phenetidin (fe-net/i-din) the ethyl ester of para-aminophenol, $NH_2 \cdot C_6H_4 \cdot OC_2H_5$; used in preparing acetophenetidin. It often appears in the urine after the administration of acetophenetidin.

phenetiduria (fe-net/i-dī-nu're-ah) the presence of phenetidin in the urine.

phenetole (fen/ē-tol) ethyl phenyl ether, an oily liquid, $C_6H_5 \cdot O \cdot C_2H_5$.

phenformin hydrochloride (fen-for/min) chemical name: *N*-(2-phenylethyl)imidodicarbonimidic diamide monohydrochloride; an oral hypoglycemic agent, $C_{10}H_{15}N_5 \cdot HCl$, no longer available in the United States.

phengophobia (fen/go-fō-be-ah) [Gr. *phengos* light + *phobein* to be frightened by] photophobia.

phenidin (fen/i-din) (*obs.*) phenacetin.

phenin (fe/nin) (*obs.*) phenacetin.

phenindamine tartrate (fē-nin/dah-mēn) chemical name: 2,3,4,9-tetrahydro-2-methyl-9-phenyl-1*H*-indene[2,1-*c*]pyridine. An antihistaminic, $C_{19}H_{19}N \cdot C_4H_6O_6$, occurring as a creamy white powder; administered orally.

phenindione (fen/in-di/ōn) [USP] chemical name: 2-phenyl-1*H*-indene-1,3,(2*H*)-dione. One of the indanedione anticoagulants, $C_{15}H_{10}O_2$, occurring as creamy white to pale yellow crystals or as a crystalline powder and having a rapid onset and short duration of action; administered orally.

pheniramine maleate (fen-ir/ah-mēn) chemical name: *N,N*-dimethyl-γ-phenyl-2-pyridinepropanamine. An antihistaminic, $C_{16}H_{20}N_2 \cdot C_4H_4O_4$, occurring as a white crystalline powder; administered orally. Called also *prophenpyridamine maleate*.

phenmetrazine hydrochloride (fen-met/rah-zēn) [USP] chemical name: 3-methyl-2-phenyl morpholine hydrochloride. A central nervous system stimulant, $C_{11}H_{15}NO \cdot HCl$, occurring as a white to off-white crystalline powder, used as an anorexic. Abuse of this drug may lead to habituation; see *amphetamine*.

pheno-, phen- [Gr. *phainein* to show] 1. a combining form indicating a showing or displaying. 2. a combining form indicating derived from or related to benzene, or containing phenyl.

phenobarbital (fe/no-bar/bi-tal) [USP] chemical name: 5-ethyl-5-phenyl-2,4,6(1*H*,3*H*,5*H*)pyrimidinetrione. A long-acting barbiturate, $C_{12}H_{12}N_2O_3$, occurring as white, glistening, small crystals, or white, crystalline powder; used as a sedative, hypnotic, and anticonvulsant, administered orally. Called also *phenobarbitone* and *phenylethylbarbituric acid*. **p. sodium** [USP], the monosodium salt of phenobarbital, $C_{12}H_{11}N_2NaO_3$, occurring as flaky crystals, or white, crystalline granules, or white powder, having the actions and uses of the base; administered orally, rectally, intravenously, intramuscularly, and subcutaneously.

phenobarbitone (fe/no-bar/bi-tōn) phenobarbital.

phenocopy (fe/no-kop'e) [Gr. *phainein* to show + *copy*] 1. an environmentally induced phenotype mimicking one usually produced by a specific genotype. 2. an individual exhibiting such a phenotype. 3. the simulated trait in a phenocopy. Cf. *genocopy*.

phenodeviant (fe/no-de've-ant) an individual whose phenotype differs significantly from that of the typical phenotype in the population.

phenogenetics (fe/no-jē-net/iks) the science which attempts to explain the chain of causality between genotype and phenotype.

phenol (fe/nol) 1. [USP] an extremely poisonous, colorless to light pink, crystalline compound, $C_6H_5 \cdot OH$, obtained by the distillation of coal tar, and converted, by the addition of 10 per cent water, into a clear liquid with a peculiar odor and a burning taste. Used as an antimicrobial agent. Called also *carbolic acid*, *hydroxybenzene*, *oxybenzene*, *phenic acid*, *phenylic acid*, and *phenylic alcohol*. See also under *poisoning*. 2. a generic term for any organic compound containing one or more hydroxyl groups attached to an aromatic or carbon ring. **p. liquefac'tum**, *liquefied p.* [USP], an aqueous solution of phenol containing not less than 89 per cent by weight of phenol; used as a topical antipruritic. Called also *phenylic alcohol*. **p. red**, phenolsulfonphthalein. **p. salicylate**, phenyl salicylate.

phenolase (fe/no-lās) a copper-containing enzyme which catalyzes the oxidation of mono-phenols and dihydroxybenzenes to quinones; it occurs in potatoes and mushrooms.

phenolate (fe/no-lāt) 1. to treat with phenol for purposes of sterilization. 2. a salt formed by union of a base with phenol, in which a monovalent metal, such as sodium or potassium, replaces the hydrogen of the hydroxyl group.

phenolated (fe/no-lāt'ed) charged with phenol.

Phenolax (fe/no-laks) trademark for a preparation of phenolphthalein.

phenolemia (fe/no-le'me-ah) the presence of phenols in the blood.

phenolic (fe-nol'ik) pertaining to or derived from phenol.

phenolization (fe/nol-i-za'shun) treatment by subjection to the action of phenol.

phenologist (fe-nol/o-jist) an expert or specialist in phenology.

phenology (fe-nol/o-je) [Gr. *phainesthai* to appear + *-logy*] a study of the effects of climate upon the life and health of living organisms.

phenolphthalein (fe/nol-thal'e-in) [USP] chemical name: 3,3-bis-(4-hydroxyphenyl)-1(3*H*)-isobenzofuranone. A cathartic, $C_{20}H_{14}O_4$, occurring as a white or faintly white, crystalline powder; administered orally.

phenolsulfonphthalein (fe/nol-sul'fön-thal'e-in) [USP] chemical name: 4,4'-(3*H*-2,1-benzoxathiol-3-ylidene)bis(*S*, *S*-dioxide)phenol. A bright to dark red, crystalline powder, $C_{19}H_{14}O_6S$, administered by intramuscular or intravenous injection as a test of renal function. Called also *phenol red*. Abbreviated PSP.

phenoltetrachlorophthalein (fe/nol-tet'rah-klör'o-thal'e-in) a coal tar derivative, used intravenously in tests of liver function.

phenoltetraiodophthalein (fe/nol-tet'rah-i'o-do-thal'e-in) phenetiothalein.

phenoluria (fe/nol-u're-ah) the presence of phenols in the urine.

phenom (fe/nom) in some systems of classification, a group or "cluster" of strains of phenotypically related organisms. Called also *phenon*. See also *numerical taxonomy*, under *taxonomy*.

phenomenology (fe-nom'e-nol/o-je) the study of phenomena; especially that part of a science, as of psychopathology, which treats of the recognition, classification, and description of the phenomena observed in that science.

phenomenon (fē-nom'fē-non), pl. *phenom'ena* [Gr. *phainomenon* thing seen] any sign or objective symptom; any observable occurrence or fact. **abstinence p.**, withdrawal symptoms; see under *symptom*. **anaphylactoid p.**, pseudoanaphylaxis. **Anderson's p.**, clumps of red blood cells in the stools of amebic dysentery; seen on microscopic examination. **aqueous-influx p.**, entrance into conjunctival or subconjunctival vessels of clear fluid (aqueous humor), deriving from an aqueous vein during compression of its recipient vessel. Formerly called *glass-rod phenomenon*, because of resemblance of the aqueous-filled vessel to a glass rod. Cf. *blood-influx p.* **arm p.**, Pool's p., def. 2. **p. of Arthus**, see *Arthus reaction*, under *reaction*. **Ascher's glass-rod p.**, aqueous-influx p. **Aschner's p.**, slowing of the pulse following pressure on the eyeball; it is indicative of cardiac vagus irritability. See *oculocardiac reflex*, under *reflex*. **Ashman's p.**, aberrant ventricular activation resulting in a short cardiac cycle following a normal or long cycle; it is associated with supraventricular premature beats and with atrial fibrillation. **Aubert's p.**, by an optic illusion, when the head is turned toward one side a vertical line appears to incline toward the other side. **Auer's p.**, inflammation or necrosis in the ear of a rabbit that is rubbed with Merck's xylol shortly after the rabbit receives its second intraperitoneal injection of horse serum—the rabbit having previously been sensitized. **Austin Flint p.**, Flint murmur; see under *murmur*. **autokinetic visible light p.**, the apparent spontaneous movement of a pin-point source of light as seen by certain susceptible persons when they gaze steadily at it in a completely blacked-out room. **Babinski's p.**, dorsiflexion of the large toe and spreading of the other toes instead of plantar flexion of all the toes when the sole is stimulated; it is a sign of damage to the corticospinal tract. **Becker's p.**, increased pulsation of the retinal arteries in Graves' disease. **Bell's p.**, an outward and upward rolling of the eyeball on the attempt to close the eye; it occurs on the affected side in peripheral facial paralysis (Bell's palsy). **Berry-De-drick p.**, the transformation of fibroma viruses into myxoma viruses. **blanching p.**, Schultz-Charlton reaction. **blood-influx p.**, filling of conjunctival or subconjunctival vessels with blood during compression of the recipient vessel of an aqueous vein. This and the aqueous-influx phenomenon, depending on minute pressure differences between blood and aqueous humor, differ in glaucomatous eyes and those with normal intraocular pressure. **Bordet's p.**, see *serum test*, under *tests*. **Bordet-Gengou p.**, fixation of the complement. **borrowing-lending hemodynamic p.**, the phenomenon of the shifting of blood from one part of the body to another, as from the skin to the internal organs, according to physiologic need; hematometakinesis. **brake p.**, the tendency of a muscle to maintain itself in its normal resting position; called also *Rieger's p.* **break-off p.**, a state of disconnectedness or unreality experienced by high-altitude pilots. Its symptomatic sensations are apparently indescribable in understandable physical terms, but the condition could be the result of a loss of all the physical sense perceptions. **Chase-Sulzberger p.**, Sulzberger-Chase p. **cheek p.**, in meningitis if pressure is exerted on both cheeks just under the zygomas there is reflex upward jerking of both arms with simultaneous bending of both elbows. **Christensen's p.**, when the mandible is protruded, a separation occurs, in the region of the molars, between the surfaces which are in contact in centric occlusion, the degree of separation depending on the downward pitch of the condyle paths. **cogwheel p.**, when a hypertonic muscle is passively stretched it resists, and this resistance sometimes takes the form of an irregular jerkiness; called also *Negro's p.* **Collie p.**, when pure neon is enclosed in a glass tube with a globule of mercury and shaken it glows with a bright,

orange-red color, and when the globule rolls it appears to be followed by a flame. **Cushing's p.**, a rise in systemic blood pressure as a result of an increase in intracranial pressure. **Dale p.**, see under *reaction*. **Danysz's p.**, decrease of the neutralizing influence of an antitoxin when a toxin is added to it in divided portions instead of all at once. **Debre's p.**, absence of measles rash at the site of injection of convalescent measles serum which has not prevented the appearance of the eruption. **Dejerine-Lichtheim p.**, Lichtheim sign. **dental p.**, thermal and tactile sensations in the gums with toothache, produced by repeated faradic stimulation of hyperesthetic lines on the body (Calligaris). **Denys-Leclef p.**, phagocytosis taking place in a test tube on mixing therein leukocytes, bacteria, and immune serum specific for the bacteria. **d'Herelle's p.**, Twort-d'Herelle p. **diaphragm p.**, **diaphragmatic p.**, the movement of the diaphragm as seen through the walls of the body; called also *phrenic phenomenon* and *phrenic wave*. **doll's head p.**, an abnormal extraocular muscle manifestation of many ophthalmologic syndromes and conditions: the eyes depress as the head is bent backward. **Donath p.**, blood from a person with paroxysmal hemoglobinuria if cooled to 5° C. outside the body and then warmed to body temperature undergoes hemolysis. See also *Donath-Landsteiner test*, under *tests*. **Doppler p.**, see under *effect*. **Duckworth's p.**, arrest of breathing before stoppage of the heart's action in certain fatal brain conditions. **Du Noüy p.**, the addition of sodium oleate to blood serum reduces the surface tension of the serum for a short time only. **Erb's p.**, Erb's sign, def. 1. **Erben's p.**, temporary slowness of the pulse on stooping or sitting down; said to characterize certain cases of neurasthenia. **face p.**, **facialis p.**, Chvostek's sign. **fall-and-rise p.**, the drop in the number of bacteria that occurs at the beginning of drug treatment and the gradual rise that follows, even while treatment continues. **fern p.**, see *ferning*. **Fick's p.**, a fogging of vision, with the appearance of halos around light, occurring in individuals wearing contact lenses. **finger p.** (in hemiplegia), 1. extension of all the fingers or of the thumb and index finger, on pressure against the pisiform bone; called also *Gordon's sign*. 2. *Souques' p.* **fixation p.**, fixation of the complement. **flicker p.**, see under *flicker*. **Friedreich's p.**, the tympanic note of skodaic resonance in pleuritis with effusion varies in pitch during inspiration and expiration, being raised on inspiration. **Galassi's pupillary p.**, Westphal-Piltz p. **Gärtner's p.**, the degree of fullness of the veins of the arm as it is raised to varying heights indicates the degree of pressure in the right atrium. **Gengou p.**, fixation of the complement. **Gerhardt's p.**, see under *sign*. **glass-rod p.**, aqueous-influx p. **glass-rod p.**, **negative**, **blood-influx p.** **Goldblatt p.**, ischemic tubular atrophy, a characteristic of renovascular hypertension. **Grasset's p.**, **Grasset-Gaussel p.**, inability of a patient to raise both legs at the same time, though he can raise either alone; seen in incomplete organic hemiplegia. **Gunn's p.**, see under *syndrome*. **Gunn's pupillary p.**, swinging flashlight sign. **halisteresis p.**, selective withdrawal of bone salt from already calcified tissue. **Hamburger p.**, chloride shift. **Hammerschlag's p.**, abnormal fatigability toward continuous sounds of gradually decreasing intensity. **Hata p.**, increase in severity of an infectious disease when a small dose of a chemotherapeutic remedy is given. **Hecht p.**, Rumpel-Leede p. **Hektoen p.**, when antigens are introduced into the animal body in allergic states, there may exist an increased range of new antibody production which may include production of antibodies concerned in previous infections and immunizations. **d'Herelle's p.**, Twort-d'Herelle p. **Herring's p.**, a faint murmur heard with the stethoscope over the lower end of the sternum for a short time after death. **Hertwig-Magendie p.**, skew deviation. **hip-flexion p.**, in paraplegia, when the patient attempts to rise from a lying position, he flexes the hip of the paralyzed side. **Hochsinger's p.**, pressure on the inner side of the biceps muscle produces closure of the fist in tetany. **Hoffmann's p.**, increased excitability to electrical stimulation in the sensory nerves; the ulnar nerve is usually tested. **Holmes' p.**, **Holmes-Stewart p.**, rebound p. **Houssay p.**, hypoglycemia and marked increase in sensitivity to insulin produced by hypophysectomy in depancreatized experimental animals. **Huebener-Thomsen-Friedenreich p.**, the *in vivo* or *in vitro* polyagglutinability of red cells by all normal human sera as a result of activation by a bacterial enzyme of a latent "T" receptor common to all erythrocytes. Called also *Thomsen p.* **Hunt's paradoxical p.**, in dystonia musculorum deformans, if the examiner attempts forcible plantar flexion of the foot that is in dorsal spasm there is produced increase of the dorsal spasm, but if the patient is ordered to extend the foot he will perform plantar flexion. **interference p.**, 1. the interference of one drug with the therapeutic activity of another drug; especially a sort of drug-fastness toward full therapeutic doses of one drug conferred on a parasite by subtherapeutic doses of another drug. 2. the interference with the replication or virulence of a virus by the simultaneous infection with another that may or may not be related; called also *preemptive immunity*. **jaw-winking p.**, Gunn's syndrome. **Kienböck's p.**, paradoxical diaphragm contraction: the hemidiaphragm on one side rises on inspiration and falls on expiration.

Koch's p., if a guinea pig which has been previously infected with tuberculosis organisms is reinjected intracutaneously, the skin over the injected area undergoes necrosis and a superficial ulcer develops. The ulcer heals quickly and infection of regional lymph nodes is retarded. The phenomenon demonstrates development of ability to localize tubercle bacilli. **Koebner's p.**, the appearance of isomorphic lesions at the site of an injury in psoriasis, verruca plana, lichen nitidus, or lichen planus; called also *isomorphic effect*. **Kohnstamm's p.**, after-movement. **Kühne's muscular p.**, Porret's p. **LE p.**, the process by which the LE cell is formed. **Leede-Rumpel p.**, Rumpel-Leede p. **Le Grand-Geblewics p.**, a flickering source of colored light (40–50 per second) when observed indirectly is perceived as a constant white light. **Leichtenstern's p.**, see under *sign*. **Lewis' p.**, hydrophagocytosis. **Liesegang's p.**, the peculiar periodic formation of a precipitate in concentric banded rings, waves, or spirals, when two electrolytes diffuse into and meet in a colloid gel. **Litten's diaphragm p.**, a movable horizontal depression of the lower part of the sides of the thorax, seen in respiration. **Lucio's p.**, a reaction occurring in diffuse lepromatous leprosy, most frequently in Mexico and Central America, marked by the eruption of crops of small red skin lesions with an area of central necrosis; the eschar may be shed, revealing ulceration, with eventual scar formation. **Lust's p.**, abduction with dorsal flexion of the foot on tapping the external popliteal nerve just below the head of the fibula; indicative of spasmophilia. **Marcus Gunn pupillary p.**, swinging flash-light sign. **Meirowsky p.**, darkening of existing melanin, perhaps by oxidation, beginning within seconds and complete within minutes to a few hours after exposure to long-wave ultraviolet radiation. See also *tan* (def. 2). **Metchnikoff's p.**, in Pfeiffer's phenomenon, if the animals are given an intraperitoneal injection of bouillon or other material, twelve hours before the test, lytic phenomena are replaced by phagocytosis. **Mills-Reincke p.**, the mortality from all diseases decreases as a result of water purification. **Moersch's p.**, fixation of the complement. **muscle p.**, the tendency of striated muscle to contract in hard lumps upon tapping. **Narsaroff's p.**, the difference in rectal temperature before and after a cold bath gradually decreases as cold baths are repeated. **Negro's p.**, cogwheel p. **Neisser-Doering p.**, suppression of the normal hemolytic action of human serum due to the presence of some antihemolytic substance; sometimes seen in renal cirrhosis and arteriosclerosis. **Neisser-Wechsberg p.**, complement deviation. **Neufeld's p.**, the dissolution of pneumococci in a solution of bile salts. **Orbeli p.**, when the response of a nerve-muscle preparation is diminishing because of fatigue, stimulation of the sympathetic nerve increases the height of the contractions. **orbicularis p.**, Westphal-Piltz p. **paradoxical diaphragm p.**, one hemidiaphragm moves upward on inspiration and downward on expiration, opposite to the movements on the contralateral side; seen in phrenic nerve paralysis and eventration. **paradoxical p. of dystonia**, Hunt's paradoxical p. **paradoxical pupil p.**, Westphal-Piltz p. **paragglutination p.**, a form of nonspecific agglutination of erythrocytes caused by certain blood sera. It disappears at 37° C. and is often due to bacterial contamination of the serum. **peroneal-nerve p.**, Lust's p. **Pfeiffer's p.**, cholera vibrios, introduced into the peritoneal cavity of a guinea pig that has been immunized against cholera, lose their motility and disintegrate. The disintegration can be followed under the microscope by removing a portion of the peritoneal contents from time to time. The same result is observed if a bacteriolytic serum (against cholera) is introduced along with the bacteria into the peritoneal cavity of a normal guinea pig. **phi p.**, the perception of the sequential flashing of a stationary row of lights as a moving light. **phrenic p.**, diaphragm p. **Piltz-Westphal p.**, Westphal-Piltz p. **Pool's p.**, 1. Schlesinger's sign. 2. contraction of the muscles of the arm following the raising of the arm above the head with the forearm extended, so as to cause stretching of the brachial plexus; seen in postoperative tetany. **Porret's p.**, the passage of a continuous current through a living muscle fiber causes an undulation proceeding from the positive toward the negative pole. **prezone p.**, **prozone p.**, see *prozone*. **psi p.** [*psyche*], an experience or effect produced without physical agency or intermediation. **Purkinje's p.**, the phenomenon that fields of equal brightness but different color become unequally bright if the intensity of the illumination is decreased. **Queckenstedt's p.**, see under *sign*. **radial p.**, the involuntary dorsal flexion of the wrist which occurs on palmar flexion of the fingers. **rash-extinction p.**, Schultz-Charlton reaction. **Raynaud's p.**, intermittent bilateral attacks of ischemia of the fingers or toes and sometimes of the ears or nose, marked by severe pallor, and often accompanied by paresthesia and pain; it is brought on characteristically by cold or emotional stimuli and relieved by heat, and is due to an underlying disease or anatomical abnormality. When the condition is idiopathic or primary it is termed *Raynaud's disease*. **rebound p.**, a manifestation of loss of coordination between groups of antagonistic muscles of the extremities in cerebellar dysfunction. It may be demonstrated by having the patient extend both arms horizontally, the examiner then tapping both outstretched arms sharply. The normal arm returns to position

promptly, whereas the affected arm overshoots the original position and may oscillate several times before achieving it. Or, the patient rests his elbow on a table and tries to flex his arm against the resistance of the examiner. When the resistance is suddenly withdrawn, the affected arm rebounds to the patient's chest, whereas the normal arm flexes only slightly, the flexion being arrested by contraction of antagonistic muscles (the triceps). **reclotting p.**, thixotropy. **release p.**, the unhampered activity of a lower center when a higher inhibiting control is removed. **Rieger's p.**, brake p. **Ritter-Rollet p.**, flexion of the foot upon a gentle electric stimulation, and its extension upon energetic stimulation. **Rumpel-Leede p.**, the appearance of minute subcutaneous hemorrhages below the area at which a rubber bandage is applied not too tightly for ten minutes upon the upper arm; characteristic of scarlet fever and hemorrhagic diathesis. **Rust's p.**, in caries or cancer of the upper cervical vertebrae, the patient supports his head with his hands when rising from or assuming a lying position; see also under *syndrome*. **satellite p.**, the more luxuriant development of a colony of microorganisms when in the neighborhood of a foreign colony, as shown by *Hemophilus influenzae* when contaminated by *Staphylococcus pyogenes* var. *aureus*. **Schellong-Strisower p.**, fall of systolic blood pressure on assuming an erect posture from the lying down position. **Schlesinger's p.**, see under *sign*. **Schramm's p.**, visibility with the cystoscope of a whole or part of the posterior urethra; seen in spinal cord disease. **Schüller's p.**, in hemiplegia due to organic lesion, the patient walks sideward more easily to the affected side than to the healthy side. **Schultz-Charlton p.**, see under *reaction*. **second set p.**, the accelerated and intensified rejection by the recipient of a second graft of tissue from the same donor as a consequence of the primary immune response (i.e., antibody production and cell-mediated immunity) induced by the first graft. **Sherrington p.**, the response of the hind limb musculature on stimulation of a motor nerve which has previously been degenerated. **shot-silk p.**, see under *retina*. **Shwartzman p.**, a severe hemorrhagic reaction with necrosis, observed in rabbits which are first injected with 0.25 ml. of typhoid or certain other culture filtrates into the skin of the abdomen and which then twenty-four (eighteen to thirty-two) hours later are injected intravenously with 0.01 ml. of the same filtrate. The site of the later injection turns blue at the center and red at the periphery, the skin is glossy, smooth, and edematous, the blood vessels below the surface are ruptured and the numerous leukocytes are dead. **Simonsen p.**, a type of graft-versus-host (GVH) reaction with an immunological basis. The injection of 10- to 11-day-old chick embryos with adult spleen cells, whole blood, or leukocyte concentrates is almost invariably fatal before hatching. Injections of these cells shortly before or after hatching are likewise fatal for many of the hosts. In all cases the principal symptoms are splenomegaly and a severe hemolytic anemia accompanied by lesions in the liver, bone marrow, and other tissues (Simonsen, 1957). **Sinkler's p.**, in an extremity with spastic paralysis, sharp flexion of the toe may be followed by flexion of the knee and hip. **Soret p.**, see under *effect*. **Souques' p.**, a phenomenon seen in incomplete hemiplegia, consisting of involuntary extension and separation of the fingers when the arm is raised; called also *finger p.* **springlike p.**, André-Thomas sign. **staircase p.**, *trappe*. **Staub-Traugott p.**, after a glucose load is administered, subsequent loads, given after a short interval, are disposed of at an accelerated rate. **Straus' p.**, see under *reaction*. **Strümpell p.**, dorsiflexion and supination of the foot on flexing the extended leg against resistance offered by the examiner. **Sulzberger-Chase p.**, immunological unresponsiveness to chemical synthesizing agents (haptens) normally capable of inducing delayed-type hypersensitivity; induced by oral administration of the haptens, it results in decreased reactivity to that hapten when it is administered as an antigen, as when conjugated to its protein carrier. **Theobald Smith's p.**, guinea pigs which have been used for standardizing diphtheria antitoxin and have thus been injected with a small dose of blood serum become highly susceptible to the serum and may die very promptly if given a rather large second dose of the same serum a few weeks later. See *anaphylaxis*. **Thomsen p.**, Huebener-Thomsen-Friedenreich p. **toe p.**, Babinski's reflex. **tongue p.**, a slight blow upon the tongue produces a contraction with the appearance of deep depressions; seen in tetany. Called also *Schultze's sign* and *tongue test*. **Trousseau's p.**, spasmodic contractions of muscles provoked by pressure upon the nerves which go to them; seen in tetany. **Twort-d'Herelle p.**, the phenomenon of transmissible bacterial lysis; bacteriophagia. When to a broth culture of typhoid or dysentery bacilli there is added a drop of filtered broth emulsion of the stool from a convalescent typhoid or dysentery patient, complete lysis of the bacterial culture will occur in a few hours. If a drop of this lysed culture is added to another culture of the bacilli, lysis will take place exactly as in the first. A drop of this culture will then dissolve a third culture, and so on through hundreds of transfers. d'Herelle attributes this phenomenon to the action of an ultramicroscopic parasite of bacteria which he named the *bacteriophage*. See *bacterial virus*, under *virus*. **Tyndall p.**, the rendering visible of a transverse beam of light through its being broken up by solid particles suspended in a liquid or gas.

Wedensky's p., on applying a series of rapidly repeated stimuli to a nerve, the muscle contracts quickly in response to the first stimulus and then fails to respond further; but if the stimuli are applied to the nerve at a slower rate, the muscle responds to all of them. **Wenckebach p.**, the generation of impulses by the sinus node of the heart at a constant rate while the P-R interval grows progressively longer during several beats until an atrial complex is not followed by a ventricular complex. **Westphal's p.**, 1. Westphal-Piltz phenomenon. 2. Westphal's sign. **Westphal-Piltz p.**, contraction of the pupil, followed by dilatation, after vigorous closing of the lids; caused by tension of the orbicularis muscle. **Wever-Bray p.**, cochlear microphonics. **Williams' p.**, the tympanic note of skodaic resonance in pleuritis with effusion varies in pitch with the opening and closing of the patient's mouth. **zone p.**, in precipitation reactions, three zones may appear in the supernatant: a zone of antibody excess, in which uncombined antibody is present; a zone of equivalence, in which both antigen and antibody are completely precipitated and no uncombined antigen or antibody is present; and a zone of antigen excess, in which all antibody has combined with antigen and additional uncombined antigen is present (in this zone, precipitation is partly or completely inhibited because, in the presence of excess antigen, soluble antigen-antibody complexes form).

phenon (fe'non) phenom.

phenopropazine (fe'no-pro'pah-zën) ethopropazine hydrochloride.

phenothiazine (fe'no-thi'ah-zën) 1. a greenish, tasteless compound, $C_{12}H_9NS$, prepared by fusing diphenylamine with sulfur; used as a veterinary anthelmintic. Called also *dibenzothiazine*, *thiodiphenylamine*. 2. any of a group of psychotherapeutic agents (e.g., chlorpromazine) resembling phenothiazine in molecular structure, i.e., all sharing a three-ring structure in which two benzene rings are joined by a sulfur and nitrogen atom. They are potent adrenergic blocking agents, their pharmacologic actions including central nervous system depression, prolongation and potentiation of the effects of narcotic and hypnotic drugs, hypotensive activity, and antispasmodic, antihistaminic, and antiemetic activity.

phenotype (fe'no-tip) [Gr. *phainein* to show + *typos* type] 1. the entire physical, biochemical, and physiological makeup of an individual as determined both genetically and environmentally, as opposed to genotype. Also, any one or any group of such traits. 2. an individual or group of individuals exhibiting a certain phenotype. **Bombay p.**, a rare phenotype produced by the interaction of genes of the ABO blood group and a rare recessive gene at a different locus, resulting in a complete lack of H antigen. Cells of individuals possessing the Bombay phenotype lack A, B, and H antigen, and their serum contains anti-A, anti-B and anti-H antigen.

phenotypic (fe'no-tip'ik) pertaining to or expressive of the phenotype.

Phenoxene (fë-nok'sën) trademark for a preparation of chlorphenoxamine hydrochloride.

phenoxide (fen-ok'sid) phenolate.

phenoxy- a prefix indicating the presence of the group OC_6H_5 , composed of phenyl and an atom of oxygen.

phenoxybenzamine hydrochloride (fë-nok'se-ben'zah-mën) [USP] chemical name: *N*-(2-chloroethyl)-*N*-(1-methyl-2-phenoxyethyl)benzenemethanamine hydrochloride. A potent α -adrenergic blocking agent, $C_{18}H_{22}ClNO$ ·HCl, occurring as a white, crystalline powder; used as an antihypertensive, administered orally.

phenozygous (fe'no-zì'gus) [Gr. *phainein* to show + *zygon* yoke] having the cranium much narrower than the face, so that the zygomatic arches are seen when the skull is viewed from above. Cf. *cryptozygous*.

phenprocoumon (fen-pro'koo-mon) [USP] chemical name: 4-hydroxy-3-(1-phenylpropyl)-2H-1-benzopyran. One of the synthetic coumarin anticoagulants, $C_{19}H_{16}O_3$, occurring as a fine, white, crystalline powder, having a more rapid onset and longer-acting effects than dicumarol and having a marked cumulative effect; administered orally.

phenpromethamine hydrochloride (fen'pro-meth'ah-mën) phenylpropylmethylaniline hydrochloride.

phenpropionate (fen-pro'pe-o-nät') USAN contraction for 3-phenylpropionate.

phensuximide (fen-suk'si-mid) [USP] chemical name: 1-methyl-3-phenyl-2,5-pyrrolidinedione. An anticonvulsant, $C_{11}H_{11}NO_2$, occurring as a white to off-white, crystalline powder; used mainly in the treatment of petit mal epilepsy, administered orally.

phentermine (fen'ter-mën) chemical name: α, α -dimethylbenzeneethanamine. An adrenergic isomer with amphetamine, $C_{10}H_{15}N$, occurring as a colorless, oily liquid; used as an anorexic, administered orally as a complex with an ion-exchange resin to produce a sustained action. **p. hydrochloride**, the water-soluble hydrochloride salt of phentermine, $C_{10}H_{15}N$ ·HCl, occurring as a white, crystalline powder; used as an anorexic, administered orally.

phentolamine (fen-tol'ah-mën) chemical name: 3-[[[4,5-dihydro-1H-imidazol-2-yl)methyl](4-methylphenyl)amino]phenol. An antiadrenergic, $C_{17}H_{19}N_3O$, which blocks the hypertensive action of epinephrine and norepinephrine and most smooth muscle responses involving alpha-adrenergic cell receptors. **p. hydrochloride** [USP], the monohydrochloride salt of phentolamine, $C_{17}H_{19}N_3O$ ·HCl, occurring as a white to off-white, crystalline powder, having the same antiadrenergic actions as the base; used mainly in the treatment of peripheral vascular diseases and to prevent and control hypertension due to pheochromocytoma, administered orally. **p. mesylate** [USP], the methanesulfonate salt of phentolamine, $C_{17}H_{19}N_3O$ ·CH₃SO₃S, occurring as a white, crystalline powder, having the same antiadrenergic actions as the base; used mainly in the diagnosis or pheochromocytoma and in the prevention and treatment of cutaneous necrosis and sloughing when extravasation of norepinephrine occurs after intravenous administration, administered intramuscularly and intravenously.

Phenurone (fen'u-rôn) trademark for a preparation of phenacemide.

phenyl (fen'il, fe'nil) the univalent radical, C_6H_5 . Symbol Ph. **p. aminosalicylate**, chemical name: 4-amino-2-hydroxybenzoic acid phenyl ester; a tuberculostatic antibacterial, $C_{13}H_{11}NO_3$. **p. carbinol**, benzyl alcohol. **p. hydrate**, **p. hydroxide**, phenol. **p. mercury acetate** phenylmercuric acetate. **p. mercury nitrate**, phenylmercuric nitrate. **p. salicylate**, a compound occurring in fine white crystals, or as a white crystalline powder, $C_{13}H_{11}O_3$; formerly used as an analgesic, antipyretic, intestinal antiseptic, enteric coating for tablets, and in preparations used in the prevention of sunburn. In veterinary medicine, it is sometimes used internally as an antipyretic and externally as an antiseptic. Called also *salol*.

phenylalaninase (fen'il-al'ah-nin-äs) phenylalanine hydroxylase.

phenylalanine (fen'il-al'ah-nin) a naturally occurring amino acid, C_6H_5 ·CH₂CH(NH₂)COOH, discovered in 1879 by Schulze; essential for optimal growth in infants and for nitrogen equilibrium in human adults.

phenylbutazone (fen'il-bu'tah-zôn) [USP] chemical name: 4-butyl-1,2-diphenyl-3,5-pyrazolidinedione. A congener of aminopyrine and antipyrine, $C_{19}H_{20}N_2O_2$, occurring as a white to off-white, crystalline powder, having analgesic, antipyretic, anti-inflammatory, and mild uricosuric properties; used especially in the treatment of gout, rheumatoid arthritis, ankylosing spondylitis, and other rheumatoid conditions, administered orally. Called also *diphebutol*.

phenylcarbinol (fen'il-kar'bì-nol) benzyl alcohol.

phenyldimethylpyrazolon (fen'il-di-meth'il-pi-ra'zo-lon) antipyrine.

phenylene (fe'nì-lën) a divalent radical, $=C_6H_4$.

phenylephrine hydrochloride (fen'il-ef'rin) [USP] chemical name: (S)-3-hydroxy- α -[(methylamino)methyl]benzenemethanol hydrochloride. An adrenergic with strong alpha-receptor stimulant activity, $C_9H_{13}NO_2$ ·HCl, occurring as white or nearly white crystals; used as vasoconstrictor to decongest nasal and laryngeal mucous membranes, to produce mydriasis without cycloplegia, to maintain blood pressure during spinal and inhalation anesthesia, to treat vascular failure in drug-induced shock, shocklike states, and hypotension, to prolong spinal anesthesia, and to treat supraventricular tachycardia. It is applied topically or administered by intramuscular or intravenous injection or infusion.

phenylhydrazine (fen'il-hi'drah-zin) an oily liquid principle, C_6H_5NH ·NH₂, used as a reagent for sugars, ketones, and aldehydes. Its hydrochloride is also used as a reagent, and has been used as an oral hemolytic in the treatment of polycythemia vera. See also *Kowarsky's test* (def. 1) and *von Jaksch's test* (def. 2), under *tests*.

phenylic (fe-nì'ik) pertaining to phenyl.

phenylindanedione (fen'il-in-dän'de-ôn) phenindione.

phenylketonuria (fen'il-ke'to-nu're-ah) an inborn error of metabolism attributable to a deficiency of or a defect in phenylalanine hydroxylase, the enzyme that catalyzes the conversion of phenylalanine to tyrosine. The lack permits the accumulation of phenylalanine and its metabolic products in the body fluids. It results in mental retardation (phenylpyruvic oligophrenia), neurologic manifestations (including hyperkinesia, epilepsy, and microcephaly), light pigmentation, eczema, and a mousy odor, unless treated by administration of a diet low in phenylalanine. The disorder is transmitted as an autosomal recessive trait. Abbreviated PKU. Two variants of classic phenylketonuria have been recognized: a mild variant, in which the patient tolerates higher levels of phenylalanine in the diet, and a transient variant, in which tolerance increases during infancy and early childhood.

phenylmercuric (fen'il-mer-ku'rik) denoting a compound containing the radical C_6H_5Hg- , forming various antiseptic, antibacterial, and fungicidal salts. **p. acetate**, chemical name: (aceto-O)phenylmercury. 1. a crystalline salt, $C_8H_8HgO_2$. 2. [NF] a compound with properties similar to those of phenylmercuric nitrate, occurring as a white to creamy white, crystalline

powder or as small white prisms or leaflets; used as a bacteriostatic preservative in pharmaceutical preparation, and in solution as a vaginal douche for adjunctive therapy in trichomonal, candidal, bacterial, and mixed infections and nonspecific leukorrhea. It is also widely used as a herbicide, especially for crabgrass. Called also *phenyl mercury acetate*. **p. nitrate**, chemical name: (nitrate-O)phenylmercury. 1. the normal salt, $C_6H_5HgNO_3$, which is converted to the basic compound (see def. 2) in aqueous solution or in moist air. 2. [NF] *basic p. nitrate*: an antibacterial and antifungal compound of phenylmercuric nitrate and its hydroxide, containing 87 to 87.9 per cent of $C_6H_5Hg^+$ (phenylmercuric ion), and 62.75 to 63.50 per cent Hg (mercury), occurring as a white, crystalline powder; used as a bacteriostatic preservative in pharmaceuticals, and as an antiseptic for various topical uses. Called also *phenyl mercury nitrate*.

phenylmethanol (fen'il-meth'ah-nol) benzyl alcohol.

phenylpropanolamine hydrochloride (fen'il-pro'pah-nol'-ah-mën hi'dro-klo'rid) [USP] chemical name: $(\pm)(R^*,S^*)\alpha$ -(1-aminoethyl)benzenemethanol hydrochloride. An adrenergic structurally and pharmacologically related to amphetamine and ephedrine, $C_9H_{13}NO \cdot HCl$, occurring as a white, crystalline powder; used as a vasoconstrictor to decongest mucous membranes, applied topically, and to produce bronchodilation in the symptomatic control of allergic manifestations, administered orally. It has also been used as a central nervous system stimulant and as an anorexic.

phenylpropylmethylamine hydrochloride (fen'il-pro'-pil-meth'ül-am'ën) chemical name: N,β -dimethylphenethylamine hydrochloride. An adrenergic with chiefly alpha-receptor activity, $C_{10}H_{15}N \cdot HCl$, used mainly as a vasoconstrictor to decongest mucous membranes, applied topically by inhalation. Called also *phenpromethamine hydrochloride*.

phenylpyruvicaciduria (fen'il-pi-ru'vik-as'ü-du're-ah) phenylketonuria.

phenylthiocarbamide (fen'il-thi'o-kar-bam'id) phenylthiourea.

phenylthiourea (fen'il-thi'o-u-re'ah) a compound, $C_6H_5NHCSNH_2$, used in genetic research in dry crystal form or in 5 per cent solution. The ability to taste it is inherited as a dominant trait, the compound being intensely bitter to approximately 70 per cent of the population, and nearly tasteless to the rest. Called also *phenylthiocarbamide* or *PTC*.

phenyltoloxamine citrate (fen'il-tol-ok'sah-mën) chemical name: N,N -dimethyl-2-[2-(phenylmethyl)phenoxy]ethanamine citrate. An isomer of diphenhydramine, $C_{17}H_{21}NO$, used as an antihistaminic, mainly to decongest the nasal mucosa, administered orally.

phenylramidol hydrochloride (fen'i-ram'i-dol) chemical name: α -(2-pyridylamino)methylbenzyl alcohol hydrochloride. A compound, $C_{13}H_{14}N_2O \cdot HCl$, used as an analgesic and skeletal muscle relaxant.

phenytoin (fen'i-to-in) [USP] chemical name: 5,5-diphenyl-2,4-imidazolidinedione. An anticonvulsant and cardiac depressant, $C_{15}H_{12}N_2O_2$, occurring as a white powder; used in the treatment of all forms of epilepsy except petit mal and as an antiarrhythmic, administered orally. Called also *diphenylhydantoin*. **p. sodium** [USP], the monosodium salt of phenytoin, $C_{15}H_{11}N_2NaO_2$, having the same appearance, actions, and uses as the base; administered orally and intravenously.

pheo- [Gr. *phaios* dun, dusky] a combining form denoting relationship to brown, dun, or dusky.

pheochrome (fe'o-kro'm) [Gr. *phaios* dusky + *chrōma* color] staining dark with chromium salts; said of certain embryonic cells; chromaffin.

pheochromoblast (fe'o-kro'mo-blast) any of the embryonic structures which develop into pheochrome (chromaffin) cells.

pheochromoblastoma (fe'o-kro'mo-blas-to'mah) pheochromocytoma.

pheochromocyte (fe'o-kro'mo-sit) [pneochrome + Gr. *kytos* hollow vessel] a chromaffin cell.

pheochromocytoma (fe-o-kro'mo-si-to'mah) [pneochromocyte + *-oma*] a well encapsulated, lobular, vascular tumor of chromaffin tissue of the adrenal medulla or sympathetic paraganglia. The cardinal symptom, reflecting the increased secretion of epinephrine and norepinephrine, is hypertension, which may be persistent or intermittent. During severe attacks, there may be headache, palpitation, apprehension, tremor, pallor or flushing of the face, nausea and vomiting, pain in the chest and abdomen, and paresthesias of the extremities.

pheophytin (fe'o-fi'tin) [Gr. *phaios* dusky + *phyton* plant] a brown pigment derived from chlorophyll by removal of magnesium.

pheresis (fë-re'sis) [Gr. *aphairesis* removal] any procedure in which blood is withdrawn from a donor, a portion (plasma, leukocytes, etc.) is separated and retained, and the remainder is retransfused into the donor. It includes plasmapheresis, leukapheresis, etc. More properly called *apheresis*.

pheromone (fer'o-mōn) a substance secreted to the outside of the body by an individual and perceived (as by smell) by a second

individual of the same species, releasing a specific reaction of behavior in the percipient. **alarm p.**, a mucus secreted by the earthworm on noxious stimulation, which is aversive to other members of the species.

phetharbital (feth-ar'bi-tal) chemical name: 5,5-diethyl-1-phenylbarbituric acid. A nonhypnotic barbiturate, $C_{14}H_{18}N_2O_3$, which has been used as an anticonvulsant and in the treatment of unconjugated hyperbilirubinemia.

Ph.G. Graduate in Pharmacy; Pharmacopoeia germanica (German pharmacopoeia).

phial (fi'al) a vial or small bottle.

phialide (fi'ah-lid) [Gr. *phialis*, dim. of *phiale* a broad flat vessel] 1. a flask-shaped projection from the mycelium of certain fungi that gives rise to endogenous basipetally produced spores. 2. the end cell of a phialophore.

Phialophora (fi'ah-lof'o-rah) a genus of imperfect fungi of the family Dematiaceae, order Moniliales. *P. verrucosa* is a cause of chromomycosis, a chronic subcutaneous fungous infection, and *P. jeanselmi* is an etiologic agent of maduromycosis.

phialophore (fi'ah-lo-för) the branch of the mycelium which bears at its tip the phialospores of certain fungi.

phialospore (fi'ah-lo-spör) a spore which is borne at the end of a phialide or a phialophore.

philagrypnia (fi'lah-grip'ne-ah) [Gr. *philein* to love + *agrypnia* sleeplessness] the ability to live with far less than the amount of sleep normally required by most people.

-philia (fil'e-ah) [Gr. *philein* to regard with affection, to love] a word termination designating notable or abnormal fondness or attraction for the subject indicated by the stem to which it is affixed.

philater (fi-li'ah-ter) [Gr. *philos* fond + *iatreia* healing] a person interested in medical science, particularly a medical student.

Philinos (fi-li'nos) of Cos (c. 250 B.C.) a Greek physician who was a pupil of Herophilus, and is believed to have been one of the founders of the Empiric school of medicine.

Philip's glands (fil'ips) [Sir Robert William Philip, Scottish physician, 1857-1939] see under *gland*.

Philippe-Gombault tract (fe-lép'-gom-bo') [Claudius Philippe, French pathologist, 1866-1903; François Alexis Albert Gombault, French neurologist, 1844-1904] Gombault-Philippe triangle.

phillyrin (fil'i-rin) a crystalline substance, $C_{27}H_{34}O_{11}$, from the leaves and bark of various species of *Phillyrea*, a genus of evergreen shrubs, e.g., *P. latifolia* L. (Oleaceae), which has antimalarial properties.

philothion (fi'lo-thi'on) [Gr. *philein* to love + *theion* sulfur] glutathione.

philter (fil'ter) a substance or object alleged to provoke love or carnal appetite.

philtrum (fil'trum) [Gr. *philtrum* love potion] 1. [NA] the vertical groove in the median portion of the upper lip, a part of the prolabium. 2. a philter.

Philumenus (fil'u-me'nus) [2nd century A.D.] a Greek physician of the Eclectic school whose works are quoted by Oribasius and Aëtius.

phimosiectomy (fi-mo'se-ek'to-me) [phimosis + Gr. *ektomē* excision] circumcision for phimosis.

phimosis (fi-mo'sis) [Gr. *phimōsis* a muzzling or closure] constriction of the preputial orifice so that the prepuce cannot be retracted back over the glans. **labial p.**, **oral p.**, atresia of the mouth. **p. vagina'lis**, atresia of the vagina.

phimotic (fi-mot'ik) pertaining to phimosis.

pHisoHex (fi'so-heks) trademark for an emulsion containing hexachlorophene.

phleb- see *phlebo-*.

phlebalgia (flë-bal'je-ah) [phleb- + *-algia*] pain due to varices within or on the surface of a nerve.

phlebanesthesia (flëb'an-es-the'ze-ah) phlebonarcosis.

phlebangioma (flëb'an-je-o'mah) [phleb- + *angioma*] a venous aneurysm.

phlebarteriectasia (flëb'ar-te're-ek-ta'ze-ah) [phleb- + Gr. *artēria* artery + *ektasis* extension] general dilatation of veins and arteries.

phlebasthenia (flëb'as-the'ne-ah) [phleb- + *a neg.* + Gr. *sthenos* strength + *-ia*] impairment of the vitality of the walls of blood vessels.

phlebectasia (flëb'ek-ta'ze-ah) [phleb- + Gr. *ektasis* dilatation + *-ia*] a varicosity; a dilatation of a vein. **p. laryn'gis**, permanent dilatation of the veins of the larynx, especially those of the vocal cords.

phlebectasis (flë-bek'tah-sis) phlebectasia.

phlebectomy (flë-bek'to-me) [phleb- + Gr. *ektomē* excision] excision of a vein, or of a part of a vein.

phlebectopia (flëb'ek-to'pe-ah) [phleb- + Gr. *ektos* out of place + *-ia*] displacement of a vein.

phlebectopy (flë-bek'to-pe) phlebectopia.

phlebemphraxis (fleb/'em-frak'sis) [*phleb-* + Gr. *emphraxis* stoppage] the stoppage of a vein by a plug or clot.

phlebexairesis (fleb/'ek-si'rē-sis) [*phleb-* + Gr. *exairesis* a taking out] surgical removal of a vein.

phlebismus (fle-biz'/mus) obstruction and consequent turgescence of veins.

phlebitic (flē-bit'/ik) pertaining to phlebitis.

phlebitis (flē-bi'tis) [*phleb-* + *-itis*] inflammation of a vein. The condition is marked by infiltration of the coats of the vein and the formation of a thrombus. The disease is attended by edema, stiffness, and pain in the affected part, and in the septic variety by pyemic symptoms. **adhesive p.**, phlebitis which tends to the obliteration of the vein; called also *plastic p.* and *proliferative p.* **anemic p.**, a form associated with anemia or chlorosis. **blue p.**, phlegmasia cerulea dolens. **chlorotic p.**, anemic p. **gouty p.**, a variety associated with the gouty diathesis, often recurrent, and sometimes occlusive; a causal relation to gout is in question. **p. mi'grans, migrating p.**, recurrent phlebitis in peripheral veins. **obliterating p., obstructive p.**, phlebitis that permanently closes the lumen of a vein. **plastic p.**, adhesive p. **productive p.**, phlebosclerosis. **proliferative p.**, adhesive p. **puerperal p.**, septic inflammation of uterine or other veins following childbirth. **septic p.**, that which is related to a septic process, as in erysipelas, peritonitis, or endometritis. In it the thrombus breaks down and septic emboli are carried to distant parts of the body. Called also *suppurative p.* **sinus p.**, inflammation of a cerebral sinus. **suppurative p.**, septic p.

phlebo-, phleb- [Gr. *phleps, phlebos* vein] a combining form denoting relationship to a vein or veins. See also words beginning *veno-*.

phleboclysis (flē-bok'li-sis) [*phlebo-* + Gr. *klysis* injection] injection of fluid into a vein. **drip p., slow p.**, phleboclysis in which the solution is instilled slowly, drop by drop.

phlebofibrosis (fleb'o-fi-bro'sis) fibrosis of the veins, as in phlebosclerosis.

phlebogenous (flē-boj'ē-nus) originating in a vein.

phlebogram (fleb'o-gram) [*phlebo-* + Gr. *gramma* a writing] 1. roentgenogram of a vein filled with contrast medium. 2. a tracing of the venous pulse made with a phlebograph or sphygmograph.

Phlebogram: *a*, a positive wave due to contraction of the right atrium; *c*, a venous wave due to contraction of the right ventricle, with downward movement of the tricuspid valve; *x*, a small negative wave due to atrial relaxation; *v*, the early diastolic wave, a positive wave occurring during ventricular contraction and reflecting the filling of the right atrium (also [not shown] the exaggerated positive wave related to reflux of blood through an incompetent atrioventricular valve); *y*, a negative wave due to emptying of the right atrium; *h*, an occasional, late filling wave.

phlebograph (fleb'o-graf) [*phlebo-* + Gr. *graphein* to write] an instrument for recording the venous pulse.

phlebography (flē-bog'rah-fe) [*phlebo-* + Gr. *graphein* to write] 1. roentgenography of a vein or veins by use of contrast medium. 2. the graphic recording of the venous pulse. 3. a description of the veins.

phleboid (fleb'oid) [*phlebo-* + Gr. *eidōs* form] resembling a vein, or composed of veins.

phlebolith (fleb'o-lith) [*phlebo-* + Gr. *lithos* stone] a calculus or concretion in a vein; a vein stone.

phlebolithiasis (fleb'o-li-thi'ah-sis) [*phlebo-* + *lithiasis*] a condition characterized by the development of vein stones.

phlebology (flē-bo'lō-je) [*phlebo-* + *-logy*] the study of the veins and their diseases.

phlebomanometer (fleb'o-mah-nom'ē-ter) [*phlebo-* + *manometer*] an instrument for the direct measurement of venous blood pressure (Burch and Winsor).

phlebometritis (fleb'o-mē-tri'tis) [*phlebo-* + Gr. *metra* uterus + *-itis*] inflammation of the veins of the uterus.

phlebonarcosis (fleb'o-nar-ko'sis) narcosis produced by intravenous injections.

phlebopexy (fleb'o-pek'se) [*phlebo-* + Gr. *pēxis* fixation] extraserous transplantation of the testicle, with preservation of the reticulum of veins; done for varicocele.

phlebophlebostomy (fleb'o-flē-bos'to-me) [*phlebo-* + Gr. *phleps* vein + *stomōn* to provide with an opening, or mouth] operative anastomosis of vein to vein.

phlebophthalmotomy (fleb'of-thal-mot'o-me) [*phlebo-* + Gr. *ophthalmos* eye + *tomē* a cutting] ophthalmophlebostomy.

phlebopezometry (fleb'o-pi'ē-zom'ē-tre) [*phlebo-* + Gr. *piesis*

pressure + *metron* measure] measurement of the venous pressure.

phleboplasty (fleb'o-plas'te) [*phlebo-* + Gr. *plassein* to form] plastic operation for the repair of a vein.

phleborrhagia (fleb'o-ra'je-ah) [*phlebo-* + Gr. *rhēgnynai* to burst forth] copious hemorrhage from a vein; venous hemorrhage.

phleborrhaphy (flē-bo'rah-fe) [*phlebo-* + Gr. *rhaphe* suture] the suturing of a vein.

phleborrhexis (fleb'o-rek'sis) [*phlebo-* + Gr. *rhēxis* rupture] rupture of a vein.

phlebosclerosis (fleb'o-skle-ro'sis) [*phlebo-* + Gr. *sklērosis* hardening] fibrous thickening of the wall of the veins.

phlebotomy (flē-bo'tis) abnormal noninflammatory changes in the veins.

phlebostasia (fleb'os-ta'ze-ah) phlebostasis.

phlebostasis (flē-bos'tah-sis) [*phlebo-* + Gr. *stasis* stoppage] 1. retardation of the flow of blood in the veins. 2. temporary sequestration of a portion of the blood from the general circulation by application of tourniquets on an extremity.

phlebostenosis (fleb'o-stē-no'sis) [*phlebo-* + Gr. *stenōsis* narrowing] stenosis or constriction of a vein.

phlebothrombosis (fleb'o-throm-bo'sis) [*phlebo-* + *thrombosis*] presence of a clot in a vein, unassociated with inflammation of the wall of the vein. Cf. *thrombophlebitis*.

phlebotome (fleb'o-tōm) a knife or lancet for use in phlebotomy.

phlebotomist (fle-bot'o-mist) one who practices phlebotomy.

phlebotomize (fle-bot'o-mīz) to bleed; to take blood from by phlebotomy.

Phlebotomus (flē-bot'o-mus) [*phlebo-* + Gr. *tomos* a cutting] a genus of biting flies of the family Psychodidae, containing some 60 species, the females of which suck blood. **P. argen'tipes**, the species which transmits kala-azar in India. **P. chinen'sis**, the species which transmits kala-azar in China. **P. inter-me'dius**, a species suspected of being a transmitter of leishmaniasis in South America. **P. macedon'icum**, a species found in Italy. **P. marti'ni**, the principal vector of kala-azar in East Africa. **P. nugu'chi**, a species found in Peru which may transmit *Bartonella bacilliformis*, the etiologic agent of *Carrión's disease*; called also *Lutzomyia noguchii*. **P. orienta'lis**, the vector of kala-azar in the Sudan. **P. papatas'ii**, the sandfly, a dipterous insect of India and the Mediterranean countries, which conveys by its bite an infection known as *phlebotomus fever*. **P. pernicio'sus**, the principal vector of kala-azar in the Medi-

Phlebotomus papatasi.

terranean. **P. sergen'ti**, a vector of *Leishmania tropica*, the etiologic agent of cutaneous leishmaniasis. **P. verruca'rum**, a fly abounding in Peru; it is a vector of *Bartonella bacilliformis*, the etiologic agent of *Carrión's disease* (bartonellosis). **P. vex-a'tor**, a species found in the United States which is not a disease vector.

phlebotomy (flē-bot'o-me) [*phlebo-* + Gr. *tomē* a cutting] incision of a vein, as for the letting of blood; venesection. **blood-less p.**, phlebostasis, def. 2.

phlegm (flem) [Gr. *phlegma*] 1. one of the four humors of the body, according to the obsolete humoral pathology. 2. morbid or viscid mucus secreted in abnormally large amount; applied especially to such mucus discharged through the mouth.

phlegmasia (fleg-ma'ze-ah) [Gr. "heat, inflammation"] inflammation or fever. **p. al'ba do'lens**, phlebitis of the femoral vein, occasionally following parturition or an acute febrile illness; it is characterized by swelling of the leg, usually without redness. Called also *leukophlegmasia* and *white leg*. **p. al'ba do'lens puerpera'rum**, postpartum iliofemoral thrombophlebitis. **cellulitic p.**, swelling and inflammation of the leg after childbirth from infection of the connective tissue. **p. ceru'lea do'lens**, an acute fulminating form of deep venous thrombosis, with reactive arterial spasm and pronounced edema of the extremity and severe cyanosis, purpuric areas, and petechiae; called also *blue phlebitis*. **p. malabar'ica**, elephantiasis. **thrombotic p.**, phlegmasia alba dolens.

phlegmatic (fleg-mat'ik) [Gr. *phlegmatikos*] characterized by an excess of the supposed humor called phlegm; hence, heavy, dull, and apathetic.

phlegmon (fleg'mon) [Gr. *phlegmonē*] diffuse inflammation of the soft or connective tissue due to infection; see *cellulitis*. **Holz p.**, a chronic cellulitis of the floor of the mouth and neck. **periurethral p.**, an extensive fulminating phlegmon originat-

ing in and about the urethra and usually accompanied by massive gangrene of the genital and perigenital tissues; called also *periurethral cellulitis*.

phlegmona (fleg'mo-nah) phlegmon. **p. diffu'sa**, phlegmonous cellulitis.

phlegmonosis (fleg'mo-no'sis) phlegmasia.

phlegmonous (fleg'mon-us) pertaining to or attended by phlegmon; see under *cellulitis*.

phlobaphene (flo'bah-fēn) [Gr. *phloios* bark + *baphē* dye] one of a series of compounds resembling resins and differing from the latter only in that they dissolve in dilute ammonia water. They are derived from tannin by boiling with acids and are characterized by their brown color.

phloem (flo'em) [Gr. *phloios* bark] a form of vascular tissue in plants which conducts synthesized nutrients, such as glucose, both up and down the stem or root, characterized by the presence of sieve tubes. Cf. *xylem*.

phlogistic (flo-jis'tik) [Gr. *phlogistos*] inflammatory.

phlogisticozymoid (flo-jis'ti-ko-zi'moid) a hypothetical substance supposed to supply the necessary feeding ground for inflammatory processes.

phlogiston (flo-jis'ton) [Gr. *phlogistos* burnt] the supposed principle of fire and combustion; a term proposed in 1697 by Stahl, who supposed that combustible substances were compounds of phlogiston and that combustion is due to the removal or liberation of phlogiston leaving the other structures of the substance behind.

phlogo- [Gr. *phlox*, *phlogos* flame] a combining form denoting relation to inflammation.

phlogocyte (flo'go-sit) [*phlogo-* + *-cyte*] a cell characteristic of tissue in an inflamed state; a plasma cell.

phlogocytosis (flo'go-si-to'sis) presence of phlogocytes (plasma cells) in the blood.

phlogogen (flo'go-jen) a body that has the power of causing inflammation.

phlogogenic (flo'go-jen'ik) [*phlogo-* + Gr. *gennan* to produce] causing inflammation.

phlogogenous (flo-goj'ē-nus) phlogogenic.

phlogotherapy (flog'o-ther'ah-pe) [*phlogo-* + Gr. *therapeia* treatment] nonspecific therapy; see under *therapy*.

phlogotic (flo-got'ik) inflammatory.

phlorhizin (flo-ri'zin) [Gr. *phloios* bark + *rhiza* root] a bitter glycoside, $C_{21}H_{24}O_{10} + 2H_2O$, from the root bark of apple, cherry, plum, and pear trees; it causes glycosuria by blocking the tubular reabsorption of glucose.

phlorhizinize (flo-ri'zi-nīz) to bring under the influence of phlorhizin.

phloridzin (flo-rid'zin) phlorhizin.

phloridzinize (flo-rid'zi-nīz) phlorhizinize.

phlorizin (flo-ri'zin) phlorhizin.

phloroglucin (flo'ro-gloo'sin) [*phlorhizin* + Gr. *glykys* sweet] chemical name: 1,3,5-trihydroxybenzene. The aglycone of many glycosides, $C_6H_3O_3$, obtained from the bark of apple and other trees, and used as a reagent for pentoses, pentosans, glycuronates, hydrochloric acid in gastric juice, etc. It is an excellent decalcifier of bone specimens. See under *tests*, and see *Günzburg's test*, under *tests*.

phloroglucinol (flo'ro-gloo'si-nol) phloroglucin.

phlorol (flo'rol) an oily liquid, $C_6H_5(OC_2H_5)_2$, derived from creosote; see *phenetole*.

phlorose (flor'ōs) a sugar formed when phlorhizin is boiled with dilute acids; glucose.

phlorrhizin (flo-ri'zin) phlorhizin.

phloryl (flo'ril) a principle obtainable from creosote.

phloxine (flok'sin) a brick-red acid dye said to have a destructive action on cancer cells.

P.H.L.S. Public Health Laboratory Service (British).

phlycten (flik'ten) phlyctena.

phlyctena (flik-te'nah), pl. *phlycte'nae* [Gr. *phlyktaina*] 1. a blister made by a burn. 2. a small vesicle containing lymph seen on the conjunctiva in certain conditions.

phlyctenar (flik'tē-nar) pertaining to or marked by phlyctenae.

phlyctenoid (flik'tē-noid) [*phlyctena* + Gr. *eidos* form] resembling a phlyctena.

phlyctenosis (flik'tē-no'sis) [Gr. *phlyktainōsis*] (obs.) any phlyctenular disease or lesion.

phlyctenotherapy (flik'tē-no-ther'ah-pe) [*phlyctenule* + Gr. *therapeia* treatment] treatment by the subcutaneous injection of the serum from blisters raised on the patient's own body by applying cantharides.

phlyctenula (flik-ten'u-lah), pl. *phlycten'ulae* [L.] phlyctenule.

phlyctenular (flik-ten'u-lar) associated with the formation of phlyctenules or vesicles, or of prominences that look like vesicles.

phlyctenule (flik'ten-ūl) [L. *phlyctaenula*; Gr. *phlyktaina* blis-

ter] a small vesicle, or an ulcerated nodule of the cornea or of the conjunctiva.

phlyctenulosis (flik'ten-u-lo'sis) the condition marked by the formation of phlyctenules, as phlyctenular keratoconjunctivitis, conjunctivitis, or ophthalmia. **allergic p.**, phlyctenulosis due to allergy. **tuberculous p.**, phlyctenulosis due to tuberculous allergy.

phobia (fo'be-ah) [Gr. *phobos* fear (*phobein* to be affrighted by) + *-ia*] any persistent abnormal dread or fear. Used as a word termination designating abnormal or morbid fear of or aversion to the subject indicated by the stem to which it is affixed.

phobic (fo'bik) of the nature of or pertaining to phobia or morbid fear.

phobophobia (fo-bo-fo'be-ah) [Gr. *phobos* fear + *phobein* to be affrighted by] a condition in psychasthenia marked by fear of one's own fears.

Phocas' disease (fo-kahz') [B. G. *Phocas*, French physician] see under *disease*.

phocomelia (fo'ko-me'le-ah) [Gr. *phōkē* seal + *melos* limb + *-ia*] a developmental anomaly characterized by absence of the proximal portion of a limb or limbs, the hands or feet being attached to the trunk of the body by a single small, irregularly shaped bone. Cf. *amelia*.

Phocomelia of arms.

phocomelus (fo-kom'ē-lus) [Gr. *phōkē* seal + *melos* limb] an individual exhibiting phocomelia.

phon (fōn) [Gr. *phōnē* voice] a unit of the subjective loudness of a sound.

phon- see *phono-*.

phonacoscope (fo-nak'o-skōp) the apparatus used in phonacoscopy.

phonacoscopy (fo'nah-kos'ko-pe) [*phon-* + Gr. *skopein* to examine] combined auscultation and percussion by means of a bell-shaped resonating chamber containing a percussion hammer, which is held on the anterior thoracic wall while the examiner listens at the back of the thorax.

phonal (fo'nal) pertaining to the voice.

phonarteriogram (fōn'ar-te're-o-gram") a tracing or graphic record of arterial sounds obtained in phonarteriography.

phonarteriographic (fōn'ar-te're-o-graf'ik) pertaining to phonarteriography or to a phonarteriogram.

phonarteriography (fōn'ar-te're-og'rah-fe) the recording of arterial sounds by means of a phonocardiograph.

phonasthenia (fo'nas-the'ne-ah) [*phon-* + *asthenia*] weakness of the voice; difficult phonation from fatigue.

phonation (fo-na'shun) the utterance of vocal sounds. **sub-energetic p.**, hypophonia. **superenergetic p.**, hyperphonia.

phonatory (fo'nah-to're) subserving or pertaining to phonation.

phonautograph (fōn-aw'to-graf) [*phon-* + Gr. *autos* self + *graphein* to write] an apparatus which registers the vibrations of the air caused by the voice.

phoneme (fo'nēm) [Gr. *phōnēma* a sound made, a thing spoken] 1. a speech sound that is the basic unit of spoken language. 2. (obs.) a hallucination of hearing voices.

phonendoscope (fōn-en'do-skōp) [*phon-* + Gr. *endon* within + *skopein* to examine] a stethoscopic device that intensifies auscultatory sounds.

phonendoskiascope (fōn-en''do-ski'ah-skōp) a phonendoscope combined with a fluorescent screen for observing the heart movements at the same time as the heart sounds are heard.

phonetic (fo-net/'ik) [Gr. *phonētikos*] pertaining to the voice or to articulate sounds.

phonetics (fo-net/'iks) the science of vocal sounds; phonology.

phoniatician (fo'ne-ah-trish'an) a person who specializes in treating voice and speech defects.

phoniatrics (fo'ne-at/'riks) [*phon-* + Gr. *iatrikē* surgery, medicine] the treatment of voice and speech defects.

phonic (fon/'ik, fo'nik) pertaining to the voice.

phonism (fo'nizm) a form of synesthesia in which a sensation of hearing is produced by the effect of something seen, felt, tasted, smelled, or thought of.

phono-, phon- [Gr. *phōnē* voice] a combining form denoting relationship to sound, often specifically to the sound of the voice.

phonoangiography (fo'no-an''je-og'rah-fe) the recording and analysis of arterial bruits to estimate the extent of arterial stenosis.

phonoauscultation (fo'no-aws'kul-ta'shun) auscultation in which a tuning-fork is placed over the organ to be examined and its vibrations are listened to through a stethoscope placed over the same organ.

phonocardiogram (fo'no-kar'de-o-gram) [*phono-* + Gr. *kardia* heart + *gramma* a writing] the graphic record produced by phonocardiography.

phonocardiograph (fo'no-kar'de-o-graf) the instrument used in phonocardiography. **fetal p.**, an instrument which provides continuous, instantaneous recording of beat-to-beat changes in fetal heart rate.

phonocardiographic (fo'no-kar'de-o-graf'ik) pertaining to phonocardiography or to a phonocardiogram.

phonocardiography (fo'no-kar'de-og'rah-fe) the graphic representation of heart sounds and murmurs; by extension, the term also includes pulse tracings (carotid, apex, and jugular pulse).

intracardiac p., the graphic registration of sounds produced by action of the heart by means of a phonocatheter passed into one of the heart chambers.

phonocatheter (fo'no-kath'ē-ter) a device similar in appearance to a conventional catheter, with a microphone at the tip.

phonocatheterization (fo'no-kath'ē-ter-i-za'shun) the use of a phonocatheter for the detection of sounds produced by the circulatory system. **intracardiac p.**, the passage of a phonocatheter into a chamber of the heart, for the detection of sounds as an aid in diagnosis of cardiac defects.

phono-electrocardioscope (fo'no-e-lek''tro-kar'de-o-skōp) an instrument incorporating a double beam cathode ray oscilloscope with a fluorescent screen of long afterglow, which permits the simultaneous direct visual recording of two phenomena such as the phonocardiogram and the electrocardiogram, the phonocardiogram and the sphygmogram, or the electrocardiogram and the sphygmogram.

phonogram (fo'no-gram) [*phono-* + Gr. *gramma* mark] a graphic record of a sound, as of a heart sound.

phonology (fo-nol'o-je) [*phono-* + *-logy*] the science which treats of vocal sounds; phonetics.

phonomania (fon''o-ma'ne-ah) [Gr. *phonē* murder + *mania* madness] psychosis marked by a tendency to commit murder.

phonomyoclonus (fo'no-mi-ok'lo-nus) myoclonus in which a sound is heard on auscultation of an affected muscle, indicating fibrillar contractions.

phonomyogram (fo'no-mi'o-gram) [*phono-* + Gr. *mys* muscle + *gramma* mark] a tracing of the sound produced by muscle action.

phonomyography (fo'no-mi-og'rah-fe) the recording of muscle sounds by an oscillograph to which the sounds are transmitted by a microphone placed over the muscle.

phonophobia (fo'no-fō-be-ah) [*phono-* + Gr. *phobein* to be frightened by] morbid dread of sounds or of speaking aloud.

phonopsia (fo-nop'se-ah) [*phono-* + Gr. *opsis* vision + *-ia*] a subjective sensation as of seeing colors, caused by the hearing of sounds.

phonorenogram (fo'no-re'no-gram) a graphic representation by means of a paper recording of pulsations of the renal artery obtained by use of a phonocatheter passed through a ureter into the pelvis of the kidney.

phonoscope (fo'no-skōp) [*phono-* + Gr. *skopein* to examine] 1. an apparatus for recording photographically the movements of a diaphragm set up by the sounds of the heart. 2. an instrument for auscultatory percussion.

phonoscopy (fo-nos'ko-pe) 1. the delimiting of solid and hollow organs (liver, heart, lungs, etc.) by listening with a stethoscope while percussion is made in the vicinity. 2. the use of the phonoscope.

phonoselectoscope (fo'no-se-lek'to-skōp) [*phono-* + *select* + Gr. *skopein* to examine] an instrument for auscultation by means of which the lower (normal) range of the pulmonary sounds are

eliminated, thus emphasizing the higher-pitched pathologic elements.

phonostethograph (fo'no-steth'o-graf) an instrument by which the chest sounds are amplified, filtered, and recorded.

Phorandendron flavescens (for''ah-den'dron fla-ves'enz) American mistletoe; see *mistletoe*.

-phore (fōr) [Gr. *phoros* bearing] a word termination signifying a carrier of the element designated by the stem to which it is affixed, as a melanophore.

-phoresis (fo-re'sis) [Gr. *phōrēsis* a being borne] a word termination indicating transmission, as electrophoresis, immunophoresis, etc.

phoria (fo're-ah) [Gr. *pherein* to bear] any tendency to deviation of the eyes from the normal when fusional stimuli are absent or fusion is otherwise prevented; a latent or usually unmanifested tropia. Heterophoria. See *cyclophoria*, *esophoria*, *exophoria*, *hyperphoria*, and *hypophoria*.

phoriascope (fo're-ah-skōp) a prism-refracting instrument for use in orthoptic training.

Phormia (for'me-ah) the blackbottle flies, a genus of blue, black, or green flies of the family Calliphoridae. **P. regi'na**, a blowfly which causes a cutaneous myiasis of sheep in the United States and Canada. The larvae have been introduced into infected wounds to facilitate healing. Called also *Lucilia regina*. See also *maggot*.

phoroblast (fo'ro-blast) [Gr. *phoros* carrying + *blastos* germ] fibroblast.

phorocyte (fo'ro-sit) a connective tissue cell.

phorocytosis (fo'ro-si-to'sis) proliferation of connective tissue cells.

phorologist (fo-rol'o-jist) one skilled in tracing the sources of endemic and epidemic diseases.

phorology (fo-rol'o-je) [Gr. *phoros* carrying + *-logy*] the study of disease carriers.

phorometer (fo-rom'ē-ter) [Gr. *pherein* to bear + *metron* measure] an instrument for ascertaining the degree and kind of heterophoria.

phorometry (fo-rom'ē-tre) use of the phorometer.

phorone (fo'rōn) chemical name: 2,6-dimethyl-2,5-heptadien-4-one. A yellowish, oily, unsaturated ketone, C₉H₁₄O, obtained from acetone, camphoric acid, etc.

phoroplast (fo'ro-plast) [Gr. *phoros* carrying + *plastos* formed] connective tissue.

Phoroptor (fo-rop'tor) trademark for a phorometer fitted with a battery of cylindrical lenses.

phorscope (fo'ro-skōp) a fixed trial frame for eye testing, with a head rest which may be fastened to the table or the wall.

phorotone (fo'ro-tōn) [Gr. *phora* motion, movement + *tonos* tension] an instrument for exercising the muscles of the eye.

phorozoon (fo'ro-zō'on) [Gr. *phoros* fruitful + *zōon* animal] the asexual stage in the life history of an organism.

phose (fōz) [Gr. *phōs* light] any subjective sensation, as of light or color; see *aphose*, *centraphose*, *centrophose*, *chromophose*, *peripheraphose*, *peripherophose*, etc.

phosgene (fos'jēn) a suffocating and highly poisonous war gas, carbonyl chloride, COCl₂; called also *CG*.

phosgenic (fos-jen'ik) [Gr. *phōs* light + *gennan* to produce] producing light.

phosis (fo'sis) the production of a phose.

phosphagen (fos'fah-jen) a group of compounds, including phosphocreatine and phosphoarginine, which occur in tissue and which yield inorganic phosphate with release of energy on cleavage. They are therefore classed as high-energy phosphate compounds.

phosphagenic (fos'fah-jen'ik) producing or forming phosphate.

phosphaminase (fos-fam'i-nās) an enzyme that catalyzes the hydrolysis of amino phosphoric compounds into amines and phosphoric acid.

phosphatase (fos'fah-tās'') [*phosphate* + *-ase*] an enzyme that hydrolyzes monophosphoric esters, with liberation of inorganic phosphate, found in practically all tissues, body fluids, and cells, including erythrocytes and leukocytes. **acid p.**, a phosphatase active in an acid medium; such enzymes are found in mammalian erythrocytes and yeast (optimal activity at pH 6), prostatic tissue, epithelium, spleen, kidney, blood plasma, liver, and pancreas, and in rice bran (optimal activity at pH 5) and Taka-dias-tase (optimal activity at pH 3-4). **alkaline p.**, a phosphatase active in an alkaline medium; such enzymes are found in blood plasma or serum, bone, kidney, mammary gland, spleen, lung, leukocytes, adrenal cortex, and seminiferous tubules (optimal activity at about pH 9.3). **serum p.**, the phosphatase of the blood serum.

phosphate (fos'fāt) [L. *phosphas*] any salt or ester of phosphoric acid. Phosphates are distributed throughout the body. Inorganic phosphates occur chiefly in the skeleton in association with calcium, where they play a role in the mineralization of bone, and in body fluids, where they play a role in the regulation of

acid-base balance. Organic phosphates are incorporated in such macromolecules as sugar phosphates, phospholipids, phosphoproteins, and nucleic acids. **acid p.**, any phosphate in which only one or two of the three replaceable hydrogen atoms are taken up or replaced. **alkaline p.**, a phosphate of an alkaline metal, as sodium or potassium. **ammoniomagnesium p.**, a double salt of ammonium and magnesium with orthophosphoric acid, $\text{Mg}(\text{NH}_4)_2\text{PO}_4 \cdot 6\text{H}_2\text{O}$; closely allied to and often associated with triple phosphate. **arginine p.**, phosphoarginine. **calcium p.**, a compound containing calcium and the phosphate radical (PO_4). **carbamyl p.**, an important intermediate compound in the formation of pyrimidine and citrulline, the latter being a step in urea formation. **creatine p.**, phosphocreatine. **earthy p.**, a phosphate of any one of the alkaline earth metals. **ferric p.**, a yellowish white powder, $\text{FePO}_4 \cdot 4\text{H}_2\text{O}$, insoluble in water or acetic acid, used as a feed and food supplement, especially to enrich bread, and as a fertilizer. **ferric p., soluble, ferric phosphate** rendered soluble by the presence of sodium citrate; used as a hematinic. **guanidine p.**, phosphoguanidine. **magnesium p., dibasic**, a salt, $\text{MgHPO}_4 \cdot 3\text{H}_2\text{O}$, occurring as a white, crystalline powder; it has been used as a mild saline laxative. **magnesium p., tribasic**, a powdered, white salt, $\text{Mg}_3(\text{PO}_4)_2 \cdot 5\text{H}_2\text{O}$, used as a gastric antacid; called also *trimagnesium p.* **normal p.**, any phosphate in which all the replaceable hydrogen atoms in phosphoric acid are replaced. **polyestradiol p.**, a polymeric ester of phosphoric acid and estradiol, used as a palliative in prostatic carcinoma. **stellar p.**, calcium phosphate occurring in star-shaped masses of crystals in urinary sediment. **trimagnesium p.**, magnesium p., tribasic. **triorthocresyl p.**, a poisonous compound, $(\text{CH}_3\text{C}_6\text{H}_4 \cdot \text{O})_3\text{PO}$, contained in Jamaica ginger, ingestion of which causes paralysis. **triose p.**, phosphotriose. **triple p.**, a calcium, ammonium, and magnesium phosphate, sometimes found in the urine.

phosphated (fos'fat-ed) containing phosphates.

phosphatemia (fos'fah-te'me-ah) [*phosphate* + Gr. *haima* blood + *-ia*] an excess of phosphates in the blood.

phosphatic (fos-fat'ik) pertaining to or containing phosphates.

phosphatidate (fos'fah-tid-ät) a phospholipid from which choline, ethanolamine, or serine has been split off.

phosphatide (fos'fah-tid) phospholipid.

phosphatidosis (fos'fah-ti-do'sis), pl. *phosphatido'ses* [*phosphatide* + *-osis*] lipidosis in which the fatty accumulations are phosphatides.

phosphatidylcholine (fos-fat'yi-dil-ko'lēn) lecithin.

phosphatidylethanolamine (fos-fat'yi-dil-eth'ah-nol-am'ēn) one of the prothromboplastic phosphatides contained in blood platelets.

phosphatidylinositol (fos-fat'yi-dil-in-o'si-tid) any of a group of compounds containing residues of inositol and phosphate, occurring in a variety of tissues and especially concentrated in the brain. Called also *phosphoinositide*.

phosphatidylinositol (fos-fat'yi-dil-in-o'si-tol) a phosphatidic acid combined with inositol.

phosphatidylserine (fos-fat'yi-dil-se'rin) one of the prothromboplastic phosphatides contained in blood platelets.

phosphatoptosis (fos'fah-top-to'sis) [*phosphate* + Gr. *ptōsis* fall] the spontaneous precipitation of phosphates from the urine; phosphaturia.

phosphaturia (fos'fah-tu're-ah) [*phosphate* + Gr. *ouron* urine + *-ia*] 1. a high percentage of phosphates in any given specimen of urine. 2. ready precipitation of the earthy phosphates from the urine; phosphatoptosis.

phosphene (fos'fēn) [Gr. *phōs* light + *phainein* to show] an objective visual sensation that appears with the eyes closed and in the absence of visual light. **accommodation p.**, the streak of light surrounding the visual field seen in the dark after accommodation.

phosphide (fos'fid) any binary compound of phosphorus and another element or radical.

phosphine (fos'fēn) 1. hydrogen phosphide, PH_3 ; a toxic malodorous gas and radical. 2. a coal tar dye extremely destructive to infusorial life; it is used as a stain. Called also *Philadelphia yellow*.

phosphite (fos'fit) any salt of phosphorous acid.

phosphamidase (fos'fo-am'i-dās) an enzyme (a lyase) that catalyzes the conversion of phosphocreatine to creatine and orthophosphate.

phosphoarginine (fos'fo-ar'ji-nin) an arginine phosphoric acid compound homologous with phosphocreatine but found in invertebrate muscles.

phosphocozymase (fos'fo-ko-zi'mās) nicotinamide-adenine dinucleotide phosphate (NADP); see under *dinucleotide*.

phosphocreatine (fos'fo-kre'ah-tin) a creatine-phosphoric acid compound, $(\text{OH})_2\text{PO} \cdot \text{NH} \cdot \text{C}(\text{NH}) \cdot \text{N}(\text{CH}_3) \cdot \text{CH}_2 \cdot \text{COOH}$, occurring in muscle metabolism, being broken down into creatine and inorganic phosphorus. It is an important storage form of high-energy phosphate, the energy source in muscle contraction.

The phosphate group is transferred to ADP on muscle contraction to yield creatine and ATP. Called also *creatine phosphate*.

phosphodiesterase (fos'fo-di-es'ter-ās) an enzyme that hydrolyzes —O—P—O— bonds in RNA and DNA.

phosphoesterase (fos'fo-es'ter-ās) phosphatase.

phosphofructaldolase (fos'fo-frukt-al'do-lās) an enzyme that catalyzes the cleavage of fructose-1,6-diphosphate into two isomeric triose phosphates: the aldose (D-glyceraldehyde-3-phosphate) and the ketose (dihydroxyacetone phosphate); it is elevated in the serum of patients with viral hepatitis, decreasing in activity as the disease subsides and becoming normal when recovery takes place.

phosphofructokinase (fos'fo-fruk'to-ki'nās) an enzyme produced by spermatozoa, allowing the spermatocyte to utilize fructose as an energy source; it catalyzes the conversion of ATP and fructose-6-phosphate to ADP and fructose-1,6-diphosphate. Formerly called *phosphohexokinase*.

phosphoglobulin (fos'fo-glob'u-lin) a phosphoprotein with globulin as the protein moiety.

phosphoglucokinase (fos'fo-gloo'ko-ki'nās) an enzyme (a transferase) that catalyzes the conversion of ATP and glucose-1-phosphate to ADP and glucose-1,6-phosphate.

phosphoglucomutase (fos'fo-gloo'ko-mu'tās) an enzyme of the phosphotransferase group that catalyzes the change of glucose-1-phosphate into glucose-6-phosphate. Found in plants and animals.

phosphoglucoprotein (fos'fo-gloo'ko-pro'te-in) a phosphorus-containing glucoprotein.

3-phosphoglyceraldehyde (fos'fo-glis'er-al'de-hid) a triose phosphate, $\text{CH}_2 \cdot \text{O} \cdot \text{PO}(\text{OH})_2 \cdot \text{CHOH} \cdot \text{CHO}$, which results from the splitting of fructose-1,6-diphosphate in muscle metabolism.

phosphoglycerate (fos'fo-glis'er-ät) a salt of phosphoglyceric acid; it is an intermediate in the metabolic formation of pyruvate, its phosphate group being transferred from the 3-carbon of the glycerate to the 2-carbon.

phosphoglyceride (fos'fo-glis'er-id) a class of phospholipids, including lecithin and cephalin, consisting of a glycerol backbone, two fatty acid chains, and a phosphorylated alcohol, the common alcohol moieties being choline, ethanolamine, serine, and inositol. Phosphatidic acid is the parent compound. The phosphoglycerides are a major component of cell membranes.

phosphoglyceromutase (fos'fo-glis'er-o-mu'tās) an enzyme of the phosphotransferase group that catalyzes the change of 3-phosphoglyceric acid into 2-phosphoglyceric acid.

phosphoguanidine (fos'fo-gwan'i-dēn) a guanidine phosphoric acid compound which on hydrolysis yields low-energy phosphate linkages.

phosphohexoisomerase (fos'fo-hek'so-i-som'er-ās) glucose-isomerase.

phosphohexokinase (fos'fo-hek'so-ki'nās) phosphofructokinase.

phosphoinositide (fos'fo-in-o'si-tid) phosphatidylinositol.

phosphoketolase (fos'fo-ke'to-lās) an enzyme (a lyase) that catalyzes the conversion of xylulose-5-phosphate and orthophosphate to acetylphosphate, glyceraldehyde-3-phosphate, and water.

phosphokinase (fos'fo-ki'nās) kinase.

phospholecithinase (fos'fo-les'i-thin-ās) any of a group of enzymes that split phosphoric acid from lecithin and some other phospholipids; usually designated as phospholipase A, B, C, D, etc., according to bond specificity.

Phospholine (fos'fo-lēn) trademark for a preparation of echothiophate iodide.

phospholipase (fos'fo-lip'ās) any of four enzymes that catalyze the splitting of a phospholipid: *Phospholipase A* occurs in the pancreas, liver, kidney, heart, muscle, and adrenals, and in cobra venom, and hydrolyzes the conversion of lecithin and cephalin to lysolecithin and lysocephalin. *Phospholipase B* has the same occurrence as A and hydrolyzes the splitting of a fatty acid from lysolecithin and lysocephalin. *Phospholipase C* occurs in the pancreas, intestinal mucosa, kidney, liver, and brain, and hydrolyzes the splitting of glycerylphosphorylcholine into a diglyceride and choline phosphate. *Phospholipase D* occurs in the toxin of *Clostridium welchii*, and hydrolyzes the splitting of phosphatidylcholine into choline and phosphatidate. Called also *lecithinase*.

phospholipid (fos'fo-lip'id) any lipid that contains phosphorus, including those with a glycerol backbone (phosphoglycerides and plasmalogens) or a backbone of sphingosine or related substance (sphingomyelins). Phospholipids are the major form of lipid in all cell membranes.

phospholipidemia (fos'fo-lip'i-de'me-ah) the presence of phospholipid in the blood.

phospholipin (fos'fo-lip'in) phospholipid.

phosphomonoesterase (fos'fo-mon'o-es'ter-ās) a phosphatase that catalyzes the hydrolysis of simple esters held by P—O bonds.

phosphomutase (fos'fo-mu'tās) an enzyme of the isomerase class that catalyzes the intermolecular transfer of phosphoryl

groups. **phosphoglycerate p.**, an enzyme that catalyzes the conversion of 2- to 3-phospho-D-glycerate.

phosphonate (fos'fo-nāt) a carbon-phosphate compound. Such compounds may be related to inorganic pyrophosphates in structure but possess stable P—C—P bonds instead of P—O—P bonds; they are stable to both enzymatic and chemical hydrolysis.

phosphonocrosis (fos'fo-ne-kro'sis) necrosis of the jaw bone due to exposure to phosphorus; called also *phossy jaw*.

phosphonium (fos'fo-ne-um) the univalent radical, PH₄, forming compounds analogous to those of ammonium.

phosphonuclease (fos'fo-nu'kle-ās) nucleotidase.

phosphopenia (fos'fo-pe'ne-ah) [*phosphorus* + Gr. *penia* poverty] deficiency of phosphorus in the body.

phosphoprotein (fos'fo-pro'te-in) a conjugated protein, such as the vitellin of egg yolk and casein of milk, in which phosphoric acid is esterified with a hydroxy amino acid, especially with serine.

phosphoptomaine (fos'fo-to'mān) any of a class of toxic compounds found in the blood in phosphorus poisoning.

phosphorated (fos'fo-rāt'ed) charged or combined with phosphorus.

phosphorescence (fos'fo-res'ens) the emission of light without appreciable heat; it is characterized by the emission of absorbed light after a delay and at a considerably longer wavelength than that of the absorbed light. Cf. *fluorescence*.

phosphorescent (fos'fo-res'ent) pertaining to or exhibiting phosphorescence.

phosphoretted (fos'fo-ret'ed) phosphorated.

phosphoribokinase (fos'fo-ri'bo-ki'nās) an enzyme (a transferase) that catalyzes the conversion of ATP and ribose-5-phosphate to ADP and ribose-1,5-diphosphate.

phosphoribosylamine (fos'fo-ri'bo-sil'ah-mēn) an intermediate product in the synthesis of purines formed from phosphoribosylpyrophosphate and glutamine; excessive production is often a factor in primary gout.

phosphoribosylpyrophosphate (fos'fo-ri'bo-sil-pi'ro-fos'fāt) an intermediate in the formation of purines and of purine and pyrimidine nucleotides; abbreviated as PRPP.

phosphoribulokinase (fos'fo-ri'bu-lo-ki'nās) an enzyme (a transferase) that catalyzes the conversion of ATP and D-ribulose 5-phosphate to ADP and D-ribulose 1,5-diphosphate.

phosphorism (fos'fo-rizm) chronic phosphorus poisoning; see under *poisoning*.

phosphorized (fos'fo-rīzd) containing phosphorus.

phosphorolysis (fos'fo-rol'i-sis) cleavage of a chemical bond with simultaneous addition of the elements of phosphoric acid to the residues, as in the splitting of the glycosidic bonds of glycogen catalyzed by the enzyme phosphorylase in carbohydrate metabolism. The reaction is analogous to hydrolysis.

phosphoroscope (fos'fōr-o-skōp) an instrument for measuring phosphorescence.

phosphorous (fos'fo-rus) pertaining to or containing phosphorus.

phosphorpenia (fos'fōr-pe'ne-ah) phosphopenia.

phosphoruria (fos'fōr-u're-ah) [*phosphorus* + Gr. *ouron* urine + -ia] the presence of free phosphorus in the urine.

phosphorus (fos'fō-rus) [Gr. *phōs* light + *phorein* to carry] a nonmetallic, allotropic element; poisonous and highly inflammable; symbol, P; atomic number, 15; atomic weight, 30.974. It occurs in three forms—*white* (yellow), *red*, and *black*. It is obtainable from bones, urine, and especially minerals, such as apatite. Ordinary white phosphorus is the kind once used in medicine, and is very inflammable and exceedingly poisonous. Phosphorus is an essential element in the diet; it is a major component of the mineral phase of bone and is abundant in all tissues, being involved in some form in almost all metabolic processes. Free phosphorus causes a fatty degeneration of the liver and other viscera, and the inhalation of its vapor often leads to necrosis of the lower jaw. Therapeutically, it was once used in rickets, osteomalacia, nervous and cerebral diseases, scrofula, and tuberculosis, as a genital stimulant in sexual exhaustion, and as a tonic in conditions of exhaustion. **amorphous p.**, red p. **black p.**, black lustrous crystals, resembling coal, insoluble in organic solvents, produced by heating white phosphorus under very high pressure. **labeled p.**, radioactive p. **ordinary p.**, white p. **radioactive p.**, ³²P, radiophosphorus. **red p.**, a dark red amorphous powder, which is infusible and insoluble in carbon disulfide, and is not poisonous; called also *amorphous p.* **white p.**, a usually white, sometimes yellow, waxy solid, which is soluble in carbon disulfide, and very inflammable and exceedingly poisonous; it is the form that was once used in medicine in the treatment of various disorders. Called also *ordinary p.* **yellow p.**, white p.

phosphoryl (fos'fōr-il) the trivalent chemical radical ≡P:O.

phosphorylase (fos'fōr'i-lās) an enzyme which, in the presence of inorganic phosphate, is able to catalyze reversibly the phosphorolytic cleavage of the α-1,4-linkage of glycogen to yield glucose-1-phosphate; it occurs in plants and animals. In animals,

it may exist in an inactive form, phosphorylase "b," which when phosphorylated, using ATP in the presence of kinase, becomes active, phosphorylase "a." **polynucleotide p.**, an enzyme that catalyzes the phosphorylation of RNA, freeing a nucleoside diphosphate; called also *polyribonucleotide nucleotidyltransferase*.

phosphorylation (fos'fōr-i-lā'shun) the metabolic process of introducing a phosphate group into an organic molecule. **oxidative p.**, the formation of high-energy phosphate bonds by phosphorylation of ADP to ATP, in which electrons are transferred from the substrate to oxygen in a series of steps: from substrate in succession to NAD, ubiquinone, cytochrome C, and oxygen; it occurs in the mitochondria.

phosphorylisis (fos'fo-ril'i-sis) phosphorolysis.

phosphosugar (fos'fo-shug'ar) a sugar combined with a phosphate; a pentose or hexose phosphate.

phosphotransacetylase (fos'fo-trans'ah-set'i-lās) phosphate acetyltransferase.

phosphotransferase (fos'fo-trans'fer-ās) any of a subclass of enzymes that catalyze the transfer of a phosphate group; see *kinase* (def. 1).

phosphotriose (fos'fo-tri'ōs) a compound consisting of a 3-carbon sugar combined with a phosphate radical. Two such compounds are formed from hexosediphosphate: 3-phosphoglyceraldehyde and 1-phosphodihydroxyacetone. Called also *triose phosphate*.

phosphotungstate (fos'fo-tung'stāt) a salt of phosphotungstic acid.

phosphovitellin (fos'fo-vi-tel'in) phosvitin.

phosphuresis (fos'fu-re'sis) the urinary excretion of phosphorus (phosphates).

phosphuret (fos'fu-ret) phosphide.

phosphuretic (fos'fu-ret'ik) pertaining to, characterized by, or promoting the urinary excretion of phosphorus (phosphates).

phosphuretted (fos'fu-ret'ed) phosphorated.

phosphuria (fos-fu're-ah) phosphaturia.

phosvitin (fos-vi'tin) a phosphoprotein isolated from vitellin in egg yolk; called also *phosphovitellin*.

phot (fōt) photo.

photo- see *photo-*.

photalgia (fo-tal'je-ah) [*phot-* + *-algia*] pain, as in the eye, caused by light.

photallochromy (fo-tal'o-kro'me) [*phot-* + Gr. *allos* different + *chrōma* color] allotropic change with color alteration due to light, as the change of yellow into red phosphorus.

photaugiaphobia (fo-taw'je-ah-fo'be-ah) [Gr. *phōtaugeia* glare + *phobein* to be affrighted by] abnormal intolerance of a glare of light.

photo (fōt) [Gr. *phōs* light] the C.G.S. unit of illumination, being one lumen per square centimeter.

photechy (fo'tek-e) [*phot-* + Gr. *ēchō* echo] the power shown by certain substances of becoming radioactive after having been exposed to radiation.

photerythrous (fo'te-rith'rus) [*phot-* + Gr. *erythros* red] sensitive to the red rays of the spectrum; said of a form of color blindness in which green is not clearly recognized.

photesthesia (fo'tes-the'sis) [*phot-* + Gr. *aisthēsis* perception] sensitiveness to light.

photic (fo'tik) pertaining to light.

photism (fo'tizm) a visual image; a sensation of color associated with a sensation of hearing, taste, smell, or touch.

photo-, phot- [Gr. *phōs*, *phōtos* light] combining form denoting relationship to light.

photoactinic (fo'to-ak-tin'ik) giving off both luminous and actinic rays.

photoactive (fo'to-ak'tiv) reacting chemically to sunlight or ultraviolet radiation.

photoallergic (fo'to-al-ler'jik) pertaining to or characterized by heightened delayed contact-type sensitivity to light.

photoallergy (fo'to-al'er-je) an allergic type of sensitivity to light.

Photobacterium (fo'to-bak-te're-um) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring usually as coccoid or rod-shaped cells, producing luminescent substances, and found on dead fish and other salt-water animals, and in sea water. It includes four species, *P. fisch'eri*, *P. har'veyi*, *P. phosphoreum*, and *P. pierantoni*.

photobacterium (fo'to-bak-te're-um) 1. a bacterium producing luminescent substances. 2. an individual organism of the genus *Photobacterium*.

photobiologic, photobiological (fo'to-bi'o-loj'ik; fo'to-bi'o-loj'i-kal) pertaining to photobiology or to the effect of light on living organisms.

photobiology (fo'to-bi-ol'o-je) [*photo-* + *biology*] that department of biology which deals with the effect of light on living organisms, including the study of photosynthesis.

photobiotic (fo'to-bi-ot'ik) [*photo-* + Gr. *bios* life] living or thriving only in the light; said of certain organisms such as green plants.

photocatalysis (fo'to-kah-tal'i-sis) the promotion or stimulation of a reaction by light.

photocatalyst (fo'to-kat'ah-list) a substance by means of which sunlight is utilized, as chlorophyll in the photosynthesis of carbohydrates by green plants.

photocatalytic (fo'to-kat'ah-lit'ik) promoted or stimulated by light; pertaining to, characterized by, or causing photocatalysis.

photocatalyzer (fo'to-kat'ah-liz'er) photocatalyst.

photoceptor (fo'to-sep'tor) photoreceptor.

photochemical (fo'to-kem'e-kal) pertaining to the chemical properties of light; chemically reactive in the presence of light or other radiation.

photochemistry (fo'to-kem'is-tre) [*photo-* + *chemistry*] the branch of chemistry which deals with the chemical properties or effects of light rays or other radiation.

photochemotherapy (fo'to-ke'mo-ther'ah-pe) treatment by means of drugs (e.g., methoxsalen) that react to ultraviolet radiation or sunlight.

photochromogen (fo'to-kro'mo-jen) [*photo-* + Gr. *chrōma* color + *gennan* to produce] a microorganism whose pigmentation develops as a result of exposure to light, specifically *Mycobacterium kansasii* (pathogenic for man), which is yellow-orange if grown in the light, and almost colorless if grown in the dark.

photochromogenic (fo'to-kro'mo-jen'ik) pertaining to or characterized by photochromogenicity.

photochromogenicity (fo'to-kro'mo-je-nis'i-te) the property of microorganisms of forming pigment consequent to light exposure; induction occurs within a few minutes in the shorter wavelengths of visible light, pigmentation then occurring within 24 hours if conditions permit continued growth.

photocinetic (fo'to-si-net'ik) (*obs.*) photokinetic.

photocoagulation (fo'to-ko-ag'u-la'shun) condensation of protein material by the controlled use of an intense beam of light (e.g., xenon arc light or argon laser); used especially in treatment of retinal detachment and destruction of abnormal retinal vessels, or of intraocular tumor masses.

photoconvulsive (fo'to-kon-vul'siv) photoparoxysmal.

photocutaneous (fo'to-ku-ta'ne-us) relating to skin manifestations in the production of which light is an important factor.

photodermatitis (fo'to-der'mah-ti'tis) an abnormal state of the skin in which light is an important causative factor.

photodermatosis (fo'to-der'mah-to'sis) a morbid condition produced in the skin by exposure to light.

photodromy (fo-to'dro-me) [*photo-* + Gr. *dromos* running] the phenomenon of moving toward (*positive p.*) or away from (*negative p.*) light; as in the case of particles in suspension.

photodynamic (fo'to-di-nam'ik) [*photo-* + Gr. *dynamis* power] powerful in the light; said of the action exerted by fluorescent substances in the light.

photodynamics (fo'to-di-nam'iks) the science of the activating effects of light.

photodynesis (fo'to-di-ne'sis) the initiation of cytoplasmic streaming (cyclosis) in plant cells by visible light.

photodynia (fo'to-din'e-ah) [*photo-* + Gr. *odynē* pain] photalgia.

photodysphoria (fo'to-dis-fo're-ah) [*photo-* + Gr. *dysphoria* distress] intolerance of light; photophobia.

photoelectric (fo'to-e-lek'trik) pertaining to the electric effects of light or other radiation.

photoelectron (fo'to-e-lek'tron) an electron emitted from a metallic surface when the latter is illuminated with light, especially with light of short wavelength.

photoelement (fo'to-el'e-ment) a galvanic element which is decomposed under the influence of light and produces photoelectricity.

photoerythema (fo'to-er'i-the'mah) erythema due to exposure to light.

photoesthetic (fo'to-es-thet'ik) [*photo-* + Gr. *aisthēsis* perception] pertaining to or having the sensation of light.

photofluorogram (fo'to-floo-or'o-gram) the film produced in photofluorography.

photofluorography (fo'to-floo-or-og'rah-fe) the photographic recording of fluoroscopic images on small films, using a fast lens; a procedure used in mass roentgenography of the chest. Called also *fluororoentgenography*, and sometimes *abreugraphy*, in honor of Manoel de Abreu, Brazilian physician, who discovered the technique.

photofluoroscope (fo'to-floo-or'o-skōp) a form of fluoroscope used in making either observations or photographs by means of roentgen rays.

photogastroscope (fo'to-gas'tro-skōp) [*photo-* + Gr. *gaster* stomach + *skopein* to examine] an apparatus for photographing the interior of the stomach.

photogene (fo'to-jen) after-image.

photogenic (fo'to-jen'ik) 1. produced by light, as photogenic epilepsy. 2. producing or emitting light; phosphorescent.

photogram (fo'to-gram) [*photo-* + Gr. *gramma* mark] the photographic record of a physiologic experiment.

photography (fo-tog'rah-fe) the process of making images on a sensitized material by exposure to light or other radiant energy. **Kirlian p.**, the taking of photographs of ordinarily invisible emanations (an aura or halo) from living organisms, plant and animal, that change in color and size. The object under study, a leaf, fingertip, etc., is placed on a piece of photographic paper or negative film on a metal plate in which a generator induces an electromagnetic field in a dark enclosure.

photohalide (fo'to-hal'id) any halogen salt that is sensitive to light.

photohematachometer (fo'to-hem'ah-tah-kom'ē-ter) [*photo-* + Gr. *haima* blood + *tachys* swift + *metron* measure] a device for making a photographic record of the speed of the blood current.

photohenric (fo'to-hen'rik) [*photo-* + *henry*] denoting a change in inductive capacity due to the action of light.

photohmik (fo-to'mik) denoting a change in electric resistance produced by light.

photoinactivation (fo'to-in-ak'ti-va'shun) inactivation, as of complement, by light.

photokinetic (fo'to-ki-net'ik) [*photo-* + Gr. *kinētikos* pertaining to motion] moving in response to the stimulus of light.

photokymograph (fo'to-ki'mo-graf) a camera with a moving film for recording movements as of the string in a string galvanometer; called also a *recording camera*.

photolethal (fo'to-le'thal) pertaining to the lethal or destructive action of light.

photology (fo-to'l'o-je) [*photo-* + *-logy*] the branch of physics which treats of light.

photoluminescence (fo'to-lu'mi-nes'ens) the quality of being luminescent after being exposed to light.

photolysis (fo-to'l'i-sis) 1. chemical decomposition by the action of light. 2. lysis or solution of cells under the influence of light.

photolyte (fo'to-lit) [*photo-* + Gr. *lyein* to dissolve] any substance decomposable by the action of light.

photolytic (fo'to-lit'ik) decomposed by light or radiant energy.

photoma (fo-to'mah) a flash of light sparks or color with no objective basis.

photomagnetism (fo'to-mag'nē-tizm) magnetism induced by the action of light.

photometer (fo-tom'ē-ter) [*photo-* + Gr. *metron* measure] a device for measuring the intensity of light. **flame p.**, an instrument for analyzing the light emitted by a substance in a flame; commonly used for determination of sodium, potassium, lithium, and calcium in biological materials. **flicker p.**, an instrument in which the frequency of a flickering light can be controlled, for use in performing the flicker test; called also *flicker meter*. **Förster's p.**, photoptometer.

photomethemoglobin (fo'to-met-he'mo-glo-bin) a compound formed by the action of light on methemoglobin.

photometry (fo-tom'ē-tre) [*photo-* + Gr. *metron* measure] the measurement of light. **flicker p.**, see *flicker test*, under *tests*.

photomicrograph (fo'to-mi'kro-graf) [*photo-* + Gr. *mikros* small + *graphein* to record] the photograph of a minute object as seen under the light microscope, produced by ordinary photographic methods. Cf. *microphotograph*.

photomicrography (fo'to-mi-krog'rah-fe) the production of photomicrographs.

photomicroscope (fo'to-mi'kro-skōp) a microscope and camera combined for making photomicrographs.

photomicroscopy (fo'to-mi-kros'ko-pe) photography of enlarged pictures of minute objects with the photomicroscope.

photomorphogenesis (fo'to-mor'fo-jen'ē-sis) the regulation of form by light, as in the induction of flowering in plants by a minimal period of daylight.

photomyoclonic (fo'to-mi'o-klon'ik) photomyogenic.

photomyogenic (fo'to-mi'o-jen'ik) photomyoclonic; denoting an electroencephalographic response to photic stimulation (brief flashes of light) marked by myoclonus of the facial muscles.

photon (fo'ton) a particle (quantum) of radiant energy.

photocnia (fo-ton'se-ah) [*photo-* + Gr. *onkos* mass] swelling due to the action of light.

photone (fo'tōn) a visualization or hallucination of light.

photo-onycholysis (fo'to-o'nīk-ol'i-sis) onycholysis resulting from exposure to sunlight or ultraviolet rays, as after treatment with the tetracyclines or methoxypsoralen.

photo-ophthalmia (fo'to-of-thal'me-ah) [*photo-* + *ophthalmia*] ophthalmia caused by intense light, such as electric light, rays of welding arc, or reflection from snow (ophthalmia nivalis). **flash p.**, ophthalmia produced by exposure to a welding arc.

photoparoxysmal (fo'to-par'oks-is'mal) photoconvulsive; denoting an abnormal electroencephalographic response to photic

stimulation (brief flashes of light), marked by diffuse paroxysmal discharge recorded as spike-wave complexes; the response may be accompanied by minor seizures.

photopathy (fo-top'ah-the) [*photo-* + Gr. *pathos* affection] a pathological effect produced by light.

photoperceptive (fo'to-per-sep'tiv) [*photo-* + *perceptive*] able to perceive light.

photoperiod (fo'to-pēr'e-od) the period of time per day that an organism is exposed to daylight or to artificial light.

photoperiodic (fo'to-pēr'e-od'ik) pertaining to the photoperiod or to photoperiodism.

photoperiodicity (fo'to-pe're-o-dis'i-te) the regularly recurring changes in the relation of light and darkness in various areas of the world, noted in the annual passage of the earth about the sun; applied also to rhythm of certain biological phenomena as determined by those changes.

photoperiodism (fo'to-pe're-od-izm) the physiologic and behavioral reactions brought about in organisms by changes in the duration of daylight and darkness in a 24-hour period. Called also *photoperiodicity*.

photopharmacology (fo'to-far'mah-kol'o-je) [*photo-* + *pharmacology*] the study of the effects of light and other radiations on drugs and on their pharmacological action.

photophilic (fo'to-fil'ik) [*photo-* + Gr. *philein* to love] thriving in light; said of organisms.

photophobia (fo'to-fō'be-ah) [*photo-* + Gr. *phobein* to be frightened by] abnormal visual intolerance of light.

photophobic (fo'to-fō'bik) pertaining to or characterized by photophobia.

photophosphorylation (fo'to-fos'for-i-la'shun) the formation of ATP occurring in chloroplasts during photosynthesis; it is analogous to oxidative phosphorylation. **cyclic p.**, that in which ATP formation is coupled with liberation of the energy arising from a cyclic flow of electrons from the ferredoxin-reducing system back to the chlorophyll.

photophthalmia (fo'to-fal'me-ah) photo-ophthalmia.

photopia (fo-to'pe-ah) [*photo-* + Gr. *ōpē* sight + *-ia*] day vision; see also *light adaptation*.

photopic (fo-top'ik) pertaining to vision in the light; said of the eye which has become light-adapted.

photoproduct (fo'to-prod'ukt) a substance synthesized in the body by the action of light.

photoprotection (fo'to-pro-tek'shun) the protection of some cells by exposure to light in the near ultraviolet light range prior to exposure to light in the far ultraviolet range.

photopsia (fo-top'se-ah) [*photo-* + Gr. *opsis* vision + *-ia*] an appearance as of sparks or flashes due to retinal irritation.

photopsin (fo-top'sin) the protein moiety of the cones of the retina that combines with retinal to form photochemical pigments.

photopsy (fo-top'se) photopsia.

photoptarmosis (fo'to-tar-mō'sis) [*photo-* + Gr. *ptarmos* sneezing + *-osis*] sneezing caused by the influence of light.

photometer (fo'top-tom'ē-ter) [*photo-* + Gr. *optos* seen + *metron* measure] a device for testing the acuity of vision by determining the smallest amount of light that will render an object just visible.

photometry (fo'top-tom'ē-tre) measurement of light perception.

photoradiometer (fo'to-ra'de-om'ē-ter) an apparatus for measuring the quantity of roentgen rays penetrating any given surface.

photochemical reaction (fo'to-re-ak'shun) a chemical reaction produced by the influence of light; a photochemical reaction.

photoreactivation (fo'to-re-ak'ti-va'shun) the reversal of the biological effects of ultraviolet radiation on cells by subsequent exposure to visible light; called also *photoreversal*.

photoreception (fo'to-re-sep'shun) [Gr. *phōs* light + L. *receptio*, from *recipere* to receive] the process of detecting radiant energy, usually of wavelengths between 3900 and 7700 Å, being the range of visible light.

photoreceptive (fo'to-re-sep'tiv) sensitive to stimulation by light.

photoreceptor (fo'to-re-sep'tor) [*photo-* + *receptor*] a nerve end-organ or receptor sensitive to light.

photorespiration (fo'to-res'pi-ra'shun) a process carried out by certain plants, occurring as a result of oxidation of glycolic acid (a product of photosynthesis released by chloroplasts) by glycolic acid oxidase, an enzyme present in the glyoxysomes, ultimately causing an increased output of carbon dioxide.

photoretinitis (fo'to-ret'i-ni'tis) inflammation of the retina due to exposure to intense light, which may result in transient central scotoma.

photoreversal (fo'to-re-ver'sal) photoreactivation.

photoscan (fo'to-skan) a two-dimensional representation (map) of the gamma rays emitted by a radioisotope, revealing its varying concentration in a body tissue, differing only from a scintiscan in

that the printout mechanism is a light source exposing a photographic film.

photoscanner (fo'to-skan'ner) the system of equipment used in the making of a photoscan.

photoscope (fo'to-skōp) [*photo-* + Gr. *skopein* to examine] a kind of fluoroscope.

photoscopy (fo-tos'ko-pe) [*photo-* + Gr. *skopein* to examine] skiascopy.

photosensitive (fo'to-sen'si-tiv) exhibiting an abnormally heightened reactivity to sunlight.

photosensitivity (fo'to-sen'si-tiv'i-te) abnormal reactivity of the skin to sunlight.

photosensitization (fo'to-sen'si-ti-za'shun) the development of abnormally heightened reactivity of the skin to sunlight. **contactant p.**, cutaneous sensitization produced by exposure to a contactant sensitizer followed by exposure to light, resulting in photocontact dermatitis.

photosensitize (fo'to-sen'si-tiz) [*photo-* + *sensitize*] to sensitize a substance or an organism, cell, or tissue to the influence of light.

photostable (fo'to-sta'b'l) unchanged by the influence of light.

photostethoscope (fo'to-steth'o-skōp) a lamp which transforms sounds amplified by a microphone into pulsations of light; used for recording the heartbeats of the fetus.

photosynthesis (fo'to-sin'thē-sis) [*photo-* + Gr. *synthesis* putting together] a chemical combination caused by the action of light; specifically the formation of carbohydrates (with release of molecular oxygen) from carbon dioxide and water in the chlorophyll tissue of plants and blue-green algae under the influence of light. In bacteria, photosynthesis employs hydrogen sulfide, molecular hydrogen, and other reduced compounds in place of water, so that molecular oxygen is not released. See also *light reaction* and *dark reaction*, under *reaction*. Cf. *chemosynthesis*.

phototaxis (fo'to-tak'sis) [*photo-* + Gr. *taxis* arrangement] the movement of cells and microorganisms under the influence of light, which may be toward (*positive p.*) or away (*negative p.*) from the source of light stimulus; called also *heliotaxis*.

phototherapy (fo'to-ther'ah-pe) [*photo-* + *therapy*] the treatment of disease, e.g. bilirubinemia, by exposure to light, especially by variously concentrated light rays.

photothermal (fo'to-ther'mal) pertaining to the heat produced by radiant energy.

photothermy (fo'to-ther'me) [*photo-* + Gr. *thermē* heat] the heat effects produced by radiant energy.

phototimer (fo'to-tim'er) a timer used in photography and radiography to give a desired interval for exposure.

phototonus (fo-tot'o-nus) [*photo-* + Gr. *tonos* tension] an irritable state of protoplasm due to the influence of light.

phototoxic (fo'to-tok'sik) pertaining to or characterized by heightening of the sunburn response to ultraviolet light, without any allergic effect (immune response) being involved; see under *dermatitis*.

phototoxicity (fo'tō-tok-sis'i-te) the quality of being phototoxic.

phototrophic (fo'to-trof'ik) [*photo-* + Gr. *trophē* nourishment] capable of deriving energy from light, as in certain green plants and bacteria.

phototropic (fo'to-trop'ik) exhibiting phototropism.

phototropism (fo-tot'ro-pizm) [*photo-* + Gr. *tropos* a turning] 1. the tendency of an organism to turn or move toward (*positive p.*) or away from (*negative p.*) light. 2. change of color produced in a substance by the action of light.

phototurbidometric (fo'to-tur-bid'o-met'rik) pertaining to the determination of the turbidity of a solution by optic methods; used in study of the activity of various enzymes.

photoxylol (fo-tok'si-lin) [*photo-* + Gr. *xylon* wood] a nitrocellulose from wood pulp used in preparing a collodion-like film; employed in microscopy and minor surgery.

photonreflectometer (fo'tron-re'flek-tom'ē-ter) an apparatus for measuring turbidity.

photuria (fo-tu're-ah) [*photo-* + Gr. *ouron* urine + *-ia*] the excretion of urine having a luminous appearance.

Phoxinus laevis (fok'si-nus le'vis) a minnow used to demonstrate the presence of chromatophore-stimulating hormone. When an extract of posterior pituitary is injected into the minnow, a red coloration appears at the point of attachment of the thoracic, abdominal, and anal fins.

Phragmidiothrix (frag-mid'e-o-thriks') a genus of microorganisms of the family Crenotrichaceae, order Chlamydobacteriales, made up of small disk-shaped cells occurring in attached trichomes which are articulated and unbranched, and are enclosed in extremely delicate, colorless sheaths with no deposits of iron or magnesium compounds. The type species is *P. multisepta*.

phragmoplast (frag'mo-plast) [Gr. *phragmos* inclosure + *plastos* formed] the barrel-shaped spindle formed in the equatorial plane during mitosis of plant cells; it precedes the formation of the cell plate.

phren (fren) [Gr. *phrēn*] 1. the diaphragm. 2. the mind, as seat of the intellect, or the heart, as seat of the passions.

phren- (fren) [Gr. *phrēn* diaphragm, mind] a combining form denoting relationship to the diaphragm or to the mind.

phrenalgia (fre-nal'je-ah) [*phren-* + *-algia*] 1. pain in the diaphragm. 2. psychalgia.

phrenectomy (fre-nek'to-me) the removal of all or a part of the diaphragm.

phrenemphraxis (fren'em-frak'sis) [*phrenic* nerve + Gr. *emphraxis* stoppage] the operation of crushing the phrenic nerve; phrenicotrpsy.

phrenetic (frē-net'ik) 1. maniacal. 2. a maniac.

phrenic (fren'ik) [L. *phrenicus*; Gr. *phrēn* mind; diaphragm] 1. pertaining to the diaphragm; diaphragmatic. 2. pertaining to the mind.

phrenicectomized (fren'i-sek'to-mizd) having the phrenic nerve excised or resected.

phrenicectomy (fren'i-sek'to-me) [*phrenic* nerve + Gr. *ektomē* excision] resection of the phrenic nerve; phreniconeurectomy.

phreniclasia, phreniclasis (fren'i-kla'ze-ah; fren'i-kla'sis) [*phrenic* nerve + Gr. *klasis* crushing] crushing of the phrenic nerve with a clamp.

phrenicoexairesis (fren'i-ko-ek-si're-sis) phrenicoexeresis.

phrenicoexeresis (fren'i-ko-ek-ser'ē-sis) [*phrenic* nerve + Gr. *exairesis* a taking out] avulsion of the phrenic nerve.

phreniconeurectomy (fren'i-ko-nu-rek'to-me) [*phrenic* + Gr. *neuron* nerve + *ektomē* excision] excision of a whole or a portion of the phrenic nerve; phrenicectomy.

phrenicotomy (fren'i-ko'to-me) [*phrenic* nerve + Gr. *tomē* a cutting] surgical division of the phrenic nerve and its accessory for the purpose of causing one-sided paralysis of the diaphragm, which then becomes pushed up by the viscera so as to compress a diseased lung.

phrenicotrpsy (fren'i-ko-trip'se) [*phrenic* nerve + Gr. *tripsis* a crushing] crushing of the phrenic nerve; phrenemphraxis.

phrenitis (frē-ni'tis) [*phren-* + *-itis*] 1. delirium or frenzy. 2. inflammation of the diaphragm; diaphragmitis.

phrenocardia (fren'o-ka'r'de-ah) [*phren-* + Gr. *kardia* heart] neurocirculatory asthenia.

phrenocolic (fren'o-kol'ik) pertaining to or connecting the diaphragm and colon.

phrenocolopexy (fren'o-ko'lo-pek-se) [*phren-* + Gr. *kolon* colon + *pēxis* fixation] operative fixation of the colon to the diaphragm.

phrenodynia (fren'o-din'e-ah) [*phren-* + Gr. *odynē* pain] pain in the diaphragm.

phrenogastric (fren'o-gas'trik) pertaining to the diaphragm and the stomach.

phrenoglottic (fren'o-glōt'ik) pertaining to the diaphragm and the glottis.

phrenograph (fren'o-graf) [*phren-* + Gr. *graphein* to write] an apparatus for recording the movements of the diaphragm.

phrenohepatic (fren'o-hē-pat'ik) [*phren-* + Gr. *hēpar* liver] pertaining to the diaphragm and the liver.

phrenologist (frē-nol'o-jist) a person who practices phrenology.

phrenology (frē-nol'o-je) [*phren-* + *-logy*] the study of the mind and character from the shape of the skull.

phrenopathy (frē-nop'ah-the) [*phren-* + Gr. *pathos* disease] (*obs.*) any mental disease or disorder.

phrenopericarditis (fren'o-per'i-kar-di'tis) [*phren-* + *pericarditis*] a condition in which the apex of the heart is attached to the diaphragm by adhesions.

phrenoplegia (fren'o-ple'je-ah) [*phren-* + Gr. *plēgē* stroke] 1. a sudden attack of mental disorder. 2. loss or paralysis of the mental faculties. 3. paralysis of the diaphragm.

phrenoptosis (fren'op-to'sis) [*phren-* + Gr. *ptōsis* falling] downward displacement of the diaphragm.

phrenosin (fren'o-sin) a cerebroside, probably C₄₈H₉₃O₉N, obtained from brain substance; it yields on hydrolysis galactose, sphingosine, and cerebronic acid.

phrenospasm (fren'o-spazm) [*phren-* + *spasm*] spasm of the diaphragm.

phrenosplenic (fren'o-splen'ik) pertaining to or connecting the diaphragm and the spleen.

phrenosterol (fren'o-ste'rol) a sterol from brain substance.

phrenotropic (fren'o-trop'ik) [*phreno-* + Gr. *tropē* a turn, turning] exerting its principal effect upon the mind.

phrictopathic (frik'to-path'ik) [Gr. *phrikto* producing a shudder + *pathos* disease] causing a shudder; a term applied to a peculiar sensation caused by irritating a hysterical anesthetic area during recovery.

phronema (fro-ne'mah) [Gr. *phronēma* mind] that portion of the cortex of the brain which is occupied by thought centers or association centers.

phrynin (fri'nin) a poisonous substance obtainable from the skin and secretions of various toads; its properties resemble those of digitalin.

phrynoderma (frin'o-der'mah) [Gr. *phrynē* toad + *derma* skin] a papular dry skin eruption (follicular hyperkeratosis), frequently accompanied by mild neuritic and eye symptoms, seen in East Indian laborers fed on a diet of maize meal; probably due to deficiency of vitamin A or of essential fatty acids. Called also *toadskin*.

phrynolysin (fri-nol'i-sin) [Gr. *phrynē* toad + *lysis* dissolution] the lysin or toxin from the venom of the fire toad (*Bombinator igneus*).

phthalate (thal'at) a salt of phthalic acid.

phthalein (thal'e-in) any one of a series of coloring matters formed by the condensation of phthalic anhydride with the phenols; some of them have a purgative action. See *phenolphthalein*. **alpha-naphthol p.**, an indicator used in the determination of hydrogen ion concentration; it has a pH range of 9.3-10.5. **orthocresol p.**, an indicator used in the determination of hydrogen ion concentration; it has a pH range of 8.2-9.8.

phthaleinometer (thal'e-in-om'ē-ter) an instrument for use in performing phenolsulfonphthalein tests.

phthalin (thal'in) any one of a series of colorless compounds formed by reduction of phthalein.

phthalylsulfacetamide (thal'il-sul'fah-set'ah-mid) [USP] chemical name: 2-[[[4-(acetaminosulfonyl)phenyl]amino]carbonyl]benzoic acid. A sulfonamide, C₁₆H₁₄N₂O₆S, occurring as white or creamy white crystals or a crystalline powder; used as an intestinal antibacterial, administered orally. Called also *phthalylsulfonazole*.

phthalylsulfathiazole (thal'il-sul'fah-thi'ah-zōl) [NF] chemical name: 2-[[[4-(2-thiazolylamino)sulfonyl]phenyl]amino]carbonyl]benzoic acid. A sulfonamide, C₁₇H₁₃N₃O₅S₂, occurring as a white or faintly yellowish white, crystalline powder; used as an intestinal antibacterial, administered orally.

phthalylsulfonazole (thal'il-sul-fon'ah-zōl) phthalylsulfacetamide.

phthinoid (thi'noid) resembling phthisis; consumptive; tuberculous.

phthiocerol (thi'o-se'rol) an alcohol, C₃₅H₇₂O₃, isolated from the wax of human tubercle bacilli.

phthiocol (thi'o-kol) chemical name: 2-hydroxy-3-methyl-1,4-naphthoquinone. An antibiotic substance produced by *Mycobacterium tuberculosis* and having some vitamin K activity.

phthiriasis (thir-i'ah-sis) [Gr. *phtheiris*, from *phtheir* louse] infestation with crab or pubic lice; see *pediculosis*. **p. inguina'lis, pubic p.**, infestation with lice of the species *Phthirus pubis*; it is usually limited to the pubic hairs but may occur on other areas, as the eyelashes.

Phthirus (thir'us) [Gr. *phtheir* louse] a genus of sucking lice of the family Pediculidae, order Anoplura, which feed on human blood. **P. pubis**, the pubic or crab louse, which infests the hair of the pubic region and which is sometimes found in other hairy areas of the body, such as the eyebrows, eyelashes, and axillae.

Phthirus pubis.

phthisic (tiz'ik) [Gr. *phthisikos*] 1. affected with phthisis (tuberculosis). 2. a former name for asthma.

phthisical (tiz'ē-kal) affected with phthisis, or of the nature of phthisis (tuberculosis).

phthisicky (tiz'e-ke) asthmatic.

phthisiogenesis (tiz'e-o-jen'ē-sis) the development of phthisis (tuberculosis).

phthisiogenetic (tiz'e-o-jē-net'ik) causing or pertaining to the causation of phthisis (tuberculosis).

phthisiogenic (tiz'e-o-jen'ik) phthisiogenetic.

phthisiologist (tiz'e-ol'o-jist) former name for a physician who specializes in pulmonary tuberculosis.

phthisiology (tiz'e-ol'o-je) [*phthisis* + *-logy*] the sum of knowledge relating to tuberculosis.

phthisiotherapeutical (tiz'e-o-ther'ah-pu'tē-kal) of or relating to the treatment of phthisis (tuberculosis).

phthisiotherapeutics (tiz'e-o-ther'ah-pu'tiks) phthisiotherapy.

phthisiotherapeutist, phthisiotherapist (tiz'e-o-ther'ah-pu'tist, tiz'e-o-ther'ah-pist) (*obs.*) one who makes a specialty of the treatment of phthisis (tuberculosis).

phthiotherapy (tiz'e-o-ther'ah-pe) [*phthisis* + *therapy*] the treatment of phthisis.

phthisis (ti'sis) [Gr. *phthisis*, from *phthein* to decay] 1. a wasting away of the body or a part of the body. 2. tuberculosis especially of the lungs. **abdominal p.**, tuberculosis of the intestines and mesenteric glands. **aneurysmal p.**, the clinical symptoms of chest pain and cough, at first dry and later productive, sometimes with hemoptysis, produced by aneurysm of the ascending aorta and the aortic arch. **bacillary p.**, that due to *Mycobacterium tuberculosis*. **black p.**, pneumoconiosis of coal workers. **p. bul/bi**, shrinkage and wasting of the eyeball. **colliers' p.**, pneumoconiosis of coal workers. **p. cor'neae**, the shriveling and disappearance of the cornea after suppurative keratitis. **diabetic p.**, caseous tuberculous bronchopneumonia in diabetic patients. **dorsal p.**, tuberculosis of the spine. **essential p.** (of the eye), ophthalmomalacia. **fibroid p.**, chronic tuberculosis in which fibrous tissue is developed in the lung; fibrotuberculosis. **flax dressers' p.**, a form of pneumoconiosis occurring in flax dressers. **glandular p.**, tuberculous lymphadenitis. **grinders' p.**, a combination of tuberculosis and pneumoconiosis occurring among grinders. **hepatic p.**, tuberculosis of the liver. **laryngeal p.**, tuberculosis of the larynx. **Mediterranean p.**, brucellosis. **miner's p.**, pneumoconiosis of coal workers. **p. nodo'sa**, acute military tuberculosis. **nonbacillary p.**, presumptive tuberculosis without demonstration of *Mycobacterium tuberculosis*. **ocular p.**, ophthalmomalacia. **p. pancreat'ica**, a wasted condition associated with disease of the pancreas. **potters' p.**, a combination of tuberculosis and silicosis of the lungs in potters. **pulmonary p.**, tuberculosis of the lung. **p. rena'lis**, tuberculosis of the kidney. **stone cutters' p.**, tuberculosis and pneumoconiosis of stone cutters. **p. ventric'uli** (*obs.*), atrophy of the mucous membrane of the stomach and alimentary canal.

phyco- [Gr. *phykos* seaweed] a combining form denoting relationship to seaweed or algae.

phycobilin (fi'ko-bil'in) any of a group of protein-linked pigments including phycoerythrin (red pigment) and phycocyanin (blue pigment), which are found in the red and the blue-green algae.

phycochrome (fi'ko-kro'm) [*phyco-* + Gr. *chrōma* color] 1. a blue-green pigment from various fresh-water algae of the simplest type. 2. any of the algae that contain both chlorophyll and a blue pigment; the blue-green algae.

phycochromoprotein (fi'ko-kro'mo-pro'te-in) a colored, conjugated protein, with respiratory function, found in various seaweeds.

phycocyanin (fi'ko-si'an-in) a blue chromoprotein found in blue-green algae.

phycocyanogen (fi'ko-si-an'o-jen) a blue pigment derived from blue-green algae.

phycoerythrin (fi'ko-er'i-thrin) a red chromoprotein found in red algae.

phycologist (fi-kol'o-jist) a specialist in phycology; called also *algologist*.

phycology (fi-kol'o-je) [*phyco-* + *-logy*] the scientific study of algae; algology.

Phycomycetae (fi'ko-mi-se'te) Phycomycetes.

Phycomycetes (fi'ko-mi-se'tēz) [*phyco-* + Gr. *mykēs* fungus] a group of fungi comprising the common water, leaf, and bread molds, and including the classes Chytridiomycetes, Oomycetes, and Zygomycetes. In some classifications, considered to be a class of the Eumycetes, with the subordinate categories as subclasses.

phycomycetosis (fi'ko-mi-sē-to'sis) infection with fungi of the group Phycomycetes; see *phycomycosis*. **subcutaneous p.**, subcutaneous phycomycosis.

phycomycetous (fi'ko-mi-se'tus) of or pertaining to fungi of the group Phycomycetes.

phycomycosis (fi'ko-mi-ko'sis) any of a group of acute mycoses caused by fungi of the group Phycomycetes, including species of *Abidia*, *Mucor*, *Rhizopus*, *Hyphomyces*, *Basidiobolus*, *Entomophthora*, and *Mortierella*; it may involve the sinuses, orbital tissue, central nervous system, lungs, gastrointestinal tract, skin, and subcutaneous tissue. Except in the subcutaneous form, it is characterized by inflammation and vascular thrombosis of the blood vessels of the organ involved. Most infections occur in diabetics; other predisposing factors include primary debilitating disease and therapy with antimetabolites, steroids, or antibiotics. **cerebral p.**, a form affecting the brain, due to extension of rhinophycomycosis through the ophthalmic and carotid arteries, resulting in orbital involvement, infarction of the brain, and meningitis; it usually develops in acidotic diabetics. **p. entomoph'thorae**, rhinophycomycosis. **subcutaneous p.**, a chronic infection caused by *Basidiobolus haptosporus*, in which gradually enlarging nodules (eosinophilic granulomas) form in the subcutaneous tissues of the arms, chest, and trunk. Multiple purulent ulcers may develop. It occurs in Indonesia, central Africa, and India, affecting chiefly children and adolescents. Unlike the other phycomycoses, it is unassociated with any apparent predisposing factors.

phygogalactic (fi'go-gah-lak'tik) [Gr. *pheugein* to avoid + *gala* milk] checking the secretion of milk; galactophygous.

phyla (fi'lah) plural of *phylum*.

phylacagogic (fi-lak'ah-goj'ik) [Gr. *phylakē* a guarding + *agōgos* leading] inducing the formation of phylaxins or protective antibodies.

phylactic (fi-lak'tik) [Gr. *phylaktikos* preservative] serving to protect; pertaining to or producing phylaxis.

phylactotransfusion (fi-lak'to-trans-fu'zhun) immunotransfusion.

phylaxiology (fi-lak'se-ol'o-je) [Gr. *phylaxis* a guarding + *-logy*] the study and practice of phylaxis or protection against infection.

phylaxis (fi-lak'sis) [Gr. "a guarding"] protection against infection; the bodily defense against infection.

phyletic (fi-let'ik) pertaining to a phylum, or to phylogeny.

Phyllanthus (fil-lan'thus) a genus of plants. **P. eng'leri**, a plant of northern Rhodesia known as suicide plant; when the bark or root is smoked it causes death.

phyllidea (fil-id'e-ah) bothridium.

phyllo- [Gr. *phyllon* leaf] a combining form denoting relationship to leaves.

phyllchlorin (fil'o-klo'rin) a compound of chlorophyll and protein.

phyllode (fil'ode) [Gr. *phyllon* leaf + *eidos* form] resembling a leaf; a term applied to tumors which on section show a lobulated, leaflike appearance.

phyloerythrin (fil'o-er'i-thrin) a derivative of chlorophyll formed in the intestinal canal of ruminant animals and found also in their bile.

phyllolith (fil'o-lith) a small concretion 100 to 200 μ in diameter formed of concentric strata, occurring in cavities in renal tuberculous.

phyllporphyrin (fil'o-por'fi-rin) a compound, $C_{32}H_{34}N_4O_2$, from chlorophyll, very similar to hematoporphyrin.

phyllopyrrole (fil'o-pir'ol) trimethylethylpyrrole, $(CH_3)_3C_4-(NH)C_2H_5$, from bile pigments.

phyllouquinone (fil'o-kwin'ōn) phytonadione.

phyloxanthine (fil'o-san'thin) a compound formed together with phyllocyanic acid by treating chlorophyll with hydrochloric acid.

phylobiology (fi'lo-bi-ol'o-je) [Gr. *phylon* tribe + *biology*] the application of scientific methods in the field of human behavior.

phylogenesis (fi'lo-jen'ē-sis) phylogeny.

phylogenetic (fi'lo-jē-net'ik) phylogenetic.

phylogenetic (fi-lo-jen'ik) pertaining to phylogeny.

phylogeny (fi-loj'ē-ne) [Gr. *phylon* tribe + *genesis* generation] the complete developmental history of a race or group of animals. Cf. *ontogeny*.

phylum (fi'lum), pl. *phyla* [L.; Gr. *phylon* race] a primary or main division of the animal or of the vegetable kingdom, grouping organisms which are assumed to have a common ancestry.

phyma (fi'mah), pl. *phymata* [Gr. "a growth"] any skin tumor or cutaneous tubercle, especially a circumscribed swelling on the skin, larger than a tubercle, and produced by exudation into the subcutaneous tissue or the corium.

phymata (fi'mah-tah) [Gr.] plural of *phyma*.

phymatology (fi'mah-tol'o-je) [Gr. *phyma* a growth + *-logy*] the study of tumors, now called oncology.

phymatorhusin (fi'mah-to-roo'sin) [Gr. *phyma* a growth + *rhusis* flow] a dark pigment from hair and melanotic tumors; it is a form of melanin.

phymatorrhysin (fi'mah-to-ris'in) phymatorhusin.

Physalia (fi-sa'le-ah) a genus of hydrozoans, the Portuguese man-of-war, characterized by a large, purple air sac that allows them to float on the surface of the water, and from which many long tentacles of stinging polyps hang. The tentacles are equipped with nematocysts that are able to penetrate the skin of man, causing intense pain; paralysis sometimes results from numerous stings.

physalides (fi-sal'i-dēz) plural of *physalis*.

physaliferous (fis'ah-lif'er-us) [*physalis* + L. *ferre* to bear] physaliphorous.

physaliform (fi-sal'i-form) [*physalis* + L. *forma* shape] resembling bubbles.

physaliphore (fi-sal'i-för) [*physalis* + Gr. *phorein* to carry] a globular cavity in certain brood cells of cancers; more correctly, the cell itself which contains such a cavity.

physaliphorous (fis'ah-lif'o-rus) [*physalis* + Gr. *phoros* bearing] containing bubbles or vacuoles.

physalis (fis'ah-lis), pl. *physalides* [Gr. *physallis* bubble] 1. a large brood cell from a cancer. 2. a spherical cavity found in certain cells, such as the large brood cells of cancers or the giant cells of sarcoma.

physallization (fis'al-i-za'shun) [Gr. *physallis* bubble] the for-

mation of a permanent froth when a liquid is shaken together with a gas.

Physaloptera (fiz'ah-lop/ter-ah) [Gr. *physallis* bubble + *pteron* wing] a genus of nematode worms of the family Spiruroidea, found in the stomach and intestine of man and other vertebrates. **P. caucasica**, a species occurring in the Caucasus and in Africa. **P. mor'dens**, *P. caucasica*. **P. ra'ra**, a species found in the stomach of dogs. **P. trunca'ta**, a species found in the proventriculus of chickens and pheasants.

physalopteriasis (fiz'ah-lop-ter-i'ah-sis) infection with *Physaloptera*.

physeal (fiz'e-al) pertaining to growth, or to the segment of tubular bone which is concerned mainly with growth (the physis).

physiatrician (fiz'e-ah-trish'an) physiatrist.

physiatrics (fiz'e-at'riks) [*physio*- + Gr. *iatrikē* surgery, medicine] that branch of medicine which deals with the diagnosis, treatment, and prevention of disease with the aid of physical agents, such as light, heat, cold, water, and electricity, or with mechanical apparatus; physical medicine.

physiatrist (fiz'e-at'rist) a physician who specializes in physiatrics.

physiatry (fiz'e-at're) physiatrics.

physic (fiz'ik) [Gr. *physikos* natural] 1. the art of medicine and of therapeutics. 2. a medicine, especially a cathartic.

physical (fiz'e-kal) [Gr. *physikos*] pertaining to the body, to material things, or to physics.

physician (fi-zish'un) 1. an authorized practitioner of medicine, as one graduated from a college of medicine or osteopathy and licensed by the appropriate board. See also *doctor*. 2. one who practices medicine as distinct from surgery. **p. assistant**, one who has been trained in an accredited program and certified by an appropriate board to perform certain of a physician's duties, including history taking, physical examination, diagnostic tests, treatment, certain minor surgical procedures, etc., all under the responsible supervision of a licensed physician. Abbreviated P.A. See also *Medex*. **attending p.**, a physician who attends a hospital at stated times to visit the patients and give directions as to their treatment. **emergency p.**, a specialist in emergency medicine. **family p.**, a medical specialist who plans and provides the comprehensive primary health care of all members of a family, regardless of age or sex, on a continuing basis. **resident p.**, a graduate and licensed physician resident in a hospital.

Physick's operation, pouches (fiz'iks) [Philip Syng Physick, American surgeon, 1768-1837] see under *operation* and *pouch*.

physicochemical (fiz'i-ko-kem'i-kal) pertaining to physics and chemistry.

physicogenic (fiz'i-ko-jen'ik) due to physical causes; of physical origin, as opposed to *psychogenic*.

physiotherapeutics, physiotherapy (fiz'i-ko-ther'ah-pu'tiks; fiz'i-ko-ther'ah-pe) physical therapy.

physics (fiz'iks) [Gr. *physis* nature] the science of the laws and phenomena of nature, but especially of the forces and general properties of matter and energy.

physio- (fiz'e-o) [Gr. *physis* nature] a combining form denoting relationship to nature, as in *physionomy*, or to physiology, as in *physiochemistry*, or denoting physical, as in *physiotherapy*.

physiochemical (fiz'e-o-kem'i-kal) pertaining to physiologic chemistry, or clinical chemistry.

physiochemistry (fiz'e-o-kem'is-tre) physiologic chemistry, or clinical chemistry.

physiocracy (fiz'e-ok'rah-se) [*physio*- + Gr. *kratein* to rule] the passive tendency in therapeutics which permits nature to take its course with little interference by man. Cf. *anthropocracy*.

physiogenesis (fiz'e-o-jen'ē-sis) embryology.

physiognomy (fiz'e-og'no-me) [*physio*- + Gr. *gnōmōn* a judge] 1. the determination of mental or moral character and qualities by the face. 2. the countenance, or face. 3. the facial expression and appearance as a means of diagnosis.

physiognosis (fiz'e-og-no'sis) [*physio*- + Gr. *gnōsis* knowledge] diagnosis by means of the facial expression or appearance.

physiologic (fiz'e-o-loj'ik) normal; not pathologic; characteristic of or conforming to the normal functioning or state of the body or a tissue or organ; physiological.

physiological (fiz'e-o-loj'i-kal) pertaining to physiology; physiologic.

physiologicoanatomical (fiz'e-o-loj'e-ko-an'ah-tom'e-kal) pertaining to physiology and anatomy.

physiologist (fiz'e-ol'o-jist) a specialist in the study of physiology.

physiology (fiz'e-ol'o-je) [*physio*- + *-logy*] 1. the science which treats of the functions of the living organism and its parts, and of the physical and chemical factors and processes involved. 2. the basic processes underlying the functioning of a species or class of organism, or any of its parts or processes. **animal p.**, the physiology of animals. **comparative p.**, a study of organ functions in various types of animals, vertebrate and invertebrate, in an effort to find fundamental relations in the physiology of

members of the entire animal kingdom. **dental p.**, the study of the function and functional form of the teeth and supporting tissues. **general p.**, the science of the general laws of life and functional activity. **hominal p.**, human physiology. **morbidity p.**, pathologic p., the study of disordered function or of function in diseased tissues. **special p.**, the physiology of particular organs. **vegetable p.**, the physiology of plants.

physiolysis (fiz'e-ol'i-sis) [*physio*- + Gr. *lysis* dissolution] natural dissolution and disintegration of tissue.

physiomedical (fiz'e-o-med'i-kal) of or relating to physiomedicalism.

physiomedicalism (fiz'e-o-med'i-kal-izm) [*physio*- + *medicalism*] a system of medical treatment in which only plant remedies are used, excluding those which are poisonous.

physiometry (fiz'e-om'ē-tre) [*physio*- + Gr. *metron* measure] measurement of the physiologic functions of the body by serologic and physiologic methods.

physioneurosis (fiz'e-o-nu-ro'sis) true neurosis.

physionomy (fiz'e-on'o-me) [*physio*- + Gr. *nomos* law] the science of the laws of nature.

physiopathic (fiz'e-o-path'ik) [*physio*- + Gr. *pathos* disease] Babinski's term for the nonpsychopathic functional nervous disorders.

physiopathologic (fiz'e-o-path'o-loj'ik) pertaining to both the physiologic and pathologic conditions.

physiopathology (fiz'e-o-pah-thol'o-je) [*physio*- + *pathology*] the science of functions in disease, or as modified by disease.

physiophyly (fiz'e-of'i-le) [*physio*- + Gr. *phylon* tribe] the evolution of bodily functions.

physiotherapist (fiz'e-o-ther'ah-pu'tist) physical therapist.

physiotherapist (fiz'e-o-ther'ah-pist) physical therapist.

physiotherapy (fiz'e-o-ther'a-pe) [*physio*- + Gr. *therapeia* cure] physical therapy.

physique (fi-zēk') bodily structure, organization, and development.

physis (fi'sis) [Gr. *phyein* to generate] the segment of tubular bone which is concerned mainly with growth in length of the bone. It consists of four zones: zone of resting cartilage, zone of proliferating cartilage, zone of hypertrophy, and zone of calcification.

physo- (fi'so) [Gr. *physis* air] a combining form denoting relationship to air or gas.

physocoele (fi'so-sēl) [*physo*- + Gr. *kelē* tumor] 1. a tumor filled with gas. 2. a hernial sac filled with gas.

Physocephalus (fi'so-sef'ah-lus) a genus of nematode worms of the superfamily Spiruroidea. **P. sexala'tus**, a species found in the stomach of pigs.

physocephaly (fi'so-sef'ah-le) [*physo*- + Gr. *kephalē* head] emphysematous swelling of the head.

physohematometra (fi'so-hem'ah-to-me'trah) [*physo*- + Gr. *haima* blood + *metra* uterus] the presence of gas and blood within the uterus.

physohydrometra (fi'so-hi'dro-me'trah) [*physo*- + Gr. *hydōr* water + *metra* uterus] the presence of gas and fluid within the uterus.

physometra (fi'so-me'trah) [*physo*- + Gr. *metra* uterus] air or gas in the uterine cavity.

Physopsis (fi-sōp'sis) a subgenus of snails (genus *Bulinus*), several species of which are the intermediate hosts of *Schistosoma haematobium* and other animal schistosomes.

physopysosalpinx (fi'so-pi'o-sal'pinks) [*physo*- + Gr. *pyon* pus + *salpinx* tube] presence of pus and gas in the uterine tube.

Physostigma (fi'so-stig'mah) [*physio*- + Gr. *stigma* stigma] a genus of tropical leguminous plants. The poisonous seed of *P. venenosum* Balf., Calabar bean, a climbing plant of Africa, contains the alkaloid, physostigmine.

physostigmine (fi'so-stig'mēn) [USP] chemical name: (3a-cis)-1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethylpyrrolo[2,3-b]indol-5-ol methylcarbamate (ester). An alkaloid, C₁₅H₂₁N₃O₂, occurring as a white odorless crystalline powder, usually obtained from the dried ripe seed (Calabar bean) of *Physostigma venenosum* Balf. (Leguminosae); it is a cholinergic that functions as an anticholinesterase. Called also *eserine*. **p. salicylate** [USP], the salicylate salt of physostigmine, C₁₅H₂₁N₃O₂C₇H₅O₃, occurring as white, shining crystals or white powder; used mainly as an ophthalmic cholinergic to produce miosis and to decrease intraocular pressure in the treatment of glaucoma, applied to the conjunctiva. It is also administered intramuscularly and intravenously to reverse the toxic effects upon the central nervous system due to drugs capable of causing anticholinergic poisoning. **p. sulfate** [USP], the sulfate salt of physostigmine, (C₁₅H₂₁N₃O₂)₂·H₂SO₄, occurring as a white, microcrystalline powder; used mainly as an ophthalmic cholinergic to decrease intraocular pressure in the treatment of glaucoma, applied topically to the conjunctiva.

physostigminism (fi'so-stig'min-izm) poisoning by physostigmine.

phytagglutinin (fi'tah-gloo'ti-nin) a phytotoxin which has the power of agglutinating red blood corpuscles.

phytalbumin (fi'tal-bu'min) [*phyto-* + *albumin*] vegetable albumin.

phytalbumose (fi-tal'bu-mōs) [*phyto-* + *albumose*] an albumose of vegetable origin.

phytase (fi'tās) an enzyme (a hydrolase) of plants that catalyzes the hydrolysis of phytic acid to inositol and phosphoric acid.

phytate persodium (fi'tāt) chemical name: *myo*-inositol hexakis(dihydrogen phosphate) dodecasodium salt; a pharmaceutical aid, $C_6H_8Na_{12}O_{24}P_6$.

phytin (fi'tin) the calcium-magnesium salt of phytic acid; a form of inositol found in plants, it is used as a dietary supplement.

phyto- (fi'to) [Gr. *phyton* plant] a combining form denoting relationship to a plant or plants.

phytoalexin (fi'to-ah-lek'sin) any of a group of compounds formed in plants in response to elicitors released by plant pathogens; they inhibit or destroy the pathogen.

phytoanaphylactogen (fi'to-an'ah-fi-lak'to-jen) [*phyto-* + *anaphylactogen*] an antigen of plant origin that is capable of inducing anaphylaxis; called also *phyto-sensitizing*.

phyto bezoar (fi'to-be'zōr) [*phyto-* + *bezoar*] a gastric concretion composed of vegetable matter such as skins, seeds, and the fibers of fruit and vegetables.

phytochemistry (fi'to-kem'is-tre) [*phyto-* + *chemistry*] the study of plant chemistry, including the chemical processes that take place in plants, the nature of plant chemicals, and the various applications of such chemicals to science and industry.

phytochinin (fi'to-kin'in) a substance isolated from the leaves of certain grasses, said to have an effect on carbohydrate metabolism resembling that of insulin.

phytocholesterol (fi'to-ko-les'ter-ol) phytosterol.

phytochrome (fi'to-krōm) [*phyto-* + Gr. *chrōma* color] a bluish conjugated protein occurring in plants, whose response to relative periods of light and darkness regulates photoperiodism (e.g., the flowering cycle); it occurs in two forms, one responding to the red end of the spectrum, the other to the far red.

phytodemetic (fi'to-dem'tik) [*phyto-* + *epidemic*] an epidemic attack of any disease of plants.

phytodetritus (fi'to-de-tri'tus) detritus produced by the disintegration and decomposition of vegetable organisms. Cf. *zoodetritus*.

phytogenesis (fi'to-jen'ē-sis) [*phyto-* + Gr. *genesis* generation] the origin and development of plants.

phytogenetic, phytogenic (fi'to-jē-net'ik; fi'to-jen'tik) phytogenous.

phytogenous (fi-toj'ē-nus) [*phyto-* + Gr. *gennan* to produce] derived from a plant, or caused by a vegetable growth.

phytohemagglutinin (fi'to-hem'ah-gloo'ti-nin) a hemagglutinin of plant origin.

phytohormone (fi'to-hor'mōn) [*phyto-* + *hormone*] plant hormone; any of the hormones produced naturally in plants and which are active in minute amounts in controlling growth and other functions at a site remote from the place of production. There are three principal types: auxins, cytokinins, and gibberellins.

phytoid (fi'toid) [*phyto-* + Gr. *eidōs* form] resembling a plant.

phytol (fi'tol) chemical name: 3,7,11,15-tetramethylhexadecan-2-ol-1. An unsaturated aliphatic alcohol, $CH_3[CH(CH_3)_2(CH_2)_3]_3C(CH_3)_2CH_2OH$, which is related to xanthophyll, to the carotenoids, and to vitamin A, and exists in chlorophyll as an ester; used in the preparation of vitamin E and phytonadione.

Phytomastigophora (fi'to-mas'ti-go'fō-rah) a class of small, plantlike, flagellate protozoa of the subphylum Mastigophora that closely resemble algae. Most are free-living, but some are parasitic, and most have chromatophores containing chlorophyll and secrete a cellulose covering which varies in thickness. It includes the orders Chrysomonadina, Dinoflagellata, Euglenoidina, and Phytomonadina.

phytomelin (fi'to-mel'in) rutin.

phytomenadione (fi'to-men'ah-di'ōn) phytonadione.

phytomitogen (fi'to-mi'to-jen) a substance of plant origin that induces mitosis in human cells.

Phytomonadina (fi'to-mon-ah-di'nah) an order of protozoa of the class Phytomastigophora, subphylum Mastigophora, comprising plantlike flagellates. In former classifications, it was included, along with the order Protomonadina, in the group Monadina.

Phytomonas (fi-tom'o-nas) 1. a genus of flagellate parasitic protozoa of the family Trypanosomatidae, order Protomastigida, morphologically similar to the genus *Leptomonas*; the organisms are found in hemipterous insects and latex plants, being transmitted from plant to plant by the insect vector. 2. formerly, a genus of bacteria producing pathogenic necroses in plants, whose members are now included in the genera *Pseudomonas* and *Xanthomonas*.

phytonadione (fi'to-nah-di'ōn) 1. chemical name: [R-(R',R''-E)]-2-methyl-3-(3,7,11,15-tetramethyl-2-hexadecenyl)-1,4-naph-

thalenedione. A fat-soluble vitamin of the K group, $C_{31}H_{46}O_2$, found in green plants or prepared synthetically and having prothrombinogenic properties. 2. [USP] a clear, yellow to amber, very viscous liquid containing 97 to 103 per cent phytonadione; used as a prothrombinogenic agent in the treatment of hypoprothrombinemia due to various causes, administered orally and parenterally. Called also *phyloquinone* and *vitamin K₁*.

phytone (fi'tōn) a peptone made from plant protein.

phytonosis (fi-ton'o-sis) [*phyto-* + Gr. *nosos* disease] any morbid condition due to a plant.

phytoparasite (fi'to-par'ah-sīt) [*phyto-* + *parasite*] any parasitic vegetable organism or species.

phytopathogenic (fi'to-path'o-jen'ik) producing disease in plants.

phytopathology (fi'to-pah-thol'o-je) [*phyto-* + *pathology*] 1. the study of plant diseases and their control. 2. the pathology of morbid conditions caused by schizomycetes and other vegetable parasites.

phytopathy (fi-top'ah-the) [*phyto-* + Gr. *pathos* disease] any disease of plants.

phytophagous (fi-tof'ah-gus) [*phyto-* + Gr. *phagein* to eat] eating vegetable food.

phytopharmacology (fi'to-fahr'mah-kol'o-je) [*phyto-* + *pharmacology*] the study of the effect of drugs on plant growth.

phytophotodermatitis (fi'to-fō'to-der'mah-ti'tis) phototoxic dermatitis induced by exposure to certain plants (meadow grass, lime, fig, bergamot, etc.) and then to sunlight.

phytoplankton (fi'to-plank'ton) [*phyto-* + Gr. *planktos* wandering] the minute plant (vegetable) organisms which, with those of the animal kingdom, make up the plankton of natural waters.

phytoplasm (fi'to-plazm) [*phyto-* + Gr. *plasma* thing formed] vegetable protoplasm.

phytoprecipitin (fi'to-pre-sip'i-tin) a precipitin produced by immunization with protein substances of plant origin.

phyto-sensitizing (fi'to-sen'si-tin'o-jen) [*phyto-* + *sensitizing*] phytoanaphylactogen.

phytosis (fi-to'sis) [*phyto-* + *-osis*] any disease caused by a phytoparasite.

phytosterin (fi-tos'ter-in) [*phyto-* + Gr. *stear* fat] phytosterol.

phytosterol (fi'to-ste'rol) a plant sterol.

phytosterolin (fi'to-ste'rol-in) a glucosidic union of a sterol and glucose.

phytotherapy (fi'to-ther'ah-pe) [*phyto-* + Gr. *therapeia* treatment] treatment by use of plants.

phytotoxic (fi'to-tok'sik) 1. pertaining to a phytotoxin, or plant poison. 2. inhibiting the growth of plants.

phytotoxin (fi'to-tok'sin) an exotoxin produced by certain species of higher plants, notably *Abrus precatorius* (abrin), *Ricinus communis* (ricin), *Croton tiglium* (croton), and *Robinia pseudacacia* (robin). Phytotoxins are resistant to proteolytic digestion, and are effective when taken by mouth. In the broadest sense a phytotoxin is any toxic substance of plant origin.

phytotricho bezoar (fi'to-tri'ko-be'zōr) [*phyto-* + Gr. *thrix* hair + *bezoar*] a bezoar composed of both plant fibers and hair.

phytotron (fi'to-tron) a laboratory in which virtually any climatic condition can be simulated for plant growth studies.

phytovitellin (fi'to-vi-tel'in) vitellin of vegetable origin.

pyroxylin (fi-tok'si-lin) [*pyro-* + Gr. *xylon* wood] a substance resembling pyroxylin; used in preparing celloidin sections.

P.I. protamine insulin.

pI the pH of a solution containing a solute at its isoelectric point.

pia (pi'ah) [L.] 1. tender; soft. 2. pia mater. **p. ma'ter**, see pia mater, below.

pia-arachnitis (pi'ah-ar'ak-ni'tis) inflammation of the pia-arachnoid; leptomeningitis.

pia-arachnoid (pi'ah-ah-rak'noid) [*pia* + *arachnoid*] the pia mater and the arachnoid considered together as one functional unit; the leptomeninges.

pia-glia (pi'ah-gli'ah) a membrane formed by the fusion of the pia mater and the marginal glia, and constituting one of the layers of the pia-arachnoid.

pial (pi'al) pertaining to the pia mater.

pia mater (pi'ah ma'ter) [L. "tender mother"] the innermost of the three membranes (meninges) covering the brain and spinal cord, investing them closely and extending into the depths of the fissures and sulci; it consists of reticular, elastic, and collagenous fibers. **p. m. enceph'ali** [NA], the pia mater covering the brain, very thin over the cerebral cortex, and thicker over the brain stem; the blood vessels for the brain ramify within it and, as they enter the brain, are accompanied for a short distance by a pial sheath. **p. m. spinal'is** [NA], the pia mater covering the spinal cord and consisting of collagenous fibers, which also form the denticulate ligament, and reticular fibers, which closely invest the cord, form the various septa, and form an investment for the rootlets.

piamatral (pi'ah-ma'tral) pial.

pian (pe-ahn') [Fr.] yaws. **p. bois**, a form of cutaneous leishmaniasis of the New World, caused by *Leishmania brasiliensis guyanensis*, transmitted by the sandfly *Lutzomyia anduzei*, occurring in the forests of the Guianas and into Brazil and Venezuela, and characterized by multiple, widespread, deep skin ulcers with occasional involvement of the oronasal mucosa. Called also *forest yaws*. **hemorrhagic p.**, verruga peruana.

piarachnitis (pi'ar-ak-ni'tis) pia-arachnitis.

piarachnoid (pi'ar-ak'noid) pia-arachnoid.

piarhemia (pi'ar-he'me-ah) [Gr. *piar* fat + *haima* blood + *-ia*] the presence of fat in the blood; lipemia.

piastrinemia (pi-as'tri-ne'me-ah) [It. *piastre* coin + Gr. *haima* blood + *-ia*] thrombocythemia.

piblokto (pi-blok'to) [Eskimo] a psychic disturbance seen chiefly among Eskimo women, marked by attacks of hysteria and running naked through the snow, sometimes with suicidal or homicidal tendencies.

pica (pi'kah) [L.] a craving for unnatural articles of food; a depraved appetite, as seen in hysteria, pregnancy, and in malnourished children.

piceous (pi'se-us) [L. *piceis*] of the nature of or resembling pitch.

Pick's cell, disease (piks) [Ludwig Pick, Berlin physician, born 1868] see under *cell*, and *Niemann-Pick disease*, under *disease*.

Pick's convolution atrophy, disease (piks) [Arnold Pick, Prague psychiatrist, 1851-1924] see *lobar atrophy*, under *atrophy*.

Pick's disease, syndrome [Friedel Pick, Prague physician, 1867-1926] see under *disease* (def. 2), and under *syndrome*.

pickling (pik'ling) the process of cleansing metallic surfaces of the product of oxidation and other impurities by immersion in acid.

Pickrell's solution, spray (method) (pik'rel) [Kenneth LeRoy Pickrell, American physician, born 1910] see under *solution* and *spray*.

pickwickian syndrome (pik-wik'e-an) [from the description of the fat boy in Dickens' *Pickwick Papers*] see under *syndrome*.

pico- [Sp. *pico* small amount; It. *piccolo* small] a combining form used in naming units of measurement to indicate one-trillionth of the unit designated by the root with which it is combined (10^{-12}).

picocurie (pi'ko-ku're) a unit of radioactivity, being 10^{-12} curie, or that quantity of radioactive material in which the number of nuclear disintegrations is 3.7×10^{-2} , or 0.037, per second. Abbreviated pc. Called also *micromicrocurie*.

picodnavirus (pi-kod'nah-vi'rus) [*pico-* + *deoxyribonucleic acid* + *virus*] parvovirus.

picogram (pi'ko-gram) a unit of mass (weight) of the metric system, being 10^{-12} gram. Abbreviated pg. Called also *microgamma* and *micromicrogram*.

picopicogram (pi'ko-pi'ko-gram) a unit of mass (weight) of the metric system, being 10^{-12} picogram, or 10^{-24} gram. Abbreviated ppg.

picornavirus (pi-kor'nah-vi'rus) [*pico-* + *ribonucleic acid* + *virus*] a name applied to one of the extremely small ether-resistant RNA viruses, the group comprising the enteroviruses and the rhinoviruses.

picounit (pi'ko-u'nit) one trillionth part of a unit (10^{-12}).

picrate (pik'rät) any salt of picric acid; a carbozoate.

picro- (pik'ro) [Gr. *pikros* bitter] a combining form meaning bitter.

picrocarmine (pik'ro-kar'min) a stain prepared from picric acid and carmine and used in microscopy. It consists of a mixture of carmine, ammonia, and distilled water, to which is added an aqueous solution of picric acid.

picrogeusia (pik'ro-gu'se-ah) [*picro-* + Gr. *geusis* taste + *-ia*] a pathologic bitter taste.

picrol (pik'rol) chemical name: potassium diiodoresorcin monosulfonate. A colorless and odorless, bitter, antiseptic powder, $(\text{OH})_2 \cdot \text{C}_6\text{H}_2 \cdot \text{SO}_3\text{OK}$, which contains about 53 per cent iodine; used as a substitute for iodoform and corrosive sublimate.

piconigrosin (pik'ro-ni-gro'sin) a solution of picric acid and nigrosin in alcohol, used as a stain.

picropodophyllin (pik'ro-pod'o-fil'in) chemical name: picropodophyllinic acid lactone. A crystalline principle, $\text{C}_{22}\text{H}_{22}\text{O}_8$, from *Podophyllum peltatum* L. (Berberidaceae); medicinally active. It is obtainable from podophyllotoxin also, and is an isomer of it.

Picrorrhiza (pik'ro-ri'zah) [*picro-* + Gr. *rhiza* root] a genus of herbs; the rhizome of *P. kurroa* Royle (Scrophulariaceae) is tonic and antiperiodic.

picrosaccharometer (pi'kro-sak'ah-rom'e-ter) an instrument used in estimating diabetic sugar.

picrosclerotine (pik'ro-skle'ro-tin) a poisonous alkaloid occurring in ergot of rye.

picrotoxin (pik'ro-tok'sin) [NF] an active principle, $\text{C}_{30}\text{H}_{34}\text{O}_{13}$,

obtained from the seed (*cocculus indicus*) of *Anamirta cocculus* L. Wight & Arn. (Menispermaceae), and occurring as flexible, shining, prismatic crystals or as a microcrystalline powder; it stimulates all portions of the central nervous system by blocking presynaptic inhibition of neural impulses and has been used as a central and respiratory stimulant in the treatment of poisoning by central nervous system depressant drugs, especially the barbiturates, administered intravenously. Called also *cocculin*.

picrotoxinism (pik'ro-tok'si-nizm) poisoning by picrotoxin.

pictograph (pik'to-graf) a chart of silhouette pictures used for testing acuteness of vision of children.

piebald (pi'bawld) exhibiting piebaldism.

piebaldism (pi-bawld'izm) 1. a condition in which the skin is partly brown and partly white, as in partial albinism and vitiligo. 2. partial albinism.

piece (pēs) a part or portion. **chief p.**, principal p. **connecting p.**, 1. middle p. 2. the neck of a spermatozoon. **end p.**, 1. end-piece; see under E. 2. the terminal portion of the tail, or flagellum, of a spermatozoon; called also *terminal filament*. See illustration under *spermatozoon*. **middle p.**, the portion of the tail of a spermatozoon limited by the anterior centriole and by the annulus; called also *connecting p.* See also illustration under *spermatozoon*. **principal p.**, the main portion of the tail of a spermatozoon, beginning at the annulus and gradually tapering toward the end piece; called also *chief p.* See illustration under *spermatozoon*. **secretory p.**, a glycopeptide component of secretory (exocrine) IgA. Called also *secretory component*. See also *immunoglobulin*.

piedra (pe-a'drah) [Sp.] a fungal disease of the hair in which the shafts bear either white or black hard gritty nodular masses of fungi. **black p.**, a fungal disease that affects the hairs of the scalp in man and other primates, occurs mainly in tropical regions, and is caused by *Piedraia hortai*. **white p.**, *piedra* that affects the beard is caused by *Trichosporon cutaneum*, and occurs chiefly in temperate regions.

Piedraia (pi'e-dri'ah) a genus of ascomycetous fungi of the family *Piedraiaceae*, one species of which, *P. hortae*, is parasitic on hair, forming small black adherent nodules; see *black piedra*, under *piedra*.

Piedraiaceae (pi'e-dri-a'se-e) a family of ascomycetous fungi of the order Myriangiales, subclass Loculoascomycetidae, which includes the genus *Piedraia*.

pier (pēr) a natural tooth or root which helps support a partial denture elsewhere than at its termination; called also *intermediate abutment*.

Pierre Robin (pe-yair'ro-ba') [Pierre Robin, French dentist, 1867-1950] see under *syndrome*.

Piersol's point (pēr'solz) [George Arthur Piersol, Philadelphia anatomist, 1856-1924] see under *point*.

piesesthesia (pi-e'zes-the'ze-ah) [Gr. *piesis* pressure + *aisthēsis* perception] pressure sensibility; the sense by which pressure stimuli are felt.

piesimeter (pi'e-sim'e-ter) [Gr. *piesis* pressure + *metron* measure] an instrument for testing the sensitiveness of the skin to pressure. **Hales' p.**, a glass tube inserted into an artery for the purpose of ascertaining the blood pressure by the height to which the blood rises in the tube.

-piesis (pi-e'sis) [Gr. *piesis* a pressing or squeezing] a word termination meaning pressure, as in otopiesis.

piezallochromy (pi'e-zal'o-kro-me) [Gr. *piesis* pressure + *allochromy*] change of color of a substance caused by crushing.

piezesthesia (pi'e-zes-the'ze-ah) piesesthesia.

piezocardiogram (pi-e'zo-kar'de-o-gram) a graphic tracing of the changes in pressure caused by pulsation of the heart, often recorded through the esophagus.

piezochemistry (pi-e'zo-kem'is-tre) [Gr. *piesis* pressure + *chemistry*] that branch of chemistry which deals with the effect of pressure on chemical phenomena.

piezometer (pi'e-zom'e-ter) [Gr. *piezein* to press + *metron* measure] 1. piesimeter. 2. orbitonometer.

PIF proliferation-inhibiting factor; see under *factor*.

pifarnine (pi-far'nēn) chemical name: 1-(1,3-benzodioxol-5-yl-methyl)-4-(3,7,11-trimethyl-2,6,10-dodecatrienyl) piperazine; a gastric antiulcerative, $\text{C}_{27}\text{H}_{40}\text{N}_2\text{O}_2$.

pigment (pig'ment) [L. *pigmentum* paint] 1. any normal or abnormal coloring matter of the body. 2. a paintlike medicinal preparation to be applied to the skin. **autochthonous p.**, endogenous p. **bile p.**, any one of the coloring matters of the bile; they are bilirubin, biliverdin, bilifuscin, biliprasin, choleprasin, bilihumin, and bilicyanin. **blood p.**, any of the pigments derived from hemoglobin; they are heme, hematin, hemosiderin, hematoporphyrin, methemoglobin, and hemofuscin. **ce-roid p.**, a coarsely globular, yellow, waxlike pigment found in the cirrhotic livers of rats kept on a low protein, low fat diet. **endogenous p.**, a pigment produced by the body's own metabolism. **exogenous p.**, **extraneous p.**, a pigment which enters the body from without. **hematogenous p.**, any pigment derived from the blood or from the blood pigment. **hepatoge-**

nous p., bile pigment formed by disintegration of hemoglobin in the liver. **Lake's p.**, a mixture of lactic acid, formaldehyde solution, phenol, and water, suggested for relief of pain in laryngeal tuberculosis. **lipochrome p.**, lipochrome. **malarial p.**, a pigment formed by the malarial parasite from the pigment of the blood and deposited largely in the spleen and liver. **melanotic p.**, melanin. **metabolic p.**, any pigment produced by the metabolic actions of cells. **respiratory p's**, substances, such as hemoglobin, myoglobin, or the cytochromes, which take part in the oxidation processes of the animal body. **wear and tear p's**, lipochromes.

pigmentary (pig'men-ta're) pertaining to or of the nature of a pigment.

pigmentation (pig'men-ta'shun) 1. the deposition of coloring matter; the coloration or discoloration of a part by a pigment. 2. coloration, especially abnormally increased coloration, by melanin. **carotinoid p.**, skin pigmentation by carotin and its congeners, usually a result of excessive ingestion of deep green or yellow fruits and vegetables. **exogenous p.**, **extraneous p.**, pigmentation caused by coloring matter introduced from outside of the body. **hematogenous p.**, pigmentation produced by the accumulation of hemoglobin derivatives such as hematoidin or hemosiderin. **malarial p.**, a pigmentation due to the accumulation, especially in the spleen and liver, of the dark-brown pigment liberated by those red blood cells which are destroyed by malarial parasites. **vagabonds' p.** (obs.), see under *disease*.

pigmented (pig'ment-ed) colored by deposit of pigment.

pigmentogenesis (pig'men-to-jen'tē-sis) [*pigment* + *genesis*] the production of pigment.

pigmentogenic (pig'men-to-jen'ik) inducing the formation or deposit of pigment.

pigmentolysin (pig'men-to-l'i-sin) a lysin causing destruction of pigment.

pigmentolysis (pig'men-to-l'i-sis) [*pigment* + Gr. *lysis* dissolution] destruction of pigment.

pigmentophage (pig-men'to-fāj) [*pigment* + Gr. *phagein* to eat] any pigment-devouring cell, especially such a cell of the hair; called also *chromophage*.

pigmentophore (pig-men'to-fōr) a cell that transports pigment.

pigmentum (pig-men'tum) [L.] pigment.

Pignet's formula, (index, standard) (pēn-yāz') [Maurice Charles-Joseph Pignet, French physician, born 1871] see under *formula*.

piitis (pi-i'tis) inflammation of the pia mater.

pikromycin (pik-ro-mi'sin) proactinomycin A.

Pil. abbreviation of L. *pilula*, pill, or *pil'ulae*, pills.

Pila (pi'lah) a genus of freshwater snails. **P. con'ica**, the second intermediate host of *Echinostoma ilocanum* in the Philippines.

pila (pi'lah), pl. *pi'lae* [L.] a pillar or pillar-like structure, such as a trabecula of spongy bone.

pilae (pi'le) [L.] plural of *pila*.

pilar, pilary (pi'lar, pil'a-re) [L. *pilaris*] pertaining to the hair.

pilaster (pi-las'ter) a ridge or fluting. **p. of Broca**, linea aspera femoris.

Pilcher bag (pil'cher) [Lewis Stephen Pilcher, Brooklyn surgeon, 1845-1934] see under *bag*.

pile (pil) 1. [L. *pila* pillar] an aggregation of similar elements for generating electricity. In nucleonics, a chain-reacting fission device for producing slow neutrons and for the preparation of radioactive isotopes. 2. [L. *pila* a ball] a hemorrhoid. **esophageal p.**, a varix in the esophagus. **muscular p.**, layers of muscular tissue so arranged as to generate an electric current. **prostatic p.**, enlarged prostate attended by hemorrhage. **sentinel p.**, a hemorrhoid-like thickening of the mucous membrane at the lower end of a fissure of the anus. **thermoelectric p.**, a set of slender metallic bars which, on exposure to heat, generates a current of electricity that moves an index and is made to register delicate changes of temperature. **voltaic p.**, a battery for current electricity made up of a series of metallic disks.

piles (pilz) hemorrhoids.

pileus (pi'le-us) [L. "a close fitting felt cap"] the membrane which sometimes covers a child's head at birth; caul.

pili (pi'li) [L.] plural of *pilus*.

pilial (pi'le-al) pertaining to a pilus or pili.

piliate (pi'le-at) having pili; said of bacteria.

Pilidae (pil'i-de) a family of fresh-water snails (order Mesogastropoda) that includes the species *Pila conica*, the second intermediate host of *Echinostoma ilocanum*.

piliform (pi'li-form) shaped like or resembling hair.

pilimictio (pi'li-mik'she-o) pilimiction.

pilimiction (pi'li-mik'shun) [L. *pilus* hair + *mictio* micturition] passing of urine containing hair or hairlike threads of mucus.

pilin (pi'lin) the protein that composes bacterial pili.

pill (pil) [L. *pilula*] a small globular or oval medicated mass to

be swallowed. Pills contain, in addition to the active drug, a diluent (or filler) and an excipient to give the mass adhesiveness, firmness, and plasticity, so that the pill can be worked by hand or machine to the desired pillular form. Cf. *tablet*. **A.B.S. p.**, a laxative pill, containing aloin, extract of belladonna, and strychnine. **blue p.**, mercury mass. **chalybeate p's**, ferrous carbonate p's. **compound cathartic p.**, a pill of colocynth, calomel, jalap, and gamboge. **enteric p.**, one coated with a substance, such as salol, which will not dissolve in the stomach. **ferrous carbonate p's**, pills containing ferrous sulfate, potassium carbonate, sucrose, tragacanth, althea, glycerin, water; used as a hematinic. **ferruginous p's**, ferrous carbonate p's. **Fothergill's p.** (obs.), a pill of calomel, squill, and digitalis. **Guy's p.** (obs.), a pill composed of digitalis, squill, extract of hyoscyamus, and mercury mass. **hexylresorcinol p's** [NF], a pill consisting of hexylresorcinol covered with a rupture-resistant coating that disintegrates in the digestive tract; used as an anthelmintic against intestinal nematodes and trematodes. **radio p.**, tele-metering capsule.

pillar (pil'ar) [L. *pila*] a supporting column, usually occurring in pairs. **p. of Corti's organ**, see *pillar cells*, under *cell*. **p's of diaphragm**, see *pars lumbalis diaphragmatis*. **p. of fauces, anterior**, arcus palatoglossus. **p. of fauces, posterior**, arcus palatopharyngeus. **p. of fornix, anterior**, columna fornicis. **p. of fornix, posterior**, crus fornicis. **p's of soft palate**, see *arcus palatoglossus* and *arcus palatopharyngeus*. **Uskows p's**, two folds of the embryo attached to the dorsolateral portion of the body wall; from these pillars and the septum transversum the diaphragm is formed.

pillet (pil'et) a little pill, or pellet.

pillion (pil-yon') a temporary replacement for an amputated leg.

pilo- (pi'lo) [L. *pilus* hair] a combining form denoting relationship to hair, resembling or composed of hair.

pilobezoar (pi'lo-be'zōr) trichobezoar.

pilocarpine (pi'lo-kar'pin) chemical name: (3*S*-cis)-3-ethylidihydro-4-[(1-methyl-1*H*-imidazol-5-yl)methyl]-2(3*H*)-furanone. An alkaloid, C₁₁H₁₆N₂O₂, obtained from the leaves of *Pilocarpus jaborandi* or *P. microphyllus*, which has cholinergic activity. **p. hydrochloride** [USP], the monohydrochloride salt of pilocarpine, C₁₁H₁₆N₂O₂·HCl, occurring as colorless, translucent crystals; used mainly as an ophthalmic cholinergic to produce miosis and to decrease intraocular pressure in the treatment of glaucoma, applied topically to the conjunctiva. **p. nitrate** [USP], the nitrate salt of pilocarpine, C₁₁H₁₆N₂·HNO₃, occurring as shining, white crystals, having the same actions and uses as the hydrochloride salt.

Pilocarpus (pi'lo-kar'pus) [Gr. *pilos* wool or hair wrought into felt + Gr. *karpos* fruit] a genus of rutaceous shrubs of tropical America; the leaves of *P. jaborandi* and *P. microphyllus* yield pilocarpine.

pilocystic (pi'lo-sis'tik) [*pilo-* + *cystic*] hollow, or cystlike, and containing hairs; said of certain dermoid tumors.

pilocytic (pi'lo-si'tik) composed of fiber-shaped cells.

piloerection (pi'lo-e-rek'shun) [*pilo-* + *erection*] erection of the hair.

pilojection (pi'lo-jek'shun) [*pilo* + L. *jacere* to throw] the introduction of one or more hairs into the sac of an aneurysm by means of a pneumatic gun, to furnish the nucleus for a blood clot inside the sac; used in the treatment of intracranial saccular aneurysms.

pilology (pi-lol'o-je) [*pilo-* + *-logy*] the study of the hair.

pilomatricoma (pi'lo-mah-trik-o'mah) a benign, sharply circumscribed, calcifying epithelial neoplasm derived from hair matrix cells, manifested as a firm intracutaneous spheroid mass from one to several centimeters in diameter, usually on the face, neck, and arms. Called also *calcified epithelioma* and *calcifying epithelioma of Malherbe*.

pilomatrixoma (pi'lo-ma-trik-so'mah) pilomatricoma.

pilomotor (pi'lo-mo'tor) [*pilo-* + L. *motor* mover] pertaining to the arrector muscles the contraction of which produces cutis anserina (goose flesh) and the erection of the hairs.

pilonidal (pi'lo-ni'dal) [*pilo-* + L. *nidus* nest] having hairs for a nidus; see under *cyst* and *sinus*.

pilose (pi'lōs) [L. *pilosus*] hairy; covered with hair.

pilosebaceous (pi'lo-sē-ba'shus) pertaining to the hair follicles and sebaceous glands.

Piltz's reflex, sign (pilts'ez) [Jan Piltz, Polish neurologist, 1870-1930] see *attention reflex of pupil*, under *reflex*, and *Westphal-Piltz phenomenon*, under *phenomenon*.

Piltz-Westphal phenomenon (pilts-vest'fahl) [Jan Piltz; A. K. O. Westphal, German neurologist, 1863-1941] see *Westphal-Piltz phenomenon*, under *phenomenon*.

pilula (pi'lu-lah), pl. *pil'ulae* [L.] pill.

pilular (pil'u-lar) resembling or pertaining to a pill.

pilule (pil'ül) [L. *pilula*] a small pill, or pellet.

pilus (pi'lus), pl. *pi'li* [L.] 1. [NA] any of the filamentous appendages of the skin, consisting of modified epidermal tissue; see *hair*.

2. [pl.] in microbiology, the minute filamentous appendages of certain bacteria; they are considerably smaller and less rigid than flagella and are associated with antigenic properties of the cell surface; called also *fimbria*. **p. annulatus** (pl. *pi'li annu-lu'tu*), a condition in which the individual hairs appear to be marked by alternating bands of white as a result of some barrier in the hair which prevents passage of light and causes the rays to be reflected back, giving the appearance of white bands. **p. cuniculatus** (pl. *pi'li cunicula'tu*), burrowing hair. **p. incarnatus** (pl. *pi'li incarna'tu*), ingrown hair. **p. incarnatus recurvus** (pl. *pi'li incarna'ti recurvu*), ingrown hair that has repenetrated the skin after growing from the hair follicle. **pi'li multigemini**, multiple hairs growing from the same follicle, as a result of deep division of its base, producing, in effect, a cluster of separate papillae. **p. tortus** (pl. *pi'li tor'tu*), twisted hair.

Pima (pim'ah) trademark for a preparation of potassium iodide.

pimelitis (pim''ē-lī'tis) [*pimelo-* + *-itis*] inflammation of the adipose tissue.

pimelo- (pim'ē-lo) [Gr. *pimelē* fat] a combining form denoting relationship to fat.

pimeloma (pim'ē-lo'mah) [*pimelo-* + *-oma*] a fatty tumor; lipoma.

pimelopterygium (pim'ē-lo-ter-ij'e-um) [*pimelo-* + Gr. *pterygion* wing] a fatty outgrowth upon the conjunctiva.

pimelorthopnea (pim'el-or''thop-ne'ah) [*pimelo-* + *orthopnea*] difficulty in breathing while lying down, due to excessive fatness.

pimelosis (pim'ē-lo'sis) [*pimelo-* + *-osis*] 1. conversion into fat. 2. fatness, or obesity.

pimeluria (pim'el-u're-ah) [*pimelo-* + Gr. *ouron* urine + *-ia*] the presence of fat in the urine.

Pimenta (pi-men'tah) [Sp. "allspice"] a genus of myrtaceous trees and shrubs of warm regions. The dried fruit of *P. officinalis* Lindl. (*Eugenia pimenta*, DC.), furnishes pimenta and pimenta oil.

pimenta (pi-men'tah) the dried, nearly ripe fruit of *Pimenta officinalis* Lindl. (Myrtaceae), once used as an aromatic, stimulant, and carminative; called also *allspice*.

piminodine esylate (pi-min'o-dēn) chemical name: 4-phenyl-1-[3-(phenylamino)propyl]-4-piperidinecarboxylic acid ethyl ester monoethanesulfonate. A synthetic narcotic analgesic, C₂₃H₃₀N₂O₂·C₂H₅O₂S, occurring as a colorless, crystalline solid; administered orally, intramuscularly, and subcutaneously.

pimozide (pim'o-zid) chemical name: 1-[1-(4,4-bis(4-fluorophenyl)butyl)-4-piperidinyl]-1,3-dihydro-2H-benzimidazol-2-one; a tranquilizer that has been used in the treatment of schizophrenia, C₂₈H₂₉F₂N₃O.

Pimpinella (pim'pi-nel'ah) [L.] a genus of umbelliferous plants. The roots of *P. saxifraga* L., Burnet saxifrage, are tonic, diuretic, emmenagogue, and carminative, and are the source of pimpinellin. *P. anisum* L. yields anise and anise oil.

pimpinellin (pim'pi-nel'in) a bitter, crystallizable principle, C₁₃H₁₀O₅, seen in colorless needles, from the root of *Pimpinella saxifraga* L. (Umbelliferae).

pimple (pim'p'l) a papule or pustule, usually of the face, neck, or upper trunk, most often due to acne vulgaris.

pin (pin) 1. a long slender metal rod for the fixation of the ends of fractured bones. 2. in dentistry, a peg or dowel by means of which an artificial crown is fixed to the root of a tooth or by which supplemental retention is provided to any dental restoration. **Steinmann's p.**, a metal rod for the internal fixation of fractures; see *nail extension*, under *extension*.

pinacyanole (pin'ah-si'ah-nōl) an aniline dye, C₂₅H₂₅N₂I, used as a tissue stain, and for sensitizing photographic plates for red.

Pinard's maneuver (pe-nahrz') [Adolphe Pinard, French obstetrician, 1844-1934] see under *maneuver*.

pince-ciseaux (pans'se-zo') [Fr. "forceps-scissors"] a cutting forceps used in iridotomy.

pincrement (pans-maw') [Fr.] the pinching of the flesh in massage.

pincers (pin'serz) 1. forceps (def. 1). 2. the median deciduous incisor teeth in the horse.

pindolol (pin'do-lōl) chemical name: 1-(1H-indol-4-yloxy)-3-[(1-methylethyl)amino]-2-propanol; a beta-adrenergic blocking agent, C₁₄H₂₀N₂O₂, having the same actions as propranolol (q.v.).

pine (pin) [L. *pinus*] the name of many coniferous trees, chiefly of the genus *Pinus*. The pines afford turpentine, volatile oils, rosin, pitch, tar, etc. **white p.**, the dried inner bark of *Pinus strobus* L. (Pinaceae), the Easter white pine; used as an ingredient in compound white pine syrup.

pineal (pin'e-al) [L. *pinealis*; *pine* pine cone] 1. pertaining to the pineal body. 2. shaped like a pine cone.

pinelectomy (pin'e-al-ek'to-me) [*pineal* body + Gr. *ektomē* excision] excision of the pineal body.

pinealism (pin'e-al-izm') the condition due to derangement of the secretion of the pineal body.

pinealoblastoma (pin'e-al-lo-blas-to'mah) pinealoma in

which the pineal cells are not well differentiated. Called also *pineoblastoma*.

pinealocyte (pin'e-ah-lo-sit') the principal cell of the pineal body, being an epithelioid cell with pale-staining cytoplasm, prominent nucleoli, and large nuclei that are often irregularly infolded or lobulated; cords of these cells make up the body of the pineal body. Called also *chief cell* and *pineal cell*. See also *interstitial cells*, under *cell*.

pinealocytoma (pin'e-ah-lo-si-to'mah) pinealoma.

pinealoma (pin'e-ah-lo'mah) a rare tumor of the pineal body composed of neoplastic nests of large epithelial cells; symptoms include hydrocephalus, conjugate paralysis of upward gaze, disturbances of gait, and precocious puberty, the last due to the suppression of pineal secretion of melatonin. Called also *pinealocytoma*. **ectopic p.**, pinealoma arising from pineal rests in the midline area, resulting in diabetes insipidus, compression of the optic chiasm, and hypopituitarism.

pinealopathy (pin'e-ah-lop'ah-the) any disease of the pineal gland.

Pinel's system (pe-nelz') (Philippe Pinel, psychologist in Paris, 1745-1826) see under *system*.

pinene (pi'nēn) a terpene, C₁₀H₁₆, found in turpentine and many essential oils; used as a solvent and in the manufacture of camphor. Called also *firpene*. **p. hydrochloride**, bornyl chloride.

pineoblastoma (pin'e-o-blas-to'mah) pinealoblastoma.

pinocytoma (pin'e-o-si-to'mah) pinealoma.

pinguecula (ping-gwek'u-lah) [L. *pinguis* fat] a yellowish spot of proliferation on the bulbar conjunctiva near the sclerocorneal junction, usually on the nasal side; seen in elderly people.

pinguicula (pin-gwik'u-lah) pinguecula.

piniform (pin'i-form) [L. *pine* pine cone + *forma* form] conical or cone shaped.

pinkeye (pink'i) acute contagious conjunctivitis.

Pinkus' disease (pin'koos) [Felix Pinkus, German dermatologist, born 1868] lichen nitidus.

pinna (pin'nah) [L. "wing"] the projecting part of the ear lying outside of the head (auricula [NA]).

pinnaglobin (pin'ah-glo-bin) a brown respiratory pigment found in the wedge-shaped mollusk *Pinna squamosa*, which contains manganese instead of iron.

pinnal (pin'al) pertaining to the pinna.

pinocarveol (pi'no-kar've-ol) a terpene alcohol, (CH₃)₂C:C₆H₇-(OH):CH₂, from *Eucalyptus globulus*; called also *isocarveol*.

pinocyte (pi'no-, pi'no-sit) a cell that exhibits pinocytosis.

pinocytic (pin'o-sit'ik) pertaining to a pinocyte or to pinocytosis.

pinocytosis (pi'no-, pin'o-si-to'sis) [Gr. *pinein* to drink + *kytos* cell + *-osis*] the imbibition of liquids by cells, especially the mechanism by which cells ingest extracellular fluid and its contents; it involves the formation of minute incupings or invaginations (caveolae) by the cell membrane, which close and pinch off to form free, fluid-filled vesicles (*pinosomes*) in the cytoplasm. It is thought to be a method of active transport across the cell membrane.

pinocytotic (pi'no-, pin'o-si-to't'ik) pertaining to or characterized by pinocytosis.

pinosome (pi'no-, pin'o-sōm) [Gr. *pinein* to drink + *sōma* body] any of the small fluid-filled vesicles found in the cytoplasm during pinocytosis, formed by invaginations of the cell membrane (caveolae) which pinch off and become free. Called also *pinocytotic vesicle*.

Pinoyella (pi'no-yel'ah) *Trichophyton*. **P. sim'ii**, *Trichophyton simii*.

Pins' sign [Emil Pins, Vienna physician, 1845-1913] Ewart's sign.

pint (pint) a measure of capacity (liquid measure), being 16 fluidounces, or the equivalent of 473.17 milliliters; symbol O (L. *octarius*), or abbreviated pt. The imperial pint is equal to 20 fluidounces.

pinta (pēn'tah) [Sp. "painted"] a form of treponematoses, being a chronic dyschromic dermatosis endemic in certain parts of tropical America and characterized by the presence on the skin of spots, which may be white, coffee colored, blue, red, or violet. It is caused by *Treponema carateum* (the Wassermann reaction is usually positive), and is believed to be transmitted usually by direct person-to-person contact. Results of penicillin therapy are excellent. Called also *mal del pinto*, *carate*, *azul*, *tina*, *lota*, or *empeines*.

pintado (pēn-tah'do) a person affected with pinta.

pintid (pin'tid) one of the flat erythematous skin lesions constituting the spreading eruption occurring in the second stage of pinta.

pinto (pēn'to) pinta.

pinus (pi'nus) [L.] the pineal body.

pinworm (pin'werm) any oxyurid, especially *Enterobius vermicularis*.

pio- [Gr. *piōn* fat] a combining form denoting relationship to fat. See also words beginning *lipo-*.

pioepithelium (pi'o-ep'i-the'le-um) [*pio-* + *epithelium*] epithelium in which fatty matter is deposited.

pion (pi'on) a nuclear particle with mass intermediate between an electron and a proton.

pionemia (pi'o-ne'me-ah) [Gr. *pion* fat + *haima* blood + *-ia*] the presence of fat or oil in the blood; lipemia.

Piophil (pi-of'i-lah) a genus of flies. **P. ca'sei**, the fly whose larvae are the "cheese skippers" and a common cause of intestinal myiasis.

piorthopnea (pi'or-thop-ne'ah) [*pio-* + Gr. *orthos* upright + *pnoia* breath] dyspnea when lying down, due to obesity.

pioscope (pi'o-skōp) [*pio-* + Gr. *skopein* to examine] an instrument for estimating the fat content of milk by comparing its color with the six shades painted on the instrument.

Piotrowski's sign (pe'ro-trov'skēz) [Alexander *Piotrowski*, neurologist in Berlin, born in 1878] see under *sign*.

pipamazine (pi-pam'ah-zēn) chemical name: 1-[3-(2-chlorophenothiazin-10-yl)propyl]-isonipicotamide. A crystal substance, $C_{21}H_{24}ClN_3O_2S$; used as an antiemetic.

pipamperone (pi-pam'pē-rōn) chemical name: 1'-[4-(4-fluorophenyl)-4-oxobutyl]-[1,4'-biperidine]-4'-carboxamide; a tranquilizer that has been used in the treatment of schizophrenia, $C_{21}H_{30}FN_3O_2$.

Pipanol (pip'ah-nol) trademark for a preparation of trihexyphenidyl hydrochloride.

pipazethate hydrochloride (pi-paz'ē-thāt) chemical name: 10-*H*-pyrido[3,2-*b*][1,4]benzothiadiazine-10-carboxylic acid 2-(2-piperidinoethoxy)ethyl ester hydrochloride. A non-narcotic antitussive, $C_{21}H_{28}N_4O_5S \cdot HCl$, occurring as a white, crystalline powder; administered orally.

pipenzolate bromide (pi-pen'zo-lāt) chemical name: 1-ethyl-3-[(hydroxydiphenylacetyl)oxy]-1-methylpiperidinium bromide. A synthetic quaternary nitrogen anticholinergic, $C_{22}H_{28}BrNO_3$, occurring as a white, crystalline powder; used mainly for adjunctive therapy in the treatment of peptic ulcer, administered orally.

Piper (pi'per) [L. "pepper"] a genus of plants producing betel, cubeb, matico, and pepper.

piperacetazine (pi'per-ah-set'ah-zēn) [USP] chemical name: 1-[10-[3-(4-(2-hydroxyethyl)-1-piperidinyl)propyl]-10-*H*-phenothiazin-2-yl]ethanone. An antipsychotic, $C_{24}H_{30}N_2O_2S$, occurring as a yellow, granular powder; used in the treatment of various forms of schizophrenia in adults, administered orally.

piperacillin sodium (pi-per'ah-sil'in) chemical name: [2*S*-[2*α*,5*α*,6*β*(*S'*)]-6-[[[(4-ethyl-2,3-dioxo-1-piperazinyl)carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid monosodium salt; an antibacterial, $C_{23}H_{28}N_5NaO_7S$.

piperazine (pi-per'ah-zēn) [USP] a compound, $C_4H_{10}N_2$, prepared by the action of alcoholic ammonia on ethylene chloride, or by other methods, occurring as white to slightly off-white lumps or flakes. Its salts are used orally as anthelmintics. Called also *diethyl diamine*, *dispermine*, and *p. hexahydrate*. **p. citrate** [USP], the citrate salt of piperazine, $(C_4H_{10}N_2)_3 \cdot 2C_6H_8O_7 \cdot xH_2O$, occurring as a white, crystalline powder; used in the treatment of intestinal roundworm and pinworm infections, administered orally.

p. edetate calcium, a compound, $C_{14}H_{24}CaN_4O_8 \cdot 2H_2O$, prepared by the reaction of edetate with calcium carbonate and piperazine; used like the citrate salt. **p. estrone sulfate**, see under *estrone*. **p. phosphate** [USP], the phosphate salt of piperazine, $C_4H_{10}N_2 \cdot H_3PO_4 \cdot H_2O$, occurring as a white, crystalline powder; used in the treatment of intestinal roundworm and trematode infections. **p. tartrate**, the tartrate salt of piperazine, $C_4H_{10}N_2O_6$; used like the citrate salt.

piperidione (pi'per-i-di'ōn) dihyprylone.

piperidolate hydrochloride (pi'per-id'o-lāt) [USP] chemical name: α -phenylbenzeneacetic acid 1-ethyl-3-piperidinyl ester hydrochloride. A synthetic tertiary anticholinergic, $C_{21}H_{25}NO_2 \cdot HCl$, occurring as a white or cream-colored powder, having the ability to reduce motility of smooth muscle, especially that of the gastrointestinal tract; used as an antispasmodic in functional gastrointestinal disorders, administered orally.

piperine (pi'per-in) [L. *piperinum*] chemical name: 1-piperoylpiperidine. A crystallizable, slightly soluble alkaloid, $C_8H_{10}N \cdot CO \cdot (CH)_3CH \cdot C_6H_5 \cdot O_2 \cdot CH_2$, from *Piper nigrum* (black pepper), used as an insecticide.

piperism (pi'per-izm) [L. *piper* pepper] poisoning by pepper.

piperocaine hydrochloride (pi'per-o-kān') chemical name: 2-methyl-1-piperidinepropanol benzoate hydrochloride. A local anesthetic, $C_{18}H_{23}NO_2 \cdot HCl$, occurring as small, white crystals or white, crystalline powder; used for topical, infiltration, regional, spinal, and caudal anesthesia.

piroxi-an hydrochloride (pi'per-oks'an) chemical name: 2-(1-piperidylmethyl)-1,4-benzodioxan hydrochloride. An alpha-adrenergic blocking agent, $C_{14}H_{19}NO_2$, formerly used in diagnostic tests for pheochromocytoma. Also used to counteract the effects of

epinephrine release before and during surgery for removal of pheochromocytoma.

pipet (pi-pet') pipette.

pipette (pi-pet') [Fr.] 1. a glass or transparent plastic tube used in measuring or transferring small quantities of liquid or gas. 2. to dispense fluid or gas by means of a pipette.

pipitzahoac (pi-pit'zah-ho-ak') [Mex.] the root and rhizome of the Mexican plant *Trixis pipitzahuac* Shaffner (*Perezia adnata* Gr., Compositae); used as a cathartic.

Pipizan (pi'pi-zan) trademark for a preparation of piperazine.

pipobroman (pi'po-bro'man) [USP] chemical name: 1,4-bis(3-bromo-1-oxopropyl)piperazine. An antineoplastic alkylating agent, $C_{10}H_{16}Br_2N_2O_2$, occurring as a white to practically white, crystalline powder; used primarily in the treatment of polycythemia vera, and has been found to be useful in the treatment of chronic granulocytic leukemia, administered orally.

piposulfan (pi-po-sul'fan) chemical name: 1,4-dihydracryloylpiperazine dimethanesulfonate (ester); an antineoplastic, $C_{12}H_{22}N_2O_8S_2$.

pipotiazine palmitate (pi'po-ti'ah-zēn) chemical name: 2-[1-[3-[2-[(dimethylamino)sulfonyl]-10-*H*-phenothiazine-10-yl]propyl]-4-piperidinyl]ethyl ester hexanoic acid; a tranquilizer, $C_{40}H_{63}N_3O_4S_2$.

pipoxolan hydrochloride (pi-poks'o-lan) chemical name: 5,5-diphenyl-2-(2-piperidinoethyl)-1,3-dioxolan-4-one hydrochloride; a muscle relaxant, $C_{22}H_{25}NO_3 \cdot HCl$.

pipradrol hydrochloride (pi'prah-drol) chemical name: α, α -diphenyl-2-piperidinemethanol hydrochloride. A central nervous system stimulant, $C_{18}H_{21}NO \cdot HCl$, occurring as small, white crystals or crystalline powder; used mainly as an antidepressant, administered orally.

piprozolin (pi-pro-zo'lin) chemical name: ethyl 3-ethyl-4-oxo-5-piperidino- $\Delta^{2,\alpha}$ -thiazolidineacetate; a choleric, $C_{14}H_{22}N_2O_5S$.

Piptal (pip'tal) trademark for preparations of pipenzolate methylbromide.

Piptocephalus (pip'to-sef'ah-lus) a genus of molds, some species of which cause alimentary toxic aleukia.

piequeur (pe-ker') a fetishist who stabs his victims in the buttocks or breast.

piquizil hydrochloride (pi'wi-zil) chemical name: isobutyl 4-(6,7-dimethoxy-4-quinazolinyl)-1-piperazinecarboxylate monohydrochloride; a bronchodilator, $C_{19}H_{28}N_4O_4 \cdot HCl$.

piqûre (pe-koor') [Fr.] puncture, especially Bernard's (diabetic) puncture.

Piracaps (pi'rah-kaps) trademark for a preparation of tetracycline hydrochloride.

pirandamine hydrochloride (pēr-an'dah-mēn) chemical name: 1,3,4,9-tetrahydro-*N*,*N*,1-trimethylindeno[2,1-*c*]pyran-1-ethanamine hydrochloride; a tricyclic antidepressant, $C_{17}H_{23}NO \cdot HCl$.

pirbenicillin sodium (pēr-ben'i-sil'in) chemical name: [2*S*-[2*α*,5*α*,6*β*(*S'*)]-6-[[[(imino-4-pyridinylmethyl)amino]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid monosodium salt; an antibacterial, $C_{24}H_{29}N_5NaO_6S$.

pirbuterol hydrochloride (pēr-bu'ter-ōl) chemical name: α^6 -[[[(1,1-dimethylethyl)amino]methyl]-3-hydroxy-2,6-pyridinedimethanol dihydrochloride; a bronchodilator, $C_{12}H_{20}N_2O_3 \cdot 2HCl$.

Pirenella (pi'rē-nel'ah) a genus of snails. **P. con'ica**, the host of the intestinal fluke, *Heterophyes heterophyes*, in Egypt.

pirfenidone (pēr-fen'i-don) chemical name: 5-methyl-1-phenyl-2(1*H*)-pyridinone; an anti-inflammatory and antipyretic, $C_{12}H_{11}NO$.

piriform (pi'r'i-form) [L. *pirum* a pear + *forma* shape] pear-shaped.

Pirogoff's amputation, angle (pi'r'o-gofs') [Nikolai Ivanovich *Pirogoff*; Russian surgeon, 1810-1881] see under *amputation*, and see *venous angle*, under *angle*.

pirolate (pi'r'o-lāt) chemical name: 1,4-dihydro-7,8-dimethoxy-4-oxopyrimido[4,5-*b*]quinoline-2-carboxylic acid ethyl ester; an antiasthmatic, $C_{18}H_{15}N_3O_5$.

pirolazamide (pi'r'o-la'zah-mīd) chemical name: hexahydro- α, α -diphenylpyrrolo[1,2-*a*]pyrazine-2(1*H*)-butanamide; a cardiac depressant with antiarrhythmic action, $C_{23}H_{28}N_4O$.

Piropasma (pi'ro-plaz'mah) [L. *pirum* pear + Gr. *plasma* something formed] a name formerly given to a genus of protozoan parasites found in the red blood cells of animals. Now called *Babesia*. See also *Nuttalia* and *Theileria*.

piroplasmosis (pi'ro-plaz-mō'sis) infection with *Piropasma* (*Babesia*); babesiasis. **bovine p.**, see *Texas fever*, under *fever*. **canine p.**, an infectious jaundice of dogs caused by *Babesia canis*; called also *biliary fever of dogs* and *malignant jaundice of dogs*. **equine p.**, biliary fever of horses.

piroxicam (pēr-ok'si-kam) chemical name: 4-hydroxy-2-methyl-*N*-2-pyridinyl-2*H*-1,2-benzothiazine-3-carboxamide; an anti-inflammatory, $C_{15}H_{13}N_3O_4S$.

pirprofen (pēr-proʻfen) chemical name: 3-chloro-4-(2,5-dihydro-1*H*-pyrrol-1-yl)- α -methylbenzeneacetic acid; an anti-inflammatory, $C_{13}H_{14}ClNO_2$.

Pirquet's reaction (cutireaction, test) (per-kāzʹ) [Clemens Freiherr von Pirquet, Austrian pediatrician, 1874–1929] see *cutaneous reaction*, under *reaction*.

pis (pe) [Fr.] urination. **p. en deux temps** installment emptying of the bladder, as in diverticulum or vesical hernia.

piscicide (pisʹi-sid) any substance poisonous to fish.

Piscidia (pi-sidʹe-ah) [L. *piscis* fish + *caedere* to kill] a genus of leguminous trees; the bark of *P. piscipula* (L.) Sarg. (*P. erythrina* L.), Jamaica dogwood, is a mild anodyne.

piscidin (pi-siʹdin) a neutral principle from *Piscidia piscipula* (L.) Sarg., an anodyne and antispasmodic.

pisiform (piʹsi-form) [L. *pisum* pea + *forma* shape] resembling a pea in shape and size.

pisiformis (piʹsi-forʹmis) [L.] pisiform.

Piskacek's sign (pisʹkach-eks) [Ludwig Piskacek, Hungarian obstetrician, 1854–1933] see under *sign*.

pistil (pisʹtil) [L. *pistillus* a pestle] gynecium.

pit (pit) 1. a hollow fovea or indentation. 2. a pockmark. 3. to indent, or to become and remain for a few minutes indented, by pressure. **anal p.**, the proctodeum. **arm p.**, the axillary fossa. **auditory p.**, a distinct depression appearing in each auditory placode, marking the beginning of the embryonic development of the internal ear. Called also *otic p.* **basilar p.**, a pit in the crown of an incisor tooth above its neck. **chrome p's**, deep ulcers in the skin caused by contact with chromium. **costal p.**, fovea costalis inferior. **ear p.**, a slight depression anterior to the helix and superior to the tragus, sometimes leading to a congenital preauricular cyst or fistula. **gastric p's**, foveolae gastricae. **Gaul's p's**, depressions in the corneal epithelium seen in neuroparalytic keratitis. **Herbert's p's**, a characteristic defect left after the healing of a limbal follicle in trachoma. **lens p.**, a pitlike depression in the ectoderm of the fetal head where the lens is developed. **nasal p.**, olfactory p. **oblong p. of arytenoid cartilage**, fovea oblonga cartilaginis arytenoideae. **olfactory p.**, the primordium of a nasal cavity. **otic p.**, auditory p. **postanal p.**, foveola coccygea. **primitive p.**, a depression at the cranial end of the primitive groove; it may open into a neurolentic canal. **pterygoid p.**, see under *fovea*. **p. of the stomach**, the epigastrium or fossa epigastrica. **triangular p. of arytenoid cartilage**, fovea triangularis cartilaginis arytenoideae.

pita (peʹtah) tinea imbricata.

pitch (pich) [L. *pix*] 1. a dark, lustrous, more or less viscous residue from the distillation of tar and other substances. 2. natural asphalt of various kinds. 3. the quality of sound dependent principally on its frequency. **black p.**, an inflammable substance obtainable from the tar of various species of pine. **Burgundy p.**, an aromatic, oily resin from *Abies* (or *Picea*) *excelsa*, the Norway spruce of Europe, much used in plasters. **Canada p.**, a resin from *Tsuga canadensis*, the hemlock tree, useful in plasters, etc. **liquid p.**, ordinary wood tar. **mineral p.**, bitumen. **naval p.**, black p.

pitchblende (pichʹblend) a black mineral containing uranium oxide; from it are obtained radium, polonium, and uranium.

pith (pith) 1. to pierce the spinal cord or brain; see *pithing*. 2. the soft tissue found in plant stems that often disappears so that the stem becomes hollow. 3. the central core of colorless parenchymatous cells in stems and some roots.

pithecoid (pithʹe-koid) [Gr. *pithēkos* ape + *eidos* form] apelike.

pithiatric (pithʹe-atʹik) curable by persuasion; said of hysterical symptoms.

pithiatism (pith-iʹah-tizm) [Gr. *peithein* to persuade + *iatos* curable] 1. a condition which is caused by suggestion and which renders the patient subject to persuasion. 2. the cure of nervous and mental disorders by persuasion.

pithiatric (pithʹe-atʹrik) pertaining to persuasion as a means of treatment; capable of being cured by persuasion and suggestion.

pithiatry (pith-iʹah-tre) medical treatment by persuasion or suggestion.

pithing (pithʹing) destruction of the brain and spinal cord by thrusting a blunt needle into the spinal canal and cranium; done on animals to destroy sensibility preparatory to experimenting on their living tissues.

pithode (piʹthōd) [Gr. *pithos* wine cask + *eidos* form] the nuclear barrel figure formed in mitosis.

Pithomyces (pithʹo-miʹsez) a genus of molds of the class Deuteromycetes. *P. chartaʹrum* causes facial eczema of ruminants.

Pitocin (pi-toʹsin) trademark for preparations of oxytocin.

Pitres' sections, sign (pe-tresʹ) [Jean Albert Pitres, physician in Bordeaux, 1848–1927] see under *section* and *sign*.

Pitressin (pi-tresʹin) trademark for vasopressin injection.

pitting (pitʹting) 1. the formation, usually by scarring, of a small depression. 2. the removal from erythrocytes, by the spleen, of certain structures, such as iron granules, without

destruction of the cells. 3. remaining indented for a few minutes after removal of firm finger-pressure, distinguishing fluid edema from myxedema.

pituicyte (pi-tuʹi-sit) [pituitary + *-cyte*] any of the dominant and distinctive fusiform cells of the neurohypophysis, which are intermingled with nerve fibers and are regarded as specialized neuroglial cells. According to their morphological appearance on staining with silver, four subtypes are distinguished: adeno-, fibro-, reticulo-, and micropituicytes.

pituita (pi-tuʹi-tah) [L.] a glutinous mucus.

pituitarigenic (pi-tuʹi-tārʹi-jenʹik) [pituitary + *gennan* to produce] produced by secretions of the pituitary gland.

pituitarism (pi-tuʹi-tarʹizmʹ) disorder of pituitary function; see *hyperpituitarism* and *hypopituitarism*.

pituitarium (pi-tuʹi-taʹre-um) [L.] pituitary. **p. anteʹrius**, anterior pituitary. **p. posteʹrius**, posterior pituitary. **p. toʹtum**, whole pituitary.

pituitary (pi-tuʹi-tārʹe) 1. pertaining to the pituitary gland. 2. the pituitary gland; see under *gland*. 3. a preparation of some part of the pituitary gland of animals, used therapeutically. Because of the abundant supply, the pituitary glands of healthy domesticated animals used as food for human consumption constitute the source. **anterior p.**, the anterior lobe of the pituitary gland. Also a preparation of the dried, partially defatted, powdered anterior lobe of the pituitary gland of hogs, sheep, or cattle. **pharyngeal p.**, pharyngeal hypophysis. **posterior p.**, 1. the posterior lobe of the pituitary gland; the neurohypophysis. 2. a powder prepared from the dried posterior pituitary lobe of those domestic animals used for food by man, having the pharmacological actions of its hormones, *oxytocin* and *vasopressin*; used mainly as an antidiabetic in the treatment of diabetes insipidus, administered subcutaneously or by nasal inhalation or topical application to the nasal mucosa. It may be used to stimulate smooth muscle tissue, especially to produce vasoconstriction in the presence of hemorrhage. **whole p.**, a preparation of the dried, partially defatted, powdered whole pituitary gland of domesticated animals.

pituitectomy (pi-tuʹi-tekʹto-me) excision of the pituitary gland.

pituitous (pi-tuʹi-tus) [L. *pituitosus*] pertaining to mucus or characterized by its secretion.

Pituitrin (pi-tuʹi-trin) trademark for posterior pituitary injection.

pituitrism (pi-tuʹi-trizm) disorder of pituitary function.

pityriasis (pitʹi-riʹah-sis) [Gr. *pityron* bran + *-iasis*] a name originally applied to a group of skin diseases characterized by the formation of fine, branny scales, but now used only with a modifier. **p. alʹba**, an extremely common skin disorder occurring on the face and neck in children and adolescents, which consists of one or many unevenly round or oval, hypopigmented, sometimes slightly reddened, finely scaling macules 1 to 4 cm. in diameter. If untreated, it usually persists for a year or several years, and often recurs. Called also *impetigo sicca*, *impetigo pityroides*, and *erythema streptogenes*. **p. amiantaʹcea**, tinea amiantacea. **p. capitis**, dandruff, def. 2. **p. furfurʹaʹcea**, dandruff, def. 2. **Gibert's p.** (obs.), p. rosea. **Hebra's p.** (obs.), dermatitis exfoliativa. **p. lichenoiʹdes**, a variety of parapsoriasis. **p. lichenoiʹdes et varioliforʹmis acuʹta**, a disease characterized by the sudden appearance of a polymorphous skin eruption composed of macules, papules, and occasional vesicles, with hemorrhage, which may run an acute, subacute, or chronic course; called also *parapsoriasis lichenoides et varioliformis* and *parakeratosis variegata*. **p. linʹguae**, geographic tongue. **p. maculaʹta**, p. alba. **p. pilʹaris** (obs.), keratosis pilaris. **p. roʹsea**, a dermatosis characterized by scaling pink oval macules arranged with the long axes parallel to the lines of cleavage of the skin. **p. rotunʹda**, a chronic dermatosis, usually affecting adults, manifested as perfectly circular patches of dry, ichthyosiform scaliness, 20 to 60 mm. in diameter, mostly on the buttocks, thighs, back, or upper arms. **p. ruʹbra pilaʹris**, a rare chronic inflammatory disease of the skin, characterized by the presence of pink scaling macules and fine acuminate, horny, follicular papules, and appearing in children or adults. It begins usually with severe seborrhea of the scalp and seborrheic dermatitis of the face, and is associated with striking keratoderma of palms and soles; it is thought by some to be a follicular variant of psoriasis. **p. sicʹca**, dandruff, def. 2. **p. simʹplex**, p. alba. **p. steatoiʹdes**, seborrheic dermatitis. **p. versicʹolor**, tinea versicolor.

pityroid (pitʹi-roid) [Gr. *pityron* bran + *eidos* form] furfuraceous; branny.

Pityrosporon (pitʹi-rosʹpo-ron) a genus of imperfect fungi of the family Cryptococcaceae, which are yeastlike and produce no mycelium; called also *Malassezia*. **P. orbicʹulare**, a species which is a customary resident of normal skin, but is capable of causing disease (tinea versicolor) in susceptible hosts; called also *Malassezia furfur*, *M. macfadyani*, *M. tropica*, and *Microsporum furfur*. **P. ovaʹle**, a lipid-dependent species which is abundant in sebaceous areas, such as the skin of the face and scalp, but is not known to be pathogenic.

Pityrosporium (pit'i-ro'spo-rum) *Pityrosporon*.

pivalate (piv'ah-lāt) USAN contraction for trimethylacetate.

pivampicillin hydrochloride (piv-am'pī-sil'in) chemical name: 6-[(aminophenylacetyl)amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (2,2-dimethyl-1-oxo-propoxy)methyl ester. A derivative of ampicillin, $C_{22}H_{28}N_4O_6S$, having the same broad spectrum of antibacterial activity and uses as ampicillin. Available as *p. hydrochloride*, *p. pamoate*, and *p. probenate*.

pivot (piv'ut) a dowel, or post; in dentistry the point of rotation for a removable partial denture. **occlusal p.**, an elevation contrived on the occlusal surface, usually in the molar region, designed to act as a fulcrum and to induce sagittal mandibular rotation.

pix (piks), gen. *pi'cis* [L.] pitch or tar.

pizotiline (pi-zō'tī-lēn) chemical name: 4-(9,10-dihydro-4H-benzo[4,5]cyclohepta[1,2-b]thien-4-ylidene)-1-methylpiperidine; an anabolic, antidepressant, and serotonin inhibitor (specific in migraine), $C_{16}H_{21}NS$.

PK psychokinesis.

pK the negative logarithm of the ionization constant (K) of an acid; the buffering power of a buffer system is greatest when its pK equals the pH.

PKU phenylketonuria.

P.L. light perception.

placebo (plah-se'bo) [L. "I will please"] an inactive substance or preparation given to satisfy the patient's symbolic need for drug therapy, and used in controlled studies to determine the efficacy of medicinal substances. Also, a procedure with no intrinsic therapeutic value, performed for such purposes. **active p.**, **impure p.**, a substance having pharmacologic properties that are not relevant to the condition being treated.

placement (plās'ment) position or arrangement, as of the teeth. **lingual p.**, displacement of a tooth toward the tongue.

placenta (plah-sen'tah), pl. *placentas* or *placen'tae* [L. "a flat cake"] an organ characteristic of true mammals during pregnancy, joining mother and offspring, providing endocrine secretion and selective exchange of soluble, but not particulate, blood-borne substances through an apposition of uterine and trophoblastic vascularized parts. According to species, the area of vascular apposition may be diffuse, cotyledonary, zonary, or discoid; the nature of apposition may be labyrinthine or villous; the intimacy of apposition may vary according to what layers are lost of those originally interposed between maternal and fetal blood (maternal endothelium, uterine connective tissue, uterine epithelium, chorion, extraembryonic mesoderm, and endothelium of villous capillary). The chorion may be joined by and receive blood vessels from either the yolk sac or the allantois, and the uterine lining may be largely shed with the chorion at birth (deciduate) or may separate from the chorion and remain (nondeciduate). The human placenta is discoid, villous, hemochorial, chorioallantoic, and deciduate. After birth, it weighs about 600 gm. and is about 16 cm. in diameter and 2 cm. thick, discounting a principal functional part, the maternal blood in the intervillous space (which leaks out at birth) into which the chorionic villi dip. The villi are grouped into adjoining cotyledons making about 20 velvety bumps on the side of the placenta facing outward to the uterus; the inner side of the placenta facing the fetus is smooth, being covered with amnion, a thin avascular layer that continues past the edges of the placenta to line the entire hollow sphere of chorion except where it is reflected to cover the umbilical cord, which joins fetus and placenta. The cord usually joins the placenta near the center but may insert at the edge, on the nonplacental chorion, or on an accessory placenta. **accessory p.**, a placenta separate from the main placenta. **p. accrete/ta**, abnormal adherence of part or all of the placenta to the uterine wall, with partial or complete absence of the decidua basalis, especially of the spongiosum layer. **adherent p.**, one which adheres closely to the uterine wall. **annular p.**, one which extends around the interior of the uterus like a ring or belt. **battledore p.**, one with marginal insertion of the cord. **bidiscoidal p.**, one consisting of two separate discoidal masses, as in the macaques. **bilobate p.**, **bilobed p.**, a placenta consisting of two lobes. **p. biparti/ta**, **bipartite p.**, bilobate p. **chorioallantoic p.**, one in which the allantois joins the chorion or provides its major blood supply. **choriovitelline p.**, one in which the yolk sac becomes an intermediary in the fetal-maternal relationship. **p. circumval-la/ta**, **circumvallate p.**, a placenta in which a dense peripheral ring is raised from the surface and the attached membranes are doubled back over the edge of the placenta. **cirsoid p.**, **p. cirsoi'des**, a placenta the vessels of which appear to be varicose. **deciduate p.**, **deciduous p.**, a placenta or type of placenta in which the decidua or maternal parts of the placenta separate from the uterus and are cast off together with the fetal (or more precisely, trophoblastic) parts. **p. diffu'sa**, a placenta in which placental tissue is distributed over the chorionic membrane, as in swine. **p. dimidia/ta**, **dimidiata p.**, bilobate p. **dis-coid p.**, **p. discoi'dea**, a disk-shaped placenta. **Duncan p.**, one that is expelled with the chorionic surface outward; cf. *Schultze's p.* **duplex p.**, bilobate p. **endotheliochorial**

p., one in which syncytial trophoblast embeds maternal vessels bared to their endothelial lining. **epitheliochorial p.**, one in which the uterine epithelial lining is not eroded but merely lies in apposition to the chorion. **p. fenestra/ta**, one which has spots where placental tissue is lacking. **fetal p.**, **p. foeta/lis**, pars fetalis placentae. **fundal p.**, one which is attached to the fundus of the uterus in the normal manner. **furcate p.**, lobed p. **hemochorial p.**, one in which maternal blood comes in direct contact with the chorion. **hemoendothelial p.**, one in which maternal blood comes in contact with the endothelium of chorionic vessels. **horseshoe p.**, a crescentic form of placenta sometimes occurring in twin pregnancy. **incarcerated p.**, retained p. **p. incre/ta**, placenta accreta with penetration of the myometrium. **labyrinthine p.**, one in which maternal blood courses in channeled trophoblast. **lobed p.**, one that is more or less subdivided into lobes. **p. margina/lis**, **p. margina/ta**, a placenta surrounded by an unusual margin of elevated infarcted tissue. **maternal p.**, the maternally contributed part of the placenta, derived from the decidua basalis; called also *pars uterina placentae* [NA]. **p. membrana/cea**, a placenta which is abnormally thin and spread out over a large area of the uterine wall. **multilobate p.**, **multilobed p.**, **p. multi-parti/ta**, a placenta consisting of more than three lobes. **p. nappifor/mis**, **p. circumvallata**. **nondeciduate p.**, **nondeciduous p.**, one in which the maternal component remains in the uterus instead of being cast off together with the trophoblastic derivatives. **panduriform p.**, **p. pandurifor/mis**, a placenta composed of two halves side by side, resembling a violin in shape. **p. percre/ta**, placenta accreta with invasion of the myometrium all the way to its peritoneal covering, sometimes resulting in rupture of the uterus. **p. pre/via**, a placenta which develops in the lower uterine segment, in the zone of dilatation, so that it covers or adjoins the internal os; painless hemorrhage in the last trimester, particularly during the eighth month, is the most common symptom. **p. pre/via centra/lis**, placenta previa in which the placenta entirely covers the internal os; called also *complete*, *total*, or *central placenta previa*. **p. pre/via margina/lis**, placenta previa in which the placenta is just palpable at the margin of the os; called also *lateral* or *marginal placenta previa*. **p. pre/via parti/ta**, placenta previa in which the internal os is partially covered; called also *incomplete* or *partial placenta previa*. **p. reflex/a**, one in which the margin is thickened, appearing to turn back on itself. **p. renifor/mis**, a kidney-shaped placenta. **retained p.**, one which is either adherent or incarcerated by irregular uterine contractions, and which in consequence fails to be expelled after childbirth. **Schultze's p.**, a placenta which is expelled with the gestation sac inside out, the amnion providing a smooth, glistening surface. Cf. *Duncan p.* **p. spu'ria**, an accessory portion having no blood vessel attachment to the main placenta. **p. succenturia/ta**, **succenturiate p.**, an accessory portion attached to the main placenta by an artery and vein. **syndes-mochorial p.**, one in which the lining epithelium of the uterus is the only maternal tissue eroded. **p. tri/loba**, **trilobate p.**, a placenta having three lobes. **p. triparti/ta**, **tripartite p.**, trilobate p. **p. trip/lex**, trilobate p. **p. uteri/na**, uterine p., maternal p. **velamentous p.**, one in which the umbilical cord is attached on the adjoining membranes. **villous p.**, one characterized by the presence of villi which are outgrowths of the chorion. **yolk-sac p.**, choriovitelline p. **zonary p.**, **zonu-lar p.**, 1. annular placenta. 2. a belt-shaped placenta, as occurs in carnivores.

placental (plah-sen'tal) pertaining to the placenta.

Placentalia (pla'sen-ta'le-ah) a division of mammals whose embryos are nourished through a placenta; it includes all mammals except marsupials and monotremes.

placentation (plas'en-ta'shun) the process of placenta formation and the result, especially with respect to taxonomically relevant aspects of structure. See *placenta*.

placentin (plah-sen'tin) a defatted desiccation product of beef placenta.

placentitis (plas'en-ti'tis) inflammation of the placenta.

placentogenesis (plah-sen'tō-jen'ē-sis) [*placenta* + *genesis*] the origin and development of the placenta.

placentogram (plah-sen'to-gram) a film taken in placentography.

placentography (plas'en-tog'rah-fe) radiological visualization of the placenta after the injection of a contrast medium. **indirect p.**, roentgenographic measurement of the space between the placenta and the presenting head of the fetus, for the recognition of placenta previa.

placentoid (plah-sen'toid) resembling the placenta.

placentologist (plas'en-tol'o-jist) a specialist in placentology.

placentology (plas'en-tol'o-je) the scientific study of the development, structure, and functioning of the placenta. **com-parative p.**, the scientific study of the development, structure, and functioning of the placenta in different species of animals.

placentolysin (plas'en-tol'i-sin) [*placenta* + Gr. *lysis* dissolution] a lysin formed in the serum of an animal into which have been injected placenta cells from another animal. It is destructive to the

placenta of animals of the species from which the cells were originally taken.

placentoma (plas'en-to'mah) a neoplasm derived from a portion of the placenta retained after an abortion.

placentopathy (plas'en-top'ah-the) any placental disease.

Placido's disk (plah-si'dōz) [A. Placido, Portuguese ophthalmologist] see under *disk*.

Placidyl (plas'i-dil) trademark for a preparation of ethchlorvynol.

placode (plak'ōd) [Gr. *plax* plate + *eidos* form] a platelike structure, especially a thickened plate of ectoderm in the early embryo, from which a sense organ develops. **auditory p.**, a thickened epidermal plate located midway alongside the hind-brain in the early embryo, from which the internal ear ultimately develops. Called also *otic p.* and *auditory saucer*. **dorsolateral p's**, a series of placodes giving rise to the acoustic and lateral line organs. **epibranchial p's**, a series of placodes located dorsal to the branchial grooves that contribute to adjacent cerebral ganglia. **lens p.**, a thickened area of ectoderm directly overlying the optic vesicle in the early embryo, from which the lens develops. **olfactory p.**, an oval area of thickened ectoderm on either ventrolateral surface of the head of the early embryo, constituting the first indication of the olfactory organ. **otic p.**, auditory p.

placoderm (plak'o-derm) [Gr. *plakosa* tablet or flat plate + *derma* skin] any of the primitive jawed fishes of the class Placodermi.

Placodermi (plak'o-der'mi) a class of primitive jawed fishes of the Paleozoic era, having a bony head shield movably articulated with a thoracic shield; known only from fossils, and believed to be ancestral to both bony and cartilaginous fishes.

placoid (plak'oid) platelike or plaquelike.

plagiocephalic (pla'je-o-se-fal'ik) characterized by plagiocephaly.

plagiocephalism (pla'je-o-sef'ah-lizm) plagiocephaly.

plagiocephaly (pla'je-o-sef'ah-le) [Gr. *plagios* oblique + *kephalē* head] an unsymmetrical and twisted condition of the head, resulting from irregular closure of the cranial sutures.

plague (plāg) [L. *plaga*, *pestis*; Gr. *plēgē* stroke] an acute febrile, infectious disease with a high fatality rate, caused by *Yersinia pestis*; it begins with fever and chills, quickly followed by prostration, and frequently attended with delirium, headache, vomiting, and diarrhea. It is primarily a disease of rats and other rodents and is transmitted to man from infected rodents by the bite of fleas of several genera, or communicated from patient to patient. Called also *pest* and *oriental plague*. See also *bubonic plague*, *pneumonic plague*, and *septicemic plague*. **ambulatory p.**, a mild form of bubonic plague, with little or no toxemia. **avian p.**, fowl p. **black p.**, hemorrhagic p. **Brunswick bird p.**, fowl p. **bubonic p.**, **p. bubonica**, plague which is marked by swelling of the lymph nodes, forming buboes in the femoral, inguinal, axillary and cervical regions. The severe form, with septicemia producing petechial hemorrhages, is known as *black death*, *pestis fulminans*, and *pestis major*. **canine p.**, black tongue of dogs; it is caused by niacin deficiency. **cat p.**, panleukopenia. **cattle p.**, a viral disease of cattle, which sometimes affects sheep and goats, marked by fever and croupous, ulcerative diphtheritic lesions of the intestinal tract; called also *rinderpest*. **cellulocutaneous p.**, plague marked by inflammation and necrosis of the skin and subcutaneous tissues and often associated with involvement of the lymph nodes. **defervescing p.**, a form which ends by a crisis. **equine p.**, African horse sickness. **fowl p.**, a viral disease of domestic fowls caused by a highly pathogenic strain of the avian influenza virus; called also *fowl pest*. **glandular p.**, bubonic p. **hemorrhagic p.**, a severe form of bubonic plague with hemorrhages into the mucous membrane and the skin. **larval p.**, ambulatory p. **lung p.**, pleuropneumonia, def. 2. **Pahvant**

Valley p., tularemia. **pneumonic p.**, that in which there is extensive involvement of the lungs, and the sputum is loaded with the causative organisms. **premonitory p.**, a mild form that sometimes foreruns the typical endemic variety. **rodent p.**, that affecting rodents. **septicemic p.**, that in which there is massive bacteremia, resulting in death before the appearance of buboes or of pulmonic manifestations. **siderating p.**, septicemic p. **Stuttgart dog p.**, Stuttgart disease. **swine p.**, hemorrhagic septicemia of swine. **sylvatic p.**, plague of the woods, as for example, the plague widely spread and still spreading among the ground squirrels and other wild rodents of the western U.S.A. **Vanin p.**, parangi. **white p.**, tuberculosis.

plakins (pla'kinz) substances similar to leukins that can be extracted from blood platelets.

plana (pla'nah) plural of *planum*.

planarian (plah-nar'i-an) any of the free-living flatworms of the class Turbellaria, which are used extensively in biologic studies of regeneration.

planchet (plan'chet) a metal disk on which radioactive samples are deposited.

Planck's constant, theory (planks) [Max Karl Ernst Ludwig Planck, German physicist, 1858-1947] see under *constant*, and see *quantum theory*, under *theory*.

plane (plān) [L. *planus*] 1. a flat surface determined by the position of three points in space. 2. a specified level, as the plane of anesthesia. 3. to rub away or abrade; see *planing*. 4. a superficial incision in the wall of a cavity or between tissue layers, especially in plastic surgery, made so that the precise point of entry into the cavity or between the layers can be determined. **Addison's p's**, a series of planes used as landmarks in the topography of the thorax and abdomen. **Aeby's p.**, one passing through the nasion and basion, perpendicular to the median plane of the cranium. **auricular p. of sacral bone**, facies auricularis ossis sacri. **auriculoinfraorbital p.**, Frankfort horizontal p. **axial p.**, one parallel with the long axis of a structure. **axiobuccolingual p.**, one parallel with the long axis of a posterior tooth and passing through its buccal and lingual surfaces. **axiolabiolingual p.**, one parallel with the long axis of an anterior tooth and passing through its labial and lingual surfaces. **axiomesiodistal p.**, one parallel with the long axis of a tooth and passing through its mesial and distal surfaces. **Baer's p.**, one passing through the upper border of the zygomatic arches. **base p.**, an imaginary plane upon which is estimated the retention of an artificial denture. **bite p.**, occlusal p. **Blumenbach's p.**, a plane determined by the base of a skull from which the lower jaw has been removed. **Bolton-nasion p.**, nasion-postcondylare p. **Broadbent-Bolton p.**, nasion-postcondylare p. **Broca's p.**, visual p. **buccolingual p.**,

Planes of the body (Davenport). Anterior view, in the anatomical position, with standard planes of reference shown by cleavages.

one passing through the buccal and lingual surfaces of a posterior tooth. **coronal p.**, frontal p. **cove p.**, the ST-T segment of the electrocardiogram in which an inverted T wave is preceded by an isoelectric plateau. **cuspal p.**, the small imaginary plane in which buccal cusp tips and lingual cusp tips are located on posterior teeth. **datum p.**, a given plane from which craniometric measurements are made. **Daubenton's p.**, one passing through the opisthion and the lower edges of the orbits. **eye-ear p.**, Frankfort horizontal p. **facial p's**, various planes determined by certain landmarks of the face, such as the Frankfort horizontal plane, and the orbital plane. **Frankfort horizontal p.**, a horizontal plane represented in profile by a line between the lowest point on the margin of the orbit and the

highest point on the margin of the auditory meatus. **frontal p.**, any plane passing longitudinally through the body from side to side, at right angles to the median plane, and dividing the body into front and back parts. So called because such a plane roughly parallels the frontal suture of the skull. Called also *coronal p.* because one of these planes passes through the coronal suture. **guide p.**, 1. any plane that guides movement. 2. an orthodontic appliance used to correct crossbite of anterior teeth. **Hensen's p.**, one passing through the center of a series of sarcous elements of a muscle fibril. **Hodge's p's**, a series of planes running parallel with the pelvic inlet, the first parallel being in the inlet, the second parallel touching the arch of the pubis and striking the lower part of the second sacral vertebra, the third cutting the spines of the ischia, and the fourth passing through the tip of the coccyx. **horizontal p.**, any plane passing through a body, at right angles to both the median and the frontal plane, and dividing the body into upper and lower parts; in dentistry, a plane passing through a tooth at right angles to its long axis. Called also *transverse p.* **interparietal p. of oc-**

Planes of the trunk (Rawling).

capital bone, planum occipitale. **intertubercular p.**, a horizontal plane transecting the trunk at the level of the tubercle of the iliac crest. **labiolingual p.**, one passing through the labial and lingual surfaces of an anterior tooth. **Listing's p.**, a transverse vertical plane perpendicular to the anteroposterior axis of the eye, and containing the center of motion of the eyes; in it lie the transverse and vertical axes of ocular rotation. **Ludwig's p.**, a horizontal plane transecting the trunk at about the level of the joint between the fourth and fifth thoracic vertebrae. **mean foundation p.**, the mean of the various irregularities in form and inclination of the basal seat (denture-supporting tissues). The ideal condition for denture stability exists when the mean foundation plane is most nearly at right angles to the direction of force. **Meckel's p.**, one passing through the auricular and alveolar points. **median p.**, the imaginary plane passing longitudinally through the middle of the body from front to back and dividing it into right and left halves. **median-raphe p.**, the median plane of the head. **mesiodistal p.**, one passing through the mesial and distal surfaces of a tooth. **midpelvic p.**, pelvic p., narrow. **midsagittal p.**, median p. **Morton's p.**, one passing through the most projecting points of the parietal and occipital protuberances. **nasion-postcondylare p.**, one passing at right angles to the median plane, and determined in profile by a line connecting the nasion and postcondylare. **nuchal p.**, planum nuchale. **occipital p.**, planum occipitale. **occlusal p.**, p. of occlusion, the hypothetical horizontal plane formed by the contacting surfaces of the upper and lower teeth when the jaws are closed. **orbital p.**, 1. planum orbitale. 2. visual plane. **orbital p. of frontal bone**, pars orbitalis ossis frontalis. **parasagittal p.**, sagittal p. **pelvic p.**, one determined by certain landmarks of the hip bone. **pelvic p., narrow**, an ovoid plane passing through the apex of the pubic arch, the spines of the ischia, and the end of the sacrum. **pelvic p., wide**, an irregularly ovoid plane passing from the middle of the pubis to the junction of the second and third sacral vertebrae, at about the center of the excavation of the pelvis. **pelvic p. of outlet**, a plane passing through the arch of the pubis, the rami of the pubis, the ischial tuberosities, and the tip of the coccyx; see *apertura pelvis inferior*. **popliteal p. of femur**, facies poplitea femoris. **principal p.**, in radiology, the plane which contains the central ray of a radiation beam. **p's of reference**, planes which are referred to as a guide to the location of specific anatomical sites, or of other planes. **p. of regard**, one passing through the center of rotation and the point of fixation in the eye. **sagittal p.**, any vertical plane that passes through the body parallel to the median plane (or to the

sagittal suture) and divides the body into left and right portions. **semicircular p. of frontal bone**, facies temporalis ossis frontalis. **semicircular p. of parietal bone**, planum temporale. **semicircular p. of squama temporalis**, facies temporalis partis squamosae. **spinous p.**, a horizontal plane transecting the trunk at the level of the anterior superior iliac spine. **sternal p.**, planum sternale. **sternoxiphoid p.**, a horizontal plane transecting the trunk at about the level of the xiphisternal joint. **subcostal p.**, a horizontal plane transecting the trunk at the level of the lower margin of the tenth rib. **suprasternal p.**, a horizontal plane transecting the trunk at the level of the jugular notch. **temporal p.**, planum temporale. **thoracic p.**, a horizontal plane transecting the trunk at about the level of the fourth intercostal space. **tooth p.**, any hypothetical plane passing through a tooth. **transpyloric p.**, a horizontal plane transecting the trunk at about the level of the eighth intercostal space. **transverse p.**, a horizontal plane of the body dividing the body into upper and lower portions, or a plane at right angles to the longitudinal axis of a structure. **umbilical p.**, a horizontal plane transecting the trunk at the level of the umbilicus. **vertical p.**, any plane of the body perpendicular to a horizontal plane and dividing the body into left and right, or front and back portions, as the sagittal and frontal planes. **visual p.**, one passing through the visual axes of the two eyes; called also *Broca's p.* and *orbital p.*

planigram (pla'ni-gram) a roentgenogram of a structure at a selected level, made by body section roentgenography.

planigraphy (plah-nig'rah-fe) body section roentgenography; see under *roentgenography*.

planimeter (pla-nim'e-ter) [L. *planus* plane + Gr. *metron* measure] an instrument used in measuring the area of surfaces.

planing (pla'ning) the plastic surgery procedure of abrading disfigured skin to promote reepithelialization with minimal scarring. It may be done by means of sandpaper, emery paper, low- or high-speed wire brushes, etc. (surgical planing; dermabrasion), or by application of caustic substances such as phenol or trichloroacetic acid (chemical planing; chemabrasion).

planithorax (plan'i-tho'raks) a diagram of the front and back of the chest.

plankton (plank'ton) [Gr. *planktos* wandering] a collective name for the minute free-floating organisms, vegetable and animal, which live in practically all natural waters.

planocellular (pla'no-sel'u-lar) made up of flat cells.

Planococcus (plan'o-kok'us) in some systems of classification, a genus of bacteria of the family Micrococcaceae, found in sea water, and made up of spherical, gram-positive cells, occurring singly, in pairs, in threes, or in tetrads.

planoconcave (pla'no-kon'kāv) flat on one side and concave on the other; see under *lens*.

planoconvex (pla'no-kon'veks) flat on one side and convex on the other; see under *lens*.

planocyte (pla'no-sit) [Gr. *planē* wandering + *-cyte*] a wandering cell.

planogram (pla'no-gram) planigram.

planography (plah-nog'rah-fe) planigraphy.

planorbid (plah-nor'bid) 1. a snail of the family Planorbidae. 2. pertaining to snails of the family Planorbidae.

Planorbidae (plah-nor'bi-de) [L. *planus* flat + *orbis* ring + *idae*] a large family of pulmonate fresh-water snails (suborder Basommatophora, order Pulmonata), many species of which are intermediate hosts of pathogenic trematodes; it includes the genera *Biomphalaria*, *Planorbis* (the type genus), and *Bulinus*.

Planorbis (plan-or'bis) a genus of snails. Several species act as intermediate hosts for *Schistosoma mansoni* and others for *Fasciolopsis buski* and echinostomes.

planotopokinesia (pla'no-top'o-ki-ne'ze-ah) [Gr. *planē* wandering + *topos* place + *kinēsis* movement] disturbance of the power of orientation in space.

planta pedis (plan'tah pe'dis) [L.] [NA] the undersurface (sole) of the foot. Called also *regio plantaris pedis*.

plantaginis semen (plan-taj'i-nis se'men) [L.] the seed of *Plantago psyllium* L., Plantaginaceae.

Plantago (plan-ta'go) a genus of herbs (family Plantaginaceae), including three species, *P. indica* L., *P. ovata* Forsk. (blond psyllium), and *P. psyllium* L. (Spanish psyllium), whose seeds (plantago, or psyllium seeds) are used as a cathartic. A preparation of the separated mucilaginous outer layers of the seeds of *P. ovata* is used in the preparation of psyllium hydrophilic mucilloid (q.v.).

plantalgia (plan-tal'je-ah) [L. *planta* sole + *-algia*] a painful condition of the sole of the foot.

planter (plan'tar) pertaining to the sole of the foot.

plantaris (plan-tah'ris) [L.] plantar; [NA] a term designating relationship to the sole of the foot.

plantation (plan-ta'shun) [L. *plantare* to plant] the insertion or application of tissue, such as a tooth, or of other material, in or on the human body. It includes *implantation*, the insertion of similar or other material within the body tissues, as of an artificial or natural tooth into a new socket, or of a therapeutic agent or device;

replantation, return of body tissue to its original site, as reinsertion of a tooth into the socket from which it was dislodged; and *transplantation*, the insertion or application of tissue derived from another individual, or from a different site in the same individual.

plantigrade (plan'ti-grād) [L. *planta* sole + *gradi* to walk] characterized by walking on the full sole of the foot, applied to animals whose entire sole touches the ground, such as the bear and man.

planula (plan'u-lah) a larval coelenterate. **invaginate p.**, the gastrula.

planum (pla'nūm), pl. *pla'na* [L.] a flat surface, determined by the position of three points in space. Called also *plane*. Used in anatomical nomenclature to designate a more or less flat surface of a bone or other structure. **p. nucha'le**, nuchal plane: the outer surface of the occipital bone between the foramen magnum and the superior nuchal line. **p. occipita'le**, occipital plane: the outer surface of the occipital bone above the superior nuchal line. **p. orbita'le**, orbital plane: a plane passing through the two orbital points and perpendicular to the Frankfort horizontal plane. **p. poplite'um fem'oris**, facies poplitea femoris. **p. semiluna'tum**, the rounded end of a crista in a semicircular canal. **p. sterna'le**, sternal plane: the anterior surface of the sternum. **p. tempora'le**, temporal plane: the depressed area on the side of the skull below the inferior temporal line.

planuria (pla-nu're-ah) [Gr. *planasthai* to wander + *ouron* urine + *-ia*] the discharge of urine from an abnormal site.

plaque (plak) [Fr.] any patch or flat area. **argyrophile p's**, amorphous argyrophilic masses, 40 to 80 microns in diameter, between the neurons of the brain in old people, particularly in the frontal cortex and the hippocampus. **attachment p's**, small regions of increased density along the sarcolemma of skeletal muscles to which myofilaments seem to attach; cf. *dense bodies*, under *body*. **bacterial p.**, dental p. **bacteriophage p.**, a cleared area in a bacterial culture, produced by bacteriophage that has been applied to it. **dental p.**, a mass adhering to the enamel surface of a tooth, composed of a mixed colony of bacteria in an intercellular matrix of bacterial and salivary polymers and remnants of epithelial cells and leukocytes. It may serve as a cause of caries, dental calculi, and periodontal disease. **fibromyelinic p's**, areas of overgrowth of medullated fibers and sheaths in areas of incomplete arteriosclerotic necrosis in the cerebral cortex. **Hollenhorst p's**, atheromatous emboli containing cholesterol crystals in the retinal arterioles, a warning sign of impending serious cardiovascular disease such as stroke, myocardial infarction, aortic aneurysm, or occlusion of the retinal arterioles. **Lichtheim p's**, areas of degeneration in the cerebral white matter that are seen in pernicious anemia. **mucous p.**, **p. muqueuse'**, condyloma latum. **opaline p.**, the gray plaque of secondary syphilis. **Peyer's p's**, Peyer's patches (folliculi lymphatici aggregati). **Randall's p's**, small calcium concretions within the tip of the renal papillae; they may project through the surface and serve as foci for the deposition of urinary salts. **Redlich-Fisher miliary p's**, thickened, dark colored areas in the neuroglia reticulum of the brain, seen in cases of senile psychoses. **senile p's**, areas of incomplete necrosis in the senile cerebral cortex. **talc p's**, opaque material visible roentgenographically on pleural surfaces in talc miners and processors.

Plaquenil (pla'kwē-nil) trademark for a preparation of hydroxychloroquine sulfate.

plasm (plazm) plasma; formative substance. **germ p.** (obs.), Weismann's term for the reproductive and hereditary substance of individuals which is passed on from the germ cell in which an individual originates in direct continuity to the germ cells of succeeding generations. By it new individuals are produced and hereditary characters are transmitted. Cf. *somatoplasm*.

plasma (plaz'mah) [Gr. "anything formed or molded"] 1. the fluid portion of the blood in which the particulate components are suspended. *Plasma* is to be distinguished from *serum*, which is the cell-free portion of the blood from which the fibrinogen has been separated in the process of clotting. See *blood plasma*, under *blood*. 2. the lymph deprived of its corpuscles or cells. 3. a glycerite of starch used in preparing ointments. 4. cytoplasm or protoplasm. **antihemophilic human p.**, normal human plasma that has been processed promptly to preserve the antihemophilic properties of the original blood; used for temporary correction of bleeding tendency in hemophilia. **blood p.**, see under *B*. **citratd p.**, blood plasma treated with sodium citrate, which prevents clotting. **muscle p.**, a liquid expressible from muscular tissue; it clots spontaneously. **normal human p.**, sterile plasma obtained by pooling approximately equal amounts of the liquid portion of citrated whole blood from eight or more adult humans, used as a blood volume replenisher. **oxalate p.**, blood plasma to which 1 per cent of ammonium oxalate has been added, to prevent clotting. **peptone p.**, albumose p. **pooled p.**, a mixture of plasma from several donors. **salt p.**, blood plasma to which a neutral salt has been added to prevent clotting. **seminal p.**, the fluid portion of the semen, in which the spermatozoa are suspended. **true p.**, blood plasma drawn direct from the blood without any change in its gas content.

plasmablast (plaz'mah-blast) [*plasma* + Gr. *blastos* germ] the earliest precursor in the plasmacytic series, which matures to form the proplasmacyte and ultimately the mature plasma cell; it may itself be a derivative of the lymphoblast.

plasmacyte (plaz'mah-sit) [*plasma* + *-cyte*] plasma cell.

plasmacytic (plaz'mah-sit'ik) pertaining to, characterized by, or of the nature of a plasma cell. See also under *series*.

plasmacytoma (plaz'mah-si-to'mah) [*plasmacyte* + *-oma*] any focal neoplasm of plasma cells, including those of multiple myeloma. Isolated plasma cell tumors may occur outside the bone marrow (extramedullary plasmacytomas), affecting such tissues as the nasal, oral, and pharyngeal mucosa and visceral organs. Called also *peripheral plasma cell myeloma* and *plasma cell tumor*. **extramedullary p.**, see *plasmacytoma*. **multiple p. of bone**, multiple myeloma. **peripheral p.**, see *plasmacytoma*.

plasmacytosis (plaz'mah-si-to'sis) the presence of excess plasma cells in the blood.

plasmagel (plas'mah-jel) a relatively rigid peripheral layer of cytoplasm which is devoid of granules.

plasmagene (plaz'mah-jēn) [*cytoplasm* + *gene*] a self-reproducing copy of a nuclear gene persisting in the cytoplasm of a cell. Cf. *chromogene*.

plasmahaut (plaz'mah-howt) [Ger.] the superficial layer of the protoplasm of a cell.

plasmal (plas'mal) a long-chain fatty acid aldehyde produced during hydrolysis of plasmalogens.

plasmalemma (plaz'mah-lem'ah) [*plasma* + Gr. *lemma* husk] 1. the plasma membrane. 2. a thin peripheral layer of the ectoplasm in a fertilized egg.

plasmalogen (plaz-mal'o-jen) a term applied to a member of a group of phospholipids, present in platelets, that liberate higher fatty aldehydes (e.g., palmital) on hydrolysis, and may be related to the specialized function of platelets in blood coagulation. Plasmalogens are also found in cell membranes of muscle and of the myelin sheath of nerve fibers.

Plasmanate (plaz'mah-nāt) trademark for a commercial preparation of human plasma protein fraction.

plasmapheresis (plaz'mah-fē-re'sis) [*plasma* + Gr. *aphairesis* removal] the removal of plasma from withdrawn blood, with retransfusion of the formed elements into the donor; generally, type-specific fresh frozen plasma or albumin is used to replace the withdrawn plasma. The procedure may be done for purposes of collecting plasma components or for therapeutic purposes.

plasmarrhexis (plaz'mah-rek'sis) [*plasma* + Gr. *rhēxis* rupture] dissolution of the cytoplasm.

plasmatherapy (plaz'mah-ther'ah-pe) the therapeutic use of blood plasma.

plasmatic (plaz-mat'ik) pertaining to or of the nature of the plasma.

plasmatogamy (plaz'mah-tog'ah-me) [*plasma* + Gr. *gamos* marriage] union of cells in which the nucleus of each cell is preserved.

plasmatorrhexis (plaz'mah-to-rek'sis) [*plasma* + Gr. *rhēxis* rupture] the bursting of a cell due to the pressure exerted from within.

plasmatosis (plaz'mah-to'sis) the liquefaction of the substance of a cell.

plasmic (plaz'mik) 1. plasmatic. 2. rich in protoplasm.

plasmid (plaz'mid) [*plasm* + *-id*] any extrachromosomal self-replicating element of a cell. In bacteria, plasmids are circular DNA molecules that reproduce themselves and are thus conserved, apart from the chromosome, through successive cell divisions; they include the F factor and R factor. Plasmids that may also become integrated into the chromosome are sometimes called *episomes*. **R p.**, see *R factor*, under *factor*.

plasmin (plaz'min) the active portion of the fibrinolytic or clot-lysing system, a proteolytic enzyme with a high specificity for fibrin, with the particular ability to dissolve formed fibrin clots but also having a similar effect on other plasma proteins and clotting factors and proteins in general. Called also *fibrinolysin*.

plasminogen (plaz-min'o-jen) the inactive precursor of plasmin to which it is converted by the proteolytic action of urokinase; called also *profibrinolysin*.

plasma- (plaz'mo) [Gr. *plasma* anything formed] a combining form denoting relationship to plasma, or to the substance of a cell.

plasmocyte (plaz'mo-sit) [*plasma-* + *-cyte*] plasma cell.

plasmocytoma (plas'mo-si-to'mah) plasmacytoma.

plasmodesm, plasmodesma (plas'mo-dezm; plaz'mo dez'mah) singular of *plasmodesmata*.

plasmodesmata (plas'mo-dez'mah-tah), sing. *plas'modesm* or *plasmodesma* [*plasma-* + Gr. *desmos* a band or bond] cytoplasmic bridges found in some plant cells, which pass between the pores in the plasma membranes of adjacent cells and serve to establish continuity between cells.

plasmodia (plaz-mo'de-ah) plural of *plasmodium*.

plasmodial (plaz-mo'de-al) pertaining to plasmodia.

plasmodiblast (plaz-mo'dī-blast) syncytiotrophoblast.

plasmodicidal (plaz'mo-dī-si'dal) [*plasmodia* + L. *caedere* to kill] destructive to plasmodia.

plasmodicide (plaz-mo'dī-sīd) an agent that is destructive to plasmodia.

Plasmodiidae (plaz'mo-di'i-de) a family of protozoa of the order Haemosporidia, subphylum Sporozoa, containing the genus *Plasmodium*.

Plasmodiophora brassicae (plaz'mo-di-of'o-rah bras'i-ke) a mycetozoan organism which causes a disease of cabbages and other cruciferous plants, called *finger and toe disease*, *stump root*, or *root-hernia*.

plasmoditrophoblast (plaz-mo'di-trof'o-blast) syncytiotrophoblast.

Plasmodium (plaz-mo'de-um) a genus of sporozoa of the family Plasmodiidae, order Haemosporidia, parasitic in the red blood cells of lizards, birds, and mammals; the malarial parasite. The organism is transmitted to the bloodstream of man by the bite of anopheline mosquitoes, in whose saliva the sporozoites are concentrated. From the blood stream, the sporozoites migrate directly to the liver (exoerythrocytic stage), where they develop and multiply within the parenchymal cells as merozoites, which then burst the liver cells and invade erythrocytes. Erythrocytic schizogony then occurs, with merozoites escaping infected erythrocytes and invading others. Some of the merozoites develop into gametocytes, which are ingested by mosquitoes, beginning the sexual stage, which ends with the development of sporozoites. **P. brasilianum**, a species found in monkeys in South America that is much like *P. malariae*, some authorities considering it to be identical. **P. canis**, a species found in dogs in India. **P. capistrani**, **P. cathemerium**, forms which cause malaria in birds. **P. cynomolgi**, a species causing malaria in monkeys of the genus *Macacus*; it is similar to *P. vivax*, some authorities considering it to be identical. **P. danilewskyi**, a species named in honor of Danilewsky, who first described intracorporeal parasites from birds. This parasite was used by Ross to trace the development of *Plasmodium* in the mosquito, but its exact identification is uncertain. **P. du'rae**, a species pathogenic for turkeys. **P. e'qui**, a species found in the horse. **P. falciparum**, the species which causes falciparum malaria in man; it is characterized by thin "signet-ring" forms of trophozoites and the "crescent" form of the gametes. **P. gallinae'ceum**, one of the numerous plasmodia of avian malaria. **P. in'ui**, a species pathogenic for monkeys (*Macacus*). **P. knowle'si**, a species causing malaria in monkeys. **P. ko'chi**, a species pathogenic for chimpanzees and monkeys. **P. lophu'rae**, a species recovered from a Borneo fireback pheasant, *Lophura igniti igniti* (Shaw and Nodd), and pathogenic for the domestic fowl. **P. mala'riae**, the species which causes quartan malaria in man. It is characterized by bandlike trophozoites and schizonts with six to twelve merozoites usually arranged in a rosette-like configuration. **P. ova'le**, a species found in the Congo and adjacent regions, causing ovale malaria, and characterized by oval or fimbriated infected red blood cells. **P. pithe'ci**, a species found in the orangutan and chimpanzees; it resembles *P. vivax* except that man is not susceptible. **P. relic'tum**, a form causing malaria in birds. **P. relic'tum** var. **matuti'num**, an organism isolated from the robin, which is morphologically similar to *P. relic'tum* but biologically very different. It possesses strict quotidian periodicity and a high degree of synchronism of segmentation, rupture of the infected red cells occurring daily about 9 A.M. **P. richeno'wi**, a species found in anthropoid apes. **P. schwet'zi**, a species found in chimpanzees. **P. ten'ue**, *P. falciparum*. **P. vas'sali**, a species found in the squirrel. **P. vi'vax**, the species causing vivax malaria, characterized by the ameboid activity and irregular form of its trophozoites, and by Schüffner's dots in parasitized red blood cells. **P. vi'vax minu'ta**, *P. ovale*.

plasmodium (plaz-mo'de-um), pl. *plasmo'dia* [*plasmo-* + Gr. *eidos* form] 1. a parasite of the genus *Plasmodium*. 2. a multinucleate continuous mass of protoplasm. **exoerythrocytic p.**, a malarial parasite outside a red blood corpuscle.

Plasmodroma (plaz'mo-dro'mah) in some classifications, a subphylum of the Protozoa, including the organisms that do not have cilia, but possess flagella or pseudopodia and one or more similar nuclei, i.e., the Mastigophora, Sporozoa, and Sarcodina. Cf. *Ciliophora*.

plasmogamy (plaz-mog'ah-me) [*plasmo-* + Gr. *gamos* marriage] cytoplasmic fusion of cells.

plasmogen (plaz'mo-jen) [*plasmo-* + Gr. *gennan* to produce] the essential part of protoplasm; bioplasm, def. 2.

plasmoid (plas'moid) an abnormal protein cellular element; see also under *humor*.

plasmology (plaz-mol'o-je) [*plasmo-* + *-logy*] the study of the most minute particles or ultimate corpuscles of living matter.

plasmolysis (plaz-mol'i-sis) [*plasmo-* + Gr. *lysis* dissolution] contraction or shrinking of the protoplasm of a plant cell due to the loss of water by osmotic action.

plasmolytic (plaz'mo-lit'ik) tending toward, pertaining to, or characterized by plasmolysis.

plasmolyzability (plaz'mo-liz'ah-bil'i-te) the power of undergoing plasmolysis.

plasmolyzable (plaz'mo-liz'ah-b'l) capable of undergoing plasmolysis.

plasmolyze (plaz'mo-liz) to subject to plasmolysis.

plasmoma (plaz-mo'mah) a tumor made up of plasma cells; plasmacytoma.

plasmon (plaz'mon) the hereditary factors of the egg cytoplasm. Cf. *genome*.

plasmoptysis (plaz-mop'ti-sis) [*plasmo-* + Gr. *ptyein* to spit] escape of protoplasm from a cell through a ruptured cell wall.

plasmorrhaxis (plaz'mo-rek'sis) [*plasmo-* + Gr. *rhêxis* splitting] plasmatorrhaxis.

plasmoschisis (plaz-mos'ki-sis) [*plasmo-* + Gr. *schisis* fission] the splitting of protoplasm into fragments.

plasmosin (plaz'mo-sin) a protein constituent of cytoplasm.

plasmosome (plaz'mo-sôm) [*plasmo-* + Gr. *sôma* body] 1. the true nucleolus of a cell. 2. [pl.] mitochondria.

plasmotomy (plaz-mot'o-me) [*plasmo-* + Gr. *temnein* to cut] reproduction by the separation from the mother cell of smaller masses of protoplasm, each containing several nuclei.

plasmotrophoblast (plaz'mo-trof'o-blast) syncytiotrophoblast.

plasmotropic (plaz'mo-trop'ik) pertaining to or causing plasmotropism.

plasmotropism (plaz-mot'ro-pizm) [Gr. *plasma* plasm + *tropos* a turning] solution or destruction of erythrocytes in the liver, spleen, or marrow, as contrasted with their destruction in the circulation.

plasome (plaz'ôm) [Gr. *plassein* to form] the hypothetical unit of living protoplasm; see *micelle*.

plasson (plas'on) [Gr. *plassôn* forming] the protoplasm of a cyto-, or non-nucleated cell.

-plast [Gr. *plastos* formed] a word termination denoting any primitive living cell.

plastein (plas'te-in) the protein synthesized by pepsin from the peptic digestion products of protein.

plaster (plas'ter) [L. *emplastrum*] 1. a gypseum material which hardens when mixed with water, used for immobilizing or making impressions of body parts, as *dental plaster*, or *plaster of Paris*. 2. a pastelike mixture which can be spread over the skin and which is adhesive at body temperature. Plasters may be protectant, counterirritant, etc. **adhesive p.**, see under *tape*. **adhesive p., sterile**, see under *tape*. **belladonna p.**, a plaster containing 30 per cent of extract of belladonna leaves and an adhesive; useful as an anodyne application in neuralgic and rheumatic pains. **p. of cantharidin**, a mixture of cantharidin and other ingredients, formerly applied to the skin as a blistering agent. **capsicum p.**, an active counterirritant which may be used in place of liquid liniments for sprains, rheumatism, and other inflammations. **dental p.**, a gypsum preparation used for the making of impressions of structures of the mouth. **diachylon p.**, lead p. **lead p.**, a plaster containing lead oxide, olive oil, lard, and water, triturated and boiled, formerly used for applying to minor wounds and bruises and also in the preparation of other plasters. Called also *diachylon p.* **mercurial p.**, a plaster containing mercury, oleate of mercury, hydrous wool fat, and lead. **mustard p.**, a uniform mixture of powdered black mustard and a solution of suitable adhesive, spread on an appropriate backing material; used as a local irritant. **opium p.**, a plaster containing extract of opium, water, and an adhesive; used as an anodyne application. **p. of Paris**, calcium sulfate dihydrate, with about three fourths of the water of crystallization driven off, and reduced to a fine powder; the addition of water produces a porous mass that has been used extensively in making casts and bandages to support or immobilize body parts, and in dentistry for taking dental impressions. **resin p., rosin p.**, a plaster containing rosin, lead, and yellow wax. **salicylic acid p.** [USP], a uniform mixture of salicylic acid in a suitable base, spread on paper, cotton cloth, or other suitable backing material, containing between 90 and 110 per cent of the labeled amount of salicylic acid; used as a topical keratolytic. **soap p.**, a discutient plaster made of dried soap and lead, sometimes applied to tumors when a dressing is required.

plastic (plas'tik) [L. *plasticus*; Gr. *plastikos*] 1. tending to build up tissues or to restore a lost part. 2. conformable; capable of being molded. 3. a substance produced by chemical condensation or by polymerization. 4. material that can be molded.

plasticity (plas-tis'i-te) 1. the quality of being plastic or conformable. 2. the ability of early embryonic cells to alter in conformity with the immediate environment.

plasticizer (plas'ti-si'zer) any of a group of agents added to other organic or synthetic substances to make them soft and flexible.

plastics (plas'tiks) 1. plastic materials used in surgery or dentistry. 2. plastic surgery.

plastid (plas'tid) [Gr. *plastos* formed] 1. any elementary constructive unit, as a cell. 2. any of the specialized organelles of

plant cells that contain pigments (e.g., chlorophyll and carotenoids) or that synthesize and accumulate reserve substances (e.g., starch); they include chloroplasts and amyloplasts.

plastidogenetic (plas-tid'ō-jē-net'ik) producing plastids or cells.

plastin (plas'tin) 1. linin. 2. spongioplasm (def. 1).

plastiosome (plas'te-o-sōm) [pl.] mitochondria.

plastochochondria (plas'to-kon'dre-ah) granular mitochondria.

plastocont (plas'to-kont) chondriocont.

plastodynamia (plas'to-di-na'me-ah) [Gr. *plastos* formed + *dynamis* power] power or ability to develop.

plastogamy (plas-tog'ah-me) [Gr. *plastos* formed matter + *gamos* marriage] conjugation in protozoa in which the protoplasm of two or more individuals undergoes amalgamation, the nuclei remaining separate. See *karyogamy* and *plasmogamy*.

plastogel (plas'to-jel) a gel possessing great plasticity.

plastokont (plas'to-kont) chondriocont.

plastomere (plas'to-mēr) cytomere.

plastoquinone (plas'to-kwin'ōn) a quinone occurring in chloroplasts, involved in the transport of electrons during photosynthesis.

plastosome (plas'to-sōm) [Gr. *plastos* formed + *sōma* body] one of the stainable granules or threads of the cytoplasm; [pl.] mitochondria.

plastron (plas'tron) [Fr. "breast-plate"] the sternum and costal cartilages.

-plasty (plas'te) [Gr. *plassein* to form, mold, shape] a word termination meaning the shaping or the surgical formation of.

plate (plāt) [Gr. *platē*] 1. a flat structure or layer, such as a thin layer of bone; see also *lamina*, *layer*, etc. 2. a dental plate. Sometimes, by extension, incorrectly used to designate a complete denture. 3. to apply a culture medium to a glass plate. 4. to cultivate bacteria on such plates. **alar p.**, lamina alaris.

anal p., cloacal membrane. **auditory p.**, the bony roof of the auditory meatus. **axial p.**, the primitive streak of the embryo. **basal p.**, 1. lamina basalis. 2. the fused parachordal cartilages, precursors of the occipital bone. 3. the portion of the decidua basalis that becomes an integral part of the placenta.

base p., see *baseplate*. **bite p.**, see *biteplate*. **blood p's**, blood platelets. **bone p.**, a metal bar with perforations for the insertion of screws, used to immobilize fractured segments.

cardiogenic p., an area of splanchnic mesoderm, at first cephalad and later in the pharyngeal region of the embryo, from which the heart arises. **cell p.**, a thickening midway of the mitotic spindle in plants that forms a dividing septum between the future daughter cells. **chorionic p.**, the inner part of the fetal placenta that gives rise to chorionic villi. **clinoid p.**, the portion of the sphenoid bone behind the sella turcica. **collecting p.**, the electronegative element of a galvanic battery, where the hydrogen and other decomposition products collect. **cortical p.**, the dense outer superficial portion of the alveolar process.

cough p., a plate of culture medium on which a patient with a respiratory infection, especially pertussis, coughs. **p. of cranial bone, inner**, lamina interna ossis cranii. **p. of cranial bone, outer**, lamina externa ossis cranii. **cribriform p.**, fascia cribrosa. **cribriform p. of ethmoid bone**, lamina cribrosa ossis ethmoidalis. **cuticular p.**, terminal web.

cutis p., dermatome, def. 3. **deck p.**, roof p. **dental p.**, a plate of acrylic resin, metal, or other material, which is fitted to the shape of the mouth and serves for the support of artificial teeth. **dermomyotome p.**, the portion of the embryonic somite remaining after migration of the sclerotomic tissue. **die p.**, a plate of metal containing dies for forming the cusps in shell crowns. **dorsal p.**, roof p. **dorsolateral p.**, lamina alaris.

Eggers' p., bone plate used for maintaining apposition of bone segments. **end p.**, see *end-plate*. **epiphyseal p.**, the thin plate of cartilage between the epiphysis and the newly forming tissue (metaphysis) of a growing long bone. **equatorial p.**, the platelike collection of chromosomes at the equator of the spindle in karyokinesis. **ethmovomerine p.**, the central part of the ethmoid bone in the fetus. **floor p.**, the unpaired ventral longitudinal zone of the neural tube, forming the floor of that tube; called also *ventral plate* and *bodenplatte*. **foot p.**, see *footplate*. **frontal p.**, a fetal plate of cartilage between the sides of the ethmoid cartilage and the sphenoid bone. **fronto-nasal p.**, a fetal plate from which the external nose is developed. **gray p.** (obs.), lamina terminalis hypothalami. **growth p.**, the area between the epiphysis and diaphysis of long bones, within which growth in length occurs. **horizontal p. of palatine bone**, lamina horizontalis ossis palatini. **Kühne's terminal p's**, the motor end-plates of nerves in the muscle spindles. **Lane p's**, steel plates with holes for screws, used in fixing the fragments of a fractured bone. **lateral mesoblastic p.**, the thickened portion of either side of the mesoblast. **lingual p.**, a major partial denture connector formed as a lingual bar extended to cover the cingula of the lower anterior teeth. **medullary p.**, neural p. **mesial p.**, nephrotome. **meta-phase p.**, equatorial p. **middle p.**, nephrotome. **Moe p.**, a stainless steel plate for internal fixation of intertrochanteric

fractures of the femur. **motor p.**, end-plate. **muscle p.**, myotome, def. 2. **nail p.**, 1. stratum corneum unguis. 2. stratum germinativum unguis. **nephrotome p.**, nephrotome. **neural p.**, the thickened plate of ectoderm in the embryo from which the neural tube develops. **notochordal p.**, head process. **oral p.**, fascia pharyngobasilaris. **orbital p. of ethmoid bone**, lamina orbitalis ossis ethmoidalis. **orbital p. of frontal bone**, pars orbitalis ossis frontalis. **palate p.**, that part of the palatine bone which forms a lateral half of the roof of the mouth. **paper p.**, lamina orbitalis ossis ethmoidalis. **parachordal p.**, basal p., def. 2. **parietal p.**, a thin lamina of the ethmoid bone that forms part of the nasal septum. **perpendicular p. of ethmoid bone**, lamina perpendicularis ossis ethmoidalis. **perpendicular p. of palatine bone**, lamina perpendicularis ossis palatini. **Petri p.**, a Petri dish containing a nutrient medium ready for inoculation with the microorganism to be cultured. **pharyngeal p.**, pharyngeal membrane. **polar p's**, **pole p's**, platelike bodies at the end of the spindle in certain forms of mitosis. **pour p.**, a bacterial culture poured into a Petri dish from a test tube in which the medium has been inoculated. **prechordal p.**, **prochordal p.**, thickened entoderm, cephalad of the notochord, that combines with ectoderm to become the pharyngeal membrane. **pterygoid p.**, external, lamina lateralis processus pterygoidei. **pterygoid p.**, internal, lamina medialis processus pterygoidei. **pterygoid p.**, lateral, lamina lateralis processus pterygoidei. **pterygoid p.**, medial, lamina medialis processus pterygoidei. **quadrigeminal p.**, lamina tecti mesencephali. **retaining p.**, an appliance used in orthodontics. **reticular p.**, a form of nerve ending in the ciliary body consisting of very fine reticulations of granular nerve fiber. **roof p.**, the unpaired dorsal longitudinal zone of the neural tube, forming the roof of that tube; called also *deck plate*, *dorsal plate*, and *deckplatte*. **segmental p.**, a plate of mesoblast on either side of the notochord at the posterior end of the embryo, from which the mesoblastic segments are formed. **Sherman p.**, a chrome-cobalt alloy or stainless steel bone plate which can be affixed to a fracture site with screws. **sole p.**, a mass of protoplasm in which motor nerve endings are embedded. **spiral p.**, lamina spiralis ossea. **spring p.**, a dental prosthesis held in place by the elasticity of the base material which abuts against natural teeth. **Strasburger's cell p.**, midbody, def. 1. **streak p.**, a plate of solid culture medium in which the infectious material is inoculated in streaks across the surface. **subgerminal p.**, a sheet of protoplasm forming the floor of the segmentation cavity of the ovum. **tarsal p's**, see *tarsus superior palpebrae* and *tarsus inferior palpebrae*. **terminal p.**, lamina terminalis hypothalami. **trial p.**, see *baseplate*. **tympanic p.**, a bony plate which forms the floor and sides of the meatus acusticus internus. **urethral p.**, an entodermal plate that gives rise to the terminal portion of the cavernous urethra. **vascular foot p.**, sucker foot. **ventral p.**, floor p. **ventrolateral p.**, lamina basalis. **vertical p. of palatine bone**, lamina perpendicularis ossis palatini. **wing p.**, lamina alaris.

plateau (plah-to') an elevated and level area. **tibial p.**, either of the bony surfaces of the tibia, internal and external, closest to the condyles of the femur. **ventricular p.**, a nearly level part of the intraventricular curve of blood pressure corresponding to the mid-ejection period of the ventricle.

platelet (plāt'let) a disk-shaped structure, 2 to 4μ in diameter, found in the blood of all mammals and chiefly known for its role in blood coagulation; platelets, which are formed in the megakaryocyte and released from its cytoplasm in clusters, lack a nucleus and DNA but contain active enzymes and mitochondria. See also under *factor*, and see *thrombocytic series*, under *series*. Called also *blood platelet* and *thrombocyte*. **blood p.**, platelet.

plateletpheresis (plāt'let-fē-re'sis) [platelet + Gr. (a)phairesis removal] thrombocytophoresis.

platinectomy (plat'i-nek'to-me) [Fr. *platine* (for footplate of stapes) + Gr. *ektomē* excision] excision of the footplate in surgical mobilization of the stapes, in treatment of hearing loss.

plating (plāt'ing) 1. the act of applying bacterial culture mediums to glass plates; the cultivation of bacteria on plates. 2. the application of plates to fractured bones for the purpose of holding the fragments in place.

platinic (plah-tin'ik) containing platinum in its higher valency.

platinode (plat'i-nōd) [platinum + Gr. *hodos* way] the collecting plate of an electric battery.

platinosis (plat'i-nō'sis) [platinum + -osis] a morbid condition resulting from exposure to soluble platinum salts, with involvement of the upper respiratory tract and allergic manifestations of the skin.

platinous (plat'i-nus) containing platinum in its lower valency.

platinum (plat'i-num) [L.] a heavy, soft, whitish metal, resembling tin: symbol, Pt; atomic number, 78; atomic weight, 195.09; specific gravity, 21.37. It also occurs as a black powder (*p. black*) and a spongy substance (*spongy p.*). Metallic platinum is insoluble except in nitrohydrochloric acid, and is fusible only at very high temperatures; it is therefore used in the manufacture of chemical apparatus. Platinum black and spongy platinum have a strong

affinity for oxygen, and act as powerful oxidizing and catalytic agents. **p. chloride**, platinic tetrachloride, a poisonous substance, $\text{PtCl}_4 \cdot 5\text{H}_2\text{O}$, used as a chemical reagent and formerly in syphilis. **p. diamminodichloride**, cisplatin.

platy- (plat'e) [Gr. *platys* broad] a combining form meaning broad or flat.

platybasia (plat'e-ba'se-ah) [*platy-* + Gr. *basis* base (of the skull) + *-ia*] basilar impression; see under *impression*.

platycelous (plat'e-se'lus) [*platy-* + Gr. *koiolos* hollow] having vertebrae flat in front, or cephalad, and concave caudad.

platycephalic (plat'e-sē-fal'ik) [*platy-* + Gr. *kephalē* head] wide headed; having a breadth-height index of less than 70.

platycephalous (plat'e-sef'ah-lus) platycephalic.

platycephaly (plat'e-sef'ah-le) the state of being platycephalic.

platycnemial (plat'ik-ne'me-ah) compression of the tibia from side to side.

platycnemial (plat'ik-ne'mik) [*platy-* + Gr. *knēmē* leg] having the tibia compressed from side to side.

platycoria (plat'e-ko're-ah) [*platy-* + Gr. *korē* pupil] a dilated condition of the pupil.

platyocrania (plat'e-kra'ne-ah) [*platy-* + Gr. *kranion* skull + *-ia*] artificial flattening of the skull.

platyocyte (plat'e-sit) [*platy-* + *-cyte*] a variety of epithelioid cell found in tubercle nodules, intermediate between a leukocyte and a giant cell.

platyglossal (plat'e-glos'al) [*platy-* + Gr. *glōssa* tongue] having a broad, flat tongue.

platyhelminth (plat'e-hel'minth) one of the Platyhelminthes.

Platyhelminthes (plat'e-hel-min'thēz) [*platy-* + Gr. *helmins* worm] a phylum of acelomate, dorsoventrally flattened, bilaterally symmetrical animals, commonly known as flatworms, and including the classes Turbellaria, Trematoda, and Cestoidea.

platyhieric (plat'e-hi-er'ik) [*platy-* + Gr. *hieron* sacrum] having a wide sacrum; having a sacral index exceeding 100.

platyknesia (plat'ik-ne'me-ah) platycnemial.

platymeria (plat'e-me're-ah) the condition of being platymeric.

platymeric (plat'e-me'rik) [*platy-* + Gr. *mēros* thigh] having a femur that is excessively compressed from before backwards.

platy-morphic (plat'e-mōr'fik) [*platy-* + Gr. *morphē* form] having a shallow or presbyopic eye.

platymyarial, platymyarian (plat'e-mi-a're-al; plat'e-mi-a're-an) [*platy-* + Gr. *mys* muscle] having all muscle cells lying next to the subcuticula, their sarcoplasm being uncovered on three sides next to the body cavity; said of the muscle arrangement in certain nematodes.

platymyoid (plat'e-mi'oid) [*platy-* + Gr. *mys* muscle + *eidos* form] having the contractile stratum arranged in an even lamina; said of certain muscle cells.

platyonychia (plat'e-o-nik'e-ah) [*platy-* + Gr. *onyx* nail + *-ia*] (*obs.*) abnormal flatness and broadness of the nails.

platyopia (plat'e-o'pe-ah) [*platy-* + Gr. *ōps* face + *-ia*] broadness across the face.

platyopic (plat'e-op'ik) marked by platyopia; having a broad face.

platypellic (plat'e-pel'ik) [*platy-* + Gr. *PELLA* bowl] having a wide pelvis, i.e., a pelvis index below 90.

platypelloid (plat'e-pel'oid) platypellic.

platyphylline (plat'e-fil'in) an alkaloid, $\text{C}_{18}\text{H}_{27}\text{O}_5\text{N}$, from *Senecio platyphyllus* D.C. (Compositae) and other species of *Senecio*.

platypnea (plah-tip'ne-ah) [*platy-* + Gr. *pnoia* breath] dyspnea induced by assumption of the upright position and relieved by assumption of a recumbent position; the opposite of orthopnea.

platypodia (plat'e-po'de-ah) [*platy-* + Gr. *pous* foot + *-ia*] abnormal flatness of the foot; flatfoot.

Platyrrhina (plat'fī-ri'nah) [*platy-* + Gr. *rhis* nose] a superfamily of the order Primates (suborder Anthropoidea), characterized by a broad nasal septum and often a prehensile tail, and including the New World monkeys.

platyrrhine (plat'e-rīn) [*platy-* + Gr. *rhis* nose] having a broad nose; having a nasal index exceeding 53.

platysma (plah-tiz'mah) [Gr.] [NA] a platelike muscle that originates from the fascia of the cervical region and inserts in the mandible and the skin around the mouth. It is innervated by the cervical branch of the facial nerve, and acts to wrinkle the skin of the neck and to depress the jaw.

platysmal (plah-tiz'mal) pertaining to the platysma.

platyspondylia (plat'e-spon-dil'e-ah) platyspondylitis.

platyspondylitis (plat'e-spon-dil'i-sis) [*platy-* + Gr. *spondylos* vertebra] congenital flattening of the vertebral bodies.

platystaphylina (plat'e-staff'i-lin) [*platy-* + Gr. *staphylē* palate] having a broad, flat palate.

platystencephalia (plat'e-sten'sē-fal'e-ah) platystencephaly.

platystencephalic (plat'e-sten-se-fal'ik) exhibiting or pertaining to platystencephaly.

platystencephalism (plat'e-sten-sef'ah-lizm) platystencephaly.

platystencephaly (plat'e-sten-sef'ah-le) [Gr. *platystatos* widest + *enkephalos* brain + *-ia*] a form of dolichocephalism in which the occiput is very wide and pentagonal, the jaws prognathic; observed among South Africans.

platytrope (plat'e-trōp) [*platy-* + Gr. *trepein* to turn] either of two symmetrical parts on opposite sides of the body; a lateral homologue.

plauracin (plaw'rah-sin) an antibiotic complex produced by *Actinoplanes auranticolor*, the structure of the components of which are not fully confirmed; a veterinary growth stimulant.

Plaut's angina, ulcer (plowts) [Hugo Carl *Plaut*, German physician, 1858-1928] see *necrotizing ulcerative gingivostomatitis*, under *gingivostomatitis*, and *necrotizing ulcerative gingivitis*, under *gingivitis*.

Playfair's treatment (plā'fārz) [William Smoult *Playfair*, British physician, 1836-1903] see under *treatment*.

Plectomycetes (plek'tō-mi-se'tēz) a series of ascomycetous fungi of the subclass Euascomycetidae that includes the order Eurotiales; their fruiting body is a cleistothecium or a gymnothecium.

plectron (plek'tron) [Gr. *plēktron* anything to strike with] the hammer form assumed by certain bacilli during sporulation.

spectrum (plek'trum) [L. from Gr. *plēktron* anything to strike with] 1. the uvula. 2. the malleus. 3. the styloid process of the temporal bone.

pledge (plej) a solemn statement of intention. **Nightingale p.**, a statement of principles for the nursing profession, formulated by a committee in 1893 and subscribed to by student nurses at the time of the capping ceremonies.

pledget (plej'et) a small compress or tuft, as of wool or lint.

plegaphonia (pleg'ah-fo'ne-ah) [Gr. *plēgē* stroke + *aphonia*] auscultation of the chest during percussion over the larynx or trachea in cases in which the patient cannot or is not allowed to speak. The vibrations produced by the percussion take the place of those of the vocal cords.

-plegia (ple'je-ah) [Gr. *plēgē* a blow, stroke] a word termination meaning paralysis, or a stroke.

pleiades (pli'ah-dēz) [in Greek mythology, seven daughters of Atlas who were placed by Zeus among the stars and form part of the constellation Taurus] a mass of enlarged lymph nodes.

pleiochloruria (pli'o-klo-roo're-ah) an excess of chlorides in the urine.

pleiochromia (pli'o-kro'me-ah) [Gr. *pleiōn* more + *chrōma* color + *-ia*] (*obs.*) increased coloration, especially increased secretion of bile pigments.

pleionexia (pli'o-nek'se-ah) pleonexia.

pleiotropia (pli'o-tro'pe-ah) pleiotropy.

pleiotropic (pli'o-trop'ik) pertaining to or characterized by pleiotropy; producing many effects in the phenotype.

pleiotropism (pli-ot-ro-pizm) pleiotropy.

pleiotropy (pli-ot-ro-pe) [Gr. *pleiōn* more + *tropē* a turning] the quality of a gene to manifest itself in a multiplicity of ways, i.e., to produce many effects in the phenotype.

pleiston (pli'ston) [Gr. *pleistos* most, very many] a group of very similar strains of bacteria.

plektron (plek'tron) [Gr.] plectron.

pleniloquence (ple-nil'o-kwens) [L. *plenus* full + *loqui* to talk] (*obs.*) abnormal talkativeness.

pleo- (ple'o) [Gr. *pleōn* more] a combining form meaning more.

pleocaryocyte (ple'o-kar'e-o-sit) pleokaryocyte.

pleochroic (ple'o-kro'ik) [*pleo-* + Gr. *chroia* color] pleochromatic.

pleochroism (ple-ok'ro-izm) the condition of being pleochromatic.

pleochromatic (ple'o-kro-mat'ik) [*pleo-* + Gr. *chrōma* color] exhibiting pleochromatism.

pleochromatism (ple'o-kro'mah-tizm) [*pleo-* + Gr. *chrōma* color] the property possessed by some crystals of transmitting one color in one position and the complementary color in a position at right angles to the first.

pleocytosis (ple'o-si-to'sis) presence of a greater than normal number of cells in the cerebrospinal fluid.

pleokaryocyte (ple'o-kar'e-o-sit) a large nucleated cell found in cachectic disease such as cancer and tuberculosis.

pleomastia (ple'o-mas'te-ah) [*pleo-* + Gr. *mastos* breast + *-ia*] polymastia.

pleomastic (ple'o-mas'tik) polymastic.

pleomazia (ple'o-ma'ze-ah) [*pleo-* + Gr. *mazos* breast + *-ia*] polymastia.

pleomorphic (ple'o-mor'fik) [*pleo-* + Gr. *morphē* form] occurring in various distinct forms; exhibiting pleomorphism.

pleomorphism (pleo'-mor'fizm) the assumption of various distinct forms by a single organism or species; also the property of crystallizing in two or more forms.

pleomorphous (pleo'-mor'fus) pleomorphic.

pleonasm (pleo'-nazm) [Gr. *pleonasmos* exaggeration] an excess in the number of parts.

pleonectic (pleo'-nek'tik) [Gr. *pleonexia* greediness] (*obs.*) taking up more than the average amount of oxygen; said of blood which has a higher than normal O₂ content at a given PO₂. Cf. *mesectic* and *mionektic*.

pleonexia (pleo'-nek'se-ah) [Gr. "greediness"] 1. the condition of being pleonectic. 2. morbid desire for acquisition; morbid greediness.

pleonexy (pleo'-nek'se) pleonexia.

pleonosteosis (pleo'-on-os'te-o'sis) [*pleo-* + Gr. *osteon* bone + *-osis*] abnormally increased ossification; premature and excessive ossification. **Leri's p.**, a hereditary syndrome resulting from premature ossification of epiphyses of the long bones, with broadening and deformity of the digits, flexion contractures of the fingers, broadening and stiffness of the toes and joints, shortening of stature, limitation of movement, and mongolian facies. Inherited as an autosomal dominant trait, the deformities become apparent during the first few years of life.

pleonotia (pleo'-no'she-ah) [*pleo-* + Gr. *ous* ear] a developmental anomaly characterized by the presence of a supernumerary ear located on the neck.

pleoptics (ple-op'tiks) [*pleo-* + Gr. *optikos* of or for sight] a technique of eye exercises designed to develop fuller vision of an amblyopic eye and assure proper binocular cooperation.

plerocercoid (pleo'-ro-ser'koid) [Gr. *plēroun* to complete + *herkos* tail + *eidos* form] the wormlike completed larval stage of certain cestode tapeworms, found in the tissues of vertebrates and invertebrates.

plerosis (ple-ro'sis) the restoration of lost tissue, as after illness.

Plesch's percussion, test (plesh'ez) [Johann Plesch, German physician in England, born 1878] see under *percussion* and *tests*.

plesiomorphism (ple'se-o-mor'fizim) [Gr. *plesios* near + *morphē* form] similarity in form.

plesiomorphous (ple'se-o-mor'fus) pertaining to or characterized by plesiomorphism.

plessesthesia (ples'es-the'ze-ah) [Gr. *plēssein* to strike + *aisthēsis* perception] palpatory percussion; percussion with one hand against a palpating finger of the other hand.

plessigraph (ples'i-graf) [Gr. *plēssein* to strike + *graphein* to write] a form of pleximeter designed to enable the user to mark out the limits of an area.

plessimeter (ples-sim'ē-ter) pleximeter.

plessimetric (ples'i-met'rik) pleximetric.

plessor (ples'or) plexor.

plethora (pleth'o-rah) [L.; Gr. *plēthorē* fullness, satiety] a general term denoting a red florid complexion, or specifically, an excessive amount of blood. **p. hydrae'mica**, increase in amount of blood due to increase in the watery element alone.

plethoric (ple-thor'ik) pertaining to or characterized by plethora.

plethysmogram (ple-thiz'mo-gram) a tracing made by the plethysmograph.

plethysmograph (ple-thiz'mo-graf) [Gr. *plēthysmos* increase + *graphein* to write] an instrument for determining and registering variations in the volume of an organ, part, or limb and in the amount of blood present or passing through it; also used for recording variations in the size of parts and in the blood supply. **body p.**, a device for measuring change in body volume, used especially in measuring pulmonary ventilation. **digital p.**, finger p. **finger p.**, one that registers the change in volume taking place in a single finger. **Franck's p.**, one consisting of an upright glass jar into which the hand and wrist are inserted. **jerkin p.**, a double-layered garment resembling a jerkin, filled with air at slightly positive pressure, used to monitor changes in pressure produced by movements of the chest wall in respiration. **Mosso's p.**, one consisting of a glass tube filled with warm water into which the hand and forearm are placed. The changes in the water level, caused by the changes in volume of the limb, are graphically recorded.

plethysmography (pleth'iz-mog'rah-fe) the recording of the changes in the size of a part as modified by the circulation of the blood in it.

pleur- see *pleuro-*.

pleura (ploor'ah), pl. *pleur'ae* [Gr. "rib," "side"] [NA] the serous membrane investing the lungs and lining the thoracic cavity, completely enclosing a potential space known as the pleural cavity. There are two pleurae, right and left, entirely distinct from each other. The pleura is moistened with a serous secretion which facilitates the movements of the lungs in the chest. **cervical p.**, cupula pleurae. **costal p.**, **p. costa'lis** [NA], the part of

Pleura; for purposes of illustration, the pleural cavity is shown as an actual space. (Williams.)

the parietal pleura lining the rib cage. **diaphragmatic p.**, **p. diaphragmat'ica** [NA], the part of the parietal pleura covering the diaphragm. **mediastinal p.**, **p. mediastina'lis** [NA], a continuation of each pleura, medially, over the lateral face of the mediastinum and the structures within it. **parietal p.**, **p. parietal'is** [NA], the portion of the pleura lining the walls of the thoracic cavity. **pericardiac p.**, **p. pericardi'aca**, the portion of the mediastinal pleura covering the pericardium and firmly attached to it. **p. pulmona'lis** [NA], **pulmonary p.**, the portion of the pleura investing the lungs and lining their fissures, completely separating the different lobes. **visceral p.**, **p. pulmonalis**.

pleuracentesis (ploor'ah-sen-te'sis) thoracentesis.

pleuracotomy (ploor'ah-kot'o-me) [*pleura* + Gr. *tomē* a cutting] incision into the pleural cavity.

pleurae (ploor'e) [L.] plural of *pleura*.

pleural (ploor'al) pertaining to the pleura.

pleuralgia (ploor-al'je-ah) [*pleur-* + *-algia*] pain in the pleura, or in the side.

pleuralgic (ploor-al'jik) pertaining to or affected with pleuralgia.

pleuramion (ploor-am'ne-on) an amnion that develops by a process of folding of the somatopleure, a characteristic of many mammals but not man.

pleurapophysis (ploor'ah-pof'i-sis) [*pleur-* + *apophysis*] a rib, or its homologue; a rib considered as part of a vertebra.

pleurectomy (ploor-ek'to-me) [*pleur-* + Gr. *ektomē* excision] excision of a portion of the pleura.

pleurisy (ploor'i-se) [Gr. *pleuritis*] inflammation of the pleura, with exudation into its cavity and upon its surface. It may occur as either an acute or a chronic process. In acute pleurisy the pleura becomes reddened, then covered with an exudate of lymph, fibrin, and cellular elements (the *dry stage*); the disease may progress to the second stage, in which a copious exudation of serum occurs (stage of *liquid effusion*). The inflamed surfaces of the pleura tend to become united by adhesions, which are usually permanent. The symptoms are a stitch in the side, a chill, followed by fever and a dry cough. As effusion occurs there is an onset of dyspnea and a diminution of pain. The patient lies on the affected side. **acute p.**, a form marked by sharp, stabbing pain, fever, friction fremitus, and to-and-fro friction sounds, or by rapid development of pleural effusion. **adhesive p.**, that in which exudate forms dense adhesions between the visceral and parietal pleurae, which partially or totally obliterate the pleural space. **blocked p.**, pleurisy in which the exudate is imprisoned in a pocket so that it cannot be aspirated; loculated pleural effusion. **cholesterol p.**, accumulation of cholesterol-containing fluid in the pleural cavity. **chronic p.**, a dry serofibrinous or purulent form, which is long continued. **chyloform p.**, **chyloid p.**, a form in which the effused fluid has a milky appearance. **chylous p.**, pleurisy in which the effusion consists of a turbid milky fluid, with sometimes a high percentage of fat; chylothorax. **circumscribed p.**, pleurisy in which the inflammation is limited to a portion of the pleura. **costal p.**, inflammation of the parietal pleura. **diaphragmatic p.**, parietal inflammation limited to parts near the diaphragm. **diffuse p.**, pleurisy in which the inflammation involves the entire surface of the pleura. **double p.**, inflammation involving the pleurae of both lungs. **dry p.**, a variety with comparatively dry fibrinous exudate, usually chronic. **encysted p.**, a form with adhesions which circumscribe the effused material; loculated pleural effusion. **epidemic p.**, epidemic pleurodynia. **exudative p.**, pleurisy with effusion. **fibrinous p.**, pleurisy characterized by deposition of large amounts of fibrin in the pleural space. **hemorrhagic p.**, a variety in which there is a bloody exudate. **ichorous p.**, empyema with a thin, offensive pus. **indurative p.**, pleurisy marked by thickening and hardening of the pleura. **interlobular p.**, a variety enclosed between the lobes of the lung. **latent p.**, a form attended with but little pain or inconvenience. **mediastinal p.**, a variety that affects the pleural folds about the mediastinum. **metapneumonic p.**, pleurisy following pneumonia; pneumococcal empyema. **plastic p.**, a form characterized by the deposition of a soft, semi-solid exudate in a layer; fibrothorax. **primary p.**, a form not consequent upon pneumonia or any other observed disease. **proliferating p.**, plastic p. **pulmonary p.**, inflammation of the pleura which covers the lungs. **pulsating p.**, a form in which the heart's action conveys a perceptible throbbing to the effused fluid. **purulent p.**, thoracic empyema. **sacculated p.**, pleurisy characterized by an adhesion pocket filled with fluid. **secondary p.**, any pleurisy consequent upon an attack of some

other disease. **serofibrinous p.**, one with a watery exudate and deposition of fibrin. **serous p.**, a form characterized by free exudation of fluid. **single p.**, pleurisy involving only one pleural space. **suppurative p.**, thoracic empyema. **visceral p.**, pleurisy with symptoms of severe prostration. **visceral p.**, pleurisy involving the visceral pleural layer. **wet p.**, **p. with effusion**, pleurisy marked by serous exudation.

pleuritic (plo-rit'ik) pertaining to or of the nature of pleurisy.

pleuritis (plo-ri'tis) pleurisy.

pleuritogenic (ploor'i-toj'ē-nus) causing pleurisy.

pleuro-, pleur- [Gr. *pleura* rib, side] combining form denoting relationship to the pleura, to the side, or to a rib.

pleurobronchitis (ploor'o-brong-ki'tis) pleurisy and bronchitis combined.

pleurocele (ploor'o-sēl) [pleuro- + Gr. *kēlē* hernia] hernia of lung tissue or of pleura.

pleurocentesis (ploor'o-sen-te'sis) [pleuro- + *kentēsis* puncture] thoracentesis.

pleurocentrum (ploor'o-sen'trum) [pleuro- + Gr. *kentron* center] the lateral element of the vertebral column.

Pleuroceridae (ploor'o-ser'i-de) a family of snails (order Mesogastropoda) that includes the medically important genera *Hua*, *Semisulcospira*, and *Goniobasis*.

pleurocholecystitis (ploor'o-ko'le-sis-ti'tis) [pleuro- + *cholecystitis*] inflammation of the pleura and the gallbladder.

pleuroclisis (plo-rok'li-sis) [pleuro- + Gr. *klysis* washing] injection of fluid into the pleural cavity; the flushing out of a pleural cavity.

pleurocutaneous (ploor'o-ku-ta'ne-us) pertaining to the pleura and the skin.

pleurodesis (ploor-od'ē-sis) [pleuro- + Gr. *desis* binding] the production of adhesions between the parietal and the visceral pleura.

pleurodont (ploor'o-dont) [pleur- + Gr. *odous* tooth] having teeth attached by one side on the inner surface of the jaw elements, as in certain lizards.

pleurodynia (ploor'o-din'e-ah) [pleuro- + Gr. *odynē* pain] paroxysmal pain in the intercostal muscles due to muscular rheumatism (fibrositis) or irritation of pleural surfaces. **epidemic p.**, an epidemic disease caused by coxsackievirus B and marked by a sudden attack of violent pain in the chest or epigastrium, fever of brief duration, and a tendency to recrudescence on the third day; called also *devil's grip*, *epidemic myalgia*, *epidemic myositis*, and *Bornholm disease*.

pleurogenic (ploor'o-jen'ik) pleurogenous.

pleurogenous (ploor-oj'ē-nus) [pleuro- + Gr. *gennan* to produce] originating in the pleura.

pleurography (plo-rog'rah-fe) [pleuro- + Gr. *graphein* to write] roentgenographic examination of the pleural cavity.

pleurohepatitis (ploor'o-hep'ah-ti'tis) [pleuro- + Gr. *hēpar* liver + *-itis*] hepatitis with inflammation of a portion of the pleura near the liver.

pleurolith (ploor'o-lith) [pleuro- + Gr. *lithos* stone] a concretion found in the pleura; calcified pleural plaque.

pleurolysis (plo-rol'i-sis) [pleuro- + Gr. *lysis* dissolution] surgical separation of the pleura from its attachments.

pleuromelus (ploor'o-me'lus) [pleuro- + Gr. *melos* limb] an individual with a supernumerary limb arising laterally from the thorax.

Pleuromonas (ploor'o-mo'nas) a genus of flagellate, somewhat ameboid protozoa of the family Bodonidae, order Protomastigida.

pleuroparietopexy (ploor'o-pah-ri'ē-to-pek'se) [pleuro- + *parietal* + Gr. *pēxis* fixation] the operation of fixing the visceral pleura to the parietal pleura, thus binding the lung to the chest wall.

pleuropericardial (ploor'o-per-i-kar'de-al) pertaining to both the pleura and the pericardium.

pleuropericarditis (ploor'o-per'i-kar-di'tis) inflammation involving both the pleura and the pericardium.

pleuroperitoneal (ploor'o-per'i-to-ne'al) pertaining to both the pleura and the peritoneum, or communicating with both the pleural and the peritoneal cavity, as a pleuroperitoneal fistula.

pleuropneumonia (ploor'o-nu-mo'ne-ah) 1. pleurisy complicated with pneumonia. 2. a contagious or infectious pneumonia of cattle, combined with pleurisy, caused by *Mycoplasma mycoides*; called also *pleuropneumonia contagiosa bovm* and *lung plague*.

pleuropneumonia-like (ploor'o-nu-mo'nyah-lik) a term applied to a group of filtrable microorganisms similar to *Mycoplasma mycoides*, the causative agent of pleuropneumonia in cattle. Such organisms have been isolated from sheep and goats (contagious agalactia), dogs, rats and mice, and also in humans. They are also known as *PPLO*. See also *Mycoplasma*.

pleuropneumonolysis (ploor'o-nu-mo-nol'i-sis) [pleuro- + Gr. *pneumōn* lung + *lysis* destruction] division of adhesions between the lung and the parietal pleura to permit the lung to collapse.

pleuropulmonary (ploor'o-pul'mo-ner'e) pertaining to the pleura and lungs.

pleurorrhoea (ploor'o-re'ah) [pleuro- + Gr. *rhoia* flow] a pleural or pleuritic effusion.

pleuroscopy (ploor-os'ko-pe) [pleuro- + Gr. *skopein* to examine] examination of the pleural cavity through an endoscope by way of a small incision in the chest wall.

pleurosoma (ploor'o-so'mah) pleurosomus.

pleurosomus (ploor'o-so'mus) [pleuro- + Gr. *sōma* body] a fetus with protrusion of the intestine and imperfect development of the arm of one side.

pleurothotonos (ploor'o-thot'o-nos) [Gr. *pleurothen* from the side + *tonos* tension] tetanic bending of the body to one side.

pleurothotonus (ploor'o-thot'o-nus) pleurothotonos.

pleurotin (ploor-o'tin) a toxic antibiotic substance, $C_{20}H_{22}O_6$, obtained from the mushroom *Pleurotus griseus*; it shows activity against staphylococcus (of boils) and tubercle bacillus.

pleurotome (ploor'o-tōm) an area of the lung supplied with afferent nerve fibers by a single posterior spinal root.

pleurotomy (ploor-ot'o-me) [pleuro- + Gr. *tomē* a cutting] surgical incision of the pleura.

pleurotyphoid (ploor'o-ti'foïd) acute pleurisy followed by and complicated with typhoid fever.

pleurovisceral (ploor'o-vis'er-al) pertaining to the pleura and the viscera.

plexal (plek'sal) pertaining to a plexus.

plexalgia (plek-sal'je-ah) [Gr. *plēxis* stroke + *-algia*] a condition seen in troops after long exposure; it is marked by pains in various parts of the body, fatigue, excitability, and insomnia.

plexectomy (plek-sek'to-me) [plexus + Gr. *ektomē* excision] surgical excision of a plexus.

plexiform (plek'si-form) [L. *plexus* plait + *forma* form] resembling a plexus or network.

pleximeter (plek-sim'ē-ter) [Gr. *plēxis* stroke + *metron* measure] 1. a plate to be struck in mediate percussion. 2. a diascopes; a glass plate used to show the condition of the skin under pressure.

pleximetric (plek'si-met'rik) pertaining to or performed by a pleximeter.

pleximetry (plek-sim'ē-tre) the use of the pleximeter.

plexitis (plek-si'tis) inflammation of a nerve plexus.

plexogenic (plek'so-jen'ik) giving rise to a plexus or plexiform structure.

plexometer (plek-som'ē-ter) pleximeter.

plexopathy (pleks-op'ah-the) any disorder of a plexus, especially of nerves. **lumbar p.**, neuropathy of the lumbar plexus.

plexor (plek'sor) a hammer used in performing percussion.

plexus (plek'sus), pl. *plexus* or *plexuses* [L. "braid"] a network or tangle; [NA] a general term for a network of lymphatic vessels, nerves, or veins. **annular p.**, a plexus of nerve fibers encircling the corneal margin. **anserine p.**, **p. anseri'nus**, p. parotideus nervi facialis. **aortic p.**, **abdominal p.**, **aorticus abdominalis**. **aortic p.**, **thoracic p.**, **aorticus thoracicus**. **p. aorticus**, a network of lymphatic vessels about the aorta. **p. aorticus abdominalis** [NA], abdominal aortic plexus: an unpaired plexus composed of interconnecting bundles of fibers that arise from the celiac and superior mesenteric plexuses and descend along the aorta. Receiving branches from the lumbar splanchnic nerves, it becomes the superior hypogastric plexus below the bifurcation of the aorta. Branches of the plexus are distributed along the adjacent branches of the aorta. **p. aorticus thoracalis**, **p. aorticus thoracicus** [NA], thoracic aortic plexus: a plexus around the thoracic aorta formed by filaments from the sympathetic trunks and vagus nerves, and from which fine twigs accompany branches of the aorta. It is continuous below with the celiac plexus and the plexus of the abdominal aorta. **areolar p.**, p. venosus areolaris. **p. arte'riae cer'ebri anterio'ris**, a thin plexus of sympathetic nerve fibers accompanying the anterior cerebral artery. **p. arte'riae cer'ebri me'diae**, a thin plexus of sympathetic nerve fibers accompanying the middle cerebral artery. **p. arte'riae chorio'deae**, delicate nerve plexuses accompanying the choroid arteries. **p. arte'riae ovar'icae**, p. ovaricus. **Auerbach's p.**, p. myentericus. **p. auricula'ris poste'rior**, a sympathetic nerve plexus on the posterior auricular artery. **autonomic p's**, **p. autonom'ici** [NA], extensive networks of nerve fibers and cell bodies associated with the autonomic nervous system; found particularly in the thorax, abdomen, and pelvis, and containing sympathetic, parasympathetic, and visceral afferent fibers. Called also *p. sympathici*. **p. axilla'ris**, **axillary p.**, a plexus of lymph vessels and nodes in the axilla. **basilar p.**, **p. basila'ris** [NA], a venous plexus of the dura mater situated over the basilar part of the occipital bone and the posterior portion of the body of the sphenoid, extending from the cavernous sinus to the foramen magnum, and communicating with other dural sinuses. **biliary p.**, a network of bile ducts said to be sometimes observable in the liver. **brachial p.**, **p. brachia'lis** [NA], a plexus originating from the ventral branches of the last four cervical spinal nerves and most of the ventral branch of the

first thoracic spinal nerves. Situated partly in the neck and partly in the axilla, it is composed successively of ventral branches and trunks (supraclavicular part) which are related to the subclavian artery and which give off the dorsal scapular, long thoracic, subclavius, and suprascapular nerves. The infraclavicular part consists of divisions which lie approximately behind the clavicle and cords and branches in the axilla in relation to the axillary artery. Its branches are medial and lateral pectoral, medial brachial cutaneous, medial antebraclial cutaneous, median, ulnar radial, subscapular, thoracodorsal, and axillary nerves. **cardiac p.**, *p. cardiacus*. **cardiac p., anterior**, superficial cardiac p. **cardiac p., deep**, the larger part of the cardiac plexus, situated between the aortic arch and the tracheal bifurcation. **cardiac p., great**, deep cardiac p. **cardiac p., superficial**, the part of the cardiac plexus that lies beneath the aortic arch to the right of the ligamentum arteriosum. **p. cardi/acus** [NA], cardiac plexus: the plexus around the base of the heart, chiefly in the epicardium. It is formed by cardiac branches from the vagus nerves and the sympathetic trunks and ganglia, contains visceral afferent fibers, and shows subdivisions related to the arch of the aorta, right and left atria, and right and left coronary arteries. The cardiac plexus is continuous with the right and left pulmonary plexuses. **p. cardi/acus profun/dus**, the deep cardiac plexus. **p. cardi/acus superficia/lis**, the superficial cardiac plexus. **p. carot/icus commun/nis** [NA], common carotid plexus: a nerve plexus on the common carotid artery, formed by branches of the internal and external carotid plexuses and the cervical sympathetic ganglia. **p. carot/icus exter/nus** [NA], external carotid plexus: a nerve plexus located around the external carotid artery, formed by the external carotid nerves from the superior cervical ganglion, and supplying sympathetic fibers which accompany the branches of the external carotid artery. **p. carot/icus inter/nus** [NA], internal carotid plexus: a nerve plexus on the internal carotid artery, formed by the internal carotid nerve, which supplies sympathetic fibers to the branches of the internal carotid artery, to the tympanic plexus, to the nerves in the cavernous sinus, and, directly or indirectly, to the cranial parasympathetic ganglia through which they pass. Called also *carotid p.* **carotid p.**, caroticus internus. **carotid p., common**, *p. caroticus communis*. **carotid p., external**, *p. caroticus externus*. **carotid p., internal**, *p. caroticus internus*. **p. caverno/sus**, cavernous plexus: a plexus of sympathetic nerve fibers related to the cavernous sinus of the dura mater. **p. caverno/sus clitor/idis**, cavernous plexus of clitoris: a plexus of nerve fibers at the root of the clitoris, derived from the vesical plexus and supplying the corpora cavernosa clitoridis. **p. caverno/si concha/rum** [NA], cavernous plexuses of conchae: numerous venous plexuses in the thick mucous membrane of the nasal conchae. **p. caverno/sus pe/nis**, cavernous plexus of penis: a plexus of nerve fibers at the root of the penis, derived from the vesical plexus and supplying the corpora cavernosa penis. **cavernous p.**, *p. cavernosus*. **cavernous p. of clitoris**, *p. cavernosus clitoridis*. **cavernous p's of conchae**, *p. cavernosi concharum*. **cavernous p. of penis**, *p. cavernosus penis*. **celiac p.**, 1. plexus celiacus. 2. plexus coeliacus (def. 2). **p. celi/acus** [NA], celiac plexus: that portion of the prevertebral plexus which lies on the front and sides of the aorta at the origins of the celiac trunk and superior mesenteric and renal arteries. It contains the paired celiac ganglia, the superior mesenteric ganglion (or ganglia), and small unnamed ganglionic masses. Branches of the plexus extend along all of the adjacent arteries; called also *solar plexus*. **cervical p.**, *p. cervicalis*. **cervical p., posterior**, a plexus in the posterior cervical region, formed by dorsal rami of the first three or four cervical spinal nerves. **p. cervica/lis** [NA], cervical plexus: a nerve plexus formed by the ventral branches of the upper four cervical nerves; arranged as an irregular series of loops, it gives off superficial branches (lesser occipital, greater auricular, transverse cervical, and supraclavicular nerves), and deep branches (phrenic, accessory phrenic, ansa cervicalis, and muscular nerves). **p. cervicobrachia/lis**, the cervical and brachial plexuses together. **p. chorioi/deus ventric/uli latera/lis**, *p. choroideus ventriculi lateralis*. **p. chorioi/deus ventric/uli quar/ti**, *p. choroideus ventriculi quarti*. **p. chorioi/deus ventric/uli ter/tii**, *p. choroideus ventriculi tertii*. **choroid p.**, infoldings of blood vessels of the pia mater covered by a thin coat of ependymal cells that form tufted projections into the third, fourth, and lateral ventricles of the brain; they secrete the cerebrospinal fluid. See *p. choroideus ventriculi lateralis*, *p. choroideus ventriculi quarti*, and *p. choroideus ventriculi tertii*. **choroid p., inferior**, **choroid p. of fourth ventricle**, *p. choroideus ventriculi quarti*. **choroid p. of lateral ventricle**, *p. choroideus ventriculi lateralis*. **choroid p. of third ventricle**, *p. choroideus ventriculi tertii*. **p. chorioi/deus ventric/uli latera/lis** [NA], choroid plexus of lateral ventricle: vascular, fringelike folds of the pia mater in the floor of the pars centralis and the roof of the inferior horn of the lateral ventricle, concerned with production of the cerebrospinal fluid. **p. chorioi/deus ventric/uli quar/ti** [NA], choroid plexus of fourth ventricle: vascular fringelike folds of the pia mater in the roof of the posterior part of the fourth ventricle and extending into and through the lateral

recesses, concerned with production of the cerebrospinal fluid. **p. chorioi/deus ventric/uli ter/tii** [NA], choroid plexus of third ventricle: vascular, fringelike folds of the pia mater in the roof of the third ventricle, concerned with production of the cerebrospinal fluid. **coccygeal p.**, **p. coccyg/eus** [NA], a small plexus formed by the ventral branches of the coccygeal and the fifth sacral nerve, and a communication from the fourth sacral nerve, and giving off the anococcygeal nerves. **p. coeli/acus**, 1. plexus celiacus. 2. a plexus made up of lymphatic vessels and the superior mesenteric lymph nodes and the celiac lymph nodes behind the stomach, duodenum, and pancreas. Called also *celiac p.* **colic p., left**, the part of the inferior mesenteric plexus that accompanies the left colic artery. **colic p., middle**, the part of the superior mesenteric plexus that accompanies the middle colic artery. **colic p., right**, the part of the superior mesenteric plexus that accompanies the right colic artery. **p. corona/rus cor/dis ante/rior**, anterior coronary plexus of heart: a plexus of sympathetic nerve fibers anterior to the heart and related chiefly to the branches of the left coronary artery. **p. corona/rus cor/dis poste/rior**, posterior coronary plexus of heart: a plexus of sympathetic nerve fibers posterior to the heart and related chiefly to the branches of the right coronary artery. **coronary p's, gastric**, *p. gastrici*. **coronary p. of heart, anterior**, *p. coronarius cordis anterior*. **coronary p. of heart, posterior**, *p. coronarius cordis posterior*. **coronary p's of stomach, superior**, *p. gastrici*. **crural p.**, *p. femoralis*. **Cruveilhier's p.**, 1. posterior cervical plexus. 2. a form of angioma made up of a knot of varicose veins. **cystic p.**, a nerve plexus near the gallbladder, related to the cystic artery. **deferential p.**, **p. deferentia/lis** [NA], the subdivision of the inferior hypogastric plexus that supplies nerve fibers to the ductus deferens. **dental p., inferior**, *p. dentalis inferior*. **dental p., superior**, *p. dentalis superior*. **p. denta/lis infe/rior** [NA], inferior dental plexus: a plexus of nerve fibers from the inferior alveolar nerve, situated around the roots of the lower teeth. **p. denta/lis supe/rior** [NA], superior dental plexus: a plexus of fibers from the superior alveolar nerves, situated around the roots of the upper teeth. **diaphragmatic p.**, *p. phrenicus*. **enteric p.**, **p. enter/icus** [NA], a plexus of autonomic nerve fibers within the wall of the digestive tube, and made up of the submucosal, myenteric, and subserosal plexuses; it contains visceral afferent fibers, sympathetic postganglionic fibers, parasympathetic preganglionic and postganglionic fibers, and parasympathetic postganglionic cell bodies. **epigastric p.**, *p. celiacus*. **esophageal p.**, **p. esopha/geus** [NA], a plexus surrounding the esophagus, formed by branches of the left and right vagi and sympathetic trunks, and containing also visceral afferent fibers from the esophagus; it is sometimes subdivided into anterior and posterior parts. **Exner's p.**, superficial tangential fibers in the molecular layer of the cerebral cortex; called also *molecular p.* **facial p.**, **p. of facial artery**, a nerve plexus along the facial artery. **femoral p.**, **p. femora/lis** [NA], a plexus accompanying the femoral artery, derived chiefly from the aortic plexus by way of the common and external iliac plexuses. **fundamental p.**, deep stroma p. **p. ganglio/sus cilia/ris**, a network of nerve fibers about the ciliary body. **gastric p's, p. gas/trici** [NA], subdivisions of the celiac portion of the prevertebral plexuses, accompanying the gastric arteries and branches and supplying nerve fibers to the stomach. **p. gas/tricus ante/rior**, see *rami gastrici anteriores nervi vagi*. **p. gas/tricus infe/rior**, a plexus of nerve fibers on the greater curvature of the stomach. **p. gas/tricus poste/rior**, see *rami gastrici posteriores nervi vagi*. **p. gas/tricus supe/rior**, a plexus of nerve fibers on the lesser curvature of the stomach. **gastroepiploic p., left**, a nerve plexus near the greater curvature of the stomach. **p. haemorrhoida/lis**, *p. venosus rectalis*. **p. haemorrhoida/lis me/dius**, see *p. rectales medii*. **p. haemorrhoida/lis supe/rior**, *p. rectalis superior*. **Heller's p.**, an arterial network in the submucosa of the intestine. **hemorrhoidal p.**, *p. venosus rectalis*. **hemorrhoidal p., middle**, see *p. rectales medii*. **hemorrhoidal p., superior**, *p. rectalis superior*. **hepatic p.**, **p. hepat/icus** [NA], a subdivision of the celiac plexus accompanying the hepatic artery to the liver. **Hovius' p.**, a venous plexus in the ciliary region connected with the sinus venosus sclerae. **hypogastric p.**, the hypogastric portion of the prevertebral plexuses; see *p. hypogastricus inferior* and *p. hypogastricus superior*. **hypogastric p., inferior**, *p. hypogastricus inferior*. **hypogastric p., superior**, *p. hypogastricus superior*. **p. hypogas/tricus**, 1. see *p. hypogastricus inferior* and *hypogastricus superior*. 2. a plexus of lymphatic vessels in the hypogastric region. **p. hypogas/tricus infe/rior** [NA], inferior hypogastric plexus: the plexus formed on each side at the front of the lower part of the sacrum by the junction of the hypogastric and pelvic splanchnic nerves; branches are given off to the pelvic organs. Called also *p. pelvinus* [NA alternative] or *pelvic p.* **p. hypogas/tricus supe/rior** [NA], superior hypogastric plexus: the downward continuation of the aortic plexus; it lies in front of the upper part of the sacrum, just below the bifurcation of the aorta, receives fibers from the lower lumbar splanchnic nerves, and divides into the right and left hypogastric nerves. Called also *nervus presacralis* [NA alternative] or *presacral*

nerve. **ileocolic p.**, the part of the superior mesenteric plexus that accompanies the ileocolic artery. **iliac p's, p. ili'aci** [NA], plexuses derived chiefly from the aortic plexus and accompanying the common iliac arteries. **p. ili'acus exter'nus**, a lymphatic plexus situated about the external iliac vessels. **infraorbital p.**, a nerve plexus situated deep to the levator labii superioris muscle, formed by superior labial branches of the infraorbital nerve and branches of the facial nerve. **inguinal p., p. inguina'lis**, a lymphatic plexus situated near the end of the long saphenous vein and along the femoral artery and vein in the iliopectineal fossa. **intercavernous p.**, a network of venous channels connecting the two cavernous sinuses across both the roof and the floor of the pituitary fossa. **intermesenteric p., p. intermesentericus.** **intermesenteric p., lumbosacral p., p. aorticus abdominalis.** **p. intermesentericus** [NA], intermesenteric plexus: the part of the aortic plexus that is located between the origins of the superior and inferior mesenteric arteries. **internal carotid venous p., p. venosus caroticus internus.** **interradial p.,** Baillarger's lines. **intestinal p., submucous, p. submucosus.** **intramural p.,** a plexus of autonomous intrinsic nerve cells and fibers which are confined entirely to the intestinal and bladder walls, and which take part in or regulate local reflexes and activity. **intrasceral p.,** a network of vessels in the sclera, receiving junctional branches from the sinus venosus sclerae. **ischial p., p. sacralis.** **Jacobson's p., p. tympanicus.** **jugular p., p. jugula'ris**, a plexus of lymphatic vessels along the internal jugular vein. **laryngeal p.,** a nerve plexus on the outer surface of the inferior constrictor of the pharynx; it is an offshoot of the pharyngeal plexus and is made up of fibers from the sympathetic and external laryngeal nerves. **lateral p., p. choroideus ventriculi lateralis.** **Leber's p.,** Hovius' p. **lienal p., p. lienal'is** [NA], a subdivision of the celiac plexus, which accompanies the splenic artery; called also **splenic p.** **lingual p., p. lingua'lis**, a nerve plexus accompanying the lingual artery. **p. lumbal'is**, 1. [NA] lumbar plexus: a plexus formed by the ventral branches of the second to fifth lumbar nerves in the psoas major muscle (the branches of the first lumbar nerve often are included). The lower division of the fourth lumbar nerve joins the fifth, and the lumbosacral trunk thus formed becomes part of the sacral plexus. The branches of the first lumbar nerve are the ilioinguinal and iliohypogastric nerves; branches of the plexus proper are the genitofemoral, lateral femoral cutaneous, obturator, and femoral nerves. 2. a lymphatic plexus in the lumbar region. **lumbar p., p. lumbalis.** **lumbosacral p., p. lumbosacra'lis** [NA], a term applied to the lumbar and sacral nerve plexuses together, because of their continuous nature. **lymphatic p., p. lymphat'icus** [NA], an interconnecting network of lymph vessels. **p. mamma'rius**, a plexus of lymph vessels along the internal mammary artery. **p. mamma'rius inter'nus**, a plexus accompanying the internal thoracic artery and its branches. **p. maxilla'ris exter'nus**, p. of facial artery. **p. maxilla'ris inter'nus**, a nerve plexus accompanying the internal maxillary artery. **maxillary p.,** see **p. maxillaris externus** and **p. maxillaris internus.** **Meissner's p., p. submucosus.** **p. menin'geus**, a nerve plexus accompanying the middle meningeal artery. **mesenteric p., inferior, p. mesentericus inferior.** **mesenteric p., superior, p. mesentericus superior.** **p. mesentericus infe'rior** [NA], inferior mesenteric plexus: a subdivision of the aortic plexus accompanying the inferior mesenteric artery. **p. mesentericus supe'rior** [NA], superior mesenteric plexus: a subdivision of the celiac plexus accompanying the superior mesenteric artery. **molecular p.,** Exner's p. **myenteric p., p. myentericus** [NA], that part of the enteric plexus within the tunica muscularis. **nasopalatine p.,** a nerve plexus near the incisive foramen. **nerve p.,** a plexus made up of intermingled nerve fibers. **p. nervorum spina'lium** [NA], plexus of spinal nerves: a plexus formed by the intermingling of the fibers of two or more spinal nerves, such as the brachial or lumbosacral plexus. **nervous p.,** a plexus made up of intermingled nerve fibers. **occipital p., p. occipita'lis**, a nerve plexus accompanying the occipital artery. **p. oesophage'us ante'rior**, see **p. esophageus.** **p. oesophage'us poste'rior**, see **p. esophageus.** **ophthalmic p., p. ophthalmicus**, a nerve plexus accompanying the ophthalmic artery. **ovarian p., p. ova'ricus** [NA], a subdivision of the aortic plexus, accompanying the ovarian arteries; called also **p. arteriae ovaricae.** **pampiniform p., p. pampiniformis** [NA], 1. in the male, a plexus of veins from the testicle and the epididymis, constituting part of the spermatic cord. 2. in the female, a plexus of ovarian veins in the broad ligament. **pancreatic p., p. pancreat'icus** [NA], subdivision of the celiac plexus, accompanying pancreatic arteries. **Panizza's p's**, two plexuses of the lymph vessels in the lateral fossae of the frenum of the prepuce. **parotid p. of facial nerve, p. parotid'us ner'vi facia'lis** [NA], a plexus formed by anastomosis of the terminal branches of the temporal, zygomatic, buccal, marginal mandibular, and cervical rami of the facial nerve, arising in the parotid gland. **patellar p.,** a plexus of nerve fibers in front of the knee, formed by communications between branches of the saphenous nerves and the femoral cutaneous nerves. **pelvic p., p. hypogastricus inferior.** **p. pelvi'us**, NA alterna-

tive for **p. hypogastricus inferior.** **periarterial p., p. periarteria'lis** [NA], a network of autonomic and sensory nerve fibers in the adventitia of an artery, some of which are following the course of the artery to reach and innervate other structures and some of which innervate the artery itself. **pericorneal p.,** anastomosing branches of the anterior conjunctival arteries, arranged in a superficial conjunctival and a deep episcleral layer about the cornea. **pharyngeal p., p. pharyngeus.** **pharyngeal p. of vagus nerve, p. pharyngeus nervi vagi.** **p. pharyngeus** [NA], pharyngeal plexus: a venous plexus posterolateral to the pharynx, formed by the pharyngeal veins, communicating with the pterygoid venous plexus, and draining into the internal jugular vein. **p. pharyngeus ascen'dens**, a nerve plexus accompanying the ascending pharyngeal artery. **p. pharyngeus ner'vi va'gi** [NA], pharyngeal plexus of vagus nerve: a plexus formed chiefly by fibers from branches of the vagus nerves, but also containing fibers from the glossopharyngeal nerves and sympathetic trunks, and supplying motor, general sensory, and sympathetic innervation to the muscles and mucosa of the pharynx and soft palate, except for the tensor veli palatini muscle. **phrenic p., p. phrenicus**, a nerve plexus accompanying the inferior phrenic artery to the diaphragm and suprarenal glands. **popliteal p., p. poplite'us**, a plexus of nerve fibers accompanying the popliteal artery. **presacral p., p. venosus sacralis.** **prevertebral p's**, autonomic nerve plexuses situated in the thorax, abdomen, and pelvis, anterior to the vertebral column; they consist of visceral afferent fibers, preganglionic parasympathetic fibers, preganglionic and postganglionic sympathetic fibers, and ganglia containing sympathetic ganglion cells, and they give rise to postganglionic fibers. The major plexuses are cardiac, pulmonary, esophageal, celiac, mesenteric, and hypogastric. All are closely related to the aorta; those in the abdomen and pelvis supply adjacent viscera by subdivisions which accompany the branches of the aorta and which are named usually after these branches, but sometimes according to the organ supplied. **primary p.,** a network of capillaries that arise from superior hypophyseal arteries, extend into the median eminence of the hypothalamus, then return to the surface, where they are collected into veins that supply the sinusoids of the adenohypophysis. **prostatic p.,** 1. plexus prostaticus. 2. plexus venosus prostaticus. **prostaticovesical p.,** the plexus venosus vesicalis in the male. **p. prostat'icus** [NA], prostatic plexus: a subdivision of the inferior hypogastric plexus that supplies nerve fibers to the prostate and adjacent organs. **pterygoid p., p. pterygoi'deus** [NA], a network of veins corresponding to the second and third parts of the maxillary artery; situated on the lateral surface of the medial pterygoid muscle and on both surfaces of the lateral pterygoid muscle, and draining into the facial vein. **puddendal p.,** plexus venosus prostaticus. **p. pudenda'lis**, p. venosus prostaticus. **p. pulmona'lis** [NA], pulmonary plexus: a nerve plexus formed by several strong trunks of the vagus nerve which are joined at the root of the lung by branches from the sympathetic trunk and cardiac plexus. The plexus is often described as having anterior and posterior parts; filaments from each accompany the blood vessels and bronchi into the lungs. **p. pulmona'lis ante'rior**, anterior pulmonary plexus: the smaller portion of the pulmonary plexus, in front of the root of the lung and interconnected with the posterior plexus; see **p. pulmonalis.** **p. pulmona'lis poste'rior**, posterior pulmonary plexus: the larger portion of the pulmonary plexus behind the root of the lung and interconnected with the anterior plexus; see **p. pulmonalis.** **pulmonary p., p. pulmonalis.** **pulmonary p., anterior, p. pulmonalis anterior.** **pulmonary p., posterior, p. pulmonalis posterior.** **pyloric p.,** a nerve plexus that supplies the region of the pylorus. **p. of Raschkow**, a delicate plexus of nerve fibers beneath the odontoblasts in the dental papilla during the formation of dentin. **rectal p's, inferior, p. rectales inferiores.** **rectal p's, middle, p. rectales medii.** **rectal p., superior, p. rectalis superior.** **p. recta'les infe'rio'res** [NA], inferior rectal plexuses: a plexus accompanying the inferior rectal artery, derived chiefly from the inferior rectal nerve. **p. recta'les me'dii** [NA], subdivisions of the inferior hypogastric plexus, in proximity with and supplying nerve fibers to the rectum; called also **p. haemorrhoidalis medius.** **p. recta'lis supe'rior** [NA], superior rectal plexus: a plexus accompanying the superior rectal artery to the rectum, derived from the inferior mesenteric and hypogastric plexuses. Called also **p. haemorrhoidalis superior.** **Remak's p.,** former name for **p. submucosus.** **renal p., p. rena'lis** [NA], a subdivision of the celiac plexus, accompanying the renal artery. **sacral p.,** 1. plexus sacralis. 2. plexus venosus sacralis. **sacral p., anterior, p. venosus sacralis.** **sacral lymphatic p., p. sacralis medius.** **p. sacra'lis** [NA], sacral plexus: a plexus arising from the ventral branches of the last two lumbar nerves (which form the lumbosacral trunk) and the first four sacral nerves. The plexus, which lies in front of the piriformis, has twelve named branches; five supply pelvic structures (the nerves to the piriformis, to levator ani and coccygeus, and to sphincter ani muscles, the pelvic splanchnic nerves and the pudendal nerve); seven help to supply the buttock and lower limb (superior and inferior gluteal, posterior femoral cutaneous, perforating cutaneous, and sciatic

nerves, and nerves to the quadratus femoris and obturator internus muscles). **p. sacra/lis ante'rior**, **p. venosus sacralis**, **p. sacra/lis me'dius**, a fine network of lymphatic vessels in the hollow of the sacrum. **Santorini's p.**, 1. plexus prostaticus. 2. plexus venosus prostaticus. **Sappey's subareolar p.**, a lymphatic plexus situated beneath the areola of the nipple. **solar p.**, **p. celiacus**. **spermatic p.**, 1. plexus testicularis. 2. plexus pampiniformis (def. 1). **p. spermaticus**, **p. testicularis**. **sphenoid p. (obs.)**, the upper portion of the internal carotid plexus. **p. of spinal nerves**, **p. nervorum spinalium**. **splenic p.**, **p. lienalis**. **Stenson's p.**, the venous network around the parotid duct. **stroma p.**, a network formed by ramifications of nerve fibrils within the substantia propria of the cornea. **stroma p., deep**, the more deeply seated portion of the stroma plexus. **subbasal p.**, the superficial stroma plexus. **subclavian p., p. subclavius** [NA], a sympathetic nerve plexus on the subclavian artery, arising from the cervicothoracic ganglion, contributing fibers to the phrenic nerve and to the branches of the subclavian artery, and continuing to the axillary artery. **submucosal p., p. submucosus** [NA], **submucous p.**, the part of the enteric plexus that is situated in the submucosa. **subsartorial p.**, a nerve plexus deep to the sartorius muscle, formed by communications between branches of the medial femoral cutaneous nerve and the saphenous and obturator nerves. **subserosal p., p. suberosus** [NA], the part of the enteric plexus situated deep to the serosal surface of the tunica serosa. **subtrapezius p.**, a term occasionally applied to a small plexus situated deep to the trapezius muscle, formed by communications between branches of the accessory nerve and cervical nerves. **supradial p.**, Bechterew's layer. **suprarenal p., p. suprarena/lis** [NA], a subdivision of the celiac plexus, in proximity with and supplying nerve fibers to a suprarenal (adrenal) gland. **p. sympathici**, **p. autonomici**. **p. tempora/lis superficia/lis**, a plexus of nerve fibers accompanying the superficial temporal artery. **testicular p., p. testicula/ris** [NA], a subdivision of the aortic plexus accompanying the testicular arteries; called also **p. spermaticus**. **p. thyroideus im'par**, **p. thyroideus impar**. **p. thyroideus infe'rior**, inferior thyroid plexus: a nerve plexus accompanying the inferior thyroid artery to the larynx, pharynx, and thyroid region. **p. thyroideus supe'rior**, superior thyroid plexus: a nerve plexus accompanying the superior thyroid artery to the larynx, pharynx, and thyroid region. **thyroid p., inferior**, **p. thyroideus infe'rior**. **thyroid p., superior**, **p. thyroideus superior**. **thyroid p., unpaired**, **p. thyroideus impar**. **p. thyroideus im'par** [NA], unpaired thyroid plexus: a venous plexus investing the surface of the thyroid gland. **tonsillar p.**, a plexus around the tonsil, formed by communications between the middle and posterior palatine nerves and the tonsillar branches of the glossopharyngeal nerve; fibers are supplied to the tonsil, soft palate, and region of the fauces. **Trolard's p.**, **p. venosus canalis hypoglossi**. **tympenic p., p. tympanicus** [NA], **p. tympanicus** [Jacobsoni], a nerve plexus on the promontory of the middle ear, formed by the tympanic and caroticotympanic nerves. It gives off the lesser petrosal nerve and a branch of the greater petrosal nerve and sends sensory fibers to the mucous membrane of the tympanic cavity, the auditory tube, and the mastoid air cells. **ureteric p., p. uretericus** [NA], a plexus supplying the ureter and derived from the renal and hypogastric plexuses. **uterine p.**, 1. the part of the uterovaginal plexus that supplies nerve fibers to the cervix and lower part of the uterus. 2. plexus venosus uterinus. **uterovaginal p., p. uterovagina/lis**, 1. [NA] the subdivision of the inferior hypogastric plexus that supplies nerve fibers to the uterus, ovary, vagina, urethra, and erectile tissue of the vestibule. 2. see **p. venosus uterinus** and **p. venosus vaginalis**. **vaginal p.**, 1. the part of the uterovaginal plexus that supplies nerve fibers to the walls of the vagina. 2. plexus venosus vaginalis. **vascular p., p. vasculosus**. **vascular p., coccygeal**, glomus coccygeum. **p. vasculosus** [NA], vascular plexus: a network of intercommunicating blood vessels. **p. venosus** [NA], venous plexus: a network of interconnecting veins. **p. venosus areola/ris** [NA], areolar venous plexus: a venous plexus in the areola around the nipple, formed by branches of the internal thoracic veins and draining into the lateral thoracic vein. Called also **p. venosus mamillae**. **p. venosus cana/lis hypoglossi** [NA], venous plexus of hypoglossal canal: a venous plexus surrounding the hypoglossal nerve in its canal, and connecting the occipital sinus with the vertebral vein and with the longitudinal vertebral venous sinuses. Called also **rete canalis hypoglossi**. **p. venosus carot'icus inter'nus** [NA], internal carotid venous plexus: a venous plexus around the petrosal portion of the internal carotid artery, through which the cavernous sinus communicates with the internal jugular vein. **p. venosus foram'inis ova/lis** [NA], venous plexus of foramen ovale: a venous plexus that connects the cavernous sinus through the foramen ovale with the pterygoid plexus and the pharyngeal plexus; called also **rete foraminis ovalis**. **p. venosus mamil'lae**, **p. venosus areolaris**. **p. venosus prostat'icus** [NA], prostatic venous plexus: a venous plexus around the prostate gland, receiving the deep dorsal vein of the penis and draining through the vesical plexus and the prostatic

veins; called also **p. pudendalis**. **p. venosus recta/lis** [NA], rectal venous plexus: a venous plexus that surrounds the lower part of the rectum and drains into the rectal veins; called also **p. haemorrhoidalis**. **p. venosus sacra/lis** [NA], sacral venous plexus: the plexus on the pelvic surface of the sacrum that receives the sacral intervertebral veins, anastomoses with neighboring lumbar and pelvic veins, and drains into the middle and lateral sacral veins; called also **p. sacralis anterior**. **p. venosus suboccipita/lis** [NA], suboccipital venous plexus: that part of the external vertebral plexus which lies on and in the suboccipital triangle, receives the occipital veins of the scalp, and drains into the vertebral vein. **p. venosus uteri'nus** [NA], uterine venous plexus: the venous plexus around the uterus, draining into the internal iliac veins by way of the uterine veins. **p. venosus vagina/lis** [NA], vaginal venous plexus: a venous plexus in the walls of the vagina, which drains into the internal iliac veins by way of the internal pudendal veins. **p. venosus vertebra/les anterio'res**, plexuses of veins on the anterior aspect of the vertebral column; see **p. venosi vertebrales externi** [anterior et posterior]. **p. venosus vertebra/les exter'ni**, plexuses of veins ramifying external to the bodies of the vertebrae; see **p. venosi vertebrales externi** [anterior et posterior]. **p. venosus vertebra/les exter'ni** [ante'rior et poste'rior] [NA], external vertebral plexuses [anterior and posterior]: venous plexuses situated on the anterior aspect of the bodies of the vertebra and on the posterior aspect of the vertebral arches, spines, and transverse processes. **p. venosus vertebra/les inter'ni**, plexuses of venous sinuses ramifying external to the dura mater, within the vertebral canal; see **p. venosi vertebrales interni** [anterior et posterior]. **p. venosus vertebra/les inter'ni** [ante'rior et poste'rior] [NA], internal vertebral plexuses [anterior and posterior]: networks of venous sinuses communicating freely within the vertebral foramina and ramifying externally to the dura mater, anterior and posterior to the spinal cord. **p. venosus vertebra/les posterio'res**, plexuses of veins on the posterior aspect of the vertebral column; see **p. venosi vertebrales externi** [anterior et posterior]. **p. venosus vesica/lis** [NA], vesical venous plexus: a venous plexus surrounding the upper part of the urethra and the neck of the bladder, communicating with the vaginal plexus in the female and with the prostatic plexus in the male. **venous p.**, a network of interconnecting veins (**p. venosus** [NA]). **venous p., areolar**, **p. venosus areolaris**. **venous p., hemorrhoidal**, **p. venosus rectalis**. **venous p., prostatic**, **p. venosus prostaticus**. **venous p., rectal**, **p. venosus rectalis**. **venous p., sacral**, **p. venosus sacralis**. **venous p., suboccipital**, **p. venosus suboccipitalis**. **venous p., uterine**, **p. venosus uterinus**. **venous p., vaginal**, **p. venosus vaginalis**. **venous p., vesical**, **p. venosus vesicalis**. **venous p. of foot, dorsal**, **rete venosum dorsale pedis**. **venous p. of foramen ovale**, **p. venosus foraminis ovalis**. **venous p. of hand, dorsal**, **rete venosum dorsale manus**. **venous p. of hypoglossal canal**, **p. venosus canalis hypoglossi**. **vertebral p.**, a plexus of veins related to the vertebral column; see terms beginning **p. venosi vertebrales**. **vertebral p's, internal**, see **p. venosi vertebrales interni** [anterior et posterior]. **vertebral p's, external**, see **p. venosi vertebrales externi** [anterior et posterior]. **p. vertebra/lis** [NA], vertebral plexus: a nerve plexus accompanying the vertebral artery, formed by fibers from the vertebral and cervicothoracic ganglia and carrying sympathetic fibers to the posterior cranial fossa via cranial nerves. **vesical p.**, 1. plexus vesicale. 2. plexus venosus vesicalis. **p. vesica/le** [NA], vesical plexus: the subdivision of the inferior hypogastric plexus that supplies sympathetic nerve fibers to the urinary bladder and parts of the ureter, ductus deferens, and seminal vesicle; called also **p. vesicalis**. **p. vesica/lis**, 1. plexus venosus vesicalis. 2. plexus vesicale. **vesicoprostatic p.**, the plexus venosus vesicalis in the male. **vidian p.**, nervus canalis pterygoidei.

-plexy (plek'se) [Gr. *plēxis* a stroke] word termination meaning a stroke, or seizure.

plica (pli'kah), pl. **pli'cae** [L.] a fold; [NA] a general term for a ridge or fold, as of peritoneum or other membrane. **pli'cae adipo'sae pleu'rae**, folds of fat in the pleura. **pli'cae ala/res** [NA], alar folds: a pair of folds of the synovial membrane of the knee joint; attached to the medial and lateral margins of the articular surface of the patella, they pass posteriorly, converge, and become continuous with the infrapatellar synovial fold. **pli'cae ampulla/res tu'bae uteri'nae**, the folds of the mucous coat lining the ampulla of the uterine tube. **p. aryepiglottica** [NA], aryepiglottic fold: a fold of mucous membrane extending on each side between the lateral border of the epiglottis and the summit of the arytenoid cartilage. **p. axilla/ris ante'rior** [NA], the fold of skin forming the anterior boundary of the axilla. **p. axilla/ris poste'rior** [NA], the fold of skin forming the posterior boundary of the axilla. **p. caeca/lis**, see **pli'cae cecales**. **pli'cae ceca/les** [NA], cecal folds: peritoneal folds on either side of the retrocecal recess, which may connect the cecum to the abdominal wall. **p. ceca/lis vascula/ris** [NA], vascular cecal fold: the fold of peritoneum that covers the anterior cecal vessels, forming the superior ileocecal recess. **p. chor'dae tym'pani** [NA], a fold in the mucous membrane of the tympanic cavity overlying the chorda tympani nerve. **pli'cae**

cilia/res [NA], ciliary folds: low ridges in the furrows between the ciliary processes. **pli'cae circula/res** [NA], **pli'cae circula/res** [Kerk'ringi], **pli'cae conniven'tes**, circular folds: the permanent transverse folds of the luminal surface of the small intestine, involving both the mucosa and submucosa. **p. cor'dae utero-ingui'na/lis**, ligamentum teres uteri. **p. duodena'lis infe'rior** [NA], inferior duodenal fold: a thin fold of peritoneum that bounds the inferior duodenal recess; called also **p. duodeno'esocolica** [NA alternative] or **duodeno'esocolic fold**. **p. duodena'lis supe'rior** [NA], superior duodenal fold: a fold of peritoneum covering the inferior mesenteric vein and the ascending branch of the left colic artery; called also **p. duodeno'jejunalis** [NA alternative] or **duodeno'jejunal fold**. **p. duodeno'jejuna'lis**, NA alternative for **p. duodenalis superior**. **p. duodeno'esocoli'ca**, NA alternative for **p. duodenalis inferior**. **p. epigas'trica**, **p. umbilicalis lateralis**, def. 1. **p. epigas'trica peritona'e/i**, **p. umbilicalis lateralis**, def. 2. **epiglottic p.**, a fold of mucous membrane between the tongue and the epiglottis. **p. fimbria'ta** [NA], fimbriated fold: the lobulated fold running backward and outward from the anterior extremity of the frenulum of the tongue. **pli'cae gas'tricae** [NA], gastric folds: the series of folds in the mucous membrane of the stomach; they are oriented chiefly longitudinally and partially disappear when the stomach is distended. **p. gastrop'ancreat'ica**, see **plicae gastropancreaticae**. **pli'cae gastrop'ancreat'icae** [NA], gastropancreatic folds: two folds of peritoneum, one covering the left gastric artery, the other the common hepatic artery, between the pancreas and the lesser curvature of the stomach. **p. glossoepiglott'ica latera'lis**, either of two folds of mucous membrane extending, one on either side, between the base of the tongue and the epiglottis. **p. glossoepiglott'ica media'na**, a single fold of mucous membrane between the two lateral glossoepiglottic folds, connecting the base of the tongue and the epiglottis. **p. hypogas'trica**, **p. umbilicalis medialis**. **p. ileocaeca'lis**, **p. ileocaeca'lis** [NA], ileocecal fold: a fold of peritoneum at the left border of the cecum, extending from the ileum above to the appendix below. **p. incu'dis** [NA], incudal fold: a variable fold in the tunica mucosa of the tympanic cavity, passing from the roof of the cavity to the body and short crus of the incus. **p. interdigita'lis**, the free border of the web connecting the bases of adjoining digits. **p. interureter'ica** [NA], interureteric fold: a fold of mucous membrane extending across the bladder between the two ureteric orifices; called also **p. ureterica**. **pli'cae i'ridis** [NA], iridial folds: the numerous minute folds on the posterior surface of the iris. **pli'cae isth'micae tu'bae uteri'nae**, a fold of peritoneum at the junction of uterine tube and uterus. **p. lacrima'lis** [NA], **p. lacrima'lis** [Has'neri], lacrimal fold: a fold of mucous membrane at the lower opening of the nasolacrimal duct. **p. longitudina'lis duode'ni** [NA], longitudinal fold of duodenum: a mucosal ridge running longitudinally on the inner surface of the medial wall of the descending part of the duodenum. **p. luna'ta**, **p. semilunaris conjunctivae**. **p. mallea'ris ante'rior membra'nae tym'pani** [NA], anterior malleal fold of tympanic membrane: the line in the tympanic membrane that extends anteriorly from the malleal prominence and demarks the pars tensa from the pars flaccida; called also **p. malleola'ris anterior membra'nae tympani**. **p. mallea'ris ante'rior tu'nicae muco'sae ca'vi tym'pani** [NA], anterior malleal fold of mucous coat of tympanic cavity: a fold in the tunica mucosa of the tympanic cavity, reflected from the tympanic membrane over the anterior process and ligament of the malleus and part of the chorda tympani nerve; called also **p. malleolaris anterior tunicae mucosae tympanicae**. **p. mallea'ris poste'rior membra'nae tym'pani** [NA], posterior malleal fold of tympanic membrane: the line in the tympanic membrane that extends posteriorly from the malleal prominence and demarks the pars tensa from the pars flaccida; called also **p. malleolaris posterior membra'nae tympanicae**. **p. mallea'ris poste'rior tu'nicae muco'sae ca'vi tym'pani** [NA], posterior malleal fold of mucous coat of tympanic cavity: a fold of the tunica mucosa of the tympanic cavity, extending from the manubrium of the malleus to the posterior wall of the cavity; called also **p. malleolaris posterior tunicae mucosae cavi tympani**. **p. malleola'ris ante'rior membra'nae tym'pani**, **p. mallearis anterior membra'nae tympani**. **p. malleola'ris ante'rior tu'nicae muco'sae tympani'cae**, **p. mallearis anterior tunicae mucosae cavi tympani**. **p. malleola'ris poste'rior membra'nae tym'pani**, **p. mallearis posterior membra'nae tympani**. **p. malleola'ris poste'rior tu'nicae muco'sae tympani'cae**, **p. mallearis posterior tunicae mucosae cavi tympani**. **p. membra'nae tym'pani exter'na ante'rior**, **p. mallearis anterior membra'nae tympani**. **p. membra'nae tym'pani exter'na poste'rior**, **p. mallearis posterior membra'nae tympani**. **p. muco'sa**, a mucous fold; a fold of mucous membrane. **p. ner'vi laryn'gei**, a fold of mucous membrane in the larynx, overlying the laryngeal nerve. **pli'cae palati'nae transver'sae** [NA], transverse palatine folds: four to six transverse ridges on the anterior part of the hard palate. **pli'cae palma'tae** [NA], palmate folds: a system of folds on the anterior and posterior walls of the cervical canal of the uterus, consisting of a median longitudinal ridge and shorter elevations

extending laterally and upward. **p. palpebronasa'lis** [NA], palpebronasal fold: a vertical fold of skin on either side of the nose, covering the medial canthus of the eye; called also **epicanthus**. **p. paraduodena'lis** [NA], paraduodenal fold: an occasionally found peritoneal fold containing a branch of the left colic artery. **p. pubovesica'lis**, a fold of peritoneum between the pubis and bladder. **p. rec'ti**, see **plicae transversales recti**. **p. rectouteri'na** [NA], **p. rectouteri'na** [Doug'lasi], rectouterine fold: a crescentic fold of peritoneum extending from the rectum to the base of the broad ligament on either side, forming the rectouterine pouch. **p. salpingopalati'na** [NA], salpingopalatine fold: the mucosal fold passing caudally from the auditory tube to the lateral pharyngeal wall. **p. salpingopharyn'gea** [NA], salpingopharyngeal fold: a mucosal fold passing caudally from the posterior lip of the pharyngeal orifice of the auditory tube to the lateral pharyngeal wall. **p. semiluna'ris** [NA], semilunar fold: a curved fold interconnecting the palatoglossal and palatopharyngeal arches and forming the upper boundary of the supratonsillar fossa. **pli'cae semiluna'ris co'li** [NA], semilunar folds of colon: crescentic folds in the wall of the large intestine, projecting into the lumen between the haustra. **p. semiluna'ris conjuncti'vae** [NA], semilunar fold of conjunctiva: a fold of mucous membrane at the medial angle of the eye. **p. sero'sa**, serosal fold; a fold of serous membrane. **p. sigmoi'dea co'li**, see **plicae semilunares coli**. **p. spira'lis** [NA], spiral fold: a spirally arranged elevation in the mucosa of the first part of the cystic duct; called also **valvula spiralis** [Heisteri]. **p. stape'dis** [NA], stapedial fold: a mucosal fold that passes from the posterior wall of the tympanic cavity along the tympanic membrane and surrounds the stapes. **p. sublingua'lis** [NA], sublingual fold: the elevation on the floor of the mouth under the tongue, covering part of the sublingual gland and containing its excretory ducts. **p. synovia'lis** [NA], synovial fold: an extension of the synovial membrane from its free inner surface into the joint cavity. **p. synovia'lis infrapatella'ris** [NA], **p. synovia'lis patella'ris**, infrapatellar synovial fold: a large process of synovial membrane, containing some fat, which projects into the knee joint; attached to the infrapatellar adipose body, it passes posteriorly and superiorly to the intercondylar fossa of the femur. **pli'cae transversales rec'ti** [NA], transverse folds of rectum: permanent transverse folds in the rectum, usually three in number (two on the left and one on the right), involving the tunica mucosa and tela submucosa, and the circular layer of the tunica muscularis. Called also **Houston's valves**. **p. triangu'la'ris** [NA], triangular fold: a fold of mucous membrane extending backward from the palatoglossal arch and covering the anteroinferior part of the palatine tonsil. **pli'cae tuba'riae tu'bae uteri'nae** [NA], tubal folds of uterine tube: the folds of the mucous lining of the uterine tube, which are high and complex in the ampulla. **pli'cae tu'nicae muco'sae ves'icae fel'leae** [NA], the folds in the mucosa of the gallbladder that bound the polygonal spaces, giving the interior a honeycombed appearance. **p. umbilica'lis latera'lis**, 1. [NA] lateral umbilical fold: a laterally placed indistinct line on either side of the inferior part of the anterior abdominal wall, overlying the inferior epigastric vessels; called also **p. epigastrica** or **epigastric fold**. 2. [NA] the fold of peritoneum covering the inferior epigastric vessels; called also **plica epigastrica peritonaei**. 3. **plica umbilicalis medialis**. **p. umbilica'lis me'dia**, **p. umbilicalis mediana**. **p. umbilica'lis media'lis** [NA], medial umbilical fold: the fold of peritoneum that covers the obliterated umbilical artery; called also **p. umbilicalis lateralis**. **p. umbilica'lis media'na** [NA], median umbilical fold: the fold of peritoneum that covers the median umbilical ligament; called also **p. umbilica'lis media**. **p. ura'chi**, umbilicalis mediana. **p. ureter'ica**, **p. interureterica**. **pli'cae vagi'nae**, rugae vaginales. **p. ve'nae ca'vae sinis'trae** [NA], a fold of visceral pericardium enclosing the remnant of the embryonic left anterior cardinal vein; called also **ligamentum venae cavae sinistae**. **p. ven'tricula'ris**, **p. vestibularis**. **p. vesica'lis transver'sa** [NA], transverse vesical fold: a transverse fold of the peritoneum extending from the bladder onto the pelvic wall when the bladder is empty. **p. vestibula'ris** [NA], vestibular fold: a fold of mucous membrane in the larynx, separating the ventricle from the vestibule; called also **false vocal cord**. **pli'cae villo'sae ventric'uli** [NA], villous folds of stomach: a fine network of furrows, marking off areas of the stomach. **p. voca'lis** [NA], a fold of mucous membrane in the larynx, forming the inferior boundary of the ventricle, the vocalis muscle being situated deep to it; called also **true vocal cord** and **vocal fold**.

plicadentin (pli'kah-den'tin) [*plica* + *dentin*] a modification of the dentin in which the fibers diverge in many lines from the central pulp cavity of the tooth, as in the teeth of reptiles and certain fish.

plicae (pli'se) plural of *plica*.

plicate (pli'kāt) [L. *plicatus*] plaited or folded.

plication (pli-ka'shun) the taking of tucks in any structure to shorten it, or in the walls of a hollow viscus; a folding.

plicidentin (pli'si-den'tin) plicadentin.

plicotomy (pli-kot'o-me) [*plica* + Gr. *tomē* a cutting] surgical division of the posterior fold of the tympanic membrane.

pliers (pli'erz) small tong-jawed pincers for bending metals or holding small objects; various forms are much used in dentistry.

Plimmer's bodies, salt (plim'erz) [Henry George Plimmer, English zoologist, 1857-1918] see under *body*, and see *antimony sodium tartrate*.

plint (plint) plinth.

plinth (plinth) a padded table for a patient to sit or lie on while performing therapeutic exercises.

-ploid [Gr. *-ploos* a fold, as in *diploos*, + *eidos* form] a word termination denoting (in adjectives) the condition in regard to degree of multiplication of chromosome sets in the karyotype, or (in nouns) an individual or cell having chromosome sets of the particular degree of multiplication in the karyotype indicated by the root to which it is added, as aneuploid, polyploid, etc.

ploidy (ploi'de) [Gr. *-ploos* a fold, as in *diploos* + *eidos* form] the status of the chromosome set in the karyotype; used also as a word termination denoting the condition in regard to the degree of multiplication of chromosome sets, as aneuploidy, diploidy, haploidy, etc.

plombage (plom-bahzh') [Fr., "sealing, stopping"] the surgical filling of an empty space in the body with inert material, as the filling of part of the chest with methyl methacrylate balls as a substitute for injection of air in artificial pneumothorax.

plotolysin (plo'to-li'sin) the hemotoxic fraction of plototoxin.

plotospasmin (plo'to-spaz'min) the neurotoxic fraction of plototoxin.

plototoxin (plo'to-tok'sin) a toxic substance derived from the catfish, *Plotosus lineatus*, said to be composed of a hemotoxic fraction (plotolysin) and a neurotoxic fraction (plotospasmin).

PLT abbreviation for *psittacosis-lymphogranuloma venereum-trachoma* (group of organisms); see *Chlamydia*.

plug (plug) a lumpy mass, which closes or obstructs an opening.

copulation p., **vaginal p.** **Corner's p.**, a piece of omentum inserted into a duodenal perforation as a temporary measure in cases which cannot be operated on at the time. **Dittrich's p's**, yellowish or gray caseous masses, of varying size, consisting of granular debris, fat globules, fatty acid crystals, and bacteria frequently found in the sputum, or expectorated alone, in cases of putrid bronchitis or bronchiectasis. **Ecker's p.**, a plug of cells in the primitive mouth of the gastrula. **epithelial p.**, a mass of ectodermal cells that temporarily closes the external naris of the fetus. **Imlach's fat p.**, a mass of fatty tissue sometimes found at the mesial angle of the external inguinal ring. **mucous p.**, a plug formed by secretions of the mucous glands of the cervix uteri and closing the cervical canal during pregnancy. **Traube's p's**, Dittrich's p's. **vaginal p.**, a plug consisting of a mass of coagulated sperm and mucus which forms in the vagina of animals after coitus; called also *copulation p.* **yolk p.**, the mass of yolk cells protruding from the blastopore of amphibians at the end of gastrulation.

Plugge's test (plug'ez) [Pieter Cornelis Plugge, Dutch biochemist, 1847-1897] see under *tests*.

plugger (plug'er) a dental instrument used for packing, condensing, and compacting filling material into a tooth cavity.

amalgam p., an instrument for condensing amalgam in a tooth cavity. **automatic p.**, one which operates by means of a spring, by attachment to a dental engine, or by a pneumatic or electronic device. **back-action p.**, one having a bent shank so that the direction of the force applied is toward the operator. **electromagnetic p.**, one activated by an electromagnet. **foil p.**, one for condensing foil in a tooth cavity. **foot p.**, one having a long, angled, foot-shaped nib. **gold p.**, an instrument for condensing gold in a tooth cavity. **reverse p.**, back-action p.

plumbage (ploom-bahzh') plombage.

plumbagin (plum-ba'jin) chemical name: 5-hydroxy 2-methyl 1,4-naphthoquinone, $\text{CH}_3 \cdot \text{C}_{10}\text{H}_4(\text{O})_2 \cdot \text{OH}$. A yellow, needle-like irritant substance, obtained from various species of plants of the genus *Plumbago*, e.g., *P. europa* L., which has been used as an abortifacient.

plumbago (plum-ba'go) see *graphite*.

plumbi (plum'bi) [L.] genitive of *plumbum*, lead. **p. ace'tas**, lead acetate. **p. chlo'ridum**, lead chloride. **p. monox'idum**, lead monoxide. **p. ni'tras**, lead nitrate. **p. ox'idum**, lead monoxide.

plumbic (plum'bik) [L. *plumbicus* leaden] pertaining to or containing lead.

plumbism (plum'bizm) lead poisoning; see under *poisoning*.

plumbotherapy (plum'bo-ther'ah-pe) [L. *plumbum* lead + *therapy*] the therapeutic use of lead, especially its salts.

plumbum (plum'bum), gen. *plum'bi* [L.] lead.

plumericin (ploo'mer-i'sin) a principle, $\text{C}_{15}\text{H}_{14}\text{O}_6$, isolated from the roots of *Plumeria multiflora* Muell.-Arg., Apocynaceae, which shows *in vitro* activity against fungi and bacteria, including *Mycobacterium tuberculosis*.

Plummer's disease, sign (plum'erz) [Henry Stanley Plummer, American physician, 1874-1937] see under *disease* and *sign*.

Plummer-Vinson syndrome (plum'er-vin'son) [Henry Stanley Plummer; Porter Paisley Vinson, American surgeon, born 1890] see under *syndrome*.

plumose (plu'mōs) [L. *plumosus*, Fr. *pluma* feather] feathery; resembling a feather.

plumula (plum'u-lah) a set of delicate cross-furrows occasionally found on the upper wall of the aqueduct of Sylvius.

pluri- [L. *plus* more] combining form meaning several or more.

pluriceptor (ploor'i-sep'tor) [*pluri-* + L. *capere* to take] a receptor which has more than two complementophil groups.

pluridyscrinia (ploor'i-dis-krin'e-ah) [*pluri-* + *dyscrinia*] co-incident disorder of several endocrine organs.

pluriglandular (ploor'i-glan'du-lar) [*pluri-* + L. *glandula*] pertaining to, derived from, or affecting several glands.

plurigravida (ploor'i-grav'i-dah) [*pluri-* + L. *gravida* pregnant] multigravida.

plurilocular (ploor'i-lok'u-lar) multilocular.

plurimenorrhea (ploor'i-men'o-re'ah) increased frequency of menstrual periods.

plurinatality (ploor'i-na-tal'i-te) large birth rate.

plurinuclear (ploor'i-nu'kle-ar) [*pluri-* + *nucleus*] multinucleate.

pluriorificial (ploor'e-or'i-fish'al) [*pluri-* + L. *orificium* orifice] pertaining to or affecting several orifices of the body.

pluripara (plo-rip'ah-rah) [*pluri-* + L. *parere* to bear] multipara.

pluriparity (ploor'i-par'i-te) multiparity.

pluripolar (ploor'i-po'lar) multipolar.

pluripotent (plo-rip'o-tent) pluripotent.

pluripotential (ploor'i-po-ten'shal) pertaining to or characterized by pluripotentiality.

pluripotentiality (ploor'i-po-ten'she-al'i-te) [*pluri-* + L. *potentia* power] possession of the power of developing (as embryonic cells) or acting in any one of several possible ways, or of affecting more than one organ or tissue.

pluriresistant (ploor'i-re-zis'tant) resistant to several drugs.

pluritissular (ploor'i-tis'u-lar) composed of several tissues.

plurivisceral (ploor'i-vis'er-al) [L. *pluri-* + *visceralis*, from *viscus* a body organ] pertaining to or affecting several viscera, or organs.

plutonium (plo-to'ne-um) [named from the planet *Pluto*] a heavy, metallic, radioactive element of atomic number 94, atomic weight 242, obtained by the addition of neutrons to uranium, thereby changing it into neptunium and then into plutonium. Symbol Pu.

Pm chemical symbol for *promethium*.

PMA an expression of the prevalence of gingivitis in large groups of persons, P representing the papillary portion of the gingiva, M the marginal portion, and A the attached portion.

P.M.B. polymorphonuclear basophil leukocytes; see *granular leukocytes*, under *leukocyte*.

P.M.E. polymorphonuclear eosinophil leukocytes; see *granular leukocytes*, under *leukocyte*.

P.M.I. point of maximal impulse; see under *point*.

P.M.N. polymorphonuclear neutrophil leukocytes; see *granular leukocytes*, under *leukocyte*.

PMSG pregnant mare serum gonadotropin.

P.N. percussion note.

-pnea (ne'ah) [Gr. *pnoia* breath] a word termination denoting relationship to breathing, as in orthopnea.

pneo- [Gr. *pnein* to breathe] combining form denoting relationship to the breath or to breathing. For words beginning thus, see also those beginning *spiro-* (2).

pneogaster (ne'o-gas'ter) [*pneo-* + Gr. *gastēr* the belly] the respiratory tract of the embryo.

pneogram (ne'o-gram) spiogram.

pneograph (ne'o-graf) [*pneo-* + Gr. *graphein* to write] spiograph.

pneometer (ne-om'ē-ter) [*pneo-* + Gr. *metron* measure] spirometer.

pneoscope (ne'o-skōp) [*pneo-* + Gr. *skopein* to examine] a device for determining movements of the chest wall in respiration.

pneuma- see *pneumato-*.

pneumal (nu'mal) pertaining to the lungs.

pneumarthrogram (nu-mar'thro-gram) [*pneumo-* + Gr. *arthron* joint + *gamma* that which is written] a roentgenogram of a joint after it has been injected with air.

pneumarthrography (nu'mar-throg'rah-fe) roentgenography of a joint after it has been injected with air or gas as a contrast medium; called also *pneumoarthrography*.

pneumarthrosis (nu'mar-thro'sis) [*pneumo-* + Gr. *arthron* joint + *-osis*] 1. the presence of gas or air in a joint. 2. the inflation of a joint with air or gas for the purpose of aiding roentgenographic examination.

- pneumoscope** (nu'mah-skōp) spiroscope.
- pneumathemia** (nu'mah-the'me-ah) [*pneumo-* + Gr. *haima* blood + *-ia*] the presence of air or gas in the blood vessels; air embolism.
- pneumatic** (nu-mat'ik) [L. *pneumaticus*; Gr. *pneumatikos*] of or pertaining to air or respiration.
- pneumatics** (nu-mat'iks) the science which deals with the physical properties of gases.
- pneumatinuria** (nu'mah-ti-nu're-ah) pneumaturia.
- pneumatism** (nu'mah-tizm) the doctrine of the Pneumatist school or sect of ancient medicine.
- Pneumatist** (nu'mah-tist) 1. a school or sect of ancient medicine, founded by Athenaeus of Attalia, and based on the action and constitution of the *pneuma*, or vital air, which passed from the lungs into the heart and arteries and was then disseminated throughout the body. Among other members of this school were Agathinus of Sparta, Archigenes of Apamea, Aretaeus of Cappadocia, and Antyllus. 2. a believer in or practitioner of the Pneumatist theory of medicine.
- pneumatization** (nu'mah-ti-za'shun) the formation of pneumatic cells or cavities in tissue, especially such formation in the temporal bone.
- pneumatized** (nu'mah-tīzd) filled with air; containing pneumatic cells.
- pneumato-, pneuma-** [Gr. *pneuma*, *pneumatōs* air] combining form denoting relationship to air or gas, or to respiration.
- pneumatocardia** (nu'mah-to-kar'de-ah) [*pneumato-* + Gr. *kardia* heart] the presence of air in the heart.
- pneumatocele** (nu-mat'o-sēl) [*pneumato-* + Gr. *kēlē* hernia] 1. hernial protrusion of lung tissue, as through a congenital fissure of the chest. 2. a usually benign, thin-walled, air-containing cyst of the lung, as in staphylococcal pneumonia. 3. a tumor or sac containing gas, especially a gaseous swelling of the scrotum. **p. cra'nii**, **extracranial p.**, gaseous tumors beneath the scalp after a fracture of the skull that communicates with the paranasal sinuses. **intracranial p.**, pneumocephalus.
- pneumatocephalus** (nu'mah-to-sef'ah-lus) pneumocephalus.
- pneumatodyspnea** (nu'mah-to-disp'ne-ah) [*pneumato-* + *dys-pnea*] difficulty in breathing due to emphysema.
- pneumatogram** (nu-mat'o-gram) spirogram.
- pneumatograph** (nu-mat'o-graf) spiograph.
- pneumatometer** (nu'mah-tom'ē-ter) [*pneumato-* + Gr. *metron* measure] a form of spirometer, or instrument for measuring the air inspired and expired.
- pneumatometry** (nu'mah-tom'ē-tre) the measurement of the air inspired and expired; spirometry.
- pneumatophore** (nu-mat'o-fōr) [*pneumato-* + Gr. *phoros* bearing] an apparatus consisting of a bag with a tube and mouthpiece, which may be attached to the body; the bag contains oxygen, to be breathed by the wearer in rescue work in mines, etc.
- pneumatorrhachis** (nu'mah-tor'ah-kis) [*pneumato-* + Gr. *rachis* spine] the presence of gas in the vertebral canal.
- pneumatoscope** (nu-mat'o-skōp) [*pneumato-* + Gr. *skopein* to examine] an instrument devised by Gabritschewsky for auscultating the percussion of the thorax from the mouth.
- pneumatosis** (nu'mah-to'sis) [Gr. *pneumatōsis*] the presence of air or gas in an abnormal situation in the body. **p. cystoi'des intestina'lis**, **p. cystoi'des intestino'rum**, a condition characterized by the presence of thin-walled, gas-containing cysts in the wall of the intestines; the lesions may be subserosal or submucosal. **intestinal p.**, **p. intestina'lis**, **p. cystoides intestinalis**. **p. pulmo'num**, pulmonary emphysema.
- pneumatotherapy** (nu'mah-to-ther'ah-pe) [*pneumato-* + *therapy*] the treatment of disease by rarefied or condensed air. **cerebral p.**, injection of pure oxygen into the subarachnoid space; once used in treatment of psychoses.
- pneumaturia** (nu'mah-tu're-ah) [*pneumato-* + Gr. *ouron* urine + *-ia*] passage of urine charged with air or gas.
- pneumatype** (nu'mah-tip) [*pneuma-* + Gr. *typos* type] a breath picture; a deposition of moisture upon a glass surface or a shiny metal plate from the exhaled air; used in the diagnosis of nasal obstructions.
- pneumectomy** (nu-mek'to-me) [Gr. *pneumōn* lung + *ektomē* excision] pneumonectomy.
- pneumoencephalography** (nūm'en-sef'ah-log'rah-fe) pneumoencephalography.
- pneumo-, pneumono-** [Gr. *pneumōn* lung] a combining form denoting relationship to the lungs. *Pneumo-* is also used as a combining form to denote relationship to air or to the breath.
- pneumoalveolography** (nu'mo-al've-o-log'rah-fe) roentgenography of the alveoli of the lungs.
- pneumoamnios** (nu'mo-am'ne-os) the presence of gas in the amniotic fluid.
- pneumoangiogram** (nu'mo-an'je-o-gram') a composite of radiographs obtained by pneumoencephalography and cerebral angiography.
- pneumoangiography** (nu'mo-an'je-og'rah-fe) roentgenography of the blood vessels of the lungs.
- pneumoarthrography** (nu'mo-ar-throg'rah-fe) pneumarthrography.
- pneumobacillus** (nu'mo-bah-sil'us) [*pneumo-* + *bacillus*] *Klebsiella pneumoniae*. **Friedländer's p.**, *Klebsiella pneumoniae*.
- pneumobulbar** (nu'mo-bul'bar) pertaining to the lungs and to the respiration center in the medulla oblongata.
- pneumobulbous** (nu'mo-bul'bus) pneumobulbar.
- pneumocardial** (nu'mo-kar'de-al) pertaining to the lungs and the heart.
- pneumocardiograph** (nu'mo-kar'de-o-graf) the instrument used in pneumocardiography.
- pneumocardiography** (nu'mo-kar'de-og'rah-fe) the recording of variations in heart function through sensors that monitor respiratory changes, e.g., changes in thoracic dimensions, in pressure changes in the bronchi, or in temperature differences between inspired and expired air.
- pneumocoele** (nu'mo-sēl) [*pneumo-* + Gr. *kēlē* tumor] pneumatocele.
- pneumocentesis** (nu'mo-sen-te'sis) [*pneumo-* + Gr. *kentēsis* puncture] pneumonocentesis.
- pneumocephalon** (nu'mo-sef'ah-lon) pneumocephalus. **p. artificia'le**, treatment by insufflation of air into the cranial cavity.
- pneumocephalus** (nu'mo-sef'ah-lus) [Gr. *pneuma* air + *kephalē* head] the presence of air in the intracranial cavity; intracranial pneumatocele.
- pneumocholecystitis** (nu'mo-ko'le-sis-ti'tis) emphysematous cholecystitis.
- pneumochysis** (nu-mok'i'sis) pulmonary edema, or serous infiltration of the lung.
- pneumococcal** (nu'mo-kok'al) pertaining to or caused by pneumococci.
- pneumococcemia** (nu'mo-kok-se'me-ah) the presence of pneumococci in the blood.
- pneumococci** (nu'mo-kok'si) plural of *pneumococcus*.
- pneumococcic** (nu'mo-kok'sik) pertaining to or caused by pneumococci.
- pneumococcidal** (nu'mo-kok-si'dal) destroying pneumococci.
- pneumococcolysis** (nu'mo-kok-kol'i'sis) [*pneumococcus* + Gr. *lysis* dissolution] solubilization of pneumococci.
- pneumococcosis** (nu'mo-kok-ko'sis) infection with pneumococci.
- pneumococcusuria** (nu'mo-kok'o-su're-ah) the presence in the urine of pneumococci or of pneumococcus polysaccharide.
- pneumococcus** (nu'mo-kok'us), pl. *pneumococ'ci* [*pneumo-* + Gr. *kokkos* berry] an individual organism of the species *Diplococcus pneumoniae*.
- pneumocolon** (nu'mo-ko'lon) [*pneumo-* + *colon*] the presence of air in the colon, often introduced as an aid to diagnosis.
- pneumoconiosis** (nu'mo-ko'ne-o'sis) [*pneumo-* + Gr. *konis* dust] a condition characterized by permanent deposition of substantial amounts of particulate matter in the lungs, usually of occupational or environmental origin, and by the tissue reaction to its presence. It may range from relatively harmless forms of anthracosis or siderosis to the destructive fibrosis of silicosis. See *aluminosis*, *anthracosis*, *asbestosis*, *siderosis*, *silicosis*, etc. **bauxite p.**, rapidly progressive pneumoconiosis leading to extreme pulmonary emphysema, frequently accompanied by pneumothorax, caused by inhalation of bauxite fumes containing fine particles of alumina and silica. Called also *bauxite workers' disease* and *Shaver's disease*. **p. of coal workers**, a form caused by deposition of large amounts of coal dust in the lungs, and typically characterized by centrilobular emphysema; called also *coalminer's* or *miner's lung*, *black phthisis*, and *miner's phthisis*. Cf. *anthracosis*. **collagenous p.**, that in which permanent scarring results, due to fibrogenic dust, such as asbestos or silica, or to altered tissue response to nonfibrogenic dust. **noncollagenous p.**, that in which the stromal reaction is minimal, consisting chiefly of reticuline fibers. **rheumatoid p.**, Caplan's syndrome. **p. siderot'ica**, siderosis, def. 1. **talc p.**, pneumoconiosis produced by the inhalation of talc; symptoms include shortness of breath, cough, fatigue, weakness, and weight loss. Prolonged exposure to large quantities of talc may result in pulmonary fibrosis.
- pneumocrania** (nu'mo-kra'ne-ah) pneumocephalus.
- pneumocranium** (nu'mo-kra'ne-um) pneumocephalus.
- pneumocystic** (nu'mo-sis'tik) relating to or caused by *Pneumocystis*.
- Pneumocystis** (nu'mo-sis'tis) a genus of organisms of uncertain status, but considered to be protozoa, probably sporozoa. **P. cari'nii**, the causative agent of a highly contagious, epidemic, interstitial plasma cell pneumonia, particularly of infants; see under *pneumonia*.

pneumocystography (nu'mo-sis-tog'rah-fe) cystography following the injection of air into the bladder.

pneumocystosis (nu'mo-sis-to'sis) interstitial plasma cell pneumonia.

pneumocystotomography (nu'mo-sis'to-to-mog'rah-fe) body section roentgenography after inflation of the bladder with air.

pneumocyte (nu-mo-sit') pneumonocyte.

pneumoderma (nu'mo-der'mah) [*pneumo* + Gr. *derma* skin] subcutaneous emphysema.

pneumodograph (nu-mod'o-graf) [*pneumo* + Gr. *hodos* way + *graphein* to write] an apparatus for registering the degree of respiratory nasal efficiency.

pneumodynamics (nu'mo-di-nam'iks) [*pneumo* + Gr. *dynamis* force] the dynamics of the respiratory process; the study of the forces exerted in the act of breathing.

pneumoempyema (nu'mo-em'pi-e'mah) empyema marked by the presence of gas; pyopneumothorax.

pneumoencephalitis (nu'mo-en-sef'ah-li'tis) Newcastle disease.

pneumoencephalogram (nu'mo-en-sef'ah-lo-gram) the roentgenogram obtained by pneumoencephalography.

pneumoencephalography (nu'mo-en-sef'ah-log'rah-fe) radiographic visualization of the fluid-containing structures of the brain after cerebrospinal fluid is intermittently withdrawn by lumbar puncture and replaced by air, oxygen, or helium.

pneumoencephalomyelogram (nu'mo-en-sef'ah-lo-mi-el'o-gram) the roentgenogram obtained by pneumoencephalomyelography.

pneumoencephalomyelography (nu'mo-en-sef'ah-lo-mi-el'o-log'rah-fe) radiographic visualization of the brain and spinal cord after cerebrospinal fluid is removed by lumbar puncture and replaced by gas.

pneumoencephalos (nu'mo-en-sef'ah-los) [*pneumo* + Gr. *enkephalos* brain] the presence of air or gas in the intracranial cavity.

pneumoenteritis (nu'mo-en'ter-i'tis) [*pneumo* + Gr. *enteron* intestine + *-itis*] inflammation of the lung and intestine. **p. of calves**, white scours in calves.

pneumoerysipelas (nu'mo-er'i-sip'e-las) (obs.) erysipelas complicated with pneumonia.

pneumofasciogram (nu'mo-fas'e-o-gram) a roentgenogram of tissue after injection of air into the fascial spaces.

pneumogalactocoele (nu'mo-gah-lak'to-sel) [*pneumo* + Gr. *gala* milk + *kēlē* tumor] a tumor containing gas and milk.

pneumogastric (nu'mo-gas'trik) [*pneumo* + Gr. *gaster* stomach] pertaining to the lungs and stomach.

pneumogastrography (nu'mo-gas-trog'rah-fe) [*pneumo* + *gastrography*] roentgenography of the stomach after the injection of air.

pneumogastroscopy (nu'mo-gas-tros'ko-pe) endoscopic examination of the stomach after injection of air.

pneumogram (nu'mo-gram) 1. the tracing or graphic record of respiratory movements. 2. a roentgenogram made after the injection of air into the part.

pneumograph (nu'mo-graf) [*pneumo* + Gr. *graphein* to write] an instrument for registering the respiratory movements.

pneumography (nu-mog'rah-fe) [*pneumo* + Gr. *graphein* to write] 1. an anatomical description of the lungs. 2. graphic recording of the respiratory movements. 3. roentgenography of a part after injection of a gas. **cerebral p.**, roentgenography of the brain by pneumoencephalography or ventriculography. **retroperitoneal p.**, roentgenography of the abdominal organs after retroperitoneal injection of air or oxygen.

pneumogynogram (nu'mo-gi'no-gram) a roentgenogram of the female reproductive organs after injection of air into the uterus.

pneumohemia (nu'mo-he'me-ah) [*pneumo* + Gr. *haima* blood + *-ia*] the presence of air or gas in the blood vessels; air embolism.

pneumohemopericardium (nu'mo-he'mo-per'i-kar'de-um) [*pneumo* + Gr. *haima* blood + *pericardium*] the presence of air or gas and blood in the pericardial cavity.

pneumohemothorax (nu'mo-he'mo-tho'raks) [*pneumo* + Gr. *haima* blood + *thōrax* chest] the presence of air or gas and blood in the pleural cavity.

pneumohydrometra (nu'mo-hi'dro-me'trah) [*pneumo* + Gr. *hydōr* water + *mētra* uterus] a collection of gas and fluid in the uterine cavity.

pneumohydropericardium (nu'mo-hi'dro-per'i-kar'de-um) [*pneumo* + Gr. *hydōr* water + *pericardium*] the presence of air or gas and fluid in the pericardial cavity.

pneumohydrothorax (nu'mo-hi'dro-tho'raks) [*pneumo* + Gr. *hydōr* water + *thōrax* chest] a collection of air or gas and fluid in the pleural cavity.

pneumokidney (nu'mo-kid'ne) [*pneumo* + *kidney*] the presence of gas in the kidney pelvis.

pneumokoniosis (nu'mo-ko'ne-o'sis) pneumoconiosis.

pneumolith (nu'mo-lith) [*pneumo* + Gr. *lithos* stone] a pulmonary calculus or concretion.

pneumolithiasis (nu'mo-li-thi'ah-sis) the presence of concretions in the lungs.

pneumology (nu-mol'o-je) [*pneumo* + *-logy*] the study of disease of the air passages.

pneumolysis (nu-mol'i-sis) pneumonolysis.

pneumomalacia (nu'mo-mah-la'she-ah) [*pneumo* + Gr. *malakia* softness] morbid softening of lung tissue.

pneumomassage (nu'mo-mah-sahzh') [*pneumo* + *massage*] air massage of the tympanum by the alternate compression and rarefaction of the air in the external auditory canal.

pneumomediastinogram (nu'mo-me'de-as-ti'no-gram) the film produced by pneumomediastinography.

pneumomediastinography (nu'mo-me'de-as'ti-nog'rah-fe) roentgenography of the mediastinum after injection of nitrous oxide or oxygen through a needle introduced back of the trachea or behind the manubrium.

pneumomediastinum (nu'mo-me'de-as-ti'num) [*pneumo* + *mediastinum*] the presence of air or gas in the mediastinum, which may interfere with respiration and circulation and may lead to pneumopericardium, pneumothorax, or pneumoperitoneum. It is due to leakage of air from the tracheobronchial tree, usually as a result of trauma; sometimes the air is deliberately introduced as an aid to examination and diagnosis. Called also *mediastinal emphysema*.

pneumomelanosis (nu'mo-mel'ah-no'sis) [*pneumo* + *melanosis*] the blackening of the lung tissue by inhaled coal dust; see *anthracosis*.

pneumometer (nu-mom'ē-ter) pneumatometer.

pneumomycosis (nu'mo-mi-ko'sis) [*pneumo* + *mycosis*] any fungal disease of the lungs.

pneumomyelography (nu'mo-mi'ē-log'rah-fe) [*pneumo* + Gr. *myelos* marrow + *graphein* to write] roentgen-ray examination after withdrawal of cerebrospinal fluid and injection of air or gas into the spinal canal.

pneumonecstasia (nu'mon-ek-ta'ze-ah) pneumonectasis.

pneumonecstasis (nu'mo-nek'tah-sis) [*pneumo* + Gr. *ektasis* extension] emphysema of the lungs; overdistention of lung tissue.

pneumonectomy (nu'mo-nek'to-me) [*pneumo* + Gr. *ektomē* excision] the excision of lung tissue, especially of an entire lung. **total p.**, surgical excision of an entire lung.

pneumonedema (nu'mo-ne-de'mah) [*pneumo* + *edema*] edema of the lungs.

pneumonemia (nu'mo-ne'me-ah) [*pneumo* + Gr. *haima* blood + *-ia*] congestion of the lungs.

pneumonere (nu'mo-nēr) one of the end-buds which cap the primitive bronchi.

pneumonia (nu-mo'ne-ah) [Gr. *pneumōnia*] inflammation of the lungs with consolidation. **abortive p.**, a form with a short and favorable course. **acute p.**, severe pneumonia of rapid onset. **p. al'ba**, a fatal desquamative pneumonia of the newborn resulting from congenital syphilis and characterized by white fatty degeneration of the lungs, which appear pale, and virtually airless. Called also *white p.* and *white lung*. **alcoholic p.**, pneumonia associated with alcoholism. **amebic p.**, pneumonia resulting from so-called amebic abscesses in the lung caused by *Entamoeba histolytica*. **anthrax p.**, pulmonary anthrax. **apex p.**, apical p., lobar pneumonia limited to the apex of the lung. **p. apostematosa**, suppurative p. **aspiration p.**, pneumonia due to the entrance of foreign matter, such as food particles, into the respiratory passages (bronchi). **atypical p.**, primary atypical p. **bacterial p.**, pneumonia caused by bacteria, chief among which are *Streptococcus pneumoniae*, *S. hemolytica*, *Staphylococcus aureus*, and *Klebsiella pneumoniae*. **bilious p.**, lobar pneumonia attended with jaundice. **bronchial p.**, bronchopneumonia. **brooder p.**, a pneumonic disease (aspergillosis) of chicks acquired from moldy grain or straw. **Buhl's desquamative p.**, cheesy p. **caseous p.**, cheesy p. **cat p.**, a lung disease of cats probably due to the agent (*Chlamydia*) of psittacosis. **catarrhal p.**, bronchopneumonia. **central p.**, lobar pneumonia beginning in the hilum of a lobe of the lung. **cerebral p.**, pneumonia associated with neurologic symptoms and disturbances of consciousness. **cheesy p.**, pneumonia, usually tuberculous, in which necrotic lung tissue is of semisolid consistency and the cut surface looks like cheese. **chronic p.**, a long-continuing form. **cold agglutinin p.**, primary atypical p. **congenital aspiration p.**, see *respiratory distress syndrome*, under *syndrome*. **contagious p. of horses**, a condition that may follow equine influenza, characterized by high fever, pneumonia, and necrosis of the lungs. **contusion p.**, pneumonia following an injury. **core p.**, central p. **Corrigan's p.**, Kaufman's p. **croupous p.**, lobar p. **deglutition p.**, aspiration pneumonia due to the entrance of food into the lungs, usually associated with dysphagia. **der-**

mal p., a condition produced by injection of virulent pneumococci into the skin of rabbits. **desquamative p.**, chronic pneumonia with hardening of the fibrous exudate and proliferation of the interstitial tissue and epithelium of the lung; called also *parenchymatous p.* **desquamative interstitial p.**, chronic pneumonia of unknown etiology, with desquamation of large alveolar cells and thickening of the walls of distal air passages; it is characterized by dyspnea and often by a nonproductive and harsh cough. **p. dis/secans**, pneumonia interlobularis purulenta. **double p.**, that which affects both lungs. **Eaton agent p.**, mycoplasmal p. **embolic p.**, pneumonia due to embolism of a blood vessel or vessels of the lungs. **ephemeral p.**, that in which the signs of pneumonia disappear after a short period. **ether p.**, pneumonia occurring after anesthesia by ether. **fibrinous p.**, pneumonia characterized by abundant exudation of fibrin into the air passages. **fibrous p.**, a form characterized by an increase in scar tissue during the healing process. **fibrous p., chronic**, interstitial pulmonary fibrosis. **Friedländer's p.**, **Friedländer's bacillus p.**, an acute specific infectious disease characterized by massive mucoid inflammatory exudates in the lung, and caused by *Klebsiella pneumoniae*. **gangrenous p.**, gangrene of the lung. **giant cell p.**, a rare, usually fatal form of interstitial pneumonia caused by the measles virus, affecting children with disease of the reticuloendothelial system (such as leukemia), and marked by the presence of multinucleate giant-cell inclusion bodies; called also *Hecht's p.* **Hecht's p.**, giant cell p. **hypostatic p.**, pneumonia due to dorsal decubitus in weak or aged persons. **indurative p.**, pneumonia associated with dense fibrous scar tissue. **infective p. of goats**, a fatal disease of goats in South Africa. **influenzal p.**, **influenza virus p.**, a severe, usually fatal disease caused by influenza virus and characterized by abrupt onset, high fever, prostration, sore throat, aching pains, and profound dyspnea and anxiety, and by massive pulmonary hemorrhagic edema and consolidation. It may be complicated by bacterial pneumonia, in which case the symptoms of that disease (shaking chills, pleuritic pain, etc.) are superimposed on the primary influenza virus pneumonia. **inhalation p.**, 1. aspiration pneumonia. 2. bronchopneumonia due to the inhalation of irritating vapors. **p. interlobularis purulen/ta**, pneumonia in which the lobules are separated from one another. **interstitial p.**, a chronic form of pneumonia with increase of the interstitial tissue and decrease of the proper lung tissue, with induration; called also *chronic fibrous p.* **interstitial plasma cell p.**, a pulmonary disease of infants and debilitated persons, including those receiving cytotoxic drugs, immunosuppressive drugs, cortisone, etc., in which cellular detritus containing plasma cells appears in the lung tissue; it is caused by *Pneumocystis carinii*. Called also *pneumocystis pneumonia*. **intrauterine p.**, pneumonia contracted by the fetus *in utero*; it may result in the death of the fetus or the birth of an infant with fully developed pneumonia. **Kaufman's p.**, acute interstitial pneumonia, a rare fatal form of pneumonia in young infants. **lipid p.**, **lipoid p.**, a pneumonia-like reaction of the lung tissue to the aspiration of oils; called also *oil-aspiration p.* and *pneumolipoidosis*. **lobar p.**, an acute febrile disease produced by the *Streptococcus pneumoniae*, and marked by inflammation of one or more lobes of the lung, together with consolidation. It is attended with chill, followed by sudden elevation of temperature, dyspnea, rapid breathing, pain in the side, and cough, with blood-stained expectoration. The symptoms abate after a week. It usually begins in the lower lobe, the lung being at first intensely congested (*stage of congestion or engorgement*), and afterward becoming red and solid from accumulation of exudate and blood cells in the alveoli (*red hepatization*), and later gray (*gray hepatization*), from degeneration of the exudates, which are finally absorbed. Called also *croupous p.*, *fibrinous p.*, and *lung fever*. **lobular p.**, bronchopneumonia. **Löffler's p.**, Löffler's syndrome. **Louisiana p.**, a form of pneumonia encountered in Louisiana, caused by a strain of *Chlamydia psittaci*. **p. malleo/sa**, pneumonia caused by or associated with glanders. **massive p.**, lobar pneumonia with extensive solidification of the air cells, or even an entire lung. **metastatic p.**, suppurative pneumonia due to bloodborne infection in bacteremia. **migratory p.**, pneumonia gradually involving one lobe of the lung after another. **mycoplasmal p.**, the most common form of primary atypical pneumonia (q.v.), caused by *Mycoplasma pneumoniae* and occurring most frequently in young adults; called also *Eaton agent p.* **obstructive p.**, that due to obstruction of the air passages, as by bronchogenic carcinoma. **oil-aspiration p.**, lipid p. **parenchymatous p.**, desquamative p. **plague p.**, pneumonic plague. **plasma cell p.**, interstitial plasma cell p. **pleuritic p.**, pleuropneumonia. **pleurogenetic p.**, **pleurogenic p.**, that which is secondary to pleural disease. **pneumococcal p.**, lobar p. **pneumocystis p.**, **Pneumocystis carinii p.**, interstitial plasma cell p. **primary atypical p.**, a general term applied to an acute infectious pulmonary disease caused by *Mycoplasma pneumoniae*, species of *Rickettsia* and *Chlamydia*, and various viruses, including adenoviruses and parainfluenza virus; it is marked by extensive but tenuous pulmonary infiltration and by fever, malaise, myalgia, sore throat, and a cough which at first is nonproductive but becomes productive and paroxysmal. Called also *atypical p.*, *atypical bronchopneu-*

monia, *acute interstitial pneumonitis*, *cold agglutinin p.*, and *viral p.* **purulent p.**, a form characterized by the expectoration of copious pus. **rheumatic p.**, a rare, usually fatal complication of acute rheumatic fever characterized by extensive pulmonary consolidation and rapidly progressive functional deterioration and by alveolar exudate (with the presence of Masson bodies), interstitial infiltrates, and necrotizing arteritis. **Riesman's p.**, a peculiar form of chronic bronchopneumonia. **secondary p.**, inflammation of the lungs coming on as a complication of some systemic disorder. **septic p.**, pneumonia invasive virulent infectious agents. **staphylococcal p.**, pneumonia caused by infection with *Staphylococcus*, many strains of which are antibiotic-resistant; it has a strong tendency to extend beyond the original site of infection. **streptococcal p.**, pneumonia caused by infection with *S. pyogenes*, usually occurring as a complication of influenza. **superficial p.**, a form which affects only the parts near the pleura. **suppurative p.**, pneumonia with formation of abscesses in the lungs. **terminal p.**, pneumonia developing during some other disease and hastening a fatal termination. **toxemic p.**, infection of the system with pneumococci without marked lung involvement. **transplantation p.**, an unusual pneumonitis affecting the recipients of transplanted kidneys, possibly as a result of altered immunologic response in the lung. **traumatic p.**, inflammation of the lung following physical injury to the thorax. **tuberculous p.**, the simplest form of pulmonary tuberculosis, often the earliest reaction to infection. **tularemia p.**, pneumonia caused by *Pasteurella tularensis*; see *tularemia*. **typhoid p.**, a form of pneumonia with typhoid symptoms. **unresolved p.**, pneumonia in which the lung signs fail to clear up within the usual period. **vagus p.**, pneumonia associated with injury of the pneumogastric nerve. **varicella p.**, pneumonia developing two to six days after the appearance of varicella (chickenpox) eruption and apparently due to the same virus. Symptoms may be severe, with violent cough, hemoptysis, and severe chest pains. Radiologically, there are numerous nodular densities, which may coalesce, at the base of each lung and, often, enlarged lymph nodes in the hilar region. Small nodular calcifications may persist. **viral p.**, pneumonia caused by a virus, as by adenoviruses, influenza virus, parainfluenza virus, and varicella virus; see also *influenza virus p.* and *primary atypical p.* **wandering p.**, migratory p. **white p.**, p. alba. **wool sorter's p.**, pulmonary anthrax.

pneumonic (nu-mon'ik) [Gr. *pneumonikos*] pertaining to the lung or to pneumonia; see also under *plague*.

pneumonitis (nu"mo-ni'tis) [Gr. *pneumon* lung + *-itis*] inflammation of the lungs. **acute interstitial p.**, primary atypical pneumonia. **aspiration p.**, aspiration pneumonia. **chemical p.**, pneumonitis caused by the inhalation of chemical irritants; the extent of the injury reflects the concentration of the irritants and the duration of exposure. **cholesterol p.**, pneumonitis characterized by chronic inflammatory changes and deposition of excessive amounts of cholesterol in the tissues. It is often lobar or segmental in distribution and may resemble primary or metastatic tumor. **feline p.**, a fatal pneumonitis with conjunctivitis in cats, caused by a strain of *Chlamydia psittaci*. **granulomatous p.**, inflammation of the lung which may result from inhalation of organic dusts by persons who have become sensitized to antigens in the dusts. The term is sometimes used to designate farmer's lung. **hypersensitivity p.**, allergic alveolitis. **malarial p.**, pneumonitis caused by *Plasmodium falciparum*, characterized by cough with bloody sputum and coarse rales; in severe cases thromboses may result from the agglutination of parasitized erythrocytes in small blood vessels of the lung. **mouse p.**, a bronchopneumonia of laboratory mice caused by a strain of *Chlamydia trachomatis*. **pneumocystis p.**, interstitial plasma cell pneumonia. **uremic p.**, pneumonitis associated with uremia; a butterfly or bat-wing configuration of opacities as seen on the chest roentgenogram is indicative of pulmonary edema.

pneumono- see *pneumo-*.

pneumonocele (nu-mon'o-sēl) pneumatocele.

pneumonocentesis (nu-mo'no-sen-te'sis) [*pneumo-* + Gr. *kēntesis* puncture] surgical puncturing of a lung for aspiration.

pneumono-cirrrosis (nu-mo'no-si-ro'sis) [Gr. *pneumon* lung + *cirrrosis*] cirrhosis, or hardening, of a lung; pulmonary fibrosis.

pneumococcus (nu'mo-no-kok'us) pneumococcus.

pneumonoconiosis (nu-mo'no-ko-ne-o'sis) pneumoconiosis.

pneumono-cyte (nu-mon'o-sīt) a collective term for the alveolar epithelial cells types I and II (alveolar cells) and alveolar phagocytes of the lungs. **granular p.**, type II alveolar cell. **membranous p.**, type I alveolar cell.

pneumonoenteritis (nu-mo'no-en'ter-i'tis) pneumoenteritis.

pneumonoerysipelas (nu-mo'no-er'i-sip'ē-las) pneumoerysipelas.

pneumonograph (nu-mon'o-graf) a roentgenogram of the lungs.

pneumonography (nu'mo-nog'rah-fe) [*pneumo-* + Gr. *graphein* to write] roentgenography of the lungs.

pneumonokoniosis (nu-mo'no-ko-ne-o'sis) pneumoconiosis.

pneumonolipoidosis (nu-mo'no-lip'oi-do'sis) [*pneumono-* + Gr. *lipos* fat + *-osis*] see *lipoid pneumonia*, under *pneumonia*.

pneumonolysis (nu'mo-nol'i-sis) [*pneumono-* + Gr. *lysis* dissolution] division of the tissues attaching the lung to the wall of the chest cavity, to permit collapse of the lung. **extraperiosteal p.**, that in which the division is between the inner surface of the ribs and the periosteum, which, with the intercostal muscle bundles, remains attached to the parietal pleura. **extrapleural p.**, that in which the separation is between the parietal pleura and the chest wall. **intrapleural p.**, that in which the separation is between the pulmonary and the parietal pleura.

pneumonomelanosis (nu-mo'no-mel'ah-no'sis) [*pneumono-* + Gr. *melas* black + *-osis*] melanosis of the lung tissue.

pneumonometer (nu'mo-nom'ē-ter) [*pneumono-* + Gr. *metron* measure] a form of spirometer.

pneumonomoniliasis (nu-mo'no-mo'nī-li'ah-sis) moniliasis (candidiasis) of the lungs.

pneumonomycosis (nu-mo'no-mi-ko'sis) pneumomycosis.

pneumonopaludism (nu-mo'no-pal'u-dizm) pneumopaludism.

pneumonopathy (nu'mo-nop'ah-the) [*pneumono-* + Gr. *pathos* disease] any disease of the lung. **eosinophilic p.**, Löffler's syndrome, or other conditions associated with eosinophilic infiltration of the lung parenchyma.

pneumonopexy (nu-mo'no-pek'se) [*pneumono-* + Gr. *pēxis* fixation] surgical fixation of the lung to the thoracic wall.

pneumonophthisis (nu'mon-of-thi'sis) pulmonary tuberculosis.

pneumonopleuritis (nu-mo'no-ploo-ri'tis) pneumopleuritis.

pneumoresection (nu-mo'no-re-sek'shun) surgical resection of a portion of the lung.

pneumorrhagia (nu-mo'no-ra'je-ah) pneumorrhagia.

pneumorrhaphy (nu'mo-nor'ah-fe) [*pneumono-* + Gr. *rhaphe* suture] suture of the lung.

pneumonosis (nu'mo-no'sis) [*pneumo-* + Gr. *nosos* disease] any lung disease.

pneumotherapy (nu-mo'no-ther'ah-pe) treatment of disease of the lung.

pneumonotomy (nu'mo-not'o-me) [*pneumono-* + Gr. *tomē* a cutting] surgical incision of the lung.

Pneumonyssoides (nu'mo-nis-oi'dēz) a genus of mites. *P. caninum* is found in the sinuses and nasal passages of dogs.

Pneumonyssus (nu'mo-nis'us) a genus of mites. *P. simicola* is found in the lungs of monkeys.

pneumopaludism (nu'mo-pal'u-dizm) [*pneumo-* + L. *palus* swamp] disease of the lungs of malarial origin.

pneumopathy (nu-mop'ah-the) pneumonopathy.

pneumopericardium (nu'mo-per'i-kar'de-um) [*pneumo-* + *pericardium*] the presence of air or gas in the cavity of the pericardium.

pneumoperitoneal (nu'mo-per'i-to-ne'al) pertaining to or characterized by pneumoperitoneum.

pneumoperitoneum (nu'mo-per'i-to-ne'um) [*pneumo-* + *peritoneum*] the presence of gas or air in the peritoneal cavity; it may occur spontaneously, as in subphrenic abscess, or be deliberately introduced as an aid to radiologic examination and diagnosis (*diagnostic p.*).

pneumoperitonitis (nu'mo-per'i-to-ni'tis) [*pneumo-* + *peritonitis*] peritonitis with the accumulation of air or gas in the peritoneal cavity.

pneumopexy (nu'mo-pek'se) pneumonopexy.

pneumophagia (nu'mo-fa'je-ah) [*pneumo-* + Gr. *phagein* to eat + *-ia*] aerophagia.

pneumophonia (nu'mo-fō-ne-ah) a form of dysphonia characterized by a breathy voice.

pneumopleuritis (nu'mo-ploo-ri'tis) inflammation of the lungs and pleura.

pneumopleuroparietopexy (nu'mo-ploor'o-pah-ri'ē-to-pek'se) [*pneumo-* + *pleura* + *parieto-* + Gr. *pēxis* fixation] the operation of suturing the lung with its parietal pleura to the margin of a thoracic wound.

pneumoprecordium (nu'mo-pre-kor'de-um) the presence of air in the precordial space.

pneumopreperitoneum (nu'mo-pre-per'i-to-ne'um) the presence of air or gas in the preperitoneal space; it may occur spontaneously or be deliberately introduced as an aid to radiologic examination and diagnosis.

pneumopyelography (nu'mo-pi'ē-log'rah-fe) [*pneumo-* + Gr. *pyelos* pelvis + *graphein* to write] pyelography in which oxygen or air, instead of an opaque solution, is injected into the renal pelvis.

pneumopyopericardium (nu'mo-pi'o-per'i-kar'de-um) [*pneumo-* + Gr. *pyon* pus + *pericardium*] the presence of air or gas and pus in the pericardium.

pneumopyothorax (nu'mo-pi'o-tho'raks) [*pneumo-* + Gr. *pyon* pus + *thōrax* thorax] the presence of air and pus in the pleural cavity, usually due to empyema and bronchopleural fistula.

pneumorachicentesis (nu'mo-ra'ke-sen-te'sis) [*pneumo-* + Gr. *rhachis* spine + *kentēsis* puncture] the introduction of air or gas into the spinal canal as a contrast medium for roentgen examination.

pneumorachis (nu'mo-ra'kis) [*pneumo-* + Gr. *rhachis* spine] 1. the presence of a gaseous collection in the spinal cord. 2. the injection of gas into the spinal canal for the facilitation of roentgenological examination.

pneumoradiography (nu'mo-ra'de-og'rah-fe) [*pneumo-* + *radiography*] radiography of a part following the injection of air or oxygen, as in pneumoperitoneum.

pneumoresection (nu'mo-re-sek'shun) pneumoresection.

pneumoretroperitoneum (nu'mo-re'tro-per'i-to-ne'um) the presence of air or gas in the retroperitoneal space.

pneumoroentgenogram (nu'mo-rent-gen'o-gram) a roentgenogram of a part after the injection of air or gas into it.

pneumoroentgenography (nu'mo-rent'gen-og'rah-fe) roentgenography of a part into which air or gas has been injected.

pneumorrhagia (nu'mo-ra'je-ah) [*pneumo-* + Gr. *rhēgnynai* to burst forth] hemorrhage from the lungs; severe hemoptysis.

pneumosepticemia (nu'mo-sep'ti-se'me-ah) pneumonia of an extreme and fatal form associated with septicemia.

pneumoserosa (nu'mo-se-ro'sah) injection of air into a joint cavity for roentgenoscopy.

pneumoserothorax (nu'mo-se'ro-tho'raks) [*pneumo-* + *serum* + Gr. *thōrax* thorax] the presence of gas and serum in the thoracic cavity.

pneumosilicosis (nu'mo-sil'i-ko'sis) the deposition of silica-bearing particles of foreign matter in the lungs; silicosis.

pneumotachograph (nu'mo-tak'o-graf) pneumotachograph.

pneumotachometer (nu'mo-tak-om'ē-ter) a transducer used in measuring expired air flow.

pneumotachygraph (nu'mo-tak'e-graf) [*pneumo-* + Gr. *tachys* swift + *graphein* to write] an instrument for recording the velocity of the respired air.

pneumotaxic (nu'mo-tak'sik) [*pneumo-* + Gr. *taxis* arrangement] relating to the regulation of the rate of respiration; see under *center*.

pneumotherapy (nu'mo-ther'ah-pe) 1. pneumatotherapy. 2. the treatment of diseases of the lungs.

pneumothermomassage (nu'mo-ther'mo-mah-sahzh') [*pneumo-* + Gr. *thermē* heat + *massage*] the application to the body of hot condensed air that has been medicated.

pneumothorax (nu'mo-tho'raks) [*pneumo-* + Gr. *thōrax* thorax] an accumulation of air or gas in the pleural space, which may occur spontaneously or as a result of trauma or a pathological process, or be introduced deliberately. See *artificial p.* and *diagnostic p.* **artificial p.**, pneumothorax induced intentionally by artificial means, employed for the purpose of allowing the lung to collapse in the treatment of pulmonary tuberculosis. Called also *induced p.* and *therapeutic p.* Cf. *collapse therapy*, under *therapy*. **clicking p.**, pneumothorax in which the patient is conscious of a clicking sound synchronous with the heart beat. Cf. *precordial knock*, under *knock*. **closed p.**, pneumothorax in which pulmonary air leaks into the pleural cavity through a wound in a lung. **diagnostic p.**, temporary artificial pneumothorax employed for the purpose of clearly demonstrating the parietal or visceral pleura on chest films in order to detect and localize tumors of the pleura. **extrapleural p.**, production of collapse of the lung by formation of an air pocket by stripping the pleural layers from the inner surface of the ribs and intercostal muscle sheaths. **induced p.**, artificial p. **open p.**, pneumothorax in which the pleural cavity is exposed to the atmosphere through an open wound in the chest wall. **pressure p.**, tension p. **spontaneous p.**, pneumothorax without known cause. **tension p.**, closed pneumothorax in which the tissues surrounding the opening into the pleural cavity act as valves, allowing air to enter but not to escape. The resultant positive pressure in the cavity displaces the mediastinum to the opposite side, with consequent embarrassment of respiration. Called also *pressure p.* **therapeutic p.**, artificial p. **valvular p.**, pneumothorax in which an aperture in the pleura has a valvelike action.

pneumotomography (nu'mo-to-mog'rah-fe) body section radiography after injection of air or other gas into the region or organ being visualized roentgenographically.

pneumotomy (nu-mot'o-me) pneumonotomy.

pneumotropic (nu'mo-trop'ik) 1. having a selective affinity for pulmonary tissue; exerting its principal effect upon the lungs. 2. having a selective affinity for pneumococci.

pneumotropism (nu-mot'ro-pizm) the predilection of an agent or organism for lung tissue.

pneumotympanum (nu'mo-tim'pah-num) air in the middle ear.

pneumotyphoid (nu'mo-ti'foid) typhoid with localization of the lesions in the lungs.

pneumotyphus (nu'mo-ti'fus) pneumonia concurrent with typhoid fever.

pneumouria (nu'mo-u're-ah) pneumaturia.

Pneumovax (nu'mo-vaks') trademark for a pneumococcal vaccine containing the capsular polysaccharides (antigens) of 14 types of pneumococci.

pneumoventricle (nu'mo-ven'tri-k'l) pneumoventriculi.

pneumoventriculi (nu'mo-ven-trik'u-li) [*pneumo* + *L. ventriculus* ventricle] presence of air in the cerebral ventricles.

pneumoventriculography (nu'mo-ven-trik'u-log'rah-fe) roentgenography of the cerebral ventricles after the injection of air or gas; see *ventriculography*.

pneusis (nu'sis) [Gr. *pneusis* a blowing] respiration.

P.O. abbreviation for *L. per os*, by mouth, orally.

Po chemical symbol for polonium.

PO₂ symbol for oxygen partial pressure (tension); also written P_{O_2} , pO_2 , and pO_2 .

Pocill. abbreviation for *L. pocillum*, a small cup.

pock (pok) a pustule, especially one of the lesions of smallpox.

pocket (pok'et) a saclike space or cavity, such as an abnormal extension of a gingival sulcus (*periodontal pocket*). **absolute p.**, a dental condition in which the deepening of the gingival sulcus entails migration of the epithelial attachment along the root and destruction of the periodontal ligament. It may be either gingival or infrabony. **complex p.**, a spiral type of periodontal pocket involving more than one surface of the tooth, but communicating with the gingival margin only along the surface at which it originates. **compound p.**, a periodontal pocket involving more than one tooth surface, and communicating with the gum margin along each of the involved surfaces. **endocardial p's**, sclerotic thickenings of the mural endocardium, occurring most often on the left ventricular septum below an insufficient aortic valve; called also *regurgitant p's* and *birds' nests*.

gingival p., a periodontal pocket in which the bottom is coronal to the level of the underlying alveolar bone. **infrabony p.**, a periodontal pocket in which the bottom is attached to the tooth in an area apical to the level of the adjacent alveolar bone. **intra-alveolar p.**, infrabony p. **infrabony p.**, infrabony p. **periodontal p.**, a gingival sulcus pathologically deepened by periodontal disease. **Rathke's p.**, see under *pouch*. **regurgitant p's**, endocardial p's. **relative p.**, a dental condition in which the deepening of the gingival sulcus results primarily from an increase in bulk of the gingiva, without apical migration of the epithelial attachment or appreciable destruction of the underlying tissues. **Seessel's p.**, see under *pouch*. **simple p.**, a periodontal pocket involving only one tooth surface. **subcrestal p.**, infrabony p. **supracrestal p.**, **supragingival p.**, gingival p. **p's of Zahn**, shallow pockets with miniature leaflets, resembling cusps of the semilunar valve, produced in the endocardium of the left ventricle by the regurgitant aortic stream in the presence of insufficiency of the aortic valve.

pockmark (pok'mark) a depressed scar left by a pustule, especially one left by a lesion of smallpox.

Pocul. abbreviation for *L. poculum*, cup.

poculum (pok'u-lum) [*L.* cup. **p. Diog'enis** ["Diogenes' cup"], the concave palm of the hand.

pod- see *podo-*.

podagra (po-dag'rah) [*pod-* + *Gr. agra* seizure] gouty pain in the great toe.

podagral (pod'ah-gral) pertaining to or characterized by podagra.

podagric (po-dag'rik) podagral.

podagrous (pod'ah-grus) podagral.

podalgia (po-dal'je-ah) [*pod-* + *-algia*] pain in the foot, as from gout or rheumatism.

podalic (po-dal'ik) [Gr. *pous* foot] accomplished by means of the feet; see under *version*.

Podalirius (po'dah-lir'e-us) the younger of two brothers, the older being Machaon, who were the sons of Æsculapius and, according to legend, the chief medical officers attached to the Greek forces during the Trojan war.

Podangium (po-dan'je-um) a genus of Schizomycetes of the order Myxobacterales, family Polyangiaceae.

podarthrititis (pod'ar-thrit'is) [*pod-* + *arthrititis*] inflammation of the joints of the feet.

podedema (pod'e-de'mah) edema of the feet.

podencephalus (pod'en-sef'ah-lus) [*pod-* + *Gr. enkephalos* brain] a fetus whose brain, without a cranium, hangs by a pedicle.

podia (po'de-ah) [*L.*] plural of *podium*.

podiatrist (po-di'ah-trist) a specialist in podiatry; formerly called *chiroprapist*.

podiatry (po-di'ah-tre) [Gr. *pous* foot + *iatreia* healing] the specialized field that deals with the study and care of the foot,

including its anatomy, pathology, medical and surgical treatment, etc. Formerly called *chiroprody*.

podium (po'de-um), pl. *po'dia* [*L.*] a footlike projection; a sucker foot; see under *foot*.

podo-, pod- [Gr. *pous*, *podos* foot] a combining form denoting relationship to the foot.

podocyte (pod'o-sit) [*podo-* + *Gr. kytos* hollow vessel] a modified epithelial cell of the visceral layer (*capsular epithelium*) of the renal glomerulus, having a small perikaryon and a number of primary and secondary footlike radiating processes (pedicels) which interdigitate with those of other podocytes and which embrace the basal lamina of glomerular capillaries.

pododerm (pod'o-derm) [*podo-* + *Gr. derma* skin] that portion of the skin which is continued downward within the horn capsule of the hoof of an animal.

pododynamometer (pod'o-di'nah-mom'ē-ter) a device for determining the strength of the leg muscles.

pododynia (pod'o-din'e-ah) [*podo-* + *Gr.odynē* pain] neuralgic pain of the heel and sole; burning pain without redness in the sole of the foot.

podogram (pod'o-gram) [*podo-* + *Gr. gramma* mark] a print of, or an outline tracing of, the sole of the foot.

podograph (pod'o-graf) [*podo-* + *Gr. graphein* to write] the instrument used in the making of a podogram.

podology (po-dol'o-je) [*podo-* + *-logy*] podiatry.

podophyllin (pod'o-fil'in) see *podophyllum resin*, under *resin*.

podophyllotoxin (pod'o-fil'o-tok'sin) a highly toxic compound, $C_{22}H_{22}O_8$, the main active component of podophyllum; it has cathartic and antineoplastic properties.

podophyllous (po-dof'i-lus) [*podo-* + *Gr. phyllon* leaf] designating the tissues which constitute the sensitive wall of the hoofs of animals.

Podophyllum (pod'o-fil'um) [*podo-* + *Gr. phyllon* leaf] a genus of perennial North American herbs, including *P. peltatum* L. (Berberidaceae), which is the source of podophyllum resin.

podophyllum (pod'o-fil'um) [USP] the dried rhizome and roots of *Podophyllum peltatum* L. (Berberidaceae), yielding not less than 5 per cent of resin (see under *resin*); its main active component is podophyllotoxin. Called also *Indian apple*, *mandrake*, *mandrake root*, *May apple*, and *vegetable calomel*.

podopompholyx (po'do-pom'fo-lik) [*podo-* + *Gr. pompholyx* a bubble] pompholyx of the soles.

podotrochilitis (pod'o-tro-ki-li'tis) [*podo-* + *Gr. trochilea* pulley + *-itis*] inflammation of the navicular bone of the horse's foot.

poe- for words beginning thus, see those beginning *pe*.

poecil- for words beginning thus, see those beginning *poikil-*.

Poecilia (pe-sil'e-ah) a genus of minnows; called also *Girardinus*. **P. reticulata**, a species used, especially in tropical America, to control mosquitoes; they eat the larvae of *Anopheles*. Called also *Girardinus poeciloides*.

Poehl's test (pelz) [Alexander Vasilyevich von *Poehl*, Russian chemist, 1850-1908] see under *tests*.

pogoniasis (po'go-ni'ah-sis) [Gr. *pōgōn* beard + *-iasis*] 1. excessive growth of the beard. 2. the growth of a beard upon a woman.

pogonion (po-go'ne-on) [Gr., dim. of *pōgōn* beard] the most anterior point of the chin in the sagittal plane.

POH an infrequently used symbol used in expressing the approximate concentration of hydroxide ions in a solution.

poi (poi) a Hawaiian food made from the root of the taro plant, *Colocasia esculenta* (L.) Schott., Araceae. It is used as a cereal substitute for allergic infants.

-poiesis (poi-e'sis) [Gr. *poiein* to make] a word termination meaning formation, as in hematopoiesis.

poietin (poi-e'tin) any of the hormones involved in regulation of the numbers of various cell types in the peripheral blood.

poikilergasia (poi'kil-er-ga'se-ah) [*poikilo-* + *Gr. ergasia* work] Meyer's term for psychopathic constitution.

poikilo- [Gr. *poikilos* spotted, mottled; varied] a combining form meaning varied or irregular.

poikiloblast (poi'ki-lo-blast') [*poikilo-* + *Gr. blastos* germ] an abnormally shaped erythroblast.

poikilocarynosis (poi'ki-lo-kar'i-no'sis) [*poikilo-* + *Gr. karyon* nucleus + *-osis*] Darier's term for the formation of various types and arrangements of cells which occurs in Bowen's disease.

poikilocyte (poi'ki-lo-sit') [*poikilo-* + *-cyte*] an erythrocyte showing abnormal variation in shape.

poikilocythemia (poi-kil'o-si-the'me-ah) poikilocytosis.

poikilocytosis (poi'ki-lo-si-to'sis) [*poikilocyte* + *-osis*] presence in the blood of erythrocytes showing abnormal variation in shape.

poikilodentosis (poi'ki-lo-den-to'sis) [*poikilo-* + *L. dens* tooth + *-osis*] a mottled condition of the teeth.

poikiloderma (poi'ki-lo-der'mah) a condition characterized by pigmentary and atrophic changes in the skin, giving it a mottled appearance. **p. atrophicans vascula're** (Jacobi), a rare,

slowly progressive atrophic skin disorder, usually of early adult life, which resembles radiodermatitis, with telangiectasia, atrophy, and variegated or mottled pigmentation of the skin. **p. of Civatte**, reddish-brown reticular pigmentation of the face, neck, and upper chest, occurring symmetrically, the result of exposure to sunlight perhaps aided by chemicals in cosmetics. **p. congenitale**, Rothmund-Thomson syndrome.

poikilodermatomyositis (poi'ki-lo-der'mah-to-mi'o-si'tis) dermatomyositis with poikiloderma-like skin changes.

poikilonymy (poi'ki-lon'i-me) [*poikilo-* + Gr. *onoma* name] the mingling of names or terms from different systems of nomenclature.

poikiloploid (poi'ki-lo-ploid'i) 1. pertaining to or characterized by poikiloploidy. 2. an individual having different cells with varying numbers of chromosomes.

poikiloploidy (poi'ki-lo-ploi'de) the state of having varying numbers of chromosomes in different cells.

poikilosmosis (poi'kil-oz-mo'sis) the processes by which a cell or tissue adjusts the osmolarity of its fluid to that of its immediate environment.

poikilostotic (poi'kil-oz-mot'ik) pertaining to poikilosmosis.

poikilostasis (poi'ki-lo-sta'sis) [*poikilo-* + Gr. *stasis* standing] the maintenance of stability in the body state (internal environment) by behavioral activities involving movement and selection by the whole organism.

poikilotherm (poi-kil'o-therm'i) an animal that exhibits poikilothermy; a so-called cold-blooded animal or ectotherm.

poikilothermal (poi'ki-lo-ther'mal) poikilothermic.

poikilothermic (poi'ki-lo-ther'mik) pertaining to or characterized by poikilothermy.

poikilothermism (poi'ki-lo-ther'mizm) poikilothermy.

poikilothermy (poi'ki-lo-ther'me) [*poikilo-* + Gr. *thermē* heat] 1. the exhibition of body temperature which varies with the environmental temperature. 2. the ability of organisms to adapt themselves to variations in the temperature of their environment.

poikilothrombocyte (poi-kil'o-throm'bo-sit) [*poikilo-* + *thrombocyte*] a blood platelet of abnormal shape.

poikilothymia (poi'ki-lo-thi'me-ah) [*poikilo-* + Gr. *thymos* spirit] a mental condition characterized by abnormal variations of mood.

poin (poin) an uncharacterized antibiotic material produced by the fungus *Fusarium sporotrichiella* var. *paoe* Bilal, and cultured from cases involving septic tonsillitis. It is active against staphylococci and streptococci *in vitro*.

point (point) [*L. punctum*] 1. a small area or spot; the sharp end of an object. 2. to approach the surface, like the pus of an abscess, at a definite spot or place. **p. A**, a roentgenographic, cephalometric landmark, determined on the lateral head film; it is the most retruded part of the curved bony outline from the anterior nasal spine to the crest of the maxillary alveolar process. Called also *subspinale*. **p. of an abscess**, the place at which the pus comes nearest to the surface. **absorbent p.**, a cone of variable width and taper, most commonly composed of paper or a paper product, used in drying or maintaining a liquid disinfectant in the root canal of a tooth. **Addison's p.**, the midpoint of the epigastric region. **alveolar p.**, prosthion. **apophysiary p.**, 1. subnasal point. 2. see *Trousseau's apophysiary points*. **p. Ar**, a cephalometric landmark, the point of intersection of the dorsal contours of the process articularis mandibulae and os temporale; called also *articulare*. **p. of Arrhigi**, an electrode site in electrocardiography, 2 to 3 cm. to the left of the seventh thoracic vertebra. **auricular p.**, the center of the opening of the external auditory meatus; called also *Broca's point*. **p. B**, a roentgenographic, cephalometric landmark, determined on the lateral head film; it is the most posterior midline point in the concavity between the infradentale and pogonium. Called also *supramentale*. **p. Ba**, a cephalometric landmark, the most inferior point on the anterior margin of the foramen magnum in the midsagittal plane; called also *basion*. **Barker's p.**, a point $\frac{1}{4}$ inches above and $\frac{1}{4}$ inches behind the middle external auditory meatus, the proper spot to apply the trephine in abscess of the temporosphenoid lobe. **p. Bo**, Bolton p. **Boas' p.**, a tender area to the left of the twelfth thoracic vertebra in patients with gastric ulcer. **boiling p.**, the temperature at which a liquid will boil (at sea level water boils at 100° C., or 212° F.); specifically, the temperature at which the equilibrium vapor pressure of a liquid phase equals the atmospheric pressure. **boiling p., normal**, the temperature at which a liquid boils at one standard atmosphere pressure. **Bolton p.**, the upper part of the notch in the shadow cast by the occipital bone in the x-ray of the lateral aspect of the skull. **Brewer's p.**, the point of the costovertebral angle, tenderness over which points to kidney infection. **Broadbent's registration p.**, a cephalometric landmark, being the midpoint on a perpendicular line from the center of the sella turcica to the nasion-postcondylare plane. **Broca's p.**, auricular p. **Cannon's p.**, see under *ring*. **cardinal p's**, 1. principal points; points on the optic axis which include the nodal points, the principal foci, and the optic center; may include conjugate focal points of object and image. 2. four points within

the pelvic inlet—the two sacroiliac articulations and the two iliopectineal eminences. **Chauffard's p.**, a point of tenderness in gallbladder disease, situated under the right clavicle. **cold rigor p.**, that point of low temperature at which the activity of a cell ceases. **conjugate p.**, conjugate focus. **contact p.**, see under *area*. **convenience p.**, a groove or depression cut in the wall of a tooth cavity in such a way as to retain the first piece of the gold placed for its filling. **p. of convergence**, the point nearest to the patient to which both eyes can converge on an object moved toward them. **corresponding p's**, points upon the two retinae whose impressions unite to produce a single perception. Cf. *disparate p's*. **Cova's p.**, a point at the apex of the costolumbar angle which is tender on pressure in cases of pyelitis of pregnancy. **craniometric p.**, any one of a numerous set of points of reference assumed for use in craniometry. **critical p.**, the temperature at or above which a gas cannot be liquefied by pressure alone. **deaf p.**, one of certain points near the ear where a vibrating tuning-fork cannot be heard. **de Mussy's p.**, a point, exceedingly painful on pressure on the line of the left border of the sternum, at the level of the end of the tenth rib; it is a symptom of diaphragmatic pleurisy. **Desjardins' p.**, a point on the abdomen 5 to 7 cm. from the umbilicus, on a line joining it to the right axilla; it lies over the head of the pancreas. **dew p.**, the temperature of the atmosphere at which the moisture begins to be deposited as dew. **p. of direction**, see *position*, def. 2. **disparate p's**, points on the retina which are not paired exactly. Cf. *corresponding p's*. **p. of dispersion**, in optics, the virtual focus. **p. of divergence**, the conjugate focus from which the light proceeds. **dorsal p.**, in hepatic colic, a point, tender on pressure, situated between the spinous processes of the vertebrae at the border of the right scapula at the level of the fourth and fifth intercostal spaces at a distance of about 2 or 3 cm. from the middle line. Called also *Pauly's p.* **p's douloureux** (pwā doo-loo-ruh') [Fr.], Valleix's p's. **p. of election**, that point at which any particular surgical operation is done by preference. **Erb's p.**, a point two or three centimeters above the clavicle and beyond the posterior border of the sternomastoid, at the level of the transverse process of the sixth cervical vertebra; stimulation here contracts various arm muscles. **eye p.**, 1. the bright circle seen at the crossing point or nearest the approximation of the rays above the microscopical ocular. 2. See under *spot*. **far p.**, the remotest point at which an object is clearly seen when the eye is at rest. **fixation p.**, the point or object on which the vision is fixed. **focal p.**, see *focus* (def. 1), and *cardinal p.* (def. 1). **freezing p.**, the temperature at which a liquid begins to freeze; that of pure water is 0° C., or 32° F. **fusion p.**, melting point. **glenoid p.**, the center of the glenoid cavity of the scapula. **Guéneau de Mussy's p.**, see *de Mussy's p.* **gutta-percha p.**, a fine, plastic, radiopaque cone made from gutta-percha and various compounding ingredients, used as a root canal filling material. **Hallé's p.**, a point on the surface of the abdomen corresponding to the point where the ureter crosses the pelvic brim. It is the point of intersection between a horizontal line connecting the anterior superior iliac spines and a vertical line projected upward from the pubic spine. **Hartmann's p.**, **Hartmann's critical p.**, p. of Sudeck. **hinge-axis p.**, a reference point on the skin corresponding with the terminal hinge axis of the mandible. **hysteroepileptogenous p.**, **hystero-genic p.**, a point on which, if pressure be made, a hysteric or hysteroepileptic attack may be produced. **ice p.**, the temperature of equilibrium between ice and air-saturated water under one atmosphere pressure. **identical p's**, corresponding p's. **p. of incidence**, see *refraction*, def. 2. **isobestic p.**, the wavelength at which two interconvertible substances (e.g., oxyhemoglobin and reduced hemoglobin) have the same absorptivity. **isoelectric p.**, the pH of a solution at which a charged molecule does not migrate in an electric field. **isotonic p.**, the pH of a solution at which a specific ion (usually a protein) contains as many negative charges as positive charges. **jugal p.**, the point of the angle formed by the masseteric and maxillary edges of the malar bone (os zygomaticum). **jugomaxillary p.**, the point at the antero-inferior angle of the malar bone (os zygomaticum). **Keen's p.**, a point for puncture of the lateral ventricles; 3 cm. above and 3 cm. behind the external auditory meatus. **Kienböck-Adamson p's**, points and lines to be marked on the scalp to indicate the areas for the application of x-ray therapy in order to produce temporary epilation for the treatment of tinea capitis. **Kocher's p.**, a point for puncture of the lateral ventricles; 2.5 cm. from the midline, 3.5 cm. in front of the bregma. **Krafft p.**, the temperature above which conjugated bile salts form polymolecular aggregates (micelles) of about 3 to 10 nm. in diameter. **lacrimal p.**, the punctum lacrimale; any of the outlets of the lacrimal canaliculi. **Lanz's p.**, a point which indicates the position of the vermiform appendix; it is situated on a line connecting the two anterior superior iliac spines one third of the distance from the right spine. **leak p.**, renal threshold for glucose; see under *threshold*. **McBurney's p.**, a point of special tenderness in acute appendicitis, situated about one-half to 2 inches from the right anterior superior iliac spine on a line between this spine and the umbilicus. It corresponds with the normal position of the base of the appendix. **McEwen's p.**, a

point above the inner canthus of the eye which is tender in acute frontal sinusitis. **Mackenzie's p.**, a point of tenderness in gallbladder disease in the upper segment of the rectus muscle. **malar p.**, a point on the external tubercle of the malar bone (os zygomaticum). **marginal p's**, *Anaplasma marginale*. **p. of maximal impulse**, the point on the chest where the impulse of the left ventricle is felt most strongly, normally in the fifth costal interspace inside the left mamillary line; abbreviated P.M.I. **maximum occipital p.**, the point in the occipital bone situated furthest from the glabella. **median mandibular p.**, a point on the anteroposterior center of the mandibular ridge in the median sagittal plane. **Méglin's p.**, a point where the greater palatine nerve emerges from the great palatine foramen. **melting p.**, the minimum temperature at which a solid begins to liquify. **mental p.**, pogonion. **metopic p.**, glabella. **motor p.**, 1. the point at which a motor nerve enters a muscle. 2. any point on the skin over a muscle at which the application of galvanic stimulation will cause contraction of a corresponding muscle. **Munro's p.**, a point midway between the umbilicus and the left anterior iliac spine, usually selected as the point for performing abdominal puncture. **Mussy's p.**, see *de Mussy's p.* **nasal p.**, nasion. **near p.**, the nearest point at which the eye can distinctly perceive an object; the nearest point of clear vision. **near p., absolute**, the near point for either eye alone with accommodation relaxed. **near p., relative**, the near point for both eyes with the employment of accommodation. **nodal p's**, one of two points on the axis of an optical system so situated that a ray falling on one will produce a parallel ray emerging through the other. **occipital p.**, 1. the posterior point on the occipital bone. 2. (*obs*) the pointed posterior end of the occipital lobe of the brain (occipital pole). **ossification p.**, a center of ossification in bone. **painful p's**, Val-leix's p's. **paper p.**, absorbent p. **Pauly's p.**, dorsal p. **phrenic-pressure p.**, a point along the phrenic nerve between the sternocleidomastoid and the scalenus anticus on the right side; pressure on the point suggests gallbladder disease. **Piersol's p.**, a point indicating the location of the vesical orifice. **pour p.**, the temperature at which a liquid just begins to flow. **pre-auricular p.**, a point on the posterior root of the zygomatic arch just in front of the auricular point. **pressure p.**, 1. a point of extreme sensibility to pressure. 2. one of various locations on the body at which digital pressure may be applied for the control of hemorrhage. **pressure-arresting p.**, a point at which pressure arrests spasm. **pressure-exciting p.**, a point at which pressure produces spasm. **principal p's**, cardinal p's, def. 1. **R p.**, a cephalometric landmark determined by the midpoint of a line perpendicular to the Bolton-nasion plane from the sella turcica. **Ramond's p.**, a point of tenderness in gallbladder disease between the heads of the sternocleidomastoid muscle. **reflection p.**, the point from which a ray of light is reflected. **refraction p.**, the point at which a ray of light is refracted. **p. of regard**, the point at which the eye is directly looking. **retromandibular tender p.**, a point behind the superior extremity of the inferior maxilla below the lobule of the ear and in front of the mastoid process. Pressure on this point elicits extreme pain in meningitis. **Robson's p.**, the point of greatest tenderness in gallbladder inflammation, situated opposite the junction of the middle and lower third of a line drawn from the right nipple to the umbilicus. **silver p.**, a solid-core root canal filling material composed of silver; its diameter and taper usually correspond to the variations in diameter and taper of the root canal instruments. **spinal p.**, subnasal p. **stereoidentical p's**, points in space outside of the region within which fusion of double images occurs. **subnasal p.**, the central point of the root of the anterior nasal spine. **subtemporal p.**, the point where the sphenotemporal suture and infratemporal crest intersect. **Sudeck's critical p.**, **p. of Sudeck**, the portion of the rectum between the last sigmoid artery and the bifurcation of the superior hemorrhoidal artery; the former belief that ligation of the latter below this point would lead to gangrene of the rectum has not been borne out by clinical experience. Called also *Hartmann's p.* **supra-auricular p.**, a point at the root of the zygomatic process of the temporal bone, directly above the auricular point. **supraclavicular p.**, a point above the clavicle and outside of the sternomastoid where the application of a stimulus causes contraction of the biceps brachii, deltoideus, brachialis, and brachioradialis muscles. **supranasal p.**, ophryon. **supraorbital p.**, 1. the ophryon. 2. in neuralgia, a tender spot just above the supraorbital notch. **sylvian p.**, a point on the surface of the skull from 29 to 32 mm. behind the external angular process of the frontal bone. **thermal death p.**, the degree of heat required to kill a given microorganism in a stated length of time. **trigger p.**, a particular spot on the body on which pressure or other stimulus will give rise to specific sensations or symptoms. **triple p.**, the temperature and pressure at which three different phases of a substance are in equilibrium. The *triple point of water* (ice, liquid, vapor) is 273.15°K. **Trousseau's apophysiary p's**, points sensitive to pressure along the dorsal and lumbar vertebrae in certain cases of neuralgia. **vaccine p.**, a piece of bone or quill, one end of which is coated with vaccine lymph. **Valleix's p's**, tender points on the course of certain nerves in neuralgia. **vital p.**, a

point in the medulla oblongata, at the respiratory center, puncture of which causes immediate death. **Vogt's p.**, **Vogt-Hueter p.**, a point of the intersection of a horizontal line, two finger-breadths above the zygoma, with a vertical line a thumb-breadth behind the ascending sphenofrontal process; here trephination may be performed in traumatic meningeal hemorrhage. **Voilemier's p.**, a point on the linea alba 6.5 cm. below the line which joins the anterior superior iliac spinous processes; here the bladder may be punctured in obese or edematous patients. **p. Z.**, a point formed by a line perpendicular to the nasion-menton line through the anterior nasal spine. **Ziemssen's motor p's**, the places of entrance of motor nerves into muscles; they are points of election in the therapeutical application of electricity to muscles.

pointer (point'er) a contusion at a bony eminence. **hip p.**, contusion of the bone of the iliac crest or avulsion of muscle attachments of the iliac crest.

pointillage (pwahn'te-yahzh') [Fr.] massage with the points of the fingers.

Poirier's glands, line (pwah-re-āz') [Paul Poirier, surgeon in Paris, 1853-1907] see under *gland* and *line*.

poise (poiz; Fr. pwahz) [J. M. Poiseuille] the unit of viscosity of a liquid, being number of grams per centimeter per second. The commonly used unit is the *centipoise*, or one one-hundredth of a poise.

Poiseuille's law, space (pwah-zuh'yez) [Jean Leonard Marie Poiseuille, physiologist in Paris, 1799-1869] see under *law* and *space*.

poison (poi'zn) [L. *potio* draft; *toxicum*; Gr. *toxikon*] any substance which, when ingested, inhaled or absorbed, or when applied to, injected into, or developed within the body, in relatively small amounts, by its chemical action may cause damage to structure or disturbance of function. See also *toxin*. **acid p.**, one which produces irritation or inflammation, as the mineral acids, oxalic acid, the caustic alkalis, antimony, arsenic, the salts of copper, some of the compounds of lead, silver nitrate, the salts of zinc, iodine, cantharides, phosphorus, etc. **acronarcotic p.**, **acrosedative p.**, poisons which produce sometimes irritation, sometimes narcotism (or sedation), or both together. They are chiefly derived from the vegetable kingdom. Stramonium and belladonna are examples of the acronarcotic and aconite is an example of the acrosedative poisons. **arrow p.**, a preparation of plant alkaloids used on their arrows by members of certain primitive tribes. **catalyst p.**, a substance firmly bound to the active areas on the surface of a catalyst, which prevents the adsorption of the reactants for the desired chemical reaction. **clam p.**, gonyaulax p. **corrosive p.**, any poison which acts by directly destroying tissue. **fatigue p.**, fatigue toxin. **fugu p.**, tetrodotoxin. **gonyaulax p.**, the neurotoxic principle produced by members of the genus *Gonyaulax* and related dinoflagellates; ingestion of shellfish that feed on these organisms causes a severe neurologic reaction which may end in paralysis and death. Called also *clam p.*, *mussel p.*, *paralytic shellfish p.*, *mytilotoxin*, and *saxitoxin*. **hemotropic p.**, a poison which has a special affinity for erythrocytes. **irritant p.**, acid p. **microbial p.**, a toxic substance produced by a microorganism. **mitotic p.**, a toxic principle that interferes with cell division. **muscle p.**, one that interferes with normal action or functioning of muscle. **mussel p.**, gonyaulax p. **narcotic p's**, poisons causing stupor or delirium, as opium, hyoscyamus, etc. **paralytic shellfish p.**, gonyaulax p. **puffer p.**, tetrodotoxin. **sedative p's**, those which directly depress the vital centers, as hydrocyanic acid, potassium cyanide, hydrogen sulfide, and other of the poisonous gases. **toot p.**, a poison from *Coriaria sarmentosa*, a plant of New Zealand. **vascular p.**, a poison which acts by affecting the blood vessels. **whelk p.**, a toxic substance which is localized in the salivary gland of whelks, members of the phylum Mollusca, class Gastropoda; its principal ingredient is tetramethylammonium hydroxide. See also under *poisoning*.

poison ivy (poi'zn i've) *Rhus*.

poison oak (poi'zn ōk) *Rhus*.

poison sumac (poi'zn soo'mak) *Rhus*.

poisoning (poi'zuh-ning) the morbid condition produced by a poison; see also *intoxication*. **akee p.**, Jamaica vomiting sickness. **antimony p.**, poisoning due to ingestion of antimony compounds, rarely to industrial exposure; the symptoms are similar to those of acute arsenic poisoning, with vomiting a prominent symptom. **argemone oil p.**, see *argemone oil*, under *oil*. **arsenic p.**, poisoning due to systemic exposure to inorganic pentavalent arsenic. *Acute arsenic poisoning*, which may result in shock and death, is marked by erythematous skin eruptions, vomiting, diarrhea, abdominal pain, muscular cramps, and swelling of the eyelids, feet, and hands. *Chronic arsenic poisoning*, due to the ingestion of small amounts over a long period of time, is marked by pigmentation of the skin accompanied by scaling, hyperkeratosis of the palms and soles, transverse white lines on the fingernails (Mees' lines), headache, peripheral neuropathy, and confusion. Called also *arsenicalism* and *arsenism*. **blood p.**, septicemia. **bongkreng p.**, see under *intoxication*. **broom p.**, poisoning caused by eating *Cytisus scoparius*, or

broom, a leguminous shrub which contains both sparteine and cytosine. **callistin shellfish p.**, poisoning caused by ingestion of gastropods of the genus *Callista*, believed to be due to a choline present in large quantities in the ovaries of the shellfish; called also *esowasure-gai p.* **carbon disulfide p.**, a condition occurring in workers in rubber and viscose products caused by carbon disulfide and marked by weakness, sleeplessness, visual impairment, gastric ulcer, and paralysis. **carbon monoxide p.**, poisoning due to the inhalation of carbon monoxide and the resulting change of oxyhemoglobin to carboxyhemoglobin, which may result in damage to the central nervous system and death. **cheese p.**, tyrotoxicosis. **corncockle p.**, githagism. **dural p.**, poisoning in aircraft workers caused by the magnesium in the aluminum-magnesium alloy (Duralumin) used in airplanes. **elasmobranch p.**, a form of ichthyosarcotoxism produced by the ingestion of certain toxic sharks and skates. **ergot p.**, ergotism. **esowasure-gai p.**, Japanese name for callistin shellfish. **fish p.**, ichthyosarcotoxism. **fluoride p.**, **chronic, fluorine p.**, **chronic, fluorosis**, def. 2. **food p.**, a group of acute illnesses caused by the ingestion of contaminated food, characterized by vomiting, diarrhea, enteritis, and prostration. It may result from allergy; toxemia from foods, such as those inherently poisonous or those accidentally contaminated by poisons; foods containing poisons formed by bacteria, such as *Clostridium botulinum* (botulism), *C. perfringens* (clostridial food poisoning), and *Staphylococcus aureus* (staphylococcal food poisoning); and foodborne infections, including infection by species of *Salmonella* (salmonellal food poisoning). **food p., clostridial**, 1. food poisoning caused by *Clostridium botulinum*. See *allantiasis* and *botulism*. 2. food poisoning caused by *Clostridium perfringens*; meat, particularly poultry, is usually the vehicle of infection. **food p., salmonellal**, food poisoning caused by the ingestion of foods containing large numbers of *Salmonella typhimurium*, *S. enteritidis*, *S. paratyphi B*, or *S. choleraesuis*; the foods involved are usually meat and other protein foods, but almost any kind may carry the organisms. It is characterized by abrupt onset, 8 to 48 hours after ingestion of the infected food, with fever, chills, nausea, vomiting, diarrhea, headache, and abdominal pain and tenderness; the attack usually lasts 2 to 5 days. **food p., staphylococcal**, food poisoning caused by the ingestion of foods containing enterotoxin, usually produced by *Staphylococcus aureus* in such foods as cream-filled pastries, custards, and cottage cheese, but also in meat. It is characterized by sudden onset, headache, salivation, nausea, vomiting, diarrhea, abdominal cramps, and sweating; the attack usually lasts from 5 to 6 hours. **forage p.**, a disease of domestic animals, especially of horses, resulting from ingestion of moldy or fermented food, or from an encephalomyelitic infection; certain forms occurring in Australia are caused by *Clostridium botulinum*. **fugu p.**, tetradotoxism. **gossypol p.**, poisoning from eating cottonseed cake. **gymnothorax p.**, a form of ichthyosarcotoxism produced by ingestion of certain moray eels of the genus *Gymnothorax*. **heavy metal p.**, poisoning with any of the heavy metals, particularly arsenic, lead, mercury, antimony, cadmium, or thallium. **larkspur p.**, poisoning from the fresh leaves and roots of larkspur, which contain aconite. Ingestion may result in instantaneous death, probably from paralysis of the heart. **lead p.**, poisoning due to the absorption or ingestion of lead or one of its salts. The symptoms include loss of appetite, weight loss, colic, constipation, insomnia, headache, dizziness, irritability, moderate hypertension, albuminuria, anemia, a blue line at the edge of the gums (lead line), encephalopathy (especially in children), and peripheral neuropathy leading to paralysis. Called also *plumbism*. **loco p.**, locoism. **manganese p.**, a condition usually caused by inhalation of manganese dust; symptoms include mental disorders accompanying a syndrome resembling paralysis agitans, and inflammation throughout the respiratory system. **meat p.**, acute, often severe gastroenteritis, caused by salmonella, clostridium, staphylococcus, streptococcus, or some similar organism. **mercury p.**, acute or chronic disease caused by mercury and its salts. The acute form, due to ingestion, is marked by severe abdominalgia, metallic taste in the mouth, vomiting, bloody diarrhea with watery stools, oliguria or anuria (usually at onset), and corrosion and ulceration of the entire digestive tract. The chronic form, due to absorption by the skin and mucous membranes, inhalation of vapors, or ingestion of mercury salts, is marked by stomatitis, metallic taste in the mouth, a blue line along the border of the gum, sore hypertrophied gums that bleed easily, loosening of the teeth, erethism, excessive secretion of saliva, tremors, and incoordination. Called also *mercurialism* and *hydrargyris*. **milk p.**, trembles. **molybdenum p.**, poisoning due to ingestion of large amounts of molybdenum, characterized by weakness and diarrhea; no cases of molybdenum poisoning in man have been reported. **mushroom p.**, poisoning resulting from ingestion of poisonous mushrooms, including *Amanita verna*, *A. phalloides*, *A. muscaria*, and *A. pantherina*. The clinical course usually begins with nausea, vomiting, abdominal pain, and diarrhea, followed by a period (up to 48 hours) of improvement, and then culminating in signs and symptoms of severe hepatic, renal, and central nervous system damage. Called also *mycetismus*. **mussel p.**, see *gonyaulax* poison, under *poison*. **naphthol p.**, the toxic condition brought on by the ex-

cessive or continued use of naphthol, characterized by anemia, jaundice, convulsions, and coma. **nitroaniline p.**, poisoning by nitroaniline, a dye used in paints, paint removers, printing inks, cloth marking inks, and solvents; intense methemoglobinemia is produced. **nutmeg p.**, severe toxic symptoms produced by as little as 1 teaspoonful of powdered nutmeg; narcosis with periods of delirium and excitability may occur within 1 to 6 hours. **O₂ p.**, see under *toxicity*. **paraldehyde p.**, paraldehydism. **parathyroid p.**, the sudden increase in the extent of metastatic calcification of organs, particularly the kidneys, when a high calcium diet is given a hyperparathyroid patient. **phenol p.**, poisoning due to ingestion or absorption through the skin of phenol; the symptoms include colic, weakness, collapse, and local irritation and corrosion. Called also *carbolism*. **phosphorus p.**, a condition resulting from ingestion or inhalation of phosphorus, manifested by toothache and mandibular necrosis (phossy jaw), anorexia, weakness, and anemia. **pitch p.**, a usually fatal disorder of pigs that eat clay pigeons or lick the tarred walls and floors of pigpens, marked by inappetence, depression, weakness, jaundice, anemia. **puffer p.**, tetradotoxism. **salmon p.**, a hemorrhagic enteritis, particularly affecting canines but which may also affect man and other animals. It is acquired by the ingestion of raw fish, especially salmon and trout, parasitized by the fluke *Trogloremia salmincola*, which serves as a vector of the etiologic agent, *Neorickettsia helminthoeca*. **salt p.**, poisoning of animals, especially pigs and birds, due to ingestion of too much salt in the absence of available water, marked by excessive thirst, diarrhea, and vomiting, often culminating in death. **saturine p.**, lead p. **sausage p.**, see *allantiasis* and *botulism*. **scombroid p.**, a form of ichthyosarcotoxism caused by the ingestion of a toxic histamine-like substance produced by the action of bacteria on histidine, a normal component of fish flesh. Scombroid fish (tuna, bonito, mackerel, etc.) are particularly susceptible to bacterial decomposition, and when inadequately preserved contaminated fish are eaten the symptoms of the illness, including epigastric pain, nausea, vomiting, headache, dysphagia, thirst, urticaria, and pruritus, develop and usually last for less than 24 hours. **selenium p.**, a form of poisoning of livestock of the North Central Great Plains region of the United States due to the feeding on plants which have absorbed selenium from the soil and characterized by cirrhosis of the liver, anemia, loss of hair, erosions of long bones, emaciation. **shellfish p.**, see *gonyaulax* poison, under *poison*. **tempeh p.**, bongkreik intoxication. **tetrachlorethane p.**, a form of poisoning in munition workers caused by inhalation of fumes of tetrachlorethane, and marked by toxic jaundice, headache, anorexia, and gastrointestinal disturbance. **tetraodon p.**, tetradotoxism. **thallium p.**, poisoning, particularly of children, due to ingestion of thallium compounds, marked by alopecia, by a variety of neurologic and psychic symptoms, including ataxia, restlessness, delirium, hallucinations, delusions, semicoma, blindness, and by liver and kidney damage. **T.N.T. p.**, trinitrotoluene p. **tobacco p.**, tabacosis. **trinitrotoluene p.**, a form of poisoning in munition workers, characterized by dermatitis, gastritis with abdominal pain, vomiting, constipation, flatulence, and blood changes. Abbreviated *T.N.T. p.* **whelk p.**, a form of intoxication characterized by intense headache, dizziness, nausea, and vomiting resulting from the ingestion of whelks, members of the phylum Mollusca, class Gastropoda. See also under *poison*. **zinc p.**, poisoning due to inhalation or ingestion of zinc; the symptoms include colic, diarrhea, vomiting, and fever.

poisonous (poi'son-us) pertaining to, due to, or of the nature of a poison; toxic; venomous.

poitrinaire (pwah/'tre-nâr') [Fr.] a patient with a chronic disease of the chest.

pokeroot (pök'root) pokeweed.

pokeweed (pök'wēd) a tall perennial herb, *Phytolacca americana*, of North America; its root has emetic and purgative properties and has been used as an antirheumatic. Mitogen from pokeweed induce lymphocyte transformation and stimulate erythropoiesis. Called also *pokeroot*.

polacrilin (pol-ah-kri'l'in) methacrylic acid ester with divinylbenzene; a synthetic ion-exchange resin, supplied in the hydrogen or free acid form; a pharmaceutical aid. **p. potassium**, a synthetic ion exchange resin, prepared through polymerization of methacrylic acid and divinylbenzene, and then further neutralized with potassium hydroxide to form the potassium salt of methacrylic acid and divinylbenzene. It is supplied as a pharmaceutical-grade ion-exchange resin in a particle size of 100- to 500-mesh; a tablet disintegrant.

polar (po'lar) [L. *polaris*, *polus*; Gr. *polos*] 1. of or pertaining to a pole; see also under *compound*. 2. being at opposite ends of a spectrum of manifestations, as polar forms of leprosy.

Polaramine (po-lar'ah-mēn) trademark for preparations of dextropheniramine maleate.

polarimeter (po'lah-rim/'ē-ter) [*polar* + Gr. *metron* measure] a device for measuring the rotation of plane polarized light; a polariscope.

polarimetry (po'lah-rim/'ē-tre) measurement of the rotation of plane polarized light by a liquid or solid.

polariscope (po-lar'i-skōp) [*polar* + Gr. *skopein* to examine] an instrument for the measurement of polarized light.

polariscopic (po-lar-i-skop'ik) pertaining to the polariscope or to polariscopy.

polariscopy (po-lar-is'ko-pe) the science of polarized light and the use of the polariscope.

polaristrobometer (po-lar'is-tro-bom'ē-ter) a form of polarimeter used for delicate analyses.

polarity (po-lar'i-te) 1. the fact or condition of having poles. 2. the exhibition of opposite effects at the two extremities. 3. the presence of an axial gradient and exhibition by a nerve of both anelectrotonus and catelectrotonus. 4. the orientation of intracellular structures to the tissue as a whole. **dynamic p.**, the specialization of a nerve cell with reference to the flow of impulses.

polarization (po-lar-i-za'shun) 1. the production of that condition in light by virtue of which its vibrations take place all in one plane or else in circles and ellipses. 2. the accumulation of bubbles of hydrogen gas on the negative plate of a galvanic battery, so that the generation of electricity is impeded. **circular p.**, that polarization which causes vibration in circles. **elliptical p.**, that which causes the vibration in ellipses. **plane p.**, the production of polarization such that the light vibrations are all in one plane. **rotatory p.**, circular or elliptical polarization, as distinguished from plane polarization.

polarize (po-lar-iz) 1. to imbue with polarity. 2. to put into a state of polarization.

polarizer (po-lar-iz'er) an appliance for polarizing light.

polarogram (po-lar'o-gram) the curve of current versus voltage obtained in polarography.

polarographic (po-lar-ro-graf'ik) pertaining to polarography.

polarography (po-lar-og'rah-fe) an electrochemical technique for identifying and estimating the concentration of reducible elements by means of the dual measurement of the current flowing through an electrochemical cell (which contains the test solution) and the electrical potential between the two electrodes as the potential is increased at a constant rate by an external voltage source. As the voltage reaches the standard electrode potential of the test substance, there is a sharp increase in current flow. The indicator electrode is usually a dropping mercury electrode.

Polaroid (po-lar-oid) trademark for a sheet (film) polarizer utilizing oriented crystals used as a substitute for Nicol prisms and for reducing glare through lenses and windshields.

poldine methylsulfate (pol'dēn) [USP] chemical name: 2-[(hydroxydiphenylacetyl)oxy]methyl]-1,1-dimethylpyrrolidinium methyl sulfate. A synthetic quaternary nitrogen anticholinergic, $C_{22}H_{29}NO_7S$, occurring as a creamy white, crystalline powder; used as an adjunct in the treatment of peptic ulcer and gastrointestinal disorders associated with hyperacidity, hypermotility, and spasm, administered orally.

pole (pōl) [L. *polus*; Gr. *polos*] 1. either extremity of an axis, as of the fetal ellipse, or of an organ of the body; called also *polus* or *extremities*. 2. either one of two points which have opposite physical qualities (electric or other). **animal p.**, the site of an ovum to which the nucleus is approximated, and from which the polar bodies pinch off. Also, in nonmammalian species, the pole of an egg less heavily laden with yolk than the vegetal pole and therefore exhibiting faster cell division. **anterior p. of eyeball**, *polus anterior bulbi oculi*. **anterior p. of lens**, *polus anterior lentis*. **antigerminial p.**, vegetal p. **cephalic p.**, the end of the fetal ellipse at which the head of the fetus is situated. **frontal p. of hemisphere of cerebrum**, *polus frontalis hemispherii cerebri*. **germinal p.**, animal p. **inferior p. of kidney**, *extremitas inferior renis*. **inferior p. of testis**, *extremitas inferior testis*. **negative p.**, cathode. **nutritive p.**, vegetal p. **occipital p. of hemisphere of cerebrum**, *polus occipitalis hemispherii cerebri*. **pelvic p.**, the end of the fetal ellipse at which the breech of the fetus is situated. **positive p.**, anode. **posterior p. of eyeball**, *polus posterior bulbi oculi*. **posterior p. of lens**, *polus posterior lentis*. **temporal p. of hemisphere of cerebrum**, *polus temporalis hemispherii cerebri*. **twin p.**, that part of a spiral-fibered nerve cell from which both the straight and spiral fibers spring. **upper p. of kidney**, *extremitas superior renis*. **upper p. of testis**, *extremitas superior testis*. **vegetal p.**, *vegetative p.*, **vitelline p.**, that pole of an ovum at which the greater amount of food yolk is deposited. Cf. *animal p.*

poli (po'li) plural of *polus*.

policapram (pol'ē-ka'pram) chemical name: poly[imino(1-oxo-1,6-hexanedyl)] a linear polymer of ϵ -aminocaproic lactam, $(C_6H_{11}NO)_n$, as microcrystals of colloid dimensions; used as a tablet binder for pharmaceutical preparations.

policeman (po-lēs'man) a glass rod with a piece of rubber tubing on one end, used as a stirring rod and transfer tool in chemical analysis.

policlinic (pol'e-klin'ik) [Gr. *polis* city + *klinē* bed] a city hospital, infirmary, or clinic. Cf. *polyclinic*.

poliencephalitis (pol'e-en-sef'ah-li'tis) polioencephalitis.

polioencephalomyelitis (pol'e-en-sef'ah-lo-mi'ē-li'tis) polioencephalomyelitis.

polio (po'le-o) poliomyelitis.

polio- (po'le-o) [Gr. *polios* gray] a combining form denoting relationship to the gray matter of the nervous system.

poliocidal (po'le-o-si'dal) neutralizing the poliomyelitis virus.

polioclastic (po'le-o-klas'tik) [*polio-* + Gr. *klastos* breaking] destroying the gray matter of the nervous system; a term applied to the viruses of poliomyelitis, epidemic encephalitis, and rabies; neurotropic.

poliodystrophia (po'le-o-dis-tro'fe-ah) poliodystrophy. **p. cer'ebri**, a rare disease of young children, characterized by neuron degeneration of the cerebral cortex and elsewhere, accompanied by progressive mental deterioration, motor disturbances, and early death; called also *Alper's disease*.

poliodystrophy (po'le-o-dis'tro-fe) [*polio-* + *dystrophy*] atrophy of the cerebral gray matter.

polioencephalitis (po'le-o-en-sef'ah-li'tis) [*polio-* + *encephalitis*] 1. inflammatory disease of the gray substance of the brain. 2. cerebral poliomyelitis. **p. acu'ta hemorrhag'ica**, Wernicke's encephalopathy. **p. acu'ta infan'tum**, an acute variety seen in children under six years of age, and marked by fever, vomiting, and convulsions; it is usually followed by permanent paralysis of the limbs which were affected with convulsions.

acute bulbar p., acute bulbar paralysis. **p. hemorrhag'ica supe'rior**, Wernicke's encephalopathy. **inferior p.**, bulbar paralysis. **posterior p.**, inflammation of the gray matter of the posterior part of the fourth ventricle. **superior hemorrhagic p.**, Wernicke's encephalopathy.

polioencephalomeningomyelitis (po'le-o-en-sef'ah-lo-mē-nin'go-mi'ē-li'tis) inflammation of the gray matter of the brain and spinal cord and of the meninges covering it.

polioencephalomyelitis (po'le-o-en-sef'ah-lo-mi'ē-li'tis) inflammatory disease of the gray matter of the brain and spinal cord.

polioencephalopathy (po'le-o-en-sef'ah-lop'ah-the) [*polio-* + Gr. *enkephalos* brain + *pathos* disease] disease of the gray matter of the brain.

polioencephalotropic (po'le-o-en-sef'ah-lo-trop'ik) having a special affinity for the gray substance of the brain; neurotropic.

poliomyelencephalitis (po'le-o-mi'el-en-sef'ah-li'tis) [*polio-* + Gr. *myelos* marrow + *enkephalos* brain + *-itis*] poliomyelitis combined with polioencephalitis.

poliomyeliticidal (po'le-o-mi'ē-li'ti-si'dal) having the power of destroying poliomyelitis virus.

poliomyelitis (po'le-o-mi'ē-li'tis) [*polio-* + Gr. *myelos* marrow + *-itis*] an acute viral disease, occurring sporadically and in epidemics, and characterized clinically by fever, sore throat, headache, and vomiting, often with stiffness of the neck and back. In the *minor illness* these may be the only symptoms. The *major illness*, which may or may not be preceded by the minor illness, is characterized by involvement of the central nervous system, stiff neck, pleocytosis in the spinal fluid, and perhaps paralysis. There may be subsequent atrophy of groups of muscles, ending in contraction and permanent deformity. The major illness is called *acute anterior p.*, *infantile paralysis*, and *Heine-Medin disease*. The disease is now largely controlled by vaccines. See also *poliovirus* and *spinal paralytic p.* **acute anterior p.**, see *poliomyelitis*. **acute lateral p.**, spinal paralytic p. **anterior p.**, inflammation of the anterior horns of the gray substance of the spinal cord. **ascending p.**, a paralytic affection which is first manifested in the legs and rapidly ascends cephalad. **bulbar p.**, a serious form of poliomyelitis in which the medulla oblongata is affected, and in which there may be dysfunction of the swallowing mechanism, and respiratory and circulatory distress. **cerebral p.**, poliomyelitis in which the areas most likely to be involved are the brain stem and the motor cortex; called also *polioencephalitis*. **endemic p.**, poliomyelitis occurring sporadically or in a small number of cases, particularly during periods of warm weather, in most countries throughout the world. **epidemic p.**, poliomyelitis occurring in epidemic form. **mouse p.**, *murine p.*, Theiler's disease. **porcine p.**, infectious porcine encephalomyelitis. **postinoculation p.**, acute poliomyelitis appearing within three weeks after some type of inoculation. **post-tonsillectomy p.**, acute poliomyelitis appearing within a short time after tonsillectomy. **postvaccinal p.**, acute poliomyelitis appearing within three weeks after some type of vaccination. **spinal paralytic p.**, the classic form of acute anterior poliomyelitis, in which the appearance of flaccid paralysis, usually of one or more limbs, makes the diagnosis quite definite.

poliomyeloencephalitis (po'le-o-mi'ē-lo-en-sef'ah-li'tis) [*polio-* + Gr. *myelos* marrow + *enkephalos* brain + *-itis*] polioencephalomyelitis.

poliomyelopathy (po'le-o-mi'ē-lop'ah-the) [*polio-* + Gr. *myelos* marrow + *pathos* disease] any disease primarily affecting the gray matter of the spinal cord.

polioneuromere (po'le-o-nu'ro-mēr) [*polio-* + Gr. *neuron* nerve + *meros* part] one of the primitive segments of the gray matter of the spinal cord.

polioplasm (pol'e-o-plazm') [*polio-* + Gr. *plasma* something formed] the internal, granular protoplasm proper of a cell.

poliosis (pol'e-o'sis) premature grayness of the hair. **p. cir-**

cumscrisp/ta, grayness of the hair in a circumscribed area of the scalp.

poliothrix (pol'e-o-thriks) [*polio-* + Gr. *thrix* hair] **poliosis**.

poliovirus (po'le-o-vi'rus) the etiologic agent of poliomyelitis, separable, on the basis of specificity of neutralizing antibody, into three serotypes, designated types 1, 2, and 3. Over the years, type 1 has been responsible for about 85 per cent of all paralytic poliomyelitis and for most epidemics, and type 3 for about 10 per cent of paralytic poliomyelitis and for occasional epidemics. Type 2 has been responsible for about 5 per cent of paralytic poliomyelitis. Epidemics caused by poliovirus are now largely controlled by vaccines. **p. mu'ris**, Theiler's virus.

polipropene (pol'ē-pro'pēn) chemical name: 1-propene homopolymer; a tablet excipient for pharmaceutical preparations, (C₃H₆)_n.

polishing (pol'ish-ing) 1. the creation of a smooth and glossy finish on a surface, as of a denture. 2. [Pl.] material obtained by abrasion of a solid, such as that (*rice polishings* or *perpolitiones oryzae*, a rich source of vitamin B) produced by the milling of rice.

polisography (pol'ē-sog'rah-fe) [Gr. *polys* many + *isos* same + *graphein* to write] roentgenography in which several exposures are made in the same film.

Politzer's bag, etc. (pol'it-zerz) [Adam *Politzer*, Hungarian otologist, 1835-1920] see under *bag*, *cone*, *operation*, *speculum*, *test*, and *treatment*.

politzerization (pol'it-zer-i-za'shun) [Adam *Politzer*] inflation of the middle ear by means of a Politzer bag. **negative p.**, displacement of secretion from a cavity through negative pressure produced by means of a Politzer bag.

polkissen (pōl-kis'en) [Ger. "pole cushion"] juxtaglomerular cells.

poll (pōl) the back part of the head, especially that of an animal.

pollakidipsia (pol'ah-kī-dip'se-ah) [Gr. *pollakis* often + *dipsa* thirst + *-ia*] a condition characterized by abnormally frequent occurrence of the sensation of thirst.

pollakisuria (pol'ah-kī-su're-ah) pollakiuria.

pollakiuria (pol'ah-ke-u're-ah) [Gr. *pollakis* often + *ouron* urine + *-ia*] unduly frequent passage of the urine.

pollantin (pol-lan'tin) an antitoxin derived from the blood serum of horses previously inoculated with extracts of the pollen of certain plants; once used in the treatment of hay fever.

polled (pōld) having no horns; said of cattle that have been bred for this inherited trait.

pollen (pōl'en) the mass of microspores (male fertilizing elements) of flowering plants. Many pollens, especially the airborne pollens, are allergens; i.e., they produce proteinaceous antigens capable of sensitizing susceptible persons and producing allergic symptoms.

pollenarium (pol'ē-na're-um) a building or room for the collection and storing of pollens.

pollenogenic (pol'ē-no-jen'ik) [*pollen* + Gr. *gennan* to produce] caused by the pollen of plants.

pollenosis (pol'ē-no'sis) pollinosis.

pollex (pōl'eks), pl. *pol'lices* [L.] [NA] the first digit of the hand, or thumb. **p. exten'sus**, backward deviation of the thumb. **p. flex'us**, permanent flexion of the thumb. **p. val'gus**, deviation of the thumb toward the ulnar side. **p. va'rus**, deviation of the thumb toward the radial side.

pollicization (pol'is-i-za'shun) [L. *pollex* thumb] the replacement or rehabilitation of a thumb, especially surgical construction of a thumb from a portion of the index finger.

pollination (pol'i-na'shun) the transfer of pollen from anther to stigma of a flowering plant.

pollinium (pol'i-ne'um) an aggregation of pollen grains held together by a mucilaginous fluid and transported as a whole during pollination.

pollinosis (pol'i-no'sis) the allergic reaction in the body to the airborne pollen of plants, resulting in the seasonal type of hay fever or rose cold. See *seasonal hay fever*, under *fever*.

pollodic (pōl-lo'dik) [Gr. *pollo* many + *hodos* way] panthodic.

pollution (pō-lu'shun) [L. *pollutio*] 1. the act of defiling or making impure. 2. the discharge of semen without coition. **diurnal p.**, **p. nim'iae**, spermatorrhea.

polocyte (pō-lo-sit) [Gr. *polos* pole + *-cyte*] see *polar bodies*, under *body*.

polonium (po-lo'ne-um) [L. *Polonia* Poland] a rare metal resembling bismuth, discovered in 1898 in pitchblende; atomic number, 84; atomic weight, 210; symbol, Po. It is radioactive, but less so than radium.

poloxalene (pol-oks'ah-lēn) a liquid poloxamer, having a molecular weight of approximately 3000; used as a surfactant in pharmaceutical preparations and in the prevention of bloat in ruminants.

poloxalkol (pol-ok'sal-kol) poloxamer 188.

poloxamer (pol-oks'ah-mer) any of a series of nonionic surfactants of the polyoxypropylene-polyoxyethylene copolymer type,

having the general formula HO(C₂H₄O)_a(C₃H₆O)_b(C₂H₄O)_c.H, where *a* = *c*; the molecular weights of the members of the series vary from about 1000 to more than 16000. The term is used in conjunction with a numerical suffix for individual unique identification of products that may be used as a food, drug, or cosmetic. Poloxamers may be surfactants, emulsifiers, or stabilizers. **p. 182L**, a liquid poloxamer, having an average molecular weight of 2450; used as a food additive and pharmaceutical aid. **p. 188**, a waxy poloxamer, having an average molecular weight of 8350; used as a cathartic, administered orally. Called also *poloxalkol*. **p. 331**, a liquid poloxamer, having an average molecular weight of 3800; used as a food additive.

polster (pōl'ster) a small bulge, as on a vessel wall. **Sander-son p's**, collections of small follicles scattered throughout the thyroid gland, so arranged that each produces a characteristic bulge.

poltophagy (pol-tof'ah-je) [Gr. *poltos* porridge + *phagein* to eat] thorough chewing of the food so that it becomes reduced to a porridge-like mass.

polus (pō'lus), pl. *po'li* [L.] a pole: either extremity of an axis; [NA] a general term for the extremity of an organ. **p. ante'rior bul'bi oc'uli** [NA], anterior pole of eyeball: the center of the anterior curvature of the eyeball. **p. ante'rior len'tis** [NA], anterior pole of lens: the central point of the anterior surface of the lens. **p. fronta'lis hemisphe'rii cer'ebri** [NA], frontal pole of hemisphere of cerebrum: the most prominent part of the anterior end of each hemisphere of the brain. **p. occipita'lis hemisphe'rii cer'ebri** [NA], occipital pole of hemisphere of cerebrum: the most posterior prominence of the occipital lobe of the cerebral hemisphere. **p. poste'rior bul'bi oc'uli** [NA], posterior pole of eyeball: the center of the posterior curvature of the eyeball. **p. poste'rior len'tis** [NA], posterior pole of lens: the central point of the posterior surface of the lens. **p. tempora'lis hemisphe'rii cer'ebri** [NA], temporal pole of hemisphere of cerebrum: the prominent anterior end of the temporal lobe of the brain.

poly (pōl'e) colloquial name for a polymorphonuclear leukocyte; see *neutrophil*, def. 1.

poly- [Gr. *polys* many] a combining form meaning many or much.

Polya's operation (pōl'yahz) [Jenő (Eugene) *Polya*, Budapest surgeon, 1876-1944] see under *operation*.

polyacid (pol'e-as'id) capable of neutralizing several molecules of an acid radical; said of a base or basic radical.

polyacrylamide (pol'e-ah-kri'l'ah-mīd) a polymer of acrylamide.

polyadenia (pol'e-ah-de'ne-ah) [*poly-* + Gr. *adēn* gland + *-ia*] pseudoleukemia.

polyadenitis (pol'e-ad'ē-ni'tis) [*poly-* + Gr. *adēn* gland + *-itis*] inflammation of several or many glands. **malignant p.**, bubonic plague.

polyadenoma (pol'e-ad'ē-no'mah) adenoma of many glands.

polyadenomatosis (pol'e-ad'ē-no-mah-to'sis) multiple adenomas in a part.

polyadenopathy (pol'e-ad'ē-nop'ah-the) any disease affecting several glands at once.

polyadenosis (pol'e-ad'ē-no'sis) disorder of several glands, particularly of several endocrine glands.

polyadenous (pol'e-ad'ē-nus) [*poly-* + Gr. *adēn* gland] having or affecting many glands.

polyagglutinability (pol'e-ah-gloo'ti-nah-bil'i-te) the susceptibility to agglutination by a number of agents not necessarily corresponding to the antigenic structure of the agglutinin.

polyalcoholism (pol'e-al'ko-hol-izm) intoxication or poisoning by a mixture of different alcohols.

polyalgnesia (pol'e-al-je'se-ah) [*poly-* + Gr. *algēs* sense of pain + *-ia*] a condition in which a single pin-prick feels as if several had been made.

polyamine (pol'e-am'in) any compound, e.g., spermine and spermidine, containing two or more amine groups.

polyandry (pol'e-an'dre) [*poly-* + Gr. *aner* man] 1. the concurrent marriage of a woman to more than one man, as practiced by certain peoples. 2. union of two or more male pronuclei with a female pronucleus, resulting in polyploidy of the zygote. Cf. *polygyny*.

Polyangiaceae (pol'e-an'je-a'se-e) a family of schizomycetes, order Myxobacterales, made up of saprophytic microorganisms found in soil and decaying organic matter, and including four genera, *Chondromyces*, *Podangium*, *Polyangium*, and *Synangium*.

polyangiitis (pol'e-an'je-i'tis) inflammation involving multiple blood or lymph vessels.

Polyangium (pol'e-an'je-um) a genus of Schizomycetes of the order Myxobacterales, family Polyangiaceae.

polyarteritis (pol'e-ar'tē-ri'tis) [*poly-* + Gr. *artēria* artery + *-itis*] a condition marked by multiple sites of inflammatory and destructive lesions in the arterial system; see *periarteritis nodosa*.

polyarthric (pol'e-ar'thrik) [*poly-* + Gr. *arthron* joint] pertaining to or affecting many joints.

polyarthritis (pol'e-ar-thri'tis) [*poly-* + Gr. *arthron* joint + *-itis*] an inflammation of several joints together. **benign p.**, polyarthritis that is usually mild, but may be severe, though without permanent joint changes; attacks usually occur in winter and last only a few months. **chronic secondary p.**, Jaccoud's syndrome. **chronic villous p.**, chronic inflammation of the synovial membrane of several joints. **p. des'truens**, rheumatoid arthritis. **p. nodo'sa**, periarteritis nodosa. **peripheral p.**, that in which the knees and ankles tend to be involved more commonly than the small joints of the hands or feet; asymmetric involvement is common and the number of joints affected tends to be limited. **p. rheumat'ica acu'ta**, rheumatic fever. **tuberculous p.**, pulmonary hypertrophic osteoarthropathy. **vertebral p.**, disease of the intervertebral substance without caries of the bodies of the vertebrae.

polyarticular (pol'e-ar-tik'u-lar) [*poly-* + L. *articularis* joint] affecting many joints.

polyatomic (pol'e-ah-tom'ik) [*poly-* + Gr. *atomon* atom] composed of several atoms.

polyauxotroph (pol'e-awk'so-trōf) [*poly-* + Gr. *auxein* to increase + *trophē* nourishment] an organism, especially a mutant, which requires multiple growth factors.

polyauxotrophic (pol'e-awk'so-trōf'ik) requiring multiple growth factors; used especially with reference to a single mutation that causes a multiple requirement.

polyavitaminosis (pol'e-a-vi'tah-min-o'sis) [*poly-* + *avitaminosis*] a deficiency disease in which more than one vitamin is lacking in the diet.

polyaxon (pol'e-ak'son) [*poly-* + Gr. *axōn* axis] a nerve cell from the horizontal dendrites of which four or more axons or branches are given off.

polyaxonic (pol'e-ak-son'ik) having several axons.

polyazin (pol'e-az'in) an organic chemical compound whose molecules contain atoms two or more of which are nitrogen.

polybasic (pol'e-ba'sik) [*poly-* + Gr. *basis* base] 1. denoting any acid which has several hydrogen atoms replaceable by a base. 2. denoting any salt of a polybasic acid formed by replacing some or all of its hydrogen atoms by a base.

polyblast (pol'e-blast) [*poly-* + Gr. *blastos* germ] Maximow's name for the mononuclear exudate cells in inflamed tissues. According to him they arise from the wandering cells of the tissues and from hypertrophied nongranular leukocytes which have left the blood stream. As now used, the term is synonymous with *macrophage*.

polyblennia (pol'e-blen'e-ah) [*poly-* + Gr. *blenna* mucus + *-ia*] the secretion of an excessive quantity of mucus.

Polybrene (pol'e-brēn) trademark for a preparation of hexadimethrine bromide.

polybutilate (pol'e-bu'tī-lāt) chemical name: poly[oxy-1,4-butanediyl oxy(1,6-dioxo-1,6-hexanediyl)]; a surgical suture coating, (C₁₀H₁₆O₄)_n.

polycarbophil (pol'e-kar'bo-fil) [USP] a pharmacologically inert, polyacrylic acid cross-linked with divinyl glycol, occurring as white to creamy white granules; used as a gastrointestinal absorbent in the treatment of diarrhea.

polycellular (pol'e-sel'u-lar) multicellular.

polycentric (pol'e-sen'trik) having many centers.

polycentricity (pol'e-sen-tris'ti-te) the state or quality of being polycentric.

polyceptor (pol'e-sep'tor) [*poly-* + *ceptor*] in early immunologic theory, an amboceptor capable of binding a number of different complements.

polychieiria (pol'e-ki're-ah) [*poly-* + Gr. *cheir* hand + *-ia*] the condition of having more than two hands.

polychemotherapy (pol'e-ke'mo-ther'ah-pe) treatment by the simultaneous administration of several chemotherapeutic agents.

polychloruria (pol'e-klo-roo're-ah) an increased excretion of chlorine in the urine.

polycholia (pol'e-ko'le-ah) [*poly-* + Gr. *cholē* bile + *-ia*] excessive flow or secretion of bile.

polychondritis (pol'e-kon-dri'tis) inflammation involving many cartilages of the body. **chronic atrophic p.**, **p. chron'ica atro'phicans**, relapsing p. **relapsing p.**, an acquired disease of unknown etiology, having a chronic course and a tendency to recurrence, and marked by inflammatory and degenerative lesions of various cartilaginous structures, including those of the joints, ears, nose, trachea, and bronchi, resulting in such deformities as floppy ear and saddle nose; if the tracheal or bronchial wall collapses, respiratory obstruction may occur. The aorta and the sclera and cornea are also affected. Called also *chronic atrophic p.*, *p. chronica atrophicans*, and *polychondro-pathia*.

polychondropathia (pol'e-kon'dro-path'e-ah) relapsing polychondritis.

polychondropathy (pol'e-kon-drop'ah-the) relapsing polychondritis.

polychrest (pol'e-krest) [*poly-* + Gr. *chrēstos* useful] 1. useful in many conditions. 2. a remedy useful in many diseases.

polychromasia (pol'e-kro-ma'ze-ah) 1. variation in the hemoglobin content of the erythrocytes of the blood. 2. polychromatophilia.

polychromate (pol'e-kro'māt) a person who can distinguish many colors.

polychromatia (pol'e-kro-ma'she-ah) polychromatophilia.

polychromatic (pol'e-kro-mat'ik) [*poly-* + Gr. *chrōma* color] exhibiting many colors. Cf. *monochromatic*.

polychromatocyte (pol'e-kro-mat'o-sit) a cell that is stainable with various stains or colors.

polychromatocytosis (pol'e-kro'mah-to-si-to'sis) polychromatophilia.

polychromatophil (pol'e-kro-mat'o-fil) [*poly-* + Gr. *chrōma* color + *philein* to love] a cell or other element that is stainable with various stains or colors.

polychromatophilia (pol'e-kro'mah-to-fil'e-ah) 1. the quality of being stainable with various stains or tints; affinity for all sorts of stains. 2. a condition in which the erythrocytes, on staining, show various shades of blue combined with tinges of pink.

polychromatophilic (pol'e-kro'mah-to-fil'ik) pertaining to or characterized by polychromatophilia.

polychromatosis (pol'e-kro'mah-to'sis) an excess of abnormally staining erythrocytes in the blood; see *polychromatophilia*, def. 2.

polychromemia (pol'e-kro-me'me-ah) [*poly-* + Gr. *chrōma* color + *haima* blood + *-ia*] increase in the coloring matter of the blood.

polychromic (pol'e-kro'mik) pertaining to or exhibiting many colors.

polychromophil (pol'e-kro'mo-fil) polychromatophil.

polychromophilia (pol'e-kro-mo-fil'e-ah) polychromatophilia.

polychylia (pol'e-ki'le-ah) [*poly-* + Gr. *chylos* chyle + *-ia*] excessive production of chyle.

Polycillin (pol'e-sil'in) trademark for preparations of ampicillin.

polyclinic (pol'e-klin'ik) [*poly-* + Gr. *klinē* bed] a hospital and school where diseases and injuries of all kinds are studied and treated clinically.

polyclonal (pol'e-klōn'al) derived from different cells; of or pertaining to several clones.

polyclonia (pol'e-klo'ne-ah) [*poly-* + Gr. *klonos* clonus + *-ia*] a disease marked by many clonic spasms, resembling tic and chorea, but distinct from either.

polycopria (pol'e-kop're-ah) [*poly-* + Gr. *kopros* filth + *-ia*] (*obs.*) excessive formation of feces.

polycoria (pol'e-ko're-ah) 1. [*poly-* + Gr. *korē* pupil + *-ia*] the existence of more than one pupil in an eye. 2. [*poly-* + Gr. *koros* surfeit + *-ia*] the deposit of reserve material in an organ or tissue so as to produce enlargement. **p. spu'ria**, a condition in which the iris contains several openings or holes. **p. ve'ra**, the existence in the eye of several pupils, each with its own sphincter.

polycrotic (pol'e-krot'ik) [*poly-* + Gr. *krotos* beat] having several secondary waves to each pulse beat.

polycrotism (pol-ik'ro-tizm) the fact or quality of being polycrotic.

polycyclic (pol'e-si'klik) [*poly-* + Gr. *kyklos* ring] containing more than one ring or cycle (frequency).

Polycycline (pol'e-si'klēn) trademark for preparations of tetracycline.

polycyesis (pol'e-si-e'sis) [*poly-* + Gr. *kyēsis* pregnancy] multiple pregnancy.

polycystic (pol'e-sis'tik) [*poly-* + Gr. *kystis* cyst] containing or made up of many cysts.

polycystoma (pol'e-sis-to'mah) a condition in which a part, especially the breast, is riddled with cysts.

polycyte (pol'e-sit) [*poly-* + Gr. *kytos* cell] a hypersegmented polymorphonuclear leukocyte of normal size. Cf. *macropolycyte*.

polycythemia (pol'e-si-the'me-ah) [*poly-* + Gr. *kytos* cell + *haima* blood + *-ia*] an increase in the total red cell mass of the blood; see *absolute p.* and *relative p.* **absolute p.**, an increase in red cell mass caused by a sustained overactivity of the erythroid component of the bone marrow, which may occur as a compensatory physiologic response to tissue hypoxia (see *secondary p.*), or as the principal manifestation of polycythemia vera. Cf. *relative p.* **appropriate p.**, see *secondary p.* **benign p.**, stress p. **compensatory p.**, see *secondary p.* **p. hyperton'ica**, stress p. **inappropriate p.**, see *secondary p.* **myelopathic p.**, **primary p.**, **p. vera**. **relative p.**, a decrease in plasma volume without change in red blood cell mass so that the erythrocytes become more concentrated (elevated hematocrit); it

may occur as an acute transient condition due to marked loss of body fluid or lowered fluid intake or a combination of both, or it may be a chronic condition associated with a low normal plasma volume and a high normal red cell mass or with other factors (see *stress p.*). Cf. *absolute p.* **p. ru'bra, p. ru'bra ve'ra**, *p. vera*. **secondary p.**, any absolute increase in the total red cell mass other than polycythemia vera, occurring as a physiologic response to tissue hypoxia. It may be compensatory and *appropriate*, adjusting for general tissue hypoxia, such as that occurring in association with pulmonary disease, alveolar hypoventilation, cardiovascular disease, and prolonged exposure to high altitude or occurring as a result of defective hemoglobin or drugs. Or it may be *inappropriate*, reflecting excessive erythropoietin production due to renal or extrarenal disorders. Called also *erythrocytosis*. **splénomegalic p.**, *p. vera*. **spurious p.**, 1. relative *p.* 2. *stress p.* **stress p.**, chronic relative polycythemia (q.v.) usually affecting white, middle-aged, mildly obese males who are active, anxiety-prone, and hypertensive, occurring without the characteristic symptoms associated with polycythemia vera, i.e., without leukocytosis, splenomegaly, and thrombocytosis. Called also *benign p.*, *Gaisböck's disease* or *syndrome*, and *stress erythrocytosis*. **p. ve'ra**, a myeloproliferative disorder of unknown etiology, characterized by abnormal proliferation of all hematopoietic bone marrow elements and an absolute increase in red cell mass and total blood volume, associated frequently with splenomegaly, leukocytosis, and thrombocytosis. Hematopoiesis is also reactive in extramedullary sites (liver and spleen). In time, myelofibrosis occurs. Called also *erythremia*, *erythrocythemia*, *p. ruba*, *splénomegalic p.*, *myelopathic p.*, *erythrocytosis megalosplenica*, *Osler's disease*, *Vaquez's disease*, and *Vasquez-Osler disease*. Cf. *secondary p.*

polydactylia (pol'e-dak-til'e-ah) polydactyly.

polydactylism (pol-e-dak'til-izm) polydactyly.

polydactyly (pol'e-dak'ti-le) [*poly-* + Gr. *daktylos* finger + *-ia*] a developmental anomaly characterized by the presence of supernumerary digits (fingers or toes) on the hands or feet.

polydentia (pol'e-den/she-ah) polyodontia.

polydipsia (pol'e-dip/se-ah) [*poly-* + Gr. *dipsa* thirst + *-ia*] excessive thirst persisting for long periods of time, as in diabetes mellitus.

polydispersoid (pol'e-dis-per'soid) a colloid in which the disperse phase consists of particles having different degrees of dispersion.

polydyscrinia (pol'e-dis-krin'e-ah) pluridyscrinia.

polydysplasia (pol'e-dis-pla/ze-ah) [*poly-* + *dysplasia*] faulty development in several types of tissue or several organs or systems. **hereditary ectodermal p.**, congenital ectodermal defect; see under *defect*.

polydysspondylism (pol'e-dis-spon/di-lizm) malformation of several vertebrae, associated with dwarfed stature, low intelligence, and malformation of the sella turcica.

polydystrophic (pol'e-dis-tro'fik) pertaining to or exhibiting polydystrophy.

polydystrophy (pol'e-dis'tro-fe) dystrophy of several tissues or structures, as may occur in congenital anomalies. **pseudo-Hurler p.**, mucopolidiosis III.

polyelectrolyte (pol'e-e-lek'tro-lit) an ion containing more than two charges.

polyembryony (pol'e-em-bri'o-ne) [*poly-* + *embryo*] the production of two or more embryos from the same ovum or seed.

polyendocrine (pol'e-en/do-krin) pertaining to or affecting several endocrine glands; see under *adenomatosis*.

polyendocrinoma (pol'e-en'do-kri-no'mah) polyendocrine adenomatosis.

polyene (pol-e'en) a chemical compound in which there are several conjugated double bonds.

polyerg (pol'e-erg) [*poly-* + Gr. *ergon* work] a monogenic antiserum which reacts with heterologous antigens.

polyergic (pol'e-er'jik) able to act in several different ways.

polyesthesia (pol'e-es-the'ze-ah) [*poly-* + Gr. *aisthesis* perception + *-ia*] a condition in which a single object seems to be felt in several different places.

polyesthetic (pol'e-es-thet'ik) pertaining to or affecting several senses or sensations.

polyestradiol phosphate (pol'e-es'trah-di'ol, pol'e-es-tra'-de-ol) a polymer of estradiol phosphate having estrogenic activity similar to that of estradiol; used in the palliative therapy of prostatic carcinoma, administered intramuscularly.

polyestrous (pol'e-es'trus) completing two or more estrus cycles in each sexual season.

polyethadene (pol-e-eth'ah-dēn) chemical name: 1,2,3,4-di-epoxybutane polymer with ethylenimine; an antacid, (C₄H₆O₂)_n (C₄H₅N)_n.

polyethylene (pol'e-eth'i-lēn) polymerized ethylene, (CH₂—CH₂)_n, a synthetic plastic material, forms of which have been used in reparative surgery.

polyethylene glycol (pol'e-eth'i-lēn gli'kol) [NF] a generic

name for mixtures of condensation polymers of ethylene oxide and water, represented by the general formula H(OCH₂CH₂)_nOH, in which *n* is greater than or equal to 4. The term is used in combination with a numeric suffix which indicates the approximate average molecular weight. Those with average molecular weights between 200 and 700 are liquid and those above 1000 are waxlike solids: *p. glycol 3000* (*n* varies from 5 to 5.75) is used as a solvent and dispensing agent in pharmaceutical preparations; *p. glycol 400* (*n* varies from 8.2 to 9.1), *p. glycol 600* (*n* varies from 12.5 to 13.9), and *p. glycol 1500* (*n* varies from 29 to 36) are used as ointment and suppository bases; *p. glycol 1540* (*n* varies from 28 to 36) is used as a vehicle in pharmaceutical preparations; *p. glycol 4000* (*n* varies from 68 to 84) and *p. glycol 6000* (*n* varies from 158 to 204) are used as ointment and suppository bases and as tablet excipients. Called also *macrogol*.

polyferose (pol-i-fer'ōs) a chelate complex of iron and a polymerized derivative of sucrose; a hematinic.

polyfolliculinic (pol'e-fo-lik'u-lin'ik) marked by extensive secretion of folliculin (estrone).

Polygala (po-lig'ah-lah) [*poly-* + Gr. *gala* milk] a genus of plants (milkworts) of many species. *P. senega* L. (Polygalaceae), or seneca snakeroot, is found in North America. See *senega*.

polygalactia (pol'e-gah-lak'she-ah) [*poly-* + Gr. *gala* milk] excessive secretion of milk.

polygalacturonase (pol'e-gah-lak-tu'ro-nās) poly-α-1,4-galacturonide glycanohydrolase: an enzyme present in most plants that catalyzes the hydrolysis of pectin to sugars and galacturonic acid; called also *pectinase*.

polygalin (po-lig'ah-lin) senegenin.

polygamy (po-lig'ah-me) [*poly-* + Gr. *gamos* marriage] the concurrent marriage of a woman or man to more than one mate, as opposed to monogamy. See also *polyandry* and *polygyny*.

polyganglionic (pol'e-gang'gle-on'ik) [*poly-* + Gr. *ganglion* ganglion] 1. having or pertaining to several or many ganglia. 2. affecting several lymphatic glands.

polygen (pol'e-jen) 1. an element which is able to combine in two or more proportions. 2. a complex antigen comprised of two or more kinds of antigenic specificities (antigenic determinants) each of which stimulates the production of specific antibodies following inoculation of the complex antigen into the animal body.

polygene (pol'ē-jēn) a group of nonallelic genes (multiple factors or cumulative genes) that interact to influence the same character in the same way so that the effect is cumulative.

polygenic (pol'ē-jēn'ik) [*poly-* + *gene*] pertaining to or determined by the action of several different genes. Cf. *multifactorial*.

polyglactin 910 (pol'e-glak'tin) chemical name: 2-hydroxypropanoic acid polymer with hydroxyacetic acid; an absorbable surgical suture material, (C₂H₃O₂)_m(C₃H₃O₂)_n.

polyglandular (pol'e-glan'du-lar) pertaining to or affecting several different glands.

polygnathus (po-lig'nah-thus) [*poly-* + Gr. *gnathos* jaw] a monster in which a parasitic twin is attached to the jaw of the autosite.

Polygonatum (pol'e-go-na'tum) [*poly-* + Gr. *gony* knee] a genus of liliaceous plants. *P. biflorum* (Walt.) Ell., or Solomon's seal, is a perennial herb of eastern North America, tonic, vulnerary, diuretic, emetic, and purgative; in a considerable dose it is a cardiac poison. The starchy rootstock was once used as a food by certain Indians.

polygram (pol'ē-gram) a tracing made by a polygraph.

polygraph (pol'ē-graf) [*poly-* + Gr. *graphein* to write] an instrument for simultaneously recording various physiological responses as represented by mechanical or electrical impulses, such as respiratory movements, pulse wave, blood pressure, and the psychogalvanic reflex. Such phenomena reflect emotional reactions which are of use in detecting deception. Popularly known as *lie detector*.

polygyny (po-lij'i-ne) [*poly-* + Gr. *gynē* woman] 1. the concurrent marriage of a man to more than one woman, as practiced by certain peoples. 2. union of two or more female pronuclei with a male pronucleus, resulting in polyploidy of the zygote. Cf. *polyandry*.

polygyria (pol'e-ji're-ah) [*poly-* + Gr. *gyros* gyrus + *-ia*] a condition in which there is more than the normal number of convolutions in the brain.

polyhedral (pol'e-he'dral) [*poly-* + Gr. *hedra* seat, base] having many faces or sides.

polyhexose (pol'e-hek'sōs) polysaccharide formed by the enzymatic condensation of hexose sugars.

polyhidrosis (pol'e-hid-ro'sis) [*poly-* + Gr. *hidrōs* sweat + *-osis*] hyperhidrosis.

polyhybrid (pol'e-hi'brid) a hybrid whose parents differ from each other in more than three characters.

polyhydramnios (pol'e-hi-dram'ne-os) [*poly-* + Gr. *hydōr* water + *amnion* amnion] hydramnios.

polyhydric (pol'e-hi'drik) containing more than two hydroxyl groups.

polyhydruria (pol''e-hi-droo're-ah) [*poly-* + Gr. *hydōr* water + *ouron* urine + *-ia*] abnormal dilution of the urine.

polyhypermenorrhea (pol''e-hi'per-men''o-re'ah) [*poly-* + Gr. *hyper* over + *menorrhea*] frequent menstruation with abnormally profuse discharge.

polyhypomenorrhea (pol''e-hi'po-men''o-re'ah) [*poly-* + Gr. *hypo* under + *menorrhea*] frequent menstruation with deficient amount of discharge.

polyidrosis (pol''e-id-ro'sis) hyperhidrosis.

polyinfection (pol''e-in-fek'shun) [*poly-* + *infection*] infection with more than one organism.

polyionic (pol''e-i-on'ik) containing several different ions (e.g., potassium, sodium, etc.), as a polyionic solution.

polykaryocyte (pol''e-kar'e-o-sit) [*poly-* + Gr. *karyon* nucleus + *-cyte*] a giant cell containing several nuclei.

Polykol (pol'ē-kol) trademark for preparations of poloxalkol.

polylecithal (pol''e-les'i-thal) [*poly-* + Gr. *lekithos* yolk] macrolethical.

polyleptic (pol''e-lep'tik) [*poly-* + Gr. *lambanein* to seize] having many remissions and exacerbations.

polylysine (pol''e-li'sin) a polypeptide composed of lysine molecules in peptide linkage; used with penicillenic acid in the detection of penicillin sensitivity; see *penicilloyl-polylysine*.

polymacon (pol''e-ma'kon) chemical name: 2-methyl-2-propenoic acid 1,2-ethanediyl ester polymer with 2-hydroxyethyl 2-methyl-2-propenoate; a hydrophilic contact lens material, (C₆H₁₀O₃)_n.

polymastia (pol''e-mas'te-ah) [*poly-* + Gr. *mastos* breast] the presence of more than one pair of mammae, or breasts.

Polymastigida (pol''e-mas'ti-gi'dah) an order of protozoa of the class Zoomastigophora, subphylum Mastigophora, consisting of small organisms possessing three to eight or more flagella and usually one or two nuclei, although some are multinucleate; they are found in the digestive tract of various arthropods and vertebrates. It includes the genera *Callimastix*, *Enteromonas*, *Eutrichomastix*, *Copromastix*, *Chilomastix*, *Hexamita*, *Giardia*, and *Trichomonas*.

polymastigote (pol''e-mas'ti-gōt) [*poly-* + Gr. *mastix* lash] 1. having several flagella. 2. any member of the Polymastigida.

polymazia (pol''e-ma'ze-ah) polymastia.

polymelia (pol''e-me'le-ah) [*poly-* + Gr. *melos* limb + *-ia*] a developmental anomaly characterized by the presence of supernumerary limbs.

polymelus (po-lim'ē-lus) an individual exhibiting polymelia.

polymenia (pol''e-me'ne-ah) polymenorrhea.

polymenorrhea (pol''e-men''o-re'ah) [*poly-* + *menorrhea*] abnormally frequent menstruation.

polymer (pol'i-mer) [*poly-* + Gr. *meros* part] a compound, usually of high molecular weight, formed by the linear combination of simpler repeating molecules, or monomers. In immunology, immunoglobulins that form aggregates of more than one four-chain monomeric unit structure. For example, IgM and IgA both contain J chains which are associated with polymerization of the molecules. **addition p.**, a compound formed by the repeated combination of smaller molecules (monomers) without the formation of any other products (e.g., polyethylene). **condensation p.**, a compound formed by the repeated reaction of smaller molecules, involving at the same time the elimination of water or other simple compound (e.g., nylon).

polymerase (pol-im'er-ās) any enzyme that catalyzes polymerization. **DNA p.**, DNA nucleotidyltransferase. **RNA p.**, RNA nucleotidyltransferase. **RNA-dependent DNA p.**, an enzyme found in the white cells of leukemia patients, but not in normal patients.

polymeria (pol'i-me're-ah) [*poly-* + Gr. *meros* part + *-ia*] a developmental anomaly characterized by the presence of supernumerary parts or organs of the body.

polymeric (pol'i-mer'ik) exhibiting the characteristics of a polymer.

polymerid (po-lim'er-id) a polymer.

polymerism (po-lim'ē-rizm, pol'i-mē-rizm) the phenomenon, or process, which results in the formation of a polymer.

polymerization (pol'i-mer'i-za'shun) the act or process of forming a compound (polymer), usually of high molecular weight, by the combination of simpler molecules.

polymerize (pol'i-mer-iz) to subject to or to undergo polymerization.

polymetacarpia (pol''e-met'ah-kar'pe-ah) [*poly-* + *metacarpus* + *-ia*] presence of more than the normal number of metacarpal bones.

polymetatarsia (pol''e-met'ah-tar'se-ah) [*poly-* + *metatarsus* + *-ia*] presence of more than the normal number of metatarsal bones.

polymicrobial (pol''e-mi-kro'be-al) [*poly-* + *microbe*] characterized by the presence of several species of microorganisms.

polymicrobic (pol''e-mi-kro'bik) polymicrobial.

polymicrogyria (pol''e-mi''kro-jī're-ah) [*poly-* + Gr. *mikros* small + *gyros* convolution + *-ia*] a malformation of the brain characterized by development of numerous small convolutions (microgyri).

polymicrolipomatosis (pol''e-mi''kro-lip'o-mah-to'sis) [*poly-* + Gr. *mikros* small + *lipomatosis*] lipomatosis marked by the presence in the subcutaneous tissues of numerous small lipomas.

polymicrotome (pol''e-mi''kro-tōm) [*poly-* + *microtome*] a microtome which cuts several sections at once.

Polymnia (po-lim'ne-ah) [Gr.; one of the nine Muses] a genus of composite-flowered plants. *P. uvedalia* L., leafcup or bearsfoot, is anthelmintic, alterative, antispasmodic, and laxative.

polymorph (pol'e-morf) colloquial term for a polymorphonuclear leukocyte; see *neutrophil*, def. 2.

polymorphic (pol''e-mor'fik) [*poly-* + Gr. *morphe* form] occurring in several or many forms; appearing in different forms at different stages of development.

polymorphism (pol''e-mor'fizm) [*poly-* + Gr. *morphe* form] the quality or character of occurring in several different forms. **balanced p.**, an equilibrium mixture of homozygotes and heterozygotes maintained by separate and opposing forces of natural selection. **genetic p.**, the occurrence together in the same population of two or more genetically determined phenotypes in such proportions that the rarest of them cannot be maintained merely by recurrent mutation.

polymorphocellular (pol''e-mor'fo-sel'u-lar) [*poly-* + Gr. *morphe* form + L. *cellula* cell] having cells of many forms.

polymorphocyte (pol''e-mor'fo-sit) a cell with a polymorphic nucleus.

polymorphonuclear (pol''e-mor'fo-nu'kle-ar) [*poly-* + Gr. *morphe* form + *nucleus*] 1. having a nucleus deeply lobed or so divided that it appears to be multiple. 2. a polymorphonuclear leukocyte; see *neutrophil*, def. 1. **filament p.**, one whose nuclear segments are joined by the filaments. **nonfilament p.**, one whose nuclear segments are joined by wide bands.

polymorphous (pol''e-mor'fus) polymorphic. **p. perverse**, a term applied to infantile sexual impulses which have not become repressed into normal mature sexuality, but appear as sexual perversions or the bases of neuroses.

Polymox (pol'ē-moks) trademark for preparations of amoxicillin.

polymyalgia (pol''e-mi-al'je-ah) myalgia affecting several muscles. **p. arterit/ica**, p. rheumatica. **p. rheumat/ica**, a syndrome in the elderly characterized by proximal joint and muscle pain, high erythrocyte sedimentation rate, and a self-limiting course; it is frequently associated with temporal arteritis.

polymyarian (pol''e-mi-a're-an) [*poly-* + Gr. *mys* muscle] having many muscle cells in each quadrant of a cross section, the cells being coelomyarian in type; said of the muscle arrangement in certain nematodes.

polymyoclonus (pol''e-mi-ok'lo-nus) [*poly-* + Gr. *mys* muscle + *klonos* clonus] 1. a fine or minute muscular tremor. 2. polyclo-nia.

polymyopathy (pol''e-mi-op'ah-the) disease affecting several muscles simultaneously.

polymyositis (pol''e-mi'o-si'tis) [*poly-* + Gr. *mys* muscle + *-itis*] inflammation of several or many muscles at once, along with degenerative and regenerative changes marked by muscle weakness out of proportion to the loss of muscle bulk. When developing in adults, it is often associated with cancer. When accompanied by skin lesions, it is known as *dermatomyositis*. **p. hemorrha/gica**, inflammation of muscles associated with edema, dermatitis, and the presence of hemorrhages into and between the muscles. **trichinous p.**, trichinosis.

polymyxin (pol''e-mik'sin) the generic name for five polypeptide antibiotics (designated A, B, C, D, and E) derived from strains of the soil bacterium *Bacillus polymyxa*, having specific activity against gram-negative bacteria, including *Pseudomonas aeruginosa*, *Proteus vulgaris*, *Escherichia coli*, *Hemophilus influenzae*, *Aerobacter aerogenes*, and *Klebsiella pneumoniae*. The least toxic members of the group are polymyxins B, usually used in the form of the sulfate salt, and E (see *colistin*). **p. B sulfate** [USP], the sulfate salt of the least toxic member of the polymyxin group, occurring as a buff-colored powder; used in the treatment of various systemic, urinary tract, ophthalmic, otic, and cutaneous infections due to susceptible gram-negative bacteria, especially *Pseudomonas aeruginosa*, administered orally, parenterally, and topically.

polynesian (pol''e-ne'sik) [*poly-* + Gr. *nēsos* island] multiple and insular; occurring in many foci.

polyneur (pol''e-nu'ral) [*poly-* + Gr. *neuron* nerve] pertaining to or supplied by several nerves.

polyneuralgia (pol''e-nu-ral'je-ah) neuralgia of several nerves.

polyneuric (pol''e-nu'rik) polyneur.

polyneuritic (pol''e-nu-rit'ik) pertaining to or affected with polyneuritis.

polyneuritis (pol''e-nu-ri'tis) [*poly-* + Gr. *neuron* nerve + *-itis*] inflammation of many nerves at once; multiple, or disseminated,

neuritis. **acute febrile p.**, **acute idiopathic p.**, **acute infective p.**, **acute postinfectious p.**, rapidly progressive ascending motor neuron paralysis of unknown etiology, frequently following an enteric or respiratory infection. An autoimmune mechanism following viral infection has been postulated. It begins with paresthesias of the feet, followed by flaccid paralysis and weakness of the legs, ascending to the arms, trunk, and face, and is attended by slight fever, bulbar palsy, absent or lessened tendon reflexes, and an increase in the protein of the cerebrospinal fluid without corresponding increase in cells. Called also *Barré-Guillain syndrome*, *Guillain-Barré polyneuritis* or *syndrome*, *acute ascending spinal paralysis*, *acute postinfectious polyneuropathy*, *neuritis*, and *postinfectious p.* **anemic p.**, polyneuritis seen in subacute combined degeneration of the spinal cord which occurs in pernicious anemia. **p. cerebra/lis menierifor/mis**, symptoms of cochlear, vestibular, facial, and trigeminal nerve irritation occurring in the early period of syphilis; called also *Frankl-Hochwart's disease*. **endemic p.**, **p. endem'ica**, beriberi. **p. gallina/rum**, a form of polyneuritis seen in fowls fed a thiamine-deficient diet. **Guillain-Barré p.**, acute febrile p. **Jamaica ginger p.**, see under *paralysis*. **postinfectious p.**, acute febrile p. **p. potato/rum**, alcoholic neuropathy. **uveoparotitic p.**, uveoparotid fever.

polyneuromyositis (pol'e-nu'ro-mi'o-si'tis) inflammation of the muscles and peripheral nerves, with loss of reflexes, sensory loss, and paresthesias.

polyneuropathy (pol'e-nu-rop'ah-the) [*poly-* + Gr. *neuron* nerve + *pathos* disease] a disease which involves several nerves. **acute postinfectious p.**, acute febrile polyneuritis. **eryth-redema p.**, acrodynia.

polyneuroradiculitis (pol'e-nu'ro-rah-dik'u-li'tis) [*poly-* + Gr. *neuron* nerve + L. *radix* root + *-itis*] inflammation of the spinal ganglia, the nerve roots, and the peripheral nerves.

polynuclear (pol'e-nu'kle-ar) 1. pertaining to or having several nuclei. 2. polymorphonuclear.

polynucleate (pol'e-nu'kle-āt) having many nuclei.

polynucleated (pol'e-nu'kle-āt'ed) polynuclear.

polynucleolar (pol'e-nu'kle-o-lar) having several nucleoli.

polynucleotidase (pol'e-nu'kle-o'ti-dās) an enzyme or a group of enzymes that catalyze the depolymerization of nucleic acids of high molecular weight to form mononucleotides; found in pancreatic fluid and elsewhere.

polynucleotide (pol'e-nu'kle-o-tīd) any polymer of mononucleotides; nucleic acid.

polyodontia (pol'e-o-don'she-ah) [*poly-* + Gr. *odous* tooth] the presence of supernumerary teeth.

polyoma (pol'e-o'mah) a tumor caused by an oncogenic virus of broad host range, originally isolated from parotid gland tumors of mice inoculated with Gross leukemia virus.

polyomavirus (pol'e-o-mah-vi'rus) any of a subgroup of the papovaviruses causing neoplastic disease in mice and hamsters; the subgroup includes the K virus and vacuolating virus. Also written *polyoma virus*. Cf. *papillomavirus*.

polyonychia (pol'e-o-nik'e-ah) [*poly-* + Gr. *onyx* nail + *-ia*] the occurrence of supernumerary nails.

polyopia (pol'e-o'pe-ah) [*poly-* + Gr. *opsis* vision + *-ia*] the condition in which one object appears as two or more objects. **binocular p.**, **diplopia**. **p. monophthal'mica**, a condition in which an object looked at by one eye appears double.

polyopsia (pol'e-op'se-ah) polyopia.

polyopy (pol'e-o'pe) polyopia.

polyorchidism (pol'e-or'ki-dizm) a developmental anomaly characterized by the presence of more than two testes.

polyorchis (pol'e-or'kis) [*poly-* + Gr. *orchis* testis] a person with more than two testes.

polyorchism (pol'e-or'kizm) polyorchidism.

polyorrhomeningitis (pol'e-or'o-men'in-jī'tis) (*obs.*) polyserositis.

polyorrhymenitis (pol'e-or'hi-mē-ni'tis) [*poly-* + Gr. *orrhos* serum + *hymēn* membrane + *-itis*] (*obs.*) polyserositis.

polyostotic (pol'e-os-tot'ik) [*poly-* + L. *os* bone] pertaining to or affecting many bones.

polyotia (pol'e-o'she-ah) [*poly-* + Gr. *ous* ear] the condition of having more than two ears.

polyovular (pol'e-o'vu-lar) pertaining to or produced from more than one ovum, as polyovular twins.

polyovulatory (pol'e-ov'u-lah-to're) ordinarily discharging several ova in one ovarian cycle.

polyoxyethylene 50 stearate (pol'e-oks'e-eth'ah-lēn) [NF] a mixture of the mono- and distearate esters of mixed polyoxyethylene diols and the corresponding free diols, the average polymer length being equivalent to about 50 oxyethylene units, occurring as a soft, cream-colored, waxy solid; used as a surfactant and emulsifying agent in pharmaceutical preparations. Called also *polyoxyl 50 stearate*.

polyoxyl (pol'e-oks'il) any of various mixtures of the mono- and distearate esters of mixed polyoxyethylene diols and the

corresponding free diols. The term is used in combination with an identifying number which indicates the average polymer length in oxyethylene units: *p. 8 stearate* and *p. 40 stearate* [USP], in which the average polymer lengths in oxyethylene units are equivalent to about 8 and 40, respectively, are used as surfactants in pharmaceutical preparations. **p. 5 oleate**, peglicol 5 oleate. **p. 10 oleyl ether**, see under *ether*. **p. 20 celostearyl ether**, see under *ether*. **p. 50 stearate**, polyoxyethylene 50 stearate.

polyp (pol'ip) [Gr. *polypous* a morbid excrescence] a morbid excrescence, or protruding growth, from mucous membrane; classically applied to a growth on the mucous membrane of the nose, the term is now applied to such protrusions from any mucous membrane. **adenomatous p.**, a benign polypoid adenoma. **cardiac p.**, a ball thrombus or tumor attached by a pedicle to the inside of the heart. **cervical p.**, a common, relatively innocuous tumor of the uterine cervix, usually of the endocervical canal, composed of a loose fibromyxomatous stroma containing mucus-secreting endocervical glands; they vary widely in size and may produce irregular vaginal bleeding. **choanal p's**, nasal polyps that project posteriorly into the nasopharynx. **endometrial p's**, small, sessile, benign projecting masses on the endometrium, composed of an edematous stroma containing cystically dilated glands. **fibrinous p.**, an intrauterine polyp made up of fibrin from retained blood; it may grow from portions of an ovum or from a thrombus at the placental site. **gelatinous p.**, myxoma. **gum p.**, a small pedunculated growth on the gingiva. **Hopmann's p.**, a mass produced by papillary hypertrophy of the nasal mucosa, having something of the appearance of a papilloma. **hydatid p.**, polypus cysticus. **juvenile p's**, small, benign hemispheric hamartomas of the large intestine occurring sporadically in children; histologically, there is an abundant loose fibrovascular stroma containing widely spaced glands; called also *retention p.* **p's of larynx**, smooth, rounded, sessile or pedunculated swellings, occurring on the true vocal cords; caused by edema in the lamina propria of the mucous membrane. **lymphoid p's**, rare, benign tumors of the colon composed of aggregates of lymphoid tissue, usually covered by a fairly regular colonic mucosa. **nasal p's**, focal accumulations of edema fluid in the mucosa of the nose, with hyperplasia of the associated submucosal connective tissue. **retention p's**, juvenile p's.

polypapilloma tropicum (pol'e-pap'i-lo'mah trop'i-kum) yaws.

polyparasitism (pol'e-par'ah-si-tizm) infection or infestation by more than one variety of parasite.

polyparesis (pol'e-pah-re'sis) [*poly-* + Gr. *paresis* slackening] dementia paralytica.

polypathia (pol'e-path'e-ah) [*poly-* + Gr. *pathos* disease + *-ia*] the presence of several diseases at once.

polypectomy (pol'i-pek'to-me) [*polyp* + Gr. *ektomē* excision] surgical removal of a polyp.

polypeptidase (pol'e-pep'ti-dās) an enzyme that catalyzes the hydrolysis of polypeptides.

polypeptide (pol'e-pep'tid) [*poly-* + *peptide*] a peptide which on hydrolysis yields more than two amino acids; called tripeptides, tetrapeptides, etc., according to the number of amino acids contained. See *peptide*. **adrenocorticotrophic p.**, a hydroxylate of adrenocorticotrophic hormone; abbreviated ACTP. **vasoactive intestinal p.**, see under *peptide*.

polypeptidemia (pol'e-pep'ti-de'me-ah) [*polypeptide* + Gr. *haima* blood + *-ia*] the presence of polypeptides in the blood.

polypeptidorrhachia (pol'e-pep'ti-do-ra'ke-ah) [*polypeptide* + Gr. *rhachis* spine + *-ia*] the presence of polypeptides in the spinal fluid.

polyperiostitis (pol'e-per'os-ti'tis) inflammation of the periosteum of several bones. **p. hyperesthet'ica**, a chronic disease of the periosteum attended by extreme hyperesthesia of the skin and soft parts.

polyphagia (pol'e-fa'je-ah) [*poly-* + Gr. *phagein* to eat] 1. excessive or voracious eating. Cf. *bulimia*. 2. omnivorousness; craving for all kinds of food.

polyphalangia (pol'e-fah-lan'je-ah) side-by-side duplication of one or more of the phalanges of a digit.

polyphalangism (pol'e-fah-lan'jizm) polyphalangia.

polypharmaceutic (pol'e-fahr'mah-su'tik) pertaining to several drugs, especially to the administration of several drugs together.

polypharmacy (pol'e-fahr'mah-se) [*poly-* + Gr. *pharmakon* drug] 1. the administration of many drugs together. 2. the administration of excessive medication.

polyphase (pol'e-fāz) [*poly-* + *phase*] having several phases; containing colloids of several types.

polyphasic (pol'e-fa'zik) having or existing in many phases; having unlike particles in the disperse phase.

polyphenic (pol'e-fen'ik) see *pleiotropism*.

polyphenoloxidase (pol'e-fe'hol-ok'si-dās) a copper-containing oxidizing enzyme which oxidizes phenols and their amino

compounds (but not tyrosine) to quinones; occurring, for example, in potatoes and mushrooms.

polypophobia (pol'e-fō/be-ah) [*poly-* + Gr. *phobein* to be affrighted by] morbid dread or fear of many things.

polyphrasia (pol'e-fra/ze-ah) [*poly-* + Gr. *phrasis* speech] morbid volubility or loquacity. Cf. *verbigeration*.

polyphyletic (pol'e-fi-let'ik) [*poly-* + Gr. *phylē* tribe] arising or descending from more than one cell type.

polyphyletism (pol'e-fi/lē-tizm) polyphyletic theory; see under *theory*.

polyphyletist (pol'e-fi/lē-tist) an adherent of the polyphyletic theory, as in blood origin.

polyphyodont (pol'e-fi/o-dont) [*poly-* + Gr. *phyein* to produce + *odont* tooth] developing several sets of teeth successively throughout life.

polypi (pol'i-pi) [L.] plural of *polypus*.

polypiform (po-lip'i-form) resembling a polyp; polypoid.

polyponia (pol'e-pi-o'ne-ah) [*poly-* + Gr. *piōn* fat + *-ia*] obesity.

polyplastic (pol'e-plas'tik) [*poly-* + Gr. *plastos* molded] 1. containing many structural or constituent elements. 2. undergoing many changes of form.

Polyplax (pol'e-plaks) a sucking louse of rats and mice. *P. miacan'thus*, a form found infrequently on rats; *P. serra'tus*, a louse of rabbits which transmits tularemia; and *P. spinulo'sa*, the common louse of rats, which transmits murine typhus.

polyplegia (pol'e-ple'je-ah) [*poly-* + Gr. *plēgē* stroke + *-ia*] simultaneous paralysis of several muscles.

polypleurodiaphragmotomy (pol'e-ploo'ro-di'ah-fram-ot'o-me) [*poly-* + Gr. *pleura* rib + *diaphragm* + *tomē* a cutting] the operation of resecting several ribs and cutting through the diaphragm for access to the convex aspect of the liver.

polyploid (pol'e-ploid) [*poly-* + *haploid*] 1. having more than two full sets of homologous chromosomes. There may be three (triploid), four (tetraploid), five (pentaploid), six (hexaploid), seven (heptaploid), eight (octaploid), etc. 2. an individual or cell having more than two full sets of homologous chromosomes. Polyploid organisms, especially plants, are larger than normal and have larger cells. Affected animals are often abnormal in appearance and usually infertile. Cf. *aneuploid*.

polyploidy (pol'e-ploi'de) the state of having more than two full sets of homologous chromosomes (see *polyploid*).

polypnea (pol'ip-ne'ah) [*poly-* + Gr. *pnoia* respiration] a condition in which the rate of respiration is increased; hyperpnea.

polypodia (pol'e-po'de-ah) [*poly-* + Gr. *pous* foot] the presence of supernumerary feet.

polypoid (pol'e-poid) [*polyp* + Gr. *eidos* form] resembling a polyp.

polypoidosis (pol'e-poi-do'sis) a condition of multiple polypoid adenomas or carcinomas; diffuse adenomatosis.

polyporin (pol-ip'o-rin) a mixture of antibiotic substances from species of *Polyporus*, which is active against some bacteria.

polyporous (pol-ip'o-rus) having many pores.

Polyporus (pol-ip'o-rus) [*poly-* + Gr. *poros* pore] basidiomycetous fungi of the order Polyporales, series Hymenomycetes, containing many species, some of which are important pathogens of trees. *P. officinalis* (larch agaric, purging agaric, white agaric) is the source of agaric acid. See also *agaric*.

polyposia (pol'e-po'ze-ah) [*poly-* + Gr. *posis* + *-ia*] ingestion of abnormally increased amounts of fluids for long periods of time. Cf. *hyperposia*.

polyposis (pol'e-po'sis) the development of multiple polyps on a part. **p. co/li**, familial **p. familial p.**, multiple adenomatous polyps with high malignant potential, lining the mucous membrane of the intestine, particularly the colon, beginning at about puberty. It occurs in several autosomal dominant forms: In Gardner's syndrome, colonic polyposis is associated with epidermoid cysts, fibromas, osteomas of the skull, supernumerary teeth, and less commonly ampullary tumors. In Peutz-Jeghers syndrome, mucocutaneous pigmentation (particularly of the lips) is associated with hamartomas of the intestine, particularly the small bowel. In Canada-Cronkhite syndrome, familial polyposis is associated with ectodermal abnormalities. In Turcot syndrome, colonic polyposis is associated with gliomas of the central nervous system. Called also **p. coli**, **familial intestinal p.**, and **multiple familial p. familial intestinal p.**, familial **p. p. gas'trica**, the presence of multiple polyps on the gastric mucosa, usually associated with atrophic gastritis. **p. intestina'lis**, a condition in which polyps occur in the intestine and rectum. **multiple familial p.**, familial **p. p. ventric'uli**, **p. gas'trica**.

polypotome (po-lip'o-tōm) a cutting instrument for removing polyps.

polypotrite (po-lip'o-trit) [*polyp* + L. *terere* to crush] an instrument for crushing polyps.

polypous (pol'e-pus) of the nature of a polyp; polyp-like.

polypragmasy (pol'e-prag'mah-se) [*poly-* + Gr. *pragma* a doing] polypharmacy.

polyptychial (pol'e-ti'ke-al) [*poly-* + Gr. *ptychē* fold] arranged in several layers; said of glands whose cells are arranged on the basement membrane in several layers. Cf. *monoptychial*.

polypus (pol'i-pus), pl. *pol'ypi* [L.; Gr. *polypous*] a polyp. **p. angiomato'des**, a polyp rich in blood vessels. **p. cys'ticus**, a polyp in which the fibrous network is coarse, thus stimulating or actually producing cysts. **p. hydatido'sus**, **p. cysticus**. **p. telangiecto'des**, a polyp which contains many dilated blood vessels.

polyradiculitis (pol'ē-rah-dik'u-li'tis) [*poly-* + L. *radix* root + *-itis*] inflammation of the nerve roots.

polyradiculoneuritis (pol'ē-rah-dik'u-lo-nu-ri'tis) [*poly-* + L. *radix* root + Gr. *neuron* nerve + *-itis*] acute febrile polyneuritis which involves the peripheral nerves, the spinal nerve roots, and the spinal cord.

polyradiculoneuropathy (pol'ē-rah-dik'u-lo-nu-rop'ah-the) Guillain-Barré syndrome.

polyribosome (pol'e-ri'bo-sōm) a complex made up of ribosomal subunits assembled among themselves by the filaments of messenger RNA containing the genetic information; they play a role in the synthesis of peptides. Called also *ergosome* and *polysome*.

polyrrhea (pol'ē-re'ah) [*poly-* + Gr. *rhoia* flow] a copious fluid discharge.

polysaccharide (pol'e-sak'ah-rīd) a carbohydrate which on hydrolysis yields a large number (variously defined as five or more to eleven or more) of monosaccharides. Cf. *oligosaccharide*. **bacterial p's**, polysaccharides found in bacteria and especially in bacterial capsules. **capsular p.**, specific capsular substance. **gastric p.**, the mucopolysaccharide found in gastric mucus. **immune p's**, polysaccharides which can function as specific antigens, such as capsular substances. **pneumococcus p.**, a polysaccharide derived from the capsule of a pneumococcus. Over 70 types, each of specific sequence, are known; Type III consists of alternating amounts of glucose and glucuronic acid. **specific p's**, soluble polysaccharides obtained from various microorganisms which in high dilution precipitate specifically the antisera to the corresponding organisms.

polysaccharose (pol'e-sak'ah-rōs) polysaccharide.

polysarcia (pol'e-sar'se-ah) [*poly-* + Gr. *sarx* flesh] corpulence or obesity.

polysarcous (pol'e-sar'kus) corpulent; obese; affected with polysarcia.

polyscelia (pol'e-se'le-ah) [*poly-* + Gr. *skelos* leg + *-ia*] a developmental anomaly characterized by the presence of more than two legs.

polyscelus (pō-lis'ē-lus) [*poly-* + Gr. *skelos* leg] an individual exhibiting polyscelia.

polyscope (pol'e-skōp) [*poly-* + Gr. *skopein* to examine] diaphanoscope.

polysensitivity (pol'e-sen'si-tiv'i-te) sensitivity to a number of different stimuli.

polysensory (pol'e-sen'so-re) capable of responding to more than one kind of sensory input; said of certain neurons of the cerebral cortex and subcortical regions.

polyserositis (pol'e-se-ro-si'tis) general inflammation of serous membranes with serous effusion; see also *Concato's disease*. **familial recurrent p.**, familial Mediterranean fever. **peri-odic p.**, familial Mediterranean fever. **recurrent p.**, familial Mediterranean fever.

polysialia (pol'e-si-a'le-ah) [*poly-* + Gr. *sialon* saliva + *-ia*] ptyalism.

polysinusitis (pol'e-sin'u-i'tis) polysinusitis.

polysinusectomy (pol'e-si'nū-sek'to-me) excision of the diseased membrane of several of the paranasal sinuses.

polysinusitis (pol'e-si-nū-si'tis) [*poly-* + *sinusitis*] inflammation of several sinuses at once.

polysomatic (pol'e-so-mat'ik) characterized by or pertaining to polysomaty.

polysomaty (pol'e-so'mah-te) [*poly-* + *chromosome*] the state of having reduplicated chromatin in the nucleus. The term is applied both to the condition of increase in chromosome number resulting from a previous endomitotic cycle (endopolyploidy, def. 3) and to increase in the amount of chromatin per chromosome (polyteny).

polysome (pol'e-sōm) polyribosome.

polysomia (pol'e-so'me-ah) [*poly-* + Gr. *sōma* body + *-ia*] a doubling or tripling of the body of a fetus.

polysomic (pol'e-so'mik) 1. pertaining to or exhibiting polysomy. 2. an individual exhibiting polysomy.

polysomus (pol'e-so'mus) [*poly-* + Gr. *sōma* body] a monster exhibiting polysomia.

polysomy (pol'e-so'me) [*poly-* + *chromosome*] an excess of a particular chromosome, resulting from meiotic chromosomal

nondisjunction. The chromosome may be duplicated three (trisomy), four (tetrasomy), or more times.

polysorbate (pol'e-sor'bāt) a generic name for esters of sorbitol and its anhydrides condensed with polymers of ethylene oxide, used as surfactant agents: *p. 20*, $C_{28}H_{54}O_{26}$, is polyoxyethylene 20 sorbitan monolaurate; *p. 40*, $C_{62}H_{122}O_{26}$, is polyoxyethylene 20 sorbitan monopalmitate; *p. 60*, $C_{84}H_{126}O_{26}$, is polyethylene 20 sorbitan monostearate; *p. 65*, $C_{100}H_{194}O_{28}$, is polyethylene 20 sorbitan tristearate; *p. 80*, $C_{84}H_{124}O_{28}$, is polyethylene 20 sorbitan monooleate; *p. 85*, $C_{100}H_{188}O_{28}$, is polyethylene 20 sorbitan trioleate. *Polysorbates 20, 40, 60, and 80* are official in NF.

polyspermia (pol'e-sper'me-ah) [*poly-* + Gr. *sperma* seed + *-ia*] 1. excessive secretion of semen. 2. polyspermy.

polyspermism (pol'e-sper'mizm) polyspermia.

polyspermy (pol'e-sper'me) fertilization of an ovum by more than one spermatozoon. **pathological p.**, entrance of more than one spermatozoon in an ovum when entrance of only one is the rule; usually development is abnormal and the embryo is not viable. **physiological p.**, entrance of more than one spermatozoon in an ovum, occurring normally in certain species, but with only one spermatozoon participating fully in the development of the embryo.

polystichia (pol'e-stik'e-ah) [*poly-* + Gr. *stichos* row + *-ia*] the presence of two or more rows of eyelashes upon a lid.

polystyrene (pol'e-sti'rēn) the resin produced by polymerization of styrol, a clear resin of the thermoplastic type, used to a limited extent in the construction of denture bases.

polysuspensoid (pol'e-sus-pen'soid) a suspensoid in which the particles are of different degrees of dispersion.

polysynaptic (pol'e-si-nap'tik) involving many synapses in series and therefore a sequence of many neurons; called also *multisynaptic*. Cf. *oligosynaptic*.

polysyndactyly (pol'e-sin-dak'til-e) a hereditary association of polydactyly and syndactyly of varying degrees of both the hand and foot.

polysynovitis (pol'e-sin'o-vi'tis) [*poly-* + *synovitis*] general inflammation of the synovial membranes.

polysyphilide (pol'e-sif'i-lid) characterized by many syphilitic lesions.

polytef (pol'ē-tef) a polymer of tetrafluoroethylene, used as a surgical implant material for many prostheses, such as artificial vessels and orbital floor implants and for many applications in skeletal augmentation and skeletal fixation. Also used in industry for many purposes, e.g., as an antistick coating for cooking utensils. Called also *polytetrafluoroethylene* (PTFE). See also *polymer fume fever*, under *fever*.

polytendinitis (pol'e-ten'dī-ni'tis) inflammation affecting several tendons.

polytendinobursitis (pol'e-ten'dī-no-bur-si'tis) associated bursitis and tendinitis in several parts of the body.

polytene (pol'e-tēn) [*poly-* + Gr. *tainia* (L. *taenia*) band] composed of or containing many strands of chromatin (chromonemata).

polytenosynovitis (pol'e-ten'o-sin'o-vi'tis) inflammation of several or many tendon sheaths at the same time.

polyteny (pol'ē-te'ne) reduplication of chromonemata in the chromosome without separation into distinct daughter chromosomes. See also *polysomaty*.

polytetrafluoroethylene (pol'e-tet'rah-floo'o-ro-eth'i-lēn) polytef.

polythelia (pol'e-the'le-ah) [*poly-* + Gr. *thēlē* nipple + *-ia*] the condition of having more than one pair of nipples.

polythelism (pol'e-the'lizm) polythelia.

polythene (pol'e-thēn) polyethylene.

polythetic (pol'e-thet'ik) [*poly-* + Gr. *thetikos* fit for placing] denoting a taxonomic group classified on the basis of several characters, as opposed to a monothetic group.

polythiazide (pol'e-thi'ah-zid) [USP] chemical name: 6-chloro-3,4-dihydro-2-methyl-3-[[2,2,2-trifluoroethyl]-thio]-methyl-2H-1,2,4-benzothiadiazine-7-sulfonamide 1,1-dioxide. An orally effective diuretic and antihypertensive, $C_{11}H_{13}ClF_3N_3O_4S_2$, occurring as a white crystalline powder.

polytocous (po-lit'o-kus) [*poly-* + Gr. *tokos* birth] giving birth to several offspring at one time.

polytomogram (pol'e-tom'o-gram) the record produced by polytomography.

polytomographic (pol'e-to'mo-graf'ik) pertaining to polytomography.

polytomography (pol'e-to-mog'rah-fe) tomography of tissue at several predetermined planes.

polytrichia (pol'e-trik'e-ah) [*poly-* + Gr. *thrix* hair] hypertrichosis.

polytrichosis (pol'e-tri-ko'sis) hypertrichosis.

Polytrichum (po-lit'ri-kum) [*poly-* + Gr. *thrix* hair] a genus of mosses, *P. juniperinum* Willd. haircap, or juniper moss, is diuretic.

polytrophia (pol'e-tro'fe-ah) [*poly-* + Gr. *trophē* nourishment] excessive nutrition.

polytrophic (pol'e-trof'ik) pertaining to or characterized by polytrophia.

polytrophu (po-lit'ro-fe) polytrophia.

polytropic (pol'e-trop'ik) [*poly-* + Gr. *tropē* a turning] affecting many kinds of bacteria or many varieties of tissue. Cf. *monotropic*.

polytropous (po-lit'ro-pus) polytropic.

polyunguia (pol'e-ung'gwe-ah) polyonychia.

polyunsaturated (pol'e-un-sach'ē-ra-ted) denoting a fatty acid, e.g., linoleic acid, having more than one double bond in its hydrocarbon chain.

polyuria (pol'e-u're-ah) [*poly-* + Gr. *ouron* urine + *-ia*] the passage of a large volume of urine in a given period, a characteristic of diabetes.

polyvalent (pol'e-va'lent; po-liv'ah-lent) having more than one valency.

polyvinyl (pol'e-vi'nil) a polymerization product of a monomeric vinyl compound, as vinyl chloride.

polyvinylacetate (pol'e-vi'nil-as'ē-tāt) a light- and heat-stable resin formed by the polymerization of vinyl acetate.

polyvinylbenzene (pol'e-vi'nil-ben'zēn) polystyrene.

polyvinylchloride (pol'e-vi'nil-klōr'id) a substance formed by the polymerization of vinyl chloride; a tasteless, odorless, clear hard resin, which changes color on exposure to ultraviolet light or heat.

polyvinylpyrrolidone (pol'e-vi'nil-pir-rol'i-dōn) povidone.

pomade (po-mād') pomatum.

Pomatiopsis (po-mat'ē-op'sis) a genus of amphibious fresh-water snails of the United States; *P. cincinnatensis* and *P. lapidaria* have been shown to be hosts of *Paragonimus kellicotti*.

pomatum (po-ma'tum) [L., from *pomum* apple] a medicated ointment for the hair.

pomegranate (pum-gran'et) [L. *pomum granatum* grained apple] the puniceous tree, *Punica granatum* L. (Punicaceae), and its fruit. The root and the dried bark of the stem were formerly used as tannic acids. Called also *granatum*.

pompholyhemia (pom'fo-le-he'me-ah) [*pompholyx* + Gr. *haima* blood + *-ia*] the presence of bubbles of gas in the blood, as in decompression sickness.

pompholyx (pom'fo-lik) [Gr. "bubble"] a skin eruption on the sides of the fingers or toes or on the palms or soles, consisting of discrete round intraepidermal vesicles 1 or 2 mm. in diameter, accompanied by intense itching, and typically manifesting itself in repeated self-limited attacks lasting one or two weeks.

pomum (po'mum) [L.] apple. **p. ada'mi** ["Adam's apple"], the prominence in the neck produced by the thyroid cartilage; prominent laryngea.

ponceau B (pon so') Biebrich scarlet; see under *scarlet*. **p. 3 B**, scarlet red; see under *red*.

Poncet's disease, operation, rheumatism (pahw-sāz') [Antonin Poncet, French surgeon, 1849–1913] see under *disease*, *operation*, and *rheumatism*.

Pond. abbreviation for L. *pondere*, by weight.

ponderable (pon'der-ah-b'l) [L. *ponderabilis*; *pondus* weight] having weight.

ponderal (pon'der-al) [L. *pondus*, weight] pertaining to weight.

Pondimin (pon'dī-mēn) trademark for a preparation of fenfluramine hydrochloride.

pondostatural (pon'do-stat'u-ral) pertaining to weight and stature.

ponesiatics (po-ne'ze-ah'triks) [Gr. *ponēs* toil, exertion + *iatrike* surgery, medicine] a system of therapy in which misdirected neurophysiologic reactions are made perceptible (as by the oscilloscope, electromyograph, etc.) and used as a guide in recognizing and correcting such undesirable responses (dysponesis). Called also *effort training*.

Ponfick's shadow (pon'fiks) [Clemens Emil Ponfick, German pathologist, 1844–1913] phantom corpuscle; see under *corpuscle*.

Pongidae (pon'ji-de) a family of primates, including the anthropoid apes, which together with the family Hominidae (man), comprise the superfamily Hominoidea.

pono- [Gr. *ponos* toil, suffering, pain] a combining form denoting relationship to hard work or to pain.

ponograph (po'no-graf) [*pono-* + Gr. *graphein* to write] an instrument for estimating and recording sensitiveness to pain.

ponopalmosis (pon'no-pal-mo'sis) [*pono-* + Gr. *palmos* palpitation] (*obs.*) palpitation on effort; Sir Clifford Albutt's term for soldier's heart or neurocirculatory asthenia.

pons (ponz), pl. *pon'tes*, gen. *pon'tis* [L. "bridge"] 1. any slip of tissue connecting two parts of an organ; called also *bridge*. 2. [NA] that part of the central nervous system lying between the medulla oblongata and the mesencephalon, ventral to the cerebellum, and consisting of a pars dorsalis and a pars ventralis; called

also *bridge of Varolius*, *p. cerebelli*, *p. varolii*, and *commissura cerebelli*. See Plate accompanying *brain*. See also *brain stem*, under **B. p. cerebel/li**, pons [NA]. **p. hep/atis**, an occasional projection of fibers partially bridging the longitudinal fissure of the liver. **p. tari/ni**, substantia perforata posterior. **p. varo/lii**, pons [NA].

pons-oblongata (ponz/'ob-lon-ga'tah) the pons and medulla oblongata considered together.

Ponstel (pon/'stel) trademark for a preparation of mefenamic acid.

pontes (pon/'tēz) plural of *pons*.

pontibrachium (pon/'te-bra'ke-um) pedunculus cerebellaris medius.

pontic (pon/'tik) [L. *pons*, *pontis* bridge] the portion of a bridge which substitutes for an absent tooth, both esthetically and functionally; it usually, but not necessarily, occupies the space formerly filled by a natural tooth.

ponticular (pon-'tik'u-lar) pertaining to the ponticulus (pro-pons).

ponticulus (pon-'tik'u-lus), pl. *ponticuli* [L., dim. of *pons* bridge] propons. **p. auric/ulae**, a point on the eminence of the concha where the posterior auricular muscle is attached. **p. promonto/rrii**, a ridge on the median wall of the tympanic cavity connecting the promontory with the pyramid.

pontil (pon/'til) pontile; pontine.

pontile (pon/'til, pon/'tēl) pertaining to the pons; pontine.

pontine (pon/'tin, pon/'tēn) pertaining to the pons; pontile.

pontobulbar (pon/'to-bul'bar) pertaining to, affecting, or regulated by the pons and the region of the medulla oblongata situated dorsad to it.

pontobulbia (pon/'to-bul'be-ah) a condition in which cavities exist in the pons and medulla oblongata; syringobulbia.

Pontocaine (pon/'to-kān) trademark for preparations of tetracaine.

pontocerebellar (pon/'to-ser/'ē-bel'ar) pertaining to the pons and the cerebellum.

pontomedullary (pon/'to-med'u-lār'e) pertaining to the pons and the medulla oblongata.

pontomesencephalic (pon/'to-mes'en-sē-fal'ik) pertaining to or involving the pons and the mesencephalon.

pontoon (pon-'tōn') [Fr. *ponton*; L. *ponto* boat] a loop or knuckle of the small intestine.

pontopeduncular (pon/'to-pē-dung'ku-lar) pertaining to, affecting, or communicating with the pons and cerebral peduncles.

pool (pōl) 1. a common reservoir on which to draw. 2. to mix plasma from several donors. 3. an accumulation, as of blood in any part of the body due to retardation of the venous circulation. **gene p.**, the totality of the genes possessed by all of the members of a population. **metabolic p.**, the entire mass of labile and reactive substances in the body, to which and from which innumerable substances continuously pass; also used in a restricted sense to mean the extracellular pool or the potassium pool.

Pool's phenomenon (pōl'z) [Eugene Hillhouse *Pool*, New York surgeon, 1874-1949] 1. see under *phenomenon*. 2. Schlesinger's sign.

Pool-Schlesinger sign (pōl-shla/'zing-er) [E. H. *Pool*; Hermann *Schlesinger*, Austrian physician, 1868-1934] Schlesinger's sign.

popin (pop/'in) a glycoside of unknown origin which is used in Barbados for amebic dysentery.

poples (pop/'lez) [L. "ham"] [NA] the posterior surface of the knee.

popliteal (pop-lit'e-al; pop/'li-te'al) [L. *poples* ham] pertaining to the posterior surface of the knee; see also under *ligament*.

poppy (pop/'e) any member of the poppy or Papaveraceae family. See *Papaver*.

population (pop/'u-la'shun) [L. *populatio*] 1. the individuals collectively constituting a certain category or inhabiting a specified geographic area. 2. a contiguously distributed grouping of a single community that is characterized by both genetic and cultural continuity through several generations.

POR problem oriented record.

poradenia (pōr'ah-de'ne-ah) poradenitis.

poradenitis (pōr'ad-ē-ni'tis) [Gr. *poros* pore + *adēn* gland + *-itis*] a disease of the iliac lymph nodes characterized by the formation of small abscesses. **p. nos'tras**, **subacute inguinal p.**, **p. vene'rea**, lymphogranuloma venereum.

poradenolymphitis (por-ad/'ē-no-lim-fi'tis) lymphogranuloma venereum.

poral (pōr'al) pertaining to or having pores.

porcelain (por/'sē-lin) a fused mixture of kaolin, felspar, quartz, and other substances, used in the making of artificial teeth, jacket crowns, facings, and veneers.

porcelaneous (por/'sē-la'ne-us) pertaining to or resembling porcelain.

porcine (por/'sīn) [L. *porcus* a pig, hog] pertaining to, characteristic of, or derived from swine.

pore (pōr) [L. *porus*; Gr. *poros*] a small opening; called also *porus* [NA]. **acoustic p.**, **osseous, external**, *porus acusticus externus osseus*. **acoustic p.**, **osseous, internal**, *porus acusticus internus osseus*. **alveolar p's**, openings between adjacent pulmonary alveoli that permit passage of air from one to another; called also *pores of Kohn*. **biliary p.**, *ductus choledochus*. **birth p.**, *metraterm*. **cranionasal p.** (*obs.*), *foramen cecum ossis frontalis*. **Galen's p.**, *canalis inguinalis*. **gustatory p.**, *porus gustatorius*. **interalveolar p's**, **p's of Kohn**, *alveolar p's*. **nuclear p's**, small octagonal openings in the nuclear envelope at sites where the two nuclear membranes are in contact, which together with the annuli form the pore complex. See also Plate XI. **slit p's**, small slitlike spaces between the pedicels of the podocytes of the renal glomerulus; called also *filtration slits*. **sweat p.**, **p. of sweat duct**, *porus sudoriferus*. **taste p.**, *porus gustatorius*.

porencephalia (po/'ren-sē-fa'le-ah) [Gr. *poros* pore + *enkephalos* brain + *-ia*] 1. the presence of cysts or cavities in the brain cortex communicating by a "pore" with the arachnoid space (Heschl, 1850). 2. the presence of cavities in the brain developed in fetal life or early infancy, whether or not they communicate with the arachnoid space; the cavities are usually the residues of destructive lesions (*encephaloclastic p.*), but sometimes are the result of maldevelopment (*schizencephalic p.*, *schizencephaly*).

porencephalic (po/'ren-sē-fal'ik) pertaining to or characterized by porencephalia.

porencephalitis (po/'ren-sēf'ah-li'tis) porencephalia associated with an inflammatory process, such as polioencephalitis.

porencephalous (po/'ren-sēf'ah-lus) porencephalic.

porencephaly (po/'ren-sēf'ah-le) porencephalia.

porfiromycin (por/'fi-ro-mi'sin) chemical name: 6-amino-8-[[[aminocarbonyl]oxy]methyl]-1,1a,2,8,8a,8b-hexahydro-8a-methoxy-1,5-dimethylazirino[2',3':3,4]pyrrolo [1,2-a] indole-4,7-dione. An antineoplastic antibiotic with antitumor activity, C₁₆H₂₀N₄O₈, derived from *Streptomyces ardens*; it is the methyl derivative of mitomycin C.

Porges-Hermann-Perutz reaction (por/'ges-her'man-pa'root) [Otto *Porges*, Vienna bacteriologist, born 1879; Otto *Hermann*, Vienna physician; Alfred *Perutz*, Austrian dermatologist, born 1885] Perutz reaction.

Porges-Meier test (reaction) [Otto *Porges*; Georg *Meier*, German serologist, born 1875] see under *tests*.

Porges-Salomon test [Otto *Porges*; Hugo *Salomon*, German physician in Buenos Aires, 1872-1954] see under *tests*.

pori (po/'ri) [L.] plural of *porus*.

Porifera (po-rif/'ē-rah) [L. *porus* pore + *ferre* to bear] the phylum of sponges; the body is perforated with many pores to admit water, from which food is strained.

poriomania (po-rif'e-o-ma'ne-ah) [Gr. *poreia* walking + *mania* madness] an impulsive tendency to wander away from home; ambulatory automatism.

porion (po're-on) [Gr. *poros* pore + *-on* neuter ending] 1. a cephalometric landmark, being the midpoint on the upper edge of the *porus acusticus externus*, situated about 5 mm. above the superior margin of the cutaneous external auditory meatus. 2. in roentgenographic cephalometrics, the top of the radiopaque ear rod, inserted in the external auditory meatus.

porocèle (po'ro-sēl) [Gr. *pōros* callus + *kēlē* hernia] scrotal hernia with thickening and hardening of the coverings of the testes.

porocephalitis (po'ro-sēf'ah-li'ah-sis) infection with parasites of the order Porocephalida.

Porocephalida (po'ro-sē-fal'i-dah) an order of the class Pentastomida, wormlike degenerate arthropods, including the families Porocephalidae and Linguatulidae.

Porocephalidae (po'ro-sē-fal'i-de) a family of the order Porocephalida, class Pentastomida, having cylindrical bodies. Adults are found in the lungs of reptiles, and the larvae are found in various vertebrates, including man. It includes the genera *Armillifer*, *Porocephalus*, and *Pentastoma*.

porocephalosis (po'ro-sēf'ah-lo'sis) porocephalitis.

Porocephalus (po'ro-sēf'ah-lus) [Gr. *poros* pore + *kephalē* head] a genus of wormlike arthropods of the order Porocephalida, family Porocephalidae. The species which parasitize man, formerly classified in this genus, are now assigned to other genera. **P. armilla'tus**, *Armillifer armillatus*. **P. constrictus**, *Armillifer armillatus*. **P. denticulatus**, *Pentastoma denticulatum* (the larva of *Linguatula serrata*).

porofocon (po'ro-fō'kon) chemical name: cellulose acetate dibutanoate; either of two hydrophobic contact lens materials, designated A or B, (C₃₂H₄₈O₁₆)_n.

porokeratosis (po'ro-ker'ah-to'sis) [Gr. *poros* pore + *keratosis*] a rare, chronic, hereditary disease of the skin, usually of the hands and feet, although it may be found on any part of the body. It is characterized by hypertrophy of the stratum corneum about the ducts of the sweat glands, followed by centrifugally spreading, indurated patches surrounded by an elevated keratotic border. It is transmitted as an autosomal dominant trait. Called also *p. excentrica* and *p. of Mibelli*. **disseminated superficial ac-**

tinic p., a form occurring on sun-exposed areas of the skin in persons 30 to 40 years of age; the lesions may enlarge to as much as 5 cm. in diameter. **p. excen'trica**, porokeratosis. **p. of Mibelli**, porokeratosis. **p. palma'ris et planta'ris dissemina'ta**, a distinctive form of porokeratosis inherited as an autosomal dominant trait, in which hundreds of gyrate and annular porokeratotic plaques occur on the soles or palms or both, and later elsewhere.

porokeratotic (po''ro-ker''ah-tot'ik) pertaining to or affected with porokeratosis.

poroma (po-ro'mah) [Gr. *pōroma* callus] a general term for a neoplasm arising in or from the eccrine pore. **eccrine p.**, a benign tumor arising from the intraepidermal portion of the eccrine sweat duct, often on the palm or sole.

poropathy (po-rop'ah-the) an alleged system of healing in which medicines are supposed to reach the diseased organs through the pores of the skin.

poroplastic (po''ro-plas'tik) both porous and plastic.

porosis (po-ro'sis) 1. [Gr. *pōrosis* callosity] the formation of the callus in the repair of a fractured bone. 2. [Gr. *pōros* pore] cavity formation. **cerebral p.**, a condition in which there are cavities in the brain substance; pencephalia.

porosity (po-ros'i-te) 1. the condition of being porous. 2. a pore.

porotic (po-rot'ik) pertaining to or characterized by porosis favoring the growth of connective tissue.

porotomy (po-rot'o-me) [Gr. *poros* pore + *tomē* a cutting] meatotomy.

porous (po'rus) penetrated by pores and open spaces.

porphin (por'fin) the fundamental ring structure of four linked pyrrole nuclei around which porphyrins, hemin, the cytochromes, and chlorophyll are built.

porphobilin (por''fo-bi'lin) a dark brown nonporphyrin pigment of unknown chemical structure.

porphobilinogen (por''fo-bi-lin'o-jen) the parent compound of the porphyrins, itself formed by condensation of two molecules of 5-aminolevulinic acid; four molecules of porphobilinogen combine to make uroporphyrin and by a series of decarboxylations and oxidations, the other porphyrins, and finally heme. Not in evidence under normal circumstances, it characteristically appears in the urine in acute intermittent porphyria.

porphobilinogenuria (por''fo-bi-lin'o-jen-u're-ah) the excretion of urine containing porphobilinogen.

porphyran (por'fi-ran) a combination of a porphyrin with a metal; a metalloporphyrin.

porphyria (por-fē're-ah, por-fi're-ah) [Gr. *porphyra* purple] any of a group of disturbances of porphyrin metabolism, characterized by marked increase in formation and excretion of porphyrins or their precursors. **acute p.**, acute intermittent p. **acute intermittent p.**, hereditary hepatic porphyria manifested by recurrent attacks of abdominal pain, gastrointestinal dysfunction, and neurologic disturbances and by excessive amounts of aminolevulinic acid and porphobilinogen in the urine; it is due to an abnormality of pyrrole metabolism transmitted as an autosomal dominant trait. Called also *acute p.*, *p. hepatica*, *Swedish genetic p.*, and *pyrroleporphyria*. **congenital erythropoietic p.**, hereditary porphyria in which the excessive porphyrin formation occurs in bone marrow normoblasts; it is characterized by cutaneous photosensitivity, leading to mutilating skin lesions, by hemolytic anemia and splenomegaly, and by excessive urinary excretion of uroporphyrin. Erythrodontia and hypertrichosis are invariably present. It is transmitted as an autosomal recessive trait. Called also *congenital photosensitive p.*, *Günther's disease*, and *erythropoietic uroporphyrin*. **congenital photosensitive p.**, congenital erythropoietic p. **p. cuta'nea tar'da heredita'ria**, hepatic porphyria resembling variegate porphyria except that abdominal and neurologic symptoms are absent or mild; called also *protocoproporphyrin hereditaria*. **p. cuta'nea tar'da symptomat'ica**, a sporadic form of porphyria characterized by chronic skin lesions ranging from slight skin fragility to severe chronic scarring, by hepatomegaly, and by excessive urinary excretion of uroporphyrin and coproporphyrin; it is usually associated with chronic alcoholism. Called also *uroporphyrin*. **cutaneous p.**, that characterized by skin manifestations; see *p. cutanea tarda hereditaria* and *symptomat'ica*. **erythropoietic p.**, **p. erythropoiet'ica**, porphyria in which excessive formation of porphyrin or its precursors occurs in bone marrow normoblasts; it includes congenital erythropoietic porphyria and erythropoietic protoporphyria. **hepatic p.**, porphyria in which the excess formation of porphyrin or its precursors is found in the liver; it includes acute intermittent porphyria, variegate porphyria, and hereditary coproporphyrin. **p. hepatic'a**, acute intermittent p. **mixed p.**, variegate p. **South African genetic p.**, variegate p. **Swedish genetic p.**, acute intermittent p. **p. variega'ta**, **variegate p.**, hereditary hepatic porphyria characterized by chronic cutaneous manifestations, notably extreme mechanical fragility of the skin, particularly areas exposed to sunlight, and by episodes of abdominal pain and neuropathy. There is typically an excess of

coproporphyrin and protoporphyria in the bile and feces. It is transmitted as an autosomal dominant trait. Called also *mixed p.* and *South African genetic p.* See also *p. cutanea tarda hereditaria*.

porphyrin (por'fi-rin) any one of a group of iron-free or magnesium-free cyclic tetrapyrrole derivatives which occur universally in protoplasm. They form the basis of the respiratory pigments of animals and plants. The porphyrins are protoporphyria, mesoporphyrin, hematoporphyrin, deuteroporphyrin, etioporphyrin, coproporphyrin, uroporphyrin, rhodoporphyrin, pyrroporphyrin, pyrroetioporphyrin, and chlorophyll.

porphyrinemia (por'fi-rin-e'me-ah) the presence of porphyrin in the blood.

porphyrinogen (por'fi-rin'o-jen) a reduced, colorless non-fluorescing compound, fully hydrogenated and readily giving rise to the corresponding porphyrin by oxidation.

porphyrinopathy (por'fir-in-op'ah-the) any disorder of porphyrin metabolism.

porphyrinuria (por'fi-rī-nu're-ah) [*porphyrin* + Gr. *ouron* urine + *-ia*] the presence in the urine of porphyrin (coproporphyrin or uroporphyrin) in excess of the normal amount.

porphyria (por'fi-rizm) porphyria.

porphyrisms (por'fi-ris'mus) the triggering action attributed to psychic and emotional disturbances in attacks of acute intermittent porphyria.

porphyziation (por'fi-ri-za'shun) pulverization; reduction to a powder: so called because it was performed on a porphyry tablet.

porphyropsin (por'fi-rop'sin) a purple pigment in the retinal rods of certain fresh-water fishes.

porphyroxine (por'fi-rok'sin) an opium alkaloid, C₁₉H₂₃O₄N.

porphyria (por'fir-u're-ah) porphyria.

porphyril (por'fi-ril) a name for hemin from which iron has been removed.

Porro's cesarean section (por'ōz) [Edoardo Porro, obstetrician in Milan, 1842–1902] see *cesarean section*, under *section*.

porta (por'tah), pl. *por'tae* [L.] an entrance or portal; used in anatomical nomenclature to designate an opening, especially the site of entrance to an organ of the blood vessels and other structures supplying or draining it. **p. hep'atis** [NA], hepatic portal: the transverse fissure on the visceral surface of the liver where the portal vein and hepatic artery enter the liver and the hepatic ducts leave. **p. labyrin'thi**, fenestra cochleae. **p. lie'nis**, hilus lienis. **p. of lung**, hilus pulmonis. **p. omen'ti**, **p. of omentum**, foramen epiploicum. **p. pulmo'nis**, hilus pulmonis. **p. re'nis**, hilus renalis. **p. of spleen**, hilus lienis.

portacaval (por'tah-ka'val) pertaining to or connecting the portal vein and the vena cava.

portacid (port-as'id) a dropper for the local application of an acid.

portal (por'tal) 1. an entrance or gateway; called also *porta*. 2. pertaining to a porta, or entrance, especially to the porta hepatis.

p. of entry, the pathway by which bacteria or other pathogenic agents gain entry to the body. **hepatic p.**, porta hepatis.

intestinal p., anterior, the region of opening of the embryonic foregut into the yolk sac or unclosed midgut. **intestinal p., posterior**, the region of opening of the embryonic hindgut into the yolk sac or unclosed midgut. **velopharyngeal p.**, the opening between the velum palatinum (soft palate) and the pharynx, which must be susceptible to closure by muscular action to permit normal speech and deglutition.

portacautic (port-kaws'tik) [Fr. *porte-caustique*] a handle for holding a caustic substance.

porte-acid (port-as'id) portacid.

porte-aiguille (port'a-gē'l') [Fr.] a surgeon's needle holder.

porte-caustique (port'ko-stēk') portacautic.

porte-ligature (port-lig'ah-tūr) portligature.

porte-mèche (port-mesh') [Fr.] a probe or director with a fork at one end for introducing a drain into a wound or fistula.

porte-noeud (port-ned') [Fr. "knot-carrier"] an instrument for applying a ligature to the pedicle of a tumor.

porte-polisher (pōrt-pol'ish-er) a hand instrument constructed to hold a wooden point, to be used in a dental engine for applying polishing paste to and burnishing teeth.

Porter (por'ter), Rodney. British biochemist, co-winner, with Gerald Maurice Edelman, of the Nobel prize for physiology and medicine in 1972, for his work on the chemical structure of antibodies.

Porter's sign (por'terz) [William Henry Porter, Dublin physician, 1790–1861] tracheal tugging; see under *tugging*.

Porter's test (por'terz) [William Henry Porter, New York physician, 1853–1933] see under *tests*.

Porteus maze test (por'te-us) [David Stanley Porteus, Hawaii psychologist, born 1883] see under *tests*.

portio (por'she-o), pl. *portio'nes* [L.] a part, or division; [NA] a general term for a particular portion of an organ or structure.

p. du'ra pa'ris sep'timi, nervus facialis (formerly considered as forming one nerve with the portio mollis paris septimi). **p.**

interme'dia ner'vi acus'tici, nervus intermedius. **p. ma'jor ner'vi trigem'ini**, radix sensoria nervi trigemini. **p. mi'nor ner'vi trigem'ini**, radix motoria nervi trigemini. **p. mol'lis pa'ris sep'timi**, nervus vestibulocochlearis (formerly considered as forming one nerve with the portio dura paris septimi). **p. supravagina'lis cer'vicis** [NA], the part of the cervix uteri that does not protrude into the vagina. **p. vagina'lis cer'vicis** [NA], the part of the cervix uteri that protrudes into the vagina.

portiones (por'she-o'nēz) [L.] plural of *portio*.

portligature (port-lig'ah-tūr) an instrument for applying a ligature in a deep wound.

portoenterostomy (por'to-en'ter-os'to-me) surgical anastomosis of the jejunum to a decapsulated area of liver in the porta hepatis region, and to the duodenum; done to establish a conduit from the intrahepatic bile ducts to the intestine in biliary atresia. Called also *hepatic p.*

portogram (por'to-gram) a roentgenogram of the portal vein.

portography (por-tog'rah-fe) roentgenography of the portal vein after injection of opaque material. **portal p.**, portography after injection of opaque material into the superior mesenteric vein or one of its branches after laparotomy has been performed. **splenic p.**, portography after percutaneous injection into the substance of the spleen, usually through the ninth intercostal space in the midaxillary line, of opaque material, which passes immediately into the splenic vein, and then into the portal vein, permitting visualization of those two vessels.

portosystemic (por'to-sis-tem'ik) connecting the portal and systemic venous circulation.

portovenogram (por'to-ve'no-gram) portogram.

portovenography (por'to-ve-nog'rah-fe) portography.

porus (po'rus), pl. *po'ri* [L.; Gr. *poros* passage] a pore; a small opening; [NA] a general term for certain openings in the body. **p. acus'ticus exter'nus** [NA], the outer end of the external acoustic meatus. **p. acus'ticus exter'nus os'seus** [NA], external osseous acoustic pore: the outer end of the bony external acoustic meatus in the tympanic portion of the temporal bone. **p. acus'ticus inter'nus** [NA], the opening of the internal acoustic meatus. **p. acus'ticus inter'nus os'seus** [NA], internal osseous acoustic pore: the opening into the internal acoustic meatus, found on the posteromedial portion of the internal surface of the petrous part of the temporal bone. **p. gale'ni**, canalis inguinalis. **p. gustato'rius** [NA], gustatory pore: the small opening of a taste bud onto the surface of the tongue. **p. op'ticus**, the opening in the sclera for passage of the optic nerve. **p. sudorif'erus** [NA], sweat pore: the opening of the duct of the sweat gland on the surface of the skin; called also *pore of sweat duct*.

Posada's mycosis (po-sah'dahz) [Alejandro Posada, Argentine pathologist, 1870-1902] coccidioidomycosis.

Posada-Wernicke disease (po-sah'dah-ver'nī-ke) [Alejandro Posada; Robert Wernicke, Argentine pathologist of 19th century] coccidioidomycosis.

posed (pōsd) placed; in dentistry, a term applied to the position of a tooth. **normally p.**, **regularly p.**, in normal position. Cf. *malposed*.

-posia [Gr. *posis* drinking + *-ia*] a word termination denoting relationship to drinking, or to intake of fluids.

position (po-zish'un) [L. *positio*] 1. a bodily posture or attitude assumed by the patient to achieve comfort in certain conditions, or the particular disposition of the body and extremities to facilitate the performance of certain diagnostic or therapeutic procedures. 2. in obstetrics, the situation of the fetus in the pelvis, determined and described by the relation of a given arbitrary point (point of direction or reference point) in the presenting part to a given arbitrary point in the coronal plane of the maternal pelvis. For the various possible positions see the table (from Greenhill and Friedman's Obstetrics). Cf. *presentation*. **Albert's p.**, a semirecumbent position of the patient for roentgenography as a means of determining the diameters of the superior strait of the pelvis. **anatomical p.**, the position of the human body, standing erect, with the palms of the hands turned forward; used as the position of reference in description of site or direction of various structures or parts as established in official anatomical nomenclature. **batrachian p.**, a lying position of infants in which the lower limbs are flexed, abducted, and resting on the bed on their outer aspects, somewhat resembling the legs of a frog. Called also *froglike p.* **Bonner's p.**, flexion, abduction, and outward rotation of the thigh in coxitis. **Bozeman's p.**, one in which the patient is strapped to supports in the knee-elbow position. **Brickner p.**, a position for treating shoulder disability, secured by tying the patient's wrist to the head of the bed with his arm supported on a pillow and raising the head of the bed; thus traction with abduction and external rotation is obtained. **Caldwell p.**, a roentgenographic position with the forehead and nose against the x-ray plate, giving a posteroanterior projection for demonstration of frontal sinuses and the anterior ethmoidal cells. **Casselberry's p.**, a prone position employed after intubation so that the patient may swallow without danger of fluid entering the tube. **centric p.**, see under *relation*.

POSITIONS OF THE FETUS IN VARIOUS PRESENTATIONS

CEPHALIC PRESENTATION

- Vertex—occiput, the point of direction
 - Left occipito-anterior.....L.O.A.
 - Left occipitotransverse.....L.O.T.
 - Right occipitoposterior.....R.O.P.
 - Right occipitotransverse.....R.O.T.
 - Right occipito-anterior.....R.O.A.
 - Left occipitoposterior.....L.O.P.
- Face—chin, the point of direction
 - Right mentoposterior.....R.M.P.
 - Left mento-anterior.....L.M.A.
 - Right mentotransverse.....R.M.T.
 - Right mento-anterior.....R.M.A.
 - Left mentotransverse.....L.M.T.
 - Left mentoposterior.....L.M.P.
- Brow—the point of direction
 - Right frontoposterior.....R.F.P.
 - Left fronto-anterior.....L.F.A.
 - Right frontotransverse.....R.F.T.
 - Right fronto-anterior.....R.F.A.
 - Left frontotransverse.....L.F.T.
 - Left frontoposterior.....L.F.P.

BREECH OR PELVIC PRESENTATION

- Complete Breech—sacrum, the point of direction (feet crossed and thighs flexed on abdomen)
 - Left sacro-anterior.....L.S.A.
 - Left sacrotransverse.....L.S.T.
 - Right sacroposterior.....R.S.P.
 - Right sacro-anterior.....R.S.A.
 - Right sacrotransverse.....R.S.T.
 - Left sacroposterior.....L.S.P.
- Incomplete breech—sacrum, the point of direction. Same designations as above, adding the qualifications footling, knee, etc.

TRANSVERSE LIE OR SHOULDER PRESENTATION

Shoulder—scapula, the point of direction

Left scapulo-anterior.....L.Sc.A.	} Back anterior positions
Right scapulo-anterior.....R.Sc.A.	
Right scapuloposterior.....R.Sc.P.	
Left scapuloposterior.....L.Sc.P.	} Back posterior positions

coiled p., the attitude of a patient on his side with hips and knees flexed and thighs drawn up to the body. **decubitus p.**, the position of an individual lying on a horizontal surface, designated, according to the portion of the body resting on the surface, *dorsal decubitus* (lying on the back), *left lateral decubitus* (on the left side), *right lateral decubitus* (on the right side), or *ventral decubitus* (on the abdomen). **Depage's p.**, a prone position with the pelvis raised to form the apex of an inverted V, while the trunk and lower limbs form the branches of the V. **dorsal p.**, the posture of a person lying on his back; called also *supine p.* **dorsal elevated p.**, position of the patient lying on the back, with shoulders and head elevated. **dorsal inertia p.**, the position of a patient on his back and tending to slide toward the foot of the bed; observed in conditions of great inertia. **dorsal recumbent p.**, position of patient on back, with lower limbs flexed and rotated outward; used in vaginal examination, application of obstetrical forceps, etc. **dorsal rigid p.**, position on the back with hips and knees flexed and thighs drawn up to the body. **dorsosacral p.**, lithotomy p. **Duncan's p.**, the position of the placenta with its margin presenting at the os for delivery. **eccentric p.**, see under *relation*. **Edebohl's p.**, a dorsal position, the knees and thighs drawn up, legs flexed on the thighs, and thighs flexed on the belly, the hips raised, and the thighs abducted; called also *Simon's p.* **Elliot's p.**, position of a patient on the operating table with lower chest elevated by placing a support under the lower costal margin; used in operations on the gallbladder. **emprosthotos p.**, emprosthotos. **English p.**, the patient on the left side, the right thigh and knee drawn up; called also *lateral recumbent p.* and *obstetrical p.* **Fowler's p.**, the position in which the head of the patient's bed is raised 18 or 20 inches above the level; the knees are also elevated. **froglike p.**, batrachian p. **frontal anterior p.**, frontoanterior p. **frontal posterior p.**, frontoposterior p. **frontal transverse p.**, frontotransverse p. **frontoanterior p.**, a position of the fetus in cephalic presentation in labor, with its brow directed toward the right (R.F.A.) or left (L.F.A.) anterior quadrant of the maternal pelvis. **frontoposterior p.**, a position of the fetus in cephalic presentation in labor, with its brow directed toward the right (R.F.P.) or left (L.F.P.) posterior quadrant of the maternal pelvis. **frontotransverse p.**, a position of the fetus in cephalic presentation in labor, with its brow directed toward the right (R.F.T.) or left (L.F.T.) iliac fossa of the maternal pelvis. **Fuchs p.**, a roentgenographic position which gives an oblique view of the zygomatic arch projected free of superimposed structures. **genucubital p.**, knee-elbow p. **genufacial p.**, the position of the patient resting on his knees and face. **genupectoral p.**, knee-chest p. **hinge p.**, the position of the condyle in the temporomandibular joint from which an opening by hinge movement is possible beyond the amplitude of rest position. **hinge p., condylar, 1. hinge p. 2. the** maxillomandibular relation from which a consciously stimulated,

true, hinge movement can be executed. **hinge p.**, **mandibular**, the most posterior mandibular position from which a consciously stimulated hinge movement can be executed. **hinge p.**, **terminal**, the mandibular hinge position from which further opening of the mandible would produce translatory rather than hinge movement; the most retruded hinge position. **horizontal p.**, the position assumed by a person lying on his back with limbs extended. **jackknife p.**, position of patient on his back, with the shoulders elevated, legs flexed on thighs, and thighs at right angles to the abdomen; used in passing the urethral sound. **Jones' p.**, acute flexion of the forearm for the treatment of fracture of the internal condyle of the humerus. **knee-chest p.**, the position of a patient on his knees with the chest resting on the table. See illustration. **knee-elbow p.**, the position of a patient resting on knees and elbows with the chest elevated from the table. **kneeling-squatting p.**, squatting position with the knees flexed acutely and pressed against the abdomen while the body is held erect; often effective in digital palpation of high rectal lesions. **Kraske's p.**, a prone position with the buttocks raised on a kidney elevator. **lateral recumbent p.**, English p. **lithotomy p.**, the patient in dorsal decubitus with hips and knees flexed and the thighs abducted and externally rotated; called also *dorsosacral p.* **Mayer p.**, a roentgenographic position that gives a unilateral superoinferior view of the temporomandibular joint, external auditory canal, and mastoid and petrous processes; helpful in demonstrating fractures and malformations of the temporomandibular joint and in the study of bony atresia of the external auditory canal. **mentoanterior p.**, a position of the fetus in cephalic presentation in labor, with its chin directed toward the right (R.M.A.) or left (L.M.A.) anterior quadrant of the maternal pelvis. **mentoposterior p.**, a position of the fetus in cephalic presentation in labor, with its chin directed toward the right (R.M.P.) or left (L.M.P.) posterior quadrant of the maternal pelvis. **mentotransverse p.**, a position of the fetus in cephalic presentation in labor, with its chin directed toward the right (R.M.T.) or left (L.M.T.) iliac fossa of the maternal pelvis. **mentum anterior p.**, mentoanterior p. **mentum posterior p.**, mentoposterior p. **mentum transverse p.**, mentotransverse p. **Noble's p.**, position of the patient standing up, leaning forward and supporting the upper body on the arms; used in examining the kidney. **obstetrical p.**, English p. **occipitoanterior p.**, a position of the fetus in cephalic presentation in labor, with its occiput directed toward the right (R.O.A.) or left (L.O.A.) anterior quadrant of the maternal pelvis. **occipitoposterior p.**, a position of the fetus in cephalic presentation in labor, with its occiput directed toward the right (R.O.P.) or left (L.O.P.) posterior quadrant of the maternal pelvis. **occipitosacral p.**, a position of the fetus in cephalic presentation in labor, with the occiput presenting directly behind, or rotated squarely into the hollow of the sacrum. **occipitotransverse p.**, a position of the fetus in cephalic presentation in labor, with its occiput directed toward the right (R.O.T.) or left (L.O.T.) iliac fossa of the maternal pelvis. **occiput anterior p.**, occipitoanterior p. **occiput posterior p.**, occipitoposterior p. **occiput sacral p.**, occipitosacral p. **occiput transverse p.**, occipitotransverse p. **occlusal p.**, the relationship of the mandible and maxillae when the jaw is closed and the teeth are in contact. **opisthotonos p.**, opisthotonos. **orthopnea p.**, **orthopneic p.**, the patient assumes an upright or a semivertical position by using two or more pillows to support his head and chest from the recumbent position, or he sits upright in a chair. Used when the patient has difficulty in breathing except in the upright position (orthopnea). **orthotonos p.**, orthotonos. **physiologic rest p.**, rest p. **posterior border p.**, the most posterior position of the mandible at any specific vertical relation to the maxillae. **prone p.**, patient lying face down. **rest p.**, the position passively assumed by the mandible when its musculature is relaxed, in the upright standing or sitting position, with eyes focused to distance. **Robson's p.**, the patient lying on his back with a sand-bag placed beneath the eleventh and twelfth ribs; used in surgery on the biliary tract. **Rose's p.**, one intended to prevent aspiration or swallowing of blood, as from an injured lip: the patient on his back with head hanging over the end of the table in full extension so as to enable the patient to bleed over the margins of the inverted upper incisors. **sacroanterior p.**, a position of the fetus in breech presentation in labor, with its sacrum directed toward the right (R.S.A.) or left (L.S.A.) anterior quadrant of the maternal pelvis. **sacroposterior p.**, a position of the fetus in breech presentation in labor, with its sacrum directed toward the right (R.S.P.) or left (L.S.P.) posterior quadrant of the maternal pelvis. **sacrotransverse p.**, a position of the fetus in breech presentation in labor, with its sacrum directed toward the right (R.S.T.) or left (L.S.T.) iliac fossa of the maternal pelvis. **sacrum anterior p.**, sacroanterior p. **sacrum posterior p.**, sacroposterior p. **sacrum transverse p.**, sacrotransverse p. **scapula anterior p.**, scapuloanterior p. **scapula posterior p.**, scapuloposterior p. **scapuloanterior p.**, a position of the fetus in transverse lie in labor, with its head to the right (R.Sc.A.) or left (L.Sc.A.) of the maternal pelvis, and its back anterior. **scapuloposterior p.**, a position of the fetus in transverse lie in labor, with its head to the right (R.Sc.P.) or left (L.Sc.P.) of the maternal

pelvis, and its back posterior. **scorbutic p.**, a pseudoparalytic position characteristic of advanced infantile scurvy, in which the infant lies quietly with the legs flexed at the knees and the hips flexed and externally rotated. **semiaxial p.**, Titterington p. **semiprone p.**, Sims' p. **semireclining p.**, a partly reclining position seen in heart disease, asthma, and pleural effusion. **Simon's p.**, Edebohls' p. **Sims' p.**, the patient on the left side with the chest, the right knee, and thigh drawn up, the left arm along the back; for vaginal examination. Called also *semiprone p.* **Stern's p.**, the patient supine with the head lowered over the end of the table, the murmur of tricuspid insufficiency being heard more distinctly. **submentovertex p.**, a roentgenographic position opposite of the verticosubmental position. **supine p.**, dorsal p. **Titterington p.**, a roentgenographic position used to demonstrate fractures of the zygomatic arches, lateral walls of the maxilla, orbital floors, and orbital margins. Called also *semiaxial p.* **trans p.**, trans configuration. **Trendelenburg's p.**, one in which the patient is supine on the table or bed, the head of which is tilted downward 30 to 40 degrees, and the table or bed angulated beneath the knees. See illustration. **tripod p.**, 1. a position assumed by the patient with abdominal weakness or meningeal irritation while sitting in bed, in which he supports himself with his hands in a plane posterior to his pelvis. 2. a sitting position assumed by the patient with respiratory insufficiency, in which his hands are placed anterior to the frontal plane. See also *tripoding*. **Valentine's p.**, the patient supine and the hips flexed by means of a double inclined plane; used in irrigating the urethra. **verticosubmental p.**, a roentgenographic position that gives an axial projection of the mandible, including the coronoid and condyloid processes of the rami, the base of the skull and its foramina, the petrous pyramids, the sphenoidal, posterior ethmoid, and maxillary sinuses, and the nasal septum. **Waters p.**, a roentgenographic position that gives a posteroanterior view of the maxillary sinus, maxilla, orbits, and zygomatic arches; helpful in demonstrating fractures of nasal bones and nasal processes of the maxilla. **Waters p., reverse**, a mento-occipital roentgenographic position used to demonstrate the facial bones when the patient cannot be placed in a prone position; helpful in demonstrating fractures of the orbits, maxillary sinuses, zygomatic bones, and zygomatic arches. **positioner** (po-zish'un-er) a resilient elastoplastic removable appliance fitted over the occlusal surfaces of the teeth to obtain limited tooth movement and stabilization, usually at the end of orthodontic treatment. **tooth p.**, see *positioner*. **positive** (poz'it-iv) [L. *positivus*] having a value greater than zero; indicating existence or presence of a condition, organism, etc., as chromatin positive or Wassermann positive; characterized by affirmation or cooperation. **positrocephalogram** (poz'it-ro-sef'ah-lo-gram") [*positron* + Gr. *kephalos* head + *gramma* a mark] a record produced by the emission of positrons by isotopes of arsenic administered to facilitate localization of brain tumors. **positron** (poz'it-tron) the positive electron, a particle having the mass of the electron but with a positive electric charge; a free positive electron. **Posner's test (reaction)** (pōs'nerz) [Carl Posner, Berlin urologist, 1854-1929] see under *tests*. **posologic** (po'so-loj'ik) pertaining to doses. **posology** (po-sol'o-je) [Gr. *posos* how much + *-logy*] the science of dosage, or a system of dosage. **Possum** (pos'um) [Patient-Operated Selector Mechanism] trademark for a machine designed for the disabled by which, when breathed into in the correct manner, the individual can operate the telephone, ring bells, turn on the television, switch off a light, type a letter, or perform any of a number of other functions by no movement other than that involved in respiration. **post** (pōst) dowel. **post-** (pōst) [L. *post* after] a prefix signifying after or behind. **postabortal** (pōst-ah-bor'tal) occurring after abortion. **postaccussal** (pōst-ak-sesh'u-al) occurring after a paroxysm. **postacetabular** (pōst'as-ē-tab'u-lar) behind the acetabulum. **postacidotic** (pōst'as-ī-dot'ik) occurring after the cessation of acidosis. **postadolescence** (pōst'ad-o-les'ens) the period following adolescence. **postadolescent** (pōst'ad-o-les'ent) 1. pertaining to or occurring in the period following adolescence. 2. a young adult. **postalbumin** (pōst'al-bu'min) a serum protein which has an electrophoretic mobility between albumin and alpha-globulin at pH 8.6. **postanal** (pōst-a'nal) situated behind the anus. **postanesthetic** (pōst'an-es-thet'ik) after anesthesia. **postapoplectic** (pōst'ap-o-plek'tik) occurring after an attack of apoplexy. **postaurale** (pōst'aw-ra'le) an anthropometric landmark, the most posterior point on the helix of the ear. **postauricular** (pōst'aw-rik'u-lar) located or performed behind the auricle of the ear.

Sims's position, posterior view

Knee-chest position

Lithotomy position

Trendelenburg's position

Surgical position for nephrectomy

Surgical position for spinal fusion

postaxial (pōst-ak'se-al) situated behind an axis. In anatomical usage, postaxial refers to the medial (ulnar) aspect of the upper limb, and the lateral (fibular) aspect of the lower limb.

postbrachial (pōst-bra'ke-al) on the posterior part of the upper arm.

postbrachium (pōst-bra'ke-um) brachium colliculi inferioris.

postbuccal (pōst-buk'al) behind the buccal region.

postbulbar (pōst-bul'bar) situated behind or distal to a bulb as behind the medulla oblongata, or distal to the pileus ventriculi (duodenal bulb).

postcapillary (pōst-kap'i-lar'e) a venous capillary.

postcardiotomy (pōst-kar'de-ot'o-me) occurring after or as a consequence of incision (open surgery) of the heart.

postcava (pōst-ka'vah) the vena cava inferior.

postcaval (pōst-ka'val) pertaining to the postcava.

postcecal (pōst-se'kal) retrocecal.

postcentral (pōst-sen'tral) situated or occurring behind a center, as the postcentral gyrus.

postcentralis (pōst'sen-tra'lis) the postcentral fissure.

postcesarean (pōst'se-za're-an) following cesarean operation.

postcibal (pōst-si'bal) [post- + L. *cibum* food] occurring after ingestion of food; postprandial.

post cibum (pōst si'bum) [L.] after meals (after food).

postcisterna (pōst'sis-ter'nah) cisterna cerebellomedullaris.

postclavicular (pōst'klah-vik'u-lar) [post- + *clavicle*] situated or occurring behind the clavicle.

postclimacteric (pōst'kli-mak'ter-ik, pōst'kli-mak-ter'ik) 1. occurring after the climacteric. 2. postmenopausal.

postcoital (post-ko'i-tal) pertaining to the time after coitus.

post coitum (pōst ko-i'tum) after coitus.

postcondylar (pōst-kon'dī-lar) behind a condyle.

postcondylare (pōst'kon-dī-lah're) the highest point of the curvature behind the occipital condyle.

postconnubial (pōst'kō-nu'be-al) [post- + L. *connubium* marriage] occurring after marriage.

postconvulsive (pōst'kon-vul'siv) occurring after a convulsion.

postcordial (pōst-kor'de-al) back of the heart.

postcornu (pōst-kor'nu) cornu posterius ventriculi lateralis.

postcranial (pōst-kra'ne-al) situated posterior or inferior to the cranium, or skull.

postcubital (pōst-ku'bi-tal) on the dorsal side of the forearm.

postcyclodialysis (pōst-si'klo-di-al'i-sis) occurring after or as a consequence of cyclodialysis.

postdevelopmental (pōst'de-vel'op-men'tal) occurring after the period of development.

postdiastolic (pōst'di-as-tol'ik) occurring after or following the diastole.

postdirotic (pōst'di-krot'ik) occurring after the dirotic elevation of the sphygmogram.

postdigestive (pōst'di-ges'tiv) after digestion.

postdiphtheric (pōst'dif-ther'ik) postdiphtheritic.

postdiphtheritic (pōst'dif-ther-it'ik) occurring after or as a consequence of diphtheria, as postdiphtheritic myocarditis.

postdormital (pōst-dor'mi-tal) pertaining to or occurring during the postdormitum.

postdormitum (pōst-dor'mi-tum) the period of increasing consciousness interposed between sound sleep and awakening.

postecdysis (pōst-ek'dī-sis) [post- + Gr. *ekdysis* a way out] the concluding phase of ecdysis in certain crustaceans and arthropods, during which the endocuticle is secreted and calcification of the skeleton occurs.

postembryonic (pōst'em-bre-on'ik) [post- + Gr. *embryon* embryo] occurring after the embryonic stage.

postencephalitic (pōst'en-sef'ah-lit'ik) occurring after or as a consequence of encephalitis.

postepileptic (pōst'ep-i-lep'tik) occurring after or as a consequence of an epileptic attack.

posteriad (pos-te're-ad) toward the posterior surface of the body.

posterior (pos-tēr'e-or) [L. "behind"; neut. *posterius*] situated in back of, or in the back part of, or affecting the back part of a structure; [NA] a term used in reference to the back or dorsal surface of the body. In lower animals, it refers to the caudal end of the body.

postero- (pos'ter-o) [L. *posterus* behind] a combining form denoting relationship to the posterior part.

posteroanterior (pos'ter-o-an-tēr'e-or) from back to front, or from the posterior (dorsal) to the anterior (ventral) surface. In roentgenology, denoting direction of the beam from the x-ray source to the beam exit surface.

posteroclusion (pos'ter-o-kloo'zhun) distoclusion.

posteroexternal (pos'ter-o-ek-ster'nal) situated on the outer side of a posterior aspect.

posteroinferior (pos'ter-o-in-fēr'e-or) posterior and inferior.

posterointernal (pos'ter-o-in-ter'nal) situated within and toward the back.

posterolateral (pos'ter-o-lat'er-al) situated behind and to one side.

posteromedial (pos'ter-o-me'de-al) situated toward the middle of the back.

posteromedian (pos'ter-o-me'de-an) situated on the midline of the back.

posteroparietal (pos'ter-o-pah-ri'ē-tal) situated at the back part of the parietal bone.

posterosuperior (pos'ter-o-soo-pēr'e-or) situated behind and above.

posterotemporal (pos'ter-o-tem'po-ral) situated at the back part of the temporal bone.

posterula (pos-ter'u-lah) [L.] the space between the nasal conchae and the posterior nares.

postesophageal (pōst-ē-sof'ah-je'al) retroesophageal.

postethmoid (pōst-eth'moid) behind the ethmoid bone.

postexed (pōs-tekst') bent backward.

postexion (pōs-tek'syun) posterior flexion.

postfebrile (pōst-feb'rīl) occurring after or as the result of a fever.

postganglionic (pōst'gang-gle-on'ik) situated posterior or distal to a ganglion; said especially of autonomic nerve fibers so located.

postglenoid (pōst-gle'noid) situated behind the glenoid fossa.

postglomerular (pōst'glo-mer'u-lar) located or occurring distal to a glomerulus of the kidney.

postgrippal (pōst-grip'al) occurring after grippe or influenza.

posthemiplegic (pōst'hēm-ī-ple'jik) occurring after or as a consequence of hemiplegia.

posthemorrhage (pōst-hēm'o-rāj) secondary hemorrhage.

posthemorrhagic (pōst-hēm'o-raj'ik) occurring after hemorrhage.

posthepatic (pōst'he-pat'ik) situated behind the liver.

posthepatitic (pōst'hep-ah-tit'ik) occurring after or as a consequence of hepatitis.

postherpetic (pōst'her-pet'ik) occurring after or as a consequence of herpes zoster; postzoster.

posthetomy (pos-thet'o-me) [Gr. *posthē* foreskin + *tomē* a cutting] circumcision.

posthioplasty (pos'the-o-plas'te) [Gr. *posthē* foreskin + *plastos* formed] plastic surgery of the prepuce.

posthitis (pos-thi'tis) [Gr. *posthē* foreskin + *-itis*] inflammation of the prepuce.

postolith (pos'tho-lith) [Gr. *posthē* foreskin + *lithos* stone] a preputial concretion or calculus.

posthumous (pos'tu-mus) [L. *postumus* coming after] occurring after death; born after the father's death.

posthyoid (pōst-hi'oid) situated or occurring behind the hyoid bone.

posthypnotic (pōst'hip-not'ik) succeeding the hypnotic state.

posthypoglycemic (pōst-hi'po-gli-se'mik) occurring after or as a consequence of hypoglycemia.

posthypophysis (pōst'hi-pof'ī-sis) the posterior part of the hypophysis, or pituitary gland.

posthypoxic (pōst'hī-pok'sik) occurring after or as a consequence of hypoxia.

postictal (pōst-ik'tal) following a stroke or seizure, such as an acute epileptic attack.

posticus (pos-ti'kus) [L.] posterior.

postinfluenzal (pōst'in-flu-en'zal) occurring after influenza.

postischial (pōst-is'ke-al) situated behind the ischium.

postligation (pōst'li-ga'shun) following ligation of a blood vessel.

postmalarial (pōst'mah-la're-al) occurring after malaria.

postmastectomy (pōst'mas-tek'to-me) following mastectomy.

postmastoid (pōst-mas'toid) situated behind the mastoid process of the temporal bone.

postmature (pōst'ma-tūr') overly developed, as a postmature infant.

postmaturity (pōst'mah-tu'rī-te) overdevelopment; the condition of a postmature infant.

postmaximal (pōst-mak'si-mal) after a maximum.

postmeal (pōst'me-a'tal) behind a meatus, or passage.

postmediastinal (pōst'me-de-as'tī-nal) behind the mediastinum; pertaining to the posterior mediastinum.

postmediastinum (pōst'me-de-as-ti'num) mediastinum posterius.

postmeiotic (pōst/'mi-ot/'ik) [*post-* + Gr. *meioun* to decrease] occurring after or pertaining to the time following meiosis.

postmenopausal (pōst/'men-o-paw/'zal) occurring after the menopause.

postmenstrua (pōst-men/'stroo-ah) the period immediately following cessation of menstrual flow.

postmesenteric (pōst/'mes-en-ter/'ik) behind or in the posterior part of the mesentery; retromesenteric.

postminimus (pōst-min/'i-mus), pl. *postmini'* [*post-* + L. *minimus* small] digitus postminimus.

postmiotic (pōst/'mi-ot/'ik) postmeiotic.

postmitotic (pōst/'mi-to/'ik) 1. pertaining to the time following or occurring after mitosis in normally dividing cells. 2. pertaining to cells that stop dividing after reaching maturity, as cells of the mammalian heart or central nervous system.

postmortal (pōst-mor/'tal) occurring after death.

post mortem (pōst mor/'tem) [L.] after death.

postmortem (pōst-mor/'tem) occurring or performed after death; pertaining to the period after death.

postnares (pōst-na/'rēs) the posterior naris.

postnarial (pōst-na/'re-al) pertaining to the posterior nares.

postnasal (pōst-na/'zal) [*post-* + L. *nasus* nose] situated or occurring behind the nose.

postnatal (pōst-na/'tal) occurring after birth, with reference to the newborn. Cf. *postpartum*.

postnecrotic (pōst/'ne-krot/'ik) after death of a part.

postneuritic (pōst/'nu-rit/'ik) occurring after neuritis.

postocular (pōst-ok/'u-lar) [*post-* + L. *oculus* eye] situated or occurring behind the eye.

postoperative (pōst-op/'er-a-'tiv) occurring after a surgical operation.

postoral (pōst-o/'ral) [*post-* + L. *os* mouth] behind the mouth.

postorbital (pōst-or/'bi-tal) behind the orbit.

postpalatine (pōst-pal/'ah-tin) behind the palate, or behind the palatine bone.

postpaludal (pōst-pal/'u-dal) postmalarial.

postparalytic (pōst/'par-ah-lit/'ik) following an attack of paralysis.

post partum (pōst par/'tum) [L.] after childbirth, or after delivery.

postpartum (pōst-par/'tum) occurring after childbirth, or after delivery, with reference to the mother. Cf. *postnatal*.

postpharyngeal (pōst-fah-'rin/'je-al) situated or occurring behind the pharynx.

postpituitary (pōst-pī-'tu/'i-ta-re) pertaining to the posterior lobe of the pituitary body.

postpneumonic (pōst/'nu-mon/'ik) following pneumonia.

postponent (pōst-po/'nent) [*post-* + L. *ponere* to place] having a more or less delayed recurrence.

postprandial (pōst-pran/'de-al) occurring after dinner, or after a meal; postcibal.

postpuberal (pōst-pu/'ber-al) postpubertal.

postpubertal (pōst-pu/'ber-tal) occurring in or pertaining to the period following puberty.

postpuberty (pōst-pu/'ber-te) the period following puberty.

postpubescence (pōst/'pu-bes/'ens) postpuberty.

postpubescent (pōst/'pu-bes/'ent) postpubertal.

postpyknotic (pōst/'pik-not/'ik) occurring after the stage of pyknosis.

postradiation (pōst/'ra-de-a/'shun) following exposure to a source of radiation.

postrolandic (pōst/'ro-lan/'dik) situated behind the fissure of Rolando (sulcus centralis).

postsacral (pōst-sa/'kral) behind or below the sacrum.

postscapular (pōst-skap/'u-lar) behind the scapula.

postscarlatinal (pōst/'skar-lah-ti/'nal) occurring after or as a consequence of scarlatina.

Post sing. sed. liq. abbreviation for L. *post singulas se'des liq'uidas*, after every loose stool.

postsphenoid (pōst-sfe/'noid) the basisphenoid, pterygoid, and alisphenoid bones together; separate bones in infancy, they usually become united with the sphenoid.

postsphygmie (pōst-sfig/'mik) occurring after the pulse wave; see under *period*.

postsplenectomy (pōst/'sple-nek/'to-me) occurring after splenectomy.

postsplenic (pōst-splen/'ik) behind the spleen.

poststenotic (pōst/'stē-not/'ik) located or occurring distal to or beyond a stenosed segment.

poststertorous (pōst-ster/'tor-us) occurring after stertor has begun in anesthesia.

postsylvian (pōst-sil/'ve-an) behind the sylvian fissure (sulcus lateralis).

postsynaptic (pōst/'si-nap/'tik) situated distal to a synapse, or occurring after the synapse is crossed.

post-tarsal (pōst-tar/'sal) behind the tarsus.

post-tibial (pōst-tib/'e-al) behind the tibia.

post-traumatic (pōst/'traw-mat/'ik) occurring as a result of or after injury.

post-tussis (pōst-tus/'is) [L.] after coughing.

post-typhoid (pōst-ti/'foid) occurring after typhoid.

postulate (pos/'tu-lāt) [L. *postulatum* demanded] anything assumed or taken for granted. **Ehrlich's p.**, see *Ehrlich's side-chain theory, under theory*. **Koch's p.**, a statement of the kind of experimental evidence required to establish the etiologic relationship of a given microorganism to a given disease. The conditions included are (1) the microorganism must be observed in every case of the disease; (2) it must be isolated and grown in pure culture; (3) the pure culture must, when inoculated into a susceptible animal, reproduce the disease; and (4) the microorganism must be observed in, and recovered from, the experimentally diseased animal.

postural (pos/'chur-al) pertaining to posture or position.

posture (pos/'chur) [L. *postura*] the attitude of the body. **Dro-sin's p.**, three postures for eliciting tenderness in appendicitis.

postuterine (pōst-u/'ter-in) situated behind the uterus.

postvaccinal (pōst-vak/'si-nal) occurring after or as a consequence of vaccination for smallpox.

postvaccinial (pōst/'vak-sin-'e-al) occurring after or as a consequence of vaccinia.

postvital (pōst-vi/'tal) see *postvital staining, under staining*.

postzoster (pōst-zos/'ter) occurring after or as a consequence of herpes zoster; postherpetic.

postzygotic (pōst/'zi-got/'ik) occurring after the completion of fertilization and formation of the zygote.

potable (po/'tah-b'l) [L. *potabilis*] fit to drink; drinkable.

Potain's apparatus, sign (po-tānz') [Pierre Carl Edouard Potain, French physician, 1825-1901] see under *apparatus* and *sign*.

Potamon (pot/'ah-mon) a genus of fresh-water crabs; *P. dentricularis*, *P. dehaani*, and *P. rathbuni* are hosts of the metacercariae of *Paragonimus westermani* in the Orient.

potash (pot/'ash) impure potassium carbonate. **caustic p.**, potassium hydroxide. **sulfurated p.** [USP], a mixture of potassium polysulfides and potassium thiosulfate, containing 12.8 per cent of sulfur in combination as sulfide; used as a source of sulfide in pharmaceutical preparations. See *white lotion, under lotion*. In veterinary medicine, it is used as a bath for mange. Called also *hepar sulfuris*, *liver of sulfur*, and *potassa sulfurata*.

potassa (po-tas/'ah) [L.] potassium hydroxide. **p. caustica**, potassium hydroxide. **p. sulfurata**, sulfurated potash.

potasemia (pot/'ah-se-'me-ah) [potassa + Gr. *haima* blood + *-ia*] the presence of an abnormally large amount of potassium in the blood; hyperkalemia.

potassic (po-tas/'ik) containing potash.

potassiomeric (po-tas/'e-o-mer-ku/'rik) (*obs.*) containing potassium and mercury in its divalent form. **p. iodide**, potassium mercuric iodide.

potassium (po-tas/'e-um) [L.] a metallic element of the alkali group, many of whose salts are used in medicine. It is a soft, silver-white metal, melting at 58° F.; atomic number, 19; atomic weight, 39.102; specific gravity, 0.87; symbol, K (L. *kalium*). Potassium is the chief cation of muscle and most other cells (intracellular fluid); see also *sodium-potassium pump, under pump*. **p. acetate** [USP], CH₃COOK, occurring as colorless, monoclinic crystals or white, crystalline powder; used as an electrolyte replenisher and as a urinary and systemic alkali, administered by intravenous infusion and orally. Formerly used as a diuretic and expectorant. Called also *diuretic salt* and *sal diureticum*. **p. alum**, see *alum*. **p. antimonytartrate**, antimony potassium tartrate; see under *antimony*. **p. arsenite**, a compound formed by the interaction of arsenic trioxide and potassium hydroxide. **p. aspartate and magnesium aspartate**, a mixture of C₄H₉KNO₄·½H₂O and C₈H₁₂MgN₂O₈·4H₂O; used as a nutrient. **p. bicarbonate** [USP], KHCO₃, occurring as colorless, transparent, monoclinic prisms or as a white, granular powder; used as a pharmaceutical necessity in the preparation of Randall's solution, and may be used as an electrolyte replenisher, antacid, and urinary alkali. **p. bichromate**, an orange-red, crystalline salt, formerly used as an external astringent, antiseptic, and caustic; in veterinary medicine, it is used as a caustic in the treatment of superficial growths. Called also *p. dichromate*. **p. bismuth tartrate**, bismuth potassium tartrate; see under *bismuth*. **p. bitartrate**, a mild cathartic, C₄H₅KO₆, occurring as opaque crystals or a white crystalline powder; administered orally. It is sometimes used in veterinary medicine as a laxative for small animals and as a diuretic for large animals. Called also *cream of tartar*. **p. bromide**, a sedative, KBr, occurring as white, cubical crystals or granular powder; used occasionally for grand mal seizures. See also *bromide*. **p. carbonate**, K₂CO₃, occurring as a white,

crystalline or granular powder; formerly used as a systemic alkaliizer and diuretic, but now used chiefly in pharmaceutical and chemical manufacturing procedures. **p. chlorate**, an explosive compound, KClO_3 , occurring as colorless crystals or as white granules or powder, formerly used as an antiseptic for the skin and mucous membranes and in the treatment of hyperthyroidism and thyrotoxicosis. It is sometimes used in veterinary medicine in solution to treat stomatitis and vaginitis. **p. chloride** [USP], KCl , occurring as colorless, elongated, prismatic, or cubical crystals, or white, granular powder; used as an electrolyte replenisher, administered orally or by intravenous infusion.

p. citrate [USP], $\text{C}_6\text{H}_5\text{K}_3\text{O}_7\cdot\text{H}_2\text{O}$, occurring as transparent crystals or as a white, granular powder; used as a systemic alkaliizer, and as an electrolyte replenisher, diuretic, and expectorant, usually administered orally. It is sometimes used in veterinary medicine as a nonirritating diuretic. **p. cyanide**, an extremely poisonous compound, KCN , occurring as a white granular powder or as fused pieces; formerly used in solution to remove silver nitrate stains from the conjunctiva. **p. dichromate**, **p. bichromate**. **p. dihydrogen phosphate**, **p. phosphate**, monobasic. **p. ferricyanide**, deep-red crystals, $\text{K}_3\text{Fe}(\text{CN})_6$, used in a delicate test for ferrous salts. **p. glucaldrate**, chemical name: potassium diqua[gluconato(2-)]dihydroxyaluminate(1-); an antacid, $\text{C}_6\text{H}_{10}\text{AlKO}_{11}$. **p. gluconate** [USP], chemical name: D-gluconic acid monopotassium salt. A salt, $\text{C}_6\text{H}_{11}\text{KO}_7$, occurring as a white to yellowish white, crystalline powder or as granules; used as an electrolyte replenisher in the prophylaxis and treatment of hypokalemia, administered orally.

p. glycerophosphate, a colorless to slightly yellow viscous substance, $\text{K}_2\text{C}_3\text{H}_5(\text{OH})_2\text{PO}_4$, formerly used as a tonic. **p. guaiacolsulfonate**, $\text{C}_7\text{H}_7\text{KO}_3\text{S}$, occurring as white crystals or crystalline powder; used as an expectorant. **p. hydroxide** [NF], KOH , white or nearly white, fused masses or small pellets, or flakes, or sticks, or other forms; used as an alkaliizer in pharmaceutical preparations. Called also *caustic potash*, *potassa*, and *potassa caustica*. **p. hypophosphite**, a white, crystalline salt, KH_2PO_2 , formerly used in the treatment of tuberculosis. **p. iodate**, a compound, KIO_3 , occurring as white crystals or crystalline powder, formerly used as a topical antiseptic in the treatment of infections of the mucous membranes. It is added to animal feed as a source of iodine. **p. iodide** [USP], KI , occurring as crystals that are colorless and transparent or somewhat opaque and white, or as a white, granular powder; used as an expectorant, as a source of iodine in thyrotoxic crisis and in the preparation of thyrotoxic patients for thyroidectomy, and as an antifungal in the treatment of lymphocutaneous sporotrichosis; administered orally. **p. mercuric iodide**, a complex, K_2HgI_4 , containing about 25.5 per cent of mercury; used as a germicide, and as an ingredient of various reagents. **p. metaphosphate** [NF], KPO_3 , a white powder used as a buffering agent in pharmaceutical preparations. **p. nitrate**, KNO_3 , occurring as a white granular or crystalline powder or as colorless transparent prisms; formerly used as an oral diuretic. **p. penicillin G**, penicillin G potassium. **p. perchlorate**, KClO_4 , occurring as colorless crystals or white, crystalline powder; a thyroid inhibitor, it has been used in the treatment of thyrotoxicosis. **p. permanganate** [USP], the potassium salt of permanganic acid, KMnO_4 , occurring as dark purple crystals, having bactericidal, fungicidal, astringent, and oxidizing properties; used in solution as a topical anti-infective. Because of its oxidizing activity, it is also used in solutions as a gastric lavage for certain poisons. **p. phenoxymethyl penicillin**, penicillin V potassium. **p. phosphate**, K_2HPO_4 , occurring as colorless or white, granules or powder; has been used as a cathartic. Called also *dipotassium phosphate*. **p. phosphate, dibasic**, **p. phosphate**. **p. phosphate, monobasic** [NF], KH_2PO_4 , occurring as colorless crystals or as a white, granular or crystalline powder; used as a buffering agent in pharmaceutical preparations. Called also *p. dihydrogen phosphate*. **radioactive p.**, radiopotassium. **p. silicate**, soluble glass, $\text{K}_2\text{Si}_2\text{O}_5$, sometimes used like plaster of Paris in making rigid dressings. **p. sodium tartrate** [USP], $\text{C}_4\text{H}_4\text{KNaO}_6\cdot 4\text{H}_2\text{O}$, occurring as colorless crystals or as a white crystalline powder; used as a cathartic. Called also *Preston's salt*, *Rochelle salt*, and *Seignette's salt*. **p. sorbate** [NF], chemical name: 2,4-hexadienoic acid potassium salt. A mold and yeast inhibitor, $\text{C}_6\text{H}_7\text{O}_2$, occurring as white crystals or as a powder; used as a preservative in pharmaceutical preparations. **p. sulfate**, K_2SO_4 , occurring as colorless or white crystals or as a white powder or granules, which has an extremely irritant action on the stomach and intestines; has been used as a cathartic. **p. sulfite**, $\text{K}_2\text{SO}_3 + 2\text{H}_2\text{O}$, occurring as white crystals or crystalline powder; formerly used as a cathartic and diuretic. **p. sulfocyanate**, **p. thiocyanate**, $\text{K}_2\text{C}_4\text{H}_4\text{O}_6 + \frac{1}{2}\text{H}_2\text{O}$; occurring as white crystals or granular powder; has been used as a cathartic. **p. tellurate**, K_2TeO_6 , occurring in white crystals; formerly used in tuberculosis. **p. thiocyanate**, KSCN , occurring as colorless, transparent, prismatic crystals; used as a reagent, and formerly as an antihypertensive agent. Called also *p. sulfocyanate*.

Potassium Triplex (po-tas'e-um tri'pleks) trademark for Randall's solution.

potency (po'ten-se) [L. *potentia* power] power; especially (1) the

ability of the male to perform sexual intercourse; (2) the power of a medicinal agent to produce the desired effects; (3) the ability of an embryonic part to develop and complete its destiny. **pro-spective p.**, the total developmental possibilities of which an embryonic part is capable. **reactive p.**, see *competence*.

potentia (po-ten'she-ah) [L.] power.

potential (po-ten'shal) [L. *potentia* power] 1. existing and ready for action, but not yet active. 2. electric tension or pressure, as measured by the capacity of producing electric effects in bodies of a different state of electrization. When bodies of different potentials are brought into communication, a current is set up between them; if they are of the same potential, no current passes between them. **action p.**, the electrical activity developed in a muscle or nerve cell during activity. It may be elicited by electrical, chemical, or mechanical stimulation, by temperature change, and so on. **after-p.**, the period following termination of the spike potential; it has a negative and positive phase. **after-p., negative**, the period following termination of the spike potential during which there is a lag in the return of the potential of an excitable cell membrane to resting potential. **after-p., positive**, the period following termination of the negative after-potential, during which the potential of an excitable cell membrane is more negative than the resting potential. It is paradoxically called *positive* because it was first detected outside the cell, where the polarity is reversed. **bioelectric p.**, the varying electric potential which accompanies all biochemical processes, as those manifested in the electrocardiogram and the electroencephalogram. **caries-producing p.**, decalcification **p.** **cochlear p.**, see under *microphonics*. **decalcification p.**, the amount of acid produced by oral bacteria from a unit amount of foodstuff, multiplied by the number of such units adhering to the teeth after ingestion of the particular food. **demarcation p.**, the difference in electrical potential between the intact longitudinal surface and the injured end of a muscle or nerve. **evoked cortical p's**, the various discrete electrical charges in the cerebral cortex which can be produced by stimulation of sense organs or of some point along the ascending pathways to the cerebral cortex. **excitatory postsynaptic p.**, a transient decrease in membrane polarization induced in a postsynaptic neuron when subjected to a volley of impulses over an excitatory afferent pathway; summation of such potentials may cause discharge by the neuron. Abbreviated EPSP. **generator p.**, the depolarization produced in neural receptors in response to specific kinds of physical stimuli; called also *receptor p.* **inhibitory postsynaptic p.**, a transient hyperpolarization of membrane potential induced in a postsynaptic neuron when subjected to a volley of impulses over an inhibitory afferent pathway, resulting in a diminished responsiveness of the neuron. Abbreviated IPSP. **membrane p.**, the electric potential which exists on the two sides of a membrane or across the wall of a cell. **morphogenetic p.**, the degree of strength or ability of an embryonic part to develop into a specific structure. **negative summing p.**, a decrease in voltage difference between the cochlear duct and the vestibule caused by moderate to strong stimulation; it is maintained as long as sound stimulation persists. **pacemaker p.**, the slow diastolic depolarization of cell membranes in the sinoatrial node. **receptor p.**, generator **p.** **resting p.**, the potential difference across the membrane of a normal cell at rest, i.e., the difference in potential between the outside and inside of a cell at rest; cf. *action potential*. **spike p.**, the initial very large change in potential of an excitable cell membrane during excitation.

potentialization, potentiation (po-ten'she-al-i-za'shun, po-ten'she-a'shun) the synergistic action of two drugs, being greater than the sum of the effects of each used alone.

potentiator (po-ten'she-a-tor) an agent that enhances another agent so that the combined effect is greater than the sum of the effects of each one alone.

potentiometer (po-ten'she-om'ē-ter) an instrument for the accurate measuring of voltage.

potification (po'ti-fi-ka'shun) the process of making water fit to drink. Applied to sea water, it is the process of removing sufficient salts to render the remaining fluid safe for drinking.

potion (po'shun) [L. *potio* draft] a draft; a large dose of liquid medicine. **Rivière's p.**, an effervescent drink produced by combining a solution of citric acid with one of sodium or potassium bicarbonate.

potocytosis (po'to-si-to'sis) [Gr. *potos* drinking + *kytos* cell + *-osis*] the hypothetical action of cells passing fluids through themselves from one place to another.

potomania (po'to-ma'ne-ah) [Gr. *potos* drinking + *mania* madness] 1. an abnormal desire to drink. 2. delirium tremens.

Pott's aneurysm, disease, etc. (pots) [Sir Percival Pott, English surgeon, 1714-1788] see *aneurysmal varix*, under *varix*; see *tuberculosis of spine*; and see under *abscess, curvature, fracture, and paraplegia*.

Pottenger's sign (pot'en-erz) [Francis Morison Pottenger, American physician, born 1869] see under *sign*.

Potter treatment (pot'er) [Caryl Ashley Potter, American physician, 1886-1933] see under *treatment*.

Potter version (pot'er) [Irving W. Potter, American obstetrician, 1868–1956] see under *version*.

Potts-Smith-Gibson operation [Willis John Potts, Chicago surgeon, born 1895; Sidney Smith, Chicago surgeon, born 1912; Stanley Gibson, Chicago pediatrician, born 1883] see under *operation*.

potus (po'tus) [L. "drink"] a potion. **p. imperia/lis**, imperial drink, a solution of $\frac{1}{2}$ oz. of cream of tartar in 3 pts. of water, sweetened, and flavored with lemon peel.

pouch (powch) a pocket-like space or sac, as of the peritoneum. **abdominovesical p.**, the pouch formed by reflection of the peritoneum from the anterior abdominal wall to the distended bladder. **anterior p. of Trötsch**, recessus membranae tympani anterior. **branchial p.**, pharyngeal p. **Broca's p.**, a pear-shaped sac in the labium majus, its extremity directed downward and backward, and its smaller one upward, forward, and outward toward the opening of the inguinal canal; composed of elastic fibers, and containing connective tissue and fat. **craniobuccal p.**, **craniopharyngeal p.**, Rathke's p. **p. of Douglas**, excavatio rectouterina. **enterocoelic p.**, a diverticulum of the enteron of the embryo. **guttural p.'s**, large mucous sacs in the horse, which are ventral diverticula of the eustachian tube, situated between the base of the cranium and the atlas dorsally and the pharynx ventrally. **Hartmann's p.**, an abnormal sacculcation of the neck of the gallbladder. **Heidenhain p.**, a small pocket of the stomach which has been surgically separated from the body of the stomach, and thus vagally denervated, and which drains to the exterior; used in the experimental study of gastric physiology. Cf. Pavlov p. **ileocelecal p.**, a peritoneal pouch at the ileocecal junction. **laryngeal p.**, sacculus laryngis. **Morison's p.**, a pouch of peritoneum below the liver and to the right of the right kidney and extending downward to the transverse mesocolon. **neurobuccal p.**, Rathke's p. **oburator p.**, paravesical p. **paracystic p.**, the lateral part of the excavatio vesicouterina. **pararectal p.**, the lateral part of the excavatio rectouterina. **paravesical p.**, the lateral part of the uteroabdominal pouch, beside the bladder and in which the obturator canal opens; called also *oburator p.* **Pavlov p.**, a pocket of stomach which has been surgically separated from the body of the stomach by a mucosal septum, but which retains vagal innervation and muscular connection, and which drains to the exterior; used in the experimental study of gastric physiology. Cf. Heidenhain p. **pharyngeal p.**, a lateral diverticulum of the pharynx that meets a corresponding groove in the ectoderm, forming a closing plate that may rupture and complete the gill slit condition observed in lower vertebrates. **Physick's p.'s**, inflamed sacculations between the rectal valves, with mucous discharge. **posterior p. of Trötsch**, recessus membranae tympani posterior. **Prussak's p.**, recessus membranae tympani superior. **Rathke's p.**, a diverticulum from the embryonic buccal cavity, from which the anterior lobe of the pituitary gland is developed. The lumen of Rathke's pouch persists in adults as small colloid-filled cysts and clefts at the juncture of the pars distalis and the neurohypophysis. Called also *craniobuccal p.* and *neurobuccal p.* **rectouterine p.**, **rectovaginal p.**, excavatio rectouterina. **rectovesical p.**, excavatio rectovesicalis. **Seessel's p.**, a transient out-pouching of the embryonic pharynx rostral of the pharyngeal membrane and caudal to Rathke's pouch. **uteroabdominal p.**, the compartment of the pelvic cavity anterior to the uterus and broad ligaments. **uteroovesical p.**, **vesicouterine p.**, excavatio vesicouterina. **visceral p.**, pharyngeal p. **Willis' p.**, omentum minus. **Zenker's p.**, pulsion diverticulum.

poudrage (poo-drahzh') [Fr.] the application of powder to a surface, as between the visceral and parietal layers of the pericardium or pleura, to promote their fusion. **pleural p.**, the application of an irritating powder on the surfaces of the pleura to promote adhesion.

poultice (pōl'tis) [L. *puls* pap; Gr. *kataplasma*] a soft, moist, mass about the consistency of cooked cereal, spread between layers of muslin, linen, gauze, or towels and applied hot to a given area in order to create moist local heat or counterirritation. **mustard p.**, see under *plaster*.

pound (pownd) [L. *pondus* weight; *libra* pound] a unit of mass (weight) of both the avoirdupois and the apothecaries' system. The avoirdupois pound contains 16 ounces, or 7000 grains, and is the equivalent of 453.592 gm. The apothecaries' pound contains 12 ounces, or 5760 grains, and is the equivalent of 373.242 gm. Abbreviated lb.

Poupart's ligament, line (poo-parts') [François Poupart, French anatomist, 1661–1708] see *ligamentum inguinale*, and see under *line*.

Povan (po'van) trademark for a preparation of pyrinium pamoate.

poverty (pov'er-te) the absence or scarcity of requisite substance or elements. **emotional p.**, diminution in the normal emotional qualities of the mind, such as love, sympathy, honor, etc. **p. of movement**, the relative immobility and stoniness of position seen in subjects with parkinsonism; akinesia.

povidone (po'vi-dōn) [USP] chemical name: 1-ethenyl-2-pyrrol-

idinone homopolymer. A synthetic polymer occurring as a white to creamy white, odorless powder, principally consisting of linear 1-vinyl-2-pyrrolidone groups, produced as a series of products having mean molecular weights ranging from about 10,000 to about 700,000; used as a dispersing and suspending agent, and has been used as a tablet binder, coating agent, and viscosity-increasing agent in pharmaceutical preparations. Formerly called *polyvinylpyrrolidone* (PVP). See also *povidone-iodine*.

povidone-iodine (po'vi-dōn i'o-din) [USP], a complex produced by reacting iodine with the polymer povidone, which slowly releases iodine; it occurs as a yellowish brown, amorphous powder and is used as a topical anti-infective. Abbreviated PVP-I.

powder (pow'der) [L. *pulvis*] a substance made up of an aggregation of small particles, as that obtained by the grinding or trituration of a solid drug. **aromatic p.**, powder of cinnamon, ginger, cardamom seed, and myristica. **bleaching p.**, calx chlorinata. **p. of chalk, aromatic**, a preparation of chalk, cinnamon, myristica, clove, cardamom, and sucrose; formerly used as an antacid, stimulant, and astringent. **p. of chalk, aromatic, with opium**, aromatic powder of chalk containing 2.5 per cent of powdered opium. **chalk p., compound**, a powder containing prepared chalk, finely powdered acacia, and sucrose; it is an antacid used in treatment of diarrhea. **chini-ofon p.**, chiniofon. **Dalmatian insect p.**, pyrethrum flowers; see under *flower*. **Dover's p.**, ipecac and opium p. **dusting p.**, a fine powder used as a substitute for talc. **dusting p., absorbable**, an absorbable powder prepared by processing cornstarch, with not more than 2 per cent of magnesium oxide; used for dusting surgeons' rubber gloves and other purposes for which talc is used in the hospital. **effervescent p.'s, compound**, Seidlitz p.'s. **furazolidone and nifuroxime p.**, a preparation containing 0.09 to 0.11 per cent furazolidone and 0.45 to 0.55 per cent nifuroxime in a suitable, slightly acidified powder base; used in the treatment of candidal, trichomonal, and bacterial vaginitis, administered intravaginally. **glycyrrhiza p., compound**, senna p., compound. **Goa p.**, a bitter, brownish yellow to amber brown powder deposited in irregular interspaces of the wood of *Andira araroba* Aguiar. (Leguminosae), a large leguminous tree common in Brazil. It is the source of chrysarobin. **impalpable p.**, a powder so fine that its particles cannot be felt as distinct bodies. **iodochlorhydroxyquin p., compound** [USP], a preparation of iodochlorhydroxyquin, boric acid, lactic acid, zinc stearate, and lactose; used as a local anti-infective in the treatment of vaginitis due to *Trichomonas vaginalis*, *Candida albicans*, *Trichophyton*, or mixed bacteria, administered by intravaginal sufflation. **ipecac and opium p.**, a pale brown powder prepared by triturating 100 gm. of finely powdered ipecac, 100 gm. of powdered opium, and 800 gm. of coarsely powdered lactose to a very fine, uniform powder; formerly widely used as a sedative and diaphoretic. **p. of jalap, compound**, a mixture of jalap and potassium bitartrate, formerly used in treatment of dropsy. **licorice p., compound**, **p. of liquorice, compound**, senna p., compound. **methylbenzethonium chloride p.** [USP], a preparation containing 85 to 115 per cent of the labeled amount of methylbenzethonium chloride in a suitable fine powder base, free from grittiness; used topically as a local anti-infective, applied to the skin of the genitalia, rectum, thighs, and intertriginous area in the treatment of ammonia dermatitis and in the treatment and prevention of dermatoses caused by contact with urine, feces, and perspiration. **nystatin topical p.** [USP], a preparation containing 90 to 130 per cent of the labeled amount of nystatin; used as an antifungal. **Persian insect p.**, pyrethrum flowers; see under *flower*. **p. of rhubarb, compound**, a preparation of rhubarb, ginger, and magnesium oxide; formerly used as a laxative antacid. **Seidlitz p.'s**, a combination of sodium bicarbonate, potassium sodium tartrate, and tartaric acid, used as a cathartic; called also *compound effervescent p.'s*. See also under *tests*. **senna p., compound**, a weak or dusky yellow powder prepared from fennel oil, finely powdered sucrose, powdered senna, powdered glycyrrhiza, and washed sulfur; used as a laxative. **Sippy p. No. 1**, sodium bicarbonate and calcium carbonate p. **Sippy p. No. 2**, sodium bicarbonate and magnesium oxide p. **sodium bicarbonate and calcium carbonate p.**, a mixture of precipitated calcium carbonate and sodium bicarbonate: antacid; widely used in treatment of peptic ulcer in combination with sodium bicarbonate and magnesium oxide powder. **sodium bicarbonate and magnesium oxide p.**, a mixture of magnesium oxide and sodium carbonate; used as an antacid and laxative. **tolnaftate p.** [USP], a preparation containing 90 to 110 per cent of the labeled amount of tolinaftate; used topically as an antifungal. **triacetin p.**, a preparation containing 90 to 110 per cent of the labeled amount of triacetin in a suitable powder base; used as an antifungal in superficial skin infections, applied topically. **zinc sulfate p., compound**, a preparation of salicylic acid, zinc sulfate, phenol, eucalyptol, menthol, thymol, and boric acid; used as an antiseptic.

power (pow'er) [L. *posse* to have power] 1. capability; potency; the ability to act. 2. a measure of magnification, as of a microscope. **candle p.**, the numerical expression, in international candles, of the luminous intensity of a light source. **carbon dioxide-combining p.**, **CO₂-combining p.**, ability of the

blood plasma to combine with carbon dioxide; often, but probably inappropriately, referred to as the alkali reserve. **defining p.**, the ability of a lens to make an object clearly visible. **resolving p.**, the ability of the eye or of a lens to make separately visible small objects that are close together, thus revealing the structure of an object; see also *resolution*.

pox (poks) 1. any eruptive or pustular disease, especially one caused by a virus; see specific entries: *chickenpox*, *cowpox*, *horsepox*, *rabbitpox*, etc. 2. former name for syphilis. **Kaffir p.**, variola minor.

poxvirus (poks-vi'rus) any of a group of relatively large, morphologically similar, and immunologically related DNA viruses, including the viruses of vaccinia (cowpox), variola (smallpox), and those producing pox diseases in lower animals.

P.P. abbreviation for *L. punctum proximum*, near point of accommodation.

P.P.D. purified protein derivative (of tuberculin); see under *tuberculin*.

ppg. picopicogram.

PPLO pleuropneumonia-like organisms; see *pleuropneumonia-like*, and *Mycoplasma*.

ppm. parts per million.

Ppt. precipitate; prepared.

PR prosthion.

P.R. abbreviation for *L. punctum remotum*, far point of accommodation.

Pr chemical symbol for *praseodymium*.

Pr. presbyopia; prism.

practice (prak'tis) [Gr. *praktikē*] the utilization of one's knowledge in a particular profession, the practice of medicine being the exercise of one's knowledge in the practical recognition and treatment of disease. **contract p.**, the treatment of the members of a specified group for a lump sum, or at so much per member. **family p.**, the medical specialty concerned with the planning and provision of the comprehensive primary health care of all members of a family, regardless of age or sex, on a continuing basis. **general p.**, the provision of comprehensive medical care as a continuing responsibility regardless of age of the patient or of the condition that may temporarily require the services of a specialist. **group p.**, see under *medicine*. **panel p.**, see under *panel*.

practitioner (prak-tish'un-er) one who has complied with the requirements of and who is engaged in the practice of medicine. **nurse p.**, see *nurse clinician*, under *nurse*.

practolol (prak'to-lōl) chemical name: *N*[4-[2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetamide; a beta-adrenergic blocking agent, $C_{14}H_{22}N_2O_3$, having the same actions as propranolol (q.v.). Its use has been found to be associated with an allergic reaction of the eyes, skin, mucous membranes, and ears.

prae- for words beginning thus, see also those beginning *pre-*.

praecox (pre'koks) [L.] beforetime; early; see *dementia praecox*.

praeputium (pre-pu'she-um) [L.] preputium. **p. clitor'idis**, preputium clitoridis. **p. pe'nis**, preputium penis.

praevia, **praevius** (pre've-a, pre've-us) [L.] going before, leading the way; see under *placenta*.

pragmatagnosia (prag'mat-ag-no'ze-ah) [Gr. *pragma* object + *agnōsia* absence of recognition] inability to recognize formerly known objects.

pragmatamnesia (prag'mat-am-ne'ze-ah) [Gr. *pragma* object + *amnesia* forgetfulness] loss of power of remembering the appearance of objects.

pragmatic (prag-mat'ik) pertaining to pragmatism; dealing with practical aspects.

pragmatism (prag'mah-tizm) the doctrine that the whole meaning of a conception lies in its practical consequences.

pralidoxime (pral'i-doks'em) chemical name: 2-[(hydroxyimino)methyl]-1-methylpyridinium. A cholinesterase reactivator, $C_7H_9N_2O^+$, capable of acting as an antagonist to certain anticholinesterases. Called also *2-PAM*. **p. chloride** [USP], the chloride salt of pralidoxime, $C_7H_9ClN_2O$, occurring as a white to pale-yellow, crystalline powder; used as an antidote in the treatment of poisoning due to organophosphates having anticholinesterase activity and to counteract the effects of overdosage by anticholinesterases used in the treatment of myasthenia gravis, administered orally and by intravenous infusion. **p. iodide**, the iodide salt of pralidoxime, $C_7H_9IN_2O$, having the actions and uses of the chloride salt. **p. mesylate**, the methanesulfonate salt of pralidoxime, $C_8H_{12}N_2O_4S$, having the actions and uses of the chloride salt.

pramoxine hydrochloride (pram-ok'sēn) [USP] chemical name: 4-[3-(4-butoxyphenoxy)propyl]morpholine hydrochloride. A local anesthetic, $C_{17}H_{27}NO_3 \cdot HCl$, occurring as a white to nearly white, crystalline powder; applied topically.

prandial (pran'de-al) [L. *prandium* breakfast] pertaining to a meal, especially dinner.

pranolium chloride (pra-no'le-um) chemical name: 2-hydroxy-*N,N*-dimethyl-*N*-(1-methylethyl)-3-(1-naphthalenyloxy)-1-

propanaminium chloride; a cardiac depressant with antiarrhythmic actions, $C_{18}H_{25}ClNO_2$.

Prantal (pran'tal) trademark for preparations of diphepanil methylsulfate.

praseodymium (pra'ze-o-dim'e-um, pra'se-o-dim'e-um) a rare earth element; atomic number, 59; atomic weight, 140.907; symbol, Pr.

P. rat. aetat. abbreviation for *L. pro ratio'ne aeta'tis*, in proportion to age.

pratique (prah-tek') [Fr.] a certificate which releases an incoming vessel from quarantine. It is given by the quarantine officer to the master, and when presented to the collector of the port admits the boat to entry.

Pratt's sign (symptom), test (prats) [Joseph Hersey Pratt, American physician, 1872-1956] see under *sign* and *tests*.

Prausnitz-Küstner reaction (test) (prows'nits-kist'ner) [Carl Willy Prausnitz, German hygienist, born 1876; Heinz Küstner, German gynecologist, born 1897] see under *reaction*.

Praxagoras (prak-sag'o-ras) **of Cos** (c. 340 B.C.) a Greek physician who succeeded Diocles as leader of the Dogmatists. He was apparently the first Greek physician to recognize the difference between arteries and veins, and to comment on the pulse.

praxiology (prak'se-ol'o-je) [Gr. *praxis* action + *-logy*] the study of conduct, rather than of thought or consciousness.

praxis (prak'sis) [Gr. "action"] the doing or performance of action; Edinger's term for the execution of pallial impulses. Cf. *gnosis*.

prazepam (prah'zē-pam) chemical name: 7-chloro-1-(cyclopropylmethyl)-1,3-dihydro-5-phenyl-2*H*-1,4-benzodiazepin-2-one. A benzodiazepine derivative, $C_{19}H_{17}ClN_2O$, used as a muscle relaxant and a tranquilizer in the treatment of conditions in which anxiety is a prominent feature, administered orally.

praziquantel (pra'zi-kwon'tel) chemical name: 2-(cyclohexylcarbonyl)-1,2,3,6,7,11b-hexahydro-4*H*-pyrazino[2,1-*a*]isoquinolin-4-one; a veterinary anthelmintic, $C_{19}H_{24}N_2O_2$.

prazosin hydrochloride (prah'zo-sin) chemical name: 1-(4-amino-6,7-dimethoxy-2-quinazolinyl)-4-(2-furanylcarbonyl)piperazine monohydrochloride. A quinazoline derivative with vasodilator properties, $C_{19}H_{21}N_5O_4 \cdot HCl$; used as an oral antihypertensive.

pre- [L. *prae* before] prefix signifying before.

preadult (pre'ah-dult') prior to adult life.

preagonal (pre-ag'o-nal) preceding the death agony.

preagonal (pre'ah-gon'ik) preagonal.

prealbuminuric (pre'al-bu'mi-nu'rik) occurring before albuminuria sets in.

preanal (pre-a'nal) in front of the anus.

preanesthesia (pre'an-es-the'ze-ah) preliminary anesthesia; light anesthesia or narcosis induced by medication as a preliminary to administration of a general anesthetic.

preanesthetic (pre'an-es-thet'ik) 1. pertaining to or inducing preanesthesia. 2. an agent that induces preanesthesia.

preantiseptic (pre'an-ti-sep'tik) pertaining to the time before the discovery of antiseptics.

preaortic (pre'a-or'tik) in front of the aorta.

preaseptic (pre'a-sep'tik) pertaining to the time before aseptic surgery was practiced.

preataxic (pre'ah-tak'sik) occurring before or preceding ataxia.

preaurale (pre'aw-ra'le) a cephalometric landmark, the point at which a straight line from the postaurale, perpendicular to the long axis of the auricle, meets the base of the auricle.

preauricular (pre'aw-rik'u-lar) situated in front of the auricle of the ear.

preaxial (pre-ak'se-al) situated or occurring before an axis; in anatomical usage, preaxial refers to the lateral (radial) aspect of the upper limb, and the medial (tibial) aspect of the lower limb.

prebacillary (pre-bas'i-ler'e) occurring before the entrance of bacilli into the system, or before they become discoverable.

prebacteriological (pre'bak-te're-o-log'i-kal) before the development of bacteriology.

prebase (pre'bās) that part of the dorsum of the tongue lying in front of the base.

prebetalipoprotein (pre'ba'tah-lip'o-pro'te-in) very low-density lipoprotein; see under *lipoprotein*.

prebetalipoproteinemia (pre'ba'tah-lip'o-pro'te-in-e'me-ah) hyperbetalipoproteinemia.

prebiotic (pre'bi-ot'ik) denoting the period before the existence of life on earth.

prebladder (pre-blad'er) an extensive cavity formed in front of the orifice of the bladder within the capsule of the prostate.

prebrachium (pre-bra'ke-um) brachium colliculi superioris.

precancer (pre'kan-ser) a condition which tends eventually to become malignant.

precancerosis (pre/'kan-ser-o/'sis) a precancerous condition; a condition of early cancer.

precancerous (pre-'kan/'ser-us) pertaining to a pathologic process that tends to become malignant.

precapillary (pre-kap/'i-ler/'e) a vessel lacking complete coats, intermediate between an arteriole and a true capillary, and containing scattered smooth muscle cells in its wall; these vessels usually have sphincter areas, which control blood flow into capillaries. Called also *metarteriole*.

precarcinomatous (pre/'kar-si-'nom/'ah-tus) preceding the development of carcinoma.

precardiac (pre-'kar/'de-ak) situated ventrad from the heart.

precordium (pre-'kar/'de-um) [*pre-* + Gr. *kardia* heart] precordium.

precartilage (pre-'kar/'ti-lij) embryonic cartilaginous tissue.

precava (pre-'ka/'vah) the vena cava superior.

precentral (pre-sen/'tral) situated in front of a center, as the precentral gyrus.

prechordal (pre-'kor/'dal) situated in front of the notochord.

precipitable (pre-sip/'i-tah-'b'l) capable of being precipitated.

precipitant (pre-sip/'i-tant) a substance which causes a chemical or mechanical precipitation.

precipitate (pre-sip/'i-tāt) [*L. praecipitare* to cast down] 1. to cause a substance in solution to settle down in solid particles. 2. [*L. praecipitatum*] a deposit made or substance thrown down by precipitation. 3. occurring with undue rapidity, as precipitate labor. 4. in immunology, the product of interaction between soluble macromolecular antigen and the homologous antibody (e.g., the antigen-antibody complex formed as a consequence of the reaction of pneumococcus capsular polysaccharide in solution with specific antiserum). **keratic p's**, see under *keratitis punctata*. **sweet p.**, calomel (mild mercurous chloride). **white p.**, ammoniated mercury.

precipitation (pre-sip/'i-ta/'shun) [*L. praecipitatio*] the act or process of precipitating. **group p.**, precipitation by a precipitin in a specific antiserum of an antigen common to a group of closely related microorganisms.

precipitin (pre-sip/'i-tin) an antibody to soluble antigen that specifically aggregates the macromolecular antigen in vivo or in vitro to give a visible precipitate. **heat p.**, coctoprecipitin.

precipitinogen (pre-sip/'i-tin-o-'jen) the soluble antigen which stimulates the formation of precipitins and is capable of reacting with them in vitro and in vivo.

precipitinoid (pre-sip/'i-tin-oid) (*obs.*) a precipitin in which the zymophore group has been changed or lost so that it cannot cause precipitation, although it still retains its affinity for the antigen.

precipitinophoric (pre-sip/'i-tin-o-'for/'ik) (*obs.*) denoting the active precipitating element or group in a precipitin.

precipitogen (pre-sip/'i-to-'jen) precipitinogen.

precipitogenoid (pre-sip/'i-toj/'e-noid) (*obs.*) a precipitogen which has lost its power of causing precipitation.

precipitoid (pre-sip/'i-toid) precipitinoid.

precipitophore (pre-sip/'i-to-'fōr/'i) (*obs.*) the group in a precipitin which causes the actual precipitation.

precipitum (pre-sip/'i-tum) (*obs.*) the precipitate resulting from the action of a precipitin.

precirrhosis (pre-'sir-ro/'sis) the early stages of cirrhosis of the liver.

preclavicular (pre-'klay-vik/'u-lar) in front of the clavicle.

preclinical (pre-'klin/'i-kal) before a disease becomes clinically recognizable.

preclival (pre-'kli/'val) in front of the clivus of the cerebellum.

precocious (pre-'ko/'shus) developed more than is usual at a given age.

precocity (pre-'kos/'i-te) unusually early development of mental or physical traits.

precognition (pre-'kog-nish/'un) [*pre-* + *cognition*] the extra-sensory perception of a future event.

precoid (pre/'koid) resembling dementia praecox.

precollagenous (pre-'kō-laj/'ē-nus) [*pre-* + *collagen*] denoting an incomplete stage in the formation of collagen.

precoma (pre-'ko/'mah) the neuropsychiatric state preceding coma, as in hepatic encephalopathy.

preconscious (pre-'kon/'shus) in freudian terminology, all the mental processes that are "out of mind" at the time, but can be recalled with little or no effort.

preconvulsant (pre-'kon-'vul/'sant) preceding the occurrence of convulsions.

preconvulsive (pre-'kon-'vul/'siv) occurring before the convulsive stage.

precordia (pre-'kor/'de-ah) [*L. praecordia*] precordium.

precordial (pre-'kor/'de-al) pertaining to the precordium.

precordialgia (pre-'kor-'de-al/'je-ah) [*precordia* + *-algia*] pain in the precordium.

precordium (pre-'kor/'de-um) the region over the heart and lower part of the thorax.

precornu (pre-'kor/'nu) cornu anterius ventriculi lateralis.

precostal (pre-'kos/'tal) in front of the ribs.

precritical (pre-'krit/'i-kal) previous to the occurrence of the crisis.

precuneal (pre-'ku/'ne-al) situated in front of the cuneus.

precuneate (pre-'ku/'ne-āt) pertaining to the precuneus.

precuneus (pre-'ku/'ne-us) [*pre-* + *L. cuneus* wedge] [NA] a small, square-shaped convolution on the medial surface of the parietal lobe of the cerebrum, bounded posteriorly by the medial part of the parietooccipital sulcus and anteriorly by the paracentral lobule.

precursor (pre/'kur-sor) [*L. praecursor* a forerunner] something that precedes. In biological processes, a substance from which another, usually more active or mature substance is formed. In clinical medicine, a sign or symptom that heralds another.

predation (pre-'da/'shun) the derivation by an organism of elements essential for its existence from organisms of other species which it consumes and destroys.

predator (pred/'ah-tor) [*L. praedator* a plunderer, pillager] an organism that derives elements essential for its existence from organisms of other species, which it consumes and destroys.

predentin (pre-'den/'tin) the soft fibrillar substance composing the primitive dentin and forming the inner layer of the circumpulp dentin; called also *dentinoid*.

prediabetes (pre-'di/'ah-be/'tēz) a state of latent impairment of carbohydrate metabolism, in which the criteria for diabetes mellitus are not all satisfied; sometimes controllable by diet alone.

prediastole (pre-'di-as/'to-le) the interval immediately preceding diastole in the cardiac cycle.

prediastolic (pre-'di-ah-'stol/'ik) 1. pertaining to the beginning of the diastole. 2. occurring just before the diastole.

predicrotic (pre-'di-'krot/'ik) occurring before the dicrotic wave of the sphygmogram.

predigestion (pre-'di-'jes/'chun) the partial artificial digestion of food before its ingestion.

predisposing (pre-'dis-'pōz/'ing) conferring a tendency to disease.

predisposition (pre-'dis-'po-'zish/'un) [*pre-* + *L. disponere* to dispose] a latent susceptibility to disease which may be activated under certain conditions, as by stress.

prediverticular (pre-'di-'ver-'tik/'u-lar) denoting a condition of thickening of the muscular wall of the colon and increased intraluminal pressure but without herniation of the mucosa, i.e., without evidence of diverticulosis.

prednisolone (pred-'nis/'o-lōn) [USP]. chemical name: 11β17α-21-trihydroxypregna-1,4-diene-3,20-dione. A synthetic glucocorticoid derived from cortisol, C₂₁H₂₈O₅, occurring as a white to practically white, crystalline powder; administered orally in the treatment of various conditions responsive to the anti-inflammatory action of glucocorticoids, including rheumatoid arthritis and other collagen diseases, allergic conditions, neoplastic and gastrointestinal disease, and blood dyscrasias. **p. acetate** [USP], the 21-acetate ester of prednisolone, C₂₃H₃₀O₄, occurring as a white to practically white, crystalline powder, having actions and uses similar to those of the base; administered by intra-articular or intramuscular injection. **p. butylacetate**, p. tebutate. **p. sodium phosphate** [USP], the sodium phosphate ester salt of prednisolone, C₂₁H₂₇Na₂O₆P, occurring as white or slightly yellow, friable granules or powder, having actions and uses similar to those of the base; administered by intravenous or intramuscular injection when rapid effect is needed, or applied topically to the conjunctiva. **p. sodium succinate for injection** [NF], sterile prednisolone sodium succinate prepared from prednisolone succinate with the aid of sodium carbonate, containing between 90 and 110 per cent of prednisolone; used as a glucocorticoid. **p. succinate** [USP], the succinate ester of prednisolone, C₂₃H₃₂O₆, occurring as a fine, creamy white powder with friable lumps, which on solubilization with sodium carbonate produces *prednisolone sodium succinate*, a form administered by intravenous or intramuscular injection when rapid effect is needed. **p. tebutate** [USP], an ester of prednisolone, C₂₇H₃₈O₆, occurring as a white to slightly yellow, free-flowing powder that may have some soft lumps; used as a pharmaceutical necessity for the sterile suspension dosage form intended for intra-articular, intrabursal, and soft-tissue injection. Called also *p. butylacetate*.

prednisone (pred-'ni-'sōn) [USP]. chemical name: 17α,21-dihydroxypregna-1,4-diene-3,11,20-trione. A synthetic glucocorticoid derived from cortisone, C₂₁H₂₆O₅, but having reduced mineralocorticoid activity; it occurs as a white to practically white, crystalline powder and is used orally in the treatment of various conditions responsive to the anti-inflammatory action of glucocorticoids. Called also *deltacortisone*.

predormital (pre-'dor/'mi-tal) pertaining to or occurring in the predormitum.

predormitum (pre-'dor-'mish/'e-um) predormitum.

predormitum (pre-'dor/'mi-tum) the period of waning con-

consciousness interposed between the waking state and sound slumber.

preeclampsia (pre'e-klamp'se-ah) a toxemia of late pregnancy characterized by hypertension, edema, and proteinuria; when convulsions and coma are associated, it is called *eclampsia*.

preelacin (pre-el'ah-sin) a precursor of elacin in the circulating blood.

preenzyme (pre'en-zim") zymogen.

preepiglottic (pre'ep-i-glot'ik) situated or occurring in front of the epiglottis.

preeruptive (pre'e-rup'tiv) preceding an eruption.

preexcitation (pre-ek'si-ta'shun) 1. premature excitation of a portion of the ventricle occurring in Wolff-Parkinson-White syndrome. It is caused by cardiac impulses transmitted along an accessory pathway not subject to the physiologic delay of the atrioventricular node, and is characterized electrocardiographically by a short P-R interval and a wide QRS interval. 2. Wolff-Parkinson-White syndrome. **ventricular p.**, Wolff-Parkinson-White syndrome.

preflagellate (pre-flaj'è-lât) preceding the flagellate state; said of protozoa.

preformation (pre'for-ma'shun) the theory of early physiologists that the fully formed animal or plant exists in a minute form in the germ cell. Opposed to the theory of *epigenesis*. See *animalculist* and *ovist*.

preformationist (pre'for-ma'shun-ist) a believer in the theory of preformation.

prefrontal (pre-fron'tal) 1. situated in the anterior part of the frontal lobe or region. 2. the central part of the ethmoid bone.

prefunctional (pre-funk'shun-al) denoting the period in embryological development during which the organ rudiments are formed but are incapable of performing their specific functions.

preganglionic (pre'gang-gle-on'ik) situated anterior or proximal to a ganglion; said especially of autonomic nerve fibers so located.

pregenital (pre-jen'i-tal) pertaining to the early infantile stage of sexual life before the genitals have become the dominant zone.

Pregl's test (pra'g'iz) [Fritz Pregl, Austrian chemist, 1869-1930] see under *tests*.

preglomerular (pre'glo-mer'u-lar) located or occurring proximal to a glomerulus of the kidney.

pregnancy (preg'nān-se) [L. *praegnans* with child] the condition of having a developing embryo or fetus in the body, after union of an ovum and spermatozoon. In women duration of pregnancy is about 266 days. Pregnancy is marked by cessation of the menses; nausea on arising in the morning (morning sickness); enlargement of the breasts and pigmentation of the nipples; progressive enlargement of the abdomen. The absolute signs of pregnancy are fetal movements, sounds of the fetal heart, and demonstration of the fetus by x-ray or ultrasound. **abdomi-**

Pregnancy—Uterine levels.

nal p., ectopic pregnancy with development of the fetus in the abdominal cavity. **ampullar p.**, ectopic pregnancy in which the ovum has been arrested in the ampulla of the oviduct.

angular p., pregnancy in which the fertilized ovum becomes implanted in the angle or cornu of the uterus. **bigeminal p.**, twin p. **broad ligament p.**, ectopic pregnancy with development of the fertilized ovum in the broad ligament. **cervical**

p., ectopic pregnancy with the development of the ovum within the cervical canal. **combined p.**, simultaneous existence of intrauterine and ectopic pregnancy. **compound p.**, superimposition of an intrauterine pregnancy on a previously existing ectopic pregnancy, generally a lithopedion. **cornual p.**, pregnancy in one of the horns of a bicornate uterus. **ectopic p.**, development of the fertilized ovum outside of the uterine cavity; called also *extrauterine p.* **exochorial p.**, graviditas exochor-

Diagram showing locations of ectopic (extrauterine) pregnancy: (1) primary abdominal; (2) ovarian; (3) ampullar; (4) tubal—rupture into broad ligament; (5) interstitial; (6) tubal—rupture into peritoneal cavity; (7) tubo-ovarian; (8) cervical (Greenhill).

rials. **extrauterine p.**, ectopic p. **fallopian p.**, tubal p. **false p.**, absence of the menses and presence of other signs of pregnancy, without occurrence of conception and development of an embryo. It may be due to psychogenic factors, to a tumor or mole, or to endocrine disorders. Called also *pseudocyesis*, *pseudopregnancy*, and *spurious p.* **gemellary p.**, twin p. **heterotopic p.**, combined p. **hydatid p.**, that which is accompanied with the formation of a hydatid mole. **hysteric p.**, false pregnancy due to psychogenic factors. **incomplete p.**, pregnancy which is interrupted prematurely: abortion (up to the 16th week); immature delivery (16th to 28th week); premature delivery (28th to 36th week). **interstitial p.**, ectopic pregnancy with gestation in that part of the oviduct which is within the wall of the uterus. **intrafallopian p.**, **intrafallopian p.**, ectopic pregnancy within the broad ligament. **intramural p.**, interstitial p. **intraperitoneal p.**, ectopic pregnancy within the peritoneal cavity. **membranous p.**, pregnancy in which the fetus has broken through its membranous envelope and lies in contact with the uterine walls. **mesenteric p.**, tuboligamentary p. **molar p.**, conversion of the ovum into a mole. **multiple p.**, pregnancy resulting in the birth of more than one infant; it may be *monovular* (resulting from the fertilization of a single ovum) or *polyovular* (resulting from the fertilization of more than one ovum). When more than two fetuses co-exist, they may come from one ovum or be the result of combined monovular and polyovular twinning. **mural p.**, interstitial p. **nervous p.**, false pregnancy due to psychogenic factors. **ovarian p.**, ectopic pregnancy occurring within an ovary. **ovario-abdominal p.**, ectopic pregnancy which begins ovarian, but afterward becomes abdominal. **oviductal p.**, tubal p. **parietal p.**, interstitial p. **phantom p.**, false pregnancy due to psychogenic factors. **plural p.**, pregnancy with more than one fetus. **prolonged p.**, pregnancy continuing beyond the normal duration, usually beyond 294 days after the beginning of the last menses. **pseudointrafallopian p.**, an ectopic pregnancy in which a sac has been formed in such a way as to simulate an intrafallopian pregnancy. **sarcotetic p.**, pregnancy with both a fetus and a mole. **sarcotetic p.**, false pregnancy due to a mole. **spurious p.**, false p. **stump p.**, pregnancy at the stump remaining after a supracervical hysterectomy. **tubal p.**, ectopic pregnancy within an oviduct. **tuboabdominal p.**, ectopic pregnancy occurring partly in the fimbriated end of the oviduct and partly in the abdominal cavity. **tuboligamentary p.**, ectopic pregnancy partly in the tube and partly in the broad ligament. **tubo-ovarian p.**, ectopic pregnancy occurring partly in the ovary and partly in the oviduct. **tubouterine p.**, ectopic pregnancy partly within the uterus and partly in an oviduct. **twin p.**, gestation with development of two fetuses. **uteroabdominal p.**, pregnancy with one fetus in the uterus and another in the abdominal cavity. **utero-ovarian p.**, pregnancy with one fetus in the uterus and another in the ovary. **uterotubal p.**, tubouterine pregnancy.

pregnane (preg'nān) a crystalline saturated steroid hydrocarbon, $C_{27}H_{48}$. β -Pregnane is the form from which several hormones, including progesterone, are derived. 5α -Pregnane, or allopregnane, is the form excreted in the urine.

pregnanediol (preg'nān-di'ol) a crystalline, biologically inactive dihydroxy derivative of pregnane, formed by reduction of progesterone and found especially in urine of women during pregnancy or the secretory phase of the menstrual cycle.

pregnanetriol (preg'nān-tri'ol) a metabolite of 17-hydroxyprogesterone, normally occurring in small amounts in body fluids and urine, but greatly increased in disorders of the adrenal cortex in which 21-hydroxylation of the steroid nucleus is impaired.

pregnant (preg'nant) [L. *praegnans*] with child; gravid.

pregnene (preg'nēn) a crystalline unsaturated steroid with one double bond and three methyl groups, $C_{21}H_{34}$; Δ^4 -pregnene forms the nucleus of the corpus luteum principle, progesterone.

pregneninone (preg'nēn-in'o-lōn) ethisterone.

pregnenolone succinate (preg-nēn'o-lōn) chemical name: (3 β -carboxy-1-oxopropoxy)-pregn-5-en-20-one. A glucocorticoid, $C_{23}H_{36}O_5$, which has been used in the treatment of rheumatoid arthritis.

pregonium (pre-go'ne-um) a recess on the lower edge of the body of the mandible in advance of the angle.

pregranular (pre-gran'u-lar) occurring before the granular stage.

pregravidic (pre'grah-vid'ik) preceding pregnancy.

prehallux (pre-hal'uks) a supernumerary bone of the foot sometimes found growing from the medial border of the scaphoid.

prehemiplegic (pre'hēm-i-ple'jik) forerunning an attack of hemiplegia.

prehensile (pre-hen'sil) [L. *prehendere* to lay hold of] adapted for grasping or seizing.

prehension (pre-hen'shun) [L. *prehensio*] the act of seizing or grasping.

prehepaticus (pre'he-pat'i-kus) [*pre-* + Gr. *hēpar* liver] a mass of vascular and connective tissue in the embryo which develops into the interstitial tissue of the liver.

prehormone (pre-hor'mōn) a precursor of a hormone.

prehyoid (pre-hi'oid) in front of the hyoid bone.

prehypophyseal (pre'hi-po-fiz'e-al) pertaining to or derived from the anterior lobe of the pituitary gland (lobus anterior hypophyseos [NA]).

prehypophysial (pre'hi-po-fiz'e-al) prehypophyseal.

prehypophysis (pre'hi-pof'i-sis) the anterior lobe of the pituitary gland.

preictal (pre-ik'tal) [*pre-* + L. *ictus* stroke] occurring before a stroke or an attack, as before an acute epileptic attack.

preicteric (pre-ik-ter'ik) denoting the phase of hepatic disease before jaundice (icterus) appears.

preimmunization (pre-im'u-ni-za'shun) artificial immunization produced in very young infants, as by the BCG vaccine.

preinduction (pre'in-duk'shun) an environmental influence on the germ cells of an individual which does not produce a modification until the third generation of his descendants, i.e., in the grandchildren.

preinvasive (pre'in-va'siv) not yet invading other tissues; see *carcinoma in situ*.

preiotation (pre'i-o-ta'shun) [*pre-* + Gr. *iōta*, the Greek letter ι] the conversion of the initial sound of *i* into *y*.

Preiser's disease (pri'zerz) [Georg Karl Felix *Preiser*, orthopedic surgeon, Hamburg, Germany, 1879–1913] see under *disease*.

Preisz-Nocard bacillus (pris-no-kard') [Hugo von *Preis*, Budapest bacteriologist, 1860–1940; E. I. E. *Nocard*] *Corynebacterium pseudotuberculosis*.

prelacrimal (pre-lak'rī-mal) in front of the lacrimal sac.

prelacteal (pre-lak'te-al) preceding the establishment of milk flow; a term applied to the feeding of a newborn baby with carbohydrate-electrolyte solutions to reduce initial weight loss until breast feeding is fully established.

prelaryngeal (pre'lah-rin'je-al) in front of the larynx.

preleukemia (pre-lu-ke'me-ah) a stage of varying duration preceding the development of overt acute myelogenous monocytic or stem-cell leukemia, characterized by bone marrow dysfunction as manifested by anemia, neutropenia, thrombocytopenia, or a combination of these. Splenomegaly, hepatomegaly, or lymphadenopathy may not appear until the onset, often explosive, of the overt leukemia itself.

preleukemic (pre-lu-ke'mik) pertaining to or affected with preleukemia.

prelimbic (pre-lim'bik) situated before a limbus; specifically, anterior to the limbus fossae ovalis.

prelipoid (pre-li'poid) 1. preceding or before the lipid stage. 2. a preliminary stage of lipid substance.

prelocalization (pre'lo-kal-i-za'shun) the localization in the egg or blastomere of materials which will develop into a particular tissue or organ.

prelocomotion (pre'lo-ko-mo'shun) the movements of a child made with the intention of moving from place to place before motor coordination is sufficiently developed to enable it to walk.

prelum (pre'lum) [L.] press.

premalignant (pre'mah-lig'nant) precancerous.

premaniacal (pre'ma-ni'ah-kal) preceding an attack of mania.

Premarin (prem'ah-rin) trademark for preparations of conjugated estrogens.

premature (pre-mah-tūr') [L. *praematurus* early ripe] 1. occurring before the proper time. 2. a premature infant; see under *infant*.

prematurity (pre'mah-tu'rī-te) underdevelopment; the condition of a premature infant.

premaxilla (pre'mak-sil'ah) a separate element derived from the median nasal processes in the embryo, which later fuses with the maxilla; see also *os incisivum*.

premaxillary (pre-mak'si-ler'de) 1. situated in front of the maxilla proper. 2. *os incisivum*. 3. pertaining to the premaxilla or to the *os incisivum*.

premedical (pre-med'i-kal) preceding and preparing for the regular medical course of study, as premedical education.

premedicant (pre-med'i-kant) a drug used for premedication.

premedication (pre'med-i-ka'shun) preliminary medication, particularly internal medication to produce narcosis prior to inhalation anesthesia.

premeiotic (pre'mi-ot'ik) [*pre-* + Gr. *meioun* to decrease] occurring before or pertaining to the time preceding meiosis.

premenarchal (pre'mē-nar'kal) pertaining to the period before menstruation is established; occurring prior to the menarche.

premenarche (pre'mē-nar'ke) the period before menstruation is established; preceding the menarche.

premenarcheal (pre'mē-nar'ke-al) premenarchal.

premenstrua (pre-men'stroo-ah) plural of *premenstruum*.

premenstrual (pre-men'stroo-al) occurring before menstruation.

premenstruum (pre-men'stroo-um), pl. *premenstrua* [L.] the period immediately preceding occurrence of the menstrual flow.

premitotic (pre'mi-tot'ik) occurring before or pertaining to the time preceding mitosis.

premolar (pre-mo'lar) [*pre-* + L. *molaris* molar] 1. one of the eight permanent teeth (two on either side of each jaw) anterior to the molars and posterior to the canine teeth; in zoology, those teeth which succeed the deciduous molars regardless of the number to be succeeded. See under *tooth*. 2. situated in front of the molar teeth.

premonitory (pre-mon'i-to-re) [L. *praemonitorius*] serving as a warning.

premonocyte (pre-mon'o-sit) promonocyte.

premorbid (pre-mor'bid) occurring before the development of disease.

premortal (pre-mor'tal) occurring just before death.

premunity (pre'mu-nish'un) relative immunity; infection immunity; a state of resistance to infection which is established after an acute infection has become chronic and which lasts as long as the infecting organisms remain in the body.

premunitive (pre-mu'nī-tiv) pertaining to or produced by preventive vaccination.

premyeloblast (pre-mi'ē-lo-blast') an early form of a myeloblast.

premyelocyte (pre-mi'ē-lo-sit') promyelocyte.

preanarcosis (pre'nar-ko'sis) narcosis induced as a preliminary to full general anesthesia or previous to local anesthesia.

preanarcotic (pre'nar-kot'ik) previous to the occurrence of narcosis.

prenares (pre-na'rēz) the nostrils or nares.

prenasale (pre'na-sa'le) a cephalometric landmark, the most projecting point, in the median plane, at the tip of the nose.

prenatal (pre-na'tal) [*pre-* + L. *natalis* natal] existing or occurring before birth, with reference to the fetus. Cf. *antepartal*.

preneoplastic (pre'ne-o-plas'tik) before the development or existence of a tumor.

preoperative (pre-op'er-a'tiv) preceding an operation.

preoptic (pre-op'tik) situated anterior to the optic chiasma.

preoral (pre-o'ral) [*pre-* + L. *os* mouth] situated in front of the mouth, or cranial to it.

preoxygenation (pre-ok'si-jen-a'shun) the prolonged breathing of oxygen before exposure to low atmospheric pressure at high altitudes, as prophylaxis against decompression sickness.

prepalatal (pre-pal'ah-tal) situated in front of the palate.

preparalytic (pre'par-ah-lit'ik) preceding the appearance of paralysis.

preparation (prep'ah-ra'shun) [L. *praeparatio*] 1. the act or process of making ready. 2. a medicine made ready for use. 3. an anatomic or pathologic specimen made ready and preserved for study. **allergenic protein p's**, extracts of various substances such as pollens, foods, dusts, etc., that are used for the diagnosis, prophylaxis, and desensitization in allergic cases. **biomechanical p.**, the procedures involved in exposing, enlarging, cleansing, and shaping the pulp chamber and root canal of a tooth by mechanical means. **cavity p.**, the removal of carious tissue and the shaping of the cavity in a tooth preliminary to insertion of filling material. **corrosion p.**, an anatomical preparation made by injecting the parts to be retained and eating away the rest of the tissues with some corrosive substance. **Ehrlich-Hata p.**, arsphenamine. **Hata p.**, arsphenamine. **heart-lung p.**, an animal in which only the heart and lungs are

kept alive, the blood from the aorta being diverted into an external system of tubes, simulating the systemic circulation, and back via a reservoir to the right atrium; used in studies of heart function. **impression p.**, a preparation of bacteria on a slide for examination, made by lightly touching a coverglass to a colony.

preparative (pre-par'ah-tiv) amboceptor, i.e., antibody.

preparator (prep'ah-ra'tor) amboceptor, i.e., antibody.

prepartal (pre-par'tal) [pre- + L. *partus* labor] occurring before, or just previous to, labor.

prepatellar (pre'pah-tel'ar) situated in front of the patella.

prepatent (pre-pa'tent) before becoming apparent or manifest; in malariaology the term is applied to the period elapsing between infection and appearance of parasites in blood.

preperception (pre'per-sep'shun) in psychology, anticipation of a perception.

preperforative (pre-per'fo-ra'tiv) before the occurrence of perforation.

preperitoneal (pre'per-i-to-ne'al) situated between the parietal peritoneum and the abdominal wall, or occurring in front of the peritoneum.

prephthisis (pre-thi'sis) pretuberculosis.

preplacental (pre'plah-sen'tal) previous to the formation of the placenta.

preponderance (pre-pon'der-ans) [pre- + L. *pondere* to weigh] the condition of having greater weight, force, or influence. **ventricular p.**, disproportionate hypertrophy between the ventricles of the heart; diagnosed by the electrocardiograph.

prepotency (pre-po'ten-se) [L. *praepotentia*] power superior to that of the other parent in transmitting inheritable characters to the offspring.

prepotent (pre-po'tent) [L. *praepotens*] having superior force; having greater power than the other parent in transmitting inheritable characters to the offspring.

prepotential (pre'po-ten'shal) the slow diastolic depolarization of the cell membranes of the cardiac pacemaker.

preprandial (pre-pran'de-al) before meals.

preproinsulin (pre'pro-in'su-lin) the precursor of proinsulin, containing an additional polypeptide sequence at the N-terminal.

preprophage (pre-pro'faj) [pre- + *prophage*] a postulated stage in the life cycle of a temperate bacteriophage, occurring after infection of a bacterium and before establishment of the prophage.

preproprotein (pre'pro-pro'te-in) any precursor (e.g., preproinsulin) of a proprotein.

preprosthetic (pre'pros-thet'ik) performed or occurring before insertion of a prosthesis.

prepuberal (pre-pu'ber-al) prepubertal.

prepubertal (pre-pu'ber-tal) occurring before puberty; pertaining to the period of accelerated growth preceding gonadal maturity.

prepuberty (pre-pu'ber-te) the period preceding puberty.

prepubescence (pre'pu-bes'ens) prepuberty.

prepubescent (pre'pu-bes'ent) prepubertal.

prepuce (pre'pūs) a covering fold of skin; often used alone to designate the preputium penis. **p. of clitoris**, preputium clitoridis. **p. of penis**, preputium penis. **redundant p.**, a condition in which there is excessive growth of the foreskin, so that it cannot be drawn back over the glans.

preputial (pre-pu'shal) pertaining to the prepuce.

preputiotomy (pre-pu'she-ot'o-me) [*preputium* + Gr. *tomē* a cutting] incision of the preputium penis on the dorsum or side of the penis, to relieve the constriction in phimosis.

preputium (pre-pu'she-um) a covering fold of skin, as the preputium penis. **p. clitoridis** [NA], a fold formed by the union of the labia minora anterior with the clitoris; called also *prepuce of clitoris*. **p. penis** [NA], the fold of skin covering the glans penis; called also *prepuce of penis* and *foreskin*.

prepyloric (pre'pi-lor'ik) in front of or just proximal to the pylorus or the pyloric part of the stomach (see *pars pylorica ventriculi*).

prerectal (pre-rek'tal) situated in front of or just proximal to the rectum.

prerenal (pre-re'nal) in front of the kidney.

prerennin (pre-ren'in) the zymogen existing in the gastric glands, which, after secretion, is converted into rennin; called also *prorennin* and *renninogen*.

prereproductive (pre're-pro-duk'tiv) pertaining to childhood, or the stage preceding puberty.

preretinal (pre-ret'i-nal) in front of the retina.

presacral (pre-sa'kral) situated in front of the sacrum.

Presamine (pres'ah-mēn) trademark for a preparation of imipramine hydrochloride.

presby- (pres/be) [Gr. *presbys* old] a combining form meaning old or denoting relationship to old age.

presbyacusia (pres'be-ah-ku'se-ah) presbycusis.

presbyiatrics (pres-be-at'riks) [presby- + Gr. *iatrikē* surgery, medicine] geriatrics.

presbycardia (pres'bi-kar'de-ah) impaired cardiac function attributed to the aging process, occurring in association with recognizable changes of senescence in the body and in the absence of convincing evidence of other forms of heart disease.

presbycusis (pres'bē-ku'sis) [presby- + Gr. *akousis* hearing] a progressive, bilaterally symmetrical perceptive hearing loss occurring with age.

presbyesophagus (pres'be-ē-sof'ah-gus) a condition characterized by alteration in motor function of the esophagus as a result of degenerative changes occurring with advancing age.

presbyope (pres'be-ōp) [presby- + Gr. *ōps* eye] one who is presbyopic.

presbyophrenia (pres'be-o-fre'ne-ah) [presby- + Gr. *phrēn* mind + *-ia*] a mental condition often seen in old age, consisting of defective memory, loss of sense of location, and confabulation; called also *Wernicke's syndrome*.

presbyopia (pres'be-o'pe-ah) [presby- + Gr. *ōps* eye + *-ia*] hyperopia and impairment of vision due to advancing years or to old age; it is dependent on diminution of the power of accommodation from loss of elasticity of the crystalline lens, causing the near point of distinct vision to be removed farther from the eye.

presbyopic (pres'be-op'ik) pertaining to presbyopia.

presbytia (pres-bish'e-ah) presbyopia.

presbytism (pres'bi-tizm) presbyopia.

prescapula (pre-skap'u-lah) the suprascapular portion of the scapula.

prescapular (pre-skap'u-lar) 1. in front of the scapula. 2. pertaining to the prescapula.

presclerotic (pre'skle-rot'ik) occurring before sclerosis takes place.

prescribe (pre-skrīb') [L. *praescribere* to write before] to designate in writing a remedy for administration.

prescription (pre-skrip'shun) [L. *prescriptio*] a written direction for the preparation and administration of a remedy. A prescription consists of the heading or *superscription*—that is, the symbol **R** or the word *Recipe*, meaning "take"; the *inscription*, which contains the names and quantities of the ingredients; the *subscription*, or directions for compounding; and the *signature*, usually introduced by the sign **S**. for *signa*, "mark," which gives the directions for the patient which are to be marked on the receptacle. **shotgun p.**, an irrational prescription that contains a number of ingredients given with the idea that one or more of them may be effective.

presecretin (pre'se-kre'tin) prosecretion.

presegmenter (pre'seg-men'ter) a full-grown malarial parasite in the stage in which the pigment is accumulated into masses just previous to segmentation.

presenile (pre-se'nīl) pertaining to a condition resembling senility, but occurring in early or middle life.

presenility (pre'sē-nīl'i-te) premature old age.

presenium (pre-se'ne-um) the period immediately preceding old age.

present (pre-zen't) [L. *praesentare* to show] to appear or to show, as to appear first at the os uteri (said of various parts of the fetus), or to appear for examination, treatment, etc. (said of a patient).

presentation (pre'zen-ta'shun) [L. *praesentatio*] in obstetrics: (a) the relationship of the long axis of the fetus to that of the mother (called also *lie*); (b) the presenting part, i.e., that portion of the fetus which is touched by the examining finger through the cervix, or during labor, is bounded by the girdle of resistance. Cf. *position*. **antigen p.**, the hypothesis that macrophages not only ingest and process antigen, refining and complexing it with SRNA, but also present it in concentrated form at their surfaces to lymphocytes, thus inducing an immune response by the lymphocytes. **breech p.**, presentation of the buttocks or feet of the fetus in labor; see also *longitudinal p.* **breech p., complete**, presentation of the buttocks of the fetus in labor, with the feet alongside of the buttocks, the fetus being in the same attitude as in vertex presentation, but with polarity reversed. **breech p., double**, complete breech p. **breech p., frank**, presentation of the buttocks of the fetus in labor, with the legs extended against the trunk and the feet lying against the face. **breech p., incomplete**, presentation of the fetus in labor, with one or both feet or one or both knees of the fetus prolapsed into the maternal vagina. **breech p., single**, frank breech p. **brow p.**, presentation of the fetal brow in labor. **cephalic p.**, presentation of any part of the fetal head in labor, including occiput, brow, or face; see also *longitudinal p.* **compound p.**, prolapse of an extremity of the fetus (an arm or leg, or both), alongside the head, or of one or both arms alongside a presenting breech, at the beginning of labor. **face p.**, the presentation of the face of the fetus in labor. **footling p.**, presentation of the fetus in labor with one (single footling) or both feet (double footling) prolapsed into the maternal vagina. **funis p.**, presentation of the umbilical cord in labor. **longitudinal p.**, the

situation of the fetus in labor in which the long axis of the fetal body lies parallel to that of the mother. Normally, the head presents first, but sometimes the breech is the first to appear. **oblique p.**, the situation of the fetus in labor in which the long axis of the fetal body lies obliquely to that of the mother; the shoulder presents first. **parietal p.**, presentation of the parietal portion of the fetal head in labor. **pelvic p.**, breech p. **placental p.**, placenta previa. **polar p.**, longitudinal p. **shoulder p.**, presentation of the fetal shoulder in labor; see also *oblique p.* and *transverse lie*, under *lie*. **torso p.**, transverse lie. **transverse p.**, see under *lie*. **trunk p.**, transverse lie. **vertex p.**, the presentation of the vertex of the fetal head in labor.

preservative (pre-zer'vah-tiv) "a substance or preparation added to a product for the purpose of destroying or inhibiting the multiplication of microorganisms" (Council on Pharmacy and Chemistry).

presomite (pre-so'mit) [pre- + *somite*] referring to embryos before the appearance of somites; in the human, before Horizon IX or 19 days postfertilization.

prespermatid (pre-sper'mah-tid) a secondary spermatocyte.

presphenoid (pre-sfe'noid) the anterior portion of the body of the sphenoid bone.

presphygmie (pre-sfig'mik) occurring before the pulse wave; see under *period*.

prespinal (pre-spi'nal) situated in front of the spine.

prespondylolisthesis (pre-spon'di-lo-lis-the'sis) a congenital defect in the last lumbar vertebra consisting of a bilateral defect in the neural arches at the pedicles.

pressometer (pres-som'è-ter) manometer. **Jarcho p.**, an instrument especially designed for measuring pressure during injection of radiopaque material into the uterus in hysterosalpingography.

pressor (pres'or) tending to increase blood pressure, as a pressor substance.

pressoreceptive (pres'o-re-sep'tiv) sensitive to stimuli due to vasomotor activity, such as blood pressure.

pressoreceptor (pres'o-re-sep'tor) a receptor or nerve ending sensitive to stimuli of vasomotor activity.

pressosensitive (pres'o-sen'si-tiv) pressoreceptive.

pressure (presh'ur) [L. *pressura*] stress or strain, whether by compression, pull, thrust, or shear. **after p.**, a sense of pressure which lasts for a short period after removal of the actual pressure. **arterial p.**, the pressure of the blood within the arteries. **atmospheric p.**, the pressure exerted by the atmosphere; it is about 15 pounds to the square inch at the level of the sea. **back p.**, the pressure caused by the damming back of the blood in a heart chamber and its tributaries, due to an obstructive heart valve or failing myocardium. **biting p.**, occlusal p. **blood p.**, the pressure of the blood on the walls of the arteries, dependent on the energy of the heart action, the elasticity of the walls of the arteries, and the volume and viscosity of the blood. The maximum pressure occurs near the end of the stroke output of the left ventricle of the heart and is termed *maximum* or *systolic* pressure. The minimum pressure occurs late in ventricular diastole and is termed *minimum* or *diastolic* pressure. **Mean blood pressure** is the average of the blood pressure levels. **Basic blood pressure** is the pressure during quiet rest or basal conditions. See also *hypertension* and *hypotension*. **brain p.**, the capillary venous pressure in the brain. **capillary p.**, the blood pressure in the capillaries. **central venous p. (CVP)**, the venous pressure as measured at the right atrium, done by means of a catheter introduced through the median cubital vein to the superior vena cava, the distal end of the catheter being attached to a manometer. **cerebrospinal p.**, the pressure or tension of the cerebrospinal fluid, normally 100–150 mm. as measured by the manometer. **diastolic p.**, see *blood p.* **Donders' p.**, increase of manometric pressure with the instrument placed on the trachea on opening the chest of a dead body; due to collapse of the lung. **endocardial p.**, pressure of blood within the heart. **hydrostatic p.**, the pressure at any level on water at rest due to the weight of the water above it. **intra-abdominal p.**, the pressure between the viscera within the abdominal cavity. **intracranial p.**, the pressure in the space between the skull and the brain, i.e., the pressure of the subarachnoid fluid. **intraocular p.**, the pressure of the fluids of the eye against the tunics. It is produced by continual renewal of the fluids within the interior of the eye, and is altered in certain pathological conditions (e.g., glaucoma). It may be roughly estimated by palpation of the eye or measured, directly or indirectly, with specially devised instruments, the tonometers. **intrathecal p.**, pressure within a sheath, particularly the pressure of the cerebrospinal fluid within the subarachnoid membrane. **intraventricular p.**, the pressure within one ventricle of the heart. **mean circulatory filling p.**, a measure of the average (arterial and venous) pressure necessary to cause filling of the circulation with blood; it varies with blood volume and is directly proportional to the rate of venous return and thus to cardiac output. **negative p.**, a pressure less than that of the atmosphere. **occlusal p.**, pressure exerted on the occlusal surfaces of the teeth when the jaws are brought into apposition. **oncotic p.**, the osmotic pressure due to the presence of colloids in a solution; in the case of plasma–interstitial fluid interaction, it is the force that tends to counterbalance the capillary blood pressure. **osmotic p.**, the potential pressure of a solution directly related to its solute osmolar concentration; it is the maximum pressure developed by osmosis in a solution separated from another by a semipermeable membrane, i.e., the pressure that will just prevent osmosis between two such solutions. **osmotic p., effective**, that part of the total osmotic pressure of a solution which governs the tendency of its solvent to pass through a semipermeable bounding membrane or across another boundary. **partial p.**, the pressure exerted by each of the components of a gas mixture. **perfusion p.**, the difference between the arterial and venous pressures at the brain level. **positive p.**, pressure greater than that of the atmosphere. **positive end-expiratory p. (PEEP)**, a method of mechanical ventilation in which pressure is maintained to increase the volume of gas remaining in the lungs at the end of expiration, thus reducing the shunting of blood through the lungs and improving gas exchange; done in acute respiratory failure to allow reduction of inspired O₂ concentrations. **pulse p.**, the difference between the systolic and diastolic pressures. **selection p.**, an effect produced by a given gene that determines the frequency of a given allele; it may be advantageous for survival (*positive selection pressure*) or disadvantageous (*negative selection pressure*). **solution p.**, the

force which tends to bring into solution the molecules of a solid contained in the solvent. **systolic p.**, see *blood p.* **venous p.**, the blood pressure in a vein, usually utilized to reflect filling pressure to the ventricle. **wedge p.**, intravascular pressure as measured by a catheter introduced into the pulmonary artery; it permits indirect measurement of the mean left atrial pressure.

presternum (pre-ster'num) manubrium sterni.

presubiculum (pre'su-bik'u-lum) a modified six-layered cortex situated between the subiculum and the main part of the parahippocampal gyrus.

presumptive (pre-zump'tiv) referring to the expected fate of an embryonic part on the basis of established fate mapping.

presuppurative (pre-sup'u-ra'tiv) occurring before suppuration.

presylvian (pre-sil've-an) pertaining to the anterior or ascending branch of the sylvian fissure (sulcus lateralis).

presymptom (pre-simp'tom) an indication which is a forerunner of the actual symptoms of a condition.

presymptomatic (pre'simp-to-mat'ik) existing before the appearance of symptoms.

presynaptic (pre'si-nap'tik) situated proximal to a synapse, or occurring before the synapse is crossed.

presystole (pre-sis'to-le) an interval of time just preceding the systole.

presystolic (pre'sis-tol'ik) [pre- + *systole*] 1. pertaining to the beginning of the systole. 2. occurring just before the systole.

pretarsal (pre-tar'sal) situated in front of the tarsus.

pretectal (pre-tek'tal) located anterior to the tectum mesencephali.

prethcamide (preth'kah-mid) a respiratory stimulant composed of equal parts by weight of cropropamide and crothetamide.

prethyroidal, prethyroidan (pre'thi-roi'de-an; pre'thi-roi-de'an) situated in front of the thyroid gland or thyroid cartilage.

pretibial (pre-tib'e-al) situated in front of the tibia.

pretracheal (pre-tra'ke-al) situated in front of the trachea.

pretragal (pre-tra'gal) situated in front of the tragus.

pretuberculosis (pre'tu-ber'ku-lo'sis) tuberculosis in an incipient and occult stage before any symptoms of the disease have appeared.

pretuberculous (pre'tu-ber'ku-lus) preceding the development of tuberculosis.

pretympenic (pre'tim-pan'ik) situated in front of the tympanum.

preurethritis (pre'u-re-thri'tis) inflammation of the vestibule of the vagina around the urethral orifice.

prevalence (prev'ah-lens) the total number of cases of a disease in existence at a certain time in a designated area. Cf. *incidence*.

preventive (pre-ven'tiv) serving to avert the occurrence of.

preventorium (pre'ven-to're-um) an institution where persons are confined for the purpose of checking the systemic spread of disease, usually for prophylaxis of children who have been exposed to tuberculosis.

preventriculus (pre'ven-trik'u-lus) the cardiac opening of the stomach (ostium cardiacum [NA]).

prevertebral (pre-ver'te-bral) situated in front of a vertebra.

prevesical (pre-ves'i-kal) [pre- + *L. vesica* bladder] situated in front of the bladder.

previable (pre-vi'ah-b'l) not yet viable; said of a fetus incapable of extrauterine existence.

previtamin (pre-vi'tah-min) a precursor of a vitamin. **p. H**, carotene.

Prévost's law, sign (pre-vōz') [Jean Louis Prévost, Swiss physician, 1838-1927] see under *law* and *sign*.

Preyer's reflex, test (pri-erz) [Thierry Wilhelm Preyer, German physiologic chemist and physiologist, 1841-1897] see under *reflex* and *tests*.

prezone (pre'zōn) prozone.

prezygapophysis (pre'zi-gah-pof'i-sis) processus articularis superior vertebrarum.

prezygotic (pre-zi-got'ik) occurring before the completion of fertilization.

prezymogen (pre-zi'mo-jen) a substance existing in the cell which becomes converted into zymogen or pre-enzyme.

PRF prolactin releasing factor.

priapism (pri'ah-pizm) [*L. priapismus*; *Gr. priapismos*] persistent abnormal erection of the penis, usually without sexual desire, and accompanied by pain and tenderness. It is seen in diseases and injuries of the spinal cord, and may be caused by vesical calculus and certain injuries to the penis. **secondary p.**, priapism caused by obstruction to the outflow of blood through the dorsal vein at the root of the penis.

priapitis (pri'ah-pi'tis) inflammation of the penis.

priapus (pri-ā'-pus) the penis.

Price-Jones curve (method) [Cecil Price-Jones, English physician, 1863-1943] see under *curve*.

Priessnitz compress (bandage) (prēs'nitz) [Vincenz Priessnitz, a Silesian farmer, 1799-1852] see under *compress*.

Priestley's mass (prēst'lēz) [Joseph Priestley, English naturalist, the discoverer of oxygen, 1733-1804] see under *mass*.

prilocaine hydrochloride (pri'lō-kān) [USP] chemical name: *N*-(2-methoxyphenyl)-2-(propylamino)propanamide monohydrochloride. A local anesthetic, $C_{13}H_{20}N_2O \cdot HCl$, occurring as a white, crystalline powder; used to produce peripheral nerve block, epidural or caudal block, and infiltration and regional anesthesia.

primaquine phosphate (prim'ah-kwin) [USP] chemical name: *N*-(6-methoxy-8-quinolinyl)-1,4-pentanediamine phosphate (1:2). An antimalarial, $C_{18}H_{21}N_3O \cdot 2H_3PO_4$, occurring as an orange-red crystalline powder, especially effective against exoerythrocytic forms of *Plasmodium vivax* and *P. falciparum*; used especially in the treatment of relapsing vivax malaria, administered orally, sometimes in conjunction with other antimalarials.

primary (pri'mer-e; pri'mah-re) [*L. primarius* principal; *primus* first] first in order or in time of development; principal.

primate (pri'māt) an individual belonging to the order Primates.

Primates (pri-ma'tēz) [*L. primus* first] the highest order of mammals, including man, apes, monkeys, and lemurs.

primed (primd) immunologically activated by initial exposure to antigen; said of cells of the immune system.

prime mover (prim' mov'er) a muscle that acts directly to bring about a desired movement.

primer (prim'er) a substance which prepares for or facilitates the action of another. **cavity p.**, a material which is used to increase the ability of resin material to adapt or adhere to the cavity wall.

primeverose (pri-mev'er-ōs) a disaccharide, 6-(β-D-xylosido)-D-glucose, $C_{11}H_{20}O_{10}$, from the cowslip, *Primula veris* L.

primidone (prim'i-dōn) [USP] chemical name: 5-ethylidihydro-5-phenyl-4,6(1*H*,5*H*)-pyrimidinedione. An anticonvulsant, $C_{12}H_{14}N_2O_2$, occurring as a white, crystalline powder; used in the treatment of grand mal, focal, and psychomotor epileptic seizures, administered orally. Called also *desoxyphenobarbital*.

primigravid (pri'mi-grav'id) pregnant for the first time.

primigravida (pri'mi-grav'i-dah) [*L. prima* first + *gravida* pregnant] a woman pregnant for the first time; also written *gravida I*.

primipara (pri-mip'ah-rah), pl. *primiparae* [*L. prima* first + *parere* to bring forth, produce] a woman who has had one pregnancy which resulted in a viable child, regardless of whether the child was living at birth, and regardless of whether it was a single or multiple birth. Also written *para I* or *I-para*.

primiparity (pri'mi-par'i-te) the condition or fact of being a primipara.

primiparous (pri-mip'ah-rus) bearing or having borne but one child.

primate (pri'mit) the anterior of a pair of gregarines undergoing syzygy.

primitiae (pri-mish'e-e) [*L. pl.*, "first things"] that part of the amniotic fluid discharged before the fetus is extruded.

primitive (prim'i-tiv) [*L. primitivus*] first in point of time; existing in a simple or early form; showing little evolution.

primordial (pri-mor'de-al) [*L. primordialis*] original or primitive; of the simplest and most undeveloped character.

primordium (pri-mor'de-um), pl. *primordia* [*L.* "the beginning"] the earliest discernible indication during embryonic development of an organ or part; called also *anlage* or *rudiment*.

primverose (prim'ver-ōs) a disaccharide occurring in zein.

Prinadol (prin'ah-dol) trademark for a preparation of phenazocine.

princeps (prin'seps) [*L.*] principal; chief.

Principen (prin'si-pen) trademark for preparations of ampicillin.

principle (prin'si-pl) [*L. principium*] 1. a chemical component.

2. a substance on which certain of the properties of a drug depend.

3. a law of conduct. **active p.**, any constituent of a drug which helps to confer upon it a medicinal property. **antianemia p.**, the constituent in liver (vitamin B_{12}) and certain other tissues that produces the hematopoietic effect in pernicious anemia. **Doppler p.**, see under *effect*. **Fick p.**, a restatement of the law of conservation of mass used in making indirect measurements, e.g., of cardiac output: the amount of blood traversing the pulmonary capillaries per unit of time is a measure of cardiac output and, because gas diffusion across the pulmonary alveolar walls depends on pulmonary blood flow, the cardiac output (liters per min.) equals O_2 absorption (cc. per minute) divided by the arterial O_2 minus the mixed venous O_2 (cc. per liter). **follicle-stimulating p.**, prolactin A. **hematinic p.**, anti-anemia p. **immediate p.**, any one of the more or less complex substances of definite chemical constitution into which a

heterogeneous substance can be readily resolved. **Le Châtelier p.**, if a biological system is subjected to stress, it will act in such a way as to reduce the stress. **luteinizing p.**, prolan B. **organic p.**, immediate p. **pleasure p.**, in freudian terminology, the automatic instinct or tendency to avoid pain and secure pleasure. **prothrombin converting p.**, in theoretical hematology, a principle in the plasma that converts prothrombin to thrombin. **proximate p.**, immediate p. **reality p.**, in freudian terminology, the mental activity which develops to control the pleasure principle under the pressure of necessity or the demands of reality. **ultimate p.**, a chemical element.

Pringle's disease (prɪŋ'g'lz) [John James Pringle, British dermatologist, 1855-1922] adenoma sebaceum.

Prinos verticellatus (pri'nos ver'ti-sil-la'tus) [Gr. *prinos* oak] *Ilex verticellata*.

Priscoline (pris'ko-lēn) trademark for preparations of tolazoline.

prism (prizm) [Gr. *prisma*] a solid with a triangular or polygonal cross section. A triangular prism splits up a ray of light into its constituent colors, and turns or deflects light rays toward its base. Prisms are used to correct deviations of the eyes, since they alter the apparent situation of objects. **adamantine p's**, **enamel p's**, **prismata** adamantina; see under *prisma*. **Mad-dox p.**, two prisms with their bases together; used in testing for torsion of the eyeball. **Nicol p.**, two slabs of Iceland spar cemented together and deflecting a ray of light in such a way that it is split in two, one part (the ordinary ray) being totally reflected and the other (the polarized ray) passing through. **Risley's p.**, a prism which rotates in a metal frame marked with a scale; used in testing ocular muscles for imbalance.

prisma (priz'mah), pl. *prismata* [Gr.] prism. **pris'mata adaman'tina** [NA], adamantine or enamel prisms: the microscopic prisms or columns, arranged perpendicular to the surface, that make up the enamel of the teeth.

prismata (priz'mah-tah) plural of *prisma*.

prismatic (priz-mat'ik) shaped like a prism; produced by a prism.

prismoid (priz'moid) resembling a prism.

prismometer (priz'mop-tom'ē-ter) [*prism* + *optometer*] an instrument for testing the eye by means of a revolving prism.

prismosphere (priz'mo-sfēr) [*prism* + *sphere*] a prism combined with a globular lens.

prismometer (priz'mop-tom'ē-ter) prismometer.

Prvine (pri'vēn) trademark for preparations of naphazoline.

p.r.n. abbreviation for *L. pro re na'ta*, according as circumstances may require.

Pro proline.

pro- [L., Gr. *pro* before] 1. a prefix signifying before or in front of. 2. a prefix denoting a precursor, as of an enzyme or hormone.

proaccelerin (pro'ak-sel'er-in) Factor V; see *coagulation factors*, under *factor*.

pro-actinium (pro'ak-tin'e-um) protactinium.

Proactinomyces (pro'ak-ti-no-mi'sēz) *Nocardia*.

proactinomycin (pro-ak'ti-no-mi'sin) a group of antibiotic substances, designated A, B, and C, from cultures of *Nocardia gardneri*, which acts against gram-positive bacteria.

proactivator (pro-ak'ti-va'tor) the inactive precursor form of an activator, or a factor that requires a chemical change, usually by an enzyme, to become an activator, e.g., a substance present in plasma (*plasminogen proactivator*), which is absorbed onto fibrin during clotting and which, when activated, will convert plasminogen to plasmin.

proadifen hydrochloride (pro-ad'i-fen) chemical name: 2-(diethylamino)ethyl-2,2-diphenylvalerate hydrochloride; a non-specific synergist.

proagglutinin (pro'ah-gloo'ti-noid) (*obs.*) an agglutinin that has a stronger affinity for the agglutininogen than has the agglutinin.

proal (pro'al) characterized by forward movement.

proamnion (pro-am'ne-on) that part of the embryonal area at the front and side of the head which remains without mesoderm for some time.

proatlas (pro-at'las) a rudimentary vertebra which in some animals lies in front of the atlas; sometimes seen as an anomaly in man.

proazamine (pro-az'ah-mēn) promethazine.

pro bacteriophage (pro'bak-te're-o-fā'j) prophage.

proband (pro'band) [Ger.; from L. *probare* to prove] propositus.

probang (pro'bang) a flexible rod with a ball, tuft, or sponge at one end; used in applying medications to or removing matter from the esophagus or larynx. **ball p.**, a probang with a ball or bulb at the end. **bristle p.**, **horse hair p.**, one with an expandable tuft of bristles or horse hairs at the end. **sponge p.**, one which is tufted with sponge at the end.

Pro-Banthine (pro-ban-thin') trademark for preparations of propantheline bromide.

probarbital (pro-bar'bi-tal) chemical name 5-ethyl-5-(1-methylethyl)-2,4,6(1*H*,3*H*,5*H*)-pyrimidinetrione. A barbiturate of intermediate duration, $C_9H_{14}N_2O_3$, used as a sedative in the form of its calcium and sodium salts.

probe (prōb) [L. *proba*; *probare* to test] a slender, flexible instrument designed for introduction into a wound, cavity, or sinus tract for purposes of exploration. **Amussat's p.**, a probe used in lithotripsy. **Anel's p.**, a delicate probe for the lacrimal puncta and canals. **blood flow p.**, an implanted cuff that fits around a surgically exposed artery or vein to detect blood flow. **blunt p.**, a probe with a blunt end. **Bowman's p.**, one of a set of probes for use on the nasal ducts. **Brackett's p's**, delicate and flexible probes of silver wire for exploring dental fistulas. **bullet p.**, one used for detecting the presence or determining the location of a bullet. **drum p.**, a probe with an attachment which emits a sound when it comes in contact with a foreign body. **electric p.**, one which on contact with a foreign body completes an electric circuit, thereby producing a sound. **eyed p.**, one with a slit near one end through which a ligature or tape may be drawn. **fiberoptic p.**, a flexible probe made up of a bundle of fine glass fibers optically aligned to transmit an image. **Girdner's p.**, an electric probe. **lacrimal p.**, one designed for use on the lacrimal passages. **Lente's p.**, a silver probe having a bulb coated with silver nitrate. **Lilienthal's p.**, an apparatus designed to explore for bullets. It consists of a probe composed of two or four pieces of metal attached to two insulated copper wires which run to a mouth piece consisting of two plates, one of copper and one of zinc. These plates are applied to the side of the tongue and the probe inserted in the wound. If the probe touches a bullet, a distinct metallic taste is perceived. **Lucae's p.**, a probe in a hollow handle, operated by a spring to apply massage in treating catarrhal otitis media. **meerscham p.**, a probe with a meerscham tip, which on contact with a lead bullet becomes darkened. **Nelaton's p.**, a bullet probe with an unglazed porcelain head. **pocket p.**, a dental instrument having a tapered, rodlike blade with a blunt, rounded tip and graduated in millimeters, used to measure the depth and determine the outline of a periodontal pocket. **scissors p.**, a long, delicate pair of scissors that can be used as a probe. **telephonic p.**, electric p. **uterine p.**, a probe for uterine exploration. **vertebra-ted p.**, a flexible probe made up of joined links. **wire p.**, a steel wire probe.

probenecid (pro-ben'ē-sid) [USP] chemical name: 4-[(di-propylamino)sulfonyl]benzoic acid. An oral uricosuric, $C_{13}H_{19}NO_4S$, occurring as a white or nearly white, fine, crystalline powder; used in the treatment of hyperuricemia associated with gout and gouty arthritis and as an adjuvant to increase plasma levels of certain drugs, especially the penicillins.

probit (pro'bit) the normal deviate of the gaussian curve plus 5, the addition being made to avoid the use of negative numbers in the calculation of a 50 per cent end-point by the probit method. See also under *method*.

proboscis (pro-bos'is) [*pro-* + Gr. *boskein* to feed, graze] any tubular process or structure of the head or snout of an animal, usually used in feeding.

probucol (pro'bu-kōl) chemical name: 4,4'-[(1-methylethylidene)bis(thio)]bis[2,6-bis(1,1-dimethylethyl)phenol]. An anticholesteremic, $C_{31}H_{48}O_2S_2$, used especially as an adjunct to diet for the reduction of elevated serum cholesterol in primary cholesterolemia, administered orally.

procainamide hydrochloride (pro-kān'ah-mīd) [USP] chemical name: 4-amino-*N*-(2-diethylaminoethyl)benzamide. A cardiac depressant, $C_{13}H_{21}N_3O \cdot HCl$, occurring as a white to tan, crystalline powder; used in the treatment of cardiac arrhythmias, administered orally and intramuscularly, and by intravenous infusion. Called also *procaine amide hydrochloride*.

procaine (pro'kān) chemical name: 4-aminobenzoic acid 2-(diethylamino)ethyl ester; a local anesthetic, $C_{13}H_{20}N_2O_2$. **p. amide hydrochloride**, procainamide hydrochloride. **p. hydrochloride** [USP], the monohydrochloride salt of procaine, $C_{13}H_{20}N_2O_2 \cdot HCl$, occurring as small white crystals or white crystalline powder; used to produce infiltration, epidural, and peripheral nerve block, and spinal anesthesia. **p. penicillin G**, see under *penicillin*.

procallus (pro-kal'us) the granulation tissue formed about the site of fracture of a bone, which develops into callus.

procarbazine hydrochloride (pro-kar'bah-zēn) [USP] chemical name: *N*-(1-methylethyl-4-[(2-methylhydrazino)methyl]benzamide monohydrochloride. An antineoplastic, $C_{12}H_{19}N_3O \cdot HCl$, occurring as a white to pale yellow, crystalline powder; used in the treatment of Hodgkin's disease, administered orally.

procarboxypeptidase (pro'kar-bok'se-pep'ti-dās) the inactive precursor of carboxypeptidase, which is converted to the active enzyme by the action of trypsin.

procarcinogen (pro'kar-sin'o-jen) a chemical substance that becomes carcinogenic only after it is altered by metabolic processes.

procaryosis (pro'kar-e-o'sis) prokaryosis.

Procaryotae (pro-kar'e-o'te) [*pro-* + Gr. *karyon* nucleus] in some systems of classification, a kingdom comprising all prokaryotic organisms, and separated into two divisions: the Cyanophyceae (blue-green algae, blue-green bacteria, or Cyanobacteria) and the Bacteria. Sometimes, prokaryotes without a true cell wall are considered to be unrelated to the Bacteria and have been placed in a separate class—the Mollicutes. Written also *Prokaryota*. Cf. *Eucaryotae*.

procaryote (pro-kar'e-ōt) prokaryote.

procaryotic (pro-kar'e-ōt'ik) prokaryotic.

procatactic (pro-kah-tark'tik) predisposing: said of a cause of disease.

procatarxis (pro-kah-tark'sis) [Gr. *prokatarxis* a first beginning] 1. a predisposing cause. 2. predisposition. 3. the production of a disease partially as a result of predisposition.

procedure (pro-se'jur) [L. *procedere*, from *pro* forward + *cedere* move] a series of steps by which a desired result is accomplished. **Anderson p.**, reconstruction of the hypopharynx and cervical esophagus by the use of bilateral rectangular flaps.

Blair-Brown p., repair of a cleft lip by the use of a lateral flap one-half the length of the lip. **Bucknall's p.**, reconstruction of the urethra using skin flaps taken from the ventral surface of the penis and scrotum.

Denis Browne's p., a two stage operation for repair of hypospadias: the first stage consists of correction of the chordee and a meatotomy; the second stage is a urethroplasty. **Glenn p.**, anastomosis of the superior vena cava to the pulmonary artery for the treatment of tricuspid atresia. **Gomori-Takamatsu p.**, a method for localizing the alkaline phosphatase enzyme: a tissue secretion is incubated in a buffered solution containing the substrate, glycerophosphate, and calcium ions; hydrolysis of the substrate releases phosphoric acid, and it combines with calcium and precipitates as calcium phosphate. This colorless precipitate is converted to brown cobalt sulfide, which is readily visualized with the microscope.

Hartmann's p., resection of a diseased portion of the colon, with the proximal end of the colon brought out as a colostomy and the distal stump or rectum being closed by suture. Bowel continuity can later be restored. Called also *Hartmann's colostomy* or *operation*. **Heller p.**, pyloromyotomy or other drainage procedure combined with the surgery on the esophagogastric junction. **Hunt-Transley p.**, a suspension procedure for ptosis of the upper eyelid; a vertical strip of lid skin with its lower end attached to the lid margin is raised, and a transverse ellipse of skin between the lid margin and eyebrow is excised. The distal portion of the skin strip is then denuded of epithelium and the strip is tunneled under the eyebrow area. The excess portion of the skin strip is excised and the wound is closed. **lip-switch p.**, a procedure which makes a tightly contracted repaired cleft lip more pliable and esthetically pleasing: a full thickness triangular flap of tissue from the lower lip with a pedicle containing the inferior labial artery is elevated and transferred by rotation to the upper lip.

push-back p., a surgical maneuver designed to reposition the soft palate posteriorly and reestablish velopharyngeal competence. **Rochet's p.**, reconstruction of the urethra using a tubed pedicle flap taken from the scrotum. **Swenson's p.**, a procedure for the treatment of obstinate constipation in newborn infants in which the aganglionic segment of colon is resected near the anus, with end-to-end anastomosis of the normally innervated upper colon to the stump of the rectum just inside the anus. **V-Y p.**, a method of repairing a skin defect in which a V-shaped incision is made next to the defect, creating a flap; the flap is transferred to the defect and closed; and the secondary defect thus created is closed with a Y-shaped suture.

procelous (pro-se'lus) [*pro-* + Gr. *kóilos* hollow] concave on the anterior surface; applied to the vertebral centra of certain animals.

procentriole (pro-sen'tre-ol) the immediate precursor of centrioles and ciliary basal bodies; it is developed in proximity to either a preexisting centriole or a deuterosome.

procephalic (pro'sē-fal'ik) [*pro-* + Gr. *kephalē* head] pertaining to the anterior part of the head.

proceroid (pro-ser'koid) one of the larval stages of fish tapeworms.

procerus (pro-se'russ) [L.] long; slender.

process (pros'es; pro'ses) [L. *processus*] 1. a prominence or projection, as of bone; for names of specific anatomical structures, see official Latinized terms under *processus*. 2. a series of operations, events, or steps leading to the achievement of a specific result; used also as a verb to designate subjection to such a series designed to produce desired changes in the original material, or achieve other result. **A.B.C. p.**, see under *method*. **accessory p. of sacrum, spurious**, crista sacralis lateralis. **acromial p.**, acromion p., acromion. **acute p. of helix**, spina helicis. **alar p. of sacrum**, crista sacralis lateralis. **aliform p. of sphenoid bone**, ala minor ossis sphenoidalis. **alveolar p.**, that portion of bone in either the maxilla or the mandible which surrounds and supports the teeth. In the maxilla, it is called *processus alveolaris maxillae* (q.v.); in the mandible, *pars alveolaris mandibulae*. **anconeal p. of ulna**, olecranon. **angular p. of frontal bone, external**, processus

zygomaticus ossis frontalis. **articular p. of axis, anterior**, facies articularis anterior axis. **articular p. of coccyx, false**, cornu coccygeum. **articular p. of sacrum, spurious**, crista sacralis intermedia. **ascending p's of vertebrae**, see *processus articularis superior vertebrae*. **axis-cylinder p.**, axon. **basilar p.**, pars basilaris ossis occipitalis. **Beccari p.**, a method of garbage disposal involving bacterial fermentation in closed cells. **p. of Blumenbach**, processus uncinatus ossis ethmoidalis. **capitular p.**, the articular process on a vertebra for the head of a rib. **p. of cartilage of nasal septum, posterior**, processus posterior sphenoidalis. **caudate p.**, processus caudatus hepatis. **ciliary p's**, processus ciliares. **Civinini's p. of external pterygoid plate**, processus pterygospinosus. **clinoid p.**, any of three processes of the sphenoid bone; see *processus clinoides anterior, medius, and posterior*. **condyloid p. of vertebrae, inferior**, processus articularis inferior vertebrae. **condyloid p. of vertebrae, superior**, processus articularis superior vertebrae. **conoïd p.**, tuberculum conoideum. **coracoid p.**, processus coracoideus scapulae. **coronoid p.**, see entries beginning *processus coronoides*. **cubital p. of humerus**, see *trochlea humeri* and *capitulum humeri*. **Deiters' p.**, axon, def. 2. **dendritic p.**, the branched process of a nerve cell; a dendrite. **dental p.**, processus alveolaris maxillae. **dentoid p. of axis, dens axis**. **descending p's of vertebrae**, see *processus articularis inferior vertebrae*. **ensiform p. of sphenoid bone**, ala minor ossis sphenoidalis. **ensiform p. of sternum**, processus xiphoideus. **epiphyseal p.**, epiphysis. **ethmoidal p. of Macalister**, crista sphenoidalis. **falciform p. of cerebellum**, falx cerebelli. **falciform p. of cerebrum**, falx cerebri. **falciform p. of fascia lata**, margo falciformis hiatus saphenus. **falciform p. of fascia pelvis**, arcus tendineus fasciae pelvis. **falciform p. of rectus abdominis muscle**, falx inguinalis. **floccular p.**, flocculus, def. 2. **folian p.**, p. of Folius, processus anterior mallei. **foot p.**, pedicel. **frontal p.**, external, spina nasalis ossis frontalis. **frontonasal p.**, an expansive facial process in the embryo, which develops into the forehead and bridge of the nose. **funicular p.**, the portion of the tunica vaginalis surrounding the spermatic cord. **Gottstein's basal p.**, any attenuated basal process connecting the basilar membrane with an outer hair cell of the organ of Corti. **greater p. of ethmoid bone, hamate p. of ethmoid bone**, processus uncinatus ossis ethmoidalis. **hamular p. of lacrimal bone**, hamulus lacrimalis. **hamular p. of sphenoid bone**, hamulus pterygoideus. **hamular p. of unciform bone**, hamulus ossis hamati. **head p.**, an axial strand of cells in the embryo extending forward from the primitive knot; called also *notochordal plate*. **inframalleolar p. of calcaneus**, trochlea peronealis calcanei. **infundibular p.**, see *pituitary gland*, under *gland*. **Ingrassias' p.**, ala minor ossis sphenoidalis. **intercondylar p. of tibia**, eminentia intercondylaris. **internal p. of humerus**, processus supracondylaris humeri. **jugal p. of occipital bone, lateral**, processus paramastoideus ossis occipitalis. **jugal p. of occipital bone, middle**, processus intrajugaliss ossis occipitalis. **jugal p. of occipital bone, posterior**, of Krause, processus paramastoideus ossis occipitalis. **lacrimal p.**, a process of the inferior nasal concha that articulates with the lacrimal bone. **lateral p. of calcaneus**, sustentaculum tali. **MacLachlan's p.**, see under *method*. **malar p.**, processus zygomaticus maxillae. **mamillary p's of sacrum, oblique**, see *crista sacralis intermedia*. **mamillary p. of temporal bone**, processus mastoideus ossis temporalis. **mandibular p.**, the ventral process formed by bifurcation of the first branchial arch (mandibular arch) in the embryo, which unites ventrally with its fellow to form the lower jaw. **marginal p. of malar bone**, tuberculum marginale ossis zygomatici. **mastoid p.**, processus mastoideus ossis temporalis. **maxillary p.**, the dorsal process formed by bifurcation of the first branchial arch in the embryo, which joins with the ipsilateral median nasal process in the formation of the upper jaw. **mental p.**, protuberantia mentalis. **nasal p.**, lateral, the lateral one of the two limbs of the horseshoe-shaped elevation bounding a nasal pit in the embryo, which participates in formation of the side and wing of the nose. **nasal p., median**, the central one of the two limbs of the horseshoe-shaped elevation bounding a nasal pit in the embryo, which participates with the ipsilateral maxillary process in forming half of the upper jaw. **nasal p. of frontal bone**, pars nasalis ossis frontalis. **nasal p. of inferior turbinate bone**, processus lacrimalis conchae nasalis inferioris. **oblique p. of vertebrae, inferior**, processus articularis inferior vertebrae. **oblique p. of vertebrae, superior**, processus articularis superior vertebrae. **occipital p. of occipital bone**, pars basilaris ossis occipitalis. **odontoid p. of axis, dens axis**. **olecranon p. of ulna**, olecranon. **olivary p. (obs.)**, tuberculum sellae turcae. **palatine p., lateral**, a shelflike projection developing from each maxillary process region of the upper jaw in the embryo, later fusing with each other and with the nasal septum to form the palate. **palatine p., median**, a shelflike projection developing from each median nasal process in the embryo, which participates with its fellow in forming the premaxillary

portion of the upper jaw. **palpebral p.**, pars palpebralis glandulae lacrimalis. **paracondyloid p. of occipital bone**, **paroccipital p. of occipital bone**, processus paramastoidaeus ossis occipitalis. **petrosal p., anterior**, lingua sphenoidalis. **petrosal p., middle**, processus clinoides medius. **petrosal p., posterior superior**, processus clinoides posterior. **pterygoid p.**, processus pyergoideus ossis sphenoidalis. **Rau's p., ravian p.**, processus anterior mallei. **restiform p. of Henle**, pedunculus cerebellaris inferior. **small p. of Soemmering**, tuberculum marginale ossis zygomatici. **spinous p.**, a slender, more or less sharp-pointed projection; see *spina*. **spinous p. of sacrum**, **spurious**, crista sacralis mediana. **spinous p. of tibia**, 1. eminentia intercondylaris. 2. tuberculum intercondylare mediale. **spinous p. of vertebrae**, processus spinosus vertebrarum. **Stieda's p.**, processus posterior tali. **styloid p. of fibula**, apex capitis fibulae. **sucker p.**, see under *foot*. **synovial p.**, plica synovialis. **temporal p. of mandible**, processus coronoides mandibulae. **Todd's p.**, see *fibrae intercrurales*. **Tomes' p.**, a cytoplasmic process of the ameloblasts, or enamel-forming cells, around which calcification of enamel occurs. **transverse p. of sacrum**, crista sacralis lateralis. **transverse p. of vertebrae**, **accessory**, processus accessorius vertebrarum lumbalium. **trochlear p. of calcaneus**, trochlea peronealis calcanei. **unciform p. of scapula**, processus coracoides scapulae. **uncinate p. of ethmoid bone**, processus uncinatus ossis ethmoidalis. **uncinate p. of lacrimal bone**, hamulus lacrimalis. **uncinate p. of pancreas**, processus uncinatus pancreatis. **uncinate p. of unciform bone**, hamulus ossis hamati. **uncinate p's of vertebra**, hook-shaped processes on the lateral borders of the superior surface of the bodies of vertebrae C3 to T1; they are frequent sites of formation of spurs (osteophytes), leading to spondylosis uncovertebralis. **ungual p. of third phalanx of foot**, tuberositas phalangis distalis pedis. **vermiform p.**, appendix vermiformis. **vermiform p. of cerebellum**, vermis cerebelli. **xiphoid p.**, the pointed process of cartilage, supported by a core of bone, connected with the lower end of the body of the sternum; called also *processus xiphoideus* and *xiphisternum*. **xiphoid p. of sphenoid bone**, ala minor ossis sphenoidalis. **zygomatoco-orbital p. of maxilla**, processus zygomaticus maxillae.

processus (pro-ses'us), pl. *processus* [L.] a process: a prominence or projection; [NA] a general term for such a mass projecting from a larger structure. **p. accesso'rii spur'ii**, crista sacralis lateralis. **p. accesso'rius vertebra'rum lumbalium** [NA], accessory process of lumbar vertebrae: a small nodule that projects backward from the posterior surface of the transverse process of a lumbar vertebra. It is situated lateral to and below the mamillary process and varies in size. **p. ala'ris os/sis ethmoidalis**, ala cristae galli. **p. alveola'ris maxil'lae** [NA], alveolar process of maxilla: the thick parabolically curved ridge that projects downward and forms the free lower border of the maxilla; it is in front of and lateral to the palatine process and it bears the teeth. Called also *dental process*. **p. ante'rior mal'lei** [NA], **p. ante'rior mal'lei** [Fo'lii], anterior process of malleus: a slender process that arises from the anterior aspect of the neck of the malleus, passes anteriorly and inferiorly to the petrotympanic fissure, and is attached to the petrous portion of the temporal bone by ligamentous fibers. **p. articula'res inferio'res vertebra'rum**, see *p. articula'ris inferior vertebrarum*. **p. articula'ris infe'rior vertebra'rum** [NA], inferior articular process of vertebrae: a process on either side of the vertebrae, springing from the inferior surface of the arch near the junction of the lamina and pedicle; it bears a surface that faces anteriorly and inferiorly, articulating with the superior articular process of the vertebra below. Called also *zygapophysis* [NA alternative]. **p. articula'ris supe'rior os/sis sa'cri** [NA], superior articular process of sacrum: either of two processes projecting backward and medialward from the first sacral vertebra at the junctions between the body and the alae; they articulate with the inferior articular processes of the fifth lumbar vertebra. **p. articula'res superio'res vertebra'rum**, see *p. articulares superior vertebrarum*. **p. articula'ris supe'rior vertebra'rum** [NA], superior articular process of vertebrae: a process on either side of the vertebrae, springing from the superior surface of the arch near the junction of the lamina and pedicle; it bears a surface that faces posteriorly and superiorly, articulating with the inferior articular process of the vertebra above. **p. bre'vis incu'dis**, ligamentum incudis superior. **p. bre'vis mal'lei**, p. lateralis mallei. **p. cauda'tus hep'atis** [NA], caudate process: the right of the two processes seen on the caudate lobe of the liver. **p. cilia'res** [NA], ciliary processes: about 70 meridionally arranged ridges or folds projecting from the crown of the ciliary body; they secrete the aqueous humor into the posterior chamber of the eye. **p. clinoi'deus ante'rior** [NA], anterior clinoid process: the bony process found on the medial extremity of the posterior border of the small wing of the sphenoid bone. **p. clinoi'deus me'dius** [NA], middle clinoid process: either of two small inconsistent eminences on the internal surface of the sphenoid bone, one on either side of the anterior part of the hypophyseal fossa.

p. clinoi'deus poste'rior [NA], posterior clinoid process: either of two tubercles found on the superior angle of either side of the dorsum sellae of the sphenoid bone, and giving attachment to the tentorium of the cerebellum. **p. cochlearifor'mis** [NA], cochleariform process: a small hollow cone of bone at the end of the semicanalis tubae auditivae, just anterior to the vestibular window, with an opening through which the tendon of the tensor tympani passes. **p. condyla'ris mandib'ulae** [NA], **p. condylo'i'deus mandib'ulae**, condylar process of mandible: the posterior process on the ramus of the mandible that articulates with the mandibular fossa of the temporal bone. **p. coracoi'deus scap'ulae** [NA], coracoid process of scapula: a strong curved process that arises from the upper part of the neck of the scapula and overhangs the shoulder joint. **p. coronoi'deus mandib'ulae** [NA], coronoid process of mandible: the anterior part of the upper end of the ramus of the mandible, to which the temporal muscle is attached. **p. coronoi'deus ul'nae** [NA], coronoid process of ulna: a wide eminence at the proximal end of the ulna, forming the anterior and inferior part of the trochlear incisure. **p. costa'rius ver'tebrae** [NA], costal process of vertebra: in a cervical vertebra, the part of the transverse process anterior to the transverse foramen. **p. e cerebel'lo ad medul'lam**, pedunculus cerebellaris inferior. **p. e cerebel'lo ad pon'tem**, pedunculus cerebellaris medius. **p. e cerebel'lo ad tes'tes**, pedunculus cerebellaris superior. **p. ethmoida'lis con'chae nasa'lis infe'rio'ris** [NA], ethmoidal process of inferior nasal concha: a bony projection above and behind the maxillary process of the inferior nasal concha. **p. falcifor'mis ligamen'ti sacrotubero'si** [NA], falciform process of sacrotubular ligament: a prolongation of the sacrotubular ligament, continuing forward along the inner border of the ramus of the ischium from the point of attachment of the ligament on the tuber of the ischium. **p. Ferrei'ni lob'uli cortica'lis re'nis**, pars radiata lobuli corticalis renis. **p. fronta'lis maxil'lae** [NA], frontal process of maxilla: a large, strong, irregular process of bone that projects upward from the body of the maxilla, its medial surface forming part of the lateral wall of the nasal cavity. **p. fronta'lis os/sis zygoma'tici** [NA], **p. frontosphenoida'lis os/sis zygoma'tici**, frontal process of zygomatic bone: the strong, upward projecting triangular process of the zygomatic bone lying behind the malar surface and between the orbital and temporal surfaces; it unites above with the zygomatic process of the frontal bone and behind with the great wing of the sphenoid bone. **p. gra'cilis**, p. anterior mallei. **p. of Ingrassias**, ala minor ossis sphenoidalis. **p. intrajugula'ris os/sis occipita'lis** [NA], intrajugular process of occipital bone: a small process that subdivides the jugular notch of the occipital bone into a lateral and a medial part. **p. intrajugula'ris os/sis tempora'lis** [NA], intrajugular process of temporal bone: a small ridge on the petrous part of the temporal bone that separates the jugular notch into a medial and a lateral part, corresponding to similar parts of the jugular notch of the facing occipital bone. **p. jugula'ris os/sis occipita'lis** [NA], jugular process of occipital bone: either of two processes on the occipital bone that project laterally from the occipital condyles and form the posterior boundary of the jugular foramen. **p. lacrima'lis con'chae nasa'lis infe'rio'ris** [NA], lacrimal process of inferior nasal concha: a process of the inferior nasal concha that articulates with the lacrimal bone. **p. latera'lis mal'lei** [NA], lateral process of malleus: a small tapered process that projects laterally from the base of the manubrium mallei and produces the malleal prominence. **p. latera'lis ta'li** [NA], lateral process of talus: a large low process on the lateral surface of the talus, articulating with the lateral malleolus. **p. latera'lis tu'beris calca'nei** [NA], lateral process of tuberosity of calcaneus: a rough process projecting downward from the lower lateral portion of the tuber calcanei. **p. lenticula'ris incu'dis** [NA], lenticular process of incus: a small process on the medial side of the tip of the long limb of the incus, which articulates with the head of the stapes. **p. mamilla'ris vertebra'rum** [NA], mamillary process of vertebrae: a tubercle on each superior articular process of the lumbar vertebrae. **p. margina'lis os/sis zygoma'tici**, tuberculum marginale ossis zygomatici. **p. mastoi'deus os/sis tempora'lis** [NA], mastoid process of temporal bone: a conical process projecting forward and downward from the external surface of the petrous part of the temporal bone just posterior to the external acoustic meatus. **p. maxilla'ris con'chae nasa'lis infe'rio'ris** [NA], maxillary process of inferior nasal concha: a bony process descending from the ethmoid process of the inferior nasal concha. **p. media'lis tu'beris calca'nei** [NA], medial process of tuberosity of calcaneus: a rough process projecting downward from the lower medial portion of the tuber calcanei. **p. muscula'ris cartilag'inis arytenoi'deae** [NA], muscular process of arytenoid cartilage: the lateral and posterior lower angular projection of the arytenoid cartilage to which the cricoarytenoid muscles are attached. **p. orbita'lis os/sis palati'ni** [NA], orbital process of palatine bone: a pyramidal process on the uppermost part of the palatine bone, one surface of it forming the posterior angle of the floor of the orbit. **p. palati'nus maxil'lae** [NA], palatine process of maxilla: a horizontally arched plate of bone that helps to form the lower part of the maxilla and with its fellow of

the opposite side the anterior two-thirds of the hard palate. **p. papilla'ris hep'atis** [NA], papillary process of liver: the left of the two processes seen on the caudate lobe of the liver. **p. paramastoi/deus os/sis occipita'lis** [NA], paramastoid process of occipital bone: a process that in man is represented by a tubercle on the under surface of the jugular process. **p. poste'rior sphenoida'lis** [NA], posterior process of cartilage of nasal septum: a narrow flat strip of cartilage that extends backward and upward along the groove on the upper margin of the vomer and below the perpendicular plate of the ethmoid bone, from the septal cartilage nearly to the sphenoid bone. Called also **p. sphenoidalis septi cartilaginei**. **p. poste'rior ta'li** [NA], posterior process of talus: a backward projection from the posterior portion of the talus, divided into two unequal parts by the sulcus tendinis musculi flexoris hallucis longi tali. **p. pterygoi/deus os/sis sphenoida'lis** [NA], pterygoid process of sphenoid bone: either of two processes on the sphenoid bone descending from the points of junction of the great wings and body of the bone, and each consisting of a lateral and a medial plate. **p. pterygospino'sus** [NA], **p. pterygospino'sus** [Civini/ni], pterygospinous process: a small spine on the posterior edge of the lateral pterygoid plate of the sphenoid bone, giving attachment to the pterygospinous ligament. **p. pyramida'lis os/sis palati'ni** [NA], pyramidal process of palatine bone: a strong process projecting downward, backward, and laterally from the lateral part of the posterior margin of the palatine bone and helping to form the pterygoid fossa. **p. retromandibula'ris glan'dulae parot'idis**, an irregularly wedge-shaped portion of the parotid gland passing medially behind the ramus of the mandible almost to the wall of the pharynx. **p. sphenoida'lis os/sis palati'ni** [NA], sphenoid process of palatine bone: an irregular mass of bone that projects upward and medially from the posterior portion of the superior margin of the perpendicular portion of the palatine bone, and articulates with the body of the sphenoid bone and with the ala vomeris. **p. sphenoida'lis sep'ti cartilagin'ei**, processus posterior sphenoidalis. **p. spino'sus vertebra'rum** [NA], spinous process of vertebrae: a part of the vertebrae projecting backward from the arch, giving attachment to muscles of the back. **p. styloi/deus fib'ulae**, apex capitis fibulae. **p. styloi/deus os/sis metacarpa'lis III** [NA], styloid process of third metacarpal bone: a prominent process projecting proximally from the base of the third metacarpal bone. **p. styloi/deus os/sis tempora'lis** [NA], styloid process of temporal bone: a long spine projecting downward from the inferior surface of the temporal bone just anterior to the stylo mastoid foramen, giving attachment to three muscles and two ligaments. **p. styloi/deus ra'dii** [NA], styloid process of radius: a blunt projection from the lateral surface of the distal end of the radius. **p. styloi/deus ul'nae** [NA], styloid process of ulna: the medial, non-articular process on the distal extremity of the ulna. **p. supracondyla'ris hu'meri** [NA], **p. supracondylo'i/deus hu'meri**, supracondylar process of humerus: a small inconstant process just proximal to the medial epicondyle of the humerus. **p. tempora'lis os/sis zygoma'tici** [NA], temporal process of zygomatic bone: the posterior blunt process of the zygomatic bone that articulates with the zygomatic process of the temporal bone. **p. transver'sus vertebra'rum** [NA], transverse process of vertebrae: a process on either side of the vertebrae, projecting laterally from the junction between the lamina and the pedicle. **p. trochlea'ris calca'nei**, trochlea peronealis calcanei. **p. uncina'tus os/sis ethmoida'lis** [NA], uncinat process of ethmoid bone: a curved plate of bone that extends inferiorly and posteriorly from the anterior part of the ethmoid labyrinth. **p. uncina'tus pancrea'tis** [NA], uncinat process of pancreas: the left and caudal part of the head of the pancreas, which hooks around behind the pancreatic vessels; called also *Winslow's pancreas*. **p. vagina'lis os/sis sphenoida'lis** [NA], vaginal process of sphenoid bone: a small plate on the inferior surface of the body of the sphenoid bone on either side, running medially from the medial pterygoid plate to articulate with the ala of the vomer and with the sphenoid process of the palatine bone. **p. vagina'lis peritone'i** [NA], a diverticulum of the peritoneal membrane extending into the inguinal canal, accompanying the round ligament in the female, or the testis in its descent into the scrotum in the male (*processus vaginalis testis*); usually completely obliterated in the female. Called also *canal of Nuck* or *Nuck's diverticulum*. **p. vermifor'mis**, appendix vermiformis. **p. voca'lis** [NA], vocal process: the process of the arytenoid cartilage to which the vocal ligament is attached. **p. xiphoi/deus** [NA], xiphoid process: the pointed process of cartilage, supported by a core of bone, connected with the lower end of the body of the sternum. **p. zygoma'ticus maxil'lae** [NA], zygomatic process of maxilla: the rough triangular eminence that articulates with the zygomatic bone and marks the separation of the facies anterior, infratemporalis, and orbitalis. **p. zygoma'ticus os/sis fronta'lis** [NA], zygomatic process of frontal bone: a thick, strong process of the frontal bone, situated at the lateral end of the supraorbital margin and articulating with the zygomatic bone, and from which the temporal line starts. **p. zygoma'ticus os/sis tempora'lis** [NA], zygomatic process of temporal bone: a long, strong process arising from the lower portion of the squamous part of the temporal bone, passing forward from just

above the entrance of the external acoustic meatus to join the zygomatic bone and thus forming the zygomatic arch.

procheilon (pro-ki'lon) [*pro-* + Gr. *cheilon* lip + *-on* neuter ending] the central prominence of the upper border between the skin and the mucous membrane of the upper lip, marking the distal termination of the philtrum (tuberculum labii superioris [NA]).

prochlorpemazine (pro'klör-pem'ah-zën) prochlorperazine.

prochlorpemazine (pro'klör-per'ah-zën) [USP] chemical name: 2-chloro-10-[3-(4-methyl-1-piperazinyl)propyl]-10H-phenothiazine. A phenothiazine derivative, $C_{26}H_{24}ClN_3S$, occurring as a clear, pale yellow, viscous liquid; used chiefly as an antiemetic, administered rectally. Called also *prochlorpemazine*. **p. edisy-late** [USP], the ethanedisulfonate salt of prochlorperazine, occurring as a white to very light yellow, crystalline powder; used as an antiemetic and tranquilizer, administered orally, intramuscularly, and intravenously. **p. maleate** [USP], the maleate salt of prochlorperazine, occurring as a white or pale yellow, crystalline powder; used as an antiemetic and tranquilizer, administered orally.

prochondral (pro-kon'dral) occurring previous to the formation of cartilage.

prochordal (pro-kor'dal) in front of the notochord.

prochorion (pro-ko're-on) [Gr. *pro-* before + *chorion* skin] an old term for the noncellular covering of the dog egg; it has tufts that are casts of uterine glands producing secretion, but were once mistakenly thought to resemble chorionic villi and to be their predecessors.

Prochownick's diet, method (pro-kov'niks) [Ludwig Prochownick, German obstetrician, 1851–1923] see under *diet* and *method*.

prochromatin (pro-kro'mah-tin) the substance composing the true nucleoli; paranuclein.

prochromosome (pro-kro'mo-söm) a chromosome-like body occurring in resting nuclei.

prochymosin (pro-ki'mo-sin) renninogen.

procidencia (pro'si-den'she-ah) [L.] a prolapse, or falling down, especially prolapse of the uterus to such a degree that the cervix protrudes from the vaginal outlet. See also *prolapse*.

procinonide (pro-sin'o-nid) chemical name: 6 α ,9-difluoro-11 β -hydroxy-16 α ,17-[(1-methylethylidene)bis(oxy)]-21-(1-oxopropoxy)pregna-1,4-diene-3,20-dione; an adrenocortical steroid, $C_{27}H_{34}F_2O_7$.

procoagulant (pro'ko-ag'u-lant) 1. tending to favor the occurrence of coagulation. 2. a precursor of a natural substance necessary to coagulation of the blood.

procoelia (pro-se'le-ah) [*pro-* + Gr. *koilia* hollow] (*obs.*) ventriculus lateralis cerebri.

procollagen (pro-kol'ah-jen) the precursor molecule of collagen, synthesized in the fibroblast, osteoblast, etc., and cleaved to form collagen extracellularly.

procollagenase (pro'ko-laj'ë-näs) the inactive precursor of collagenase.

proconceptive (pro'kon-sep'tiv) 1. aiding or favoring conception. 2. an agent that facilitates or promotes conception.

proconvertin (pro'kon-ver'tin) Factor VII; see *coagulation factors*, under *factor*.

procreation (pro'kre-a'shun) [L. *procreatio*] the entire process of bringing a new individual into the world.

procreative (pro'kre-a'tiv) concerned in procreation; able to beget.

proct- see *procto-*.

proctalgia (prok-tal'je-ah) [*proct-* + *-algia*] neuralgia of the lower rectum. **p. fu'gax**, episodic severe pain in the rectum, often awakening the individual at night; it is attributed to spasm of the levator ani and coccygeal muscles.

proctatresia (prok'tah-tre'ze-ah) [*proct-* + *a* neg. + Gr. *trësis* perforation] imperforation of the anus.

proctectasia (prok'tek-ta'ze-ah) [*proct-* + Gr. *ektasis* dilatation + *-ia*] dilatation of the rectum or of the anus.

proctectomy (prok'tek'to-me) [*proct-* + Gr. *ektomë* excision] surgical removal of the rectum.

proctencleisis (prok'ten-kli'sis) [*proct-* + Gr. *enkleiein* to shut in] constriction, or stenosis, of the lower rectum; a rectal stricture.

procteuranter (prok'tu-rin'ter) [*proct-* + Gr. *eurynein* to widen] a baglike device used in dilating the rectum.

procteurysis (prok-tu'ri-sis) dilatation of the rectum by means of a procteuranter.

proctitis (prok-ti'tis) [*proct-* + *-itis*] inflammation of the rectum. **epidemic gangrenous p.**, a disease of the northern part of South America and the Fiji and other islands of the South Pacific, marked by rapidly spreading ulceration of the anus and lower bowel, with bloody discharges, fever, and great prostration. **factitial p.**, radiation p. **radiation p.**, proctitis resulting from radiation therapy, as of the cervix or uterus, marked by tenesmus, pain, rectal bleeding, and diarrhea and by telangiectasis, it may progress to ulceration. Called also *factitial p.*

procto-, proct- [Gr. *prōktos* anus, hence the hinder parts] combining form designating relationship to the rectum.

proctocoele (prok'to-sēl) [*procto-* + Gr. *kēlē* hernia] rectocele.

proctoclysis (prok-tok'li-sis) [*procto-* + Gr. *klysis* a drenching] the slow introduction of large quantities of liquid into the rectum; called also *Murphy drip*. See *Murphy's method* (2d def.), under *method*.

proctococcyx (prok'to-kok'si-pek'se) [*procto-* + Gr. *kokkyx* coccyx + *pēxis* fixation] fixation of the rectum to the coccyx by sutures.

proctocoelectomy (prok'to-ko-lek'to-me) surgical removal of the rectum and colon.

proctocolitis (prok'to-ko-li'tis) coloproctitis.

proctocolonoscopy (prok'to-ko'lon-os'ko-pe) the inspection of the interior of the rectum and lower portion of the colon.

proctocolpoplasty (prok'to-kol'po-plas'te) [*procto-* + Gr. *kolpos* vagina + *plassein* to form] operative closure of a rectovaginal fistula.

proctocystoplasty (prok'to-sis'to-plas'te) [*procto-* + Gr. *kystis* bladder + *plassein* to form] a plastic operation on the rectum and bladder; operative closure of a rectovesical fistula.

proctocystotomy (prok'to-sis-tot'o-me) [*procto-* + Gr. *kystis* bladder + *tomē* a cutting] the rectovesical operation for stone in the bladder.

proctodaeum (prok'to-de'um) proctodeum.

proctodeum (prok'to-de'um) [*proct-* + Gr. *hodaio* pertaining to a way] an invagination of the ectoderm of the embryo at the point where later the anus is formed; called also *anal pit*.

proctodone (prok'to-dōn) a hormone said to be secreted by cells of the anterior intestine of insects and to terminate diapause.

proctodynia (prok'to-din'e-ah) [*proct-* + Gr. *odynē* pain] pain in or about the anus.

Proctofoam-HC (prok'to-fōm) trademark for an aerosol foam containing 1 per cent hydrocortisone acetate and 1 per cent pramoxine hydrochloride; used to relieve anorectal inflammation, pain, swelling, and pruritus.

proctogenic (prok'to-jen'ik) [*procto-* + Gr. *gennan* to produce] derived from the anus or rectum.

proctologic (prok'to-loj'ik) pertaining to proctology.

proctologist (prok-tol'o-jist) a physician who specializes in proctology.

proctology (prok-tol'o-je) [*procto-* + *-logy*] the branch of medicine concerned with disorders of the rectum and anus.

proctoparalysis (prok'to-pah-ral'i-sis) [*procto-* + *paralysis*] paralysis of the muscles of the anus and rectum.

proctoperineoplasty (prok'to-per'i-ne'o-plas'te) plastic repair of the anus and perineum.

proctoperineorrhaphy (prok'to-per'i-ne-or'ah-fe) proctoperineoplasty.

proctopexy (prok'to-pek'se) [*procto-* + Gr. *pexis* fixation] fixation of the rectum to some adjacent tissue or organ by suture.

proctoplasty (prok'to-plas'te) [*procto-* + Gr. *plassein* to form] plastic surgery of the rectum.

proctoplegia (prok'to-ple'je-ah) [*procto-* + Gr. *plēgē* stroke] proctoparalysis.

proctopolypus (prok'to-pol'i-pus) [*procto-* + *polypus*] polyp of the rectum.

proctoptoma (prok'top-to'mah) (*obs.*) proctoptosis.

proctoptosis (prok'top-to'sis) [*procto-* + Gr. *ptōsis* fall] prolapse of the anus.

proctorrhagia (prok'to-ra'je-ah) bleeding from the rectum.

proctorrhaphy (prok-tor'ah-fe) [*procto-* + Gr. *rhaphe* seam] surgical repair of the rectum.

proctorrhea (prok'to-re'ah) [*procto-* + Gr. *rhoia* flow] a mucous discharge from the anus.

proctoscope (prok'to-skōp) [*procto-* + Gr. *skopein* to examine] a speculum or tubular instrument with appropriate illumination for inspecting the rectum. **Tuttle's p.**, a rectal speculum with an electric light at its extremity and an arrangement for inflating the rectal ampulla.

proctoscopy (prok-tos'ko-pe) [*procto-* + Gr. *skopein* to examine] inspection of the rectum with a proctoscope.

proctosigmoid (prok'to-sig'moid) the rectum and sigmoid colon.

proctosigmoidectomy (prok'to-sig'moi-dek'to-me) [*procto-* + *sigmoid* + Gr. *ektomē* excision] excision of the anus, rectum, and sigmoid flexure.

proctosigmoiditis (prok'to-sig'moi-di'tis) inflammation of the rectum and sigmoid.

proctosigmoidopexy (prok'to-sig-moid'o-pek'se) the surgical fixation of the rectum and sigmoid colon.

proctosigmoidoscope (prok'to-sig-moid'o-skōp) an instrument for illuminating and viewing the rectum and sigmoid colon.

proctosigmoidoscopy (prok'to-sig'moi-dos'ko-pe) examination of the rectum and sigmoid with the sigmoidoscope.

proctospasm (prok'to-spazm) [*procto-* + *spasm*] spasm of the rectum.

proctostasis (prok-tos'tah-sis) [*procto-* + Gr. *stasis* stoppage] constipation due to anesthesia of the rectum to the stimulus of defecation.

proctostenosis (prok'to-stē-no'sis) [*procto-* + Gr. *stenōsis* narrowing] stricture of the rectum.

proctostomy (prok-tos'to-me) [*procto-* + Gr. *stomoun* to provide with an opening, or mouth] surgical creation of a permanent artificial opening from the body surface into the rectum.

proctotome (prok'to-tōm) a knife for proctotomy.

proctotomy (prok-tot'o-me) [*procto-* + Gr. *tomē* a cutting] incision into the rectum, as for relief of rectal stricture. **external p.**, that done on or near the sphincter. **internal p.**, transabdominal incision of the rectum from within above the sphincter.

proctotoreusis (prok'to-to-roo'sis) [*procto-* + Gr. *toreusis* boring] the construction of an artificial anus.

proctotresia (prok-to-tre'se-ah) proctotoreusis.

proctoalvotomy (prok'to-val-vot'o-me) incision of the rectal valves.

procumbent (pro-kum'bent) lying on the face; prone.

procursive (pro-kur'siv) [L. *procursivus*] characterized by a tendency to run forward.

procurvation (pro'kur-va'shun) [L. *procurvare* to bend forward] a bending forward, as of the body.

procuticle (pro-ku'ti-k'l) [*pro-* + L. *cuticula*] the layer of the exoskeleton of certain crustaceans and arthropods beneath the epicuticle, which contains chitin as the principal constituent; it is composed of an endocuticle and an exocuticle.

procyclidine hydrochloride (pro-si'kli-dēn) [USP] chemical name: 1-cyclohexyl-1-phenyl-3-pyrrolidino hydrochloride. A synthetic anticholinergic, $C_{19}H_{25}NO \cdot HCl$, occurring as a white crystalline powder; used as a skeletal muscle relaxant in the treatment of parkinsonism, administered orally.

prodigiosin (pro-dij'e-o'sin) chemical name: 2,2'-[3-methoxy-4'-amyl-5'-methyl-5-(2"-pyrryl)] dipyrrolylmethene. An antibiotic dye from *Serratia marcescens*, $C_{20}H_{25}N_3O$, formerly used as an antifungal agent.

prodroma (pro-dro'mah), pl. *prodromata* [Gr. *prodromē* a running forward] prodrome.

prodromal (pro-dro'mal) premonitory; indicating the onset of a disease or morbid state.

prodromata (pro-dro'mah-tah) [Gr.] plural of *prodroma*.

prodrome (pro'drōm) [L. *prodromus*; Gr. *prodromos* forerunning] a premonitory symptom or precursor; a symptom indicating the onset of a disease.

prodromic (pro-dro'mik) prodromal.

pro-drug (pro'drug) [L. *pro-* before + *drug*] a compound that, on administration, must undergo chemical conversion by metabolic processes before becoming an active pharmacological agent; a precursor of a drug.

product (prod'ukt) something produced. **cleavage p.**, a substance formed by the splitting of a compound molecule into simpler molecules. **contact activation p.**, a product of the interaction of blood coagulation Factors XII and XI, which functions to activate Factor IX during the formation of intrinsic thromboplastin. **decay p.**, a nuclide, which may be stable or radioactive, resulting from the radioactive disintegration of a radionuclide, being formed either directly or as the result of successive transformations in a radioactive series. Called also *daughter*. **end p.**, the final product in a chain of metabolic reactions. **fibrinolytic split p's**, fragments of fibrinogen or fibrin degraded by plasmin. **fission p.**, an isotope, usually radioactive, of an element in the middle of the periodic table, produced by fission of a heavy element, such as uranium, under bombardment by high energy particles. **gene p.**, **primary**, the specific protein or polypeptide molecules, frequently enzymes, which depend on the presence of a gene. **spallation p's**, the many different chemical elements produced in small quantities in nuclear fission. **substitution p.**, a chemical product obtained by substituting for one element in a molecule an atom or a radical of some other substance. **Vaughan's split p's**, a protein which has been split up into a poisonous and a nonpoisonous part by treatment with a solution of 2 per cent sodium hydroxide in ethanol; the toxic fraction is soluble in the menstruum, the latter is not. The former is called the "poison"; the latter, the "residue." Cf. *petit serum*.

productive (pro-duk'tiv) producing or forming; said especially of an inflammation that produces new tissue or of a cough that brings forth sputum or mucus.

proecdysis (pro-ek'di-sis) [*pro-* + Gr. *ekdysis* a way out] the period of preparation for the process of ecdysis, during which the new cuticle is laid down and the old one ultimately detached from it.

proelastase (pro'e-las'tās) the inactive precursor of elastase, formed in the pancreas.

proemial (pro-e'me-al) [L. *proemium* a prelude] introductory;

serving as an introduction or indication; prodromal; potentially dangerous.

proencephalon (pro-'en-sef'ah-lon) prosencephalon.

proencephalus (pro-'en-sef'ah-lus) [*pro-* + Gr. *enkephalos* brain] a fetus with a part of the brain protruding from a frontal fissure.

proenzyme (pro-'en-'zim) an inactive precursor that is converted to the active enzyme by the action of acid, another enzyme, or by other means. Called also *pre-enzyme* and *zymogen*.

proerythroblast (pro-'ē-rith'ro-blast) pronormoblast.

proerythrocyte (pro-'ē-rith'ro-sīt) a precursor of an erythrocyte; the term is without standing in any scheme of morphological development.

proesterase (pro-es'ter-ās) the inactive precursor of an esterase.

proestrogen (pro-es'tro-jen) a substance which is without estrogenic activity but which is metabolized in the body to active estrogen.

proestrus (pro-es'trum) proestrus.

proestrus (pro-es'trus) [*pro-* + L. *oestrus*] the period of heightened follicular activity preceding estrus in female mammals.

Proetz position, treatment (prets) [Arthur Walter Proetz, American otolaryngologist, born 1888] see under *position* and *treatment*.

profadol hydrochloride (pro'fah-dōl) chemical name: 3-(1-methyl-3-propyl-3-pyrrolidiny)phenol hydrochloride; a narcotic analgesic, $C_{14}H_{21}NO \cdot HCl$.

profenamine (pro-fen'ah-mēn) ethopropazine.

proferment (pro-fer'ment) proenzyme; zymogen.

professional (pro-fesh'un-al) 1. pertaining to one's profession or occupation. 2. one who is a specialist in a particular field or occupation. **allied health p.**, a person with special training and licensed when necessary, who works under the supervision of a health professional with responsibilities bearing on patient care. Called also *paraprofessional*.

Professional Standards Review Organization See *PSRO*.

Profeta's immunity, law (pro-fa'tahz) [Giuseppe Profeta, Italian dermatologist, 1840-1910] see under *immunity* and *law*.

profibrinolysin (pro'fi-brī-no-li'sin) the inactive precursor of fibrinolysin; plasminogen.

Profichet's syndrome (disease) (pro'fe-shāz') [Georges Charles Profichet, French physician, born 1873] see under *syndrome*.

profile (pro'fil) a simple outline of the shape or form of an object, such as the head or face, viewed from the side. By extension, a graph representing quantitatively a set of characteristics subjected to tests.

proflavine (pro-fla'vin) chemical name: 3,6-diaminoacridine. An acriflavine derivative, $C_{13}H_{11}N_3$, which is a disinfectant bacteriostatic against many gram-positive bacteria. It has been used in the form of the dihydrochloride and hemisulfate salts as a topical antiseptic, and was formerly used as a urinary antiseptic. Called also *diamino-acridine*.

profluvium (pro-floo've-um) [L.] a flowing forth. **p. sem'-inis**, a flowing from the vagina of the semen deposited during coitus.

profundometer (pro'fon-dom'ē-ter) an apparatus for locating a foreign body by the fluoroscope by obtaining three lines of sight which intersect at the foreign body.

profundaplasty (pro-fun'dah-plas'te) reconstruction of the occluded or stenosed deep femoral artery (profunda femoris artery).

profundoplasty (pro-fun'do-plas'te) profundaplasty.

profundus (pro-fun'dus) [L.] deep; [NA] a term denoting a structure situated deeper than another from the surface of the body.

progamous (prog'ah-mus) [*pro-* + Gr. *gamos* marriage] previous to fertilization of the ovum.

progaster (pro'gas-ter) [*pro-* + Gr. *gastēr* stomach] the archenteron.

progastrin (pro-gas'trin) an inactive precursor of gastrin.

progenia (pro-je'ne-ah) [*pro-* + L. *gena* chin] prognathism.

progenital (pro-jen'ī-tal) on the external surface of the genitals.

progenitor (pro-jen'ī-tor) [L.] a parent or ancestor.

progeny (proj'ē-ne) [L. *progignere* to bring forth] offspring, or descendants.

progeria (pro-je're-ah) [*pro-* + Gr. *gēras* old age + *-ia*] premature old age; a form of infantilism marked by small stature, absence of facial and pubic hair, wrinkled skin, gray hair, and the facial appearance, attitude, and manner of old age. Cf. *infantilism* and *hypophyseal infantilism*.

progestagen (pro-jes'tah-jen) progestogen.

progestational (pro'jes-ta'shun-al) 1. a term applied to that phase of the menstrual cycle, just before menstruation, when the corpus luteum is active and the endometrium secreting. 2. de-

noting a class of pharmaceutical preparations that have effects similar to those of progesterone; used in such disorders as dysfunctional uterine bleeding and recurrent abortion. See also under *agent*.

progesteroid (pro-jes'tē-roid) a progesterone-like compound; sometimes used to include progesterone and all other compounds having progestational effects.

progesterone (pro-jes'tē-ron) chemical name: pregn-4-ene-3,20-dione. The principal progestational hormone of the body, $C_{21}H_{30}O_2$, liberated by the corpus luteum, adrenal cortex, and placenta, whose function it is to prepare the uterus for the reception and development of the fertilized ovum by transformation of the endometrium from the proliferative to the secretory stage. Also [USP], the same principle isolated from pregnant sows or prepared synthetically, occurring as a white or creamy white, crystalline powder, and containing, calculated on the dry basis, between 98 and 102 per cent of progesterone; used, usually in the form of synthetic derivatives, as a progestin in the treatment of functional uterine bleeding, abnormalities of the menstrual cycle, and threatened abortion, administered orally and intramuscularly. Called also *luteohormone* and *progestational hormone*.

progestin (pro-jes'tin) the name originally given (Corner and Allen, 1930) to the crude hormone of the corpora lutea. It has since been isolated in pure form and is now known as *progesterone*. The name progestin is used for certain synthetic or natural progestational agents. See *progestational agents*, under *agent*.

progestogen (pro-jes'to-jen) a term applied to any substance possessing progestational activity.

progestomimetic (pro-jes'to-mi-met'ik) having physiologic activity similar to that of progesterone.

progllossis (pro-glos'is) [Gr. *proglōssis*] the tip of the tongue.

proglottid (pro-glōt'id) [*pro-* + *glottis*] one of the segments making up the body of a tapeworm. See *strobilia*.

proglottis (pro-glōt'is), pl. *proglōt'tides*. Proglottid.

proglumide (pro-gloo'mid) chemical name: (+)-4-benzamido-N,N-dipropylglutaramic acid; an anticholinergic, $C_{18}H_{28}N_2O_4$.

prognathic (prog-na'thik) prognathous.

prognathism (prog'nah-thizm) the condition of being prognathous; marked protrusion of the jaw.

prognathometer (prog'nah-thom'ē-ter) [*prognathous* + Gr. *metron* measure] an instrument for measuring the form and degree of prognathism.

prognathous (prog'nah-thus, prog-na'thus) [*pro-* + Gr. *gnathos* jaw] having projecting jaws, having a gnathic index above 103, the teeth being in mesiocclusion.

prognose (prog-nōs') to forecast the course and outcome of a disease.

prognosis (prog-no'sis) [Gr. *prognōsis* foreknowledge] a forecast as to the probable outcome of an attack of disease; the prospect as to recovery from a disease as indicated by the nature and symptoms of the case. **dental p.**, an evaluation of the results to be achieved from any dental treatment.

prognostic (prog-nos'tik) 1. affording an indication as to prognosis. 2. a symptom or sign on which a prognosis may be based.

prognosticate (prog-nos'ti-kāt) to forecast the probable outcome of an attack of disease.

prognostician (prog'nos-tish'an) one who is skilled in prognosis.

progoitrin (pro-go'i'trin) an inactive compound found in the seeds of most plants belonging to the genus *Brassica*, which liberates goitrin through specific enzymatic hydrolysis.

progonoma (pro'go-no'mah) [Gr. *pro* before + *gonos* sperm + *-oma*] a tumor due to displacement of tissue as the result of fetal atavism to a stage which does not occur in the life history of the species, but which does occur in ancestral forms of the species. **melanotic p.**, melanotic neuroectodermal tumor.

progranulocyte (pro-gran'u-lo-sīt') promyelocyte.

progravid (pro-grav'id) [*pro-* + L. *gravidus* pregnant] denoting the phase of the endometrium, under the influence of the corpus luteum, during which it is prepared for pregnancy.

progression (pro-gresh'un) the act of moving or walking forward; the process of spreading or becoming more severe. **backward p.**, walking backward; an act seen in certain nervous diseases. **cross-legged p.**, a walk in which the toes are turned in and the foot is placed in front of its fellow. **metadromic p.**, one of the sequelae of epidemic encephalitis, consisting in the fact that a person who is barely able to walk may have no difficulty in running.

progressive (pro-gres'iv) advancing; going forward; going from bad to worse; increasing in scope or severity.

proguanil hydrochloride (pro-gwan'il) chemical name: *N*-(4-chlorophenyl)-*N'*-(1-methylethyl)imidodicarbonimidic diamide hydrochloride. An antimalarial, $C_{11}H_{17}Cl_2N_5$, occurring as a white, crystalline powder; used in the prophylaxis and treatment of malaria, administered orally. Seldom used in the United States because of the development of resistance by the malarial parasite to proguanil. Called also *chloroguanide hydrochloride*.

Progynon (pro-jin'on) trademark for preparations of estradiol.

prohormone (pro-hor'mōn) a precursor of a hormone, for example, proinsulin, being of larger molecular size than the active hormone.

proinsulin (pro-in'su-lin) a precursor of insulin, with a molecular weight of 8,000 to 10,000; it has minimal hormonal activity and is converted to insulin by removal of the connecting C chain, leaving the two (A and B)-chains, active insulin molecule.

pro-invasin (pro'in-va'sin) a precursor of invasin (hyaluronidase).

projection (pro-jek'shun) [*pro-* + *L. jacere* to throw] 1. a throwing forward, especially the act of referring impressions made on the sense organs to their proper source, so as to locate correctly the objects producing them. 2. the connection between the cerebral cortex and other parts of the nervous system or organs of special sense. 3. the act of extending or jutting out, or a part that juts out. 4. a mental mechanism by which a repressed complex is disguised by being regarded as belonging to the external world or to someone else. **eccentric p.**, see *referred sensation*, under *sensation*. **erroneous p.**, a misjudging of the position of an object, due to weakness or palsy of the eye muscles.

prokaryon (pro-kar'e-on) [*pro-* + *Gr. karyon* nucleus] 1. nuclear material that is scattered in the cytoplasm of the cell, rather than bounded by a membrane; found in some unicellular organisms, such as bacteria. 2. prokaryote.

prokaryosis (pro'kar-e-o'sis) [*pro-* + *Gr. karyon* + *-osis*] the state of not having a true nucleus, the nuclear membrane being absent and the nuclear material being either scattered in the cytoplasm of the cell or collected in a nucleoid region; a characteristic of bacteria and the blue-green algae. Cf. *eukaryosis*.

Prokaryotae (pro-kar'e-o'te) [*pro-* + *Gr. karyon* nucleus] Prokaryotae.

prokaryote (pro-kar'e-ōt) [*pro-* + *Gr. karyon* nucleus] an organism (e.g., a bacterium or a blue-green alga), which does not have a true nucleus, the nuclear membrane being absent and the nuclear structures being collected in a nuclear region, or nucleoid, and the chromosomes lying naked (not combined with protein) in the cytoplasm of the cell. Most prokaryotes (except mycoplasmas) have a true cell wall, and all reproduce by cell division. See also *Prokaryotae*. Cf. *eukaryote*.

prokaryotic (pro'kar-e-ōt'ik) pertaining to a prokaryon or to a prokaryote or to prokaryosis.

Proketazine (pro-ke'tah-zēn) trademark for preparations of carphenazine maleate.

prolabium (pro-la'be-um) [*pro-* + *L. labium* lip] the prominent central part of the upper lip, in its full thickness, which overlies the premaxilla.

prolactin (pro-lak'tin) [*pro-* + *L. lac* milk] one of the hormones of the anterior pituitary gland that stimulates and sustains lactation in postpartum mammals, the mammary glands having been prepared by other hormones, including estrogens, progesterone, growth hormone, and corticosteroids; it also stimulates the formation of milk in the crop sac of certain birds, as in pigeons and doves, and shows luteotropic activity in certain mammals. Called also *lactogen* and *lactogenic hormone*.

prolactinoma (pro-lak'ti-no'mah) a pituitary tumor, usually a microadenoma of the mammotropic cells, which secretes prolactin; a mammotropic tumor.

prolamin (pro-lam'in, pro'lah-min) any one of a group of proteins found in cereals. They are soluble in alcohol (70–80 per cent), but insoluble in water and absolute alcohol. They are also called *alcohol-soluble proteins*.

prolan (pro'lan) Zondek's term for the gonadotropic principle of human pregnancy urine, responsible for the biologic pregnancy tests. Originally, the response of rodents to pregnancy urine was ascribed to two hormones, *prolan A*, follicle-stimulating, and *prolan B*, luteinizing. It is now known that the gonadotropic principle in human pregnancy is a single entity and differs from the gonadotropic substance of the anterior pituitary. The term *prolan* has fallen into disuse but is of historic value. See *chorionic gonadotropin*.

prolapse (pro-laps') [*L. prolapsus*; *pro* before + *labi* to fall] 1. the falling down, or sinking, of a part or viscus; proidentia. 2. to undergo such displacement. **anal p.**, **p. of anus**, protrusion of modified anal skin through the anal orifice. **p. of the cord**, premature expulsion of the umbilical cord in labor before the fetus is delivered. **frank p.**, prolapse of the uterus in which the vagina is inverted and hangs from the vulva. **p. of the iris**, protrusion of the iris through a wound in the cornea. **Morgagni's p.**, chronic inflammatory hyperplasia of the mucosa and submucosa of the sacculus laryngis. **rectal p.**, **p. of rectum**, protrusion of the rectal mucous membrane through the anus in varying degree, classified as *incomplete* or *partial* with no displacement of anal sphincter muscle, *complete with displacement* of anal sphincter muscle, *complete with no displacement* of anal muscles but usually with herniation of bowel, and *internal complete (concealed)* with intussusception of the rectosigmoid and upper portion of the rectum into the lower rectum. **p. of**

uterus, downward displacement of the uterus so that the cervix is within the vaginal orifice (*first-degree p.*), the cervix is outside the orifice (*second-degree p.*), or the entire uterus is outside the orifice (*third-degree p.*).

prolapsus (pro-lap'sus) [*L.*] prolapse. **p. a'ni**, prolapse of the anus. **p. rec'ti**, prolapse of the rectum. **p. u'teri**, prolapse of the uterus.

prolepsis (pro-lep'sis) the return of a paroxysm before the expected time.

proleptic (pro-lep'tik) occurring prior to the usual time; said of a periodic disease whose paroxysms return at successively shorter intervals.

proleukocyte (pro-lu'ko-sit) a precursor of a leukocyte; the term is without standing in any current scheme of morphological development.

prolidase (pro'li-dās) an enzyme which catalyzes the hydrolysis of an imide bond between an α -carboxyl group and proline or hydroxyproline; it may occur in intestines.

proliferate (pro-lif'er-āt) to grow by the reproduction of similar cells.

proliferation (pro-lif'ē-ra'shun) [*L. proles* offspring + *ferre* to bear] the reproduction or multiplication of similar forms, especially of cells and morbid cysts. **fibroplastic p.**, an overgrowth of collagenous connective tissue involving many organs of the body, as occurs in systemic lupus erythematosus, scleroderma, and other collagen diseases.

proliferative (pro-lif'er-a-tiv) characterized by proliferation.

proliferous (pro-lif'er-us) proliferative.

prolific (pro-lif'ik) [*L. prolificus*] fruitful; productive.

proligerous (pro-lij'er-us) [*L. proles* offspring + *gerere* to bear] producing offspring.

prolinase (pro'li-nās) an enzyme which catalyzes the hydrolysis of dipeptides containing proline or hydroxyproline as N-terminal groups; occurs in the kidney and intestines. Called also *iminodipeptidase*.

proline (pro'lin) an amino acid, 2-pyrrolidine-carboxylic acid, discovered by Fischer in 1901; it is a major constituent of collagen (see *tropocollagen*).

prolinemia (pro'li-ne'me-ah) hyperprolinemia.

prolintane hydrochloride (pro-lin'tān) chemical name: 1-(α -propylphenethyl)pyrrolidine hydrochloride; an antidepressant, $C_{15}H_{23}N \cdot HCl$.

Prolixin (pro-lik'sin) trademark for preparations of fluphenazine hydrochloride.

Prolloid (pro'loid) trademark for a preparation of thyroglobulin (def. 2).

Proluton (pro-lu'ton) trademark for preparations of progesterone.

polymphocyte (pro-lim'fo-sit) a developmental form of the lymphocytic series intermediate between the lymphoblast and lymphocyte.

promanide (pro'man-id) glucosulfone sodium.

promastigote (pro-mas'ti-gōt) [*pro-* + *Gr. mastix* whip] the morphologic stage in the development of certain protozoa of the family Trypanosomatidae, characterized by a free anterior flagel-

lum and resembling the typical adult form of *Leptomonas*. Called also *leptomonad stage* or *form*. Cf. *amastigote*, *epimastigote*, and *trypomastigote*.

promazine hydrochloride (pro'mah-zēn) [USP] chemical name: *N,N*-dimethyl-10*H*-phenothiazine-10-propanamine monohydrochloride. A phenothiazine derivative, $C_{17}H_{20}N_2S \cdot HCl$, occurring as a white to slightly yellow, crystalline powder; used as an antipsychotic agent, as an antiemetic, and as an analgesic- and anesthetic-potentiating agent, administered orally, intramuscularly, and intravenously.

promegakaryocyte (pro'meg-ah-kar'e-o-sīt'') a precursor in the thrombocytic series, being a cell intermediate between the megakaryoblast and the megakaryocyte.

promegaloblast (pro-meg'ah-lo-blast'') the earliest developmental form in the abnormal red cell maturation sequence occurring in vitamin B_{12} and folic acid deficiencies; it corresponds to the pronormoblast, but differs from it by its larger size, abundant basophilic cytoplasm, and reticulated, unclumped nuclear chromatin. Several nucleoli are usually present.

prometaphase (pro-met'ah-fāz) the phase of mitosis which generally begins with the disintegration of the nuclear membrane. When this has occurred a more fluid zone is noted in the center of the cell in which the chromosomes move freely and in apparent disorder, making their way toward the equator.

promethazine hydrochloride (pro-meth'ah-zēn) [USP] chemical name: *N,N*, α -trimethyl-10*H*-phenothiazine-10-ethanamine. A phenothiazine derivative, $C_{17}H_{20}N_2S \cdot HCl$, occurring as a white to faint yellow, crystalline powder, having marked antihistaminic activity as well as sedative and antiemetic actions; used to provide bedtime, surgical, and obstetrical sedation, to potentiate the action of central depressants, and to manage nausea and vomiting associated with surgery, pregnancy, and motion sickness, administered orally, intramuscularly, and intravenously.

promethestrol dipropionate (pro-meth'es-trol) chemical name: 4,4'-(1,2-diethyl-1,2-ethanediyl)bis[2-methylphenol]dipropionate. An orally effective, synthetic, nonsteroid estrogenic agent, $C_{26}H_{34}O_4$, occurring as a white, crystalline powder, having actions and uses similar to those of diethylstilbestrol (q.v.). Called also *methestrol dipropionate*.

promethium (pro-me'the-um) the radioactive metallic chemical element of atomic number 61, atomic weight 147, and symbol Pm. Formerly called *florentium* and *illinium*.

promine (pro'mēn) a substance widely distributed in animal cells, characterized by its ability to promote cell division and growth. Cf. *retine*.

prominence (prom'i-nens) a protrusion or projection; for names of specific anatomical structures see under *prominentia*. **Ammon's scleral p.**, a prominence on the globe of the eye of the fetus. **tubal p.**, torus tubarius.

prominentia (prom'i-nen'she-ah), pl. *prominen'tiae* [L.] a prominence, protrusion, or projection; [NA] a general term for a small protrusion on another structure or part. **p. cana'lis facia'lis** [NA], prominence of facial canal: an elongated elevation on the medial wall of the tympanic cavity, just inferior to the prominence of the lateral semicircular canal and superior and posterior to the vestibular window. **p. cana'lis semicircula'ris latera'lis** [NA], prominence of lateral semicircular canal: a large rounded prominence on the upper portion of the medial wall of the tympanic cavity, between the vestibular window and the mastoid antrum. **p. laryn'gea** [NA], laryngeal prominence: a subcutaneous prominence on the front of the neck produced by the thyroid cartilage of the larynx; called also *Adam's apple*. **p. mallea'ris membra'nae tym'pani** [NA], **p. malleola'ris membra'nae tym'pani**, mallear prominence of tympanic membrane: a small projection at the upper extremity of the stria mallearis, formed by the lateral process of the malleus. **p. spira'lis** [NA], a prominence on the external wall of the cochlear duct, separating the stria vascularis from the external spiral sulcus. **p. styloi'dea** [NA], styloid prominence: an irregular nodule on the posterior portion of the floor of the tympanic cavity, corresponding to the base of the styloid process.

prominentiae (prom'i-nen'she-e) plural of *prominentia*.

promitosis (pro'mi-to'sis) a simple form of cell division seen in tumor cells, in which the nucleolus or karyosome divides as in mitosis, the rest of the division simulating amitosis.

promonocyte (pro-mon'o-sīt) a precursor in the monocytic series, being a cell intermediate in development between the monoblast and monocyte.

promontorium (prom'on-to're-um), pl. *promonto'ria* [L.] promontory, a projecting eminence or process; [NA] a general term for such a structure. **p. faci'e'i**, nasus externus. **p. os'sis sa'cri** [NA], promontory of sacrum: the prominent anterior border of the pelvic surface of the body of the first sacral vertebra. **p. tym'pani** [NA], promontory of tympanic cavity: the prominence on the medial wall of the tympanic cavity, formed by the first turn of the cochlea.

promontory (prom'on-to're) a projecting eminence or process;

for names of specific anatomical structures see under *promontorium*.

promoter (pro-mo'ter) a substance in a catalyst which increases the rate of activity of the latter. Cf. *protector*.

promoxolane (pro-mok'so-lān) chemical name: 2,2-diisopropyl-1,3-dioxolane-4-methanol. A liquid, $C_{10}H_{20}O_3$, used as a skeletal muscle relaxant and tranquilizer.

promyelocyte (pro-mi'ē-lo-sīt'') a precursor in the granulocytic series, being a cell intermediate in development between a myeloblast and myelocyte, and containing a few, as yet undifferentiated, cytoplasmic granules.

prone (pro'nāt) to assume or place in a prone position.

pronation (pro-na'shun) [L. *pronatio*] the act of assuming the prone position, or the state of being prone. Applied to the hand, the act of turning the palm backward (posteriorly) or downward, performed by medial rotation of the forearm. Applied to the foot, a combination of eversion and abduction movements taking place in the tarsal and metatarsal joints and resulting in lowering of the medial margin of the foot, hence of the longitudinal arch. Cf. *supination*.

Pronators contracted, forearm and hand pronated.
(King and Showers.)

Pronation

pronatoflexor (pro-na'to-flek'sor) both pronator and flexor.

pronator (pro-na'tor) [L.] a muscle that serves to pronate.

prone (prōn) [L. *pronus* inclined forward] lying face downward; see also *pronation*.

pronephron (pro-nef'ron) pronephros.

pronephros (pro-nef'ros), pl. *pronephroi* [pro- + Gr. *nephros* kidney] the primordial kidney; an excretory structure or its rudiments developing in the embryo before the mesonephros. Its duct is later used by the mesonephros, which arises caudal to it.

Pronestyl (pro-nes'til) trademark for preparations of procainamide hydrochloride.

pronetalol (pro-net'ah-lōl) pronethalol.

pronethalol (pro-neth'ah-lōl) chemical name: α -[(isopropylamino)methyl]-2-naphthalenemethanol; a beta-adrenergic blocking agent, $C_{15}H_{19}NO$, having the same actions as propranolol (q.v.). Called also *nethalide* and *pronetalol*.

prong (prong) a conical projection, such as a conical root of a tooth.

pronograde (pro'no-grād) [L. *pronus* bent downward + *gradi* to walk] characterized by walking with the body approximately horizontal; applied to quadrupeds. Cf. *orthograde*.

pronometer (pro-nom'ē-ter) an instrument for measuring the amount of pronation or supination of the forearm.

pronormoblast (pro-nor'mo-blast) the earliest of the immature forms recognizable as a normal precursor of the mature erythrocyte. It is round, with a relatively large nucleus which occupies most of the cell and is surrounded by a small amount of cytoplasm. The cytoplasm is of clear deep blue color, often staining slightly unevenly, and showing a pale perinuclear halo. The

nucleus is round, and consists of a network of fairly uniformly distributed chromatin strands, giving a finely reticular appearance; it is reddish purple in color and contains several nucleoli. Called also *rubriblast* and *proerythroblast*. See also *normoblast*.

Prontosil (pron'to-sil) trademark for the hydrochloride salt of *p*-(2,4-diaminophenyl)azo]benzenesulfonamide(sulfamidochrysoidine), $C_{12}H_{13}N_5O_2S \cdot HCl$, occurring as orange-red crystals. The forerunner of the sulfonamide drugs, it was first prepared in 1932, and is no longer used therapeutically. Called also *P. flavum* and *P. rubrum*.

pronucleus (pro-nu'kle-us) the precursor of a nucleus. **female p.**, the haploid nucleus of the fully mature ovum which loses its nuclear envelope and liberates its chromosomes to meet in synapsis with those similarly derived from the male pronucleus. **male p.**, the nuclear material of the head of a spermatozoon, after it has penetrated the ovum and acquired a pronuclear membrane.

pro-otic (pro-ot'ik) [*pro-* + Gr. *ous* ear] anterior to the ear.

Propadrine (pro'pah-drēn) trademark for preparations of phenylpropanolamine hydrochloride.

propagation (prop'ah-ga'shun) reproduction.

propagative (prop'ah-ga'tiv) pertaining to or concerned in propagation.

propagule (prop'ah-gūl) in ecology, the minimum number of individuals of a species necessary to colonize a habitable island.

propancreatitis (pro-pan'kre-ah-ti'tis) (*obs.*) purulent pancreatitis.

propane (pro'pān) a hydrocarbon of the methane series, $CH_3-CH_2-CH_3$, which is a constituent of natural gas and crude petroleum, and occurs as a colorless flammable gas with a characteristic odor.

propanidid (pro-pan'i-did) chemical name: 4-[2-(diethyl-amino)-2-oxoethoxy]-3-methoxybenzeneacetic acid propyl ester. A short-acting anesthetic, $C_{18}H_{27}NO_5$, derived from eugenol; administered intravenously.

propanolide (pro-pan'o-lid) betapropiolactone.

propantheline bromide (pro-pan'thē-lēn) [USP] chemical name: *N*-methyl-*N*-(1-methylethyl)-*N*-[2-(9*H*-xanthen-9-ylcarbonyloxy)ethyl]-2-propanaminium bromide. An anticholinergic, $C_{22}H_{30}BrNO_3$, occurring as white or nearly white crystals, which inhibits gastrointestinal hypermotility and hyperacidity; used especially as adjunctive therapy in the treatment of peptic ulcer, administered orally, intravenously, and intramuscularly.

proparacaine hydrochloride (pro-par'ah-kān) [USP] chemical name: 3-amino-4-propoxybenzoic acid 2-(diethylamino)ethyl ester monohydrochloride. An anesthetic, $C_{16}H_{26}N_2O_3 \cdot HCl$, occurring as a white to off-white, or faintly buff-colored, crystalline powder; applied topically to the conjunctiva.

propatyl nitrate (pro'pah-til) chemical name: 2-ethyl-2-(hydroxymethyl)-1,3-propanediol trinitrate; a coronary vasodilator, $C_8H_{11}N_3O_9$.

propedeutic (pro'pē-du'tik) pertaining to preliminary instruction.

propedeutics (pro'pē-du'tiks) [Gr. *propaideia* preparatory teaching] preliminary instruction.

propene (pro'pēn) propylene.

propenyl (pro-pe'nil) a three-carbon radical with one double bond between two of the carbons, $CH_3CH=CH-$.

propepsin (pro-pep'sin) pepsinogen.

propeptone (pro-pep'tōn) hemialbumose.

propeptonuria (pro'pep-to-nu're-ah) hemialbumosuria.

properdin (pro'per-din) a relatively heat-labile, normal serum protein (a euglobulin) that, in the presence of complement component C3 and magnesium ions, acts nonspecifically against gram-negative bacteria and viruses and plays a role in lysis of erythrocytes. It migrates as a β -globulin, and although not an antibody, may act in conjunction with complement-fixing antibody.

properitoneal (pro'per-i-to-ne'al) situated between the parietal peritoneum and the abdominal wall; preperitoneal.

prophage (pro'fāj) [*pro-* + *phage*] the latent stage of a phage in a lysogenic bacterium, in which the viral genome becomes inserted into a specific portion of the host chromosome and is duplicated each cell generation.

prophase (pro'fāz) the first stage in cell reduplication. In mitosis, the stage during which the chromosomes become visible (because of supercoiling of DNA), the cell nucleus starts to lose its identity, and the centrioles begin to migrate. In meiosis, the prophase of the first division consists of five stages: leptotene, zygotene, pachytene, diplotene, and diakinesis. In the second meiotic division, prophase resembles that in mitotic division. See *meiosis* and *mitosis*.

phenpropyridamine (pro'fen-pi-rid'ah-mēn) pheniramine.

prophylactic (pro'fi-lak'tik) [Gr. *prophylaktikos*] 1. tending to ward off disease; pertaining to prophylaxis. 2. an agent that tends to ward off disease.

prophylaxis (pro'fi-lak'sis) [Gr. *prophylassein* to keep guard be-

fore] the prevention of disease; preventive treatment. **causal p.**, removal of the cause of a disease. **chemical p.**, the use of chemicals in preventing the transmission of disease, especially venereal disease. **collective p.**, the protection of the community from infection. **dental p.**, the use of appropriate procedures and/or techniques to prevent dental and oral disease and malformations. **drug p.**, the use of drugs in the prevention of infection. **gametocidal p.**, the use of drugs, such as primaquine, to destroy the gametocytes of malaria. **individual p.**, the prevention of infection in an individual. **mechanical p.**, prevention of the transmission of venereal disease by mechanical means (e.g., a condom). **oral p.**, dental p. **serum p.**, prevention of disease by the use of immune serums.

propicillin (pro'pī-sil'in) levopropylcillin potassium.

propiodal (pro-pi'o-dal) chemical name: 2-hydroxytrimethylene-bis-(trimethylammonium)iodide. A white crystalline powder, $C_6H_{24}I_2N_6O$, formerly used as a source of iodine.

propiolactone (pro'pe-o-lak'tōn) chemical name: 2-oxetanone. A disinfectant, $C_3H_4O_2$, effective against gram-positive, gram-negative, and acid-fast bacteria, fungi, and viruses. It is also used to prepare inactivated vaccines, because it destroys the nucleic acid core of viruses but does not damage the capsid. Called also *beta*-propiolactone.

propiomazine hydrochloride (pro'pe-o-ma'zēn) [USP] chemical name: 1-[10-[2-(dimethylamino)propyl]-10*H*-phenothiazin-2-yl]-1-propanone monohydrochloride. A phenothiazine derivative, $C_{20}H_{24}N_2OS \cdot HCl$, occurring as a yellow powder; used to provide bedtime, perisurgical, and obstetrical sedation and as an antiemetic during labor, administered intramuscularly and intravenously.

propionate (pro'pe-o-nāt) any salt of propionic acid.

Propionibacteriaceae (pro'pe-on'e-bak-te're-a'se-e) a family of Schizomycetes, order Eubacteriales, occurring as nonmotile, irregularly shaped rods. It includes three genera, *Butyribacterium*, *Propionibacterium*, and *Zymobacterium*.

Propionibacterium (pro'pe-on'e-bak-te're-um) [*pro-* + Gr. *piōn* fat + *baktērion* little rod] a genus of microorganisms of the family Propionibacteriaceae, order Eubacteriales, made up of non-spore-forming, anaerobic, gram-positive bacilli found as saprophytes in dairy products.

propionicacidemia (pro'pī-on'ik-ah'sī-de'me-ah) propionic acidemia.

propionitrile (pro'pe-o-ni'tril) ethyl cyanide.

propionyl (pro'pe-o-nil) the acyl radical of propionic acid.

propiram fumarate (pro'pī-ram) chemical name: *N*-(1-methyl-2-piperidinoethyl)-*N*-2-pyridylpropionamide; an analgesic, $C_{16}H_{25}N_3O \cdot C_4H_4O_4$.

proplasmacyte (pro-plaz'mah-sit) a precursor in the plasmacytic series, being a cell intermediate in development between the plasmablast and the plasma cell.

proplasmin (pro-plaz'min) plasminogen.

proplastid (pro-plas'tid) any of the cytoplasmic bodies resembling mitochondria or chloroplasts, from which plastids are formed.

proplex, proplexus (pro'pleks, pro-plek'sus) (*obs.*) the choroid plexus of the lateral ventricle of the brain.

propions (pro'pons) [L. *pro* before + *pons* bridge] the delicate plates of white substance which pass transversely across the anterior end of the pyramid and just below the pons; called also *ponticulus*.

propositi (pro-poz'i-ti) [L.] plural of *propositus*.

propositus (pro-poz'i-tus), pl. *propositi* [L. *proponere* to put on view] the original person presenting with, or likely to be subject to, a mental or physical disorder and whose case serves as the stimulus for a hereditary or genetic study; called also *proband*. Cf. *index case*, under *case*.

propoxycaine hydrochloride (pro-pok'se-kān) [USP] chemical name: 4-amino-2-propoxybenzoic acid 2-(diethylamino)ethyl ester monohydrochloride. A local anesthetic, $C_{16}H_{26}N_2O_3 \cdot HCl$, occurring as a white, crystalline solid; used for infiltration and block anesthesia.

propoxyphene (pro-pok'se-fēn) chemical name: (S)- α -[2-(dimethylamino)-1-methylethyl]- α -phenylbenzeneethanol propanoate. An analgesic, $C_{22}H_{29}NO_2$, structurally related to methadone. Called also *dextropropoxyphene*. See also *levopropoxyphene napsylate*.

p. hydrochloride [USP], the hydrochloride salt of propoxyphene, $C_{22}H_{29}NO_2 \cdot HCl$, occurring as a white, crystalline powder; used as an analgesic to provide relief in mild to moderate pain, administered orally. **p. napsylate**, [USP], the napsylate salt of propoxyphene, $C_{22}H_{29}NO_2 \cdot C_{10}H_9O_3S \cdot H_2O$, occurring as a white powder, used the same as the hydrochloride salt.

propranolol (pro-pran'o-lōl) chemical name: 1-[(1-methylethyl)amino]-3-(1-naphthalenyloxy)-2-propanol. A beta-adrenergic blocking agent, $C_{18}H_{21}NO_2$, which decreases cardiac rate and output, reduces blood pressure, and is effective in the prophylaxis of migraine. **p. hydrochloride**, [USP], the hydrochloride salt of propranolol, $C_{18}H_{21}NO_2 \cdot HCl$, occurring as a white to off-white, crystalline powder. It is used as an antiarrhythmic, and

also as an antihypertensive, in the management of hypertrophic aortic stenosis, and in conjunction with an alpha-adrenergic blocking agent in the symptomatic treatment of inoperable pheochromocytoma. It is also effective in the prophylaxis of migraine. Administered orally or intravenously.

proprietary (pro-pri'ē-ta-re) a proprietary medicine; "any chemical, drug, or similar preparation used in the treatment of diseases, if such article is protected against free competition as to name, product, composition, or process of manufacture by secrecy, patent, trademark, or copyright, or by any other means."

proprioception (pro'pre-o-sep'shun) perception mediated by proprioceptors or proprioceptive tissues.

proprioceptive (pro'pre-o-sep'tiv) receiving stimuli within the tissues of the body, as within muscles and tendons. See *proprioceptor*.

proprioceptor (pro'pre-o-sep'tor) sensory nerve terminals which give information concerning movements and position of the body; they occur chiefly in the muscles, tendons, and the labyrinth. See *exteroceptor*, *interoceptor*, and *receptor*, def. 3.

propriodentium (pro'pre-o-den'she-um) the tissues of a tooth.

propriospinal (pro'pre-o-spi'nal) pertaining wholly to the spinal cord; said of ascending and descending nerve fibers that interconnect segments of the spinal cord.

proprotein (pro-pro'te-in) any precursor (e.g., proinsulin) of a protein.

proptometer (pro-tom'ē-ter) [Gr. *proptōsis* a fall forward + *metron* measure] an instrument for measuring protrusion, especially a scale for measuring the degree of exophthalmos; exophthalmometer.

proptosis (prop-to'sis) [Gr. *proptōsis* a fall forward] a forward displacement or bulging, especially of the eye; see *exophthalmos*.

propulsion (pro-pul'shun) [*pro-* + *L. pellere* to thrust] 1. tendency to fall forward in walking. 2. festination.

propyl (pro'pil) the univalent chemical radical, C_3H_7 , or $CH_3-CH_2-CH_2-$. **p. gallate** [NF], chemical name: 3,4,5-trihydroxybenzoic acid propyl ester. An antioxidant, $C_{10}H_{12}O_5$, occurring as a white, crystalline powder having a very slight characteristic odor; used in pharmaceutical preparations.

propylene (prop'i-lēn) chemical name: propene. A gaseous hydrocarbon, $CH_3-CH=CH_2$, of the olefin series, which has anesthetic properties. **p. glycol** [USP], chemical name: 1,2-propanediol. A clear, colorless, viscous liquid, $C_3H_8O_2$, used as a humectant and solvent in pharmaceutical preparations.

propylhexedrine (pro'pil-hek'sē-drēn) [USP] chemical name: *N,N*-dimethyl-2-cyclohexylethylamine. An adrenergic compound, $C_{10}H_{19}N$, occurring as a clear, colorless liquid; used as a vasoconstrictor to decongest nasal mucosa, administered by inhalation.

propylidone (pro'pil-i'o-dōn) [USP] chemical name: 3,5-diiodo-4-oxo-1(4*H*)-pyridineacetic acid propyl ester. A radiopaque medium, $C_{10}H_{11}I_2NO_3$, occurring as a white to almost white, crystalline powder; used in bronchography, administered intratracheally.

propylparaben (pro'pil-par'ah-ben) [NF] chemical name: 4-hydroxybenzoic acid propyl ester. An antifungal agent, $C_{10}H_{11}O_3$, occurring as small colorless crystals or white powder; used as a preservative in pharmaceutical preparations.

propylthiouracil (pro'pil-thi'o-u'rah-sil) [USP] chemical name: 2,3-dihydro-6-propyl-2-thioxo-4(1*H*)-pyrimidinone. A thyroid inhibitor, $C_7H_{10}N_2OS$, occurring as a white, powdery, crystalline substance; used in the treatment of hyperthyroidism, particularly to prepare patients for thyroid surgery and to maintain those who are poor surgical risks, administered orally.

proquazone (pro'kwah-zōn) chemical name: 1-isopropyl-7-methyl-4-phenyl-2(1*H*)-quinazolinone; an anti-inflammatory, $C_{18}H_{18}N_2O$.

pro re nata (pro re na'tah) [L.] according to circumstances. Abbreviated *p.r.n.*

prerenin (pro-ren'in) prerenin.

prerenate potassium (pro-ren'o-āt) chemical name: potassium 6,7-dihydro-17-hydroxy-3-oxo-3'*H*-cyclopropa[6,7]-17*α*-pregna-4,6-diene-21-carboxylate; an aldosterone antagonist, $C_{25}H_{31}KO_4$.

proroxan hydrochloride (pro-rok'san) chemical name: 1-(2,3-dihydro-1,4-benzodioxin-6-yl)-3-(3-phenyl-1-pyrrolidinyl)-1-propanone hydrochloride; an anti-adrenergic (α -receptor), $C_{23}H_{23}NO_3 \cdot HCl$.

prorrhaphy (pro'rah-fe) [*pro-* + *Gr. raphē* suture] advancement.

prorsad (pror'sad) [L. *prorsum* forward] in a forward direction.

prorubricyte (pro-roo'brī-sit) basophilic normoblast.

proscillaridin (pro-sil-ar'i-din) chemical name: 3β-[(6-deoxy- α -L-mannopyranosyl)-14-hydroxybuta-4,20,22-trienolide. A cardiac glycoside, $C_{30}H_{48}O_{10}$, which yields rhamnose on hydrolysis; used as a cardiotonic.

prosecretin (pro'se-kre'tin) the supposed precursor of secretin,

thought to be contained in epithelial cells and to be converted into secretin on hydrolysis with acids.

prosection (pro-sek'shun) a carefully programmed dissection for demonstration of anatomic structure.

prosector (pro-sek'tor) [L.] one who dissects anatomical subjects for demonstration.

prosencephalon (pros'en-sef'ah-lon) [Gr. *prosō* before + *enkephalos* brain] 1. [NA] the part of the brain developed from the anterior of the three primary vesicles of the embryonic neural tube; it comprises the diencephalon and telencephalon. 2. the most anterior of the three primary brain vesicles in the embryo, later dividing into the telencephalon and the diencephalon. Called also *forebrain*.

prosimian (pro'sim'i-an) [*pro-* + *L. simia* an ape] a primitive living primate or an early ancestral primate.

proso- [Gr. *prosō* forward] a prefix meaning forward, or anterior.

prosocele (pros'o-sēl) *prosocele*.

prosocele (pros'o-sēl) [*proso-* + *Gr. koilia* a hollow] the foremost cavity of the brain; the ventricular cavity of the prosencephalon.

prosodemic (pros'o-dem'ik) [*proso-* + *Gr. dēmos* people] passing from one person to another instead of reaching a large number at once, through some means such as water supply; said of a disease progressing in that way.

prosody (pros'o-de) [Gr. *prosōdos* a solemn procession] the variation in stress, pitch, and rhythm of speech by which different shades of meaning are conveyed.

prosogaster (pros'o-gas'ter) [*proso-* + *Gr. gastēr* stomach] foregut.

prosopagnosia (pros'o-pag-no'se-ah) [*prosopo-* + *a neg.* + *Gr. gnōsis* perception + *-ia*] a variety of visual agnosia characterized by inability to recognize the faces of other people, or even one's own face in a mirror; it is due to damage to the underside of both occipital lobes, extending to the inner surface of the temporal lobes.

prosopalgia (pros'o-pal'je-ah) [*prosopo-* + *-algia*] trigeminal neuralgia.

prosopalgic (pros'o-pal'jik) pertaining to or affected with prosopalgia (trigeminal neuralgia).

prosopantritis (pros'o-pan-tri'tis) [*prosopo-* + *Gr. antron* cavity + *-itis*] inflammation of the frontal sinuses.

prosopectasia (pros'o-pek-ta'ze-ah) [*prosopo-* + *Gr. ektasis* expansion + *-ia*] oversize of the face.

prosoplasia (pros'o-pla'se-ah) [*proso-* + *Gr. plassein* to form] 1. abnormal differentiation of tissue. 2. development into a higher level of organization or of function.

prosopo- (pros'o-po) [Gr. *prosōpon* face] a combining form denoting relationship to the face.

prosopooanosis (pros'o-po-ah-nos'kī-sis) [*prosopo-* + *Gr. ana* up + *schisis* cleft] oblique facial cleft.

prosopodiplegia (pros'o-po-di-ple'je-ah) [*prosopo-* + *Gr. dis* (di-) twice + *plēgē* stroke] paralysis of the face and one lower extremity.

prosopodysmorphism (pros'o-po-dis-mor'fe-ah) [*prosopo-* + *dys-* + *Gr. morphē* form + *-ia*] facial hemiatrophy.

prosoponeuralgia (pros'o-po-nu-ral'je-ah) pain in the nerves of the face.

prosopopagus (pros'o-pop'ah-gus) [*prosopo-* + *Gr. pagus* thing fixed] unequal conjoined twins in which the parasite is attached to the face elsewhere than at the jaw.

prosopoplegia (pros'o-po-ple'je-ah) [*prosopo-* + *Gr. plēgē* stroke] facial paralysis.

prosopoplegic (pros'o-po-ple'jik) pertaining to or affected with prosopoplegia (facial paralysis).

prosoposchisis (pros'o-pos'kī-sis) [*prosopo-* + *Gr. schisis* cleft] congenital fissure of the face.

prosopospasm (pros'o-po-spazm) [*prosopo-* + *spasm*] spasm of the muscles of the face.

prosoposternodymus (pros'o-po-ster'no-di'mus) [*prosopo-* + *Gr. sternon* sternum + *didymos* twin] a double monster joined face to face and sternum to sternum.

prosopothoracopagus (pros'o-po-tho'rah-kop'ah-gus) [*prosopo-* + *Gr. thorax* chest + *pagos* thing fixed] conjoined symmetrical twins united in the frontal plane, the fusion extending from the oral region through the thorax.

prostacyclin (pros'tah-si'klin) an intermediate in the metabolic pathway of arachnidonic acid, formed from prostaglandin endoperoxides in the walls of arteries and veins; an unstable substance, it is a potent vasodilator and a potent inhibitor of platelet aggregation.

prostaglandin (pros'tah-glan'din) a group of naturally occurring, chemically related, long-chain hydroxy fatty acids that stimulate contractility of the uterine and other smooth muscle and have the ability to lower blood pressure, regulate acid secretion of the stomach, regulate body temperature and platelet aggregation,

and to control inflammation and vascular permeability; they also affect the action of certain hormones. First found in semen, prostaglandins have since been found in menstrual fluid and various tissues of many species, and have been synthesized chemically. There are six types, A, B, C, D, E, and F, the degree of saturation of the side chain of each being designated by subscripts 1, 2, and 3. The types of prostaglandin are abbreviated PGE₂, PGF₂, and so on. Prostaglandin E₂ is also known as *dinoprostone*; PGF_{2α} as *dinoprost*. **p. E₁**, alprostadil. **p. E₂**, dinoprostone. **p. F_{2α}**, dinoprost. **p. F_{2α}** tromethamine, dinoprost tromethamine.

prostalene (pros'tah-lēn) chemical name: (+)-methyl 7-[(1*R**, 2*R**, 3*R**, 5*S**)-3,5-dihydroxy-2-[(*E*)-3-hydroxy-3-methyl-1-octenyl]cyclopentyl]-4,5-heptadienoate; a prostaglandin, C₂₂H₃₆O₅.

Prostaphlin (pro-staf'lin) trademark for preparations of oxacillin sodium.

prostata (pros'tah-tah) [NA] a gland in the male which surrounds the neck of the bladder and part of the urethra; see *prostate*.

prostatagia (pros'tah-tal'je-ah) [*prostate* + *-algia*] pain in the prostate.

prostatauxe (pros'tah-tawk'se) [*prostate* + Gr. *auxē* increase] enlargement of the prostate.

prostate (pros'tāt) [Gr. *prostates* one who stands before, from *pro* before + *histanai* to stand] a gland in the male which surrounds the neck of the bladder and the urethra. Called also *prostata* [NA]. It consists of a median lobe and two lateral lobes, and is made up partly of glandular matter, the ducts from which

empty into the prostatic portion of the urethra, and partly of muscular fibers which encircle the urethra. The prostate contributes to the seminal fluid a secretion containing acid phosphatase, citric acid, and proteolytic enzymes which account for the liquefaction of the coagulated semen.

prostatectomy (pros'tah-tek'to-me) [*prostate* + *ektomē* excision] surgical removal of the prostate or of a part of it. **perineal p.**, removal of the prostate through an incision in the perineum. **retropubic prevesical p.**, removal of the prostate through a suprapubic incision but without entering the urinary bladder. **suprapubic transvesical p.**, removal of the prostate through an incision above the pubis and through the urinary bladder. **transurethral p.**, see under *resection*.

prostatelcosis (pros'tat-el-ko'sis) [*prostate* + Gr. *helkōsis* ulceration] ulceration of the prostate.

prostataria (pros'tah-te're-ah) prostatism.

prostatic (pros-tat'ik) pertaining to the prostate.

prostaticovesical (pros-tat'ī-ko-ves'ī-kal) pertaining to the prostate and the bladder.

prostaticovesiculectomy (pros-tat'ī-ko-ve-sik'u-lek'to-me) excision of the prostate and seminal vesicles.

prostatism (pros'tah-tizm) a symptom complex resulting from compression or obstruction of the urethra, due most commonly to hyperplasia of the prostate; symptoms include diminution in the caliber and force of the urinary stream, hesitancy in initiating voiding, inability to terminate micturition abruptly (with post-voiding dribbling), a sensation of incomplete bladder emptying, and, occasionally, urinary retention. **vesical p.**, a condition of retention of the urine resembling that of prostatic disease, but existing in the absence of any affection of the prostate.

prostatisme (pros'tah-tizm) prostatism. **p. sans prostate**, the symptoms of prostatic obstruction without enlargement of the prostate.

prostatitic (pros'tah-ti'tik) pertaining to prostatitis.

prostatitis (pros'tah-ti'tis) inflammation of the prostate.

allergic p., **eosinophilic p.**, a condition seen in patients with certain allergies, characterized by diffuse infiltration of the prostate by eosinophils, with the development of small foci of fibrinoid necrosis. **nonspecific granulomatous p.**, prostatitis characterized histologically by focal or diffuse infiltration of the tissues by peculiar, large, pale macrophages.

prostatocystitis (pros-ta'to-sis-ti'tis) [*prostate* + Gr. *kystis* bladder + *-itis*] inflammation of the neck of the bladder (prostatic urethra) and the bladder cavity.

prostatocystotomy (pros-ta'to-sis-tot'o-me) [*prostate* + Gr. *kystis* bladder + *tomē* a cutting] surgical incision of the bladder and prostate.

prostatodynia (pros'tah-to-din'e-ah) [*prostate* + Gr. *odynē* pain] pain in the prostate.

prostatography (pros'tah-tog'rah-fe) roentgenography of the prostate.

prostatolith (pros-tat'o-lith) a prostatic calculus.

prostatolithotomy (pros-tat'o-li-thot'o-me) incision of the prostate for the removal of calculus.

prostatomegaly (pros'tah-to-meg'ah-le) [*prostate* + Gr. *megalē* great] hypertrophy of the prostate.

prostatometer (pros'tah-tom'ē-ter) [*prostate* + Gr. *metron* measure] an instrument for measuring the prostate.

prostatomy (pros-tat'o-me) prostatotomy.

prostatomyomectomy (pros-ta'to-mi'o-mek'to-me) [*prostate* + *myomectomy*] the surgical removal of a prostatic myoma.

prostatorrhoea (pros'tah-to-re'ah) [*prostate* + Gr. *rhoia* flow] a catarrhal discharge from the prostate.

prostatotomy (pros'tah-tot'o-me) [*prostate* + Gr. *tomē* a cutting] surgical incision of the prostate.

prostatotoxin (pros'tah-to-tok'sin) a toxin formed on injection of an extract of the prostate; it is destructive to prostatic cells.

prostatovesiculectomy (pros'tah-to-ve-sik'u-lek'to-me) excision of the prostate and seminal vesicles.

prostatovesiculitis (pros'tah-to-ve-sik'u-li'tis) inflammation of the prostate and seminal vesicles.

prostaxia (pro-stak'se-ah) a stabilized condition of protein dispersion in the body.

prosteration (pro'ster-na'shun) camptocormia.

protheses (pros-the'sēz) [Gr.] plural of *prosthesis*.

prosthesis (pros-the'sis), pl. *prostheses* [Gr. "a putting to"] an artificial substitute for a missing body part, such as an arm or leg, eye or tooth, used for functional or cosmetic reasons, or both.

Cape Town p., an aortic valve replacement developed at the University of Cape Town, inserted in conjunction with a cardiopulmonary bypass. **cleft palate p.**, an appliance used to restore integrity of the roof of the mouth in patients with cleft palate.

Cutter SCDK p., a double-cage modification of the Starr-Edwards prosthesis, with the additional cage extending into the proximal chamber or upstream of the orifice; designed to achieve optimal flow conditions by permitting the use of a larger orifice or a smaller ball. **dental p.**, a replacement for one or more of the teeth or other oral structure, ranging from a single tooth to a complete denture.

Magovern-Cromie p., a modified Starr-Edwards prosthesis equipped with multiple curved recessed pins which are ejected into the adjacent tissue for fixation, thus eliminating the need for suturing. **maxillofacial p.**, a replacement for parts of the upper jaw or of the face missing because of disease or injury.

ocular p., 1. an artificial substitute for the eyeball. 2. eyeglasses. **Sauerbruch's p.**, an artificial limb with which the tissues of the stump are used to secure motion.

Starr-Edwards p., a caged-ball cardiac valve prosthesis consisting of a retaining cage made of silicone-coated nonferrous metal containing a Silastic ball for occluding the orifice and preventing the reflux of blood. **Vanghetti's p.**, an artificial limb similar to Sauerbruch's prosthesis, designed to be moved by muscles of the stump.

prosthetic (pros-thet'ik) serving as a substitute; pertaining to the use or application of prostheses.

prosthetics (pros-thet'iks) the field of knowledge relating to prostheses, their design, use, etc. **dental p.**, prosthodontics.

facial p., prosthetics concerned only with the replacement of parts of the face.

prosthetist (pros'thē-tist) [Gr. *prosthes* one who adds] a person skilled in prosthetics and practicing its application in individual cases.

prosthion (pros'the-on) [Gr. *prosthios* the foremost + *-on* neuter ending] 1. the lowest anterior point on the gum between the maxillary central incisors. 2. the point of the alveolar process that projects most anteriorly in the midline. Called also *alveolar point*.

prosthodontia (pros'tho-don'she-ah) prosthodontics.

prosthodontics (pros'tho-don'tiks) [*prosthesis* + Gr. *odoustooth*] that branch of dentistry concerned with the construction of artificial appliances designed to restore and maintain oral function by replacing missing teeth and sometimes other oral structures or parts of the face.

prosthodontist (pros'tho-don'tist) a dentist who specializes in prosthodontics.

Prosthogonimus (pros'tho-gon'i-mus) a genus of trematode parasites. **P. macrorchis**, a species parasitizing chickens, turkeys, pheasants, and other birds.

prosthokeratoplasty (pros'tho-ker'ah-to-plas'te) surgical replacement of corneal tissue (as in cataract) by an inert transparent prosthesis.

Prostigmin (pro-stig'min) trademark for preparations of neostigmine.

Prostin E2 (pros'tin) trademark for preparations of dinoprostone.

Prostin F2 Alpha (pros'tin) trademark for preparations of dinoprost tromethamine.

prostration (pros-tra'shun) [L. *prostratio*] extreme exhaustion or powerlessness. **heat p.**, heat exhaustion. **nervous p.**, neurasthenia.

prot- see *proto-*.

protactinium (pro'tak-tin'e-um) a radioactive metallic chemical element occurring along with radium in pitchblende, carnotite and other minerals; atomic weight, 231; atomic number, 91; symbol Pa.

protagon (pro'tah-gon) [*prot-* + Gr. *agein* to lead] a crystalline mass, $C_{108}H_{380}N_5PO_{35}$, which separates from an alcoholic extract of brain substance on cooling.

protal (pro'tal) congenital; first; dating from the beginning.

Protalba (pro-tal'bah) trademark for preparations of protoveratrine A.

protalbmose (pro-tal'bu-mōs) a primary protease.

protaminase (pro-tam'i-nās) carboxypeptidase B.

protamine (pro'tah-min) [*prot-* + *amine*] any of a class of basic proteins of low molecular weight, occurring in combination with nucleic acids in the sperm of salmon and certain other fish and having the property of neutralizing heparin. **p. sulfate** [USP], a purified mixture of simple protein principles obtained from the sperm or testes of suitable species of fish; it has the property of neutralizing heparin, and is used as an antidote to overdosage with heparin, administered intravenously.

Protaminobacter (pro'tah-mi'no-bak'ter) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as motile or nonmotile, frequently pigmented cells in soil or water. It includes two species, *P. albobiflavus* and *P. ruber*.

protan (pro'tan) an individual exhibiting protanomalopia or protanopia, marked by derangement or loss of the red-green sensory mechanism, with a noticeable shift or shortening of the spectrum and luminance loss in the long-wave (red) end. Cf. *deutan*.

protandrous (pro-tan'drus) exhibiting protandry.

protandry (prōt-an'dre) [Gr. *prōtos* first + *aner*, *andros* man] hermaphroditism in which the male gonad matures before the female gonad; cf. *protogyny*.

protanomalopia (pro'tah-nom'ah-lo'pe-ah) [*prot-* + Gr. *anōmalos* irregular + *ōpē* sight + *-ia*] a problematic variant of normal color vision, in which none of the constituents for complete chromatic perception are lacking, but a greater than usual proportion of lithium red light to thallium green is required to match a fixed sodium yellow. Sometimes called "red weakness," and viewed as a transitional stage to complete loss of color vision. Cf. the correlative terms *deuteranomalopia* and *tritanomalopia*.

protanomalopsia (pro'tah-nom'ah-lop'se-ah) protanomalopia.

protanomalous (pro'tah-nom'ah-lus) pertaining to or characterized by protanomalopia.

protanomaly (pro'tah-nom'ah-le) protanomalopia.

protanope (pro'tah-nōp) an individual exhibiting protanopia; a color deviant.

protanopia (pro'tah-no'pe-ah) [*prot-* + *an-* neg. + Gr. *ōpē* sight + *-ia*] defective color vision of the dichromatic type, characterized by retention of the sensory mechanism for two hues only (blue and yellow) of the normal 4-primary quota, and lacking that for red and green and their derivatives, with loss of luminance and shift of brightness and hue curves toward the short-wave end of the spectrum, as in twilight vision. Coined by von Kries (1897) to replace "red blindness." Cf. the correlative terms *deuteranopia*, *tritanopia*, and *tetartanopia* (def. 2), in which the color vision deficiency is in the second, third, and fourth primary, respectively.

protanopic (pro'tah-nop'ik) pertaining to or characterized by protanopia.

protanopsia (pro'tah-nop'se-ah) protanopia.

Protea (pro'te-ah) [L.] a genus of trees of many species from various wet and warm regions; several species are medicinal, e.g.,

P. mellifera L., Proteaceae, the sugar protea, is made into a syrup used for coughs and pulmonary affections.

protean (pro'te-an) [Gr. *Prōteus* a many-formed deity] 1. assuming different shapes; changeable in form. 2. an insoluble derivative of protein, being the first product of the action of water, dilute acids, or enzymes.

proteantigen (pro'te-an'ti-jen) a protein antigen.

protease (pro'te-ās) a general term for a proteolytic enzyme. See *peptidase*. **fig-tree p.**, ficin.

protectant (pro-tek'tant) protective.

protectin (pro-tek'tin) thin paper coated on one side with an adhesive caoutchouc plaster; used in surgery.

protective (pro-tek'tiv) [L. *protegere* to cover over] 1. affording defense or immunity. 2. an agent that affords defense against a deleterious influence, such as a substance applied to the skin (*skin p.*) to avoid the effects of the sun's rays (*solar p.*) or other noxious influences; called also *screen*.

protector (pro-tek'tor) a substance in a catalyst which prolongs the rate of activity in the latter. Cf. *promotor*. **LATS p.**, an antibody in hyperthyroid patients with the capacity to block LATS (long acting thyroid stimulator) from combining with thyroid microsomes.

Proteaceae (pro'te'e-e) a taxonomic tribe of the family Enterobacteriaceae, order Eubacteriales, made up of straight, motile, gram-negative rods, which are found primarily in fecal matter and other putrefying material. It includes a single genus, *Proteus*.

proteid (pro'te-id) protein.

proteidic (pro'te-id'ik) pertaining to a protein or proteins.

proteidid (pro'te-i-din) an obsolete term for a bacteriolytic substance derived from certain microorganisms, and used at one time for protective inoculation against certain diseases. **pyocyanase p.**, a bacteriolytic substance derived from *Pseudomonas aeruginosa*, and used at one time for protective inoculation against diphtheria.

proteidogenous (pro'te-i-doj'ē-nus) giving rise to or producing proteins.

protein (pro'te-in) [Gr. *prōtos* first] any of a group of complex organic compounds which contain carbon, hydrogen, oxygen, nitrogen, and usually sulfur, the characteristic element being nitrogen, and which are widely distributed in plants and animals. Proteins, the principal constituents of the protoplasm of all cells, are of high molecular weight and consist essentially of combinations of α -amino acids in peptide linkages. Twenty different amino acids are commonly found in proteins, and each protein has a unique, genetically defined amino-acid sequence which determines its specific shape and function. They serve as enzymes, structural elements, hormones, immunoglobulins, etc., and are involved in oxygen transport, muscle contraction, electron transport, and other activities throughout the body, and in photosynthesis. They may be classified as: 1. *Simple or globular proteins*, including most of the proteins in the body, are generally soluble in water or salt solution and yield only α -amino acids on complete hydrolysis. Based mainly on their chemical properties, this class includes albumins, globulins, histones, and protamines. 2. *Fibrous or fibrillar proteins*, the principal structural proteins of the body, are generally insoluble. The major types of this class are collagens, elastins, keratins, and actin and myosin. 3. *Conjugated or compound proteins* are those in which the protein molecule is united with a nonprotein molecule or molecules (the prosthetic group) otherwise than as a salt. They include nucleoproteins, mucoproteins, lipoproteins, chromoproteins, phosphoproteins, and metalloproteins. **alcohol-soluble p.**, prolamin. **allosteric p.**, any protein whose biological properties are changed by binding specific small molecules at sites other than the active site. **bacterial p.**, a protein formed by bacterial activity. **bacterial cellular p.**, a protein that forms part of the substance of a bacterium. **Bence Jones p.**, a low-molecular weight, thermosensitive urinary protein, which is found almost exclusively in multiple myeloma and constitutes the light-chain component of myeloma globulin. Its outstanding characteristic is its unique property of coagulating on heating at 45°-55° C. and of redissolving partially or wholly on boiling. **carrier p.**, a protein which, when coupled to haptens *in vivo* or *in vitro*, renders the haptens capable of eliciting an immune response. See *haptens*. **coagulated p.**, an insoluble form which certain proteins assume when denatured at their isoelectric point by heat, alcohol, ultraviolet rays, or other agents. **complete p.**, a protein composed of amino acids in appropriate proportion to each other so that they all can be properly used by the body, and therefore more valuable for nutrition than is the partial protein (q.v.). **compound p.**, **conjugated p.**, see *protein*. **constitutive p's**, proteins produced in fixed amounts, regardless of the organism's need for them. **cord p's**, the proteins of blood from the umbilical cord. **C-reactive p.**, a globulin that forms a precipitate with the somatic C-polysaccharide of the pneumococcus *in vitro*; its demonstration in the serum is a sensitive indicator of inflammation of infectious or noninfectious origin. Abbreviated **CRP**. **defensive p.**, any protein formed within the body and serving as a protection against disease; any alexin, phylaxin, or sozin. Called also *Buchner body*. **denatured p.**, see *protein*.

denaturation, under denaturation. **derived p.**, derivatives of the protein molecule formed by hydrolytic changes, including proteins, metaproteins, coagulated proteins, proteoses, peptones, and peptides. **fibrillar p.**, see *protein*. **floating p.**, a protein which does not constitute part of the tissues, but simply circulates in the body and is then excreted. **globular p.**, see *protein*. **Hektoen, Kretschmer, and Welker p.**, a protein found in urine which resembles Bence Jones protein in solubility, but differs in its crystalline form, in its behavior toward heat, and in its precipitin reactions. **p. hydrolysate**, an artificial digest of protein derived by acid, enzymatic, or other hydrolysis of casein, lactalbumin, fibrin, or other suitable proteins that supply the approximate nutritive equivalent of the source protein in the form of its constituent amino acids; used intravenously as a fluid and nutrient replenisher. **immune p's**, immunoglobulins. **incomplete p.**, partial p. **insoluble p.**, a substance left behind after the other proteins have been extracted from a cell. **iodized p.**, a protein treated with iodine. **M p.**, see *permease*. **maintenance p.**, the smallest amount of protein upon which the normal conditions of the body can be maintained. **myeloma p.**, a homogeneous monoclonal immunoglobulin produced by a plasmacytoma, or partial immunoglobulin molecules, such as Bence Jones protein, produced by plasma cells that have undergone neoplastic transformation. **native p.**, unchanged animal or vegetable protein, especially as it occurs in foods. **partial p.**, a protein having a ratio of amino acids different from that of the average body protein, and therefore less valuable for nutrition than is the complete protein (q.v.). Called also *incomplete p.* **plasma p's**, all proteins present in the blood, including albumin, fibrinogen, and globulin. In addition to their other functions, all serve to provide colloid osmotic pressure, which prevents plasma loss from the capillaries. **plasma p. fraction**, see *under fraction*. **prophylactic measles p.**, an immune substance for prophylaxis against measles; an immunoglobulin fraction of serum that contains antibodies active against the measles virus. It may be a convalescent serum, and was formerly a placental extract. **protective p.**, defensive p. **pyocyanic p.** (*obs.*), a substance prepared by treating the *Pseudomonas aeruginosa* with potassium hydroxide; used in suppuration. **pyogenic p.** (*obs.*), the protein portion of a bacterium which is the suppuration-producing element of the bacterium. **racemized p.**, protein so changed by chemical or other agents, usually dilute alkali, that its optical activity is lowered and it becomes more resistant to enzymatic hydrolysis. Acid hydrolysis of a racemized protein shows inactivation (racemization) of several of its constituent amino acids. **serum p's**, proteins in the serum component of blood, including immunoglobulins, albumin, complement, clotting factors, and enzymes. **silver p.**, mild, see *under silver*. **silver p., strong**, see *under silver*. **simple p.**, see *protein*. **split p.**, see *Vaughan's split product, under product*. **synthetic p.**, highly complex polypeptides made in the laboratory; they show most of the characteristics of native protein. **whole p.**, protein which has not been split.

proteinaceous (pro'te-in-ə'shus) pertaining to or of the nature of a protein.

proteinase (pro'te-in-ās'') any enzyme that catalyzes the splitting of interior peptide bonds in a protein; an endopeptidase. **clothes-moth p.**, an enzyme found in the intestine of the clothes moth, *Tineola biselliella*, which will digest wool keratin at pH 9.3 after the keratin has been reduced. **serine p.**, any of a series of proteolytic enzymes that contain serine, histidine, and aspartic acid at their active site; they include enzymes active in digestion (e.g., trypsin), blood coagulation, immune reactions, and fertilization of the ovum. So called, because serine was the first amino acid found at the active site.

proteinemia (pro'te-in-e'me-ah) an excess of protein in the blood.

proteinic (pro'te-in'ik) pertaining to protein.

proteinochrome (pro'te-in-o-krōm) [*protein* + Gr. *chrōma* color] any one of a series of coloring matters formed by the action of bromine or chlorine on tryptophan.

proteinochromogen (pro'te-in-o-kro'mo-jen) former name for tryptophan; so called because it gave a red color with bromine.

proteinogen (pro'te-in-o-jen) Northrop's name for the hypothetical mother substance of all proteins.

proteinogenous (pro'te-in-oj'ē-nus) formed by or from a protein.

proteinogram (pro'te-in-o-gram) a graphic representation of the proteins present in the blood serum.

proteinology (pro'te-in-ol'o-je) [*protein* + -logy] the scientific study of proteins or of the protein status of the body.

proteinosis (pro'te-in-o'sis) the accumulation of excess protein in the tissues. **lipid p., lipid p.**, a hereditary disturbance of lipid metabolism marked by yellowish deposits of a hyalin lipid-carbohydrate mixture on the inner surface of the lips, under the tongue, on the oropharynx and larynx, and in many other sites. There may be nodular masses on the face and extremities. Hoarseness due to laryngeal nodules is a common early symptom. A light-sensitive form is now thought to be a variety of erythropoietic protoporphyria. Called also *hyalinosis cutis et mucosae*,

lipoidosis cutis et mucosae, and *Urbach Wiethe disease*. **pulmonary alveolar p.**, a chronic lung disease characterized by dyspnea, productive cough, chest pain, weakness, weight loss, and hemoptysis, and by the filling of the distal alveoli with a bland, eosinophilic, probably endogenous, proteinaceous material that prevents ventilation of affected areas. **tissue p.**, see *amyloidosis*.

proteinotherapy (pro'te-in-o-ther'ah-pe) treatment of disease by the parenteral injection of foreign protein.

proteinphobia (pro'te-in-fō-be-ah) [*protein* + Gr. *phobein* to be affrighted by + -ia] morbid aversion to protein foods.

proteinpolysaccharide (pro'te-in-pol'e-sak'ah-rid) proteoglycan.

proteinuria (pro'te-in-u're-ah) [*protein* + Gr. *ouron* urine + -ia] the presence of an excess of serum proteins in the urine; called also *albuminuria*. **accidental p.**, adventitious p. **p. of adolescence**, cyclic p. **adventitious p.**, that which is not due to a kidney disease; called also *accidental* or *false p.* **athletic p.**, functional proteinuria occurring in athletes; effort p. **Bence Jones p.**, the presence in the urine of Bence Jones protein. **cardiac p.**, proteinuria caused by cardiac disease. **colliquative p.**, proteinuria which is at first mild, but increases suddenly and markedly during convalescence; it is seen in several systemic and renal diseases. **cyclic p.**, a term once used to denote the appearance at stated times each day of a small amount of protein in the urine; it is observed principally in young persons (p. of adolescence). Called also *recurrent p.* and *Pavy's disease*. **dietetic p., digestive p.**, that produced by the use of certain foods. **effort p.**, functional proteinuria occurring as a result of vigorous and prolonged exercise of the lower limbs; called also *athletic p.* **emulsion p.**, proteinuria in which the turbidity does not disappear on filtration, heating, or adding acid; seen in puerperal eclampsia. **enterogenic p.**, that due to intestinal decomposition. **essential p.**, a form of functional proteinuria which is not associated with or followed by renal disease; it includes effort and orthostatic proteinuria. **false p.**, adventitious p. **febrile p.**, proteinuria due to fever. **functional p.**, any proteinuria which is not truly pathologic, such as the transient proteinurias of pregnancy or of adolescence; also known variously as *intermittent*, *paroxysmal*, *physiologic*, and *transient p.* **globular p.**, proteinuria due to renal excretion of red blood cells and dependent on blood in the urine. **gouty p.**, functional proteinuria, with excessive secretion of uric acid. **hematogenous p., hemic p.**, a variety due to abnormal condition of the blood, as in some intoxications. **intermittent p.**, functional p. **intrinsic p.**, true p. **light-chain p.**, increased urinary excretion of light-chain fragments of immunoglobulins, as in Fanconi syndrome. **lordotic p.**, postural proteinuria due to lordotic deformity of the spine. **mixed p.**, true proteinuria occurring concurrently with adventitious proteinuria. **nephrogenous p.**, that caused by renal disease; called also *renal p.* **neurotic p.**, a variety dependent on nervous diseases. **orthostatic p., orthotic p.**, a form of functional proteinuria, usually seen between the ages of ten and twenty, which occurs on standing erect and disappears on lying down. **palpatory p.**, temporary proteinuria produced by bimanual palpation of the kidneys. **paroxysmal p.**, functional p. **physiologic p.**, functional p. **postrenal p.**, proteinuria which has arisen at some point beyond the uriniferous tubule, such as the renal pelvis, ureter, bladder, prostate, or urethra. **postural p.**, proteinuria related to body position, as orthostatic and lordotic proteinuria. **p. praetuberculo'sa**, that occurring in the incipient stage of pulmonary tuberculosis. **prerenal p.**, proteinuria due primarily to a disease other than one of the kidney, such as heart disease, liver disease, fever, hyperthyroidism. **pseudo-p.**, adventitious p. **pyogenic p.**, that due to the absorption of pus cells or exudates, as in pneumonia, septic processes, etc. **recurrent p.**, cyclic p. **regulatory p.**, proteinuria or the transitory elimination of protein after excessive physical exercise, etc. **renal p.**, nephrogenous p. **residual p.**, persistence of protein in the urine after an attack of acute nephritis. **serous p.**, true p. **transient p.**, functional p. **true p.**, that which is characterized by the discharge with the urine of some of the protein elements of the blood; called also *intrinsic p.* and *serous p.*

proteinuric (pro'te-in-u'rik) pertaining to or marked by proteinuria.

proteoclastic (pro'te-o-klas'tik) [*protein* + Gr. *klasis* breakage] splitting up proteins or the protein molecule.

proteoglycan (pro'te-o-gli'kan) any of a group of glycoproteins present in connective tissue and formed of subunits of disaccharides linked together and joined to a protein core; the proteoglycans, which include the mucopolysaccharides with their protein moiety, serve as a binding or cementing material. Called also *proteinpolysaccharide*.

Proteoglypha (pro'te-og'li-fah) Proteroglypha.

proteohormone (pro'te-o-hor'mōn) a hormone that is a peptide or a protein and so is destroyed in the intestinal tract.

proteolipid (pro'te-o-lip'id) a combination of a peptide or protein with a lipid, having the solubility characteristics of lipids. Cf. *lipoprotein*.

proteolipin (pro'te-o-lip'in) proteolipid.

proteolysin (pro'te-ol'i-sin) a specific substance causing proteolysis.

proteolysis (pro'te-ol'i-sis) [*protein* + Gr. *lysis* dissolution] the splitting of proteins by hydrolysis of the peptide bonds with formation of smaller polypeptides; the process may be catalyzed by proteolytic enzymes, by acids, or by bases.

proteolytic (pro'te-ol'i-tik) 1. pertaining to, characterized by, or promoting proteolysis. 2. an enzyme that promotes proteolysis.

proteometabolic (pro'te-o-met'ah-bol'ik) pertaining to proteometabolism.

proteometabolism (pro'te-o-met'ab'o-lism) the metabolism of protein.

Proteomyces (pro'te-o-mi'sēz) Trichosporon.

proteoplectic (pro'te-o-pek'tik) proteopexic.

proteopepsis (pro'te-o-pep'sis) [*protein* + Gr. *pepsis* digestion] the digestion of protein.

proteopeptic (pro'te-o-pep'tik) digesting protein; pertaining to the digestion of protein.

proteopexic (pro'te-o-pek'sik) fixing protein within the organism.

proteopexy (pro'te-o-pek'se) [*protein* + Gr. *pēxis* fixation] the fixation of proteins within the organism.

proteophilic (pro'te-o-fil'ik) growing best in a protein-rich medium; said of certain bacteria.

protease (pro'te-ōs) [*protein* + -ose] a secondary protein derivative or a mixture of split products formed by a hydrolytic cleavage of the protein molecule more complete than that which occurs with the primary protein derivatives, but not so complete as that which forms amino-acids. The primary proteases are precipitated by half saturation with ammonium sulfate, the secondary, by full saturation.

Proteosoma (pro'te-o-so'mah) [*proteus* + Gr. *sōma* body] a former name for a genus of parasitic protozoa infecting birds and reptiles.

proteosotherapy (pro'te-o-so-ther'ah-pe) treatment of disease by the subcutaneous or intravenous injection of foreign protease.

proteosuria (pro'te-o-su're-ah) [*protease* + Gr. *ouron* urine + -ia] the presence of protease in the urine.

proteotherapy (pro'te-o-ther'ah-pe) proteinotherapy.

proteotoxin (pro'te-o-tok'sin) a toxic protein (e.g., anaphylatoxin) formed as a consequence of the interaction between a bacterial protein and the host's serum; endotoxin.

proter (pro'ter) [Gr. *proteros* front] the anterior daughter organism after transverse division of a protozoan; cf. *opisthe*.

Proteroglypha (pro'ter-o-glif'ah) a group of venomous snakes that have small stationary fangs which are grooved rather than hollow and so must be held in the wound if the poison is to reach the deeper tissues. Examples are the Indian cobra and the Sonoran coral snake. Called also *Ankyloproglypha* and *Proteoglypha*.

Proteromonas (pro'ter-o-mo'nahz) a genus of elongate, piriform, biflagellate protozoa of the family Bodonidae, order Protomastigida, found as parasites in the gut of various species of lizards. Called also *Prowazekella*.

proteuria (pro'te-u're-ah) [*protein* + Gr. *ouron* urine + -ia] proteinuria.

proteuric (pro'te-u'rik) proteinuric.

Proteus (pro'te-us) [Gr. *Prōteus* a many-formed deity] a genus of microorganisms of the tribe Proteae, family Enterobacteriaceae, order Eubacteriales, made up of gram-negative, generally active, motile, rod-shaped bacteria of limited pathogenicity, usually found in fecal and other putrefying material. **P. hydrophilus**, a bacillus closely related to the *Proteus* group and found to be the etiologic agent of red leg of frogs, ulcer disease of brook trout, and red sore of pike. **P. incon'stans**, a species isolated from patients with gastroenteritis, and also found in urinary tract infections; more than 150 different serotypes have been recognized. **P. melanovog'enes**, the cause of black rot. **P. mirab'ilis**, a species which is usually saprophytic and occasionally found as a human pathogen. **P. morgan'i**, an organism found in the intestinal tract and associated with summer diarrhea of infants. **P. rettge'ri**, a causative agent of diarrheal diseases of birds; also isolated from patients with sporadic and epidemic gastroenteritis. **P. vulga'ris**, the type species of *Proteus*, occurring, often as a secondary invader, in a variety of localized suppurative pathologic processes, and being a common cause of cystitis. It occurs as several serotypes; the X strains agglutinate in antiserum to certain of the rickettsia, X-19 strains in antiserum to the typhus group, and X-K in antiserum to the tsutsugamushi group, in the Weil-Felix reaction used for diagnostic purposes. See Plate accompanying *bacterium*.

prothallus (prō-thāl'us) the independent, free living gametophyte generation of ferns and related lower vascular plants.

prothesis (proth'e-sis) [Gr. "a placing in public"] prosthesis.

prothetic (pro-thet'ik) prosthetic.

prothipendyl hydrochloride (pro-thi'pen-dil) chemical

name: *N,N*-dimethyl-10*H*-pyrido[3,2-*b*][1,4]benzothiazine-10-propanamine hydrochloride monohydrate; an antihistaminic and sedative, C₁₆H₁₈N₃S·HCl·H₂O.

prothrombin (pro-throm'bin) [*pro* + Gr. *thrombos* clot + -in chemical suffix] Factor II; see *coagulation factors*, under *factor*.

prothrombinase (pro-throm'bin-ase) thromboplastin. **extrinsic p.**, extrinsic thromboplastin. **intrinsic p.**, intrinsic thromboplastin.

prothrombinogenic (pro-throm'bi-no-jen'ik) promoting the production of prothrombin (Factor II).

prothrombinopenia (pro-throm'bi-no-pe'ne-ah) hypoprothrombinemia.

prothyl (pro'thil) protyl.

protide (pro'tid) protein.

protidemia (pro'ti-de'me-ah) proteinemia.

protinium (pro-tin'e-um) protium.

protiodide (pro-ti'o-did) that one of the series of iodides of the same base which contains the smallest amount of iodine.

protirelin (pro-ti're-lin) thyrotropin releasing hormone.

protist (pro'tist) any member of the kingdom Protista; a single-celled organism. **eukaryotic p.**, protists having a true nucleus bounded by a nuclear membrane, and which exhibits mitosis, including protozoa, fungi, slime molds, and algae other than blue-green algae. Called also *higher p's*. **higher p's**, eukaryotic p's. **lower p's**, prokaryotic p's. **prokaryotic p.**, protists having no true nucleus, the nuclear material being a naked ring in the cytoplasm of the cell, and which reproduce primarily by fission, including bacteria and blue-green algae. Called also *lower p's*.

Protista (pro-tis'tah) [Gr. *prōtista* the very first, from *prōtos* first] in some systems of classification, a kingdom comprising bacteria, algae, slime molds, fungi, and protozoa. It includes all the single-celled organisms, some of which are plantlike, some are animal-like, while others are distinctly different from either plants or animals. In other classifications the bacteria and blue-green algae are excluded (see *Monera* and *Procaryotae*).

protistologist (pro'tis-tol'o-jist) a microbiologist.

protistology (pro'tis-tol'o-je) [*Protista* + -logy] microbiology.

protium (pro'te-um) the mass one isotope of hydrogen, symbol ¹H; ordinary, or light, hydrogen. See *hydrogen*. Cf. *deuterium* and *tritium*.

proto-, prot- [Gr. *prōtos* first] a combining form meaning first.

proto-actinium (pro'to-ak-tin'e-um) protactinium.

protoalbumose (pro'to-al'bu-mōs) a primary protease.

protoanemonin (pro'to-ah-nem'o-nin) chemical name: 5-methylene-2-oxodihydrofuran. An antibiotic substance, C₈H₄O₂, from the flowering herb, *Anemone pulsatilla*, active against certain gram-positive and gram-negative bacteria. Its mechanism of action is not well understood.

Protobacteriaceae (pro'to-bak'te-ri'e-e) a tribe of the family Nitrobacteriaceae that obtain their life energy by the oxidation of simple inorganic compounds of carbon or hydrogen.

protobe (pro'tōb) protobios.

protobiology (pro'to-bi-ol'o-je) [*proto* + Gr. *bios* life + -logy] the science which deals with the forms of life more minute than bacteria, such as viruses.

protobios (pro'to-bi'os) [*proto* + Gr. *bios* life] a name proposed by d'Herelle for the bacteriophage (protobios bacteriophagus).

protoblast (pro'to-blast) [*proto* + Gr. *blastos* germ] 1. a cell with no cell wall; an embryonic cell. 2. the nucleus of an ovum. 3. a blastomere from which a particular organ or part develops.

protoblastic (pro'to-blas'tik) pertaining to a protoblast.

protobrochal (pro'to-bro'kal) [*proto* + Gr. *brochos* mesh] denoting the first stage in the development of an ovary.

Protocalliphora (pro'to-kah-lif'o-rah) a genus of flies whose larvae feed on nesting birds.

protocaryon (pro'to-kar'e-on) [*proto* + Gr. *karyon* nucleus] a cell nucleus formed of a single karyosome in a network of linin.

protochloride (pro'to-klo'rid) that one of a series of chlorides of the same element which contains the least amount of chlorine.

protochlorophyll (pro'to-klo'ro-fil) a substance in plant tissue which is changed by the action of light into chlorophyll.

protochondral (pro'to-kon'dral) pertaining to the protochondrium or to centers of condensation.

protochondrium (pro'to-kon'dre-um) [*proto* + Gr. *chondros* cartilage] the basophil substance developed from precartilaginous which constitutes the intermediate stage in cartilage formation.

protociliate (pro'to-sil'e-āt) any member of the subclass Protociliatia.

Protociliatia (pro'to-sil'e-a'she-ah) a subclass of parasitic protozoa of the class Ciliata, subphylum Ciliophora, found in the colon of reptiles, amphibians, and fish, and characterized by two or more nuclei of the same type, cilia of equal length, and absence of a cytostome. It includes the genus *Opalina*.

protocol (pro'to-kol) the original notes made on a necropsy, an experiment, or on a case of disease.

protocone (pro'to-kōn) [*proto-* + Gr. *kōnos* cone] the primary inner, central, or lingual cusp in the evolutionary development of the upper molar teeth of placental mammals.

protoconid (pro'to-ko'nid) the labial cusp of a primitive lower molar; the primitive cusps become greatly modified in many higher mammals and have completely disappeared in some.

protocooperation (pro'to-co-op'er-a'shun) 1. symbiosis in which both populations (or individuals) gain from the association but are able to survive without it. 2. the tendency of animals to cluster in groups and thereby to mutually facilitate the survival of individual organisms.

protocoproporphyrin (pro'to-kop'ro-por-fir'e-ah) porphyrin with an excess of protophyrin and coproporphyrin in the bile and feces; see *porphyria cutanea tarda hereditaria*.

protodiastolic (pro'to-di'ah-stol'ik) pertaining to early diastole, i.e., immediately following the second heart sound.

protoduodenum (pro'to-du-o-de-num) the first or proximal portion of the duodenum, extending from the pylorus to the duodenal papilla, and developed embryonically from the foregut.

protoelastose (pro'to-e-las'tōs) hemielastin.

protofibril (pro'to-fi'bril) the first elongated unit appearing in the process of formation of any type of fiber.

protogaster (pro'to-gas'ter) [*proto-* + Gr. *gastēr* stomach] archenteron.

protoglobulose (pro'to-glob'u-lōs) a primary product formed in the digestion of globulin.

protogonocyte (pro'to-go'no-sit) [*proto-* + *gonocyte*] one of the two cells resulting from division of the impregnated ovum and, in certain lower forms, constituting the primordial germ cell from which all gametes derive.

protogonoplasm (pro'to-go'no-plazm) [*proto-* + Gr. *gōnē* seed + *plasma* anything formed or molded] (obs.) idiochromidia.

protogynous (pro-toj'i-nus) exhibiting protogyny.

protogyny (pro-toj'i-ne) [*proto-* + Gr. *gyne* woman] hermaphroditism in which the female gonad matures before the male gonad. Cf. *protandry*.

protoheme (pro'to-hēm) the prosthetic group of cytochrome *b*, consisting of protoporphyrin and iron.

protohematin (pro'to-hem'in) hemin.

protohydrogen (pro'to-hi'dro-jen) protium.

protiodide (pro'to-i'o-did) protiodide.

protokylol hydrochloride (pro'to-ki'lol) chemical name: 4-[2-[[2-(1,3-benzodioxol-5-yl)-1-methylethyl]amino]-1-hydroxyethyl]-1,2-benzenediol hydrochloride. An adrenergic, $C_{18}H_{21}NO_5$, occurring as a white crystalline powder; used as a bronchodilator for the treatment of bronchospasm associated with bronchial asthma, pulmonary emphysema, bronchitis, and bronchiectasis, administered orally.

Protomastigida (pro'to-mas-tij'i-dah) an order of generally small protozoa of the class Zoomastigophora, subphylum Mastigophora, characterized by the presence of one or two flagella and a plastic rather than ameboid body. Many are free-living, but some are parasites in plants, invertebrates, and vertebrates, including man. It includes the families Trypanosmatidae, Cryptobiidae, and Bodonidae.

protomedicus (pro'to-med'i-kus) [*proto-* + L. *medicus* physician] a medieval term for physician-in-chief.

protomerite (pro'to-me'rit) [*proto-* + Gr. *meros* part] the anterior portion of certain gregarine protozoa. Cf. *deutomerite*.

protometer (pro-tom'ē-ter) [L. *pro-* + Gr. *metron* measure] an instrument for measuring the forward protrusion of the eyeball.

Protominobacter (pro-tom'i-no-bak'ter) a genus of bacteria containing several species found in soil and water.

Protomonadina (pro'to-mon-ah-di'nah) an order of protozoa of the class Zoomastigophora, subphylum Mastigophora, comprising heterogeneous primitive animal flagellates. In former classifications, it was included, along with the order Phytomonadina, in the group Monadina. It includes the families Monodidae and Protomonadina.

proton (pro'ton) [Gr. *prōtos* first + *-on* neuter ending] 1. (obs.) the primitive rudiment of a part; a primordium or anlage. 2. an elementary particle of positive charge which forms the nucleus of the ordinary hydrogen atom of mass 1; protons, along with the neutrons, form the nucleus of atoms of all other elements. The proton is the unit of positive electricity, being equivalent to the electron in charge and approximately to the hydrogen ion in mass.

protonephridium (pro'to-nef-rid'e-um) an osmoregulatory tubule of some invertebrates; its inner end contains a flame cell or bulb.

protonephron (pro'to-nef'ron) pronephros.

protonephros (pro'to-nef'ros) pronephros.

protoneuron (pro'to-nu'ron) [*proto-* + Gr. *neuron* nerve] 1. the first neuron in a peripheral reflex arc. 2. a unit of the nerve net of low metazoa that lacks polarization.

protonic (pro-ton'ik) (obs.) primordial.

protonitrate (pro'to-ni'trāt) that one of several nitrates of the same base which contains the least amount of nitric acid.

Protopam (pro'to-pam) trademark for preparations of pralidoxime.

protopathic (pro'to-path'ik) [*proto-* + Gr. *pathos* disease] primary; idiopathic. See *protopathic sensibility*, under *sensibility*.

protopecten (pro'to-pek'ten) pectose.

protophyllin (pro'to-fil'in) chlorophyll hydride, a colorless substance which is changed into chlorophyll by the action of air or carbon dioxide.

Protophyta (pro'to-fi'tah) [*proto-* + Gr. *phyton* plant] the lowest division of the vegetable kingdom, made up of unicellular organisms and including the algae, bacteria, and viruses.

protophyte (pro'to-fit) [*proto-* + Gr. *phyton* plant] a unicellular plant or vegetable organism; an individual of the division Protophyta.

protophytology (pro'to-fi-tol'o-je) the scientific study of the simplest forms of plants (protophytes).

protopine (pro'to-pin) 1. an alkaloid, $C_{20}H_{19}NO_5$, from *Eschscholtzia californica*, the California poppy, and many other plants; it is an anodyne and hypnotic. 2. a poisonous alkaloid from various species of perennial herbs of the genus *Dicentra*.

protoplasia (pro-to-pla'se-ah) primary formation of tissue.

protoplasm (pro'to-plazm) [*proto-* + Gr. *plasma* plasma] the viscous, translucent, polyphasic colloid with water as the continuous phase that makes up the essential material of all plant and animal cells. It is composed mainly of nucleic acids, proteins, lipids, carbohydrates, and inorganic salts. The protoplasm surrounding the nucleus is known as the *cytoplasm* and that composing the nucleus is the *nucleoplasm*. **functional p.**, kinoplasm. **granular p.**, protoplasm having granular inclusions, including those in the planeroplasm. **superior p.**, endoplasmic reticulum. **totipotent p.**, protoplasm which has the power of performing all the functions of the cell.

protoplasmatic (pro'to-plaz-mat'ik) protoplasmic.

protoplasmic (pro'to-plaz'mik) pertaining to or consisting of protoplasm.

protoplast (pro'to-plast) [*proto-* + Gr. *plastos* formed] 1. the type or model of some organic being. 2. a cell (Hanstein, 1880). 3. a bacterial or plant cell deprived of its rigid wall, but with its plasma membrane still intact; the cell is dependent for its integrity on an isotonic or hypertonic medium. Cf. *spheroplast*.

protoporphyrin (pro'to-por-fi'r'e-ah) porphyrin characterized by intense pruritus, erythema, and edema after short exposure of the skin to sunlight and by excessive protoporphyrin in erythrocytes, plasma, and feces; the skin lesions usually fade without scarring or pigmentation, but a chronic weatherbeaten appearance is characteristic. Called also *erythrohepatic p.* or *erythropoietic p.*

protoporphyrin (pro'to-por'fi-rin) the porphyrin, $C_{34}H_{34}N_4O_4$, whose iron complex, united with protein, occurs as hemoglobin, myoglobin, catalase, and certain respiratory pigments. Two of its four pyrrole groups have both a methyl and a propionate side chain; the other two have both a methyl and a vinyl side chain.

protoporphyrinuria (pro'to-por'fi-rin-u're-ah) [*protoporphyrin* + Gr. *ouron* urine + *-ia*] the presence of protoporphyrin in the urine.

protoprotease (pro'to-pro'te-ōs) a primary protease.

ptoposis (pro-top'sis) protrusion of the eye; exophthalmos.

protosalt (pro'to-sawlt) that one of a series of salts of the same base which contains the smallest amount of the substance combining with the base.

protospasm (pro'to-spazm) [*proto-* + Gr. *spasmos* spasm] a spasm which begins in a limited area and extends to other parts; the earlier and minor spasm of jacksonian epilepsy.

Protopirura (pro'to-spi-roo'rah) a genus of nematode parasites. **P. gracilis**, a species found in cats.

protostoma (pro'to-sto'mah) blastopore.

protostome (pro'to-stōm) [*proto-* + Gr. *stoma* mouth] an individual of the Protostomia.

Protostomia (pro'to-sto'me-ah) a series of the Eucelomata, including the mollusks, annelids, and arthropods, in all of which the mouth arises from the blastopore.

Protostrongylus (pro'to-stron'ji-lus) a genus of lung worms. **P. rufescens**, a species that infects sheep, goats, deer, and domestic rabbits.

protosulfate (pro'to-sul'fāt) that one of several sulfates of the same base which contains the smallest proportion of sulfate ion.

prosyphilis (pro'to-sif'i-lis) primary syphilis.

Prototheria (pro'to-the'ri-ah) [*proto-* + Gr. *therion* beast, animal] in some systems of classification, a subclass of the Mammalia, including the order Monotremata, the egg-laying mammals.

prototoxin (pro'to-tok'sin) [*proto-* + *toxin*] (obs.) that portion or constituent of a toxin which has the greatest combining

capacity for the antitoxin; see *deuterotoxin*, *hemotoxin*, *heterotoxin*, *tritotoxin*.

prototoxoid (pro'to-tok'soid) prototoxoid.

prototroph (pro'to-trōf) [*proto-* + Gr. *trophē* nourishment] a prototrophic organism.

prototrophic (pro'to-trof'ik) having the same growth factor requirements as the ancestral or prototype strain; said of microbial mutants.

prototropy (pro-tot'ro-pe) [*proton* + Gr. *tropē* a turning] the more usual type of tautomerism, which is the result of a mobile hydrogen ion. For example, acetoacetic ester, $\text{CH}_3\text{C}(\text{CH}_3)\text{COOC}_2\text{H}_5$.

$\text{H}_2\text{C}=\text{CH}-\text{COOC}_2\text{H}_5$. Cf. *anionotropy*.

prototype (pro'to-tip) [*proto-* + Gr. *typos* type] the original type or form after which other types or forms are developed.

protoveratrine (pro'to-ver'ah-trēn) an ester alkaloid obtained from the liliaceous plants *Veratrum album* L. and *V. viride* Aiton, occurring in two forms, designated A and B, both of which possess antihypertensive properties. Protoveratrine A is said to be more active than the B form; the two are usually administered in combination.

protovertebra (pro'to-ver'te-brah) 1. somite. 2. the caudal half of a somite that forms most of a vertebra.

protoxoid (pro-tok'se-oid) prototoxoid.

protoxide (pro-tok'sid) that one of a series of oxides of the same metal which contains the smallest amount of oxygen.

protoxoid (pro-tok'soid) any toxoid which has a greater affinity for the antitoxin than has the toxin; see *toxoid*.

Protozoa (pro'to-zo'ah) a phylum comprising the simplest organisms of the animal kingdom, consisting of unicellular organisms that range in size from submicroscopic to macroscopic; most are free-living, but some lead commensalistic, mutualistic, or parasitic existences. Protozoa are usually divided into four subphyla: Sarcodina (amebae), having pseudopodia during most of the life cycle; Mastigophora (flagellates), having one or more flagella during most of the life cycle; Ciliophora (ciliates and suctorians), having cilia during some stage of development; and Sporozoa, having no locomotor organs in the adult stages and reproducing by sporulation. Cf. *Metazoa*.

Subphyla of Protozoa: A, Sarcodina, represented by *Entamoeba histolytica* of amebic dysentery. B, Mastigophora, represented by *Trypanosoma gambiense* of African sleeping sickness. C, Ciliophora, represented by *Balantidium coli*, causative organism of a certain oriental dysentery (redrawn after Leuckart). D, Sporozoa, represented by (a) *Eimeria stiedae* from liver of rabbit, (b) *Plasmodium vivax*, of malaria, shown in a red blood cell (all greatly enlarged). (Hermes.)

protozoa (pro'to-zo'ah) plural of *protozoan*.

protozoacide (pro'to-zo'ah-sid) destructive to protozoa; an agent destructive to protozoa.

protozoagglutinin (pro'to-zo'ah-gloo'ti-nin) an agglutinin formed in the blood in protozoan infections which has the power of agglutinating the infecting protozoa.

protozoal (pro'to-zo'al) pertaining to or caused by protozoa.

protozoan (pro'to-zo'an) 1. of or pertaining to Protozoa. 2. an organism belonging to the Protozoa.

protozoiasis (pro'to-zo-i'ah-sis) any disease caused by protozoa.

protozoology (pro'to-zo-ol'o-je) the study of protozoa. **clinical p.**, the study of protozoan parasites causing diseases in man and other animals.

protozoon (pro'to-zo'on), pl. *protozoa* [*proto-* + Gr. *zōon* animal] a primitive animal organism consisting of a single cell; any individual organism belonging to the Protozoa.

protozoophage (pro'to-zo-o-fāj) [*protozoa* + Gr. *phagein* to eat] a cell which has a phagocytic action on protozoa.

protozoosis (pro'to-zo-o'sis) protozoiasis.

protozootherapy (pro'to-zo-o-ther'ah-pe) the treatment of diseases caused by protozoa, particularly the chemotherapy of such diseases.

protraction (pro-trak'shun) [L. *protrahere* to drag forth from a place] a facial anomaly in which a cephalometric landmark or facial structure stands farther forward than usual. **mandibular p.**, a facial anomaly in which the gnathion is anterior to the orbital plane. **maxillary p.**, a facial anomaly in which the subnasion is anterior to the orbital plane.

protractor (pro-trak'tor) [*pro-* + L. *trahere* to draw] an instrument for extracting bits of bone, bullets, or other foreign material from wounds.

protransglutaminase (pro-tranz'gloo-tam'in-ās) the inactive precursor of transglutaminase; called also *coagulation Factor XIII*.

protriptyline hydrochloride (pro-trip'ti-lēn) [USP] chemical name: *N*-methyl-5*H*-dibenzo [*a,d*] cycloheptene-5-propylamine hydrochloride; a tricyclic antidepressant, $\text{C}_{19}\text{H}_{21}\text{N}\cdot\text{HCl}$, occurring as a white to yellowish powder; administered orally.

protrusio (pro-troo'ze-o) [L.] the state of being thrust forward; projection. **p. acetabuli**, arthrokataclasis.

protrusion (pro-troo'zhun) [L. *protrusi* to push forward] the state of being thrust forward or laterally, as in masticatory movements of the mandible. **bimaxillary p.**, the projection of both the maxilla and the mandible beyond normal limits in relation to the cranial base. **bimaxillary dentoalveolar p.**, the positioning of the entire dentition forward with respect to the facial profile. **intrapelvic p.**, arthrokataclasis.

protrypsin (pro-trip'sin) a substance convertible into trypsin.

protuberance (pro-tu'ber-ans) [*pro-* + L. *tuber* bulge] a projecting part, or prominence; an apophysis, process, or swelling. For names of specific anatomical structures not included here, see under *protuberantia*. **p. of chin**, protuberantia mentalis. **laryngeal p.**, prominentia laryngea. **occipital p.**, transverse, torus occipitalis. **palatine p.**, torus palatinus. **tubal p.**, torus tubarius.

protuberantia (pro-tu'ber-an'she-ah) [L.] protuberance: a projecting part, or prominence. **p. menta/lis** [NA], mental protuberance: a more or less distinct and triangular prominence on the anterior surface of the body of the mandible, on or near the median line. **p. occipita/lis exter'na** [NA], external occipital protuberance: a prominence at the center of the outer surface of the squama of the occipital bone which gives attachment to the ligamentum nuchae. **p. occipita/lis inter'na** [NA], internal occipital protuberance: the projection of bone at the midpoint of the cruciform eminence, on the internal surface of the squama of the occipital bone, sometimes presenting as a ridge (*crista occipitalis interna* [NA]).

protyl, protyle (pro'til) [*proto-* + Gr. *hylē* matter] a theoretical substance from which all the chemical elements were formerly supposed to be derived.

proud (prowd) characterized by exuberant granulation tissue.

Provell (pro-vel') trademark for a preparation of protoveratrin A and B.

Provera (pro-ver'ah) trademark for preparations of medroxyprogesterone acetate.

provertebra (pro-ver'tē-brah) protoverlebra.

provirus (pro-vi'rus) the genome of an animal virus integrated (by crossing over) into the chromosome of the host cell, and thus replicated in all of its daughter cells.

provisional (pro-vizh'un-al) formed or performed for temporary purposes; temporary.

provitamin (pro-vi'tah-min) a precursor of a vitamin; a substance from which the animal organism can form vitamin. Provitamin A is carotene. Ergosterol has been spoken of as provitamin D.

provocative (pro-vok'ah-tiv) stimulating the appearance of a sign, reflex, reaction, or therapeutic effect.

Prowazek's bodies (pro-vah't'seks) [Stanislas Joseph Matthias von Prowazek, zoologist in Hamburg, 1875-1915] see under *body*.

Prowazek-Greeff bodies (pro-vah't'sek-grāf) [S. J. M. von Prowazek; Carl Richard Greeff, German ophthalmologist, 1862-1938] trachoma bodies.

Prowazekella (pro-vah't'ze-kel'ah) *Proteromonas*.

Prowazekia (pro'vah't-zek'e-ah) *Bodo*.

proxazole (prok'sa-zōl) chemical name: *N,N*-diethyl-3-(1-phenylpropyl)-1,2,4-oxadiazole-5-ethanamine; a smooth muscle relaxant, analgesic, and anti-inflammatory, $\text{C}_{17}\text{H}_{22}\text{N}_4\text{O}$. **p. citrate**, the citrate salt of proxazole having the same actions as the base.

proxemics (prok-se'miks) the study of the effects of spatial distance between persons interacting with each other, and of their orientation toward each other.

proximal (prok'si-mad) toward the proximal end or in a proximal direction.

proximal (prok'si-mal) [L. *proximus* next] nearest; closer to any point of reference: opposed to *distal*.

proximalis (prok'si-ma'lis) proximal; [NA] a term denoting proximity to the point of origin or attachment of an organ or part.

proximate (prok'si-māt) [L. *proximatus* drawn near] immediate or nearest.

proximoataxia (prok'si-mo-ah-tak'se-ah) ataxia affecting the proximal part of an extremity, as the arm, forearm, thigh, or leg.

proximobuccal (prok'si-mo-buk'al) pertaining to the proximal and buccal surfaces of a posterior tooth.

proximoceptor (prok'si-mo-sep'tor) contiguous receptor.

proximolabial (prok'si-mo-la-be-al) pertaining to the proximal and labial surfaces of an anterior tooth.

proximolingual (prok'si-mo-ling'gwal) pertaining to the proximal and lingual surfaces of a tooth.

prozonal (pro'zo-nal) 1. situated before a sclerozone. 2. pertaining to a prozone.

prozone (pro'zōn) [*pro-* + *zone*] the phenomenon exhibited by some sera, which give effective agglutination reactions when diluted several hundred- or thousandfold but do not visibly react with the antigen particles when undiluted or only slightly diluted. The phenomenon is not due simply to antibody excess, but often involves a special class of antibodies, blocking or incomplete antibodies, which react with the corresponding particulate antigen in an anomalous manner. The bound antibody not only fails to elicit agglutination, but actively inhibits it. Called also *prezone*, *prozone phenomenon*, and *agglutinoïd reaction*.

prozymogen (pro-zi'mo-jen) a precursor of a pre-enzyme, or zymogen.

PRPP phosphoribosylpyrophosphate.

prual (proo'al) a very violent poison from the root of the tropical flowering vine, *Coptosapelta flavescens*; used as a dart poison.

pruinat (proo'i-nāt) [L. *pruina* hoarfrost] having the appearance of being covered with hoarfrost.

Prulet (pru'let) trademark for a preparation of oxyphenisatin acetate.

Prunella (proo-nel'ah) a genus of labiate plants. *P. vulgaris* L. (heal-all or self-heal) is astringent and tonic.

prunin (proo'nin) a concentration prepared from the wild black cherry, *Prunus serotina* Ehrh. (Rosaceae), formerly used in thoracic and nervous diseases.

Prunus (proo'nus) [L. "plum-tree"] a genus of rosaceous trees and shrubs, including the plums, cherries, sloes, apricots, and peaches. *P. americana*, Marsh., American wild plum or river plum. *P. amygdalus* Batsch., almond. *P. armenica*, apricot. *P. communis* L., almond. *P. domestica* L., garden plum. *P. laurocerasus* L., cherry laurel. *P. persica*, peach. *P. serotina* Ehrh., a large American cherry tree with dark bark and thick oval leaves; called also *wild cherry*. *P. spinosa* L., a species of plum, the sloe, or blackthorn sloe. *P. virginiana* L., the choke cherry of North America; its bark has sedative, pectoral, and astringent qualities and its fruit is highly astringent.

pruriginous (proo-rij'i-nus) of the nature of or tending to cause prurigo.

prurigo (proo-ri'go) [L. "the itch"] a name applied to several itchy skin eruptions of unknown cause, in which the characteristic lesion (prurigo papule) is dome-shaped with a small transient vesicle on top, followed by crusting or lichenification; specific types are usually indicated by a modifying term. *p. agria*, a severe prurigo persisting into adulthood, characterized chiefly by hard excoriating prurigo papules and lichenification, with sparse urticarial elements. *Besnier's p.*, a form of dermatitis which is known to pediatricians as infantile eczema (q.v.) when it occurs in infants and young children and to dermatologists as atopic dermatitis (q.v.) when it occurs in infants, adolescents, and adults. *p. chronica multifor/mis*, papular urticaria. *p. estivalis* (obs.), a papular type of polymorphous light eruption. *p. of Hebra*, *p. mitis*. *melanotic p.*, a form associated with primary biliary cirrhosis in women, characterized by reticulated hyperpigmentation and intense itching. *p. mi'tis*, a mild form of prurigo thought by some to be a mild papular variant of atopic dermatitis or of papular urticaria. *p. nodularis*, a type of neurodermatitis, with discrete, firm, rough-surfaced, dark brownish-gray, intensely itchy nodules up to 1 or 2 cm. broad; it mostly occurs on the extensor surfaces of the extremities, and chiefly affects middle-aged women. *p. sim'plex*, papular urticaria. *summer p.*, *p. estivalis*.

pruritic (proo-rit'ik) pertaining to or characterized by pruritus.

pruritogenic (proo'ri-to-jen'ik) capable of causing or tending to cause pruritus.

pruritus (proo-ri'tus) [L. from *prurire* to itch] itching; also, the name of various conditions characterized by itching, the specific site or type being indicated by a modifying term. *p. ani*, intense chronic itching in the anal region. *essential p.*, pruritus occurring idiopathically, without other discoverable abnormality. *p. hiema'lis*, winter itch. *p. scro'ti*, intense itching in the scrotal area. *senile p.*, *p. seni'lis*, an itching in the aged, possibly due to dryness of the skin occurring as a result of decreased sweat and sebum secretion, or bathing too frequently, or both. *symptomatic p.*, itching associated with and symptomatic of some other abnormality or disease, such as jaundice.

uremic p., generalized itching associated with chronic renal failure and not attributable to other internal or skin disease. *p. vul'vae*, intense itching of the external genitals of the female, as in kraurosis vulvae.

Prussak's fibers, pouch, space (proo'sahks) [Alexander Prussak, Russian otologist, 1839-1897] see under *fiber*, and see *recessus membranae tympani superior*.

prussiate (prus'e-āt) cyanide.

p.s. abbreviation for *per second*.

psalis (sa'lis) [Gr. "arch"] the fornix of the cerebrum (fornix cerebri [NA]).

psalterial (sal-te're-al) pertaining to the psalterium.

psalterium (sal-te're-um) [L.; Gr. *psaltērion* harp] 1. commissura fornicis. 2. the omasum.

Psalydolytta (sal'i-do-lit'tah) a genus of blister beetles. *P. fusca* and *P. subtrigata* of Africa produce a severe vesicular dermatitis.

psammo- (sam'o) [Gr. *psammos* sand] a combining form denoting relation to sand or to sandlike material.

psammocarcinoma (sam'o-kar'si-no'mah) [*psammo-* + *carcinoma*] carcinoma containing calcareous matter.

psammoma (sam-o'mah) [*psammo-* + *-oma*] a tumor, especially a meningioma, that contains psammoma bodies; formerly sometimes called *Virchow's psammoma*.

psammomasarcoma (sam'o-sar-ko'mah) [*psammo-* + *sarcoma*] a sarcoma containing a sandy deposit.

psammotherapy (sam'o-ther'ah-pe) [*psammo-* + Gr. *therapeia* treatment] ammotherapy.

psammous (sam'us) sandy.

psauoscopy (saw-os'ko-pe) [Gr. *psaein* to touch + *skopein* to examine] a method of physical examination by passing the ball of the index finger back and forth lightly over the margin of an abnormal area. Over the pathological area the finger seems to encounter greater resistance and the skin seems more tense and less supple.

pselaphesia (sel-ah-fe'ze-ah) [Gr. *psēlaphēsis* touching] the tactile sense.

psellism (sel'izm) [Gr. *psellisma* stammer] stammering or stuttering; see *stuttering*.

pseud- see *pseudo-*.

pseudacousis (soo'dah-koo'sis) [*pseud-* + Gr. *akousis* hearing] pseudacousma.

pseudacousma (soo'dah-kōōz'mah) [*pseud-* + Gr. *akousma* thing heard] a subjective sensation as if sounds were altered in pitch and quality.

pseudactinomycosis (soo-dak'ti-no-mi-ko'sis) pseudoactinomycosis.

pseudagraphia (soo'dah-gra'fe-ah) pseudoagraphia.

pseudalbuminuria (soo'dal-bu'mi-nu're-ah) adventitious proteinuria.

Pseudamphistomum (sood'am-fis'to-mum) [*pseud-* + *amphi-* + Gr. *stoma* mouth] a genus of flukes; called also *Metorchis* and *Pseudoamphistomum*. *P. trunca'tum*, a species found in the bile ducts of cats, dogs, seals, and deer, and occasionally in man in Europe and India.

pseudangina (soo'dan-ji'nah) pseudoangina.

pseudankylosis (soo'dang-kī-lo'sis) pseudoankylosis.

pseudaphia (soo-da'fe-ah) [*pseud-* + Gr. *haphē* touch + *-ia*] defect in the power of perceiving touch.

pseudarrhenia (soo'dah-re'ne-ah) female pseudohermaphroditism.

pseudarthrit (soo'dar-thri'tis) [*pseud-* + *arthritis*] a hysterical affection of the joints.

pseudarthrosis (soo'dar-thro'sis) [*pseud-* + Gr. *arthrōsis* joint] a pathologic entity characterized by deossification of a weight-bearing long bone, followed by bending and pathologic fracture, with inability to form normal callus leading to existence of the "false joint" that gives the condition its name.

Pseudechis (soo-dek'is) [*pseud-* + Gr. *echis* viper] a genus of venomous elapid snakes of Australia, including *P. porphyria'cus*, the blacksnake. See table accompanying *snake*.

pseudencephalus (soo'den-sef'ah-lus) [*pseud-* + Gr. *enkephalos* brain] a monster with a vascular tumor in place of the brain.

pseudesthesia (soo'des-the'ze-ah) [*pseud-* + Gr. *aisthēsis* perception] any imaginary sensation; a sensation which is felt without any external stimulus, or a sensation which does not correspond to the stimulus that causes it.

pseudinoma (soo'di-no'mah) [*pseud-* + *-oma*] phantom tumor.

pseudo-, pseud- [Gr. *pseudēs* false] combining form signifying false or spurious.

pseudoacanthosis (soo'do-ak'an-tho'sis) [*pseudo-* + *acanthosis*] a condition clinically resembling acanthosis. *p. ni'gricans*, a benign form of acanthosis nigricans associated with obesity; the obesity is sometimes associated with endocrine disturbance.

pseudocephalus (soo'do-a-sef'ah-lus) [*pseudo-* + *acephalus*]

a placental parasitic twin, apparently headless, but with a rudimentary cranium contained in the autosome.

pseudoactinomycosis (soo''do-ak''tī-no-mi-ko'-sis) [*pseudo-* + *actinomycosis*] a variety of chronic pulmonary disease resembling actinomycosis, usually nocardiosis.

pseudoagglutination (soo''do-ah-gloo''tī-na'shun) pseudo-hemagglutination.

pseudoagraphia (soo''do-ah-graf'e-ah) a condition in which the patient can copy writing, but cannot write except in a meaningless and illegible manner.

pseudoalbuminuria (soo''do-al''bu-mī-nu're-ah) adventitious proteinuria.

pseudoalleles (soo''do-ah-lēlz') [*pseudo-* + *allele*] 1. genes which are seemingly allelic, but which can eventually be shown to have distinct but closely linked loci. 2. allelic genes which form heterozygotes resembling the wild type rather than either mutant type.

pseudoallelic (soo''do-ah-lēl'ik) pertaining to pseudoalleles; seemingly allelic but located at different sites on homologous chromosomes.

pseudoallelism (soo''do-al''lē-lizm) the possession of pseudoalleles.

pseudoalveolar (soo''do-al-ve'o-lar) simulating an alveolar structure.

Pseudoamphistomum (soo''do-am-fis'to-mum) *Pseudamphistomum*.

pseudoanaphylactic (soo''do-an''ah-fi-lak'tik) pertaining to pseudoanaphylaxis.

pseudoanaphylaxis (soo''do-an''ah-fi-lak'sis) [*pseudo-* + *anaphylaxis*] a reaction the symptoms of which resemble those of the anaphylactic reaction, produced by the injection of serum which has been acted upon by agar, kaolin, starch, and other substances, and also by the injection of other nonspecific proteins.

pseudoanemia (soo''do-ah-ne'me-ah) [*pseudo-* + *anemia*] marked pallor with no clinical or hematological evidence of anemia. **p. angiospastica**, a form due to vasoconstriction.

pseudoaneurysm (soo''do-an''u-rizm) dilatation and tortuosity of a vessel, giving the appearance of an aneurysm.

pseudoangina (soo''do-an-ji'nah) [*pseudo-* + *angina*] false angina; a syndrome occurring in nervous individuals, marked by precordial pain, fatigue, and lassitude, without evidence of organic disease of the heart. See *angina pectoris vasomotoria*.

pseudoankylosis (soo''do-ang''kī-lo'sis) a false ankylosis.

pseudoanodontia (soo''do-an''o-don'she-ah) the condition in which teeth develop but do not erupt.

pseudoantagonist (soo''do-an-tag'o-nist) a muscle which by flexing a joint enhances the effect of another muscle crossing that joint to act on a more distant one.

pseudoapoplexy (soo''do-ap'o-plek'se) [*pseudo-* + *apoplexy*] a condition resembling apoplexy, but without cerebral hemorrhage.

pseudoappendicitis (soo''do-ah-pen''dī-si'tis) a condition with symptoms simulating appendicitis, sometimes hysterical and sometimes of syphilitic origin, but without affection of the appendix. **p. zooparasitica**, a condition in which parasites are present in the vermiform appendix.

pseudoarthrosis (soo''do-ar-thro'sis) pseudarthrosis.

pseudoasthma (soo''do-as'mah) paroxysmal dyspnea.

pseudotachetosis (soo''do-ath'e-to'sis) movements of the fingers elicited when the patient closes his eyes and extends his arms, associated with impairment of joint position sense.

pseudotrophoderma colli (soo''do-at''ro-to-der'mah kol'le) a skin disease characterized by papillomatous, depigmented, glossy lesions on the sides of the neck; the depigmented areas resemble vitiligo. It probably differs from confluent reticulated papillomatosis chiefly in its location.

pseudobacillus (soo''do-bah-sil'us) an exceedingly small, rod-like poikilocyte, resembling a microorganism.

pseudobacterium (soo''do-bak-te're-um) [*pseudo-* + Gr. *baktērion* stick] a cell that resembles a bacterium.

pseudobasedow (soo''do-bas'e-dow) basedoid.

pseudobronchiectasis (soo''do-brong''ke-ek'tah-sis) a condition in which a bronchiectasis-like pattern appears in the bronchogram of partially atelectatic pulmonary segments when the larger bronchi have become shortened and broadened in outline; these reversible changes do not indicate destruction of the bronchial walls.

pseudobulbar (soo''do-bul'bar) apparently, but not really, due to a bulbar lesion.

pseudocartilage (soo''do-kar'tī-lij) chondroid tissue.

pseudocartilaginous (soo''do-kar''tī-laj'i-nus) composed of a substance resembling cartilage.

pseudocast (soo''do-kast) a false cast: a form of urinary sediment resembling true casts, but being an accidental formation, taking the shape of casts by adherence to mucus threads, cotton fibers, etc.

pseudocoele (soo''do-sēl) the *cavum septi pellucidi*.

pseudoccephalocoele (soo''do-sef''ah-lo-sēl) a hernia of the brain not congenital, but due to disease or injury of the skull.

pseudochancere (soo''do-shang'ker) an indurated lesion resembling or simulating chancre. **p. re'dux**, a gummatous recurrence at the site of a primary syphilitic lesion.

pseudocholecystitis (soo''do-ko''le-sis-ti'tis) a syndrome resembling cholecystitis but occurring as an allergic response to eating certain foods.

pseudocholesteatoma (soo''do-ko''les-te-ah-to'mah) a mass of cornified epithelial cells resembling cholesteatoma in the tympanic cavity in chronic middle ear inflammation.

pseudocholinesterase (soo''do-ko''lin-es'ter-ās) cholinesterase.

pseudochorea (soo''do-ko-re'ah) [*pseudo-* + *chorea*] a condition of complete general incoordination with symptoms like those of chorea.

pseudochromesthesia (soo''do-kro''mes-the'ze-ah) [*pseudo-* + Gr. *chrōma* color + *aisthēsis* perception + *-ia*] a false sensation of color.

pseudochromidrosis (soo''do-kro''mid-ro'sis) [*pseudo-* + *chromidrosis*] sweating with the presence on the skin of pigment due to the action of bacteria.

pseudochromosome (soo''do-kro''mo-sōm) rodlike Golgi bodies of the spermatocytes.

pseudochylous (soo''do-ki'l'us) resembling chyle, but containing no fat.

pseudocirrhosis (soo''do-sī-ro'sis) [*pseudo-* + *cirrhosis*] a clinical condition suggestive of, but not due to, cirrhosis; it is often due to pericarditis (*pericardial p.*). See also *Pick's disease*, def. 2. **pericardial p. of the liver**, **pericarditic p.**, *Pick's disease*, def. 2.

pseudoclaudication (soo''do-claw''dī-ka'shun) intermittent claudication due to compression of the cauda equina.

pseudoclonus (soo''do-klo'nus) a short-lived clonic response.

pseudocoarctation (soo''do-ko''ark-ta'shun) a substandard term used to refer to a condition roentgenologically resembling coarctation, but without compromise of the lumen of the affected structure; a "kinked aorta," possibly an aortic arch anomaly. **p. of the aorta**, an uncommon congenital anomaly of the arch of the aorta that simulates roentgenologically coarctation but does not produce occlusion of the vessel.

pseudocoele (soo''do-sēl) [*pseudo-* + Gr. *koilia* hollow] the *cavum septi pellucidi*.

pseudocoelom (soo''do-se'lom) in zoology, a body cavity between the mesoderm and endoderm; a persistent blastocoele.

pseudocoelomate (soo''do-sēl'o-māt) 1. having a pseudocoelom. 2. an animal having a pseudocoelom, as the aschelminths.

pseudocolloid (soo''do-kol'oid) a mucoid substance sometimes found in ovarian cysts. **p. of lips**, Fordyce's spots.

pseudocoloboma (soo''do-kol'o-bo'mah) a line or scar on the iris giving the appearance of a coloboma.

pseudocolony (soo''do-kol'o-ne) a small aggregation of crystalline or other materials which sometimes appears on the surface of sterile serum agar or other culture plates, especially after long incubation or drying.

pseudocopulation (soo''do-kop''u-la'shun) bodily association of male and female associated with liberation of gametes in proximity of space and time but without sexual union.

pseudocorpus luteum (soo''do-kor''pus loo'te-um) a maturing graafian follicle which does not rupture but retains its ovum and then becomes luteinized.

pseudocowpox (soo''do-kow'poks) milker's nodules; see under *nodule*.

pseudocoxalgia (soo''do-kok-sal'je-ah) osteochondrosis of the caputular epiphysis of the femur; see under *osteochondrosis*.

pseudocrisis (soo''dok'ri-sis) [*pseudo-* + Gr. *krisis* crisis] a false crisis; a sudden but temporary abatement of febrile symptoms.

pseudocroup (soo''do-krōōp') 1. laryngismus stridulus. 2. thymic asthma.

pseudocyanin (soo''do-si'ah-nin) pseudoisocyanin.

pseudocyesis (soo''do-si-e'sis) [*pseudo-* + Gr. *kyēsis* pregnancy] false pregnancy.

pseudocylindroid (soo''do-sī-lin'droid) a shred of mucin in the urine resembling a cylindroid; sometimes of spermatic origin.

pseudocyst (soo''do-sist) [*pseudo-* + *cyst*] an abnormal or dilated space resembling a cyst but not lined by epithelium as is a true cyst. **pancreatic p.**, an encapsulated collection of pancreatic juice and cellular debris that has escaped from the pancreas, the wall being formed by inflammatory fibrosis of serosal surfaces of adjacent organs; pseudocysts most commonly occur in the lesser sac of the peritoneum.

pseudodementia (soo''do-de-men'she-ah) an extreme condition of general apathy simulating dementia, but with no actual defect of intelligence. **hysterical p.**, a condition marked by failure of memory, with seeming inability to answer simple

questions, and by a psychotic-like state accompanied by bizarre behavior and episodes of excitement or stupor.

pseudodextrocardia (soo''do-deks''tro-kar'de-ah) a condition in which the heart is displaced to the right, but the ventricles are not inverted nor are the great vessels transposed.

pseudodiabetes (soo''do-di''ah-be'tēz) subclinical diabetes.

pseudodiastolic (soo''do-di''ah-stol'ik) apparently but not truly diastolic.

pseudodiphtheria (soo''do-dif-the're-ah) the presence of a false membrane not due to *Corynebacterium diphtheriae*.

pseudodominant (soo''do-dom'i-nant) giving the appearance of being dominant; said of a recessive genetic trait appearing in the offspring of a homozygous and a heterozygous parent, the trait being manifested only in the homozygous parent and offspring.

pseudodysentery (soo''do-dis'en-ter'e) a condition marked by the symptoms of dysentery, but due to some local irritation and not to the organisms of dysentery.

pseudoedema (soo''do-ē-de'mah) a puffy state resembling edema.

pseudoembryonic (soo''do-em''bre-on'ik) apparently, but not truly, embryonic.

pseudoemphysema (soo''do-em''fi-ze'mah) a condition resembling emphysema, but due to temporary blocking of the bronchial tubes.

pseudoencephalomalacia (soo''do-en-sef''ah-lo-mah-la'she-ah) a highly fatal disease of cattle, sheep, and pigs, marked by edema of the brain, with muzzle twitching, opisthotonos, blindness, and inability to stand.

pseudoendometritis (soo''do-en''do-mē-tri'tis) a condition simulating endometritis, in which there are changes in the blood vessels, hyperplasia of the stroma and glands, and atrophy.

pseudoeosinophil (soo''do-e'o-sin'o-fil) neutrophilic leukocytes with granules showing a predilection for acid dyes.

pseudoephedrine (soo''do-ē-fed'rin) chemical name: [S-(R*, -R*)]-α-[1-(methylamino)ethyl]benzenemethanol. One of the stereoisomers of ephedrine, C₁₀H₁₅NO, having less pressor action and central stimulant effects than ephedrine. **p. hydrochloride** [USP], the hydrochloride salt of pseudoephedrine, C₁₀H₁₅NO·HCl, occurring as fine, white to off-white crystals or as a powder; used as a nasal decongestant, and as a bronchodilator, administered orally.

pseudoepiphysis (soo''do-e-pif'i-sis) an accessory bone at the distal and the proximal end of the second metacarpal bone.

pseudoesthesia (soo''do-es-the'ze-ah) pseudesthesia.

pseudoexfoliation (soo''do-eks''fo-le-a'shun) a condition resembling exfoliation but actually resulting from deposition, as from the deposition of small grayish particles on the capsule of the crystalline lens.

pseudoexophoria (soo''do-ek''so-fo're-ah) an outward tendency of the visual axis excited by diminishing the activity of the accommodative centers.

pseudoexophthalmos (soo''do-eks''of-thal'mos) any condition, other than exophthalmos, that gives a prominent appearance to the eyes, e.g., marked lid retraction, shallow orbits, congenital macrophthalmos, and high myopia.

pseudoxystrophy (soo''do-ek'stro-fe) a developmental anomaly marked by the characteristic musculoskeletal defects of exstrophy of the bladder but with no major defect of the urinary tract.

pseudofarcy (soo''do-far'se) lymphangitis epizootica.

pseudofluctuation (soo''do-fluk''tu-a'shun) a tremor resembling fluctuation, such as is sometimes seen on tapping lipomas.

pseudofolliculitis (soo''do-fo-lik''u-li'tis) a chronic disorder occurring chiefly in the beard of Negroes, most often in the submandibular region of the neck, the characteristic lesions of which are erythematous papules, less commonly pustules, containing buried hairs whose tips can easily be freed up; in contrast to sycosis barbae (q.v.), which is most frequently seen in bearded men, this disorder affects exclusively those who shave.

pseudofracture (soo''do-frak'tūr) a condition seen in the roentgenogram of a bone as a thickening of the periosteum and formation of new bone over what looks like an incomplete fracture.

pseudofructose (soo''do-fruk'tōs) a form of fructose, differing from it in the carbon atom configuration.

pseudoganglion (soo''do-gang'gle-on) a thickening of a nerve simulating a ganglion. **Bochdalek's p.**, plexus dentalis superior. **Cloquet's p.**, see under *ganglion*. **Valentin's p.**, intumescentia tympanica.

pseudogestation (soo''do-jes-ta'shun) false pregnancy.

pseudoesthesia (soo''do-gūs'es-the'ze-ah) [*pseudo* + Gr. *geusis* taste + *aisthēsis* perception + *-ia*] a false sensation of taste associated with a sensation of another modality.

pseudoageusia (soo''do-gu'ze-ah) [*pseudo* + Gr. *geusis* taste + *-ia*] a sensation of taste inappropriate to the exciting stimulus or occurring in the absence of a stimulus.

pseudoglanders (soo''do-glan'derz) lymphangitis ulcerosa pseudofaricosa.

pseudoglioma (soo''do-gli-o'mah) a condition resembling glioma, a membrane being produced back of the lens because of failure of the posterior vascular sheath of the lens to atrophy, or because of its replacement by connective tissue.

pseudoglobulin (soo''do-glob'u-lin) one of a class of globulins characterized by being soluble in water in the absence of neutral salts and thus not a true globulin (euglobulin); see also under *globulin*.

pseudoglottic (soo''do-glot'ik) pertaining to the pseudoglottis.

pseudoglottis (soo''do-glot'is) 1. the aperture between the false vocal cords. 2. neoglottis.

pseudoglucosazone (soo''do-gloo''ko-sa'zōn) a crystalline substance sometimes developed in normal urine in testing for sugar.

pseudogonorrhea (soo''do-gon''o-re'ah) gonococcal urethritis.

pseudogout (soo''do-gowt) an apparently hereditary, arthritic condition marked by attacks of goutlike symptoms, usually affecting a single joint (particularly the knee) and associated with chondrocalcinosis.

pseudographia (soo''do-graf'e-ah) [*pseudo* + Gr. *graphein* to write + *-ia*] the production of meaningless written symbols.

pseudogynecomastia (soo''do-jin''ē-ko-mas'te-ah) an excess of adipose tissue in the male breast with no increase in glandular tissue.

pseudohallucination (soo''do-hah-loo''sī-na'shun) a hallucination brought about by the exercise of memory and imagination; the individual experiencing it realizes that it is morbid rather than real.

pseudohaustation (soo''do-haw-strā'shun) a false appearance of normal sacculatation of the wall of the colon, the roentgenographic appearance being produced by edematous islands of mucosa regularly placed between deep areas of ulceration in the muscle layers.

pseudohelminth (soo''do-hel'minth) [*pseudo* + Gr. *helmins* worm] a structure or object that resembles an endoparasitic worm.

pseudohemagglutination (soo''do-hem''ah-gloo''tī-na'shun) a clumping of erythrocytes due to rouleau formation.

pseudohematuria (soo''do-he'mah-tu're-a) the presence in the urine of pigments that impart to it a pink or red color, but with no detectable hemoglobin or blood cells.

pseudohemophilia (soo''do-he'mo-fil'e-ah) von Willebrand's disease.

pseudohemoptysis (soo''do-he-mop'tī-sis) spitting of blood which comes from some source other than the lungs or bronchial tubes.

pseudohereditary (soo''do-hē-red'ī-tār'e) occurring in successive generations because of imposition of the same environmental factors and not because of genetic transmission.

pseudohermaphrodism (soo''do-her-maf'ro-dizm) pseudohermaphroditism.

pseudohermaphrodite (soo''do-her-maf'ro-dit) an individual who has gonadal tissue of one sex and shows one or more contradictions of the morphological criteria of sex. See also *intersex* and *hermaphrodite*. **female p.**, a genetic and gonadal female, with partial masculinization; called also *female intersex*. **male p.**, a genetic and gonadal male with incomplete masculinization; called also *male intersex*.

pseudohermaphroditism (soo''do-her-maf'ro-dit-izm) a condition in which the gonads are of one sex but one or more contradictions exist in the morphologic criteria of sex. See also *intersexuality* and *hermaphroditism*. **female p.**, a form in which the affected individual is a genetic and gonadal female with partial masculinization. **male p.**, a form in which the affected individual is a genetic and gonadal male with incomplete masculinization.

pseudohernia (soo''do-her'ne-ah) an inflamed sac or gland simulating strangulated hernia.

pseudoheterotopia (soo''do-het'er-o-to'pe-ah) displacement of gray or white matter of the brain or cord, produced by unskillful manipulation in the autopsy.

pseudohydrocephalus (soo''do-hi'dro-sef'ah-lus) abnormally large appearance of a normal-sized head, due to smallness of the face and body, as in Russell's syndrome.

pseudohydronephrosis (soo''do-hi'dro-ne-fro'sis) a paranephritic cyst.

pseudohyoscyamine (soo''do-hi'o-si'ah-nāin) norhyoscyamine.

pseudohyperkalemia (soo''do-hi'per-kal'e-me-ah) spurious elevation of serum levels of potassium, as by release of potassium from platelets in thrombocytosis or from leukocytes in chronic myelogenous leukemia.

pseudohypertrichosis (soo''do-hi'per-tri-ko'sis) persistence after birth of the fine hair present during fetal life, owing to inability of the skin to throw it off.

pseudohypertrophic (soo''do-hi'per-trof'ik) characterized by apparent, but not real, hypertrophy.

pseudohypertrophy (soo''do-hi-per'tro-fe) false hypertrophy;

increase of size without true hypertrophy. **muscular p.**, an increase in the size of a muscle which is not due to enlargement of muscle fibers but to infiltration of the muscle with other tissue.

pseudohypoadosteronism (soo''do-hi''po-al-dos'ter-on-izm) a hereditary disorder of infancy characterized by severe salt loss by the kidneys despite elevated secretion and urinary excretion of aldosterone; it is thought to be due to unresponsiveness of the distal renal tubule to aldosterone. Affected infants outgrow the need for dietary salt supplements in early childhood. The term is also applied to the endocrine abnormality associated with sodium-losing nephropathy, usually due to chronic pyelonephritis, in adults.

pseudohypoparathyroidism (soo''do-hi''po-par'ah-thi'roi-dizm) a hereditary condition clinically resembling hypoparathyroidism, but caused by failure of response to rather than deficiency of parathyroid hormone. It is characterized by hypocalcemia and hyperphosphatemia, and is commonly associated with short stature, obesity, short metacarpals, and ectopic calcification.

pseudohypophosphatase (soo''do-hi''po-fos'fa-ta'ze-ah) a condition resembling hypophosphatase, characterized by osteopathy of the skull and long bones, muscular hypotonia, hypercalcemia, and phosphoethanolaminuria. It is distinguished by normal alkaline phosphatase activity.

pseudohypothyroidism (soo''do-hi''po-thi'roi-dizm) the inability to utilize thyroxine in tissue cells, despite normal thyroid function, leading to development of the symptoms and certain stigmata of hypothyroidism.

pseudoicterus (soo''do-ik'ter-us) pseudojaundice.

pseudoinfarction (soo''do-in-fark'shun) the simulation in the electrocardiographic pattern of myocardial infarction, due to other cardiopathies.

pseudoion (soo''do-i'on) one of the electrically charged particles of a colloidal solution.

pseudoisochromatic (soo''do-i''so-kro-mat'ik) seemingly of the same color throughout: applied to solutions for testing color blindness, containing two pigments which will be distinguished by the normal eye, but not by the color blind. Cf. *anisochromatic*.

pseudoisocyanin (soo''do-i''so-si'ah-nin) an orange metachromatic dye, *N,N'*-diethyl pseudoisocyanin, used for the selective demonstration of insulin in pancreatic islet beta cells.

pseudojaundice (soo''do-jawn'dis) skin discoloration caused by blood changes and not due to liver disease, as in carotinemia.

pseudokeratin (soo''do-ker'ah-tin) false keratin, found in the skin and the nervous system.

pseudolamellar (soo''do-lah-mel'ar) resembling lamellae.

pseudoleukemia (soo''do-lu-ke'me-ah) an obsolete term for a group of conditions resembling one another in showing enlargement of the lymph glands and in characteristics which resemble the conditions present in leukemia, but without leukemic blood findings. The term included aleukemic lymphadenosis, aleukemic myelosis, Hodgkin's disease, Kundrat's lymphosarcoma, multiple myeloma, and tuberculosis and syphilis of the lymph glands. See *lymphogranulomatosis*, and *agnogenic myeloid metaplasia*, under *metaplasia*. **p. cutis**, pseudoleukemia with the development of skin lesions. **p. gastrointestinalis**, a condition characterized by extensive lymphocytic infiltration of the gastrointestinal tract, without the typical clinical picture of leukemia. **p. lymphatica**, nonsplenic leukemia, a state associated with Hodgkin's disease and also with lymphomatous tumors of the kidneys and intestines in children. **myelogenous p.**, former term for multiple myeloma.

pseudoleukocytthemia (soo''do-lu''ko-si-the'me-ah) pseudo-leukemia.

pseudolipoma (soo''do-li-po'mah) localized edema of neuropathic origin simulating lipoma; it occurs in hysteria and certain lesions of the nervous system. Called also *neuropathic edema*.

pseudolithiasis (soo''do-li-thi'ah-sis) a condition with symptoms of spasm resembling biliary colic.

pseudologia (soo''do-lo'je-ah) [*pseudo* + Gr. *logos* word + *-ia*] the writing of anonymous letters to people of prominence, to one's self, etc. **p. fantas'tica**, a tendency to tell extravagant and fantastic falsehoods centered about one's self.

pseudoluxation (soo''do-luk-sa'shun) partial dislocation of a bone.

Pseudolynchia (soo''do-linch'e-a) a genus of parasitic flies of the family Hippoboscidae. **P. canarian'sis**, **P. mau'rah**, a species of pigeon flies that are vectors of *Haemoproteus columbae*; called also *Lynchia maura*.

pseudomalignancy (soo''do-mah-lig'nan-se) a lesion, especially of skin, histologically malignant but clinically benign, as in keratoacanthoma, juvenile melanoma, dermatofibroma, etc.

pseudomamma (soo''do-mam'ah) a structure resembling a nipple, or even a complete breast, sometimes found on ovarian dermoids.

pseudomania (soo''do-ma'ne-ah) [*pseudo* + Gr. *mania* madness] 1. false or pretended mental disorder. 2. pathologic lying.

pseudomasturbation (soo''do-mas'tur-ba'shun) peotillomania.

pseudomegacolon (soo''do-meg'ah-ko'lon) dilatation of the colon in adults. Cf. *megacolon*.

pseudomelanosis (soo''do-mel'ah-no'sis) a staining of the tissue after death with pigments from the blood.

pseudomelia (soo''do-me'le-ah) [*pseudo* + Gr. *melos* limb + *-ia*] phantom limb. **p. paraesthet'ica**, the perception of various morbid or perverted sensations as occurring in an absent or paralyzed limb.

pseudomembrane (soo''do-mem'brān) false membrane; see under *membrane*.

pseudomembranous (soo''do-mem'brah-nus) marked by or pertaining to a *pseudomembrane*.

pseudomeningitis (soo''do-men'in-jit'is) pial inflammation with symptoms resembling meningitis.

pseudomenstruation (soo''do-men'stroo-a'shun) uterine discharge unattended with endometrial changes of menstruation, usually occurring in newborn babies.

pseudomethemoglobin (soo''do-met-he'mo-glo'bin) methemalbumin.

pseudomicrocephalus (soo''do-mi'kro-seff'ah-lus) an individual with a small brain due to the atrophy of one hemisphere, probably acquired secondarily.

pseudomilium (soo''do-mil'e-um) see *colloid milium*, under *milium*.

Pseudomonadaceae (soo''do-mo'nah-da'se-e) a family of microorganisms (order Pseudomonadales, suborder Pseudomonadineae), occurring as elongate straight rods or coccoid cells in soil and fresh or salt water. It includes 12 genera, *Acetobacter*, *Aeromonas*, *Alginomonas*, *Azotomonas*, *Halobacterium*, *Mycoplana*, *Photobacterium*, *Protaminobacter*, *Pseudomonas*, *Xanthomonas*, *Zoogloea*, and *Zymomonas*.

Pseudomonadales (soo''do-mo'nah-da'lēz) an order of class Schizomycetes, made up of straight, curved, or spiral, rigid, rod-shaped, gram-negative microorganisms, rarely occurring in pairs or chains, and including two suborders, Pseudomonadineae and Rhodobacteriineae.

Pseudomonadineae (soo''do-mo'nah-di'ne-e) a suborder of Schizomycetes (order Pseudomonadales), made up of cells of various shapes and sizes, containing unique pigments, soluble in water or organic solvents. It includes seven families, Caulobacteraceae, Methanomonadaceae, Nitrobacteraceae, Pseudomonadaceae, Siderocapsaceae, Spirillaceae, and Thiobacteriaceae.

Pseudomonas (soo''do-mo'nas) a genus of microorganisms of the family Pseudomonadaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring usually as monotrichous, lophotrichous, or nonmotile straight rods. Some of the 149 described species are pathogenic for plants or for warm- and cold-blooded vertebrates. **P. aeruginosa**, the type species of the genus, and the only one pathogenic for man, made up of microorganisms which produce the blue-green pigment, pyocyanin, which gives the color to "blue pus" observed in certain suppurative infections. It is the causative agent of a variety of human diseases, including some cases of endocarditis, pneumonia, and meningitis, and sometimes causes a type of otitis known as *hot weather ear*. Formerly called *P. pyocyanea*, *Bacillus pyocyaneus*, and *Bacterium aeruginosa*. **P. eisenbergii**, a species of nonpathogenic fluorescent microorganisms found in water, which do not liquefy gelatin. **P. fluorescens**, a species of nonpathogenic fluorescent microorganisms found in feces, sewage, soil, and water, and which liquefy gelatin. **P. mal'lei**, the etiologic agent of glanders. **P. nonliquefaciens**, **P. eisenbergii**. **P. pseudomallei**, the causative agent of melioidosis, a glanders-like infection observed in rodents and occasionally in man. **P. pyocyanea**, **P. aeruginosa**. **P. reptiliv'ora**, a species which is pathogenic for lizards. **P. sep'tica**, a species which causes a disease of caterpillars. **P. syncy'nea**, a species isolated from blue milk, which produces the blue pigment responsible for its color.

Pseudomonilia (soo''do-mo-nil'e-ah) *Candida*.

pseudomorphine (soo''do-mor'fin) a compound, $C_{16}H_{19}N_2O_6 \cdot 3H_2O$, occurring in opium and prepared by the oxidation of morphine; called also *dehydromorphine*.

pseudomotor (soo''do-mo'tor) producing movements which are not normal.

pseudomucin (soo''do-mu'sin) a substance resembling mucin found in ovarian cysts.

pseudomucinous (soo''do-mu'si-nus) pertaining to pseudomucin.

pseudomyiasis (soo''do-mi-i'ah-sis) the presence of fly maggots in the digestive tract due to ingestion; if present in large numbers, they may cause diarrhea and other symptoms.

pseudomyopia (soo''do-mi-o'pe-ah) defective vision, not myopia, which causes the patient to hold objects nearer than normal to the eyes, thus simulating myopia.

pseudomyxoma (soo''do-mik-so'mah) a colloid growth developed upon the peritoneum, often secondary to an ovarian dermoid cyst. **p. peritone'i**, the presence in the peritoneal cavity of

- mucoid matter from a ruptured ovarian cyst or a ruptured mucocele of the appendix; called also *hydrops spurius*.
- pseudonarcotic** (soo''do-nar-kot''ik) sedative and apparently, but not directly, narcotic.
- pseudonarcotism** (soo''do-nar''ko-tizm) a hysterical condition simulating narcosis.
- pseudoneoplasm** (soo''do-ne''o-plazm) [*pseudo-* + *neoplasm*] 1. a temporary formation resembling a tumor. 2. a phantom tumor.
- pseudoneuritis** (soo''do-nu-ri''tis) a hyperemic condition of the optic papilla, occurring as a congenital anomaly.
- pseudoneuroma** (soo''do-nu-ro''mah) [*pseudo-* + *neuroma*] a tumor on a nerve simulating a neuroma; false neuroma.
- pseudoneuronophagia** (soo''do-nu-ro''no-fa''je-ah) a false appearance of phagocytosis of nerve cells.
- pseudonit** (soo''do-nit) [*pseudo-* + *nit*] hair cast, def. 2.
- pseudonucleolus** (soo''do-nu-kle''o-lus) [*pseudo-* + *nucleolus*] karyosome.
- pseudonystagmus** (soo''do-nis-tag''mus) large rhythmic jerking movements of the eye occurring in association with other diseases.
- pseudo-obstruction** (soo''do-ob-struk''shun) a condition simulating obstruction. **intestinal p.**, a condition characterized by constipation, colicky pain, and vomiting, but without evidence of organic obstruction apparent at laparotomy.
- pseudo-ochronosis** (soo''do-o-kro''no-sis) a condition resembling ochronosis, but not caused by a disorder of metabolism.
- pseudo-optogram** (soo''do-op''to-gram) an optogram in which the rods strip off from the illuminated spot and only the cones remain.
- pseudo-osteomalacia** (soo''do-os''te-o-mah-la''she-ah) rachitic contraction of the pelvis.
- pseudo-ovum** (soo''do-o''vum) a large prominent cell, resembling an ovum, seen in granuloma-cell tumor.
- pseudopannus** (soo''do-pan''nus) a disorder of the cornea resembling pannus, as sometimes occurs in molluscum contagiosum.
- pseudopapilla** (soo''do-pah-pil''ah) a false papilla formed by the presence of deeply depressed lines or grooves on the gingival papillae or the marginal gingivae but without the separation of the tissue seen with cleft formation.
- pseudopapilledema** (soo''do-pap''i-lē-de''mah) anomalous elevation of the optic disk.
- pseudoparalysis** (soo''do-pah-rai''i-sis) false paralysis: apparent loss of muscular power, without true paralysis, marked by defective coordination of movements or by repression of movement on account of pain. **p. ag''itans**, paralysis agitans. **arthritic general p.**, a condition resembling general paralysis, dependent on intracranial atheroma in arthritic persons; called also *Klippel's disease*. **congenital atonic p.**, amyotonia congenita. **Parrot's p., syphilitic p.**, pseudoparalysis of one or more of the extremities in infants caused by syphilitic osteochondritis of an epiphysis.
- pseudoparaphrasia** (soo''do-par''ah-fra''ze-ah) complete general incoherence in which the patient calls everything by a wrong name.
- pseudoparaplegia** (soo''do-par''ah-ple''je-ah) spurious paralysis of the lower limbs, as in malingering or hysteria.
- pseudoparasite** (soo''do-par''ah-sīt) any object resembling or mistaken for a parasite.
- pseudoparesis** (soo''do-pah-re''sis) a hysterical or other nonorganic condition simulating paresis.
- pseudopelade** (soo''do-pe''lad) patchy alopecia of the scalp roughly simulating, and rarely accompanying, alopecia areata; it may be due to various diseases of the follicles, some of which are associated with scarring and some are not.
- pseudopellagra** (soo''do-pē-lag''rah) a condition in alcoholics once thought to be similar but not known to be identical to pellagra.
- pseudopeptone** (soo''do-pep''tōn) ovomucoid.
- pseudopericardial** (soo''do-per''i-kar''de-al) seemingly, but not actually, arising from the pericardium.
- pseudoperitonitis** (soo''do-per''i-to-ni''tis) peritonism.
- pseudophakia** (soo''do-fa''ke-ah) a condition in which the degenerated crystalline lens is replaced by mesodermal tissue. **p. adipo''sa**, a condition in which the crystalline lens is replaced by a mass of fatty tissue. **p. fibro''sa**, replacement of the crystalline lens by a mass of connective tissue that represents hyperplasia of both the anterior and posterior vascular sheaths of the lens.
- pseudophotesthesia** (soo''do-fo''tes-the''ze-ah) the perception of light on receipt of a stimulus other than light.
- pseudophthisis** (soo''do-thi''sis) a wasting disease not of the nature of tuberculosis.
- Pseudophyllidea** (soo''do-fi-lid''e-ah) an order of cestodes in which the scolex typically has two opposing sucking organs. It includes the family Diphylobothriidae.
- pseudophyllidean** (soo''do-fi-lid''e-an) pertaining to or caused by tapeworms of the order Pseudophyllidea.
- pseudoplasm** (soo''do-plazm) a new growth which disappears spontaneously.
- pseudoplegia** (soo''do-ple''je-ah) [*pseudo-* + Gr. *plēgē* stroke + *-ia*] hysterical paralysis or pseudoparalysis.
- pseudopneumonia** (soo''do-nu-mo''ne-ah) a condition marked by the symptoms of pneumonia, but without any lesions in the lungs.
- pseudopod** (soo''do-pod) pseudopodium.
- pseudopodia** (soo''do-po''de-ah) plural of *pseudopodium*.
- pseudopodiospore** (soo''do-po''de-o-spōr) [*pseudopodium* + *spore*] amebula, def. 2.
- pseudopodium** (soo''do-po''de-um), pl. *pseudopodia* [*pseudo-* + Gr. *pous* foot] a temporary protrusion of the cytoplasm of an ameba, serving for purposes of locomotion or to engulf food. There are four types: axopodium, filopodium, lobopodium, and rhizopodium.
- pseudopoliomyelitis** (soo''do-po''le-o-mi''ē-li''tis) a poliomyelitis-like disease caused by an enterovirus other than poliovirus.
- pseudopolycythemia** (soo''do-pol''e-si-the''me-ah) 1. stress polycythemia. 2. relative polycythemia.
- pseudopolyemia** (soo''do-pol''e-mi-e''le-ah) an illusory sensation which may be referred to many extreme portions of the body, including the nose, nipples, and glans penis, as well as the hands and feet. **p. paraesthesia**, the perception of various morbid or perverted sensations, referred to various extreme portions of the body.
- pseudopolyp** (soo''do-pol''ip) a hypertrophied tab of mucous membrane resembling a polyp, but caused by ulceration surrounding and sometimes undermining a portion of intact mucosa; frequently observed in chronic inflammatory diseases, such as ulcerative colitis.
- pseudopolyposis** (soo''do-pol''i-po''sis) the occurrence of numbers of pseudopolyps in the colon and rectum, as the result of long-standing inflammation.
- pseudopregnancy** (soo''do-preg''nan-se) 1. false pregnancy. 2. the premenstrual stage of the endometrium; so called because it resembles the endometrium just before implantation of the blastocyst.
- pseudoprogathism** (soo''do-prog''nah-thizm) a deformity which gives the appearance of a true anteroposterior jaw malrelationship, but which primarily affects the teeth, rather than basal bone.
- pseudoproteinuria** (soo''do-pro''te-in-u''re-ah) adventitious proteinuria.
- pseudopseudohypoparathyroidism** (soo''do-soo''do-hi''po-par''ah-thi''roid-izm) an incomplete form of pseudohypoparathyroidism characterized by the same constitutional features but by normal levels of calcium and phosphorus in the serum.
- pseudopsia** (soo''do-pse''ah) [*pseudo-* + Gr. *opsis* vision + *-ia*] false or perverted vision.
- pseudopterygium** (soo''do-ter''ij'e-um) a conjunctival scar attached to the cornea, superficially resembling a true pterygium, but usually not firmly adherent to the underlying tissue.
- pseudoptosis** (soo''do-to''sis) [*pseudo-* + Gr. *ptōsis* fall] decrease in the size of the palpebral aperture.
- pseudoptyalism** (soo''do-ti''al-izm) accumulation and drooling of saliva due to dysphagia.
- pseudorabies** (soo''do-ra''be-ēz) a highly contagious disease affecting the central nervous system of swine, cattle, dogs, cats, rats, and other animals; in swine the infection usually runs a milder course than in other species. Caused by a herpesvirus, it is characterized by sudden onset, severe pruritus, late paralysis, convulsions, and death within three to four days after onset. Called also *Aujeszky's disease*, *mad itch*, and *infectious bulbar paralysis*. **bovine p.**, pseudorabies of cattle.
- pseudoreaction** (soo''do-re-ak''shun) a false or deceptive reaction; a skin reaction in intradermal tests which is not due to the specific protein used in the test but to the protein of the medium employed in producing the toxin.
- pseudoreduction** (soo''do-re-duk''shun) the apparent halving of the chromosome number by synapsis.
- pseudoreminiscence** (soo''do-rem''i-nis''ens) confabulation.
- pseudoretinitis pigmentosa** (soo''do-ret''in-i''tis pig''men-to''sah) pigmentary degeneration of the retina mimicking retinitis pigmentosa, but arising from intrauterine viral infections, vascular lesions, and other causes.
- pseudorheumatism** (soo''do-roo''mah-tizm) a condition resembling rheumatic fever, due to some nonrheumatic disease, as gonorrhea.
- pseudorickets** (soo''do-rik''ets) renal osteodystrophy.
- pseudoscarlatina** (soo''do-skar''lah-ti''nah) a febrile condition with an eruption like that of scarlet fever, but due to septic poisoning.
- pseudosclerema** (soo''do-skle-re''mah) adiponecrosis subcutanea neonatorum.

pseudosclerosis (soo'do-skle-ro'sis) [*pseudo-* + Gr. *sklērōsis* hardening] a condition with the symptoms but without the lesions of multiple sclerosis. **spastic p., p. spas'tica**, Creutzfeldt-Jakob syndrome. **Strümpell-Westphal p.**, hepatolenticular degeneration. **Westphal-Strümpell p.**, hepatolenticular degeneration.

pseudoscrotum (soo'do-skro'tum) a solid partition with a median raphe, resembling the scrotum in the male, obliterating the opening into the vagina in female pseudohermaphrodites.

pseudosmia (soo-doz'me-ah) [*pseudo-* + Gr. *osmē odor* + *-ia*] a delusion as to smell.

pseudosolution (soo'do-so-lu'shun) solutions which do not act according to the usual physical laws of solutions; the term is sometimes applied to colloidal solutions.

pseudostoma (soo-dos'to-mah) [*pseudo-* + Gr. *stoma* mouth] an apparent communication between silver-stained endothelial cells.

pseudostrabismus (soo'do-strah-bis'mus) apparent strabismus due to an overhanging epicanthus which narrows the visible width of the sclera medial to the iris.

pseudostrophanthin (soo'do-stro-fan'thin) a poisonous glycoside, $C_{40}H_{60}O_{16} \cdot H_2O$, from the African shrub *Strophanthus hispidus* DC. (Apocynaceae).

pseudostriature (soo'do-struk'chur) reticular substance.

pseudotabes (soo'do-ta'bēz) [*pseudo-* + L. *tabes* wasting] (*obs.*) any neuropathy with symptoms like those of tabes dorsalis but not due to syphilis, which may be associated with various conditions such as diabetes, alcoholism, and arsenic poisoning. Called also *Leyden's ataxia* and *neurotabes*. **p. mesenter'ica**, hysterical pseudotabes, chiefly of young women. **p. peripher'ica** (*obs.*), an acute syphilitic disease involving the nerve roots and the meninges and simulating tabes. **pupillotonic p.**, Adie's syndrome.

pseudotetanus (soo'do-tet'ah-nus) persistent muscular contractions resembling tetanus but not associated with the presence of *Clostridium tetani*.

pseudothrill (soo'do-thril) a condition that simulates a true thrill.

pseudotoxin (soo'do-tok'sin) a poisonous extract from belladonna leaves.

pseudotrachoma (soo'do-trah-ko'mah) a disease of the eye and lids resembling trachoma.

pseudotrismus (soo'do-tris'mus) a motor disorder of the mouth with symptoms similar to those of trismus.

pseudotropine (soo-dot-ro-pin) a dark-brown, syrupy, liquid base, a decomposition product of tropine.

pseudotruncus arteriosus (soo'do-trunk'us ar-te're-o'sus) the most severe form of tetralogy of Fallot.

pseudotubercle (soo'do-tu'ber-k'l) a tubercle resembling that of tuberculosis, but not due to the tubercle bacillus.

pseudotuberculoma (soo'do-tu'ber'ku-lo'mah) a tumor resembling in structure a tuberculoma. **p. silicot'icum**, a pseudotuberculoma due to the presence in the tissue of silica.

pseudotuberculosis (soo'do-tu'ber'ku-lo'sis) a fatal disease of rodents, especially guinea pigs and rabbits, caused by *Yersinia* (*Pasteurella*) *pseudotuberculosis*, marked by caseous swellings and nodules (pseudotubercles) in various organs. Rarely, *Corynebacterium pseudotuberculosis* causes the disease in sheep, goats, and other domestic animals. **p. hom'inis streptoth'rica**, a disease of man closely resembling tuberculosis, but due to a streptothrix.

pseudotumor (soo'do-tu'mor) phantom tumor. **p. cer'ebri**, a condition caused by cerebral edema, marked by raised intracranial pressure with headache, nausea, vomiting, and papilledema without neurological signs except occasional sixth-nerve palsy. Called also benign *intracranial hypertension* and *meningeal hydrops*. **orbital p.**, a distinctive, chronic inflammatory reaction in the orbital tissues of the eye, of unknown etiology, that may closely resemble a neoplasm and often becomes bilateral. Symptoms include exophthalmos and congestion of the lids with edema. When limitation of ocular motility also occurs, it is sometimes called *orbital myositis*.

pseudotympanites, pseudotympany (soo'do-tim'pah-ni'tēz, soo'do-tim'pah-ne) (*obs.*) false tympanites, as in accordion abdomen.

pseudotyphus (soo'do-ti'fus) a disease of Sumatra resembling scrub typhus (tsutsugamushi disease).

pseudouremia (soo'do-u-re'me-ah) uremia-like symptoms occurring in acute glomerulonephritis and in hypertensive vascular disease (hypertensive encephalopathy).

pseudouridine (soo'do-ūr'i-dēn) 5-ribosyluracil, a constituent of transfer-RNA differing from uridine in having the linkage between the 5-carbon of uracil and the 1-carbon of ribose.

pseudovacule (soo'do-vak'u-ōl) a round space within certain red blood corpuscles containing an animal microorganism.

pseudovalve (soo'do-valv) a peculiar formation on the parietal

endocardium of the left ventricle, seen especially in insufficiency of the aortic valves.

pseudoventricle (soo'do-ven'tre-k'l) *cavum septi pellucidi*.

pseudovermicule, pseudovermiculus (soo'do-ver'mī-kūl, soo'do-ver-mik'u-lus) ookinete.

pseudovoice (soo'do-vois) the vocal sounds produced under proper training by a person who has lost his larynx.

pseudovomiting (soo'do-vom'it-ing) regurgitation of matter from the stomach.

pseudoxanthine (soo'do-zan'thin) 1. a compound, $C_4H_5N_5O$, from muscle tissue or nucleic acids. 2. a compound, $C_5H_4N_4O_2$, from uric acid.

pseudoxanthoma elasticum (soo'do-zan-tho'mah e-las'ti-kum) a rare skin disease marked by small yellowish macules and papules, individual or confluent, or massed into plaques, and exaggeration of the normal creases and folds of the skin. The histologic features are masses of swollen and calcified elastic fibers with degeneration of the collagen fibers in the lower and middle layers of the dermis and in the gastrointestinal tract and heart.

pseudozooglea (soo'do-zo'o-gle'ah) a clump of bacteria not disintegrating readily in water, arising from imperfect separation or more or less fusion of the components, but not having the degree of compactness and gelatinization seen in zooglea.

p.s.i. pounds per square inch.

psilocin (si'lo-sin) a hallucinogenic substance closely related to psilocybin.

psilocybin (si'lo-si'bin) chemical name: 3-[2-(dimethylamino)ethyl]indol-4-ol dehydrogen phosphate ester. A hallucinogenic crystalline compound, $C_{13}H_{18}O_3N_2P_2$, possessing indole characteristics, isolated from the mushroom *Psilocybe mexicana* Heim.

psilosis (si-lo'sis) [Gr. *psilōsis* a stripping bare] (*obs.*) sprue (def. 1). **p. pigmento'sa**, pellagra.

psittacine (sit'ah-sin) [Gr. *psittakos* parrot] of or relating to an order of birds including the parrot and related birds (parakeets, macaws, etc.)

psittacosis (sit-ah-ko'sis) [Gr. *psittakos* parrot + *-osis*] a disease caused by a strain of *Chlamydia psittaci*, first observed in parrots but later discovered to exist in other birds and domestic fowl (see *ornithosis*). In psittacine birds, it is characterized by respiratory and systemic infection. When transmitted to man, it usually takes the form of a pneumonia accompanied by fever, cough, and often by splenomegaly. Other clinical forms include hepatitis, myocarditis, delirium, and coma. The pulmonary form may be transmitted by contact with pigeons, parakeets, budgerigars, ducks, turkeys, pheasant, and probably chickens.

psosas (so'as) see *Table of Musculi*.

psodymus (sod'y-mus) [Gr. *psoa* muscle of the loin + *didymos* twin] a monster with two heads and bodies, but single at and below the loins.

psoititis (so-i'tis) [Gr. *psoa* muscle of the loin + *-itis*] inflammation of a psosas muscle or of its sheath.

psomophagia (so'mo-fa'je-ah) [Gr. *psōmos* morsel + *phagein* to eat] bolting of food; swallowing of food without thorough chewing.

psomophagy (so-mof'ah-je) psomophagia.

psoralen (sor'ah-len) any of the constituents of certain plants (*Ammi majus*, *Psoralea corylifolia*, etc.) collectively known as "psoralens"; exposure to substances containing psoralens, such as certain perfumes and drugs (including methoxsalen and trioxsalen) and then to sunlight may produce phototoxic dermatitis (q.v.).

psorenteritis (so'ren-ter-i'tis) [*psora* + *enteritis*] a condition of the intestinal mucosa thought to be peculiar to cholera, marked by loss of villi and a granular debris in the surface mucous sheath.

psoriasiform (so're-as'i-form) resembling psoriasis.

psoriasis (so-ri'ah-sis) [Gr. *psōrīasis*] a chronic, hereditary, recurrent, papulosquamous dermatosis, the distinctive lesion of which is a vivid red macule, papule, or plaque covered almost to its edge by silvery lamellated scales. It usually involves the scalp and extensor surfaces of the limbs, especially the elbows, knees, and shins. **p. annula'ris**, **p. annula'ta**, psoriasis with lesions occurring in ring-shaped patches; called also *p. circinata*. **p. arthropath'ica**, psoriasis associated with arthritis, probably of the rheumatoid type. **p. bucca'lis**, a rare form of psoriasis affecting the oral mucosa. **p. circina'ta**, *p. annularis*. **p. discoi'dea**, psoriasis occurring in solid persistent patches. **p. figura'ta**, psoriasis in which the lesions coalesce to form marked patterns. **flexural p.**, inverse p. (def. 1). **p. follicula'ris**, psoriasis with small scaly lesions located at the openings of sebaceous and sweat glands. **p. gutta'ta**, *guttate p.*, psoriasis in which the lesions are small (about the size of drops of water) and distinct. This form may begin suddenly after sunburn or an acute infection, such as streptococcal sore throat, and has a better prognosis than other forms. **p. gyra'ta**, psoriasis in which the lesions have coalesced to form a serpentine pattern. **inverse p.**, 1. psoriasis primarily involving the skin folds and flexures, including those of the nails, with little or no scaling, and

sometimes with the formation of pustules; called also *flexural p.* 2. *p. palmaris et plantaris*. **p. invetera'ta**, a form with confluent lesions and with thickening and hardening of the skin. **p. lin'guae**, a rare form of psoriasis affecting the mucosa of the tongue. **p. ostra'cea**, psoriasis in which the lesions form thick, tough patches covered with scales, giving them a resemblance to the outside of an oyster shell. **p. palma'ris et planta'ris**, psoriasis of the palms and soles; called also *volar p.* **pustular p.**, psoriasis characterized by small pustules which may occur diffusely or in clusters on the palms and soles, or which may occur suddenly as an acute, generalized, febrile, pustular eruption (*von Zumbusch's type*), with persistent relapses and sometimes serious systemic involvement. **p. rupioi'des**, psoriasis with rupia-like crusts. **p. universa'lis**, psoriasis in which the lesions occur over the entire body. **volar p.**, *p. palmaris et plantaris*. **von Zumbusch's p.**, see *pustular p.*

psoriatic (so''re-at'ik) 1. pertaining to, affected with, or of the nature of, psoriasis. 2. a person affected with psoriasis.

Psorophora (so-rof'o-rah) a genus of large, annoying mosquitoes, the larvae of which prey on the larvae of other kinds of mosquitoes. Some species, particularly *P. ferox* and *P. lutzi*, act as carrier hosts of the eggs of *Derma'tobia hominis*.

psorophthalmia (so''rof-thal'me-ah) [Gr. *psôrophthalmia*] a form of ulcerative marginal blepharitis.

Psoroptes (so-rop'têz) a genus of mites. **P. bo'vis**, *P. ovis*. **P. cunic'uli**, a common external parasite of rabbits, leading to secondary infections that may extend to the inner ear and involve the central nervous system. **P. e'qui**, a species causing skin lesions (psoroptic mange) in horses, especially in areas covered with long hair. **P. o'vis**, a species which causes the most common type of mange in sheep (sheep scab), cattle (bovine scabies), and horses, with intense itching and sometimes general symptoms.

psorosperm (so'ro-sperm) [Gr. *psôros*, rough, scabby + *sperma*, seed] (*obs.*) any parasitic sporozoon, especially of the order Myxosporidia.

P.S.P. phenolsulfonphthalein.

PSRO Professional Standards Review Organization: an organization of physicians and in some cases allied health professionals in a designated area, state, or community established to monitor health care services paid for through Medicare, Medicaid, and Maternal and Child Health programs to assure that services provided are medically necessary, meet professional standards, and are provided in the most economic medically appropriate health care agency or institution. The requirement for the establishment of PSRO's was added to the Social Security Amendments of 1972 (Public Law 92-603).

psych- see *psycho-*.

psychalgalia (si''kal-ga'le-ah) psychalgia.

psychalgia (si-kal'je-ah) a pain of mental or hysterical origin, such as neurasthenic headache, clavus hystericus, etc; pain attending or resulting from a mental effort.

psychalgie (si-kal'jik) pertaining to or characterized by psychalgia.

psychanalysis (si-kah-nal'i-sis) psychoanalysis.

psychanopsia (si-kah-nop'se-ah) [*psych-* + *an* neg. + Gr. *opsis*, vision + *-ia*] psychic blindness.

psychasthene (si''kas-thên) (*obs.*) a person afflicted with psychasthenia.

psychasthenia (si''kas-the'ne-ah) (*obs.*) a functional neurosis marked by stages of pathologic fear or anxiety, obsessions, fixed ideas, tics, feelings of inadequacy, self-accusation, and peculiar feelings of strangeness, unreality, and depersonalization.

psychasthenic (si''kas-then'ik) (*obs.*) marked by, or characteristic of psychasthenia.

psychataxia (si''kah-tak'se-ah) a disordered mental condition marked by inability to fix the attention, agitation, etc.

psyche (si'ke) [Gr. *psychê* the organ of thought and judgment] the human faculty for thought, judgment, and emotion; the mental life, including both conscious and unconscious processes.

psychedelic (si''kê-del'ik) [*psyche* + Gr. *delos* manifest, evident] pertaining to or characterized by visual hallucinations, intensified perception, and, sometimes, behavior similar to that seen in psychosis. By extension, a drug that produces such effects.

psychergograph (si-ker'go-graf) [*psyche* + Gr. *ergon* work + *graphein* to write] an instrument for recording serial responses to a series of stimuli.

psychiatric (si''ke-at'rik) pertaining to or within the purview of psychiatry.

psychiatrics (si''ke-at'riks) psychiatry.

psychiatrist (si-ki'ah-trist) a physician who specializes in psychiatry.

psychiatry (si-ki'ah-tre) [*psyche* + Gr. *iatreia* healing] that branch of medicine which deals with the study, treatment, and prevention of mental illness. **biological p.**, that which emphasizes physical, chemical, and neurological causes and treatment approaches. **community p.**, a broad term referring to the mobilization of community resources to provide and deliver a

coordinated program of mental health directed at diagnosis, treatment, rehabilitation, aftercare, early case-finding, and promoting mental health and preventing psychosocial disorders. The term is sometimes used synonymously with preventive psychiatry and with social psychiatry. **cross-cultural p.**, the comparative study of mental illness and mental health among different societies, nations, and cultures; called also *transcultural p.* **cultural p.**, the branch of social psychiatry concerned with the mentally ill in relation to their cultural environment. **descriptive p.**, psychiatry based upon the observation and study of external factors which can be readily seen, felt, or heard, as differentiated from dynamic psychiatry. **dynamic p.**, the study of emotional processes, their origins, and the mental mechanisms underlying them. **existential p.**, that based on the existential philosophy of Kierkegaard, Heidegger, Jaspers, etc. **forensic p.**, psychiatry which deals with the legal aspects of mental disorders. **industrial p.**, occupational p. **occupational p.**, that concerned with the diagnosis and prevention of mental illness in industry, with the return of the psychiatric patient to work, and with psychiatric aspects of absenteeism, accident proneness, personnel policies, occupational fatigue, vocational adjustment, retirement, and related phenomena. Called also *industrial p.* **organic p.**, 1. that dealing with the psychological aspects of organic brain disease. 2. biological p. **orthomolecular p.**, the study of mental disease on the basis of the molecular environment of the brain, especially as compared to the concentrations of substances normally present in the body. **preventive p.**, a broad term referring to the amelioration, control, and limitation of psychiatric disability. It is often categorized as *primary*—measures to prevent a disorder; *secondary*—therapeutic measures to limit a disorder; and *tertiary*—measures and intervention to reduce impairment or disability following a disorder. The term is sometimes used synonymously with community psychiatry and social psychiatry. **social p.**, that concerned with the cultural, ecologic, and sociologic facts that engender, precipitate, intensify, prolong, or otherwise complicate maladaptive patterns of behavior and their treatment. The term is sometimes used synonymously with community psychiatry and preventive psychiatry. **transcultural p.**, cross-cultural p.

psychic (si'kik) [Gr. *psychikos*] pertaining to the psyche or to the mind; mental.

psychics (si'kiks) psychology.

psychism (si'kizm) the theory that there is a fluid diffused through all living beings, animating all alike.

psycho-, psych- [Gr. *psychê* the organ of thought and reason] a combining form denoting relationship to the psyche, or to the mind.

psychoactive (si''ko-ak'tiv) affecting the mind or behavior, as psychoactive drugs.

psychoalgalia (si''ko-al-ga'le-ah) psychalgia.

psychoanaleptic (si''ko-an'ah-lep'tik) [*psycho-* + Gr. *analêpsis* a taking up] exerting a stimulating effect upon the mind.

psychoanalysis (si''ko-ah-nal'i-sis) the method of eliciting from patients an idea of their past emotional experiences and the facts of their mental life, in order to discover the mechanism by which a pathologic mental state has been produced, and to furnish hints for psychotherapeutic procedures; the method employs free association, recall and interpretation of dreams, and interpretation of transference and resistance phenomena. Also, a system of theoretical psychology. **existential p.**, that based on the existential philosophy of Kierkegaard, Heidegger, Jaspers, etc.

psychoanalyst (si''ko-an'ah-list) a practitioner of psychoanalysis.

psychoanalytic (si''ko-an'ah-lit'ik) pertaining to psychoanalysis.

psychoauditory (si''ko-aw'di-to're) pertaining to the consciousness and intelligent perception of sound.

psychobacillosis (si''ko-bas'i-lo'sis) (*obs.*) inoculation of bacteria for the treatment of schizophrenia.

psychobiological (si''ko-bi'o-loj'e-kal) pertaining to the interactions between mind and body in the formation and continuation of the personality.

psychobiology (si''ko-bi-ol'o-je) that branch of biology which considers the interactions between body and mind in the formation and functioning of personality; the scientific study of the personality function.

psychocatharsis (si''ko-kah-thar'sis) [*psycho-* + Gr. *katharsis* purging] see *abreaction* and *catharsis*, def. 2.

psychocentric (si''ko-sen'trik) [*psycho-* + Gr. *kentrikos* of or from a center] denoting or relating to the concept that control of the personality centers in the mind, the subjective system of the individual, as distinguished from the physical organs of the nervous system. Cf. *cerebrocentric*.

psychochemistry (si''ko-kem'is-tre) the application of chemistry to the study of psychology and behavior.

psychochrome (si''ko-krôm) [*psycho-* + Gr. *chrôma* color] a subjective mental association between any bodily sensation and some particular color.

psychochromesthesia (si''ko-kro'm''es-the'ze-ah) [*psycho-* + Gr. *chrōma* color + *aisthēsis* perception + *-ia*] the condition in which auditory or other nonvisual stimuli produce sensations or associated sensations of color.

psychocortical (si''ko-kor'te-kal) pertaining to the mind and to the cortex of the brain as the site of mental functions.

psychocutaneous (si''ko-ku-ta'ne-us) pertaining to the relations between mental or emotional factors and skin disorders.

psychodelic (si''ko-del'ik) psychedelic.

psychodiagnosis (si''ko-di'ag-no'sis) the use of psychological testing in the diagnosis of disease.

psychodiagnostics (si''ko-di'ag-nos'tiks) psychodiagnosis.

Psychodidae (si-ko'di-de) a family of flies, the owl flies or sandflies, of the order Diptera, characterized by small size, long legs, and abundant hair on both wings and body. It includes the genus *Phlebotomus*.

psychodometer (si''ko-dom'ē-ter) an instrument for measuring the time factor in mental activity.

psychodometry (si''ko-dom'ē-tre) [*psycho-* + Gr. *hodos* way + *metron* measure] the measurement of the rate of mental action.

psychodrama (si''ko-dram'ah) the psychiatric group-therapy technique of having patients dramatize their individual conflicting situations of daily life.

psychodynamics (si''ko-di-nam'iks) [*psycho-* + Gr. *dynamis* power] the science of mental processes.

psychodysleptic (si''ko-dis-lep'tik) [*psycho-* + Gr. *dys-* bad + *lēpsis* a taking hold] inducing a dreamlike or delusional state of mind.

psychogalvanometer (si''ko-gal'vah-nom'ē-ter) a galvanometer for recording the electrical agitations produced by emotional stresses.

psychogenesis (si''ko-jen'ē-sis) 1. mental development. 2. production of a symptom or illness by psychic, as opposed to organic, factors.

psychogenic (si''ko-jen'ik) of intrapsychic origin; having an emotional or psychologic origin (in reference to a symptom), as opposed to a psychogenic, or organic, basis.

psychogenous (si-koj'ē-nus) psychogenic.

psychogeriatrics (si''ko-je'r'e-at'riks) management of the psychologic and psychiatric problems of the aged.

psychogogic (si''ko-goj'ik) increasing intrapsychic tensions and acting as a stimulant.

psychogram (si''ko-gram) [*psycho-* + Gr. *gramma* a writing] 1. psychograph. 2. a visual sensation associated with a mental idea as of a certain number which appears visualized when it is thought of.

psychograph (si''ko-graf) [*psycho-* + Gr. *graphein* to write] 1. a chart for recording graphically the personality traits of an individual. 2. a written description of the mental functioning of an individual.

psychokinesia (si''ko-ki-ne'ze-ah) [*psycho-* + Gr. *kinēsis* motion + *-ia*] explosive cerebral action due to defective inhibition.

psychokinesis (si''ko-ki-ne'sis) [*psycho-* + Gr. *kinēsis* motion] 1. the direct influence of volitional action on a physical object, or the influence of mind on matter without the intermediation of physical force. 2. psychokinesia.

psychokym (si''ko-kim) a psychic process conceived physiologically; that something which flows through the central nervous system and which is at the basis of psychic processes.

psycholagny (si''ko-lag'ne) [*psycho-* + Gr. *lagneia* lust] the experiencing of sexual enjoyment from imagining or thinking of sexual acts.

psycholepsy (si''ko-lep'se) [*psycho-* + Gr. *lēpsis* a taking hold, a seizure] a condition characterized by sudden changes of mood.

psycholeptic (si''ko-lep'tik) [*psycho-* + Gr. *lēptikos* assimilative] Delay's term for drugs which affect the mental state (psyche). Cf. *neuroleptic*.

psycholinguistics (si''ko-ling-gwis'tiks) the study of factors affecting activities involved in communicating and comprehending verbal information.

psychologic, psychological (si''ko-loj'ik; si''ko-loj'e-kal) pertaining to psychology.

psychologist (si-kol'o-jist) a qualified specialist in psychology.

psychology (si-kol'o-je) [*psycho-* + *-logy*] that branch of science which deals with the mind and mental processes, especially in relation to human and animal behavior. **abnormal p.**, the study of derangements or deviations of mental functions. **analytic p.**, **analytical p.**, psychology by introspective methods, founded by Carl Gustav Jung, as opposed to experimental psychology. **animal p.**, the study of the mental activity of animals. **behavioristic p.**, see *behaviorism*. **child p.**, the study of the development of the mind of the child. **clinical p.**, the use of psychologic knowledge and techniques in the treatment of persons with emotional difficulties. **cognitive p.**, that branch of psychology which deals with the human mind as it receives and interprets impressions from the external world. **community**

p., a broad term referring to the organization of community resources around multiple levels of professionals, paraprofessionals, and nonprofessionals for the prevention of mental disorders. **comparative p.**, the study of the mental action of animals. **constitutional p.**, the relation of the psychology of the individual to the morphology and physiology of his body. **criminal p.**, the study of the mentality, the motivation, and the social behavior of criminals. **depth p.**, the psychology of the unconscious; psychoanalysis. **dynamic p.**, psychology which stresses the element of energy in mental processes. **experimental p.**, the study of the mind and mental operations by the employment of experimental methods. **genetic p.**, that branch of psychology which deals with the development of mind in the individual and with its evolution in the race. **gestalt p.**, see *gestaltism*. **hormic p.**, a psychology which asserts that active striving toward a goal is a fundamental category of psychology (McDougall). **individual p.**, the system of Alfred Adler in psychiatric theory, research, and therapy, stressing the concepts of organ inferiority, the inferiority complex, and overcompensation. **physiologic p.**, **physiological p.**, the branch of psychology that studies the relationship between physiologic processes and behavior. **social p.**, psychology which treats of the social aspects of mental life.

psychomathematics (si''ko-math'e-mat'iks) mathematics applied to the study of psychology.

psychometer (si-kom'ē-ter) an instrument used in psychometry.

psychometrician (si''ko-mē-trish'an) a person skilled in psychometry.

psychometrics (si''ko-met'riks) 'psychometry.

psychometry (si-kom'ē-tre) [*psycho-* + Gr. *metron* measure] 1. measurement of the duration and force of mental processes. 2. the measurement of intelligence.

psychomotor (si''ko-mo'tor) pertaining to motor effects of cerebral or psychic activity.

psychoneural (si''ko-nu'ral) relating to the totality of neural events initiated by a sensory input and leading to storage, to discrimination, or to an output of any kind.

psychoneuroses (si''ko-nu-ro'sēz) [Gr.] plural of *psychoneurosis*.

psychoneurosis (si''ko-nu-ro'sis), pl. *psychoneuroses* [*psycho-* + Gr. *neuron* nerve + *-osis*] an emotional disorder due to unresolved conflicts, anxiety being its chief characteristic. The anxiety may be expressed directly or indirectly, as by conversion, displacement, etc. In contrast to the psychoses, the psychoneuroses do not involve gross distortions of external reality or disorganization of personality. Called also *neurosis*. **defense p.**, a psychosis or neurosis whose symptoms are due to the attempt to repress a painful idea. The idea is excluded from the mind, but remains in subconsciousness, where it acts as a cause of disturbance. The term includes hysteria as well as various neuroses and psychoses.

psychonomy (si''kon-o'me) [*psycho-* + Gr. *nomos* law] the science of the laws of mental activity.

psychopath (si''ko-path) a person who has an antisocial (psychopathic) personality (q.v.); see *antisocial personality*, under *personality*. **sexual p.**, an individual whose sexual behavior is manifestly antisocial and criminal.

psychopathia (si''ko-pa'the-ah) psychopathy. **p. sexualis**, mental disease marked by perversion of the sexual feelings.

psychopathic (si''ko-path'ik) 1. pertaining to a person with an antisocial (psychopathic) personality (q.v.); antisocial. 2. (*obs.*) pertaining to mental disease.

psychopathology (si''ko-pah-thol'o-je) [*psycho-* + *pathology*] the pathology of mental disorders; the branch of medicine which deals with the causes and nature of mental disease.

psychopathy (si-kop'ah-the) [*psycho-* + Gr. *pathos* disease] a disorder of the psyche, whether or not associated with subnormal intelligence.

psychopharmacology (si''ko-fahr'mah-kol'o-je) 1. the study of the action of drugs on psychological functions and mental states. 2. the use of drugs to modify psychological functions and mental states.

psychophylaxis (si''ko-fi-lak'sis) prophylaxis in mental disease; mental hygiene.

psychophysical (si''ko-fiz'e-kal) pertaining to the mind and its relation to physical manifestations.

psychophysics (si''ko-fiz'iks) [*psycho-* + Gr. *physikos* natural] the science dealing with the quantitative relationships between the characteristics or patterns of physical stimuli and the resultant sensations.

psychophysiology (si''ko-fiz'e-ol'o-je) [*psycho-* + *physiology*] pertaining to psychophysiology; having bodily symptoms of a psychogenic origin. Called also *psychosomatic*. See also under *disorder*.

psychophysiology (si''ko-fiz'e-ol'o-je) the science that deals with the relationship between psychologic and physiologic processes.

psychoplasm (si''ko-plazm) protyl.

psychoplegia (si''ko-ple'je-ah) [*psycho-* + Gr. *plēgē* stroke + *-ia*] a sudden attack of dementia.

psychoplegic (si''ko-ple'jik) an agent that lessens cerebral activity or excitability.

psychopneumatology (si''ko-nu'mah-tol'o-je) [*psycho-* + Gr. *pneuma* breath + *-logy*] the study of the interactions of mind, body, and soul.

psychoprophylactic (si''ko-pro'fi-lak'tik) pertaining to psychoprophylaxis.

psychoprophylaxis (si''ko-pro'fi-lak'sis) a technique of psychophysical training aimed at the suppression of all painful sensation associated with normal childbirth.

psychoreaction (si''ko-re-ak'shun) Much's reaction.

psychorrhesis (si''ko-rek'sis) [*psycho-* + Gr. *rhēxis* rupture] a malignant form of anxiety neurosis, marked by perplexity and anguish; it is sometimes produced by shock and occasionally terminates in hyperpyrexia and death.

psychosedation (si''ko-sē-da'shun) a procedure whereby the patient is rendered free from fear and apprehension through the administration of a psychosedative agent.

psychosedative (si''ko-sed'ah-tiv) an agent that allays apprehension by its action on subcortical centers, while producing minimal motor and sensory impairment because of its limited effect on the cerebral cortex.

psychosensorial (si''ko-sen-so're-al) psychosensory.

psychosensory (si''ko-sen'so-re) pertaining to the conscious perception of sensory impulses to the mind and to sensation.

psychoses (si-ko'séz) [Gr.] plural of *psychosis*.

psychosexual (si''ko-seks'u-al) pertaining to the psychic or emotional aspects of sex.

psychosin (si-ko'sin) a galactoside, C₂₃H₄₅N₂O, resulting from the decomposition of phrenosin. On hydrolysis it yields galactose and sphingosine.

psychosis (si-ko'sis), pl. *psycho'ses* [*psych-* + *-osis*] 1. a general term for any major mental disorder of organic and/or emotional origin characterized by derangement of the personality and loss of contact with reality, often with delusions, hallucinations, or illusions. Cf. *neurosis*. 2. formerly, a generic name for any mental disorder. **affective p.**, major affective disorder. **alcoholic p.**, mental disorder in which excessive use of alcohol is the chief etiologic factor, such as delirium tremens and Korsakoff's psychosis. **bipolar p.**, see *manic-depressive p.* **Cheyne-Stokes p.**, a condition resembling cardiac asthma, with intense motor agitation, sometimes seen along with the onset of Cheyne-Stokes respiration in chronic heart disease. **circular p.**, see *manic-depressive p.* **depressed p.**, see *manic-depressive p.* **drug p.**, a toxic psychosis due to the ingestion of drugs. **epileptic p.**, psychosis occurring in a person suffering from epilepsy. **exhaustion p.**, mental disorder due to some exhausting or depressing occurrence, as an operation. **famine p.**, a mental condition resulting from malnutrition among destitute civilians under conditions of oppression. **febrile p.**, febrile delirium. **functional p.**, a psychosis in which organic disease or dysfunction does not play a part. **gestational p.**, a psychosis developing during pregnancy. **hysterical p.**, an acute situational reaction occurring in individuals with hysterical personalities, usually manifested by the sudden onset of hallucinations, delusions, bizarre behavior, and volatile affect; the term includes certain culture-specific syndromes such as amok, koro, and latah. **infection exhaustion p.**, exhaustion delirium. **involutional p.**, see under *melancholia*. **Korsakoff's p.**, alcoholic psychosis, believed to be a chronic form of Wernicke's encephalopathy (q.v.). It is accompanied by disturbance of orientation, susceptibility to external stimulation and suggestion, amnesia, hallucinations, and especially by confabulation. The signs of polyneuritis (wristdrop, etc.) are usually present. Called also *polyneuritic psychosis*, *cerebroathia psychica toxæmica*, and *chronic alcoholic delirium*. **manic p.**, see *manic-depressive p.* **manic-depressive p.**, a major affective disorder characterized by severe mood swings and a tendency to remission and recurrence. It is seen in a *manic type*, consisting of manic episodes characterized by excessive elation, irritability, talkativeness, flight of ideas, and psychomotor overactivity; in a *depressed* or *unipolar type*, consisting of depressive episodes characterized by severely depressed mood and by mental and motor retardation that may progress to stupor; and in a *circular* or *bipolar type*, consisting of at least one depressive episode and a manic episode. Called also *manic-depressive illness* or *reaction*. **organic p.**, organic brain syndrome; see under *syndrome*. **paranoiac p.**, **paranoid p.**, paranoia. **periodic p.**, a condition in which intermittent periods of depression or hypomania recur regularly in a seemingly mentally healthy or nearly healthy individual. **polyneuritic p.**, **p. polyneuritica**, Korsakoff's p. **postpartum p.**, a psychotic episode, usually schizophrenic in nature, occurring during the postpartum period, which may be precipitated by organic and/or toxic factors; called also *puerperal p.* **prison p.**, any psychosis for which prison environment has been a precipitating factor. **puerperal p.**, postpartum p. **purpose p.**, a psychotic state motivated by a clear-cut wish, such as a wish to appear insane and therefore irresponsible. **schizo-**

affective p., a psychotic state characterized by mixed schizophrenic and manic-depressive symptoms. **senile p.**, mental deterioration in old age associated with organic brain changes and characterized by numerous symptoms, including impaired memory of recent events, confabulation, irritability, self-interest, decreased capacity for abstract thought, and sometimes symptoms of paranoia, especially delusions of persecution. **situational p.**, a transitory mental disorder caused by an unbearable situation over which the patient has no control. **symbiotic p.**, **symbiotic infantile p.**, a condition seen in two- to four-year-old children having an abnormal relationship to the mothering figure, characterized by intense separation anxiety, severe regression, giving up of useful speech, and autism. **toxic p.**, a psychosis due to the ingestion of toxic agents (e.g., alcohol, opium) into the body, or to presence of toxins within the body. **unipolar p.**, see *manic-depressive p.*

psychosocial (si''ko-so'shal) pertaining to or involving both psychic and social aspects.

psychosolytic (si-ko'so-lit'ik) [*psychosis* + Gr. *lytikos* dissolving] tending to relieve or abolish psychotic symptoms.

psychosomatic (si''ko-so-mat'ik) [*psycho-* + Gr. *sōma* body] pertaining to the mind-body relationship; having bodily symptoms of psychic, emotional, or mental origin; called also *psychophysiological*. See also under *disorder*.

psychosomaticist (si''ko-so-mat'ah-sist) one who practices psychosomatic medicine.

psychosomimetic (si-ko'so-mi-met'ik) psychotomimetic.

psychostimulant (si''ko-stim'u-lant) 1. producing a transient increase in psychomotor activity. 2. a drug that produces such effects.

psychosurgery (si''ko-ser'jer-e) brain surgery performed for the relief of mental and psychic symptoms.

psychotechnics (si''ko-tek'niks) [*psycho-* + Gr. *technē* art] the employment of psychological methods in studying sociological and other problems.

psychotherapeutics (si''ko-ther'ah-pu'tiks) psychotherapy.

psychotherapy (si-ko-ther'ah-pe) [*psycho-* + Gr. *therapeia* treatment] treatment designed to produce a response by mental rather than by physical effects, including the use of suggestion, persuasion, re-education, reassurance, and support, as well as the techniques of hypnosis, abreaction, and psychoanalysis which are employed in the so-called deep psychotherapy. **group p.**, see under *therapy*. **supportive p.**, a technique aimed at reinforcing a patient's defenses and helping suppress disturbing psychological material, while avoiding the probing of emotional conflicts; used when symptoms are insufficient to warrant intensive psychotherapy.

psychotic (si-kot'ik) 1. pertaining to, characterized by, or caused by psychosis. 2. a person exhibiting psychosis.

psychotogenic (si-kot'o-jen'ik) producing a state of psychosis.

psychotomimetic (si-kot'o-mi-met'ik) [*psychosis* + Gr. *mimētikos* imitative] pertaining to, characterized by, or producing manifestations resembling those of a psychosis, e.g., visual hallucinations, distortion of perception, and schizophrenia-like behavior. By extension, applied to a drug that produces these effects.

psychotonic (si''ko-ton'ik) [*psycho-* + Gr. *tonos* tone] exerting an elevating or stimulating effect upon the mind.

psychotropic (si''ko-trop'pik) [*psycho-* + Gr. *trōpē* a turning] exerting an effect upon the mind; capable of modifying mental activity; usually applied to drugs that affect the mental state.

psychro- (si''kro) [Gr. *psychros* cold] a combining form denoting relationship to cold.

psychroalgia (si''kro-al'je-ah) a painful feeling of cold.

psychroesthesia (si''kro-es-the'ze-ah) [*psychro-* + Gr. *aisthēsis* perception + *-ia*] a state in which a part of the body, though warm, seems cold.

psychrolusia (si''kro-loo'se-ah) [*psychro-* + Gr. *louein* to wash] bathing in cold water.

psychrometer (si-krom'ē-ter) [*psychro-* + Gr. *metron* measure] an apparatus for measuring atmospheric moisture by the difference in reading of two thermometers, one with a dry bulb and one with a wet bulb. **sling p.**, an instrument in which the thermometers are swung through the air to facilitate evaporation from the wet bulb.

psychrophile (si''kro-fil) an organism which grows best at low temperatures.

psychrophilic (si''kro-fil'ik) [*psychro-* + Gr. *philein* to love] fond of cold; said of bacteria that grow in the cold, often growing best between 15° and 20° C. See also *mesophilic* and *thermophilic*.

psychrophore (si''kro-för) [*psychro-* + Gr. *pherein* to bear] a double catheter for applying cold to the urethra.

psychrotherapy (si''kro-ther'ah-pe) [*psychro-* + Gr. *therapeia* treatment] the treatment of disease by the application of cold.

psyllium (sil'e-um) a plant of the genus *Plantago*. *Blond p.* is *P. ovata* Forskål; *Spanish p.* is *P. psyllium* L. See also *plantago (psyllium) seed*, under *seed*.

Pt chemical symbol for *platinum*.

PTA plasma thromboplastin antecedent (blood coagulation Factor XI).

PTAP a purified diphtheria toxoid precipitated by aluminum phosphate.

ptarmic (tar'mik) [Gr. *ptarmikos* making to sneeze] relating to or producing spasmodic sneezing.

ptarmus (tar'mus) [Gr. *ptarmos*] spasmodic sneezing.

PTC plasma thromboplastin component (blood coagulation Factor IX); phenylthiocarbamide.

PTEN pentaerythritol tetranitrate.

pteridine (ter'i-dēn) a bicyclic nitrogenous base characteristic of the pterins and folic acids.

Pteridophyta (ter'i-dof'i-tah) [Gr. *ptēris* fern + *phyton* plant] a division of the plant kingdom including the ferns.

pteridophyte (ter'i-do-fit') one of the Pteridophyta.

pterin (ter'in) [Gr. *pteron* wing] any compound containing pteridine; the pterins are derivatives of 2-amino-4-hydroxypteridine and are constituents of folic acids. They were first identified in the wings of butterflies. See also *aminopterin*, *leucopterin*, *uropterin*, and *xanthopterin*.

pteron (te're-on) [Gr. *pteron* wing] a point at the junction of the frontal, parietal, temporal, and great wing of the sphenoid bone; about 3 cm. behind the external angular process of the orbit.

pternalgia (ter-nal'je-ah) [Gr. *pterna* heel + *algos* pain + *-ia*] pain in the heel.

pteroylglutamate (ter'o-il-gloo'tah-mate) a salt of pteroylglutamic (folic) acid. See *folic acid*, under *acid*.

pterygium (tē-rij'e-um) [Gr. *pterygion* wing] a winglike structure, applied especially to an abnormal triangular fold of membrane, in the interpalpebral fissure, extending from the conjunctiva to the cornea, being immovably united to the cornea at its apex, firmly attached to the sclera throughout its middle portion, and merged with the conjunctiva at its base. **p. col'li**, a thick

Pterygium.

fold of skin on the lateral aspect of the neck, extending from the mastoid region to the acromion, producing congenital webbed neck. **congenital p.**, epitarsus.

pterygoid (ter'i-goid) [Gr. *pterygōdes* like a wing] shaped like a wing.

pterygomandibular (ter'i-go-man-dib'u-lar) pertaining to the pterygoid process and the mandible.

pterygomaxillary (ter'i-go-mak'si-ler'e) pertaining to a pterygoid process and the upper jaw.

pterygopalatine (ter'i-go-pal'ah-tin) pertaining to a pterygoid process and to the palatine bone.

PTFE abbreviation for polytetrafluoroethylene; see *polytef*.

ptilosis (ti-lo'sis) [Gr. *ptilōsis*] 1. a falling out or loss of the eyelashes. 2. a form of pneumoconiosis caused by inhaling the dust from ostrich feathers.

ptisan (tiz'an) [L. *ptisana*; Gr. *ptisanē*] (*obs.*) sweetened barley water, or other similar preparation; a decoction or medicinal tea.

P.T.O. abbreviation for Ger. *Perlsucht Tuberculin Original*; see *Klempner's tuberculin*, under *tuberculin*.

ptomaine (to'mān, to-mān') [Gr. *ptōma* carcass] any one of a nonspecific and vague class of toxic bases, usually considered to be formed by the action of bacterial metabolism. Some are formed by the decarboxylation of amino acids. The ptomaines include cadaverine, muscarine, neurine, ptomatropine, putrescine, and many other compounds. Called also *animal alkaloid*, *putrefactive alkaloid*, and *cadaveric alkaloid*.

ptomainemia (to'mān-e'me-ah) [ptomaine + Gr. *haima* blood + *-ia*] the presence of ptomaines in the blood.

ptomainotoxism (to'mān-o-tok'sizm) poisoning by a ptomaine.

ptomatine (to'mah-tin) ptomaine.

ptomatopsia (to'mah-top'se-ah) [Gr. *ptōma* corpse + *opsis* vision + *-ia*] necropsy.

ptomatopsy (to'mah-top'se) necropsy.

ptomatropine (to-mat'ro-pin) [ptomaine + *atropine*] a poison from putrid sausages and the viscera of corpses of those dead from typhoid fever; it has effects somewhat like those of atropine.

ptosed (tōst) affected with ptosis; prolapsed.

ptosis (to'sis) [Gr. *ptōsis* fall] 1. prolapse of an organ or part. 2. drooping of the upper eyelid from paralysis of the third nerve or from sympathetic innervation. **abdominal p.** (*obs.*), splanchnoptosis. **p. adipo'sa, false p.**, an apparent ptosis caused by a fold of skin and fat hanging down below the border of the eyelid. **Horner's p.**, moderate ptosis of an eye, with retraction of the eyeball, miosis, and flushing of the affected side of the face, due to lesions of the cervical sympathetic. **p. lipomato'sis**, ptosis produced by lipoma of the eyelid. **morning p.**, waking ptosis. **p. sympath'ica**, ptosis associated with miosis, vasomotor facial paralysis, and diseases of the cervical sympathetic system. **visceral p.** (*obs.*), splanchnoptosis. **waking p.**, temporary paralysis of the upper lid on awakening from sleep.

-ptosis (to'sis) [Gr. *ptōsis* fall] a word termination indicating downward displacement.

ptotic (tot'ik) pertaining to or affected with ptosis.

P.T.R. abbreviation for Ger. *Perlsucht Tuberculin Rest*; see under *tuberculin*.

PTT partial thromboplastin time; see under *test*.

ptyal-, ptyalo- [Gr. *ptyalon* spittle] a combining form denoting relationship to the saliva. See also words beginning *sial-* and *sialo-*.

ptyalagogue (ti-al'ah-gog) [ptyalo- + Gr. *agōgos* leading] sialagogue.

ptyalectasis (ti'ah-lek'tah-sis) [ptyalo- + Gr. *ektasis* distention] 1. operative dilatation of a salivary duct. 2. dilatation of one of the ducts of the salivary glands.

ptyalin (ti'ah-lin) [Gr. *ptyalon* spittle] α-amylase occurring in saliva.

ptyalogen (ti'ah-lin'o-jen) [ptyalin + Gr. *gennan* to produce] pre-α-amylase, a hypothetical proenzyme in the salivary glands.

ptyalism (ti'ah-lizm) [Gr. *ptyalismos*] excessive secretion of saliva, as seen in chronic mercury poisoning; called also *salivation* and *polysialia*.

ptyalith (ti'ah-lith) [ptyalo- + Gr. *lithos* stone] (*obs.*) a salivary calculus.

ptyalize (ti'ah-liz) to increase or stimulate the secretion of saliva.

ptyalocoele (ti-al'o-sēl) [ptyalo- + Gr. *kēlē* tumor] a cystic tumor containing saliva. **sublingual p.**, ranula.

ptyalogenic (ti'ah-lo-jen'ik) [ptyalo- + Gr. *gennan* to produce] formed from or by the action of saliva.

ptyalography (ti'ah-log'rah-fe) [ptyalo- + Gr. *graphein* to write] sialography.

ptyalolith (ti'ah-lo-lith) (*obs.*) a salivary calculus.

ptyalolithiasis (ti'ah-lo-li-thi'ah-sis) the presence of salivary calculi.

ptyalolithotomy (ti'ah-lo-li-thot'o-me) sialolithotomy.

ptyaloreaction (ti'ah-lo-re-ak'shun) a reaction occurring in the saliva.

ptyalorrhea (ti'ah-lo-re'ah) [ptyalo- + Gr. *rhoia* flow] ptyalism.

ptyalose (ti'ah-lōs) maltose produced by the action of ptyalin on starch.

ptyocrinous (ti-ok'rī-nus) [Gr. *ptyon* a winnowing shovel, or fan + *krinein* to separate] elaborating secretion in the form of granules which are eventually extruded; said of unicellular glands, as globet cells, which secrete in this way. Cf. *diacrinous*.

Pu chemical symbol for *plutonium*.

pubarche (pu-bar'ke) the beginning of growth of the pubic hair.

puberal (pu'ber-al) [L. *puber* of marriageable age] pubertal.

puberphonia (pu'ber-fo'ne-ah) a failure of adolescent voice change, usually of psychogenic origin.

pubertal (pu'ber-tal) pertaining to or characteristic of puberty.

pubertas (pu-ber'tas) [L.] puberty. **p. prae'cox**, precocious puberty.

puberty (pu'ber-te) [L. *pubertas*] the period during which the secondary sex characteristics begin to develop and the capability of sexual reproduction is attained. **precocious p.**, unusually early sexual maturity, either idiopathic or pathological and either isosexual or with development of sex characters of the opposite sex; called also *pubertas praecox*.

pubes (pu'bēz) [L., pl. of *pubis*] 1. [NA] the hairs growing over the pubic region. 2. regio pubica.

pubescence (pu-bes'ens) the state of being pubescent.

pubescent (pu-bes'ent) [L. *pubescens* becoming hairy] 1. arriving at the age of puberty. 2. covered with down or lanugo.

pubic (pu'bik) pertaining to or lying near the pubes.

pubioplasty (pu'be-o-plas'te) a plastic operation on the pubes.

pubiotomy (pu'be-ot'o-me) [pubis + Gr. *tomē* a cutting] surgical separation of the pubic bone lateral to the median line.

pubis (pu'bis), pl. *pu'bes* [L.] the os pubis.

pubisure (pu'bi-sūr) pubes.

pubococcygeal (pu'bo-kok-sij'e-al) pertaining to the pubis and coccyx or to the musculus pubococcygeus.

pubofemoral (pu'bo-fem'o-ral) pertaining to the os pubis and femur.

puboprosthetic (pu'bo-pros-tat'ik) pertaining to the os pubis and prostate gland.

puborectal (pu'bo-rek'tal) pertaining to the pubis and rectum or to the musculus puborectalis.

pubotibial (pu'bo-tib'e-al) pertaining to the pubes and tibia.

pubovesical (pu'bo-ves'i-kal) pertaining to the pubes and bladder.

pudenda (pu-den'dah) [L.] plural of *pudendum*.

pudendal (pu-den'dal) pertaining to the pudenda.

pudendum (pu-den'dum), pl. *puden'da* [L., from *pudere* to be ashamed.] the external genitalia of humans, especially of the female; see *p. femininum*. **female p.**, *p. femininum*. **p. femini'num** [NA], female pudendum: that portion of the female genitalia comprising the mons pubis, labia majora, labia minora, vestibule of the vagina, bulb of the vestibule, greater and lesser vestibular glands, and vaginal orifice. Commonly used to denote the entire external female genitalia (*partes genitales feminae externae*). Called also *p. muliebre* and *vulva*. **p. mulie'bre**, *p. femininum*.

pu'dic (pu'dik) [L. *pu'dicus*] pertaining to the pudenda.

puericulture (pu'er-i-kul'tür) [L. *puer* child + *cultura* culture] the art of rearing and training children.

puericulturist (pu'er-i-kul'tür-ist) a specialist in the training of children.

puerile (pu'er-il) [L. *puerilis*; *puer* child] pertaining to childhood or to children; childish.

puerpera (pu'er-per-ah) [L. *puer* child + *parere* to bring forth, to bear] a woman who has just given birth to an infant.

puerperal (pu'er-per-al) [L. *puerperalis*] pertaining to the puerperium.

puerperalism (pu'er-per-al-izm) a disease condition incident to childbirth.

puerperant (pu'er-per-ant) 1. giving birth. 2. a puerpera.

puerperium (pu'er-pe-re-um) [L.] the period or state of confinement after labor.

puff (puf) 1. a short, blowing, auscultation sound. 2. in genetics, any of the regions of the giant chromosomes of certain flies at which disorganized arrangement and most of RNA synthesis occurs. **chromosome p's**, active loci of RNA and DNA synthesis in the giant salivary gland chromosomes of insects.

veiled p., a faint, muffled pulmonary murmur.

puffing (pu'fing) enlargement in giant polytene chromosomes of fly larval organs; these chromosome puffs are repositories of RNA and DNA synthesis.

pugil, pugillus (pu'jil, pu-jil'us) [L. *pugillus*] a handful.

pukateine (pu-kat'e-in) chemical name: 1,2-methylenedioxy-11-hydroxyaporphine. A crystalline alkaloid, C₁₈H₁₇NO₃, from the bark of *Laurelia novaezelandiae* A. Cunn., Lauraceae.

pulegone (pu'le-gön) chemical name: *p*-menth-4(8)-en-3-one. A volatile oil, a menthene, (CH₃)₂C:C₆H₇(O):CH₃, from pennyroyal oil.

Pulex (pu'leks) [L. "flea"] a genus of fleas which are parasitic on man, dogs, cats, and badgers. **P. cheo'pis**, *Xenopsylla cheopis*. **P. duge'si**, *P. irritans*. **P. ir'ritans**, the common flea or human flea, which is parasitic on the skin of man, its bite producing itching. **P. pen'etrans**, *Tunga penetrans*; see *chigoe*. **P. serrat'iceps**, *Ctenocephalides canis*.

pulex (pu'leks), pl. *pu'lices* [L.] an organism of the genus *Pulex*; a flea.

Pulheems (pul'hēmz) a system of medical classification for recording the physical and mental status of recruits in the British armed services, representing: P, physical capacity; U, upper limbs; L, lower limbs; H, hearing (acuity); EE, eyesight (visual acuity); M, mental capacity; S, stability (emotional).

pulicicide (pu-lis'i-sid) [L. *pulex* flea + *caedere* to kill] an agent destructive to fleas.

Pulicidae (pu-lis'i-de) a family of the Siphonaptera which includes most of the fleas. Four genera are important to man: *Ctenocephalides*, *Hoplopyllus*, *Pulex*, and *Xenopsylla*.

pul (pul) 1. to strain a muscle. 2. the injury sustained in a muscle strain.

pullorin (pul'o-rin) a preparation containing the soluble antigens of *Salmonella pullorum*.

Pullularia (pul'u-la're-ah) *Aureobasidium*. **p. pul'lulans**, *Aureobasidium pullulans*.

pullulate (pul'u-lāt) to germinate.

pullulation (pul'u-la'shun) [L. *pullulare* to sprout] the act or process of budding, as in yeast, or of sprouting; germination.

pulmo (pul'mo), gen. *pulmo'nis*, pl. *pulmo'nes* [L.] [NA] the organ of respiration; see *lung*.

pulmo- [L. *pulmo* lung] a combining form denoting relationship to the lungs; see also words beginning *pulmono-*.

pulmoaortic (pul'mo-a-or'tik) pertaining to the lungs and the aorta.

pulmogram (pul'mo-gram) a roentgenogram of the lungs.

pulmolith (pul'mo-lith) [*pulmo-* + Gr. *lithos* stone] a lung calculus.

pulmometer (pul-mom'ter) [*pulmo-* + L. *metrum* measure] a form of spirometer for measuring the capacity of the lungs for air.

pulmometry (pul-mom'tre) the measurement of the lung capacity.

pulmonal (pul'mo-nal) pulmonary.

pulmonary (pul'mo-ner'e) [L. *pulmonarius*] pertaining to the lungs.

pulmonectomy (pul'mo-nek'to-me) pneumonectomy.

pulmonic (pul-mon'ik) 1. pertaining to the lungs; pulmonary. 2. pertaining to the pulmonary artery.

pulmonitis (pul'mo-ni'tis) inflammation of the lungs; pneumonia.

pulmono- [L. *pulmo*, *pulmonis* lung] a combining form denoting relationship to the lungs; see also words beginning *pulmo-*.

pulmonohepatic (pul'mo-no-hē-pat'ik) pertaining to or communicating with the lungs and the liver; hepatopulmonary.

pulmonologist (pul'mo-nol'o-jist) an individual skilled in pulmonology.

pulmonology (pul'mo-nol'o-je) the science concerned with the anatomy, physiology, and pathology of the lungs.

pulmonoperitoneal (pul'mo-no-per'i-to-ne'al) pertaining to or communicating with the lungs and the peritoneum.

pulmotor (pul'mo-tor) [*pulmo-* + L. *motor* mover] an apparatus for producing artificial respiration by forcing oxygen into the lungs, and, when they are distended, sucking out the air.

pulp (pulp) [L. *pulpa* flesh] any soft, juicy animal or vegetable tissue, such as that contained within the spleen or the pulp chamber of a tooth (see *dental pulp*). **coronal p.**, the part of the dental pulp contained in the crown portion of the pulp cavity.

dead p., necrotic p. **dental p.**, the richly vascularized and innervated connective tissue contained in the pulp cavity of a tooth, constituting the formative, nutritive, and sensory organ of the dentin; called also *pulpa dentis* [NA]. **devitalized p.**, necrotic p. **digital p.**, the mass of tissue forming the soft cushion on the palmar or plantar surface of the distal phalanx of a finger or toe. **enamel p.**, stellate reticulum. **exposed p.**, dental pulp which, through trauma or disease, has become exposed to the external environment. **mummified p.**, dental pulp which has undergone caseation necrosis. **necrotic p.**, dental pulp which has been deprived of its blood and nerve supply and is no longer composed of living tissue, as evidenced by its insensitivity to stimulation by electricity, heat, cold, or trauma. **nonvital p.**, necrotic p. **putrescent p.**, a necrotic pulp which has been invaded by putrefactive microorganisms and is characterized by a particularly foul odor. **radicular p.**, the part of the dental pulp contained in the root canal of a tooth. **red p.**, **splenic p.**, the dark, reddish brown substance which fills up the interspaces of the sinuses of the spleen; called also *pulpa lienis* [NA]. **tooth p.**, dental p. **vertebral p.**, the soft central portion of an intervertebral disk. **vital p.**, a dental pulp which is characterized by vascularity and sensation. **white p.**, sheaths of lymphatic tissue surrounding the arteries of the spleen. **wood p.**, a purified cellulose prepared from finely shredded wood and used in the manufacture of paper; sometimes used also as an absorbent dressing.

pulpa (pul'pah), pl. *pul'pae* [L. "flesh"] pulp. **p. corona'le** [NA], the portion of the dental pulp in the crown portion of the pulp cavity. **p. den'tis** [NA], dental pulp: the richly vascularized and innervated connective tissue contained in the pulp cavity of a tooth. **p. lie'nis** [NA], the dark, reddish-brown substance that fills up the interspaces of the sinuses of the spleen; called also *red pulp* and *pulp of spleen*. **p. radica'ris** [NA], the portion of the dental pulp in the root canal of a tooth.

pulpal (pul'pal) pertaining to the pulp.

pulpalgia (pul-pal'je-ah) pain in the pulp of a tooth.

pulpation (pul-pa'shun) pulpefaction.

pulpectomy (pul-pek'to-me) [*pulp* + Gr. *ektomē* excision] extirpation of the pulp from the pulp chamber and root canals of a tooth.

pulpefaction (pul'pē-fak'shun) [*pulp* + L. *facere* to make] conversion into pulp.

pulpiform (pul'pī-form) resembling pulp.

pulpitides (pul-pit'i-dēz) [Gr.] plural of *pulpitis*; applied to all types of pulp inflammation collectively.

pulpitis (pul-pi'tis), pl. *pulpit'ides*. Inflammation of the dental pulp. **anachoretic p.**, pulpitis caused by bacteria attracted to the pulp because of local irritation; see also *anachoresis*. **closed p.**, pulpitis in which the dental pulp is not exposed to the oral environment. **hyperplastic p.**, pulpitis characterized by exuberant proliferation of chronically inflamed dental pulp. **open p.**, pulpitis in which the dental pulp is obviously exposed to the oral environment through a carious lesion.

pulpless (pulp'les) without pulp; having the pulp removed.

pulpoaxial (pul'po-ak'se-al) pertaining to or formed by the pulpal and axial walls of a tooth cavity.

pulpobuccoaxial (pul'po-buk'o-ak'se-al) pertaining to or formed by the pulpal, buccal, and axial walls of a tooth cavity.

pulpodistal (pul'po-dis'tal) pertaining to or formed by the pulpal and distal walls of a tooth cavity.

pulpodontia (pul'po-don'she-ah) pulpodontics.

pulpodontics (pul'po-don'tiks) that branch of dentistry dealing with the dental pulp.

pulpolabial (pul'po-la'be-al) pertaining to or formed by the pulpal and labial walls of a tooth cavity.

pulpolingual (pul'po-ling'gwal) pertaining to or formed by the pulpal and lingual walls of a tooth cavity.

pulpolinguoaxial (pul'po-ling'gwo-ak'se-al) pertaining to or formed by the pulpal, lingual, and axial walls of a tooth cavity.

pulpomesial (pul'po-me'ze-al) pertaining to or formed by the pulpal and mesial walls of a tooth cavity.

pulpotomy (pul-pot'o-me) [pulp + Gr. *tomē* a cutting] surgical excision of the coronal portion of a vital pulp.

pulpy (pul'pe) soft or pulpaceous.

pulque (pul'ke) a fermented drink made in Mexico and Central America from the juice of *Agave*; it is the source of mescal (def. 2).

pulsate (pul'sāt) to beat rhythmically, as the heart.

pulsatile (pul'sah-tīl) characterized by a rhythmical pulsation.

pulsatilla (pul'sah-tīl'ah) the dried herb of the ranunculaceous flowering plants *Anemone pulsatilla* L., *A. pratensis* L., or *A. patens* L. Formerly used in a variety of conditions, such as dysmenorrhea, epididymitis, and orchitis, its use has been largely abandoned.

pulsation (pul-sa'shun) [L. *pulsatio*] a throb or rhythmical beat, as of the heart. **expansile p.**, a pulsation which is seen or felt to become larger and wider with each impact of the pulse; it reflects an increase in volume of a mass, usually an aneurysm. **suprasternal p.**, arterial pulsation in the region of the suprasternal notch, due to dilatation and/or elongation of the aortic arch or to aneurysm.

pulsator (pul'sa-tor) an apparatus for maintaining respiration. **Bragg-Paul p.**, a pulsator consisting of an air bag placed around the patient's chest and abdomen and rhythmically inflated and deflated by an electric pump.

pulse (puls) [L. *pulsus* stroke] 1. the rhythmic expansion of an artery which may be felt with the finger. *The pulse rate or number of pulsations of an artery per minute normally varies from 50 to 100. See also beat.* 2. a brief surge, as of current or voltage. **abdominal p.**, the pulse over the abdominal aorta. **abrupt p.**, a pulse which strikes the finger rapidly; a quick or rapidly rising pulse. **allorhythmic p.**, a pulse marked by irregularities in rhythm. **alternating p.**, pulsus alternans. **anacrotic p.**, one in which the ascending limb of the tracing shows a transient drop in amplitude, or a notch. **anadicrotic p.**, one in which the ascending limb of the tracing shows two small additional waves or notches. **anatricrotic p.**, one in which the ascending limb of the tracing shows three small additional waves or notches. **atrial liver p.**, a presystolic pulse corresponding to the atrial venous pulse, sometimes occurring in tricuspid stenosis. **atrial venous p.**, **atriovenous p.**, a cervical venous pulse having an accentuated "a" wave during atrial systole, owing to increased force of contraction of the right atrium; a characteristic of tricuspid stenosis. **biferious p.**, **bisferious p.**, pulsus bisferiens. **bigeminal p.**, a pulse in which two beats follow each other in rapid succession, each group of two being separated from the following by a longer interval, usually related to regularly occurring ventricular premature beats. **cannon ball p.**, Corrigan's p. **capillary p.**, Quincke's p. **carotid p.**, the pulse in the carotid artery, tracings of which are used in timing the phases of the cardiac cycle. **catadicrotic p.**, one in which the descending limb of the tracing shows two small additional waves or notches. **catatricrotic p.**, one in which the descending limb of the tracing shows three small additional waves or notches. **centripetal venous p.**, a venous pulse caused by a systolic volume expansion passed from the arteries through the capillaries and venules into the larger veins. **collapsing p.**, Corrigan's p. **Corrigan's p.**, a jerky pulse with a full expansion, followed by a sudden collapse, occurring in aortic regurgitation; called also *water-hammer p.* See also *Corrigan's sign* (def. 2), under *sign*. **coupled p.**, bigeminal p. **dicrotic p.**, a pulse characterized by two peaks, the second peak occurring in diastole and being an exaggeration of the dicrotic wave. **dropped-beat p.**, intermittent p. **elastic p.**, a full pulse which gives an elastic feeling to the finger. **entoptic p.**, the subjective sensation of seeing in the dark a flash of light at each heart beat. **epigastric p.**, abdominal p. **equal p.**, one in which all of the beats are of the same strength. **febrile p.**, a pulse characteristic of fever, often described as full and bounding. **filiform p.**, thready p. **formicant p.**, a small, nearly imperceptible pulse. **frequent p.**, one which is faster in rate than normal. **full p.**, an easily felt pulse; one with a large amplitude of expansion of the vessel palpated. **fu-**

nic p., the arterial tide in the umbilical cord. **hard p.**, one which is characterized by very high tension. **hepatic p.**, the pulsations of the liver. **high-tension p.**, one characterized by a gradual impulse, long duration, slow subsidence, and a firm, cordy state of the artery between the beats. **infrequent p.**, one which is slower in rate than normal. **intermittent p.**, one in which various beats are dropped. **irregular p.**, one in which the beats occur at irregular intervals. **jerky p.**, one in which the artery is suddenly and markedly distended. **jugular p.**, a pulsation seen or felt over the jugular vein. **Kussmaul's p.**, paradoxical p. **labile p.**, a pulse which is normal when the patient is resting, but which is increased by sitting, standing, or exercise. **low-tension p.**, a pulse with sudden onset, short duration, and quick decline, and which is easily obliterated by pressure. **Monneret's p.**, a full, slow, and soft pulse said to be characteristic of jaundice. **monocrotic p.**, one in which the tracing shows only one expansion in one beat of the artery. **nail p.**, the pulsation of blood under the nails; sometimes demonstrated by the onychograph. **paradoxical p.**, a pulse that markedly decreases in size during inspiration, as that which often occurs in constrictive pericarditis. **pistol-shot p.**, a form in which the arteries are subject to sudden distention and collapse. **plateau p.**, a pulse which is slowly rising and sustained. **polycrotic p.**, one in which the tracing shows secondary pulse waves. **quadrigeminal p.**, one with a pause after every fourth beat. **quick p.**, 1. one which strikes the finger smartly and leaves it quickly; called also *short p.* 2. one with a faster rate than normal. **Quincke's p.**, alternate blanching and flushing of the skin that may be elicited in several ways, e.g., by observing the nail bed or skin at the root of the nail while pressing on the end of the nail. Caused by pulsation of subpapillary arteriolar and venous plexuses, it is sometimes seen in aortic insufficiency and other disorders, but may occur in normal persons under certain conditions. It was originally thought to be due to pulsation of the capillaries, hence the name *capillary pulse*. Called also *Quincke's sign*. **radial p.**, that felt over the radial artery. **respiratory p.**, a pulsation observed even in health in the superficial cervical veins after rapid exercise. **retrosternal p.**, a venous pulse perceptible just above the suprasternal notch. **Riegel's p.**, a pulse which is diminished in size during expiration. **running p.**, a pulse with small irregular excursions. **sharp p.**, jerky p. **short p.**, quick p., def. 1. **slow p.**, one with less than the usual number of pulsations per minute. **soft p.**, a pulse of low tension. **strong p.**, a forcible pulse; a pulse of high amplitude. **tense p.**, a pulse that is hard and full, but without wide excursions. **thready p.**, one that is very fine and scarcely perceptible. **trembling p.**, **tremulous p.** (obs.), running p. **tricrotic p.**, one in which the tracing shows three marked expansions in one beat of the artery. **trigeminal p.**, one with a pause after every third beat. **trip-hammer p.**, Corrigan's p. **undulating p.**, a pulse giving the sensation of successive waves. **unequal p.**, a pulse in which some of the beats are strong and others weak. **vagus p.**, a slow pulse. **venous p.**, the pulsation which occurs in a vein, usually observed at the right jugular vein just above the sternoclavicular junction. **vermicular p.**, a small rapid pulse giving to the finger a sensation of wormlike movement. **vibrating p.**, jerky p. **water-hammer p.**, Corrigan's p. **wiry p.**, a small, tense pulse.

pulsimeter (pul-sim'ē-ter) [pulse + L. *metrum* measure] (obs.) an apparatus for measuring the force of the pulse.

pulsion (pul'shun) a pushing forward, or outward or to either side.

pulsus (pul'sus), pl. *pul'sus* [L.] pulse. **p. abdomina/lis**, abdominal pulse. **p. aequa/lis**, equal pulse. **p. alter/nans**, alternating pulse: a pulse in which there is regular alternation of weak and strong beats without changes in cycle length. **p. bifer/iens**, **p. bisfer/iens**, a pulse characterized by two strong systolic peaks separated by a midsystolic dip, most commonly occurring in pure aortic regurgitation and aortic regurgitation with stenosis. **p. bigem'inus**, bigeminal pulse. **p. ce/ler**, quick pulse. **p. cor'dis** (obs.), the pulse felt over the apex of the heart. **p. dele'tus** (obs.), absence of pulse, seen in aortic aneurysm. **p. dif'ferens**, inequality of the pulse observable at corresponding sites on either side of the body. **p. du'plex** (obs.), dicrotic pulse. **p. du'rus** (obs.), hard pulse. **p. filifor/mis**, thready pulse. **p. for'micans**, formicant pulse. **p. for'tis**, a strong pulse. **p. fre/quens**, frequent pulse. **p. irregula'ris perpet'uus**, a pulse which is wholly irregular. **p. mag'nus**, a large, full pulse. **p. mag'nus et ce/ler**, a large, full, and rapid pulse. **p. mol'lis**, soft pulse. **p. monoc'rotus**, monocrotic pulse. **p. oppres'sus**, a pulse which appears to be pushing its way through a contracted artery. **p. paradox'us**, paradoxical pulse. **p. par'vus**, a small pulse. **p. par'vus et tar'dus**, a small hard pulse which rises and falls slowly. **p. ple'nus**, full pulse. **p. pseudointermit'tens** (obs.), a pulse showing an occasional intermittence, owing to a feeble contraction of the ventricle. **p. ra'rus** (obs.), a slow pulse due to prolongation of the heart's pause. **p. tar'dus**, an abnormally slow pulse due to a prolongation of the systole or diastole. **p. trigem'inus**, trigeminal pulse. **p. undulo'sus**, undulating pulse. **p. vac'uus**, an extremely weak

pulse. **p. veno'sus**, venous pulse. **p. vi'brans** (obs.), jerky pulse.

pultaceous (pul-ta'shus) [L. *pultaceus*] like a pulp or poultice.

pulv. abbreviation for L. *pulvis* powder.

pulverization (pul'ver-i-za'shun) [L. *pulvis* powder] the reduction of any substance to powder.

pulverulent (pul-ver'u-lent) [L. *pulverulentus*] powdery; dust-like.

pulvinar (pul-vi'nar) [L. "a cushioned seat"] [NA] the prominent medial portion of the posterior end of the thalamus, which is cushion-like and partly overhangs the superior colliculus; it receives fibers from other thalamic nuclei and gives off widespread cortical projections. **p. thal'ami**, NA alternative for nucleus posterior thalami.

pulvinate (pul'vi-nāt) [L. *pulvinus* cushion] shaped like a cushion.

pulvis (pul'vis) [L.] powder.

pumex (pu'meks) [L. "foam"] pumice.

pumice (pum'is) [USP] a substance of volcanic origin, consisting chiefly of complex silicates of aluminum, potassium, and sodium, occurring as a very light, hard, rough, porous, grayish powder; used in dentistry as an abrasive or polishing agent, the effect achieved depending on the particle size.

pump (pump) 1. an apparatus for drawing or forcing fluids or gases. 2. to draw or force fluids or gases. **air p.**, a pump for exhausting or forcing in air. **Alvegniat's p.**, a mercurial air pump used in measuring the free gaseous constituents of the blood. **blood p.**, a machine used to propel blood through the tubing of extracorporeal circulation devices, especially designed to achieve this without causing damage to the blood constituents, particularly the erythrocytes. **breast p.**, a manual or electric pump for abstracting milk from the breast. **calcium p.**, the mechanism of active transport of calcium (Ca^{++}) across a membrane, as of the sarcoplasmic reticulum of muscle cells, against a concentration gradient; the mechanism is driven by hydrolysis of ATP by the membrane-bound enzyme ATPase. **cardiac balloon p.**, a device for augmenting blood flow to the heart while relieving the cardiac work load. **infusion p.**, a device for injecting a measured amount of fluid during a specific interval of time. **infusion-withdrawal p.**, a pump for the simultaneous injection and withdrawal of fluid at the same rate. **Lindbergh p.**, a perfusion apparatus by means of which an organ removed from the body may be kept alive indefinitely. **$\text{Na}^+\text{-K}^+$ p.**, sodium p. **peristaltic p.**, a pump that moves liquid through tubing by alternate contractions and relaxations on the tubing. **sodium p.**, **sodium-potassium p.**, the mechanism of active transport, involving membrane-bound ATPase, by which sodium (Na^+) is extruded from a cell and potassium (K^+) is brought in, so as to maintain the low concentration of Na^+ and the high concentration of K^+ within the cell with respect to the surrounding medium, the high concentration of K^+ being necessary for vital processes such as protein biosynthesis, certain enzymes activities, and maintenance of the membrane potential of excitable cells. Called also $\text{Na}^+\text{-K}^+$ p. **stomach p.**, a pump for removing the contents from the stomach.

pumpkin (pump'kin) the edible fruit of the plant *Cucurbita pepo* L. (Curcubitaceae), whose dried, ripe seeds were once used as an anthelmintic.

pump-oxygenator (pump'-ok'si-jē-na'tor) an apparatus, usually extracorporeal, comprising an arterial pump and blood oxygenator plus filters and traps, for saturating blood with oxygen; used to relieve the heart and lungs during heart surgery.

puna (poo'nah) mountain sickness.

punch (punch) 1. an instrument for indenting, perforating, or excising a disk or segment of tissue or material. 2. an instrument for extracting the root of a tooth. **Caulk p.**, a cautery punch for the removal of median bar prostatic enlargements. **kidney p.**, **Murphy's kidney p.**, see *Murphy's test*, under *tests*. **pin p.**, an instrument for piercing the metal plate to receive the pins for fastening artificial teeth. **plate p.**, a tool for cutting out parts of an artificial dental plate.

punchdrunk (punch'drunk) a traumatic encephalopathy of prizefighters resulting from cumulative cerebral concussions; it is characterized by the general slowing of mental functions, occasional bouts of confusion, and scattered memory loss.

punched-out (punch'towt) having the appearance of substance or tissue having been removed with a punch.

puncta (punk'tah) [L.] plural of *punctum*.

punctate (punk'tāt) [L. *punctum* point] resembling or marked with points or dots.

punctiform (punk'ti-form) [L. *punctum* point + *forma* shape] like a point; located in a point. In bacteriology, said of very minute colonies.

punctio (punk'she-o) [L.] the act of puncturing, pricking or dotting.

punctograph (punk'to-graf) [L. *punctum* point + Gr. *graphein* to write] an instrument for the roentgenographic localization of foreign bodies in the tissues.

punctum (punk'tum), pl. *punc'ta* [L.] an extremely small spot, or point; used in anatomical nomenclature as a general term to designate an extremely small area, or point of projection. **p. cae'cum**, blind spot; see under *spot*. **punc'ta doloro'sa**, Valleix's points. **p. lacrima'le** [NA], lacrimal point: the opening on the lacrimal papilla of an eyelid, near the medial angle of the eye, into which tears from the lacrimal lake drain to enter the lacrimal canaliculi. **punc'ta lacrima'lia**, see *punctum lacrimale*. **p. lu'teum**, macula retinae. **p. nasa'le infe'rius**, the rhinion. **p. ossificatio'nis**, ossification center. **p. prox'imum**, near point. **p. remo'tum**, far point. **punc'ta vasculo'sa**, minute red spots marking the cut surface of the white substance of the brain, produced by blood from divided vessels.

punctumeter (punk-tum'ē-ter) [L. *punctum* point + *metrum* measure] an instrument for measuring the range of accommodation.

punctura (punk-tu'rah) [L.] puncture. **p. explorato'ria**, exploratory puncture.

puncturatio (punk'tu-ra'she-o) [L.] the act of puncturing.

puncture (punk'tūr) [L. *punctura*] 1. the act of piercing or penetrating with a pointed object or instrument. 2. a wound so made. **Bernard's p.**, in experimental medicine, puncture on a definite point of the floor of the fourth ventricle causing glycosuria; called also *diabetic p.* **cisternal p.**, puncture of the cisterna cerebellomedullaris through the occipitoatlantoid ligament for the purpose of withdrawing cerebrospinal fluid. **Corning's p.**, lumbar p. **cranial p.**, cisternal p. **diabetic p.**, Bernard's p. **epigastric p.**, pericardiocentesis in which the trocar is passed just below the xiphoid cartilage in the middle line, directed obliquely from below upward, passing 2 cm. along the posterior surface of the sternum. It is then directed somewhat obliquely backward, passing into the gap in the sternal insertion of the diaphragm, entering the pericardium at its base. Called also *Marfan's method* and *Marfan's epigastric p.* **exploratory p.**, puncture of a cavity or tumor and removal of some portion of the contents for examination. **heat p.**, elevation of the temperature of the animal body produced by puncturing the base of the brain. **intracisternal p.**, cisternal p. **Kronecker's p.**, in experimental medicine, puncture of the inhibitory nerve center of the heart by means of a long fine needle. **lumbar p.**, the tapping of the subarachnoid space in the lumbar region, usually between the third and fourth lumbar vertebrae. **Marfan's epigastric p.**, epigastric p. **Quincke's p.**, spinal p., lumbar p. **splenic p.**, puncture of the spleen to obtain a specimen of splenic tissue for examination. **sternal p.**, removal of bone marrow from the manubrium of the sternum through an appropriate needle. **suboccipital p.**, cisternal p. **thecal p.**, puncture of the spinal membranes. **transthemoidal p.**, a technique for obtaining postmortem biopsy specimens of the brain, using a tracer inserted through the nostril. **ventricular p.**, puncture of a cerebral ventricle for the purpose of withdrawing fluid.

pungent (pun'jent) [L. *pungens* pricking] sharp or biting; somewhat acrid.

punizin (pu'ni-zin) a purple dye formed by the action of light and air on a colorless chromogen found in the secretions of the snails *Murex trunculus* and *Purpura lapillus*.

Puntius (pun'te-us) a genus of fresh-water fish. **P. javan'icus**, a species placed in fresh-water ponds in certain areas of the world, because it eliminates the weeds necessary for the propagation of mosquitoes.

P.U.O. pyrexia of unknown origin.

pupa (pu'pah) [L. "a doll"] the second stage in the development of an insect, between the larva and the imago.

pupal (pu'pal) pertaining to a pupa.

pupil (pu'pil) [L. *pupilla* girl] the opening at the center of the iris of the eye, through which light enters the eye; see *iris*. Called also *pupilla* [NA]. **Adie's p.**, tonic p. **Argyll Robertson p.**, one which is miotic and which responds to accommodation effort, but not to light. **artificial p.**, one made by iridectomy. **Behr's p.**, contralateral dilatation of the pupil in lesions of the optic tract. **bounding p.**, a pupil which shows alternating dilatation and contraction. **Bumke's p.**, dilatation of the pupil following a psychic stimulus; it is said not to occur in schizophrenia. **cat's-eye p.**, one with a narrow vertical aperture. **cornpicker's p's**, dilated pupils resulting from exposure to dust from Jimsonweed (which contains stramonium) in the cornfield. **fixed p.**, a pupil which does not react either to light or on convergence, or in accommodation. **Horner's p.**, a pupil that is smaller both in light and in darkness than the normal pupil, due to a lesion of the peripheral sympathetic innervation of the eye. **Hutchinson's p.**, a condition of the pupils in which one is dilated and the other not. **keyhole p.**, a pupil with a coloboma or a sector iridectomy on one side of the margin. **pin-hole p.**, one which is extremely contracted. **skew p's**, a condition in which one of the ocular axes deviates upward and the other downward. **stiff p.**, Argyll Robertson p. **tonic p.**, a usually unilateral condition of the eye in which the affected pupil is larger than the other, responds to accommodation and conver-

gence in a slow, delayed fashion, and reacts to light only after prolonged exposure to dark or light. Called also *Adie's pupil* and *papillotonia*. See also *Adie's syndrome*, under *syndrome*.

pupilla (pu-pil'ah) [L. "girl", pl. *pupillae* [NA]] the pupil: the opening at the center of the iris of the eye, through which light enters the eye; see *iris*.

pupillary (pu'pi-ler-e) pertaining to the pupil.

pupillatonia (pu'pil-ah-to'ne-ah) tonic pupil.

Pupillidae (pu-pil'i-de) a family of small to minute terrestrial gastropods (suborder Stylommatophora, order Pulmonata) that are commonly found in moist wooded regions in North America; the genus *Chondrina* serves as a host of *Dicrocoelium dentriticum*.

pupillo- (pu'pi-lo) [L. *pupilla* pupil] a combining form denoting relationship to the pupil.

pupillograph (pu-pil'o-graf) an instrument that detects responses of the pupil of the eye.

pupillometer (pu'pi-lom'ē-ter) [*pupillo-* + L. *metrum* measure] an instrument for measuring the width or diameter of the pupil.

pupillometry (pu'pil-lom'ē-tre) measurement of the diameter or width of the pupil of the eye.

pupillomotor (pu'pi-lo-mo'tor) pertaining to the movement of the pupil.

pupilloplegia (pu'pi-lo-ple'je-ah) [*pupillo-* + Gr. *plēgē* stroke] tonic pupil.

pupilloscope (pu-pil'o-skōp) von Hess's instrument for measuring reactions of the pupil.

pupilloscopy (pu'pi-los'ko-pe) [*pupillo-* + Gr. *skopein* to examine] retinoscopy.

pupillostatometer (pu-pil'o-stah-tom'ē-ter) [*pupillo-* + Gr. *statos* placed + *metron* measure] an instrument for measuring the distance between the pupils.

pupillotonia (pu'pi-lo-to'ne-ah) tonic pupil.

Purdy's method, test (per'dēz) [Charles Wesley Purdy, American physician, 1846-1901] see under *method* and *tests*.

pure (pür) [L. *purus*] free from mixture with or contamination by other materials; a reagent is *chemically pure* when it contains no other chemicals that might interfere with its action.

purgación (poor'gah-se-on') [Sp.] a Peruvian term for gonorrhea.

purgation (pur-ga'shun) [L. *purgatio*] catharsis; purging effected by a cathartic medicine.

purgative (pur'gah-tiv) [L. *purgativus*] 1. cathartic (def. 1); causing evacuation of the bowels. 2. a cathartic, particularly one that stimulates peristaltic action.

purge (purj) [L. *purgare* to cleanse, to purify] 1. to relieve of fecal matter. 2. a purgative remedy or dose.

puric (pu'rik) 1. pertaining to pus. 2. pertaining to purine.

puriform (pu'ri-form) [L. *pus* pus + *forma* form] resembling pus; the term is applied to the contents of cold abscesses which resemble pus.

purinase (pu'ri-nās) an enzyme that catalyzes purine conversions.

purine (pu'rin) [L. *purum* pure + *urine*] a colorless crystalline heterocyclic compound, $C_5H_4N_4$, which is not found free in nature, but is variously substituted to produce a group of compounds known as *purines* or *purine bases* (purine bodies), of which uric acid is a metabolic end product. The purine bases include adenine and guanine, which are constituents of nucleic acids, and hyoxanthine and xanthine. **amino p.**, aminopurine. **methyl p's**, alkaloïds formed from purines by substituting methyl groups, usually in positions 1, 3, 7. The principal ones are caffeine, theobromine, and theophylline.

purinemia (pu'ri-ne'me-ah) [*purine* + Gr. *haima* blood + *-ia*] the presence of purine bases in the blood.

purinemic (pu'ri-ne'mik) pertaining to or characterized by purinemia.

Purinethol (pu'rēn-thol) trademark for a preparation of mercaptopurine.

purinolytic (pu'rin-o-lit'ik) [*purine* + Gr. *lytikos* loosing] splitting up purines.

purinometer (pu'rin-om'ē-ter) [*purine* + Gr. *metron* measure] an apparatus for estimating the quantity of purine bodies in the urine.

Purkinje's cells, fibers, etc. (pur-kin'jēz) [Johannes Evangelista von Purkinje, Bohemian anatomist, physiologist, and microscopist, 1787-1869] see under *cell*, *fiber*, *image*, *layer*, *network*, *phenomenon*, *shift*, and *vesicle*.

Purkinje-Sanson mirror images (pur-kin'je-sah-sōz') [J. E. Purkinje; Louis Joseph Sanson, French physician, 1790-1841] Purkinje's images; see under *image*.

Purmann's method (poor'manz) [Matthaeus Gottfried Purmann, German surgeon, 1648-1711] see under *method*.

Purodigin (pu'ro-di'jin) trademark for a preparation of crystalline digitoxin.

purohepatitis (pu'ro-hep'ah-ti'tis) [*pus* + *hepatitis*] hepatic abscess.

puromucous (pu'ro-mu'kus) consisting of or containing pus and mucus; mucopurulent.

puromycin (pür'o-mi'sin) chemical name: (S)-3'-[(2-amino-3-(4-methoxyphenyl)-1-oxopropyl)amino-3'-deoxy-N,N-dimethyladenosine. An antibiotic produced by *Streptomyces alboniger*, $C_{22}H_{29}N_7O_5$, which has the ability to inhibit protein synthesis and so has been used experimentally as an antineoplastic. It also has trypanosomocidal and amebicidal activity, and was formerly used in the treatment of African trypanosomiasis and amebic dysentery. **p. hydrochloride**, the dihydrochloride salt of puromycin, $C_{22}H_{29}N_7O_5 \cdot 2HCl$, having the same actions as the base.

puron (pu'ron) a compound $C_8H_8N_4O_2$, obtained by electrolysis of uric acid.

purple (pur'pl) 1. a color, between blue and red. 2. a substance of this color used as a dye or indicator. **bromocresol p.**, an indicator, dibromorthocresol sulfonphthalein, used in the determination of hydrogen ion concentration; it has a pH range of 5.2 to 6.8, being yellow at 5.2 and purple at 6.8. **royal p.**, tyrian purple. **Stewart's p.**, 1 grain of iodine in 1 oz. of petrolatum. **tyrian p.**, a dye of the ancients which was obtained from the snails *Murex trunculus* and *Purpura lapillus*. **visual p.**, rhodopsin.

Purpura (pur'pu-rah) a genus of marine snails, some species of which furnish a purple dye. See *purpurine*.

purpura (pur'pu-rah) [L. "purple"] a group of disorders characterized by purplish or brownish red discoloration, easily visible through the epidermis, caused by hemorrhage into the tissues. Small punctate hemorrhages are called *petechiae*; large hemorrhages are called *ecchymoses* (bruises; black and blue marks). **p. abdomina'lis**, Henoch's p. **allergic p.**, **anaphylactoid p.**, Schönlein-Henoch p. **p. annula'ris telangiectodes**, a rare purpuric eruption, commonly beginning on the lower extremities and becoming generalized, the original punctate erythematous lesions coalescing to form an annular or serpiginous pattern; involution is gradual, sometimes followed by atrophy and loss of hair in the area. Called also *Majocchi's purpura* or *disease*. **brain p.**, cerebral toxic pericapillary hemorrhage. **p. bullo'sa**, pemphigus hemorrhagicus. **fibrinolytic p.**, **p. fibrinolyt'ica**, purpura secondary to and accompanied by increased fibrinolytic activity of the blood; called also *p. thrombolyt'ica*. **p. ful'minans**, a form of nonthrombocytopenic purpura, observed mainly in children, usually following an infectious disease such as scarlet fever, and characterized by fever, shock, anemia, and sudden and rapidly spreading symmetrical skin hemorrhages of the lower extremities, often associated with extensive intravascular thromboses and gangrene. **p. hemorrhha'gica**, thrombocytopenic p., idiopathic. **Henoch's p.**, a variety of Schönlein-Henoch purpura characterized by acute visceral symptoms such as vomiting, diarrhea, abdominal distention, hematuria, and renal colic, and without articular symptoms. Called also *p. nervosa*. **Henoch-Schönlein p.**, Schönlein-Henoch p. **p. hyperglobuline'mica**, originally used to designate prolonged, repetitive episodes of purpura associated with an increase in gamma globulins; no longer considered a specific entity inasmuch as the clinical and laboratory findings are observed in a variety of hematologic conditions. **idiopathic p.**, see *thrombocytopenic p.*, *idiopathic*. **Landouzy's p.**, a term originally used to designate a form of purpura with grave systemic manifestations. **Majocchi's p.**, *p. annularis telangiectodes*. **malignant p.**, epidemic cerebrospinal meningitis. **p. nervo'sa**, Henoch's p. **p. of newborn**, a form of thrombocytopenia observed soon after birth, presumed in certain instances to be due to the passage of anti-platelet factor(s) across the placenta. **nonthrombocytopenic p.**, purpura without any decrease in the platelet count of the blood. **p. pigmento'sa chron'ica**, chronic purpuric dermatosis with hemosiderosis. **psycho-genic p.**, a condition clinically identical with autoerythrocyte sensitization syndrome, but without erythrocyte sensitivity. **p. rheumat'ica**, Schönlein's p. **Schönlein's p.**, Schönlein-Henoch purpura with articular symptoms and without gastrointestinal symptoms. **Schönlein-Henoch p.**, a form of nonthrombocytopenic purpura probably due to a vasculitis of unknown cause, most commonly observed in children and associated with a variety of clinical symptoms including urticaria and erythema, arthropathy and arthritis, gastrointestinal symptoms, and renal involvement. Called also *allergic p.*, *anaphylactoid p.*, and *Schönlein-Henoch disease*. **p. seni'lis**, dark purplish red ecchymoses occurring on the forearms and back of the hands in the elderly. **p. sim'plex**, a general designation for nonthrombocytopenic purpura unaccompanied by defined vascular or intravascular abnormalities. **p. sim'plex, pigmented familial**, a form of nonthrombocytopenic purpura occurring in certain families; an autosomal dominant gene seems to be responsible. **steroid p.**, bizarre-shaped broad hemorrhages beneath the skin of the back of the forearms, hands, or shins caused by attrition of dermal and vascular connective tissue due to long-term treatment with adrenocortical steroid hormones. Identical with purpura senilis in appearance. **thrombocytolytic p.**, fibrinolytic p. **thrombocytopenic p.**, any form of purpura in which the platelet count is decreased; it may be either primary (idiopathic) or secondary. **thrombocytopenic p., idiopathic, throm-**

bocytopenic purpura unassociated with any definable systemic disease but often accompanied by the presence of a serum antiplatelet factor, now characterized as an IgG immunoglobulin. **thrombocytopenic p., secondary**, thrombocytopenic purpura occurring as a consequence of a primary hematologic disease such as leukemia, or an underlying systemic nonhematologic entity. **thrombocytopenic p., thrombotic**, a disease of undefined cause, characterized by thrombocytopenia, hemolytic anemia, bizarre neurological manifestations, azotemia, fever, and thromboses in terminal arterioles and capillaries; called also *microangiopathic hemolytic anemia* and *Moschowitz's disease*. **p. thrombolyt/ica**, fibrinolytic p. **thrombopenic p.**, thrombocytopenic p. **p. variolo/sa** (obs.), hemorrhagic small-pox.

purpurate (pur'pu-rāt) a salt of purpuric acid.

purpureaglycoside (pur-pu're-ah-gli'ko-sid) a cardiac glycoside, $C_4H_7O_{18}$, from the leaves of *Digitalis purpurea* L. (Schrophulariaceae). **p. C.**, see *deslanoside*.

purpuric (pur-pu'rik) of the nature of, pertaining to, or affected with purpura.

purpuriferous (pur'pu-rif'er-us) [L. *purpura* purple + *ferre* to bear] producing a purple pigment.

purpurin (pur'pu-rin) 1. a glycoside from madder root that has been used as a nuclear stain. It is 1,2,4-trihydroxyanthraquinone, $C_{14}H_8(CO)_2C_6H(OH)_3$. 2. uroerythrin. 3. purpurine.

purpurine (pur'pu-rēn) 1. a neurotoxic substance derived from the median zone of the hypobranchial or purple gland of gastropods of the genus *Purpura*, thought to be an ester or a mixture of esters of choline; the substance is called *murexine* when derived from snails of the genus *Murex*. 2. purpurin.

purpurinuria (pur'pu-rin-u're-ah) the presence of uroerythrin in the urine.

purpuriparous (pur'pu-rip'ah-rus) [L. *purpura* purple + *parere* to produce] purpuriferous.

purpurogenous (pur'pu-roj'ē-nus) [L. *purpura* purple + Gr. *gennan* to produce] producing visual purple (rhodopsin).

purr (pur) a low vibratory murmur, or purring sound.

purring (pur'ing) having a tremulous quality, like the purr of a cat.

purshianin (pur-shi'ah-nin) a brown, oily liquid glycoside mixture from *Rhamnus purshiana* D.C. (Rhamnaceae), having laxative action.

Purtscher's disease (angiopathic retinopathy) (poor'cherz) [Otmar Purtscher, Swiss ophthalmologist, 1852-1927] see under *disease*.

puru (poo'roo) the native name in the Malay States for yaws.

purulence (pu'roo-lens) [L. *purulentia*] the condition or fact of being purulent.

purulency (pu'roo-len'se) purulence.

purulent (pu'roo-lent) [L. *purulentus*] consisting of or containing pus; associated with the formation of or caused by pus.

puruloid (pu'roo-loid) resembling pus; puriform.

pus (pus), pl. *pu'ra*, gen. *pu'ris* [L.] a liquid inflammation product made up of cells (leukocytes) and a thin fluid called liquor puris. **anchovy sauce p.**, the brownish pus seen in amebic abscess of the liver. **blue p.**, pus with a bluish tint, seen in certain suppurative infections, the color occurring as a result of the presence of an antibiotic pigment (pyocyanin) produced by *Pseudomonas aeruginosa*. **p. bo'num et laudab'ile**, laudable pus. **burrowing p.**, pus which is not walled off but may extend between fascial planes for considerable distances. **cheesy p.**, thick, nearly solid pus. **curdy p.**, pus mixed with cheesy flakes. **green p.**, pus having a greenish tint. **ichorous p.**, a thin, acrid pus, often having an ill smell, secreted by unhealthy surfaces. **laudable p.**, **p. laudan'dum**, a term once applied to a creamy yellow, inodorous pus, secreted by a healthy granulating surface, and regarded as indicative of less danger than other varieties. **sanious p.**, bloody pus, often ichorous and ill smelling.

Pusey's emulsion (pu'sēz) [William Allen Pusey, American dermatologist, 1865-1940] see under *emulsion*.

pustula (pus'tu-lah), pl. *pus'tulae* [L.] pustule.

pustular (pus'tu-lar) pertaining to or of the nature of a pustule; consisting of pustules.

pustulation (pus'tu-la'shun) the formation of pustules.

pustule (pus'tūl) [L. *pustula*] a visible collection of pus within or beneath the epidermis, often in a hair follicle or sweat pore. **multilocular p.**, a pustule with several compartments, indicating origin from a spongiotic vesicle within the epidermis rather than from infection arising in a follicle or sweat pore, or beneath the epidermis. **primary p.**, one formed without any previous lesion. **secondary p.**, one which is preceded by a vesicle or papule. **simple p.**, unilocular p. **spongiform p.** of Kogoj, a multilocular microabscess formed in the epidermis by spongiosis, followed by infiltration with large numbers of polymorphonuclear leukocytes, as in acrodermatitis continua and impetigo herpetiformis. **unilocular p.**, one consisting of a single cavity filled with pus, suggesting origin within a follicle or sweat

pore or from beneath the epidermis, rather than within it; called also *simple p.*

pustulosis (pus'tu-lo'sis) a condition marked by an outbreak of pustules. **p. vaccinifor'mis acu'ta**, **p. variolifor'mis acu'ta**, Kaposi's varicelliform eruption; see under *eruption*.

putamen (pu-ta'men) [L. "shell"] [NA] the larger and more lateral part of the lentiform nucleus, separated from the globus pallidus by the lateral medullary lamina.

Putnam type (put'nam) [James Jackson Putnam, Boston neurologist, 1846-1918] subacute combined degeneration of the spinal cord; see under *degeneration*.

Putnam-Dana syndrome (put'nam-da'nah) [J. J. Putnam; Charles Loomis Dana, neurologist in New York, 1852-1935] subacute combined degeneration of spinal cord (see under *degeneration*).

putrefaction (pu'trē-fak'shun) [L. *putrefactio*] enzymic decomposition, especially of proteins, with the production of foul-smelling compounds, such as hydrogen sulfide, ammonia, and mercaptans. Cf. *fermentation*.

putrefactive (pu'trē-fak'tiv) pertaining to or of the nature of putrefaction.

putrefy (pu'trē-fi) to decompose, with the production of foul-smelling compounds; a term applied especially to the decomposition of proteins and organic matter.

putrescence (pu-tres'ens) partial or complete rottenness.

putrescent (pu-tres'ent) [L. *putrescens* decaying] rotting; undergoing putrefaction.

putrescine (pu-tres'in) chemical name: tetra-methylene-diamine. A polyamine, $NH_2(CH_2)_4NH_2$, first found in decaying animal tissues but now known to occur in almost all tissues and in cultures of certain bacteria. It is formed by decarboxylation of ornithine and is itself a precursor of spermidine.

putrid (pu'trid) [L. *putridus*] characterized by putrefaction; rotten or corrupt.

putrilage (pu'trī-lij) [L. *putrilago*] putrescent or putrid matter.

putromaine (pu-tro'mān) any poison produced by the decomposition of food within the living body.

putty (put'e) a pliable, sticky material. **Horsley's p.**, see under *wax*.

Puusepp's operation, reflex (poos'eps) [Lyudvig Martinovich Puusepp, Estonian neurosurgeon, 1875-1942] see under *operation* and *reflex*.

PVP, polyvinylpyrrolidone.

PVP-I povidone-iodine.

Px, pneumothorax.

pyarthrosis (pi'ar-thro'sis) [Gr. *pyon* pus + *arthron* joint + *-osis*] suppurative within a joint cavity; acute suppurative arthritis.

Pycnanthemum (pik-nan'the-mum) [Gr. *pyknos* dense + *anthe-mon* bloom] a genus of American mints, called *mountain basil* and *mountain mint*, aromatic and carminative; resembling pennyroyal and spearmint in taste and smell.

pycno- for words thus beginning, see those beginning *pykno-*.

pyecchysis (pi-ek'ki'sis) [Gr. *pyon* pus + *ek* out + *chein* to pour] the effusion of purulent matter.

pyel- see *pyelo-*.

pyelectasia (pi'ē-lek-ta'ze-ah) pyelectasis.

pyelectasis (pi'ē-lek'tah-sis) [*pyel-* + Gr. *ektasis* distention] dilatation of the renal pelvis.

pyelic (pi-el'ik) pertaining to the pelvis of the kidney.

pyelitic (pi'ē-lit'ik) pertaining to or affected with pyelitis.

pyelitis (pi'ē-li'tis) [*pyel-* + *-itis*] inflammation of the pelvis of the kidney. It is attended by pain and tenderness in the loins, irritability of the bladder, remittent fever, bloody or purulent urine, diarrhea, vomiting, and a peculiar pain on flexion of the thigh. See also *pyelonephritis*. **calculous p.**, that which is caused by calculi. **p. cystica**, pyelitis with the formation of multiple submucosal cysts. **defloration p.**, pyelitis in women after the first sexual intercourse, as a result of infection following rupture of the hymen. **encrusted p.**, pyelitis with ulcers which are encrusted with urinary salts. **p. glandula'ris**, pyelitis with conversion of transitional mucosal into cylindrical epithelium, with formation of glandular acini. **p. granulo'sa**, pyelitis marked by the presence of exuberant granulations. **p. grvida'rum**, inflammation of the kidney and ureter occurring in pregnancy. **hematogenous p.**, pyelitis in which the infection comes from the blood. **hemorrhagic p.**, that which is attended with hemorrhage. **suppurative p.**, a form with development of pus which causes abscess of the kidney, or pyonephrosis. **urogenous p.**, pyelitis in which the infection comes from the urine.

pyelo-, pyel- [Gr. *pyelos* pelvis] combining form denoting relationship to the pelvis of the kidney.

pyelocaliectasis (pi'ē-lo-kal'e-ek'tah-sis) [*pyelo-* + *calix* + *ektasis* distention] dilatation of the kidney pelvis and calices.

pyelocystanastomosis (pi'ē-lo-sist'ah-nas'to-mo'sis) pyelocystostomosis.

pyelocystitis (pi'ē-lo-sis-ti'tis) [*pyelo-* + Gr. *kystis* bladder + *-itis*] inflammation of the renal pelvis and of the bladder.

pyelocystostomosis (pi'ē-lo-sis'to-sto-mo'sis) [*pyelo-* + Gr. *kystis* bladder + *anastomosis*] the surgical formation of a communication between the renal pelvis and the bladder.

pyelofluoroscopy (pi'ē-lo-floo'o-ro-sko-pe) examination of the renal pelvis by means of the fluoroscope.

pyelogram (pi'ē-lo-gram') [*pyelo-* + Gr. *gramma* mark] a roentgenogram of the kidney and ureter, especially showing the pelvis of the kidney. **dragon p.**, bizarre forms in the pyelogram seen in polycystic kidney.

pyelograph (pi'ē-lo-graf) pyelogram.

pyelography (pi'ē-log'rah-fe) [*pyelo-* + Gr. *graphein* to draw] roentgenography of the renal pelvis and ureter after the structures have been filled with a contrast solution. **air p.**, pneumopyelography. **antegrade p.**, that in which the contrast medium is introduced by percutaneous needle puncture into the renal pelvis. **ascending p.**, retrograde p. **p. by elimination**, intravenous p. **excretion p.**, intravenous p. **intravenous p.**, pyelography in which an intravenous injection is made of a contrast medium which passes quickly into the urine. **lateral p.**, pyelography in which the patient lies in lateral position with his questionable side next to the film. **respiration p.**, pyelography with a diphasic film showing the kidney under several phases of the respiratory cycle. **retrograde p.**, pyelography in which the contrast fluid is injected into the renal pelvis through the ureter. **wash-out p.**, that in which the roentgenogram is taken after the kidneys have been filled with a contrast solution and then "washed-out" by water diuresis; this procedure increases the contrast between a normal and a malfunctioning kidney.

pyeloileocutaneous (pi'ē-lo-il'e-o-ku-ta'ne-us) pertaining to the kidney pelvis, ileum, and skin; see under *anastomosis*.

pyelointerstitial (pi'ē-lo-in'ter-stish'al) pertaining to the interstitial tissue of the renal pelvis.

pyelolithotomy (pi'ē-lo-li-thot'o-me) [*pyelo-* + Gr. *lithos* stone + *tomē* a cutting] the operation of excising a renal calculus from the pelvis of the kidney.

pyelometry (pi'ē-lom'e-tre) [*pyelo-* + Gr. *metron* measure] the measurement by tracings of the waves of contraction and relaxation of the renal pelvis, recorded by changes of pressure through a ureteral catheter.

pyelonephritis (pi'ē-lo-nē-fri'tis) [*pyelo-* + Gr. *nephros* kidney + *-itis*] inflammation of the kidney and its pelvis, beginning in the interstitium and rapidly extending to involve the tubules, glomeruli, and blood vessels; due to bacterial infection. **acute p.**, pyelonephritis of sudden onset characterized by fever, shaking chills, pain in the costovertebral region or flanks, and symptoms of bladder inflammation; it is a self-limited bacterial disease caused most often by gram-negative enteric bacilli. **chronic p.**, pyelonephritis attributed to cicatricial effects of a previous infection or to recurring or progressive infection. Typically, it is of insidious onset, manifested by symptoms of chronic renal insufficiency, with fatigue, headache, loss of appetite, weight loss, excessive thirst, and polyuria. **p. of pregnancy**, a renal infection during pregnancy characterized by dilatation of the renal pelvis and the ureters; some degree of ureteric obstruction may be caused by the gravid uterus.

pyelonephrosis (pi'ē-lo-nē-fro'sis) [*pyelo-* + Gr. *nephros* kidney + *-osis*] any disease of the kidney and its pelvis.

pyelopathy (pi'ē-lo-pah-the) [*pyelo-* + Gr. *pathos* disease] any disease of the renal pelvis.

pyelophlebitis (pi'ē-lo-fle-bi'tis) [*pyelo-* + Gr. *phleps* vein + *-itis*] inflammation of the veins of the renal pelvis.

pyeloplasty (pi'ē-lo-plas'te) [*pyelo-* + Gr. *plassein* to form] a plastic operation on the pelvis of the kidney.

pyeloplication (pi'ē-lo-pli-ka'shun) [*pyelo-* + L. *plica* fold] reduction in size of a dilated renal pelvis by infolding its walls by Lambert sutures.

pyeloscopy (pi'ē-lo-sko-pe) [*pyelo-* + Gr. *skochein* to examine] observation of the kidney pelvis under the fluoroscope after intravenous or retrograde injection of a contrast medium.

pyelostomy (pi'ē-lo-s-to-me) [*pyelo-* + Gr. *stomoun* to provide with an opening, or mouth] the operation of forming an opening into the renal pelvis for the purpose of temporarily diverting the urine from the ureter.

pyelotomy (pi'ē-lo-t'o-me) [*pyelo-* + Gr. *tomē* a cutting] incision of the pelvis of the kidney.

pyeloureterectasis (pi'ē-lo-u-re'ter-ek'tah-sis) dilatation of a renal pelvis and a ureter.

pyeloureterography (pi'ē-lo-u-re'ter-og'rah-fe) pyelography.

pyeloureterolysis (pi'ē-lo-u-re'ter-ol'i-sis) [*pyelo-* + *ureter* + Gr. *lysis* dissolution] the surgical freeing of fibrous bands or adhesions near the junction of the kidney pelvis and ureter.

pyeloureteroplasty (pi'ē-lo-u-re'ter-o-plas'te) plastic operation on the renal pelvis and ureter.

pyelovenous (pi'ē-lo-ve'nus) pertaining to the kidney pelvis and renal veins.

pyemesis (pi-em'ē-sis) [Gr. *pyon* pus + *emesis* vomiting] vomiting of purulent matter.

pyemia (pi-e'me-ah) [Gr. *pyon* pus + *haima* blood + *-ia*] a general septicemia in which secondary foci of suppuration occur and multiple abscesses are formed. The condition is marked by fever, chills, sweating, jaundice, and abscess in various parts of the body. Called also *metastatic infection*. **arterial p.**, a form due to the dissemination of septic emboli from the heart. **cryptogenic p.**, that in which the source of infection is in an unidentified tissue. **otogenous p.**, that which originates from inflammation in the ear. **portal p.**, suppurative pyelophlebitis; see *pyelophlebitis*.

pyemic (pi-e'mik) pertaining to or marked by pyemia.

Pyemotes (pi-ē-mo'tez) a genus of parasitic mites; formerly called *Pediculoides*. **P. ventricosus**, a predaceous mite which attacks the larvae of a number of insects. Found in the straw of various cereals, it produces a vesiculopapular dermatitis (grain itch) in man. Formerly known as *Pediculoides ventricosus* and *Acarus tritici*.

pyencephalus (pi'en-set'ah-lus) [Gr. *pyon* pus + *enkephalos* brain] abscess of the brain.

pyesis (pi-e'sis) suppuration.

pygal (pi'gal) [Gr. *pygē* rump] pertaining to the buttocks; natal.

pygalgia (pi-gal'je-ah) [*pygo-* + *-algia*] pain in the buttocks.

pygist (pi'jist) [Gr. *pygē* rump] a pederast.

pygmalionism (pig-ma'le-on-izm) [*Pygmalion*, a Greek sculptor who fell in love with a statue he had carved] the falling in love with an object made by one's self.

pygmy (pig'me) [Gr. *pygmaios* dwarfish] a small individual; a dwarf.

pygo- [Gr. *pygē* rump] a combining form denoting relationship to the buttocks.

pygoamorphus (pi'go-ah-mor'fus) asymmetrical conjoined twins, in which the parasite, or teratoma, is an amorphous mass attached to the sacral region of the autosome.

pygodidymus (pi'go-did'i-mus) [*pygo-* + Gr. *didymos* twin] a fetus with double hips and pelvis.

pygomelus (pi-gom'ē-lus) [*pygo-* + Gr. *melos* limb] a fetus with a supernumerary limb or limbs attached to or near the buttock.

pygopagus (pi-gop'ah-gus) [*pygo-* + Gr. *pagos* thing fixed] a double monster consisting of two nearly complete individuals joined at the sacrum, so the two components are back to back. **p. parasiticus**, an asymmetrical double monster in which the parasitic component is attached to the sacral region of the autosome.

pygopagy (pi-gop'ah-je) the condition of being a pygopagus.

pyic (pi'ik) of or pertaining to pus.

pyin (pi'in) [Gr. *pyon* pus] an albuminoid mucus-like substance found in pus, and separated from it by adding sodium chloride and filtering.

pyknic (pik'nik) [Gr. *pyknos* thick] having a short, thick, stocky build. Cf. *macroplanchnic* and *microplanchnic*.

pykno- [Gr. *pyknos* thick, frequent] a combining form meaning thick, compact, or frequent.

pyknocyte (pik'no-sit) a distorted and contracted, occasionally spiculed erythrocyte normally occurring in small numbers in the full-term infant, but in greater numbers in hemolytic disorders.

pyknocytoma (pik'no-si-to'mah) oxyphilic granular cell adenoma.

pyknocytosis (pik'no-si-to'sis) conspicuous increases in the numbers of pyknocytes.

pyknodysostosis (pik'no-dis'os-to'sis) a symptom complex inherited as an autosomal recessive trait, consisting of dwarfism, osteopetrosis, partial agenesis of the terminal digits of the hands and feet, cranial anomalies, frontal and occipital bossing, and hypoplasia of the angle of the mandible.

pyknoepilepsy (pik'no-ep'i-lep'se) [*pykno-* + Gr. *epilepsia* seizure] petit mal epilepsy.

pyknolepsy (pik'no-lep'se) [*pykno-* + Gr. *lepis* seizure] petit mal epilepsy.

pyknometer (pik-nom'ē-ter) [*pykno-* + Gr. *metron* measure] an instrument for determining the specific gravity of fluids.

pyknometry (pik-nom'ē-tre) measurement by the pyknometer.

pyknomorphic (pik'no-mor'fik) pyknomorphous.

pyknomorphous (pik'no-mor'fus) [*pykno-* + Gr. *morphē* form] having the stainable elements compactly arranged; a term applied to certain nerve cells.

pyknophrasia (pik'no-fra'ze-ah) [*pykno-* + Gr. *phrasis* speech + *-ia*] thickness of speech.

pyknoplasson (pik'no-plas'on) [*pykno-* + *plasson*] the plasson in its unexpanded form. Cf. *chasmatoplasson*.

pyknosis (pik-no'sis) [Gr. *pyknōsis* condensation] a thickening, especially degeneration of a cell in which the nucleus shrinks in size and the chromatin condenses to a solid, structureless mass or masses.

pyknotic (pik-not'ik) [Gr. *pyknōtikos*] 1. serving to close the pores. 2. pertaining to pyknosis.

pyle- [Gr. *pylē* gate] a combining form denoting relationship to the portal vein.

pylephlebectasis (pi'le-fle-bek'tah-sis) [*pyle-* + Gr. *phleps* vein + *ektasis* dilatation] dilatation of the portal vein.

pylephlebitis (pi'le-fle-bi'tis) [*pyle-* + Gr. *phleps* vein + *-itis*] inflammation of the portal vein; it usually results from intestinal disease. Suppurative pylephlebitis, or portal pyemia, is marked by symptoms of pyemia. **adhesive p.**, inflammation of the portal vein producing thrombosis; pylethrombophlebitis.

pylethrombophlebitis (pi'le-throm'bo-fle-bi'tis) [*pyle-* + Gr. *thrombos* clot of blood + *phleps* vein + *-itis*] thrombosis and inflammation of the portal vein.

pylethrombosis (pi'le-throm-bo'sis) thrombosis of the portal vein, as in adhesive pylephlebitis.

pylic (pi'lik) [Gr. *pylē* gate] pertaining to the portal vein.

pylometer (pi-lom'ē-ter) [Gr. *pylē* gate + *metron* measure] an instrument for measuring obstruction at the ureteral opening of the bladder.

pylon (pi'lon) a temporary artificial leg.

pyloralgia (pi'lo-ral'je-ah) [*pylorus* + Gr. *algos* pain + *-ia*] pain in the region of the pylorus.

pylorectomy (pi'lo-rek'to-me) [*pylorus* + Gr. *ektomē* excision] excision of the pylorus.

pyloric (pi-lor'ik) pertaining to the pylorus or to the pyloric part of the stomach (pars pylorica ventriculi).

pyloristhenosis (pi-lor'e-stē-no'sis) [*pylorus* + Gr. *stenōsis* narrowing] stenosis, or narrowing, of the caliber of the pylorus; pyloric stenosis.

pyloritis (pi'lo-ri'tis) inflammation of the pylorus.

pyloro- (pi-lor'o) [Gr. *pylōros*, from *pylē* gate + *ouros* guard] a combining form denoting relationship to the pylorus.

pylorodiosis (pi-lor'o-di-o'sis) [*pyloro-* + Gr. *diōsis* pushing asunder] the operation of dilating a stricture of the pylorus with the finger, which is inserted either directly through a gastrotomy incision (*Loreta's method*) or indirectly by invaginating the anterior gastric wall (*Hahn's method*).

pyloroduodenitis (pi-lor'o-du'o-de-ni'tis) inflammation of the pyloric and duodenal mucosa.

pylorogastrectomy (pi-lor'o-gas-trek'to-me) excision of the pylorus and adjacent portion of the stomach.

pyloromyotomy (pi-lor'o-mi-ot'o-me) incision of the longitudinal and circular muscles of the pylorus; Fredet-Ramstedt's operation.

pyloroplasty (pi-lor'o-plas'te) [*pyloro-* + Gr. *plassein* to form] a plastic operation to relieve pyloric obstruction or to accelerate gastric emptying. **double p.**, posterior pyloromyotomy combined with the Heineke-Mikulicz pyloroplasty. **Finney p.**, enlargement of the pyloric canal by means of a longitudinal incision through the pylorus and adjacent walls of the stomach and duodenum and the establishment of an inverted U-shaped anastomosis between the stomach and duodenum. **Heineke-Mikulicz p.**, enlargement of a pyloric stricture by incising the pylorus longitudinally and suturing the incision transversely.

pyloroptosis (pi'lo-ro-to'sis) [*pyloro-* + Gr. *ptōsis* falling] (*obs.*) displacement of the pyloric end of the stomach.

pyloroscopy (pi'lo-ros'ko-pe) [*pyloro-* + Gr. *skopein* to examine] inspection of the pylorus with an endoscope.

pylorospasm (pi-lor'o-spazm) [*pyloro-* + Gr. *spasmos* spasm] spasm of the pylorus or of the pyloric portion of the stomach.

congenital p., spasm of the pylorus in infants due to prenatal conditions. **reflex p.**, pylorospasm due to extragastric conditions.

pylorostenosis (pi-lor'o-stē-no'sis) pyloristhenosis.

pylorostomy (pi'lo-ros'to-me) [*pyloro-* + Gr. *stomoun* to provide with an opening, or mouth] surgical formation of an opening through the abdominal wall into the stomach near the pylorus.

pylorotomy (pi'lo-rot'o-me) [*pyloro-* + Gr. *tomē* a cutting] surgical incision of the pylorus.

pylorus (pi-lor'us) [Gr. *pyloros*, from *pylē* gate + *ouros* guard] [NA] the distal aperture of the stomach surrounded by a strong band of circular muscle, and through which the stomach contents are emptied into the duodenum. It is variously used to mean pyloric part of the stomach, pyloric antrum, pyloric canal, pyloric opening, and pyloric sphincter.

pyo- [Gr. *pyon* pus] a combining form denoting relationship to pus.

pyoarthrosis (pi'o-ar-thro'sis) pyarthrosis.

pyoblennorrhea (pi'o-blen'o-re'ah) suppurative blennorrhea.

pyocalix (pi'o-ka'liks) the presence of pus in a calix of the renal pelvis.

pyocele (pi'o-sēl) [*pyo-* + Gr. *kēlē* hernia] distention of a cavity or tube with pus due to retention; as an accumulation of pus in the scrotum.

pyocelia (pi'o-se'le-ah) [*pyo-* + Gr. *koilia* cavity] pus in the abdominal cavity.

pyocephalus (pi'o-sef'ah-lus) [*pyo-* + Gr. *kephalē* head] the presence of purulent fluid in the cerebral ventricles.

pyochezia (pi'o-ke'ze-ah) [*pyo-* + Gr. *chezein* to defecate + *-ia*] presence of pus in the stools.

pyococcic (pi'o-kok'sik) pertaining to or produced by pus-forming cocci.

pyococcus (pi'o-kok'us) any pus-forming coccus.

pyocolpocele (pi'o-kol'po-sēl) [*pyo-* + Gr. *kolpos* vagina + *kēlē* tumor] a tumor of the vagina containing pus.

pyocolpos (pi'o-kol'pos) [*pyo-* + Gr. *kolpos* vagina] a collection of pus within the vagina.

pyoculture (pi'o-kul'tūr) [*pyo-* + *culture*] the comparison of a bacteriologic culture of pus with uncultured pus from the same lesion, as an indication of the resistance of the patient to the infection.

pyocyanase (pi'o-si'ah-nās) an antibacterial material from cultures of *Pseudomonas aeruginosa* (*pyocyanea*), which is bactericidal for many bacteria and lytic for some (*Vibrio comma*). It is composed of three fractions, one of which is the blue pigment, pyocyanin.

pyocyanic (pi'o-si-an'ik) pertaining to blue pus, or to *Pseudomonas aeruginosa* (*P. pyocyanea*).

pyocyanin (pi'o-si'ah-nin) [*pyo-* + Gr. *kyanos* blue + *-in*, a chemical suffix] a blue-green antibiotic pigment produced by *Pseudomonas aeruginosa*; it gives the color to blue pus.

pyocyanogenic (pi'o-si'ah-no-jen'ik) producing pyocyanin.

pyocyanosis (pi'o-si'ah-no'sis) any disease due to infection with *Pseudomonas aeruginosa* (*P. pyocyanea*).

pyocyst (pi'o-sist) [*pyo-* + *cys*] a cyst containing pus.

pyocystitis (pi'o-sis'tis) pus in the urinary bladder.

pyoderma (pi'o-der'mah) [*pyo-* + Gr. *derma* skin] any purulent skin disease. **chancriform p.**, **p. chancriforme faciei**, an ulcerated nodular solitary lesion of the face resembling a chancre. **p. facia/le**, a condition characterized by formation of a few or many abscesses and cysts on the face, with intense erythema, and sinus tracts linking the deep-seated lesions. Untreated, the lesions persist for months, and leave severe scars. **p. gangreno'sum**, a rapidly evolving cutaneous ulcer or ulcers, characterized by marked undermining of the border; once regarded as a complication peculiar to ulcerative colitis, it also occurs with other wasting diseases. **p. veg'etans**, dermatitis vegetans. **p. verruco'sum**, **verrucous p.**, dermatitis vegetans.

pyodermatitis (pi'o-der'mah-ti'tis) (*obs.*) pyoderma. **p. veg'etans**, dermatitis vegetans.

pyodermatosis (pi'o-der'mah-to'sis) (*obs.*) pyoderma.

pyodermia (pi'o-der'me-ah) pyoderma.

pyodermitis (pi'o-der-mi'tis) (*obs.*) pyoderma. **p. veg'etans**, dermatitis vegetans.

pyofecia (pi'o-fe'se-ah) pus in the feces.

pyogenesis (pi'o-jen'ē-sis) [*pyo-* + Gr. *genesis* production] the formation of pus; pyopoeisis.

pyogenic (pi'o-jen'ik) producing pus; pyopoeitic.

pyogenin (pi-oj'e-nin) a compound, C₆₃H₁₂₈N₂O₁₉, derived from the body of pus cells.

pyogenous (pi-oj'ē-nus) caused by pus.

pyohemia (pi'o-he'me-ah) pyemia.

pyohemothorax (pi'o-he'mo-tho'raks) [*pyo-* + Gr. *haima* blood + *thōrax* chest] a collection of pus and blood in the pleural space.

pyohydronephrosis (pi'o-hi'dro-nēfro'sis) the accumulation of pus and urine in the kidney.

pyoid (pi'oid) [*pyo-* + Gr. *eidos* form] 1. resembling pus. 2. a puslike substance from raw or granulating surfaces, but free from bacteria and nontoxic.

pyolabyrinthitis (pi'o-lab'i-rin-thi'tis) inflammation of the labyrinth of the ear, with suppuration.

pyometra (pi'o-me'trah) [*pyo-* + Gr. *mētra* womb] an accumulation of pus within the uterus.

pyometritis (pi'o-mē-tri'tis) purulent inflammation of the uterus.

pyometrium (pi'o-me'tre-um) pyometra.

pyomyositis (pi'o-mi'o-si'tis) myositis purulenta. **tropical p.**, a disease of West Africa characterized by fever and the development of suppurating tumors in the muscles; it is probably caused by *Staphylococcus albus* and *S. aureus*. Called also *bung pagga*.

pyonephritis (pi'o-nē-fri'tis) purulent inflammation of the kidney.

pyonephrolithiasis (pi'o-nef'ro-li-thi'ah-sis) [*pyo-* + Gr. *nephros* kidney + *lithos* stone + *-iasis*] the presence of stones and pus in the kidney.

pyonephrosis (pi'o-nēfro'sis) [*pyo-* + Gr. *nephros* kidney + *-osis*]

suppurative destruction of the parenchyma of the kidney, with total or almost complete loss of renal function.

pyonephrotic (pi''o-nē-frot'ik) pertaining to or characterized by pyonephrosis.

pyonychia (pi''o-nik'e-ah) [pyo- + Gr. *onyx* nail + -ia] paronychia.

pyo-ovarium (pi''o-o-va're-um) abscess of an ovary.

Pyopen (pi'o-pen) trademark for a preparation of carbenicillin disodium.

pyopericarditis (pi''o-per'ī-kar-di'tis) purulent inflammation of the pericardium.

pyopericardium (pi''o-per'ī-kar-de-um) the presence of pus in the pericardial cavity.

pyoperitoneum (pi''o-per'ī-to-ne'um) [pyo- + *peritoneum*] pus in the peritoneal cavity.

pyoperitonitis (pi''o-per'ī-to-ni'tis) purulent inflammation of the peritoneum.

pyophagia (pi''o-fa'je-ah) [pyo- + Gr. *phagein* to eat] the swallowing of pus.

pyophthalmia (pi''of-thal'me-ah) a suppurative condition of the eye.

pyophthalmitis (pi''of-thal-mi'tis) purulent inflammation of the eye.

pyophylactic (pi''o-fi-lak'tik) [pyo- + Gr. *phylaktikos* guarding] serving as a defense against purulent infection.

pyophysometra (pi''o-fi''so-me'trah) [pyo- + Gr. *physa* air + *mētra* uterus] a collection of pus and gas in the uterus.

pyoplasia (pi''o-pla'ne-ah) [pyo- + Gr. *planē* wandering] wandering of pus from one part to another.

pyopneumocholecystitis (pi''o-nu''mo-ko''le-sis-ti'tis) [pyo- + Gr. *pneuma* air + *cholecyst* + -itis] distention of the gallbladder with pus and gas.

pyopneumocyst (pi''o-nu''mo-sist) [pyo- + Gr. *pneuma* air + *cyst*] a cyst containing pus and gas.

pyopneumohepatitis (pi''o-nu''mo-hep'ah-ti'tis) abscess of the liver with pus and gas in the abscess cavity.

pyopneumopericardium (pi''o-nu''mo-per'ī-kar-de-um) [pyo- + Gr. *pneuma* air + *pericardium*] the presence of pus and gas in the pericardial cavity.

pyopneumoperitoneum (pi''o-nu''mo-per'ī-to-ne'um) the presence of pus and gas in the peritoneal cavity.

pyopneumoperitonitis (pi''o-nu''mo-per'ī-to-ni'tis) [pyo- + Gr. *pneuma* air + *peritonitis*] peritonitis with the presence of pus and gas in the peritoneal cavity.

pyopneumothorax (pi''o-nu''mo-tho'raks) [pyo- + Gr. *pneuma* air + *thōrax* chest] a collection of pus and air or gas in the pleural cavity.

pyopoesis (pi''o-poi-e'sis) [pyo- + Gr. *poiein* to make] the formation of pus; pyogenesis.

pyopoietic (pi''o-poi-et'ik) producing pus; pyogenic.

pyoptysis (pi-op'ti-sis) [pyo- + Gr. *ptysis* spitting] spitting of purulent matter.

pyopyelectasis (pi''o-pi''ē-lek'tah-sis) [pyo- + Gr. *pyelos* pelvis + *ektasis* dilatation] dilatation of the renal pelvis with purulent fluid.

pyorrhea (pi''o-re'ah) [pyo- + Gr. *rhoia* flow] a discharge of pus. **p. alveola'ris**, compound periodontitis. **paradental p.**, pyorrhea in which the pockets are deep and the discharge of pus persists in spite of the removal of all local irritation. **Schmutz p.**, paradental p. with a pocket formation around the tooth with pus, caused by unhygienic local conditions.

pyorrhoeal (pi''o-re'al) pertaining to or characterized by pyorrhea.

pyorubin (pi''o-roo'bin) a bright-red, water-soluble, nonfluorescent pigment produced by *Pseudomonas aeruginosa*.

pyosalpingitis (pi''o-sal-pin-jī'tis) [pyo- + Gr. *salpinx* tube + -itis] purulent salpingitis.

pyosalpingo-oophoritis (pi''o-sal-ping'go-o''of-o-ri'tis) inflammation of the ovary and oviduct, with the formation and accumulation of pus.

pyosalpingo-oothecitis (pi''o-sal-ping'go-o''o-the-si'tis) pyosalpingo-oophoritis.

pyosalpinx (pi''o-sal/pinks) [pyo- + Gr. *salpinx* tube] a collection of pus in an oviduct.

pyosapremia (pi''o-sap-re'me-ah) [pyo- + Gr. *sapros* rotten + *haima* blood + -ia] infection of the blood with purulent matter.

pyosclerosis (pi''o-skle-ro'sis) an inflammatory, purulent sclerosis.

pyosepticemia (pi''o-sep'ti-se'me-ah) pyemia combined with septicemia.

pyosin (pi'o-sin) a compound, C₅₇H₁₁₀N₂O₁₅, derived from the plasma of pus cells.

pyosis (pi-o'sis) (obs.) suppuration.

pyospermia (pi''o-sper'me-ah) [pyo- + Gr. *sperma* seed + -ia] presence of pus in the semen.

pyostatic (pi''o-stat'ik) [pyo- + Gr. *statikos* halting] 1. arresting suppuration. 2. an agent that arrests the formation of pus.

pyostomatitis (pi''o-sto''mah-ti'tis) inflammation of the mouth with suppuration. **p. veg'etans**, inflammation of the mouth beginning with minute flat miliary abscesses of uniform size, tending to conglomerate and spreading to involve the whole mouth, the mucosa becoming proliferative, soft, red, folded, and verrucose; it is sometimes associated with ulcerative colitis.

pyotherapy (pi''o-ther'ah-pe) [pyo- + Gr. *therapeia* treatment] treatment with pus.

pyothorax (pi''o-tho'raks) [pyo- + Gr. *thōrax* chest] thoracic empyema.

pyotoxinemia (pi''o-tok''si-ne'me-ah) [pyo- + *toxin* + Gr. *haima* blood + -ia] presence in the blood of the toxins of pus-forming organisms.

pyoumbilicus (pi''o-um-bil'i-kus) infection of the umbilicus.

pyourachus (pi''o-u'rah-kus) the presence of pus in the urachus.

pyoureter (pi''o-u-re'ter) [pyo- + *ureter*] an accumulation of pus in a ureter.

pyovesiculosis (pi''o-vē-sik''u-lo'sis) an accumulation of pus in the seminal vesicles.

pyoxanthine (pi''o-zan'thin) a brownish red pigment derivable by oxidation from pyocyanin.

pyoxanthose (pi''o-zan'thōs) [pyo- + Gr. *xanthos* yellow] a yellow pigment produced by the oxidation of pyocyanin in blue pus when exposed to air.

pyrabrom (pēr'ah-brom) chemical name: 8-bromotheophylline compound with 2-[[2-dimethylamino) ethyl] (p-methoxyenzyl) aminopyridine (1:1); an antihistaminic, C₂₄H₃₀BrN₃O₃.

pyracin (pi'rah-sin) a derivative of pyridoxine.

Pyralis (pēr'ah-lis) a genus of small, widely distributed moths. **P. farina'lis**, the grain-infesting meal moth that serves as an intermediate host of helminthic parasites, such as *Hymenolepis*.

pyramid (pēr'ah-mid) [Gr. *pyramis*] a pointed or cone-shaped structure or part; called also *pyramis* [NA]. The term is often used alone to indicate the pyramis medullae oblongatae. **p. of cerebellum**, pyramis vermis. **p. of Ferrein**, pars radiata lobuli corticalis renalis. **p's of kidney**, pyramides renales; see under *pyramis*. **Lalouette's p.**, lobus pyramidalis glandulae thyroideae. **p. of light**, a triangular reflection seen upon the membrana tympani. **Malacarne's p.**, the posterior end of the pyramid of the vermis. **p's of Malpighi**, pyramides renales; see under *pyramis*. **p. of medulla oblongata**, pyramis medullae oblongatae. **p. of medulla oblongata, anterior (obs.)**, pyramis medullae oblongatae. **p. of medulla oblongata, posterior (obs.)**, fasciculus gracilis medullae oblongatae. **olfactory p. (obs.)**, trigonum olfactorium. **petrous p.**, pars petrosa ossis temporalis. **renal p's**, pyramides renales; see under *pyramis*. **p. of temporal bone**, pars petrosa ossis temporalis. **p. of temporal bone, of Arnold**, pars mastoidea ossis temporalis. **p. of thyroid**, lobus pyramidalis glandulae thyroideae. **p. of tympanum**, eminentia pyramidalis. **p. of vermis**, pyramis vermis. **p. of vestibule**, pyramis vestibuli. **Wistar's p's**, see *concha sphenoidalis*.

pyramidal (pi-ram'i-dal) [L. *pyramidalis*] shaped like a pyramid; see also under *tract*.

pyramidale (pi-ram'i-da'le) os triquetrum.

pyramidalis (pi-ram'i-da'lis) [L.] pyramidal.

pyramides (pi-ram'i-dēz) [Gr.] plural of *pyramis*.

Pyramidon (pi-ram'i-don) trademark for a preparation of aminopyrine.

pyramidotomy (pēr'am-i-dot'o-me) section of the pyramidal tract.

pyramis (pēr'ah-mis), pl. *pyram'ides* [Gr.] pyramid; [NA] a general term for a part or structure resembling a pyramid. **p. cerebel'li**, p. vermis. **pyram'ides Malpig'hii**, pyramides renales. **p. medul'lae oblonga'tae** [NA], pyramid of medulla oblongata: either of two rounded masses, one on either side of the anterior median fissure of the medulla oblongata, composed of motor fibers (pyramidal tract) from the cerebral cortex to the spinal cord and medulla oblongata. **p. os'sis tempora'lis**, pars petrosa ossis temporalis. **pyram'ides rena'les** [NA], **pyram'ides rena'les** [Malpig'hii], renal pyramids: the conical masses that make up the medullary substance of the kidney; they contain the loops of Henle, the collecting ducts, and the arterioles rectae renalis. **p. ver'mis** [NA], pyramid of vermis: the part of the vermis of the cerebellum between the tuber vermis and the uvula. **p. vestib'uli** [NA], pyramid of vestibule: the triangular-shaped anterior end of the vestibular crest.

pyran (pi'ran) 1. a cyclic compound, C₆H₆O, in which the ring consists of 5 carbon atoms and 1 oxygen atom. 2. (obs.) an antineuralgic and antirheumatic preparation of benzoic acid, salicylic acid, and thymol.

pyranisamine maleate (pi'rah-nis'ah-mēn) pyrilamine maleate.

pyranose (pi'rah-nōs) a hexose in which the oxygen ring bridges carbon atoms 1 and 5 in the aldoses or carbon atoms 2 and 6 in the ketoses.

pyrantel (pi-ran'tel) chemical name: (E)-1,4,5,6-tetrahydro-1-methyl-2-[2-(2-thienyl)vinyl]pyrimidine. An anthelmintic, $C_{11}H_{14}N_2S$, effective against pinworms (*Enterobius vermicularis*) and roundworms (*Ascaris lumbricoides*). **p. pamoate** [USP], the pamoate salt of pyrantel, $C_{11}H_{14}N_2S \cdot C_{23}H_{16}O_8$, occurring as a yellow to tan solid; used in the treatment of ascariasis and enterobiasis, administered orally. **p. tartrate**, the tartrate salt of pyrantel, $C_{11}H_{14}N_2S \cdot C_4H_6O_8$, occurring as a white to greenish-yellow, crystalline powder, having the same actions as the pamoate salt.

pyranil (pi'ran-il) the radical C_5H_5O , of which pyran is the hydride.

pyrathiazine hydrochloride (pēr'rah-thi'ah-zēn) chemical name: 10-[2-(1-pyrrolidinyl)ethyl]-phenothiazine hydrochloride, $C_{16}H_{20}N_4S_4HCl$; used as an antihistaminic.

pyrazinamide (pi'rah-zin'ah-mid) [USP] chemical name: pyrazinecarboxamide. An antibacterial derived from nicotinic acid, $C_5H_5N_3O$, occurring as a white to practically white, crystalline powder; used as a tuberculostatic, administered orally.

pyrazine (pi'rah-zēn) a volatile compound, $C_4H_4N_2$, with the odor of heliotrope.

pyrazofurin (pēr'ah-zo-fūr'in) chemical name: 4-hydroxy-3-β-D-ribofuranosyl-1H-pyrazole-5-carboxamide; an antineoplastic, $C_9H_{13}N_3O_6$.

pyretic (pi-rek'tik) [Gr. *pyrektikos* feverish] 1. pertaining to or of the nature of fever. 2. an agent that induces fever.

pyrene (pi'ren) a polycyclic hydrocarbon, $C_{16}H_{10}$.

pyrenoid (pi'rē-noid) [Gr. *pyrēn* fruit stone + *eidōs* form] one of the refringent bodies seen in the chromatophores of certain protozoa; it is active in carbohydrate metabolism.

pyrenolysis (pi'rē-nol'i-sis) [Gr. *pyrēn* fruit stone + *lysis* solution] the breaking down of the nucleolus of a cell.

Pyrenomycetes (pi-re'no-mi-se'tēz) a series of ascomycetous fungi of subclass Euascomycetidae, including the orders Clavicipitales and Erysiphales; their fruiting body is a perithecium.

pyretotherapy (pi'rē-ther'ah-pe) [Gr. *pyr* fever + *therapy*] pyretotherapy.

pyrethron (pi'rē-thron) a neutral ester from pyrethrum.

pyrethrum (pi-re'thrum) [Gr. *pyrethron*] see under *flower*.

pyretic (pi-ret'ik) [Gr. *pyretos* fever] pertaining to or of the nature of fever.

pyreticosis (pi-ret'i-ko'sis) any febrile affection.

pyreto- [Gr. *pyretos* fever] a combining form denoting relationship to fever.

pyretogen (pi-ret'o-jen) a substance which excites fever.

pyretogenesis (pi'rē-to-jen'ē-sis) [pyreto- + Gr. *genesis* production] the origin and causation of fever.

pyretogenetic (pi'rē-to-jē-net'ik) pertaining to pyretogenesis.

pyretogenic (pi'rē-to-jen'ik) producing fever.

pyretogenous (pi'rē-toj'ē-nus) 1. caused by high body temperature. 2. pyrogenic.

pyretography (pi'rē-tog'rah-fe) [pyreto- + Gr. *graphein* to write] a description of fever.

pyretology (pi'rē-tol'o-je) [pyreto- + *-logy*] the sum of what is known regarding fevers; the science of fevers.

pyretolysis (pi'rē-tol'i-sis) [pyreto- + Gr. *lysis* dissolution] 1. reduction of fever. 2. lysis which is hastened by fever.

pyretotherapy (pi'rē-to-ther'ah-pe) [pyreto- + Gr. *therapeia* treatment] 1. treatment of a disease by raising the patient's temperature, especially by means of injecting fever-producing vaccines. 2. the treatment of fever.

pyretotyphosis (pi'rē-to-ti-fo'sis) [pyreto- + Gr. *typhōsis* delirium] the delirium of fever.

pyrexia (pi-rek'se-ah), pl. *pyrexiae* [Gr. *pyressein* to be feverish] a fever, or a febrile condition; abnormal elevation of the body temperature. **Pel-Ebstein p.**, see under *fever*.

pyrexial (pi-rek'se-al) pertaining to or characterized by pyrexia.

pyrexigenic (pi-rek'se-o-jen'ik) pyrogenic.

pyrexia (pi'rek-se) pyrexia.

Pyribenzamine (pēr'i-ben'zah-mēn) trademark for preparations of triphenylamine.

pyridine (pēr'i-dēn) 1. a colorless, liquid, basic coal tar derivative, C_5H_5N , derived also from tobacco and various organic matters. 2. any one of a large group of substances homologous with normal pyridine.

Pyridium (pi-rid'e-um) trademark for preparations of phenazopyridine hydrochloride.

pyridostigmine bromide (pēr'i-do-stig'mēn) [USP] chemical name: 3-[[[dimethyl-amino]carbonyloxy]-1-methyl pyridinium bromide. A cholinergic, $C_8H_{13}BrN_2O_2$, occurring as a white or almost white, crystalline powder; used in the treatment of

myasthenia gravis and as an antidote for nondipolarizing muscle relaxants, such as curariform drugs, administered orally and parenterally.

pyridoxal (pēr'i-dok'sal) chemical name: 2-methyl-3-hydroxy-4-formyl-5-hydroxymethylpyridine. One of the forms of vitamin B₆; see *Table of Vitamins*, under *vitamin*. **p. phosphate**, a major coenzyme involved in amino acid metabolism.

pyridoxamine (pēr'i-doks'ah-mēn) one of the three active forms of vitamin B₆.

pyridoxine (pēr'i-dok'sēn) chemical name: 5-hydroxy-6-methyl-3,4-pyridinedimethanol. One of the forms of vitamin B₆; see *Table of Vitamins*, under *vitamin*. **p. hydrochloride** [USP], the hydrochloride salt of pyridoxine, $C_8H_{11}NO_3 \cdot HCl$, occurring as colorless or white crystals or white crystalline powder; used in the prophylaxis and treatment of vitamin B₆ deficiency. It has also been used in neuromuscular and neurological diseases, in dermatoses, and in the management of nausea and vomiting of pregnancy and irradiation sickness. **p. phosphate**, a coenzyme involved in many amino acid reactions.

pyriform (pēr'i-form) piriform.

pyrilamine maleate (pēr-il'ah-mēn) [USP] chemical name: N-[(4-methoxyphenyl)methyl]-N',N'-dimethyl-N-2-pyridinyl-1,2-ethane diamine (Z)-2-butenedioate (1:1). An antihistaminic, $C_{17}H_{23}N_3O_4 \cdot C_4H_4O_4$, occurring as a white, crystalline powder; administered orally. Called also *mepyramine maleate* and *pyranisamine maleate*.

pyrimethamine (pēr'i-meth'ah-mēn) [USP] chemical name: 5-(4-chlorophenyl)-6-ethyl-2,4-pyrimidinediamine. A folic acid antagonist, $C_{12}H_{13}ClN_4$, occurring as a white crystalline powder; used as an antimalarial, especially for suppressive prophylaxis, and also used concomitantly with a sulfonamide in the treatment of toxoplasmosis, administered orally.

pyrimidine (pi-rim'i-dēn) an organic compound, a metadiazine, $C_4H_4N_2$, which is the fundamental form of the pyrimidine bases. These are mostly oxy or amino derivatives, for example, 2,4-dioxypyrimidine is uracil, 2-oxy-4-aminopyrimidine is cytosine, and 2,4-dioxy-5-methylpyrimidine is thymine. Some of these are constituents of nucleic acid (uracil, thymine, and cytosine). It is also the parent substance of the barbiturates.

pyrinoline (pēr-in'o-lēn) chemical name: 3-(di-2-pyridylmethylene)-α,α-di-2-pyridyl-1,4-cyclopentadiene-1-methanol; an antiarrhythmic cardiac depressant, $C_{27}H_{20}N_4O$.

pyrithiamine (pēr'i-thi'ah-min) a synthetic compound, $CH_3 \cdot C_6H_4NH_2 \cdot CH_2 \cdot C_6H_4NH_2 \cdot CH_2 \cdot CH_2OH$, which by metabolic competition can cause symptoms of thiamine deficiency.

pyro- (pi'ro) [Gr. *pyr* fire] a combining form meaning fire or heat, or, in chemistry, produced by heating.

pyroborate (pi-ro-bo'rāt) any salt of pyroboric acid.

pyrocatechin (pi'ro-kat'ē-kin) [pyro- + *catechu*] pyrocatechol.

pyrocatechol (pi'ro-kat'ē-kol) chemical name: 1,2-benzenediol. A compound, $C_6H_4(OH)_2$, comprising the aromatic portion in the synthesis of endogenous catecholamines; it is obtained by distilling catechu, etc., or produced synthetically, and has been used as a topical antiseptic and as a reagent. Called also *catechol* and *pyrocatechin*.

pyrodextrin (pi'ro-deks'trin) a brown substance produced by the action of heat upon starch.

pyrogallol (pi'ro-gal'ol) chemical name: 1,2,3-trihydroxybenzene. A poisonous acid, $C_6H_3O_3$, derived from gallic acid, and used externally as an antimicrobial and irritant; it is also used as a reagent. Called also *pyrogallol acid*.

pyrogen (pi'ro-jen) [pyro- + Gr. *gennan* to produce] a fever-producing substance. **bacterial p.**, a fever-producing agent of bacterial origin; endotoxin. **distilled water p.**, filtrable thermostable products of bacterial activity that accumulate in distilled water and tend to cause a severe chill when the water is injected.

pyrogenetic (pi'ro-jē-net'ik) pyrogenic.

pyrogenic (pi'ro-jen'ik) [pyro- + Gr. *gennan* to produce] inducing fever.

pyrogenous (pi-roj'ē-nus) pyretogenous.

pyroglobulin (pi'ro-glob'u-lin) [pyro- + *globulin*] a blood globulin which precipitates from serum on heating (56°C.).

pyroglobulinemia (pi'ro-glob'u-li-ne'me-ah) presence in the blood of an abnormal protein constituent which is precipitated by heat; observed in myeloma and lymphosarcoma and sometimes in patients for whom no diagnosis can be established.

pyroglutamate (pi'ro-gloo'tah-māt) 5-oxoproline.

pyrolagnia (pi'ro-lag'ne-ah) [pyro- + Gr. *lagneia* lust] sexual gratification from witnessing or making fires.

pyroligneous (pi'ro-lig'ne-us) [pyro- + L. *lignum* wood] pertaining to the destructive distillation of wood.

pyrolusite (pi'ro-lu'sit) native manganese dioxide, a black powder used in dry-cell batteries.

pyrolysis (pi-ro-l'i-sis) [pyro- + Gr. *lysis* dissolution] decomposition of organic substances under the influence of a rise in temperature.

pyromania (pi''ro-ma'ne-ah) [*pyro-* + Gr. *mania* madness] obsessive preoccupation with fires; compulsion to set fires; incendiarism. **erotic p.**, pyrolagnia.

pyrometer (pi-rom'ē-ter) [*pyro-* + Gr. *metron* measure] an instrument for measuring the intensity of heat, especially for temperatures which cannot be measured with a mercury thermometer.

pyrone (pi'rōn) a principle, CO(CH)₄O, found in opium, from which several other constituents are derived by substitution.

Pyronil (pi'ro-nil) trademark for a preparation of pyrrobutamine.

pyronine (pi'ro-nin) a dye used in histology; the pyronines are methylated diamine xanthenes. **p. B.**, a basic dye, the tetraethylpyronine chloride, (C₂H₅)₂N·C₆H₃(O)CH·C₆H₃·N(C₂H₅)₂Cl. **p. G.**, a basic dye, the tetramethylpyronine chloride, (CH₃)₂N·C₆H₃(O)CH·C₆H₃N(CH₃)₂Cl.

pyroninophilia (pi''ro-nin'o-fil'e-ah) [*pyronine* + Gr. *philēin* to love] increased affinity for pyronine, sometimes observed in plasma and reticuloendothelial cells.

pyronyx (pi''ro-nik'sis) [*pyro-* + Gr. *nyxis* a pricking]—ignipuncture.

pyrophobia (pi''ro-fo'be-ah) [*pyro-* + Gr. *phobein* to be affrighted by] abnormal dread of fire.

pyrophosphatase (pi''ro-fos'fah-tās) any enzyme that catalyzes the hydrolysis of central pyrophosphate linkages. **inorganic p.**, pyrophosphate phosphohydrolase: an enzyme occurring in many tissues that catalyzes the hydrolysis of pyrophosphate to two orthophosphates. **nucleotide p.**, dinucleotide nucleotidohydrolase: an enzyme occurring in the liver and kidney that catalyzes the hydrolysis of a dinucleotide to two mononucleotides.

pyrophosphate (pi''ro-fos'fāt) any salt of pyrophosphoric acid. **stannous p.**, chemical name: diphosphoric acid ditin (2+) salt; a diagnostic aid (bone imaging), Sn₂P₂O₇.

pyrophosphokinase (pi''ro-fos'fo-ki'nās) an enzyme (a transferase) that catalyzes the transfer of a pyrophosphate from ATP to a substrate.

pyrophosphotransferase (pi''ro-fos'fo-trans'fer-ās) an enzyme that catalyzes the transfer of a pyrophosphate, as from ATP to thiamine to form AMP and thiamine pyrophosphate.

Pyroplasma (pi''ro-plaz'mah) *Babesia*.

pyropuncture (pi''ro-punk'tūr) [*pyro-* + *puncture*] ignipuncture.

pyroscope (pi''ro-skōp) [*pyro-* + Gr. *skopein* to examine] an instrument for measuring the intensity of heat radiations.

pyrosis (pi-ro'sis) [Gr. *pyrōsis* burning] heartburn.

Pyrosoma (pi''ro-so'mah) [*pyro-* + Gr. *sōma* body] *Babesia*.

pyrotic (pi-rot'ik) [Gr. *pyrōtikos*] caustic; burning.

pyrotoxin (pi''ro-tok'sin) [*pyro-* + Gr. *toxikon* poison] 1. a toxin developed during a fever. 2. a toxic principle obtained from many bacteria; even if ordinarily nonpathogenic, when injected it causes fever and wasting.

pyrovalerone hydrochloride (pēr-o-val'er-ōn) chemical name: 4'-methyl-2-(1-pyrrolidinyl)valerophenone hydrochloride; a central nervous systemic stimulant, C₁₆H₂₃NO·HCl.

pyroxamine maleate (pēr-oks'ah-mēn) chemical name: 3-[(*p*-chloro- α -phenylbenzyl)oxy]-1-methylpyrrolidine maleate (1:1); an antihistaminic, C₁₈H₂₀ClNO·C₄H₄O₄.

pyroxylin (pi-rok'si-lin) [Gr. *pyr* fire + *xylon* wood] [USP] a product of the action of a mixture of nitric and sulfuric acids on cotton, consisting chiefly of cellulose tetranitrate; a necessary ingredient of collodion. Called also *colloxylin*, *dinitiocellulose*, *nitrocellulose*, and *guncotton*.

pyrrobutamine phosphate (pēr''ro-bu'tah-mēn) [USP] chemical name: 1-[4-(4-chlorophenyl)-3-phenyl-2-butenyl]pyrrolidine phosphate (1:2). A long-acting antihistaminic, C₂₀H₂₂Cl·N·2H₃PO₄, occurring as a white, or almost white, crystalline powder; administered orally.

pyrrocaine (pēr'o-kān) chemical name: *N*-(2,6-dimethylphenyl)-1-pyrrolidineacetamide; a local anesthetic, C₁₄H₂₀N₂O. **p. hydrochloride**, the monohydrochloride salt of pyrrocaine, occurring as a white, crystalline powder; used as a local anesthetic in dentistry to produce infiltration and nerve block anesthesia.

pyroetioporphyrin (pēr'o-e'te-o-por'fi-rin) a porphyrin, C₃₀H₃₄N₄.

pyrrole (pēr'ol) a liquid, basic, cyclic substance, (CH)₄NH, obtained in the destructive distillation of various animal substances. Four pyrrole groups (tetrapyrrole) are formed into a ring in the biosynthesis of the porphyrins.

pyrrolidine (pī-rol'i-din) a simple base, tetramethylene imine, (CH₂)₄NH, which may be obtained from tobacco or prepared from pyrrole.

pyrrolin (pir'o-lin) an oily liquid, C₄H₈NH, formed by the action of acetic acid and zinc dust on pyrrole.

pyrrolnitrin (pēr-ōl-ni'trin) chemical name: 3-chloro-4-(3-chloro-2-nitrophenyl)-1*H*-pyrrole; an antifungal antibiotic isolated from *Pseudomonas pyrocinia*, C₁₀H₆Cl₂N₂O₂, effective against *Trichophyton* species.

pyroloporphyria (pir'o-lo-por-fir'e-ah) acute intermittent porphyria.

pyrroporphyrin (pir'o-por'fi-rin) a porphyrin, C₃₁H₃₄O₂N₄, derived from chlorophyll.

pyruvate (pi'roo-vāt) a salt, ester, or dissociated form of pyruvic acid, $\begin{matrix} \text{O} & \text{O} \\ \parallel & \parallel \\ \text{CH}_3\text{C} & - & \text{C} & - & \text{O}^- \end{matrix}$. In biochemistry, the term is used interchangeably with pyruvic acid, even though pyruvate technically refers to the negatively charged ion. Pyruvate is the end product of glycolysis, and it in turn may be converted to lactate or acetyl CoA or to ethanol (as in yeasts).

pyruvemia (pi''roo-ve'me-ah) a condition characterized by an increased amount of pyruvic acid in the blood.

pyrvinium pamoate (pir-vin'e-um) [USP] chemical name: 6-(dimethylamino)-2-[2-(2,5-dimethyl-1-phenyl-1*H*-pyrrol-3-yl)ethenyl]-1-methylquinolinium salt with 4,4'-methylenebis[3-hydroxy-2-naphthalenecarboxylic acid] (2:1). An anthelmintic, C₇₅H₇₀N₆O₈, occurring as a bright orange or orange-red to almost black, crystalline powder; used in the treatment of enterobiasis, administered orally.

Pythagoras (pī-thag'o-ras) of Samos (5th century B.C.) the famous Greek philosopher whose interest in mathematics is reflected in his concept of "critical days" in disease which, in Greek medicine of antiquity, was believed to enter a critical phase on certain days of the illness. Similar number lore (e.g., 4 humors, 4 elements, 4 qualities) is also found later in other concepts of disease and medicine (e.g., galenism).

pythogenesis (pi''tho-jen'ē-sis) [Gr. *pythein* to rot + *genesis* production] 1. the origination of a process of decay or decomposition. 2. generation from filth.

pythogenic (pi''tho-jen'ik) [Gr. *pythein* to rot + *gennan* to produce] causing decay or decomposition.

pythogenous (pi-thoj'ē-nus) caused by putrefaction or filth.

pyuria (pi-u're-ah) [Gr. *pyon* pus + *ouron* urine + *-ia*] the presence of pus in the urine. **miliary p.**, the presence in the urine of miliary bodies consisting of pus cells, blood cells, and epithelium.

PZI protamine zinc insulin; see under *insulin*.

Q. electric quantity.

Q₁₀ symbol for *temperature coefficient*; see under *coefficient*.

q symbol for (1) the long arm of a chromosome or (2) the frequency of the rarer allele of a pair.

qcepo (ksa'po) the tubercle type of cutaneous leishmaniasis.

q.d. abbreviation for *L. quaque di'e*, every day.

Q fever (*Q* for *query*) see under *fever*.

q.h. abbreviation for *L. quaque ho'ra*, every hour.

q.i.d. abbreviation for *L. quater in di'e*, four times a day.

q.l. abbreviation for *L. quantum li'bet*, as much as desired.

Q.N.S. abbreviation for *Queen's Nursing Sister* (of Queen's Institute of District Nursing).

q.n.s. quantity not sufficient.

Q.P. abbreviation for *quanti-Pirquet reaction*; see under *reaction*.

q.p. abbreviation for *L. quantum pla'ceat*, as much as desired.

q.q.h. abbreviation for *L. quaque quar'ta ho'ra*, every four hours.

Qq.hor. abbreviation for *L. quaque ho'ra*, every hour.

q.s. abbreviation for *L. quantum sa'tis*, sufficient quantity.

q-sort (ku'sort) a technique of personality assessment in which the subject (or an observer) indicates the degree to which a standardized set of descriptive statements applies to the subject.

q.suff. abbreviation for *L. quantum sufficit*, as much as suffices.

Quaalude (kwa'llood) trademark for a preparation of methaqualone.

quack (kwak) one who fraudulently misrepresents his ability and experience in the diagnosis and treatment of disease or the effects to be achieved by the treatment he offers.

quackery (kwak'er-e) the fraudulent misrepresentation of one's ability and experience in the diagnosis and treatment of disease or of the effects to be achieved by the treatment offered.

quacksalver (kwak-sal'ver) one claiming special merit for treatment with his medications and salves.

Quadamoid (quad'rah-moid) trademark for an oral suspension of trisulfapyrimidines.

quadrangle (kwod'rang-g'l) 1. a figure having four angles, or sides. 2. Black's term for a dental instrument having four angulations in the shank connecting the handle, or shaft, with the working portion of the instrument, known as the blade, or nib.

quadrangular (kwod-rang'gu-lar) [*L. quadri* four + *angulus* angle] having four angles.

quadrant (kwod'rant) [*L. quadrans* quarter] 1. one quarter of a circle; that portion of the circumference of a circle that subtends an angle of 90 degrees. 2. any one of four corresponding parts or quarters, as of the abdominal surface or of the eardrum.

quadrantal (kwod-ran'tal) resembling or affecting a quadrant.

quadrantanopia (kwod'rant-ah-no'pe-ah) [*L. quadrans* a fourth part + *Gr. an-* neg. + *ōpē* vision + *-ia*] defective vision or blindness in one fourth of the visual field, bounded by a vertical and a horizontal radius. Called also *tetartanopia*.

quadrantanopsia (kwod'ran-tah-nop'se-ah) quadrantanopia.

quadrat (kwod'rat) [*L. quadratus* squared] a rectangular, usually square, sample plot used in ecological studies, especially a plot containing 1 square meter. A sample plot of larger area is often called a *major quadrat*.

quadrante (kwod'rāt) [*L. quadratus* squared] square or squared; four sided.

quadratipronator (kwod-ra'te-pro-na'tor) *musculus pronator quadratus*.

quadratus (kwod-ra'tus) [*L.*] squared; four sided.

quadri- (kwod'rī) [*L. quattuor* four; in combination, *quadri-*] a prefix signifying four, or fourfold.

quadribasic (kwod'rī-ba'sik) having four replaceable atoms of hydrogen.

quadriceps (kwod'rī-seps) [*quadri-* + *L. caput* head] four headed; possessing four heads. See *Table of Musculi*.

quadricepsplasty (kwod'rī-seps'plas-te) plastic repair of a ruptured quadriceps femoris muscle.

quadriceptor (kwod'rī-sep'tor) [*quadri-* + *L. ceptor*] an intermediary body having four combining groups.

quadricuspid (kwod'rī-kus'pid) [*quadri-* + *L. cuspis* point] 1. having four cusps; said of a tooth, or of a semilunar (aortic or pulmonary) valve with four cusps. 2. a tooth with four cusps.

quadridigitate (kwod'rī-dij'i-tāt) tetradactylous.

quadrigemina (kwod'rī-jem'i-nah) [*L.*] plural of *quadrigeminum*.

quadrigeminal (kwod'rī-jem'i-nal) [*L. quadrigeminus*] fourfold, or in four parts; forming a group of four.

quadrigeminum (kwod'rī-jem'i-num), pl. *quadrigemina* [*L.*] fourfold.

quadrigeminus (kwod'rī-jem'i-nus) [*L.*] quadrigeminal.

quadrilateral (kwod'rī-lat'er-al) [*quadri-* + *L. latus* side] 1. having four sides. 2. a four-sided figure, or postulate. **Celsus' q.**, "Notae vero inflammationis sunt quatuor, rubor et tumor, cum calore et dolore." (The four cardinal symptoms of inflammation, redness, swelling, heat, and pain.)

quadrilocular (kwod'rī-lok'u-lar) [*quadri-* + *L. locus* a small space] having four cells, cavities, or chambers.

quadrupara (kwod-rip'ah-rah) [*quadri-* + *L. parere* to bring forth, produce] a woman who has had four pregnancies which resulted in viable offspring; also written *para IV*.

quadrupartite (kwod'rī-par'tit) having four parts or divisions.

quadriplegia (kwod'rī-ple'je-ah) paralysis of all four limbs; tetraplegia.

quadrupolar (kwod'rī-po'lar) having four poles, as a cell.

quadrisect (kwod'rī-sekt) [*quadri-* + *L. secare* to cut] to cut into four parts.

quadrisection (kwod'rī-sek'shun) [*quadri-* + *L. sectio* cut] division into four parts.

quadrilobular (kwod'rī-tu-ber'ku-lar) having four tubercles or cusps.

quadrivalent (kwod'rī-va'lent, kwod-riv'ah-lent) [*quadri-* + *L. valere* to be worth] having a chemical valence or combining power of four.

quadruped (kwod'roo-ped) [*quadri-* + *L. pes* foot] 1. four footed. 2. an animal having four feet.

quadrupl. abbreviation for *L. quadruplicato*, four times as much.

quadruplet (kwod'rup-let) [*L. quadrupulus* fourfold] one of four offspring produced in one gestation period.

Quain's degeneration, fatty heart (kwānz) [Sir Richard Quain, British physician, 1816-1898] see under *degeneration* and *heart*.

quale (kwa'le) the quality of a thing; especially the quality of a sensation or other conscious process.

qualifying (kwol'i'fing) in psychology, signifying a form of facial deceit in which an individual adds another facial expression to one that has just been shown, e.g., a smile may be shown after an angry expression as a sign that the individual is not as angry as he may seem.

qualimeter (kwah-lim'ē-ter) [*L. qualis* of what sort + *metrum* measure] penetrometer, def. 1.

qualitative, qualitative (kwol'i-ta'tiv) [*L. qualitativus*] pertaining to quality.

quality (kwol'i-te) in radiology, the ability of a particular form or type of ionizing radiation to penetrate matter.

quanta (kwon'tah) [*L.*] plural of *quantum*.

quantasome (kwon'tah-sōm) [*L. quantum* + *Gr. sōma* body] one of the uniform oblate spheroids of about 100 by 200 Å, which are present within the chloroplasts and are postulated to be the units of photosynthesis, each consisting of 250 molecules of chlorophyll, the minimum amount found necessary for photosynthesis.

quantatope (kwon'tah-trōp) [*L. quantum* + *Gr. tropos* a turning] the site of the quantasome that is directly involved in the transfer of electrons.

quantimeter (kwon-tim'ē-ter) [*L. quantus* how much + *metrum* measure] an apparatus for measuring the quantity of roentgen rays generated by a tube.

quantitative (kwon'ti-ta-tiv) [*L. quantitativus*] denoting or expressible as quantity; relating to the proportionate quantities or to the amount of the constituents of a compound.

quantity (kwon'ti-te) 1. a characteristic, as of energy or mass, susceptible of precise physical measurement. 2. a measurable amount. **scalar q.**, a quantity that is expressed only in terms of magnitude. **vector q.**, a quantity that is expressed in terms of magnitude and direction.

quantum (kwon'tum), pl. *quanta* [*L. "as much as"*] a unit of energy under the quantum theory. It is *hν*, in which *h* is Planck's constant, 6.55×10^{-27} , and *ν* is the frequency of vibration with which the energy is associated. See *quantum theory*, under *theory*.

q. of light, a quantity of light (radiant energy) equivalent to the frequency of the light times 6.55×10^{-27} erg. sec.

quantum libet (kwon'tum li'bet) [*L.*] as much as desired.

quantum satis (kwon'tum sat'is) a sufficient quantity.

quantum sufficit (kwon'tum suf'fi-sit) [*L.*] as much as suffices.

quarantine (kwor'an-tēn) [Ital. *quarantina*] 1. a period (usually of forty days' duration) of detention of ships or persons coming

from infected or suspected ports. 2. the place where persons are detained for inspection. 3. to detain or isolate on account of suspected contagion. 4. restrictions placed on the entrance to and exit from the place or premises where a case of communicable disease exists.

quart (kwort) [L. *quartus* fourth] the fourth part of a gallon (946 ml.).

quartan (kwor'tan) [L. *quartanus*, pertaining to the fourth] recurring every 72 hours (fourth day, counting the day of the previous paroxysm). See *malaria*. **double q.**, a fever in which the paroxysms occur on each of two successive days followed by an afebrile day, and continuing in this pattern. **triple q.**, a fever in which the paroxysms occur every day i.e., quotidian, because of infection with three different groups of quartan parasites.

quarter (kwor'ter) the part of a horse's hoof lying between the heel and the toe. **false q.**, a cleft in the quarter of a horse's hoof from the top to the bottom.

quartile (kwor'til) [L. *quartus* one fourth] the middle term of each half of a series of variables.

quartipara (kwor-tip'ah-rah) quadripara.

quartisect (kwor'ti-sekt) [L. *quartus* fourth + *secare* to cut] to cut into four parts.

quartisternal (kwor'ti-ster'nal) [L. *quartus* fourth + *sternum* sternum] pertaining to the fourth sternebra, or the bony segment of the sternum opposite the fourth intercostal space.

quartz (kwarts) a crystalline form of silicon dioxide (silica), Si-O₂; called also *rock crystal*.

Quarzan (kwahr'zan) trademark for a preparation of clidinium bromide.

quasi [L. *quasi* as if, as though] a prefix signifying almost, seemingly, or resembling.

quasidominance (kwa'zi-dom'i-nans, kwah'zī-dom'i-nans) [*quasi* + *dominance*] the direct transmission, generation to generation, of a recessive trait in populations in which the gene is frequent or inbreeding is intense, produced by mating of a recessive homozygote and a heterozygote, the proportion of affected offspring thus resembling that in dominant inheritance.

quasidominant (kwa'zi-dom'i-nant, kwah-zī-dom'i-nant) pertaining to or exhibiting quasidominance.

quassation (kwō-sa'shun) [L. *quassatio*] the crushing of drugs, or their reduction to small pieces.

Quassia (kwosh'e-ah) [after *Quassi*, a Negro who used it as a remedy] a genus of simaroubaceous tropical trees, the wood of which was first used in the 18th century in the treatment of fevers.

quassia (kwash'e-ah) [after *Quassi*, black slave of Surinam who used it in the treatment of malignant fevers in the 18th century] the dried, intensely bitter heart-wood of the simaroubaceous trees *Picrasma excelsa* (Sw.) Planch. (Jamaica quassia), or *Quassia amara* L. (Surinam quassia); it has been used as an enema for seatworms.

quassin (kwash'in) the major bitter principle, C₂₂H₃₀O₆, of quassia.

Quat., quat. abbreviation for L. *quat'tuor*, four.

quater in die (kwah'ter in de'a) [L.] four times a day.

quaternary (kwah'ter-ner'e, kwah-ter'nah-re) [L. *quaternarius*, from *quat'tuor* four] 1. fourth in order. 2. containing four elements or groups.

Quatrefages' angle (katr'fazh-ez) [Jean Louis Armand de *Quatrefages* de Bréau, French naturalist, 1810-1892] parietal angle.

quazepam (kwah'zē-pam) chemical name: 7-chloro-5-(2-fluorophenyl)-1,3-dihydro-1-(2,2,2-trifluoroethyl)-2H-1,4-benzodiazepine-2-thione; a sedative and hypnotic, C₁₇H₁₁ClF₄N₂S.

quazodine (kwa'zo-dēn) chemical name: 4-ethyl-6,7-dimethoxyquinazoline; a cardiotonic and bronchodilator, C₁₂H₁₄N₂O₂.

quebrachitol (ka-brah'chī-tol) chemical name: 1-methyl-inositol. A sugar from quebracho bark, which has been suggested as a sugar substitute in diabetes.

Queckenstedt's sign (phenomenon, test) (kwek'en-stets'') [Hans Heinrich Georg *Queckenstedt*, German physician, 1876-1918] see under *sign*.

Quelcin (kwel'i-sin) trademark for a preparation of succinylcholine.

quenching (kwench'ing) to put out, extinguish, or suppress; to cool (as hot metal) by immersing in water. In liquid scintillation counting, any process taking place within the sample container which results in a decrease in number or intensity of the light flashes produced, thus lowering the amount of energy recorded. **fluorescence q.**, a technique for measuring the primary interaction of antigen and antibody by determination of the amount of light absorbed by bound antigen from fluorescent-labeled antibody exposed to ultraviolet light.

Quénu-Mayo operation (ka'nu-mah'o) [Eduard André Victor Alfred *Quénu*, French surgeon, 1852-1933; William James *Mayo*, American surgeon, 1861-1939] see under *operation*.

Quénu-Muret sign (ka'nu-mū-rē') [E.A.V.A. *Quénu*; Paul Louis *Muret*, French surgeon, born 1878] see under *sign*.

quenuthoracoplasty (kwe'nu-tho'rah-ko-plas'te) [E.A.V.A. *Quénu*] division of the ribs to promote retraction of the chest wall in empyema.

quercetin (kwer'sē-tin) chemical name: 3,3',4',5,7-pentahydroxyflavone. The aglycon of rutin and other glycosides, which has been used to reduce abnormal capillary fragility; called also *meletin* and *sophoretin*. **q-3-rutinoside**, rutin.

Quercus (kwer'kus) [L.] a genus of trees including the oaks, certain species of which (e.g., *Q. infectoria* Oliv., Fagaceae) harbor nutgalls, a source of gallic and tannic acids, which are used in various pharmaceuticals for their astringent properties.

Quervain's disease (kār'vanz) [Fritz de *Quervain*, Swiss surgeon, 1868-1940] see under *disease*.

Questran (kwes'tran) trademark for a preparation of cholestyramine resin.

Quetelet's rule (ket'ē-lāz') [Lambert Adolphe Jacques *Quetelet*, Belgian mathematician, 1796-1874] see under *rule*.

Queyrat's erythroplasia (ka-rahz') [Auguste *Queyrat*, French dermatologist, born 1872] see under *erythroplasia*.

quick (kwik) 1. rapid. 2. alive. 3. pregnant and able to feel the fetal movements.

Quick test (kwik) [Armand James *Quick*, Milwaukee physician, born 1894] see under *tests*.

quicklime (kwik'līm) calcium oxide.

quickening (kwik'en-ing) the first recognizable movements of the fetus, appearing usually from the sixteenth to the eighteenth week of pregnancy.

quidding (kwid'ing) a condition in horses in which food is taken into the mouth, repeatedly chewed, and then expelled; it may be caused by injuries to the mouth, disorders of the teeth or gums, paralysis of the muscles of mastication, or some other condition causing inability to swallow. Called also *cudding*.

Quide (kwīd) trademark for a preparation of piperacetazine.

quigila (kwij'i-lah) Brazilian name for ainhum.

quillaia (kwil-la'yah) the dried inner part of the bark of *Quillaja saponaria* Molina (Rosaceae); formerly used in medicine for its local irritant action. Its chief constituent is quillaic acid, and it is used in the manufacture of saponin, in shampoo formulations for its foaming qualities, and as a detergent in the film industry. Called also *soap bark*, *soap tree bark*, and *quillay bark*.

Quillaja (kwil-la'yah) [Chilian *quillai*] a genus of rosaceous trees. *Q. saponaria* Molina, a species native to South America, which was first described in 1782. See also *quillaia*.

quinacrine hydrochloride (kwin'ah-krin) [USP] chemical name: N⁴-(6-chloro-2-methoxy-9-acridinyl)-N¹,N¹-diethyl-1,4-pentanediamine dihydrochloride dihydrate. An antimalarial, antiprotozoal, and anthelmintic, C₂₂H₃₀ClN₃·2HCl·2H₂O, occurring as a bright yellow, crystalline powder; used especially for suppressive therapy of malaria and in the treatment of giardiasis and tapeworm infestations, administered orally. Called also *chinacrin hydrochloride* and *mepacrine hydrochloride*.

quinabarbitone (kwin'al-bar'bī-tōn) secobarbital.

Quincke's disease, edema, meningitis, pulse (sign), puncture, (kwink'ez) [Heinrich Irenaeus *Quincke*, physician in Kiel, 1842-1922] see *angioneurotic edema*, under *edema*, see *lumbar puncture*, under *puncture*, and see under *meningitis* and *pulse*.

quinestrol (kwin-es'trōl) chemical name: 3-(cyclopentyloxy)-19-nor-17α-pregna-1,3,5(10)-trien-20-yn-17-ol; an estrogen, C₂₅H₃₂O₂.

quinethazone (kwin-eth'ah-zōn) [USP] chemical name: 7-chloro-2-ethyl-1,2,3,4-tetrahydro-4-oxo-6-quinazolinesulfonamide. An orally effective diuretic, C₁₀H₁₂ClN₂O₂S, occurring as a white to yellowish white, crystalline powder; used in the treatment of edema associated with various conditions and of hypertension.

quinfamide (kwin'fah-mīd) chemical name: 1-(dichloroacetyl)-1,2,3,4-tetrahydro-6-quinolinyl ester 2-furnancarboxylic acid; an antiamebic, C₁₆H₁₃Cl₂NO₄.

quingestanol acetate (kwin-jes'tah-nōl) chemical name: 3-(cyclopentyloxy)-19-nor-17α-pregna-3,5-dien-20-yn-17-ol acetate; a progestin, C₂₇H₃₆O₅.

quingestrone (kwin-jes'trōn) chemical name: 3-(cyclopentyloxy)-pregna-3,5-dien-20-one; a progestin, C₂₆H₃₆O₂.

Quinidex (kwin'i-deks) trademark for a preparation of quinidine sulfate.

quinidine (kwin'i-din) chemical name: 6-methoxycinchonan-9-ol. The dextrorotatory isomer of quinine, C₂₀H₂₄N₂O₂, obtained from various species of *Cinchona* and their hybrids, and from *Remijia pedunculata*, or prepared from quinine. It has cardiac depressant activity, and is as potent an antimalarial as quinine but is rarely used for the latter effect except in those having an idiosyncrasy to quinine. **q. gluconate** [USP], the gluconate salt of quinidine, occurring as an odorless, white powder with a very bitter taste; administered intramuscularly or intravenously for the treatment of cardiac arrhythmias. **q. polygalacturonate**, a salt of quinidine, (C₂₀H₂₄N₂O₂·C₆H₁₀O₇·H₂O)_x having

actions and uses the same as the other salts of quinidine; administered orally. **q. sulfate** [USP], the sulfate salt of quinidine, occurring as fine, needle-like crystals or as a fine, white powder, which is odorless, has a bitter taste, and darkens on exposure to light; administered orally for the treatment of cardiac arrhythmias.

quinine (kwin'in, kwin-ën', kwī'nin) [L. *quinina*] an alkaloid of cinchona, $C_{20}H_{24}N_2O_2 \cdot 3H_2O$, occurring as a white microcrystalline powder, which suppresses the asexual erythrocytic forms of all malarial parasites and has a slight effect on the gametocytes of *Plasmodium vivax* and *P. malariae* but none on those of *P. falciparum*. Once widely used to prevent and control malaria, it has been largely replaced by less toxic and more effective synthetic antimalarials, and is now used chiefly (usually in the form of one of its soluble salts) in the treatment of falciparum malaria resistant to other antimalarials. Quinine also has analgesic antipyretic, mild oxytocic, cardiac depressant, and sclerosing properties, and it decreases the excitability of the motor endplate. **q. and urea hydrochloride**, a double salt of quinine and urea hydrochloride, $C_{20}H_{24}N_2O_2 \cdot HCl \cdot CH_4N_2O_2 \cdot HCl \cdot 5H_2O$, occurring as colorless translucent prisms, white granules, or white powder. It has been used to produce sclerosing, thrombosis, and obliteration of internal hemorrhoids and varicose veins, and as a local anesthetic. **q. bismuth iodide**, a compound of quinine and bismuth iodide formerly used in the treatment of syphilis. **q. bisulfate**, a colorless, crystalline cinchona salt, $C_{20}H_{24}O_2N_2 \cdot H_2SO_4 + 7H_2O$. It is much more soluble than the ordinary sulfate, and was formerly used in solution in the treatment of various ophthalmic disorders. **q. dihydrochloride**, the dihydrochloride salt of quinine, $C_{20}H_{24}N_2O_2 \cdot 2HCl$, occurring as a white powder, having the same actions and uses as the base; administered intravenously. **q. ethylcarbonate**, a white crystalline compound, $C_2H_5 \cdot O \cdot CO \cdot O \cdot C_{20}H_{24}N_2O_2$, formed by the action of ethyl chlorocarbonate on quinine; it has been used like quinine sulfate. **q. hydrobromide**, a salt, $C_{20}H_{24}O_2N_2 \cdot HBr + H_2O$, formerly used in the treatment of hyperthyroidism and pneumococcal pneumonia. **q. hydrochloride**, a white salt, $C_{20}H_{24}O_2N_2 \cdot HCl + 2H_2O$, resembling the sulfate in taste and uses. **q. salicylate**, a salt, $C_{20}H_{24}N_2O_2 \cdot C_7H_5O_2 + H_2O$, in slender white needles, formerly used as an antipyretic and antirheumatic. **q. sulfate** [USP], the dihydrate sulfate salt of quinine, $(C_{20}H_{24}N_2O_2) \cdot H_2SO_4 \cdot 2H_2O$, occurring as white, fine needle-like crystals, having the same actions and uses as the base, and also used to prevent nocturnal cramps in the legs and feet; administered orally. **q. tannate**, a yellowish powder, containing 33 per cent anhydrous quinine, formerly used in whooping cough and diarrhea.

quininism (kwin'i-nizm) cinchonism.

quinoid (kwin'oid) containing the chromatophoric group:

quinoline (kwin'o-lēn) a tertiary amine or alkaloid, C_8H_7N , a yellowish, aromatic liquid derivable from quinine, coal tar, and various other sources, which has antiseptic, antipyretic, and antiperiodic properties.

quinometry (kwī-nom'ē-tre) the standardization of the alkaloids of quinine.

quinone (kwī-nōn', kwī'nōn) 1. a substance, $CO(CH \cdot CH)_2CO$, in golden-yellow crystals, obtained by oxidizing quinic acid. 2. any benzene derivative in which two hydrogen atoms are replaced by two oxygen atoms.

Quinora (kwin'o-rah) trademark for a preparation of quinidine sulfate.

quinovin (kwin-o'vin) a bitter glycosidal mixture from cinchona.

quinovose (kwin'o-vōs) isorhodoose; 6-deoxy-D-glucose.

quinoxin (kwin-ok'sin) nitrosophenol, $C_6H_4(NO)OH$, a pale yellow, crystalline substance prepared from phenol by the action of nitrous acid.

Quinq. abbreviation for L. *quin'que*, five.

Quinquaud's sign (kang-kōz') [Charles Eugène *Quinquaud*, French physician, 1843-1894] see under *sign*.

quincecuspid (kwin'kwe-kus'pid) [L. *quinque* five + *cuspid* point] 1. having five cusps. 2. a tooth with five cusps.

quinquetubercular (kwin'kwe-tu-ber'ku-lar) having five tubercles or cusps.

quinquevalent (kwing'kwē-val'ent, kwin-kwev'ah-lent) [L. *quinque* five + *valens* able] 1. having five different valencies. 2. pentavalent.

quinquina (kin-ke'nah) cinchona.

quinsy (kwin'ze) [L. *cynanche* sore throat] peritonsillar abscess. **lingual q.**, suppurative inflammation of the lingual tonsil.

Quint. abbreviation for L. *quin'tus*, fifth.

quintan (kwin'tan) [L. *quintanus* of the fifth] recurring every fifth day, as a fever.

quintessence (kwin-tes'ens) [L. *quintus* fifth + *essentia* essence] the highly concentrated extract of any substance.

quintipara (kwin-tip'ah-rah) [L. *quintus* fifth + *parere* to bring forth, produce] a woman who has had five pregnancies which resulted in viable offspring; also written para V.

quintisternal (kwin'ti-ster'nal) [L. *quintus* fifth + *sternum*] denoting the fifth bony portion of the sternum, or the part above the xiphoid process and adjacent to the fifth intercostal space.

quintuplet (kwin'tup-let) [L. *quintuplex* five-fold] one of five offspring produced in one gestation period.

quittor (kwit'or) a fistulous sore on the quarters or the coronet of a horse's foot. **simple q.**, local inflammation resulting in a slough, with formation of pus immediately above the hoof. **skin q.**, a very painful ulcer of the skin above the hoof. **sub-horny q.**, inflammation beginning at the coronary band and extending beneath the hoof and producing pus formation in the sensitive tissue. **tendinous q.**, a condition in which the inflammation has extended into the tendons of the leg and the ligaments of the joint.

quoad vitam (kwo'ad vi'tam) [L.] so far as life is concerned.

Quotane (kwo'tān) trademark for preparations of dimethisouquin hydrochloride.

Quotid. abbreviation for L. *quotid'ie*, daily.

quotidian (kwo-tid'e-an) [L. *quotidianus* daily] 1. recurring every day; amphemorous. 2. a form of intermittent malaria with daily recurrent paroxysms.

quotient (kwo'shent) a number obtained as the result of division. **achievement q.**, a percentage statement of the extent to which a child has progressed in learning in proportion to his ability. Abbreviated A.Q. **albumin q.**, the amount of albumin in the blood plasma divided by the amount of albumin present in the blood. **Ayala's q.**, a quotient in examination of the cerebrospinal pressure, obtained by dividing the pressure after removal of 10 ml. of cerebrospinal fluid by that registered before such removal, and multiplying by 10. Normal values are 5.5 to 6.5. A result under 5 indicates a small reservoir, as in subarachnoid block; over 7 means a large reservoir, as may be encountered in serous meningitis or hydrocephalus. **caloric q.**, the quotient obtained by dividing the heat evolved (expressed in calories) by the oxygen consumed (expressed in milligrams) in a metabolic process. **D q.**, the ratio of glucose to nitrogen in the urine. **growth q.**, that portion of the entire food energy which is utilized for the purpose of growth. **intelligence q.**, the measure of intelligence obtained by dividing the patient's mental age, as ascertained by the Binet-Simon scale, by his chronological age and multiplying the result by 100. Abbreviated I.Q. **protein q.**, the number obtained by dividing the quantity of globulin of the blood plasma by the quantity of albumin. **rachidian q.**, Ayala's q. **respiratory q.**, the ratio of the volume of carbon dioxide given off by the body tissues to the volume of oxygen absorbed by them; usually equal to the corresponding volumes given off and taken up by the lungs. Abbreviated R.Q. **spinal q.**, Ayala's q.

q.v. abbreviation for L. *quan'tum vis*, as much as you please, and for *quod vi'de*, which see.

R

R symbol for *roentgen*; chemical symbol for an *organic radical*.
R. abbreviation for *Rankine* (scale), *Réaumur* (scale), *remotum* (far), *respiration*, *Rickettsia*, *right*, and *Behnken's unit*; also for *rough colony* (see under *colony*).

R symbol for *L. rec'ipe*, take. See *prescription*.

r symbol for *ring chromosome*; former symbol for *roentgen*, officially replaced by capital *R*.

Ra chemical symbol for *radium*.

Raabe's test (rah/bez) [Gustav Raabe, German physician, born 1875] see under *tests*.

rabbiting (rab/et-ing) impaction of the denticulated broken surfaces of a fractured bone.

rabbia (rab/be-ah) rabies.

rabbitpox (rab/it-poks) an acute eruptive disease of laboratory rabbits, caused by a virus closely related to the vaccinia virus.

rabelaisin (rab/ē-la/i-sin) a poisonous glycoside from *Rabelaisia philippinensis*, a plant of the Philippine Islands: a heart stimulant.

rabic (ra/bik) pertaining to rabies.

rabid (ra/be-si/dal) destructive to the rabies virus.

rabid (rab/id) [*L. rabidus*] affected with rabies.

rabies (ra/bēz, ra/be-ēz) [*L. rabere* to rage] an acute infectious disease of the central nervous system usually fatal in mammal species ranging from bats to cattle. It is caused by an RNA virus (rhabdoviridae). Human infection results from the bite of a rabid animal, such as a bat, wolf, dog, cat, mongoose, or other mammal. The incubation period in man is from one to three months, being shorter following bites near the brain than after those farther away. The earliest symptoms are numbness and tingling around the site of infection; soon afterwards generalized hyperexcitability occurs, followed by fever, by paralysis of the muscles of deglutition and glottal spasm at first provoked by the drinking of fluids or by the sight of fluids, and by maniacal behavior. Convulsions, tetany, and respiratory paralysis are the inevitable terminal event. The diagnosis can be confirmed during life by viral isolation (from saliva, cerebrospinal fluid, urine) or by demonstration of neutralizing antibody, and after death by the appearance of cytoplasmic inclusion bodies (Negri bodies) in degenerated neurons. Called also *hydrophobia* and *lyssa*. See also under *vaccine*. **dumb r.**, rabies in which paralysis is an early, predominant symptom, the animal showing no signs of viciousness or tendency to bite. **furious r.**, a form in which there is very pronounced excitement. **paralytic r.**, rabies in which paralysis is a marked symptom—usually an ascending spinal paralysis.

rabiform (ra/bi-form) resembling rabies.

race (rās) 1. an ethnic stock, or division of mankind; in a narrower sense, a national or tribal stock; in a still narrower sense, a genealogic line of descent; a class of persons of a common lineage. In genetics, races are considered as populations having different distributions of gene frequencies. 2. a class or breed of animals; a group of individuals having certain characteristics in common, owing to a common inheritance; a subspecies.

racemase (ra/se-mās) an enzyme that catalyzes the racemization of an optically active substance, such as lactic acid. **alanine r.**, an enzyme that catalyzes the conversion of L-alanine to D-alanine. **glutamate r.**, an enzyme that catalyzes the conversion of L-glutamate to D-glutamate. **lactate r.**, an enzyme that catalyzes the conversion of L-lactate to D-lactate. **lysine r.**, an enzyme that catalyzes the conversion of L-lysine to D-lysine. **mandelate r.**, an enzyme that catalyzes the conversion of L-mandelate to D-mandelate. **methionine r.**, an enzyme that catalyzes the conversion of L-methionine to D-methionine. **methylmalonyl-CoA r.**, an enzyme that catalyzes the conversion of D-methylmalonyl-CoA to L-methylmalonyl-CoA. **proline r.**, an enzyme that catalyzes the conversion of L-proline to D-proline. **threonine r.**, an enzyme that catalyzes the conversion of L-threonine to D-threonine.

racemate (ra/se-māt) an equimolecular mixture of two enantiomorphous isomers, being optically inactive in solution because of the presence of the same number of dextro- and levo-rotatory molecules. In the solid state it may have the properties of a loosely bound molecular compound. Called also *racemic form*, *racemic mixture*, or *racemic modification*.

raceme (ra-sēm') [*L. racemus* a bunch of grapes] 1. a form of inflorescence in which the individual flowers are borne on stalks which spring from a long central stem. 2. racemate.

racemethionine (rās/ē-mē-thi'o-nēn) [USP] chemical name: L-methionine. A compound, C₅H₁₁NO₂S, occurring as white, crystalline platelets or powder. It is used as a dietary supplement with lipotropic action.

racemic (ra-se'mik) made up of two enantiomorphous isomers and therefore optically inactive.

racemization (ra/sē-mi-za'shun) the transformation of one

half of the molecules of an optically active compound into molecules which possess exactly the opposite (mirror-image) configuration, with complete loss of rotatory power because of the statistical balance between equal numbers of dextro- and levorotatory molecules. Cf. *mutarotation*.

racemose (ras'e-mōs) [*L. racemosus*] resembling a bunch of grapes on its stalk.

racephedrine hydrochloride (ra-sef/ē-drin) chemical name: *dl-α*-[1-(methylamino)ethyl]benzyl alcohol hydrochloride. The racemic form of ephedrine hydrochloride, C₁₀H₁₅NO·HCl, occurring as fine, white crystals or as a powder and used as a sympathomimetic.

racephenicol (rās-ē-fen/i-kōl) chemical name: (+)-*threo*-2,2-dichloro-*N*-[β-hydroxy-α-(hydroxymethyl)-*p*-(methylsulfonyl)-phenethyl]acetamide; an antibacterial, C₁₂H₁₅Cl₂NO₅S.

rachi- see *rachio-*.

rachial (ra/ke-al) rachidial.

rachialbuminimeter (ra/ke-al-bu'mī-nim/ē-ter) an apparatus for measuring the albumin in a specimen of the cerebrospinal fluid.

rachialbuminimetry (ra/ke-al-bu'mī-nim/ē-tre) the measurement of the amount of albumin in the cerebrospinal fluid.

rachialgia (ra/ke-al/je-ah) [*rachi-* + Gr. *algos* pain + *-ia*] pain in the vertebral column.

rachianalgesia (ra/ke-an'al-je/ze-ah) rachianesthesia.

rachianesthesia (ra/ke-an'es-the/ze-ah) spinal anesthesia; anesthesia produced by the injection of the anesthetic into the spinal canal.

rachicentesis (ra/ke-sen-te/sis) [*rachi-* + Gr. *kentēsis* puncture] lumbar puncture.

rachidial (ra-kid'e-al) pertaining to the spine.

rachidian (ra-kid'e-an) pertaining to the spine.

rachigraph (ra/ke-graf) [*rachi-* + Gr. *graphein* to write] an instrument for recording the outlines of the spine and back.

rachilysis (ra-kil/i-sis) [*rachi-* + Gr. *lysis* dissolution] mechanical treatment of a curved vertebral column by combined traction and pressure.

rachio-, rachi- (ra/ke-o, ra/ke) [Gr. *rhachis* spine] combining form denoting relation to the spine.

rachiocampsis (ra/ke-o-kamp/sis) [*rachio-* + Gr. *kampsis* curve] curvature of the spinal column.

rachiocentesis (ra/ke-o-sen-te/sis) [*rachio-* + Gr. *kentēsis* puncture] lumbar puncture.

rachiochysis (ra/ke-ok/i-sis) [*rachio-* + Gr. *chysis* a pouring] the effusion of a fluid within the vertebral canal.

rachiocyphosis (ra/ke-o-si-fo/sis) kyphosis.

rachiodynia (ra/ke-o-din'e-ah) [*rachio-* + Gr. *odynē* pain + *-ia*] pain in the spinal column.

rachiookyphosis (ra/ke-o-ki-fo/sis) kyphosis.

rachiometer (ra/ke-om/ē-ter) [*rachio-* + Gr. *metron* measure] an instrument for measuring curvatures of the vertebral column.

rachiomylitis (ra/ke-o-mi/ē-li'tis) [*rachio-* + Gr. *myelos* marrow + *-itis*] inflammation of the spinal cord.

rachiotagmus (ra/ke-op/ah-gus) [*rachio-* + Gr. *pagos* thing fixed] symmetrical conjoined twins united back to back in the sagittal plane, fusion being limited to the upper trunk and cervical region.

rachioathy (ra/ke-op/ah-the) [*rachio-* + Gr. *pathos* disease] any disease of the spine.

rachioscoliosis (ra/ke-o-sko'lle-o/sis) lateral curvature of the spine.

rachiotome (ra/ke-o-tōm) an instrument for cutting the vertebrae.

rachiotomy (ra/ke-ot/o-me) [*rachio-* + Gr. *tomē* a cutting] incision of a vertebra, or of the vertebral column.

rachipagus (ra-kip/ah-gus) [*rachi-* + Gr. *pagos* thing fixed] a double monster joined at the vertebral column.

rachiresistance (ra/ke-re-zis/tans) a condition in which the injection of a spinal anesthetic produces little or no effect.

rachiresistant (ra/ke-re-zis/tant) abnormally insensitive to spinal anesthetics.

rachis (ra/kis) [Gr. *rhachis* spine] the vertebral column.

rachisagra (ra/kis-ag/rah) [*rachis* + Gr. *agra* seizure] pain or gout in the spine.

rachischisis (ra-kis/ki-sis) [*rachi-* + Gr. *schisis* cleft] congenital fissure of the spinal column. See illustration on following page. **r. partia/lis**, fissure of the spinal column of limited extent; menorachischisis. **r. poste/rior**, spina bifida. **r. tota/lis**, holorachischisis.

rachisensibility (ra/ke-sen'si-bil/i-te) the condition of being abnormally sensitive to spinal anesthetics.

Rachischisis (Babcock).

rachisensible (ra''ke-sen'si-b'l) abnormally sensitive to spinal anesthetics.

rachitic (ra-kit'ik) pertaining to or affected with rickets.

rachitis (ra-ki'tis) [Gr. *rachitis*] 1. rickets. 2. inflammatory disease of the vertebral column. **r. feta'lis annula'ris**, the formation before birth of annular thickenings on the long bones. **r. feta'lis micromel'ica**, deficient longitudinal growth of the bones of the fetus. **r. tar'da**, late rickets.

rachitism (rak'i-tizm) a tendency to rickets.

rachitogenic (rah-kit'o-jen'ik) causing rickets.

rachitome (rak'i-tōm) a cutting instrument used in opening the spinal canal.

rachitomy (rah-kit'o-me) [*rachi-* + Gr. *tomē* a cutting] the surgical or anatomical opening of the vertebral canal.

racial (ra'shal) pertaining to a particular race.

rad [acronym for *radiation absorbed dose*] a unit of measurement of the absorbed dose of ionizing radiation; it corresponds to an energy transfer of 100 ergs per gram of any absorbing material (including tissues). The biological effect of 1 rad varies with the kind of radiation the tissue is exposed to. Cf. *gray* (def. 3.).

rad. abbreviation for L. *radix*, root.

radarkymography (ra'dar-ki-mog'rah-fe) the recording on a television monitor, by means of a radar tracking instrument, of cardiac motion displayed on a fluoroscope.

radectomy (ra-dek'to-me) [L. *radix* root + Gr. *ektomē* excision] excision of a portion of the root of a tooth.

Rademacher's system (rah'dē-mah'kerz) [Johann Gottfried Rademacher, German physician, 1772-1850] the belief that there should be a specific remedy for every disease.

radiability (ra'de-ah-bil'i-te) the property of being readily penetrated by the roentgen or other ray.

radiable (ra'de-ah-b'l) capable of being examined by the roentgen ray.

radiad (ra'de-ad) toward the radius or radial side.

radial (ra'de-al) [L. *radialis*] 1. pertaining to the radius of the forearm or to the radial (lateral) aspect of the arm as opposed to the ulnar (medial) aspect; pertaining to a radius. 2. radiating; spreading outward from a common center.

radialis (ra'de-a'lis) [L.] radial; [NA] a term designating relationship to the radius.

radian (ra'de-an) in ophthalmometry, an arc whose length equals the radius of its curvature. It is an arc of 57.295 degrees.

radiant (ra'de-ant) [L. *radians*] 1. diverging from a common center. 2. any radioactive substance.

radiate (ra'de-āt) [L. *radiare*, *radiatus*] 1. to diverge or spread from a common point. 2. arranged in a radiating manner.

radiathermy (ra-di'ah-ther'me) short wave diathermy.

radiatio (ra-de-a'she-o), pl. *radiationes* [L.] a radiation or radiating structure; used in anatomical nomenclature to designate a collection of nerve fibers connecting different portions of the brain.

r. acus'tica [NA], acoustic radiation: a fiber tract arising in the medial geniculate nucleus and passing laterally in the sublentiform portion of the internal capsule to terminate in the transverse temporal gyri of the temporal lobe; the radiation provides reciprocal connections and forms part of the inferior thalamic peduncle. **r. cor'poris callo'si** [NA], radiation of corpus callosum: the fibers of the corpus callosum radiating to all parts of the neopallium. **r. cor'poris stria'ti**, the extension of fibers from the thalamus and hypothalamus to the corpus striatum. **r. occipitohalam'ica** [Gratiolet], r. optica. **r. op'tica** [NA], optic radiation: a fiber tract which begins at the lateral geniculate body, passes laterally through the pars retrolentiformis of the internal capsule, and finally projects posteriorly to end in the striate area on the medial surface of the occipital lobe, on either side of the calcarine sulcus; the radiation provides reciprocal connections and forms part of the posterior thalamic peduncle. Called also *geniculocalcarine tract*, **r. occipitohalamica** [Gratiolet], and *radiation of Gratiolet*. **r. pyramida'lis**, pyramidal radiation: the projection of fibers from the cerebral cortex to the pyramidal tract.

radiation (ra-de-a'shun) [L. *radiatio*] 1. divergence from a common center. 2. a structure made up of divergent elements, as

one of the fiber tracts in the brain; for official names of specific structures, see under *radiatio*. 3. electromagnetic waves, such as those of light, or particulate rays, such as alpha, beta, and gamma rays, given off from some source. **acoustic r.**, radiatio acustica. **adaptive r.**, evolution from a generalized, primitive species to diverse, specialized species, each adapted to a distinct mode of life. **alpha r.**, α -r., see under *ray*. **auditory r.**, radiatio acustica. **background r.**, radiation arising from radioactive material other than that directly under consideration or study. Background radiation due to cosmic rays and natural radioactivity in the environment is always present; additional background radiation may be due to the presence of other radioactive material in the vicinity, or radioactive components of building materials, etc. **beta r.**, β -r., see under *ray*. **Cerenkov r.**, energy produced when swiftly travelling electrons pass through a liquid with a speed greater than the speed of light in that liquid. **r. of corpus callosum**, radiatio corporis callosi. **corpusecular r's**, radiations other than x-ray and γ -rays, such as alpha-, beta-, proton-, neutron-, positron-, and deuteron-rays. **electromagnetic r.**, see under *wave*. **gamma r.**, γ -r., see under *ray*. **r. of Gratiolet**, radiatio optica. **heterogeneous r.**, radiation consisting of a beam of particles of various energies, or having different frequencies, or containing different types of particles; see also *white r.* **homogeneous r.**, radiation consisting of an extremely narrow band of frequencies or a beam of monoenergetic particles of a single type; see also *characteristic r.* and *monochromatic r.* **Huldshinsky's r.**, a course of three months' treatment with ultraviolet rays from the quartz-mercury vapor lamp. **interstitial r.**, energy emitted by radium or radon inserted directly into the tissue. **ionizing r.**, high-energy radiation (x-rays and gamma rays) which interacts to produce ion pairs in matter. **irritative r.**, radiation with ultraviolet rays to the point of erythema. **mitogenetic r.**, **mitogenic r.**, specific energy allegedly given off by a cell undergoing mitosis. **monochromatic r.**, see under *ray*. **monoenergetic r.**, radiation of a given type, as of alpha, beta, or gamma rays, in which all particles or photons originate with and have the same energy. **occipitohthalmic r.**, **optic r.**, radiatio optica. **photochemical r.**, that part of the radiant spectrum which produces chemical changes. **pyramidal r.**, radiatio pyramidalis. **Rollier's r.**, exposure of the tuberculous patient to gradually increasing doses of the ultraviolet rays of the sun. **tegmental r.**, fibers radiating laterally from the red nucleus. **thalamic r.**, fibers which reciprocally connect the thalamus and cerebral cortex by way of the internal capsule; usually grouped into four subradiations (peduncles): anterior or frontal, superior or centroparietal, posterior or occipital, and inferior or temporal. **thalamotemporal r.**, radiatio acustica. **white r.**, a spectral distribution of x-rays ranging from very low energy photons to those produced by the peak kilovoltage applied across an x-ray tube; analogous to the continuous optical spectrum obtained from white light.

radiationes (ra-de-a'she-o'nēz) [L.] plural of *radiatio*.

radical (rad'i-kal) [L. *radicalis*] 1. directed to the cause; directed to the root or source of a morbid process, as radical surgery. 2. a group of atoms which enters into and goes out of chemical combination without change, and which forms one of the fundamental constituents of a molecule. **acid r.**, 1. the electronegative element which combines with hydrogen to form an acid. 2. all of the acid except the hydroxyl group. **alcohol r.**, all of the alcohol molecule except the hydrogen atom of the -OH group; an alkoxy radical. **color r.**, chromophore. **free r.**, a radical, extremely reactive and having a very short half-life (10^{-6} seconds or less in an aqueous solution), which carries an unpaired electron.

radices (rad'i-sēz) [L.] plural of *radix*.

radiciform (ra-dis'i-form) [L. *radix* root + *forma* shape] shaped like a root; shaped like the root of a tooth.

radicle (rad'i-k'l) [L. *radicula*] 1. any one of the smallest branches of a vessel or nerve. 2. the embryonic, or primary, root that grows out of the hypocotyl of seed plants.

radicotomy (rad'i-kot'o-me) rhizotomy.

radicula (rah-dik'u-lah) [L.] radicle, def. 1.

radiculalgia (rah-dik'u-lal'je-ah) pain due to disease of the spinal nerve roots.

radicular (rah-dik'u-lar) of or pertaining to a radical or root.

radicectomy (rah-dik'u-lek'to-me) [L. *radicula* radicle + Gr. *ektomē* excision] excision of a rootlet, especially resection of spinal nerve roots.

radiculitis (rah-dik'u-li'tis) [L. *radicula* radicle + *-itis*] inflammation of the root of a spinal nerve, especially of that portion of the root which lies between the spinal cord and the intervertebral canal.

radiculoganglionitis (rah-dik'u-lo-gang'gle-o-ni'tis) inflammation of the posterior spinal nerve roots and their ganglions.

radiculomedullary (rah-dik'u-lo-med'u-ler'e) pertaining to or affecting the nerve roots and the spinal cord.

radiculomeningomyelitis (rah-dik'u-lo-mē-ning'go-mi'ē-li'tis) inflammation of the nerve roots, the meninges, and the spinal cord.

radiculomyelopathy (rah-dik''u-lo-mi''ē-lop''ah-the) disease of the nerve roots and spinal canal.

radiculoneuritis (rah-dik''u-lo-nu-ri''tis) acute febrile polyneuritis.

radiculoneuropathy (rah-dik''u-lo-nu-rop''ah-the) disease of the nerve roots and nerve.

radiculopathy (rah-dik''u-lop''ah-the) disease of the nerve roots. **spondylotic caudal r.**, compression of the cauda equina due to encroachment upon a congenitally small spinal canal by spondylosis, resulting in pseudoclaudication or more profound neural disorders of the lower limbs.

radicectomy (ra''de-ek''to-me) [L. *radix* root + Gr. *ektomē* excision] excision of the root of a tooth.

radiferous (ra-dif''er-us) containing radium.

radii (ra''de-i) [L.] plural of *radius*.

radio- (ra''de-o) [L. *radius* ray] a combining form denoting relationship to a ray or radiation; sometimes used with specific reference to the emission of radiant energy, to radium, or to the radius (bone of the forearm). It is also affixed to the name of a chemical element to designate a radioactive isotope of that particular element, as radiocarbon, radioiodine, etc.

radioactinium (ra''de-o-ak-tin''e-um) a substance formed by the disintegration of actinium.

radioaction (ra''de-o-ak''shun) radioactivity.

radioactive (ra''de-o-ak''tiv) having the property of radioactivity.

radioactivity (ra''de-o-ak-tiv''i-te) the quality of emitting or the emission of corpuscular or electromagnetic radiations consequent to nuclear disintegration, a natural property of all chemical elements of atomic number above 83, and possible of induction in all other known elements. **artificial r.**, **induced r.**, radioactivity produced by bombarding an element with high velocity particles, as the radioactivity of synthetic nuclides.

radioactor (ra''de-o-ak''tor) an apparatus used for collecting and purifying radium emanation.

radioallergosorbent (ra''de-o-al''er-go-sor''bent) denoting a radioimmunoassay technique for the measurement of specific IgE antibody to a variety of allergens; see under *tests*.

radioanaphylaxis (ra''de-o-an''ah-fi-lak''sis) anaphylactic sensitization to the roentgen ray or other form of radiant energy.

radioautogram (ra''de-o-aw''to-gram) autoradiograph.

radioautograph (ra''de-o-aw''to-graf) autoradiograph.

radioautography (ra''de-o-aw-tog''rah-fe) autoradiography.

radiobe (ra''de-ōb) [*radio-* + Gr. *bios* life] one of the peculiar microscopical condensations of sterilized bouillon produced by radium, discovered by J. B. Burke, which, by their appearance and the way in which they divide, have suggested the similar phenomena of bacteria.

radiobicipital (ra''de-o-bi-sip''i-tal) pertaining to the radius and the biceps muscle of the arm.

radiobiological (ra''de-o-bi''o-loj''i-kal) pertaining to radiobiology; concerning cellular and tissue response to irradiation.

radiobiologist (ra''de-o-bi-ol''o-jist) one who devotes his studies to radiobiology.

radiobiology (ra''de-o-bi-ol''o-je) that branch of science which is concerned with the effect of light and of ultraviolet and ionizing radiations upon living tissue or organisms.

radiocalcium (ra''de-o-kal''se-um) a radioactive isotope of calcium. ⁴⁵Ca, with a half-life of 180 days, is used as a tracer in the study of calcium metabolism.

radiocarbon (ra''de-o-kar''bon) a radioactive isotope of carbon such as ¹⁴C, with a half-life of over 5000 years.

radiocarcinogenesis (ra''de-o-kar''si-no-jen''ē-sis) cancer formation caused by exposure to radiation.

radiocardiogram (ra''de-o-kar''de-o-gram) the graphic record obtained by radiocardiography.

radiocardiography (ra''de-o-kar''de-og''rah-fe) 1. the graphic recording of the variation with time of the concentration, in a selected chamber of the heart, of a radioactive isotope, usually injected intravenously. 2. radioelectrocardiography.

radiocarpal (ra''de-o-kar''pal) pertaining to the radius and carpus.

radiocarpus (ra''de-o-kar''pus) musculus flexor carpi radialis.

radiochemistry (ra''de-o-kem''is-tre) the branch of chemistry which treats of radioactive materials.

radiochemy (ra''de-o-kem''e) the effects produced by radioactive rays.

radiochromism (ra''de-o-kro''izm) [*radio-* + Gr. *chroa* color] the capacity of a substance to absorb certain radioactive and roentgen rays.

radiocinematograph (ra''de-o-sin''ē-mat''o-graf) an apparatus combining the moving picture camera and the roentgen ray machine, making possible moving pictures of the internal organs.

radiocolloids (ra''de-o-kol''oids) radioisotopes in pure form in solution, which tend to behave more like colloids than solutes.

radiocurable (ra''de-o-kūr''ah-b'l) curable by radiation therapy.

radiocystitis (ra''de-o-sis-ti''tis) acute or chronic inflammatory tissue changes in the urinary bladder caused by ionizing irradiation.

radiode (ra''de-ōd) an instrument for the therapeutic application of a radioactive source.

radiodense (ra''de-o-dens''i) radiopaque.

radiodensity (ra''de-o-den''si-te) the property of being relatively resistant to the passage of radiant energy; the property of being radiopaque.

radiodermatitis (ra''de-o-der-mah-ti''tis) a cutaneous inflammatory reaction occurring as a result of exposure to biologically effective levels of ionizing radiation.

radiodiagnosis (ra''de-o-di''ag-no''sis) diagnosis by means of roentgen rays and roentgenograms.

radiodiagnostics (ra''de-o-di''ag-nos''tiks) the art of roentgen-ray diagnosis.

radiodiaphane (ra''de-o-di''ah-fān) an instrument for performing transillumination by means of radium.

radiodigital (ra''de-o-dig''i-tal) pertaining to the radius and to the fingers.

radiodontics (ra''de-o-don''tiks) dental radiology.

radiodontist (ra''de-o-don''tist) a dentist who specializes in dental radiology.

radioecology (ra''de-o-e-kol''o-je) the science dealing with the effects of radiation on species of plants and animals in natural communities or ecosystems.

radioelectrocardiogram (ra''de-o-e-lek''tro-kar''de-o-gram) the graphic recording obtained by radioelectrocardiography.

radioelectrocardiograph (ra''de-o-e-lek''tro-kar''de-o-graf''i) a battery-operated device by means of which cardiographic signals from electrodes attached at desired body sites are transmitted to a recorder close to or at a distance from the subject.

radioelectrocardiography (ra''de-o-e-lek''tro-kar''de-og''rah-fe) electrocardiography in which impulses are beamed by radio from the subject to a receiver close to or at a distance from the subject.

radioelement (ra''de-o-el''ē-ment) any chemical element having radioactive properties.

radioencephalogram (ra''de-o-en-sef''ah-lo-gram''i) a curve showing the passage of an injected tracer through the cerebral blood vessels as revealed by an external scintillation counter.

radioencephalography (ra''de-o-en-sef''ah-log''rah-fe) the recording of changes in the electric potential of the brain without direct attachment between the recording apparatus and the subject, the impulses being beamed by radio waves from the subject to the receiver.

radioepidermitis (ra''de-o-ep''i-der-mi''tis) radiodermatitis.

radioepithelitis (ra''de-o-ep''i-the-li''tis) radiodermatitis.

radiogen (ra''de-o-jen) any radioactive substance.

radiogenesis (ra''de-o-jen''ē-sis) the production of rays or radioactivity; actinogenesis.

radiogenic (ra''de-o-jen''ik) [*radio-* + Gr. *gennan* to produce] produced by irradiation.

radiogold (ra''de-o-gold) a radioactive isotope of gold, viz., ¹⁹⁵Au, ¹⁹⁸Au, or ¹⁹⁹Au. The isotope ¹⁹⁸Au is the most commonly used in solid form or in colloidal solution. It has a half-life of 2.7 days and emits gamma (0.411 MeV) as well as beta radiation (E_{max} = 0.96 MeV). The gamma rays contribute from 6 to 10 per cent of the total dose. It is used both as a diagnostic scintiscanning agent and as a therapeutic cancericidal agent.

radiogram (ra''de-o-gram''i) radiograph.

radiograph (ra''de-o-graf''i) a film produced by radiography.

cephalometric r., cephalogram. **panoramic r.**, a type of extraoral body-section radiograph on which an entire maxilla or both maxillae are depicted on a single film. Called also *Orthopantomograph*.

radiographic (ra''de-o-graf''ik) pertaining to or produced by radiography.

radiography (ra''de-og''rah-fe) [*radio-* + Gr. *graphein* to write] the making of film records (radiographs) of internal structures of the body by passage of x-rays or gamma rays through the body to act on specially sensitized film. See also *roentgenography*. **neutron r.**, that in which a narrow beam of neutrons from a nuclear reactor is passed through tissues, especially useful in visualizing bony tissue. **urine r.**, a technique for measuring the quantity of organic iodide excreted by the kidneys, by comparison of the roentgenographic density of a specimen of urine voided at completion of intravenous urography with that of a calibrated scale.

radiohumeral (ra''de-o-hu''mer-al) pertaining to the radius and humerus.

radioimmunity (ra''de-o-i-mu''ni-te) a condition of decreased sensitivity to radiation sometimes produced by repeated irradiation.

radioimmunoassay (ra'de-o-im'u-no-as'a) an immunological technique for the measurement of minute quantities of antigen or antibody, hormones, certain drugs, and other substances. The substance under test (e.g., a hormone) is mixed with diluted antiserum (antihormone antibody) in the presence of radioactively labeled antigen (hormone). The concentration of the test substance will then be inversely proportional to amount of labeled antigen bound to the specific antibody and directly related to the amount of free labeled antigen.

radioimmunodiffusion (ra'de-o-im'u-no-dif-fu'zhun) immunodiffusion conducted with radioisotope-labeled antibodies or antigens.

radioimmunoelectrophoresis (ra'de-o-im'u-no-e-lek'tro-fere'sis) electrophoresis in which any layer of precipitates is identified by adding the corresponding radioactive-labeled antigen or antibody and subjecting it to autoradiography.

radioimmunoprecipitation (ra'de-o-im'u-no-pre-sip'i-ta'shun) immunoprecipitation conducted with radioisotope-labeled antibody or antigen.

radioimmunosorbent (ra'de-o-im'u-no-sor'bent) denoting a radioimmunoassay technique for measuring IgE in samples of serum; see under *tests*.

radioiodine (ra'de-o-i'o-din) a radioactive isotope of iodine; of the nine isotopes, ^{131}I and ^{125}I are the most commonly used in the diagnosis and treatment of both benign and malignant disease of the thyroid gland and in the scintiscanning of such organs as the lung, liver, kidney, etc. ^{131}I has a half-life of 8.04 days and emits both beta and gamma rays. ^{125}I has a half-life of 60 days and emits only gamma radiation.

radioiron (ra'de-o-i'ern) a radioactive isotope of iron. ^{55}Fe has a half-life of about 4 years, ^{59}Fe , a half-life of 47 days. A mixture of these has been used in study of the blood.

radioisotope (ra'de-o-i'so-top) an isotope which is radioactive, i.e., one having an unstable nucleus, which gives it the property of decay by one or more of several processes. It may be produced from the stable isotope of the element by irradiation in a cyclotron or nuclear reactor. Radioisotopes have important diagnostic and therapeutic uses in clinical medicine and research. **carrier-free r.**, see *carrier-free*.

radiokymography (ra'de-o-ki-mog'rah-fe) roentgenkymography.

radiolead (ra'de-o-led') a radioactive isotope of lead.

radiolesion (ra'de-o-le'zhun) a lesion caused by exposure to radiation.

radioligand (ra'de-o-li'gand, rad'de-o-lig'and) a radioactive-labeled substance, e.g., an antigen, used in the quantitative measurement of an unlabeled substance by its binding reaction to a specific antibody or other receptor site.

radiologic, radiological (ra'de-o-loj'ik; ra'de-o-loj'e-kal) pertaining to radiology.

radiologist (ra'de-o-l'o-jist) a specialist in the use of radiant energy (x-rays, etc.) in the diagnosis and treatment of disease.

radiology (ra'de-o-l'o-je) the science of radiant energy and radiant substances, especially that branch of the health sciences which deals with the use of radiant energy in the diagnosis and treatment of disease.

radiolucency (ra'de-o-lu'sen-se) the property of being radioluculent.

radioluculent (ra-de-o-lu'sent) [*radio-* + *L. lucere* to shine] permitting the passage of radiant energy, such as x-rays, yet offering some resistance to it, the representative areas appearing dark on the exposed film.

radiolus (ra-de'o-lus) [*L.*, dim. of *radius* ray] a probe, staff, or sound.

radiometallography (ra'de-o-met'ah-log'rah-fe) the radiography of metals.

radiometer (ra'de-o-m'ē-ter) 1. an instrument for estimating roentgen-ray quantity. 2. an instrument in which radiant heat and light may be directly converted into mechanical energy. 3. an instrument for measuring radiant energy. **pastille r.**, an apparatus consisting of a color index by means of which the color changes in the pastilles, before and after radiation, may be estimated. **photographic r.**, a radiometer that uses strips of photographic paper which, after exposure and development, are compared with a half-tone color index.

radiomicrometer (ra'de-o-mi-krom'ē-ter) [*radio-* + *Gr. mikros* small + *metron* measure] an instrument for detecting minute changes of radiant energy.

radiomimetic (ra'de-o-mi-met'ik) [*radio-* + *Gr. mimētikos* imitative] exerting effects similar to those of ionizing radiation.

radiomuscular (ra'de-o-mus'ku-lar) going from the radial artery or nerve to the muscles.

radiomutation (ra'de-o-mu-ta'shun) change in the character of cells caused by exposure to radiation.

radion (ra'de-on) one of the radiant particles thrown off by a radioactive substance.

radionecrosis (ra'de-o-ne-kro'sis) destruction of tissue caused by radiant energy.

radioneuritis (ra'de-o-nu-ri'tis) a form of neuritis resulting from exposure to roentgen rays or other radiant energy.

radionitrogen (ra'de-o-ni'tro-jen) a radioactive substance produced by bombarding boron with alpha rays.

radionuclide (ra'de-o-nu'klid) a radioactive nuclide; one that disintegrates with the emission of corpuscular or electromagnetic radiations.

radio-opacity (ra'de-o-o-pas'i-te) radiopacity.

radiopacity (ra'de-o-pas'i-te) the property of being radiopaque.

radiopaque (ra'de-o-pāk') [*radio-* + *L. opacus* dark, obscure] not permitting the passage of radiant energy, such as x-rays, the representative areas appearing light or white on the exposed film.

radioparency (ra'de-o-par'en-se) the property of being radioparent.

radioparent (ra'de-o-par'ent) permitting the passage of roentgen rays.

radiopathology (ra'de-o-pah-thol'o-je) pathology having to do with the effects of radiation on tissues.

radiopelvimetry (ra'de-o-pel-vim'ē-tre) measurement of the pelvis by roentgen-ray examination.

radiopharmaceutical (ra'de-o-fahr'mah-su'ti-kal) a radioactive pharmaceutical or chemical (e.g., radioactive iodine, cobalt, etc.) used for diagnostic or therapeutic purposes.

radiopharmacy (ra'de-o-fahr'mah-se) the preparation of radioactive pharmaceuticals and radionuclides.

radiophobia (ra'de-o-fō-be'ah) morbid anxiety about the damaging effects of x-rays and radium.

radiophosphorus (ra'de-o-fos'fo-rus) either of two radioactive isotopes of phosphorus, ^{32}P and ^{33}P . The former, a pure beta emitter, has a half-life of 14.3 days and is used in solution or colloidal form as a diagnostic and therapeutic agent.

radiophotography (ra'de-o-fō-tog'rah-fe) photography of the fluorescent image produced by an x-ray beam.

radiophylaxis (ra'de-o-fi-lak'sis) the modifying effect of a small dose of radiation on the reaction to a large subsequent radiation.

radiophysics (ra'de-o-fiz'iks) the physics of radiology.

radioplastic (ra'de-o-plas'tik) a term used to designate a method of making a plaster image of an organ, such as the heart, from roentgenoscopic measurements.

radiopotassium (ra'de-o-po-tas'e-um) a radioactive isotope of potassium. ^{42}K , with a half-life of 12.4 hours, is used in tracer studies of potassium interchange in the body.

radiopotential (ra'de-o-po-ten'she-a'shun) the action of a drug in enhancing the effect of irradiation.

radiopraxis (ra'de-o-prak'sis) [*radio-* + *Gr. praxis* practice] use of rays of light, electricity, etc., in treatment of disease.

radiopulmonography (ra'de-o-pul'mo-nog'rah-fe) a rapid method for estimation of ventilation of localized lung areas, based on measurement of variation in intensity of low-voltage x-rays passed through the lungs during breathing.

radioreaction (ra'de-o-re-ak'shun) a bodily reaction, especially a skin reaction, to radiation.

radioreceptor (ra'de-o-re-sep'tor) a receptor for the stimuli which are excited by radiant energy, such as light or heat.

radioreistance (ra'de-o-re-zis'tans) resistance, as of tissue or cells to irradiation.

radioresistant (ra'de-o-re-zis'tant) resisting the effects of radiation.

radioresponsive (ra'de-o-re-spon'siv) reacting favorably to radiation.

radiosclerometer (ra'de-o-skle-rom'ē-ter) penetrometer, def. 1.

radioscope (ra'de-o-skōp) [*radio-* + *Gr. skopein* to examine] an instrument for detecting or studying roentgen rays or other forms of radioactivity.

radioscopy (ra'de-os'ko-pe) [*radio-* + *Gr. skopein* to examine] fluoroscopy.

radiosensibility (ra'de-o-sen'si-bil'i-te) radiosensitivity.

radiosensitive (ra'de-o-sen'si-tiv) sensitive to radiant energy, as roentgen ray or other radiations; said of skin, tumor tissue, etc.

radiosensitivity (ra'de-o-sen'si-tiv-nes) radiosensitivity.

radiosensitivity (ra'de-o-sen'si-tiv'i-te) sensitivity, as of the skin or other tissue, to radiant energy, such as roentgen-ray or other radiations.

radiosodium (ra'de-o-so'de-um) a radioactive isotope of sodium, ^{24}Na and ^{22}Na are used in the study of blood flow, water balance, and peripheral vascular diseases.

radiostereoscopy (ra'de-o-ster'e-os'ko-pe) [*radio-* + *Gr. stereos* solid + *skopein* to examine] the inspection of the interior organs by means of the roentgen rays.

radiostrontium (ra'de-o-stron'she-um) a radioactive isotope

of strontium, of which there are four: ^{85}Sr , ^{87}Sr , ^{90}Sr , and ^{90}Sr . The half-lives are, respectively 65 days, 2.8 hours, 51 days, and 28 years. Their importance in clinical scintiscanning and nuclear fallout is primarily due to their affinity for bone.

radiosulfur (ra'de-o-sul'fur) a radioactive isotope of sulfur.

radiotelemetry (ra'de-o-tel-em'ē-tre) the determination of measurement of various factors, the specific data being transmitted by radio waves from the object of measurement to the recording apparatus.

radiotellurium (ra'de-o-tel-lu're-um) any radioactive isotope of the element tellurium.

radiothanatology (ra'de-o-than'ah-to'l'o-je) [*radio* + Gr. *thanatos* death + *logos* treatise] the study of the effect of radiant energy on dead tissue.

radiotherapeutics (ra'de-o-ther'ah-pu'tiks) 1. the body of knowledge comprising the available information regarding the therapeutic use of ionizing radiation. 2. radiotherapy.

radiotherapist (ra'de-o-ther'ah-pist) a specialist in radiotherapy.

radiotherapy (ra'de-o-ther'ah-pe) [*radio* + Gr. *therapeia* cure] the treatment of disease by ionizing radiation. **interstitial r.**, that administered with the radioactive element contained in devices (e.g., needles or wire) inserted directly into the tissues. **intracavitary r.**, that in which the radioactive element is introduced into a natural body cavity.

radiotherapy (ra'de-o-ther'me) [*radio* + Gr. *thermē* heat] 1. therapeutic use of radiant heat or of heat emanating from radioactive substances. 2. short wave diathermy.

radiothorium (ra'de-o-tho're-um) a radioactive isotope of thorium.

radiotomy (ra'de-ot'o-me) [*radio* + Gr. *tomē* a cutting] see *body section roentgenography*, under *roentgenography*.

radiotoxemia (ra'de-o-tok-se'me-ah) toxemia produced by radiation or a radioactive substance.

radiotracer (ra'de-o-tra'ser) a radioactive tracer.

radiotransparency (ra'de-o-trans-par'en-se) the quality of being pervious to roentgen rays or other forms of radiation.

radiotransparent (ra'de-o-trans-par'ent) permitting the passage of roentgen rays or of other forms of radiation.

radiotropic (ra'de-o-trop'ik) influenced by radiation.

radiotropism (ra'de-ot'ro-pizm) a tropism with regard to radiation.

radioulnar (ra'de-o-ul'nar) pertaining to the radius and ulna.

radium (ra'de-um) [so called from its radiant quality] a rare radioactive element in the uranium decay series. It has an atomic weight of 226, an atomic number of 88, and a half-life of 1622 years. It is found mainly in pitchblende and undergoes spontaneous disintegration with formation of a gas called radon (half-life = 3.85 days). In this process it emits alpha particles. Radon (alpha emitter) on deposit in solid form disintegrates into a series of decay products: radium A (half-life = 3 minutes), radium B (half-life = 26.7 minutes), and radium C (half-life = 19.5 minutes). The beta particles and gamma radiations used in clinical therapy originate from radium B and C. With radium in a sealed container and the same number of atoms of each decay product disintegrating per second, radium and its decay products are in equilibrium. In this state, the formation of beta particles and gamma rays reaches its maximum. In clinical gamma-ray therapy, shielding off of the beta particles can be accomplished by a metallic container, e.g., of gold or platinum. A glass wall container permits irradiation with beta particles as well as gamma rays.

radius (ra'de-us), pl. *ra'dii* [L. "spoke" (of a wheel)] 1. a line radiating from a center, or the circular limit defined by a fixed distance from an established point or center. 2. [NA] the bone on the outer or thumb side of the forearm, articulating proximally with the humerus and ulna and distally with the ulna and carpus; see Plate accompanying *skeleton*. **r. cur'vus**, Madelung's deformity. **r. fix'us**, a straight line from the hormion to the infion. **radii of lens**, **ra'dii len'tis** [NA], imaginary lines extending from the midpoint of the axis of the lens of the eye to the capsule of the lens. **Van der Waals r.**, the distance at which there is a balance between Van der Waals attractive and repulsive forces in the formation of chemical bonds.

radix (ra'diks), pl. *rad'ices* [L.] the lowermost part, or a structure by which something is firmly attached; [NA] a general term for the lowermost part, or a part by which a structure is anchored, as the portion of a hair, nail, or tooth that is buried in the tissues, or the part of a nerve adjacent to the center to which it is connected. Called also *root*. **r. ante'rior**, r. ventralis. **r. ar'cus ver'tebrae**, pediculus arcus vertebralis. **r. bre'vis gan'glii cilia'ris**, r. oculomotoria ganglii ciliaris. **r. clin'ica** [NA], clinical root: that portion of a tooth below the clinical crown, being attached to the gingiva or alveolus. **r. cochlea'ris ner'vi acus'tici**, r. inferior nervi vestibulocochlearis. **rad'ices cran'ia'les ner'vi access'o'rii** [NA], the cranial roots of the accessory nerve. Originating from the nucleus ambiguus and emerging from the side of the medulla oblongata below the roots of the vagus nerve, they unite with the spinal portion in the

jugular foramen. Their constituent fibers then form the internal branch, which joins the vagus nerve and is distributed to the soft palate, constrictors of the pharynx, and the larynx. **r. den'tis** [NA], root of tooth: the portion of a tooth which is covered by cementum, proximal to the neck of the tooth and ordinarily embedded in the dental alveolus; called also *anatomical root*. **r. descen'dens** [*mesencephalica*] **ner'vi trigem'ini**, tractus mesencephalicus nervi trigemini. **r. dorsa'lis** [NA], dorsal root (of spinal nerves): the posterior, or sensory division of each spinal nerve, attached centrally to the spinal cord and joining peripherally with the ventral, or motor, root to form the nerve

Diagram of a horizontal section of the spinal cord, with dorsal and ventral roots and a spinal nerve (Gardner, Gray, and O'Rahilly).

before it emerges through the intervertebral foramen: each dorsal root bears a spinal ganglion and conveys sensory fibers to the spinal cord. Called also *r. posterior*. **r. facia'lis**, NA alternative for *nervus canalis pterygoidei*. **r. infe'rior an'sae cer'vica'lis** [NA], inferior foot of ansa cervicalis: a strand of filaments connecting the ansa cervicalis with branches of the second and third cervical nerves. **r. infe'rior ner'vi vestibuloco'chlea'ris** [NA], inferior root of vestibulocochlear nerve: the central continuation of the pars cochlearis nervi octavi from the spiral ganglion, passing dorsal to the inferior cerebellar peduncle to enter the brain; called also *r. cochlearis nervi acus'tici*. **r. latera'lis ner'vi media'ni** [NA], lateral root of median nerve: the fibers contributed to the median nerve by the lateral cord of the brachial plexus. **r. latera'lis trac'tus op'tici** [NA], lateral root of optic tract: fibers from the optic tract that enter the lateral geniculate body. **r. lin'guae** [NA], root of tongue: the portion of the tongue posterior to the sulcus terminalis, being attached below to the hyoid bone, and directed backward as well as upward. **r. lon'ga gan'glii cilia'ris**, ramus communicans nervi nasociliaris cum ganglione ciliari. **r. media'lis ner'vi media'ni** [NA], medial root of median nerve: the fibers contributed to the median nerve by the medial cord of the brachial plexus. **r. media'lis trac'tus op'tici** [NA], medial root of optic tract: fibers from the optic tract that enter the superior colliculus and the pretectal region. **r. mesencephal'ica ner'vi trigem'ini**, tractus mesencephalicus nervi trigemini. **r. mesen'te'rii** [NA], root of mesentery: the line of attachment of the mesentery to the posterior abdominal wall, extending from the duodenojejunal flexure at the left of the second lumbar vertebra diagonally downward to the upper border of the right sacroiliac articulation. **rad'ices mol'les gan'glii cilia'ris**, see *ramus sympathicus ad ganglion ciliare*. **r. moto'ria ner'vi trigem'ini** [NA], motor root of trigeminal nerve: the smaller of the two roots by which the trigeminal nerve is attached to the side of the pons; it contains proprioceptive as well as motor fibers, and continues deep to the trigeminal ganglion to join the mandibular nerve. Called also *portio minor nervi trigemini*. **r. na'si** [NA], root of nose: the upper portion of the nose, which is attached to the frontal bone. **r. ner'vi facia'lis**, the root of the facial nerve, consisting of fibers passing from the nucleus of the facial nerve to the facial colliculus, and from there to the ventral surface of the lower portion of the pons. **r. oculomo'to'ria gan'glii cilia'ris** [NA], oculomotor root of ciliary ganglion: a short collection of fibers passing from the inferior branch of the oculomotor nerve to the posterior inferior portion of the ciliary ganglion; it contains preganglionic parasympathetic fibers for the sphincter pupillae and ciliary muscle. Called also *r. bre'vis ganglii ciliaris*. **rad'ices pariet'a'les ve'n'ae ca'vae infe'rio'ris**, vessels draining blood from the abdominal wall into the inferior vena cava, including the venae lumbales and vena phrenica inferior. **r. pe'nis** [NA], root of penis: the proximal, attached portion of the penis, consisting of the diverging crura of the corpora cavernosa and the bulb. **r. pi'li** [NA], root of hair: the proximal portion of a hair embedded in the hair follicle. **r. poste'rior**, r. dorsalis. **r. pulmo'nis** [NA], root of lung: the attachment of either lung, comprising the structures entering and emerging at the hilus. **r. senso'ria ner'vi trigem'ini**

[NA], sensory root of trigeminal nerve: the larger of the two roots by which the trigeminal nerve is attached to the side of the pons. It contains sensory fibers and expands into a large flat ganglion (the trigeminal ganglion) which gives rise to the ophthalmic, maxillary, and mandibular nerves. Called also *portio major nervi trigemini*. **rad/ices spina/les ner/vi accessor/rii** [NA], the spinal roots of the accessory nerve. Originating from the gray matter of the spinal cord and emerging from the side of the cord as far down as a level between the third and seventh cervical nerves, they form a trunk that ascends in the vertebral canal, passes through the foramen magnum, and unites with the cranial portion in the jugular foramen. The constituent fibers then form the external branch, which supplies the sternocleidomastoid and trapezius muscles. **r. supe/rior an/sae cervica/lis** [NA], superior root of ansa cervicalis: fibers of the first or second cervical nerve, descending in company with the hypoglossal nerve, connecting it and the ansa cervicalis and helping supply the infrahyoid muscles. Called also *ramus descendens nervi hypoglossi*. **r. supe/rior ner/vi vestibulocochlea/ris** [NA], superior root of vestibulocochlear nerve: the central continuation of the pars vestibularis nervi octavi from the vestibular ganglion, entering the brain just lateral to the intermediate nerve and in front of the inferior cerebellar peduncle. Called also *r. vestibularis nervi acustici*. **rad/ices sympath/icae gan/glii cilia/ris**, see *ramus sympathicus ad ganglion ciliare*. **r. sympath/ica gan/glii submaxilla/ris**, *ramus sympathicus ad ganglion submandibulare*. **r. un/guis** [NA], root of nail: the proximal portion of the nail, situated in the sulcus of the matrix of the nail. **r. ventra/lis** [NA], ventral root (of spinal nerves): the anterior, or motor, division of each spinal nerve, attached centrally to the spinal cord and joining peripherally with the dorsal, or sensory, root to form the nerve before it emerges through the intervertebral foramen. It conveys motor fibers to skeletal muscle and contains preganglionic autonomic fibers at thoracolumbar and sacral levels. Called also *r. anterior*. **r. vestibula/ris ner/vi acus/tici**, *r. superior nervi vestibulocochlearis*. **rad/ices viscera/les ve/nae ca/vae inferio/ris**, vessels draining blood from the viscera of the abdominal and pelvic cavities to the inferior vena cava, including the venae hepaticae, renales, and suprarenales, the vena spermatica, testicularis, and ovaricus, and the plexus pampiniformis.

radon (ra'don) a heavy, colorless, gaseous, radioactive element, symbol Rn, atomic weight 222, atomic number 86, obtained by the breaking up of radium, and used in radiotherapy. Called also *radium emanation (RE)*. Cf. *radium*. ^{210}Rn is a radioactive isotope of the actinium radioactive series. ^{220}Rn is a radioactive isotope of the thorium radioactive series.

raffinase (raf'i-nās) an enzyme which catalyzes the hydrolytic cleavage of raffinose.

raffinose (raf'i-nōs) melitose.

rafoxanide (rah-foks'ah-nid) chemical name: 3'-chloro-4'-(p-chlorophenoxy)-3,5-diiodosalicylanilide; an anthelmintic, $\text{C}_{19}\text{H}_{11}\text{Cl}_2\text{I}_2\text{NO}_5$.

rage (rāj) a state of violent anger. **sham r.**, an outburst of behavior in a decorticated animal, resembling that manifested in fear and anger; a similar phenomenon may be observed in man in cases of insulin hypoglycemia or carbon monoxide poisoning.

ragocyte (rag'o-sit) a cell found in the joints in rheumatoid arthritis. Such cells are produced when polymorphonuclear leukocytes ingest aggregated IgG, rheumatoid factor, fibrin, and complement.

raigan (ra'i-gan) a native Chinese name for dried mushrooms, *Omphalia lapidescens*; anthelmintic.

Raillietina (ri''le-ē-ti'nah) a genus of tapeworms of the family Davaineidae, many species of which infect birds, domestic fowl, and mammals. *R. madagascariensis* (*Taenia madagascariensis*, Madagascar tapeworm), *R. asiatica*, *R. formosana*, *R. demarariensis* (*Taenia demarariensis*), and *R. loechesalavezi* have been reported from man.

raillietiniasis (ri''le-ē-ti-ni'ah-sis) infection with a parasite of the genus *Raillietina*.

Rainey's corpuscles, tubes, tubules (ra'nēz) [George Rainey, English anatomist, 1801-1884] sarcosporidian cysts; see under *cyst*.

rale (rahl) [Fr. *râle* rattle] an abnormal respiratory sound heard in auscultation, and indicating some pathologic condition. Rales are distinguished as *dry* or *moist*, according to the absence or presence of fluid in the air passages, and are classified according to their site of origin as *bronchial*, *cavernous*, *laryngeal*, *pleural*, *tracheal*, and *vesicular*, (*crepitan*). **amphoric r.**, a coarse, musical, and tinkling rale caused by the splashing of fluid in a cavity connected with a bronchus. **atelectatic r.**, a nonpathologic rale which is dissipated by deep breathing or coughing. Such rales are frequently heard in those who breathe feebly and superficially, when on deep inspiration the moist walls of the unexpanded alveoli are suddenly forced apart by the entering air; after a few deep inspirations such rales become lost. These rales are best observed at the margins or borders of the lung and are sometimes known as *marginal* or *border rales*. **border r.**, atelectatic r. **bronchial r.**, a rale produced in a bronchus.

bubbling r., a moist rale, finer than a subcrepitant rale, heard in bronchitis, in the resolving stage of croupous pneumonia, and over small cavities. **cavernous r.**, a hollow and metallic rale caused by the alternate expansion and contraction of a pulmonary cavity during respiration. **cellophane r.**, a dry crackling chest sound, as heard in interstitial pulmonary fibrosis. **clicking r.**, a small, sticky sound heard in inspiration, and caused by the passage of air through secretions in the smaller bronchi. **collapse r.**, a fine crepitant rale heard over collapsed lung tissue; also at the base of the healthy lung of a bedridden patient, due to incomplete expansion of the air vesicles. **consonating r.**, a clear, ringing sound produced in bronchial tubes that are surrounded by consolidation tissues. **crackling r.**, subcrepitant r. **crepitant r.**, a very fine rale, resembling the sound produced by rubbing a lock of hair between the fingers or by particles of salt thrown on fire; heard at the end of inspiration. **dry r.**, a rale produced by the presence of viscid secretion in the bronchial tubes or by spastic contraction of the walls of the tubes; it has a whistling, musical, or squeaking quality. Dry rales are heard in asthma and bronchitis. **extrathoracic r.**, a rale produced in the larynx or trachea. **gurgling r.**, a very coarse rale resembling the bursting of large bubbles; in pulmonary edema, heard over large cavities that contain fluid, and in the trachea in the "death rattle." **guttural r.**, a rale produced in the throat. **r. in/dux**, a crepitant rale heard in the stage of beginning consolidation in pneumonia. **laryngeal r.**, a rale produced in the larynx. **marginal r.**, atelectatic r. **metallic r.**, consonating r. **moist r.**, a rale produced by the presence of liquid in the bronchial tubes. **mucous r.**, **r. mu/queux**, a modified subcrepitant rale resembling the sound produced by blowing through a pipe into soapy water; it is caused by the bursting of viscid bubbles in the bronchial tubes. **pleural r.**, a pleural friction sound. **r. redux**, **r. de retour**, an unequal crackling sound produced by air passing through fluid in a bronchial tube; heard in the resolution stage of pneumonia. **sibilant r.**, a hissing sound resembling that produced by suddenly separating two oiled surfaces. It is produced by the presence of a viscid secretion in the bronchial tubes or by thickening of the walls of the tubes; heard in asthma and bronchitis. **sonorous r.**, a fine, moist sound resembling the cooing of a dove, produced by the passage of air through mucus in the capillary bronchial tubes; heard in capillary bronchitis and asthma. **subcrepitant r.**, a fine, moist rale heard in conditions that are associated with liquid in the smaller tubes; called also *crackling r.* **tracheal r.**, a rale produced in the trachea. **vesicular r.**, crepitant r. **whistling r.**, sibilant r.

Ralfe's test (ralfs) [Charles Henry Ralfe, English physician, 1842-1896] see under *tests*.

ramal (ra'mal) pertaining to a ramus; branching.

Raman effect (ram'an) [Sir Chandrasekhara Venkata Raman, Indian physicist, born 1888; winner of the Nobel prize for physics in 1930] see under *effect*.

ramaninjana (ram'an-in-jah'nah) a form of palmus, or jumping disease, prevailing in Madagascar.

R.A.M.C. Royal Army Medical Corps.

ramex (ra'meks) [L.] 1. (*obs.*) a hernia. 2. varicocele.

rami (ra'mi) [L.] plural of *ramus*.

Ramibacterium (ra'me-bak-te're-um) [L. *ramus* branch + *bacterium*] a genus of microorganisms of the tribe Lactobacillaeae, family Lactobacillaceae, order Eubacteriales, made up of nonsporulating, anaerobic, gram-positive bacilli found in the intestinal tract and occasionally associated with purulent infections. **R. ramo'sum**, *Bacteroides ramosus*.

ramicotomy (ram'i-kot'o-me) [*ramus* + Gr. *tomē* a cutting] ramisection.

ramification (ram'i-fi-ka'shun) [*ramus* + L. *facere* to make] 1. distribution in branches. 2. a branch or set of branches. 3. the manner of branching.

ramify (ram'i-fi) [*ramus* + L. *facere* to make] 1. to branch; to diverge in various directions. 2. to traverse in branches.

ramisection (ram'i-sek'shun) [*ramus* + L. *sectio* a cutting] the operation of cutting the appropriate rami communicantes of the sympathetic nervous system (*sympathetic ramisection*).

ramisectomy (ram'i-sek'to-me) ramisection.

ramitis (ram-i'tis) [*ramus* + *-itis* inflammation] inflammation of a ramus.

Rammstedt (rahm'stet) see *Ramstedt*.

ramolissement (rah'mol-ēs-maw') [Fr.] softening.

Ramon's flocculation, flocculation test [Gaston Ramon, French bacteriologist 1886-1963] see under *tests*.

Ramón y Cajal (rah-mōn e ka-hal') [Santiago Ramón y Cajal, Spanish histologist, 1852-1934] see *Cajal*.

Ramond's sign (ram-onz') [Louis Ramond, French internist, 1879-1952] see under *sign*.

ramose (ra'mos) [L. *ramus* branch] branching; having many branches.

rampart (ram'part) a board, encircling embankment. **maxillary r.**, a ridge or mound of epithelial cells that is seen in that

portion of the jaw of the embryo which is to become the alveolar border.

Ramsay Hunt disease, syndrome (ram'se hunt) [James Ramsay Hunt, American neurologist, 1872–1937] see *dyssynergia cerebellaris progressiva*; see *juvenile paralysis agitans (of Hunt)*, under *paralysis*; and see under *syndrome*, def. 1.

Ramsden's eyepiece (ramz'denz) [Jesse Ramsden, English instrument maker and optician, 1735–1800] see under *eyepiece*.

Ramstedt operation (rahm'stet) [Wilhelm Conrad Ramstedt, surgeon in Münster, born 1867] Fredet-Ramstedt operation.

ramulus (ram'u-lus), pl. *ram'uli* [L., dim. of *ramus*] a small branch or terminal division.

ramus (ra'mus), pl. *ra'mi* [L.] a branch; [NA] a general term for a smaller structure given off by a larger one, or into which the larger structure, such as a blood vessel or nerve, divides. **r. acetabula'ris arte'riae circumflex'ae fem'oris media'lis** [NA], acetabular branch of medial circumflex femoral artery: a branch of the medial circumflex artery of the thigh, distributed to the head of the femur and to the acetabulum (hip joint); called also *r. acetabuli arteriae circumflexae femoris medialis*. **r. acetabula'ris arte'riae obturato'riae** [NA], acetabular branch of obturator artery: it is distributed to the hip joint; called also *arteria acetabuli*. **r. acetab'uli arte'riae circumflex'ae fem'oris media'lis**, *r. acetabularis arteriae circumflexae femoris medialis*. **r. acromia'lis arte'riae suprascapula'ris** [NA], acromial branch of suprascapular artery: it is distributed to the acromion process; called also *r. acromialis arteriae transversae scapulae*. **r. acromia'lis arte'riae thoracoacromia'lis** [NA], acromial branch of thoracoacromial artery: it is distributed to the deltoid muscle and acromion process. **r. acromia'lis arte'riae transver'sae scapulae**, *r. acromialis arteriae suprascapularis*. **ra'mi ad pon'tem arte'riae basila'ris** [NA], pontine branches of basilar artery: they are distributed to the pons and adjacent parts of the brain. **ra'mi alveola'res superio'res antero'res ner'vi infraorbita'lis** [NA], anterior superior alveolar branches of infraorbital nerve: branches from the infraorbital nerve that innervate the incisor and canine teeth of the upper jaw, help form the superior dental plexus, and give terminal twigs to the floor of the nose; modality, general sensory. **r. alveola'ris supe'rior me'dius ner'vi infraorbita'lis** [NA], middle superior alveolar branch of infraorbital nerve: a branch from the infraorbital nerve that innervates the premolar teeth of the upper jaw by way of the superior dental plexus; modality, general sensory. **ra'mi alveola'res superio'res postero'res ner'vi maxilla'ris** [NA], posterior superior alveolar branches of maxillary nerve: they innervate the maxillary sinus, cheek, gums, and molar and premolar teeth of the upper jaw; they form part of the superior dental plexus; modality, general sensory. **r. anastomot'icus**, a structure connecting one nerve to another; see terms beginning *r. communicans*. **r. anastomot'icus arte'riae menin'geae me'diae cum arte'ria lacrima'li** [NA], a branch of the middle meningeal artery that is distributed to the orbit and anastomoses with the recurrent meningeal branch of the lacrimal artery. **r. anastomot'icus gan'glii o'tici cum chor'da tym'pani**, *r. communicans ganglii otici cum chorda tympani*. **r. anastomot'icus gan'glii o'tici cum ner'vo auriculotempora'li**, *r. communicans ganglii otici cum nervo auriculotemporalis*. **r. anastomot'icus gan'glii o'tici cum ner'vo spino'so**, *r. communicans ganglii otici cum ramo meningei nervi mandibularis*. **ra'mi anastomot'ici ner'vi auriculotempora'lis cum ner'vo facia'li**, *rami communicantes nervi auriculotemporalis cum nervo faciali*. **r. anastomot'icus ner'vi facia'lis cum ner'vo glossopharyn'geo**, *r. communicans nervi facialis cum nervo glossopharyngeo*. **r. anastomot'icus ner'vi facia'lis cum plex'u tympan'ico**, *r. communicans nervi facialis cum plexu tympanico*. **r. anastomot'icus ner'vi glossopharyn'gei cum ra'mo auricula'ri ner'vi va'gi**, *r. communicans nervi glossopharyngei cum ramo auriculari nervi vagi*. **r. anastomot'icus ner'vi lacrima'lis cum ner'vo zygoma'tico**, *r. communicans nervi lacrimalis cum nervo zygomatico*. **ra'mi anastomot'ici ner'vi lingua'lis cum ner'vo hypoglos'so**, *rami communicantes nervi lingualis cum nervo hypoglosso*. **r. anastomot'icus ner'vi media'ni cum ner'vo ulna'ri**, *r. communicans nervi mediani cum nervo ulnari*. **r. anastomot'icus ner'vi va'gi cum ner'vo glossopharyn'geo**, *r. communicans nervi vagi cum nervo glossopharyngeo*. **r. anastomot'icus perona'e'us ner'viperona'e'i commu'nis**, *r. communicans peroneus nervi peronei communis*. **r. anastomot'icus ulna'ris ner'vi radia'lis**, *r. communicans ulnaris nervi radialis*. **ra'mi antero'res arteria'rum intercosta'lum**, anterior branches of intercostal arteries. **r. ante'rior arte'riae obturato'riae** [NA], anterior branch of obturator artery: it passes forward around the medial margin of the obturator foramen, on the obturator membrane, and is distributed to the obturator and adductor muscles. **r. ante'rior arte'riae recurren'tis ulna'ris** [NA], anterior branch of ulnar recurrent artery: it helps supply the pronator teres and brachialis muscles and runs to the front of the medial epicondyle, supplying the elbow joint and

adjacent structures. **r. ante'rior arte'riae rena'lis** [NA], the anterior branch of the renal artery, supplying the anterior, superior, and inferior segments of the kidney. **r. ante'rior arte'riae thyroi'deae superio'ris** [NA], anterior branch of superior thyroid artery: it helps supply the upper part of the gland, anastomosing with its fellow of the opposite side along the upper border of the isthmus. **r. ante'rior ascen'dens fissu'rae cer'ebri latera'lis** [Syl/vii], *r. ascendens sulci lateralis cerebri*. **r. ante'rior duc'tus hepat'ici dex'tri** [NA], the anterior branch of the right hepatic duct. **r. ante'rior hori-zonta'lis fissu'rae cer'ebri latera'lis** [Syl/vii], *r. anterior sulci lateralis cerebri*. **r. ante'rior ner'vi auricula'ris mag'ni** [NA], anterior branch of great auricular nerve; it is distributed to the skin of the face over the parotid gland; modality, general sensory. **ra'mi antero'res nervo'rum cervica'lum**, *rami ventrales nervorum cervicalium*. **r. ante'rior ner'vi coccyg'ei**, *r. ventralis nervi coccygei*. **r. ante'rior ner'vi cuta'nei antebrach'ii media'lis** [NA], anterior branch of medial cutaneous nerve of forearm; it innervates the skin of the front and medial aspect of the forearm; modality, general sensory; called also *r. volaris nervi cutanei antibrachii medialis*. **r. ante'rior ner'vi laryn'gei inferio'ris**, anterior branch of inferior laryngeal nerve. **ra'mi antero'res nervo'rum lumba'lum**, *rami ventrales nervorum lumbalium*. **r. ante'rior ner'vi obturato'rii** [NA], anterior branch of obturator nerve; it supplies the gracilis and the adductor longus and brevis muscles and the pectineus, and occasionally gives off a branch to the skin of the medial side of the thigh and leg; modality, motor and general sensory. **ra'mi antero'res nervo'rum sacra'lum**, *rami ventrales nervorum sacralium*. **r. ante'rior nervo'rum spina'lum**, *r. ventralis nervorum spinalium*. **ra'mi antero'res nervo'rum thoraca'lum**, *rami ventrales nervorum thoracorum*. **r. ante'rior ramo'rum cutaneo'rum latera'lum** [*pectora'lum et abdomina'lum*], anterior branch of the lateral cutaneous branches of the intercostal arteries. **r. ante'rior ramo'rum cutaneo'rum latera'lum** [*pectora'lum et abdomina'lum*] *nervo'rum intercosta'lum*, the anterior branch of the lateral cutaneous branches of the intercostal nerve. **r. ante'rior sul'ci latera'lis cer'ebri** [NA], anterior branch of lateral cerebral sulcus; it runs forward a short distance into the inferior frontal gyrus; called also *r. anterior horizontalis fissurae cerebri lateralis* [Sylvii]. **ra'mi arterio'si interlobula'res hep'atis**, *arteriae interlobulares hepatis*. **ra'mi articula'res arte'riae genu sup'remae**, *ra'mi articula'res arte'riae ge'nus descenden'tis* [NA], articular branches of descending genicular artery; they pass downward in the vastus medialis muscle and help supply the knee joint. **r. ascen'dens arte'riae circumflex'ae fem'oris latera'lis** [NA], ascending branch of lateral circumflex femoral artery: it runs upward along the trochanteric line of the femur and between the gluteus medius and minimus muscles, and anastomoses with branches of the superior gluteal artery. It helps supply the upper thigh muscles. **r. ascen'dens arte'riae circumflex'ae fem'oris media'lis** [NA], ascending branch of medial circumflex femoral artery: it ascends in front of the quadratus femoris muscle to the trochanteric fossa, and there anastomoses with gluteal arteries. **r. ascen'dens arte'riae circumflex'ae il'ium profun'dae** [NA], ascending branch of deep circumflex iliac artery: a branch leaving the deep circumflex iliac artery near the anterior superior iliac spine, rising between and distributing to the transversus abdominis and internal oblique muscles. **r. ascen'dens arte'riae transver'sae col'li**, *r. superficialis arteriae transversae colli*. **r. ascen'dens sul'ci latera'lis cer'ebri** [NA], ascending branch of lateral cerebral sulcus: it runs superiorly a short distance into the inferior frontal gyrus; called also *r. anterior ascendens fissurae cerebri lateralis* [Sylvii]. **ra'mi auricula'res antero'res arte'riae tempora'lis superficia'lis** [NA], anterior auricular branches of superficial temporal artery: they supply the lateral aspect of the pinna and the external acoustic meatus. **r. auricula'ris arte'riae auricula'ris postero'ris** [NA], auricular branch of posterior auricular artery: a branch supplying the pinna and adjacent skin. **r. auricula'ris arte'riae occipita'lis** [NA], auricular branch of occipital artery: an inconstant branch of the occipital artery that helps supply the medial aspect of the pinna. **r. auricula'ris ner'vi va'gi** [NA], auricular branch of vagus nerve: a branch arising from the superior ganglion of the vagus, innervating the cranial surface of the auricle, the floor of the external acoustic meatus, and the adjacent part of the tympanic membrane; modality, general sensory. **ra'mi bronchia'les antero'res ner'vi va'gi**, see *rami bronchiales nervi vagi*. **ra'mi bronchia'les aor'tae thora'cicae** [NA], bronchial branches of thoracic aorta: branches arising from the thoracic aorta to supply the bronchi and lower trachea, and passing along the posterior sides of the bronchi to ramify about the respiratory bronchioles; distributed also to adjacent lymph nodes, pulmonary vessels, and pericardium, and to part of the esophagus. Called also *arteriae bronchiales* or *bronchial arteries*. **ra'mi bronchia'les arte'riae mamma'riae inter'nae**, *rami bronchiales arteriae thoracicae internae*. **ra'mi bronchia'les ar-**

te'riae thora'ciae inter'nae [NA], bronchial branches of internal thoracic artery: small, variable branches of the internal thoracic artery, with distribution to the bronchi and trachea; called also *rami bronchiales arteriae mammariae internae*. **ra'mi bronchia'les bron'chi**, a name applied to the first, extrapulmonary divisions of the main bronchi, the eparterial and hyparterial bronchial rami. **r. bronchia'lis eparteria'lis**, a name given to the superior lobar bronchus on the right, which arises above the level of the pulmonary artery; called also *eparterial bronchus*. **r. bronchia'les hyparteria'les**, a name given to the middle and inferior lobar bronchi on the right and the lobar bronchi on the left, all of which arise below the level of the pulmonary artery; called also *hyparterial bronchi*. **ra'mi bronchia'les ner'vi va'gi** [NA], branches of the vagus that supply the bronchi and the pulmonary vessels, both directly and by way of the anterior and posterior parts of the pulmonary plexus; modality, parasympathetic and visceral afferent. **ra'mi bronchia'les posterio'res ner'vi va'gi**, see *rami bronchiales nervi vagi*. **ra'mi bronchia'les pulmo'nis**, a name given to intrapulmonary bronchial divisions smaller than the main bronchi and larger than the bronchioles; in NA, they are classified as lobar and segmental bronchi, and branches (rami) of the latter. **ra'mi bronchia'les segmento'rum** [NA], intrasegmental bronchial branches: smaller branches arising from the segmental bronchi. **ra'mi bucca'les ner'vi facia'lis** [NA], buccal branches of facial nerve: they innervate the zygomatic, levator labii superioris, buccinator, and orbicularis oris muscles; modality, motor and general sensory. **ra'mi calca'nei latera'les arte'riae peronea'ae**, rami calcanei ramorum malleolarium arteriae peroneae. **ra'mi calca'nei latera'les ner'vi sura'lis** [NA], lateral calcaneal branches of sural nerve: they innervate the skin on the back of the leg and the lateral side of the foot and heel; modality, general sensory. **ra'mi calca'nei media'les arte'riae peronea'ae**, rami calcanei ramorum malleolarium medialium arteriae tibialis posterioris. **ra'mi calca'nei media'les ner'vi tibia'lis** [NA], medial calcaneal branches of tibial nerve: branches supplying the medial side of the heel and of the posterior part of the sole; modality, general sensory. **ra'mi calca'nei ramo'rum malleola'rium latera'lium arte'riae peronea'ae** [NA], calcaneal branches of lateral malleolar branches of peroneal artery: branches arising from the lateral malleolar branches of the peroneal artery and distributed to the lateral aspect and back of the heel; called also *rami calcanei laterales arteriae peroneae*. **ra'mi calca'nei ramo'rum malleola'rium media'lium arte'riae tibia'lis posterio'ris** [NA], calcaneal branches of medial malleolar branches of posterior tibial artery: branches that arise from the medial malleolar branches of the posterior tibial artery and are distributed to the medial aspect and back of the heel; called also *rami calcanei mediales arteriae peroneae*. **ra'mi capsula'res arte'riae re'nis** [NA], capsular branches of renal artery: they supply the renal capsule. **ra'mi cardi'aci cervica'les inferio'res ner'vi va'gi** [NA], inferior cardiac branches of the vagus nerve: branches (sometimes called cervicothoracic) arising from the vagi and from the recurrent laryngeal nerves at the thoracic inlet, and joining cervicothoracic sympathetic cardiac nerves, the combined nerves passing to the cardiac plexus; modality, parasympathetic and visceral afferent. Called also *inferior cardiac branches of recurrent laryngeal nerve*. **ra'mi cardi'aci cervica'les superio'res ner'vi va'gi** [NA], superior cervical cardiac branches of vagus nerve: variable branches arising from the vagus in the cervical region and usually joining the cervical sympathetic cardiac nerves. The conjoined nerves then descend in front of, or behind, the arch of the aorta to the cardiac plexus; modality, parasympathetic and visceral afferent. **ra'mi cardi'aci inferio'res ner'vi recurren'tis**, r. cardi'aci cervicales inferiores nervi vagi. **ra'mi cardi'aci thora'cici ner'vi va'gi** [NA], thoracic cardiac branches of the vagus nerve: branches which arise in the thorax from the right and left vagus and left recurrent laryngeal nerves. They go directly to the posterior walls of the atria, to the coronary plexuses, and to the anterior pulmonary plexuses. **ra'mi caroticotymp'an'ici arte'riae carot'i-dis inter'nae** [NA], caroticotymp'anic branches of internal carotid artery: branches that supply the tympanic cavity. **r. car'peus dorsa'lis arte'riae radia'lis** [NA], dorsal carpal branch of radial artery: it runs medially deep to the extensor tendons, and helps form the dorsal carpal rete. **r. car'peus dorsa'lis arte'riae ulna'ris** [NA], dorsal carpal branch of ulnar artery: a variable branch of the ulnar artery that runs laterally deep to the tendons of the ulnar muscles of the wrist, helping to form the dorsal carpal rete. **r. car'peus palma'ris arte'riae radia'lis** [NA], palmar carpal branch of radial artery: a branch that passes medially behind the flexor tendons on the palmar aspect of the wrist and forms a network with a corresponding branch of the ulnar artery; called also *r. carpeus volaris arteriae radialis*. **r. car'peus palma'ris arte'riae ulna'ris** [NA], palmar carpal branch of ulnar artery: a branch that passes laterally behind the flexor tendons on the palmar aspect of the wrist and forms a network with a corresponding branch of the radial artery; called also *r. carpeus volaris arteriae ulnaris*. **r. car'peus vola'ris arte'riae radia'lis**, r. car-

peus palmaris arteriae radialis. **r. car'peus vola'ris arte'riae ulna'ris**, r. carpeus palmaris arteriae ulnaris. **ra'mi cauda'ti** [NA], the caudate branches of the transverse part of the left branch of the portal vein. **ra'mi celi'aci ner'vi va'gi** [NA], celiac branches of vagus nerve: branches that arise from both the anterior and posterior vagal trunks and join the celiac plexus; modality, parasympathetic and visceral afferent; called also *rami coeliaci plexus gastrici posterioris and celiac nerves*. **ra'mi centra'les arte'riae cer'ebri anterio'ris** [NA], central branches of anterior cerebral artery: they ascend into the base of the brain in front of the optic chiasma and are distributed to the hypothalamus, caudate nucleus, and internal capsule. **ra'mi centra'les arte'riae cer'ebri me'diae** [NA], central branches of medial cerebral artery: central branches that pass through the anterior perforated substance, comprising chiefly the rami striati. **ra'mi centra'les arte'riae cer'ebri posterio'ris** [NA], central branches of posterior cerebral artery: they supply the thalamic area and, by way of the choroid branches, the choroid plexuses of the third and lateral ventricles. **r. choro'i'deus arte'riae cer'ebri posterio'ris** [NA], choroid branch of posterior cerebral artery: it supplies the choroid plexuses of the third and lateral ventricles. **ra'mi choro'i'dei posterio'res arte'riae cer'ebri posterio'ris** [NA], a name applied to the posterior choroidal branches of the posterior cerebral artery when it supplies more than one branch to the choroid plexus. **r. circumflex'us arte'riae corona'riae sinis'trae** [NA], circumflex branch of left coronary artery: it curves around to the back of the left ventricle in the coronary sulcus, supplying the left ventricle and left atrium. **r. circumflex'us fib'ulae arte'riae tibia'lis posterio'ris** [NA], fibular circumflex branch of posterior tibial artery: it winds laterally around the neck of the fibula, helping supply the soleus muscle and contributing to the anastomosis around the knee joint; called also *r. fibularis arteriae tibialis posterioris*. **r. clavicula'ris arte'riae thoracoacromia'lis** [NA], clavicular branch of thoracoacromial artery: a vessel that passes medially to supply the subclavius muscle. **r. coch'leae arte'riae audit'vae inter'nae**, r. cochleae arteriae labyrinthi. **r. cochlea'ris arte'riae labyrin'thi** [NA], cochlear branch of labyrinthine artery: it supplies the cochlea. **ra'mi coeli'aci plex'us gas'trici posterio'ris**, rami celiaci nervi vagi. **r. collatera'lis arteria'rum intercosta'lium posterio'rum** [III–XI] [NA], collateral branch of posterior intercostal arteries [III–XI]: a branch helping supply the thoracic wall, arising from the posterior intercostal arteries near the angle of the rib and running forward in the lower part of the corresponding intercostal space. **r. col'li ner'vi facia'lis** [NA], cervical branch of facial nerve: it lies deep to and innervates the platysma muscle; modality, motor. **r. commu'nicans**, 1. [NA] a communicating branch between two nerves. 2. a branch connecting two arteries. **r. commu'nicans arte'riae peronea'ae** [NA], communicating branch of peroneal artery: a communicating branch between the peroneal and the posterior tibial arteries, distributed to the interosseous membrane and supramalleolar region. **r. commu'nicans gan'glii cilia'ris cum ner'vo nasocilia'ri** [NA], communicating branch of ciliary ganglion with nasociliary nerve: a branch or branches carrying sensory fibers from the cornea, iris, ciliary body, and choroid, and passing through the ciliary ganglion to the nasociliary nerve. Called also *sensory root of ciliary ganglion*. **r. commu'nicans gan'glii o'tici cum chor'da tym'pani** [NA], communicating branch of otic ganglion with chorda tympani: a small branch that interconnects the otic ganglion and the chorda tympani; called also *r. anastomoticus ganglii otici cum chorda tympani*. **r. commu'nicans gan'glii o'tici cum ner'vo auriculo-tempora'li** [NA], communicating branch of otic ganglion with auriculotemporal nerve: a branch carrying postganglionic parasympathetic fibers from the otic ganglion to the auriculotemporal nerve for distribution to the parotid gland; called also *r. anastomoticus ganglii otici cum nervo auriculotemporalis*. **r. commu'nicans gan'glii o'tici cum ra'mo menin'geo ner'vi mandibula'ris** [NA], communicating branch of otic ganglion with meningeal branch of mandibular nerve: a branch that carries autonomic fibers destined for the meninges from the otic ganglion to the meningeal branch of the mandibular nerve; called also *r. anastomoticus ganglii otici cum ramo meningeo nervi mandibularis*. **ra'mi communican'tes gan'glii submandibula'ris cum ner'vo lingua'li** [NA], **ra'mi communican'tes gan'glii submaxilla'ris cum ner'vo lingua'li**, communicating branches of submandibular ganglion with lingual nerve: branches which interconnect the lingual nerve and the submandibular ganglion, and by which the ganglion is suspended from the nerve; they carry preganglionic fibers that derive from the chorda tympani and synapse in the submandibular ganglion, and postganglionic fibers. Called also *motor root(s) of submandibular ganglion*. **ra'mi communican'tes ner'vi auriculotempora'lis cum ner'vo facia'li** [NA], communicating branches of auriculotemporal nerve with facial nerve: branches containing sensory fibers from the auriculotemporal nerve that join the facial nerve within the parotid gland, to be distributed with branches of the latter; called also *rami anastomotici nervi auriculotemporalis cum nervo faciali*. **r. commu'nicans ner'vi facia'**

lis cum ner'vo glossopharyngeal'geo [NA], communicating branch of facial nerve with glossopharyngeal nerve: a branch that interconnects the glossopharyngeal nerve and the facial nerve after emergence of the latter from the stylomastoid foramen; called also *r. anastomoticus nervi facialis cum nervo glossopharyngeal'geo*. **r. communicans ner'vi facialis cum plexu tympanico** [NA], communicating branch of facial nerve with tympanic plexus: a branch that interconnects the facial nerve and the tympanic plexus of the glossopharyngeal nerve; called also *r. anastomoticus nervi facialis cum plexu tympanico*. **r. communicans ner'vi glossopharyngeal'gei cum ra'mo auriculari ner'vi vagi** [NA], communicating branch of glossopharyngeal nerve with auricular branch of vagus nerve: a small branch connecting the glossopharyngeal nerve with the auricular branch of the vagus nerve; called also *r. anastomoticus nervi glossopharyngeal'gei cum ramo auriculari nervi vagi*. **r. communicans ner'vi lacrimalis cum ner'vo zygomatico** [NA], communicating branch of lacrimal nerve with zygomatic nerve: a branch that carries parasympathetic postganglionic fibers originating in the pterygopalatine ganglion and destined for the lacrimal gland; called also *r. anastomoticus nervi lacrimalis cum nervo zygomatico*. **r. communicans ner'vi laryngeal'gei inferioris cum ra'mo laryngeal'gei inter'no** [NA], communicating branch of inferior laryngeal nerve with internal laryngeal branch: a small branch interconnecting the inferior laryngeal nerve with the internal branch of the superior laryngeal nerve, behind or in the posterior cricoarytenoid muscle. **r. communicans ner'vi laryngeal'gei recurrentis cum ra'mo laryngeal'gei inter'no**, *r. communicans nervi laryngeal' inferioris cum ramo laryngeal' interno*. **r. communicans ner'vi laryngeal'gei superioris cum ner'vo laryngeal'gei inferioris** [NA], communicating branch of superior laryngeal nerve with inferior laryngeal nerve: a small branch interconnecting the internal branch of the superior laryngeal nerve with the inferior laryngeal nerve, behind or in the posterior cricoarytenoid muscle; called also *r. anastomoticus nervi laryngeal'gei superioris cum nervo laryngeal'gei inferioris*. **r. communicans ner'vi lingualis cum chor'da tympani** [NA], communicating branch of lingual nerve with chorda tympani: the chorda tympani as it joins the lingual nerve in the infratemporal fossa medial to the lateral pterygoid muscle; modality, parasympathetic and special sensory. **ra'mi communicantes ner'vi lingualis cum ner'vo hypoglossal'is** [NA], communicating branches of lingual nerve with hypoglossal nerve: plexiform terminal branches interconnecting the lingual and hypoglossal nerves just in front of the hyoglossus muscle; called also *rami anastomotici nervi lingualis cum nervo hypoglossal'is*. **r. communicans ner'vi mediani cum ner'vo ulnari** [NA], communicating branch of median nerve with ulnar nerve: a small branch across the flexor digitorum profundus muscle, connecting the median with the ulnar nerve; called also *r. anastomoticus nervi mediani cum nervo ulnari*. **r. communicans ner'vi nasociliaris cum ganglio ciliaris** [NA], communicating branch of nasociliary nerve with ciliary ganglion: a branch or branches carrying sensory fibers from the cornea, iris, ciliary body, and choroid, and passing through the ciliary ganglion to the nasociliary nerve; called also *radix longa ganglii ciliaris*. **ra'mi communicantes ner'vi spinalium** [NA], communicating branches of spinal nerves: branches connecting spinal nerves with sympathetic ganglia, each spinal nerve receiving a gray communicating ramus, and the thoracic and upper lumbar spinal nerves having in addition a white communicating ramus. **r. communicans ner'vi vagi cum ner'vo glossopharyngeal'gei** [NA], communicating branch of vagus nerve with glossopharyngeal nerve: a small branch connecting the auricular branch of the vagus nerve with the glossopharyngeal nerve; called also *r. anastomoticus nervi vagi cum nervo glossopharyngeal'gei*. **r. communicans peroneus ner'vi peronei communis** [NA], peroneal communicating branch of common peroneal nerve: a small branch arising from the common peroneal nerve either with the lateral sural cutaneous nerve or separately; distally it joins the medial sural cutaneous to form the sural nerve; called also *r. anastomoticus peroneus nervi peronei communis*. **r. communicans ulnari ner'vi radialis** [NA], ulnar communicating branch of radial nerve: a small branch in the hand that interconnects the most medial dorsal digital nerve from the superficial branch of the radial nerve with the adjacent most lateral dorsal digital nerve from the dorsal branch of the ulnar nerve; called also *r. anastomoticus ulnaris nervi radialis*. **ra'mi corticales arteriae cerebri anterioris** [NA], cortical branches of anterior cerebral artery: orbital, frontal, and parietal branches of the anterior cerebral artery that supply the cortex of the frontal and parietal lobes. **ra'mi corticales arteriae cerebri mediae** [NA], cortical branches of middle cerebral artery: orbital, frontal, temporal, and parietal branches from the middle cerebral artery, distributed to the cortex over the insula and the lateral surface of the hemisphere. **ra'mi corticales arteriae cerebri posterioris** [NA], cortical branches of posterior cerebral artery: temporal, occipital, and parieto-occipital branches from the posterior cerebral artery, distributed to the cortex of the inferior and medial surfaces of the temporal and occipital lobes. **r. costalis lateralis arteriae thoracicae internae**, *r. costalis*

lateralis arteriae thoracicae internae [NA], lateral costal branch of internal thoracic artery: an occasional branch passing inferolaterally behind the ribs, supplying ribs and costal cartilages, and anastomosing with the posterior intercostal arteries. **r. cricothyroidae arteriae thyroideae superioris** [NA], cricothyroid branch of superior thyroid artery: a vessel running medially over the cricothyroid muscle, toward the cricothyroid ligament, and anastomosing with its fellow of the opposite side. **ra'mi cutanei anteriores ner'vi femoralis** [NA], anterior cutaneous branches of femoral nerve: they innervate the skin on the front and medial aspect of the thigh and patella and contribute to the subsartorial and patellar plexuses; modality, general sensory. **r. cutaneus anterior ner'vi iliohypogastrici** [NA], anterior cutaneous branch of iliohypogastric nerve: it runs forward between the internal and external oblique muscles and innervates the skin over the pubis; modality, general sensory. **r. cutaneus anterior [pectoralis et abdominalis] nervorum intercostalium** [NA], a branch arising from the intercostal nerves and helping innervate the skin in the anteromedial thoracic and abdominal regions, with medial mammary branches given off in the breast region; modality, general sensory. **ra'mi cutanei anteriores [pectoralis et abdominalis] nervorum intercostalium**, anterior cutaneous branches (thoracic and abdominal) of the anterior branches of the intercostal arteries. **ra'mi cutanei arteriae mammae internae**, cutaneous branches of the internal mammary artery. **ra'mi cutanei cruris mediales ner'vi sapheni** [NA], medial crural cutaneous branches of saphenous nerve: branches distributed by the saphenous nerve to the skin of the medial aspect of the leg; modality, general sensory. **r. cutaneus lateralis arteriarum intercostalium posteriorum** [III–XI] [NA], lateral cutaneous branch of posterior intercostal arteries [III–XI]: a branch arising from the posterior intercostal arteries, supplying the anterolateral thoracic wall. The branches of the third through fifth give off small mammary branches. Called also (pl.) *rami cutanei laterales [pectoralis et abdominales] nervorum intercostalium*. **r. cutaneus lateralis ner'vi iliohypogastrici** [NA], lateral cutaneous branch of iliohypogastric nerve: it is distributed to the skin over the side of the buttock; modality, general sensory. **r. cutaneus lateralis [pectoralis et abdominalis] nervorum intercostalium** [NA], lateral cutaneous branch (thoracic and abdominal) of intercostal nerves: a branch arising from the intercostal nerves, and dividing further into anterior and posterior branches to innervate the skin of the lateral and posterior body wall; modality, general sensory. The branches of the fourth through sixth intercostal nerves give off lateral mammary branches. **ra'mi cutanei laterales [pectoralis et abdominales] nervorum intercostalium**, see *r. cutaneus lateralis arteriarum intercostalium posteriorum* [III–XI]. **r. cutaneus lateralis ra'mi dorsalis arteriarum intercostalium posteriorum** [III–XI] [NA], lateral cutaneous branch of dorsal branch of posterior intercostal arteries [III–XI]: it supplies the posterolateral aspect of the thorax. The branches of the third through fifth arteries give off small mammary branches. Called also *r. cutaneus lateralis nervorum intercostalium posteriorum*. **r. cutaneus lateralis ramorum dorsalis nervorum thoracicum** [NA], lateral cutaneous branch of dorsal branches of thoracic nerves: the lateral of the two terminal divisions of the dorsal branch of each thoracic nerve; each supplies first the corresponding levator costae muscle, then the longissimus thoracis and iliocostalis thoracis muscles; the lower ones pierce the latissimus dorsi and supply the skin of the back. Called also *r. cutaneus lateralis ramorum posteriorum nervorum thoracicum*. **r. cutaneus lateralis ramorum posteriorum arteriarum intercostalium**, *r. cutaneus lateralis ramorum dorsalis nervorum thoracicum*. **r. cutaneus medialis ra'mi dorsalis arteriarum intercostalium posteriorum** [III–XI] [NA], medial cutaneous branch of dorsal branch of posterior intercostal arteries [III–XI]: it supplies the skin adjacent to the vertebral column; called also *r. cutaneus medialis ramorum posteriorum arteriarum intercostalium*. **r. cutaneus medialis ramorum dorsalis nervorum thoracicum** [NA], medial cutaneous branch of dorsal branches of thoracic nerves: the medial of the two terminal divisions of the dorsal branch of a thoracic nerve; those of the upper nerves supplying the skin of the back, and those of the lower ones chiefly supplying the erector spinae muscle. Both groups supply adjacent periosteum, ligaments, and joints. Called also *r. cutaneus medialis ramorum posteriorum nervorum thoracicum*. **r. cutaneus medialis ramorum posteriorum arteriarum intercostalium**, *r. cutaneus medialis ramorum dorsalis nervorum thoracicum*. **r. cutaneus medialis ramorum posteriorum nervorum thoracicum**, *r. cutaneus medialis ramorum dorsalis nervorum thoracicum*. **r. cutaneus ner'vi obturato'rii**

[NA], cutaneous branch of obturator nerve: a variable branch arising from the anterior branch of the obturator nerve, forming part of the subsartorial plexus, and supplying the skin of the medial aspect of the thigh and leg; modality, general sensory. **r. cutaneus palmae/ris nervi ulnae/ris**, *r. palmaris nervi ulnaris*. **r. deltoideus arteriae profunde braehii** [NA], deltoid branch of deep brachial artery: it is distributed to the brachialis and deltoid muscles and anastomoses with the posterior circumflex humeral artery; called also *deltoid artery*. **r. deltoideus arteriae thoracoacromialis** [NA], deltoid branch of thoracoacromial artery: a branch of the thoracoacromial artery descending with the cephalic vein and helping to supply the deltoid and pectoralis major muscles. **rami dentales arteriae alveolaris inferioris** [NA], dental branches of inferior alveolar artery: branches arising from the inferior alveolar artery in the mandibular canal and supplying the inferior teeth. **rami dentales arteriarum alveolarium superiorum anteriorum** [NA], dental branches of anterior superior alveolar arteries: they supply the incisor and canine teeth. **rami dentales arteriae alveolaris superioris posterioris** [NA], dental branches of posterior superior alveolar artery: they supply the molar and premolar teeth. **rami dentales inferioris plexus dentalis inferioris** [NA], inferior dental branches of inferior dental plexus: they supply the lower teeth; modality, general sensory. **rami dentales superioris plexus dentalis superioris** [NA], superior dental branches of superior dental plexus: they innervate the teeth of the upper jaw; modality, general sensory. **r. descendens anterior arteriae coronariae** [cor'dis] *sinistrae*, *r. interventricularis anterior arteriae coronariae sinistrae*. **r. descendens arteriae circumflexae femoris lateralis** [NA], descending branch of lateral circumflex femoral artery: a branch passing from the lateral circumflex artery (sometimes directly from the deep femoral) to the knee, and supplying the thigh muscles. **r. descendens arteriae occipitalis** [NA], descending branch of occipital artery: a branch that arises from the occipital artery on the obliquus capitis superior muscle and divides into superficial and deep branches, supplying the trapezius and deep neck muscles. **r. descendens arteriae transversae colli**, *r. profundus arteriae transversae colli*. **r. descendens nervi hypoglossi**, *radix superior ansae cervicalis*. **r. descendens posterior arteriae coronariae** [cor'dis] *dextrae*, *r. interventricularis posterior arteriae coronariae dextrae*. **r. dexter arteriae hepaticae propriae** [NA], right branch of proper hepatic artery: the right of the two branches into which the proper hepatic artery normally divides; it supplies the right lobe of the liver and a branch, the cystic artery, to the gallbladder. **r. dexter arteriae pulmonalis**, *arteria pulmonalis dextra*. **r. dexter venae portae** [NA], the right branch of the portal vein, distributed to the right lobe of the liver. **r. digastricus nervi facialis** [NA], digastric branch of facial nerve: a branch that innervates the posterior belly of the digastric muscle; modality, motor; called also *digastric nerve*. **r. dorsalis arteriarum intercostalium posteriorum** [III–XI] [NA], dorsal branch of posterior intercostal arteries: a branch arising from a posterior intercostal artery, passing backward with the dorsal branch of the corresponding intercostal nerve to supply the posterior thoracic wall; it has a spinal branch and a medial and a lateral cutaneous branch. Called also (pl.) *rami posteriores arteriarum intercostalium*. **rami dorsales arteriae intercostalis superioris** [NA], dorsal branches of highest intercostal artery: the dorsal branches arising from the first two posterior intercostal arteries, which stem from the highest intercostal artery. Their distribution is similar to that of the other posterior intercostals; see *ramus dorsalis arteriarum intercostalium posteriorum*. **r. dorsalis arteriarum lumbalium** [NA], dorsal branch of lumbar arteries: the larger of the two branches into which each lumbar artery (four or five) divides; it supplies lumbar back muscles and gives off a spinal branch. **r. dorsalis arteriae subcostalis** [NA], dorsal branch of subcostal artery: a branch supplying back muscles, its distribution being similar to that of the dorsal branches of the lower posterior intercostal arteries. **rami dorsales linguae arteriae lingualis** [NA], dorsal lingual branches of lingual artery: branches of the lingual artery arising beneath the hyoglossus muscle and supplying the tonsil and the back of the tongue. **r. dorsalis manus nervi ulnae/ris**, *r. dorsalis nervi ulnaris*. **rami dorsales nervorum cervicalium** [NA], the dorsal branches of the eight cervical spinal nerves; called also *rami posteriores nervorum cervicalium*. **r. dorsalis nervi coccygei** [NA], dorsal branch of coccygeal nerve: the dorsal branch of the last spinal nerve, which helps innervate the skin over the coccyx; called also *r. posterior nervi coccygei*. **rami dorsales nervorum lumbalium** [NA], the dorsal branches of the five lumbar spinal nerves; called also *rami posteriores nervorum lumbalium*. **rami dorsales nervorum sacralium** [NA], the dorsal branches of the five sacral spinal nerves, which emerge from the sacrum through the dorsal sacral foramina; called also *rami posteriores nervorum sacralium*. **r. dorsalis nervorum spinalium** [NA], dorsal branch of spinal nerves: the smaller of the two chief branches into which each spinal nerve divides almost

as soon as it emerges from the intervertebral foramen. The dorsal branches supply the skin, muscles, joints, and bone of the dorsal part of the neck and trunk. Commonly each branch divides into a medial and a lateral portion. Called also *r. posterior nervorum spinalium*. **rami dorsales nervorum thoracorum** [NA], the dorsal branches of the twelve thoracic spinal nerves; called also *rami posteriores nervorum thoracorum*. **r. dorsalis nervi ulnae/ris** [NA], dorsal branch of ulnar nerve: a large cutaneous branch that arises from the ulnar nerve and passes down the distal portion of the forearm to the medial side of the back of the hand, where it divides usually into three, sometimes four, dorsal digital nerves; modality, general sensory. Called also *r. dorsalis manus nervi ulnaris*. **r. dorsalis venarum intercostalium**, *r. dorsalis venarum intercostalium posteriorum* [IV–XI]. **r. dorsalis venarum intercostalium posteriorum** [IV–XI] [NA], the dorsal branch of the posterior intercostal veins, corresponding to the dorsal branch of the posterior intercostal arteries. **rami duodenales arteriae pancreatoduodenalis superioris** [NA], duodenal branches of superior pancreaticoduodenal artery: vessels supplying the duodenum. **rami epiploici arteriae gastroepiploicae dextrae** [NA], epiploic branches of right gastroepiploic artery: vessels that supply the greater omentum. **rami esophagei aortae thoracicae** [NA], esophageal branches of thoracic aorta: branches, usually two, that arise from the front of the aorta to supply the esophagus; called also *arteriae oesophagae* or *esophageal arteries*. **rami esophagei arteriae gastricae sinistae** [NA], esophageal branches of left gastric artery: vessels that supply the esophagus. **rami esophagei arteriae thyroideae inferioris** [NA], esophageal branches of inferior thyroid artery: vessels supplying the esophagus. **rami esophagei nervi laryngei recurrentis** [NA], esophageal branches of recurrent laryngeal nerve: branches of the recurrent laryngeal nerve that help innervate the esophagus; modality, visceral afferent and general sensory. **r. externus nervi accessorii** [NA], external branch of accessory nerve: the branch of the eleventh cranial nerve that originates from the spinal roots of the nerve; it supplies the sternomastoid and trapezius muscles. **r. externus nervi laryngei superioris** [NA], external branch of superior laryngeal nerve: the smaller of the two branches into which the superior laryngeal nerve divides, descending under cover of the sternothyroid muscle and innervating the cricothyroid and the inferior constrictor of the pharynx; modality, motor. **r. femoralis nervi genitofemoralis** [NA], femoral branch of genitofemoral nerve: a branch arising by division of the genitofemoral nerve above the inguinal ligament; entering the femoral sheath, it turns forward and supplies the skin of the femoral triangle; modality, general sensory. Called also *nervus lumbinguinalis*. **r. fibularis arteriae tibialis posterioris**, *r. circumflexus fibulae arteriae tibialis posterioris*. **rami frontales arteriae cerebri anterioris** [NA], frontal branches of anterior cerebral artery: branches of the anterior cerebral artery that supply the cortex of the frontal lobe on the median and superior surfaces and the superior part of the lateral surface. **rami frontales arteriae cerebri mediae** [NA], frontal branches of middle cerebral artery: branches of the middle cerebral artery that supply the cortex of the frontal lobe on the lateral surface. **r. frontalis arteriae meningiae mediae** [NA], frontal branch of middle meningeal artery: a branch lodged in grooves on the sphenoid and parietal bones, and supplying the dura mater of the front of the brain. A part of it is sometimes enclosed in a bony canal. **r. frontalis arteriae temporalis superficialis** [NA], frontal branch of superficial temporal artery: a tortuous terminal branch that supplies the forehead and frontal scalp. **r. frontalis nervi frontalis**, the frontal branch of the frontal nerve. **rami gastrici anteriores nervi vagi**, *rami gastrici anteriores nervi vagi* and *rami gastrici posteriores nervi vagi*. **rami gastrici posteriores nervi vagi** [NA], posterior gastric branches of vagus nerve: branches arising from the anterior trunk of the vagus near the cardiac end of the stomach, innervating the anterior aspect of the lesser curvature and the anterior surface of the stomach almost to the pylorus; modality, parasympathetic and visceral afferent. Called also *plexus gastricus anterior*. **rami gastrici nervi vagi**, see *rami gastrici anteriores nervi vagi* and *rami gastrici posteriores nervi vagi*. **rami gastrici posteriores nervi vagi** [NA], posterior gastric branches of vagus nerve: branches arising from the posterior vagal trunk near the cardiac end of the stomach, and innervating the cardiac orifice and fundus, the posterior aspect of the lesser curvature, and the posterior surface of the stomach to the pyloric antrum; modality, parasympathetic and visceral afferent. Called also *plexus gastricus posterior*. **r. genitalis nervi genitofemoralis** [NA], genital branch of genitofemoral nerve: a branch arising from the genitofemoral nerve above the inguinal ligament; entering the inguinal canal through the deep ring, it supplies the cremaster and continues to the skin of the scrotum or of the labium majus, and that of the adjacent area of the thigh; modality, general sensory and motor. Called also *nervus supermaticeus externus*. **rami gingivales inferioris plexus dentalis inferioris** [NA], inferior gingival branches of inferior dental plexus: branches originating from the inferior dental plexus and innervating the gingivae of the lower jaw; modality, general sensory. **rami gingivales su-**

perio/res plex/us denta/lis superio/ris [NA], superior gingival branches of superior dental plexus: branches arising from the superior dental plexus and innervating the gingivae of the upper jaw; modality, general sensory. **ra/mi glandula/res arte/riae facia/lis** [NA], **ra/mi glandula/res arte/riae maxilla/ris exter/nae**, glandular branches of facial artery: branches given off to the submandibular gland by the facial artery as it passes over the lateral surface of the gland. **ra/mi glandula/res arte/riae thyreo/deae inferio/ris**, glandular branches of the inferior thyroid artery. **ra/mi glandula/res arte/riae thyreo/deae superio/ris**, glandular branches of the superior thyroid artery. **ra/mi glandula/res gan/glii submandibula/ris** [NA], glandular branches of submandibular ganglion: short branches running from the submandibular ganglion to innervate the submandibular gland, bearing postganglionic parasympathetic (secretory) fibers from this ganglion and sympathetic fibers that are postganglionic from the superior cervical ganglion. Called also *rami submaxillares ganglii submaxillaris* and *submaxillary nerves*. **ra/mi hepatici ner/vi va/gi** [NA], hepatic branches of vagus nerve: branches (sometimes only one) arising from the anterior vagal-trunk, contributing to the hepatic plexus, and helping innervate the liver, gallbladder, pancreas, pylorus, and duodenum; modality, parasympathetic and visceral afferent. **r. hyoi/deus arte/riae lingua/lis**, *r. suprahyoideus arteriae lingualis*. **r. hyoi/deus arte/riae thyreo/deae superio/ris**, *r. infrahyoideus arteriae thyroideae superioris*. **r. ili/acus arte/riae iliolumba/lis** [NA], iliac branch of iliolumbar artery: one of the two branches into which the iliolumbar artery divides in the iliac fossa; it supplies the iliacus muscle and sends a large nutrient branch to the ilium. **r. infe/rior arte/riae glu/teae superio/ris** [NA], inferior branch of superior gluteal artery: the lower division of the deep branch of the superior gluteal artery, accompanied by the superior gluteal artery, accompanied by the superior gluteal nerve and helping supply the gluteus medius, gluteus minimus, and tensor fasciae latae muscles and the hip joint and ilium. **ra/mi inferio/res ner/vi cuta/nei col/li**, *rami inferiores nervi transversi colli*. **r. infe/rior ner/vi oculomoto/rii** [NA], inferior branch of oculomotor nerve: the branch of the oculomotor nerve that innervates the medial and inferior rectus and inferior oblique muscles of the eyeball and, via the motor root of the ciliary ganglion and then the short ciliary nerves, supplies the sphincter pupillae and ciliary muscles; modality, motor and parasympathetic. **ra/mi inferio/res ner/vi transver/si col/li** [NA], inferior branches of transverse nerve of neck: the more inferior of the branches that arise from the transverse cervical nerve near the anterior border of the sternocleidomastoid muscle, innervating skin and subcutaneous tissue in the anterior cervical region; modality, general sensory. Called also *rami inferiores nervi cutanei colli*. **r. infe/rior os/sis is/chii**, *r. ossis ischii*. **r. infe/rior os/sis pu/bis** [NA], inferior *r. of pubis*, the short flattened bar of bone that projects from the body of the pubic bone in a posteroinferolateral direction to meet the ramus of the ischium. **r. infrahyoi/deus arte/riae thyro/deae superio/ris** [NA], infrahyoid branch of superior thyroid artery: a vessel running along the inferior border of the hyoid bone, supplying the infrahyoid region, and anastomosing with its fellow of the opposite side; called also *r. hyoideus arteriae thyroideae superioris*. **r. infrapatella/ris ner/vi saphe/ni** [NA], infrapatellar branch of saphenous nerve: a branch running inferolaterally from the saphenous nerve to the patellar plexus; modality, general sensory. **ra/mi inguina/les arte/riae femora/lis** [NA], inguinal branches of femoral artery: branches arising from the external pudendal arteries and supplying the inguinal region. **ra/mi intercosta/les anterio/res arte/riae thora/cicae inter/nae** [NA], **ra/mi intercosta/les arte/riae mamma/riae inter/nae**, anterior intercostal branches of internal thoracic artery: twelve branches, two in each of the upper six intercostal spaces, that supply the intercostal spaces and the pectoralis major muscle. Within each space both branches run laterally, the upper anastomosing with the posterior intercostal artery, the lower with the collateral branch of that artery. **r. interfunicula/ris** (*obs.*), a branch connecting the two trunks of the sympathetic nervous system. **ra/mi interganglionares** [NA], interganglionic branches: the branches that interconnect the ganglia of the sympathetic trunk. **r. inter/nus ner/vi accesso/rii** [NA], internal branch of accessory nerve: the branch that continues from the cranial roots of the nerve, carrying motor fibers that are distributed by branches of the vagus to the soft palate, pharyngeal constrictors, and larynx. **r. inter/nus ner/vi laryn/gei superio/ris** [NA], internal branch of superior laryngeal nerve: the larger of the two branches of the superior laryngeal nerve, which innervates the mucosa of the epiglottis, base of the tongue, and larynx; modality, general sensory. **r. interventricula/ris ante/rior arte/riae corona/riae sinis/trae** [NA], anterior interventricular branch of left coronary artery: the branch of the left coronary artery that runs to the apex of the heart in the anterior interventricular sulcus, supplying the ventricles and most of the interventricular septum; called also *r. descendens anterior arteriae coronariae* [*cordis*] *sinistrae*. **r. interven-tricula/ris poste/rior arte/riae corona/riae dex/trae**

[NA], posterior interventricular branch of right coronary artery: a branch running toward the apex of the heart in the posterior interventricular sulcus, supplying the diaphragmatic surface of the ventricles and part of the interventricular septum. Called also *r. descendens posterior arteriae coronariae* [*cordis*] *dextrae*. **r. of ischium**, *r. ossis ischii*. **ra/mi isth/mi fau/cium ner/vi lingua/lis** [NA], branches from the lingual nerve to the isthmus of the fauces; modality, general sensory. **r. of jaw**, *r. mandibulae*. **ra/mi labia/les anterio/res arte/riae femora/lis** [NA], anterior labial branches of femoral artery: branches that arise from the external pudendal arteries and supply the labium majus; called also *arteriae labiales anteriores vulvae*. **ra/mi labia/les inferio/res ner/vi menta/lis** [NA], inferior labial branches of mental nerve: branches of the mental nerve that innervate the lower lip; modality, general sensory. **ra/mi labia/les posterio/res arte/riae puden/dae inter/nae** [NA], posterior labial branches of internal pudendal artery: two branches arising from the internal pudendal artery in the anterior part of the ischiorectal fossa, helping to supply the ischiocavernosus and bulbospongiosus muscles, and supplying the labium majus and labium minus. Called also *arteriae labiales posteriores vulvae*. **ra/mi labia/les superio/res ner/vi infraorbita/lis** [NA], superior labial branches of infraorbital nerve: branches of the infraorbital nerve that are distributed to mucous membrane of the mouth and skin of the upper lip; modality, general sensory. **ra/mi laryngopharyn/gei gan/glii cervica/lis superio/ris** [NA], laryngopharyngeal branches of superior cervical ganglion: branches from the superior cervical ganglion to the larynx and walls of the pharynx; modality, sympathetic. **r. latera/lis duc/tus hepat/ici sinis/tri** [NA], the lateral branch of the left hepatic duct. **r. latera/lis ner/vi supraorbita/lis** [NA], lateral branch of supraorbital nerve: a branch of the supraorbital nerve that supplies the frontal sinus, upper eyelid, and skin and subcutaneous tissue of the forehead and scalp laterally as far as the temporal region; modality, general sensory. **r. latera/lis ramo/rum dorsa/lium nervo/rum cervica/lium** [NA], lateral branch of dorsal branches of cervical nerves: the lateral branch that arises from the dorsal branch of each of the eight cervical nerves, supplying adjacent muscles; called also *r. lateralis ramorum posteriorum nervorum cervicalium*. **r. latera/lis ramo/rum dorsa/lium nervo/rum lumba/lium** [NA], lateral branch of dorsal branches of lumbar nerves: the branch that runs inferolaterally from the dorsal branch of each lumbar nerve, innervating adjacent muscle; the upper of these branches terminally constitute the superior cluneal nerves, supplying skin of the buttock. Called also *r. lateralis ramorum posteriorum nervorum lumbalium*. **r. latera/lis ramo/rum dorsa/lium nervo/rum sacra/lium** [NA], lateral branch of dorsal branches of sacral nerves: the lateral branch that arises from the dorsal branch of each of the three upper sacral nerves; called also *r. lateralis ramorum posteriorum nervorum sacralium*. **r. latera/lis ramo/rum posterio/rum nervo/rum cervica/lium**, *r. lateralis ramorum dorsaliu[m] nervorum cervicalium*. **r. latera/lis ramo/rum posterio/rum nervo/rum lumba/lium**, *r. lateralis ramorum dorsaliu[m] nervorum lumbalium*. **r. latera/lis ramo/rum posterio/rum nervo/rum sacra/lium**, *r. lateralis ramorum dorsaliu[m] nervorum sacralium*. **ra/mi lienal/les arte/riae lienal/les** [NA], splenic branches of splenic artery: the terminal branches of the splenic artery, which follow the trabeculae. **ra/mi lienal/les plex/us coeli/aci**, splenic branches of celiac plexus. **r. lingua/lis ner/vi facia/lis** [NA], lingual branch of facial nerve: an inconstant branch of the facial nerve sometimes arising together with the stylohyoid branch, and helping to supply the styloglossal and glossopalatine muscles; modality, motor. **ra/mi lingua/les ner/vi glossopharyn/gei** [NA], lingual branches of glossopharyngeal nerve: branches of the glossopharyngeal nerve that innervate the posterior third of the tongue; modality, general and special sensory. **ra/mi lingua/les ner/vi hypoglos/si** [NA], lingual branches of hypoglossal nerve: branches of the hypoglossal nerve that innervate the intrinsic and extrinsic muscles of the tongue; modality, motor. **ra/mi lingua/les ner/vi lingua/lis** [NA], lingual branches of lingual nerve: branches that innervate the anterior two-thirds of the tongue, adjacent areas of the mouth, and the gums; modality, general and special sensory. **r. lumba/lis arte/riae iliolumba/lis** [NA], lumbar branch of iliolumbar artery: a branch that arises from the iliolumbar artery in the iliac fossa and ascends to supply the psoas and quadratus lumborum muscles, sending a spinal branch through the intervertebral foramen just above the sacrum. **ra/mi malleola/res latera/les arte/riae perone/ae** [NA], lateral malleolar branches of peroneal artery: vessels supplying the lateral aspect of the ankle and giving off calcaneal branches to the lateral aspect and back of the heel; called also *arteria malleolaris posterior lateralis*. **ra/mi malleola/res media/les arte/riae tibiales posterioris** [NA], medial malleolar branches of posterior tibial artery: vessels supplying the area of the medial malleolus and giving off calcaneal branches to the medial aspect and back of the heel; called also *arteria malleolaris posterior medialis*. **ra/mi mamma/rii arte/riae mamma/riae inter/nae**, *rami mammarii arteriae thoracicae inter-*

nae. **ra'mi mamma'rii arte'riae thora'ciae inter'nae** [NA], mammary branches of internal thoracic artery: branches arising from the second, third, and fourth perforating branches of the internal thoracic artery and helping to supply the mammary gland. **ra'mi mamma'rii exter'ni arte'riae thoraca'lis latera'lis**, rami mammarii laterales arteriae thoracicae laterales. **ra'mi mamma'rii latera'les arte'riae thora'ciae latera'lis** [NA], lateral mammary branches of lateral thoracic artery: they supply the mammary gland. **r. mamma'rii latera'les ramo'rum anterio'rum arteria'rum intercosta'lium**, lateral mammary branches of anterior branches of intercostal arteries. **ra'mi mamma'rii latera'les ramo'rum cutaneo'rum latera'lium nervo'rum intercosta'lium** [NA], lateral mammary branches of lateral cutaneous branches of intercostal nerves: branches given to the lateral part of the mammary gland by lateral cutaneous branches of intercostal nerves; modality, general sensory. **r. mamma'rii media'les arteria'rum intercosta'lium**, medial mammary branches of the intercostal arteries. **ra'mi mamma'rii media'les ramo'rum cutaneo'rum anterio'rum nervo'rum intercosta'lium** [NA], medial mammary branches of anterior cutaneous branches of intercostal nerves: branches given to the medial part of the mammary gland by anterior cutaneous branches of intercostal nerves; modality, general sensory. **ra'mi mamma'rii ra'mi cutanei latera'lis arteria'rum intercosta'lium posterio'rum** [NA], mammary branches of lateral cutaneous branch of posterior intercostal arteries: branches arising from the lateral cutaneous branches of the third through fifth posterior intercostal arteries and supplying the mammary region. **r. of mandible**, **r. mandib'ulae** [NA], a quadrilateral process projecting superiorly from the posterior part of either side of the mandible. **r. margina'lis mandib'ulae ner'vi facia'lis** [NA], marginal mandibular branch of facial nerve: a branch of the facial nerve that runs forward from the front of the parotid gland along the border of the mandible, deep to the platysma and depressor anguli oris muscles, supplying the latter and the risorius, depressor labii inferioris, and mentalis muscles; modality, motor. **ra'mi mastoi'dei arte'riae auricula'ris posterio'ris** [NA], mastoid branches of posterior auricular artery: they supply the mastoid cells. **r. mastoi'deus arte'riae occipita'lis** [NA], mastoid branch of occipital artery: it enters the cranial cavity through the mastoid foramen and supplies the dura mater, diploe, and mastoid cells. **r. media'lis duc'tus hepatic' sinis'tri** [NA], the medial branch of the left hepatic duct. **r. media'lis ner'vi supraorbita'lis** [NA], medial branch of supraorbital nerve: it supplies the frontal sinus, upper eyelid, and skin and subcutaneous tissue of the forehead and scalp as far back as the parietal bone; modality, general sensory. **r. media'lis ramo'rum dorsa'lium nervo'rum cervica'lium** [NA], medial branch of dorsal branches of cervical nerves: the medial branch arising from the dorsal branch of each of the eight cervical nerves, supplying muscle, periosteum, ligaments, and joints; also, except for those of the first, and generally the sixth, seventh, and eighth cervical nerves, having an eventual cutaneous distribution. Called also *r. medialis ramorum posteriorum nervorum cervicallium*. **r. media'lis ramo'rum dorsa'lium nervo'rum lumba'lium** [NA], medial branch of dorsal branches of lumbar nerves: the medial branch that arises from the dorsal branch of each lumbar nerve, mainly innervating deep muscle, but also helping supply ligaments, periosteum, and joints; called also *r. medialis ramorum posteriorum nervorum lumbalium*. **r. media'lis ramo'rum dorsa'lium nervo'rum sacra'lium** [NA], medial branch of dorsal branches of sacral nerves: the medial branch that arises from the dorsal branch of each of the upper three sacral nerves; called also *r. medialis ramorum posteriorum nervorum sacralium*. **r. media'lis ramo'rum posterio'rum nervo'rum cervica'lium**, *r. medialis ramorum dorsa'lium nervorum cervicallium*. **r. media'lis ramo'rum posterio'rum nervo'rum lumba'lium**, *r. medialis ramorum dorsa'lium nervorum lumbalium*. **r. media'lis ramo'rum posterio'rum nervo'rum sacra'lium**, *r. medialis ramorum dorsa'lium nervorum sacralium*. **ra'mi mediastina'les aor'tae thora'ciae inter'nae** [NA], mediastinal branches of internal thoracic artery: they supply areolar tissue, pericardium, lymph nodes, and the thymus in the anterior and superior mediastina; called also *arteriae mediastinales anteriores*. **r. membra'nae tym'pani ner'vi auriculotempora'lis** [NA], branch to tympanic membrane of auriculotemporal nerve: a branch given to the tympanic membrane by the nerve of the external acoustic meatus, a branch of the auriculotemporal nerve; modality, general sensory. **r. menin'geus accessori'us arte'riae menin'geae me'diae** [NA], accessory meningeal branch of middle meningeal artery: a branch arising from the middle meningeal artery, or directly from the maxillary artery, and entering the middle cranial fossa through the foramen ovale to supply the trigeminal ganglion, walls of the cavernous sinus, and neighboring dura mater. **r. menin'geus arte'riae oc-**

cipita'lis [NA], meningeal branch of occipital artery: one or more variable branches of the occipital artery that enter the posterior fossa and supply the dura mater. **r. menin'geus arte'riae vertebra'lis** [NA], meningeal branch of vertebral artery: a branch arising from the vertebral artery in the foramen magnum, and ramifying in the posterior cranial fossa to supply the dura mater, including the falx cerebelli, and bone. **r. menin'geus [me'dius] ner'vi maxilla'ris** [NA], middle meningeal branch of maxillary nerve: a branch arising from the maxillary nerve in the middle cranial fossa, accompanying the middle meningeal artery, and supplying the dura mater; modality, general sensory. Called also *nervus meningeus [medius]*. **r. menin'geus ner'vi mandibula'ris** [NA], meningeal branch of mandibular nerve: a branch that arises from the trunk of the mandibular nerve, re-enters the cranium through the foramen spinosum, accompanies the middle meningeal artery to supply the dura mater, and also helps innervate the mucous membrane of the mastoid air cells. Called also *nervus spinosus*. **r. menin'geus nervo'rum spina'lium** [NA], meningeal branch of spinal nerves: the small branch of each spinal nerve that re-enters the intervertebral foramen to supply the dura mater, vertebral column, and associated ligaments. **r. menin'geus ner'vi va'gi** [NA], meningeal branch of vagus nerve: a branch that arises in the jugular foramen from the superior ganglion of the vagus nerve, innervating dura mater of the posterior cranial fossa. **ra'mi menta'les ner'vi menta'lis** [NA], mental branches of mental nerve: they innervate the skin of the chin; modality, general sensory. **ra'mi muscula'res** [NA], muscular branches: any branches of a peripheral nerve or vessel that supply muscle, many not being more specifically named. **ra'mi muscula'res ner'vi axilla'ris** [NA], muscular branches of axillary nerve: they innervate the deltoid and teres minor muscles; modality, motor. **ra'mi muscula'res ner'vi femora'lis** [NA], muscular branches of femoral nerve: they innervate the anterior thigh muscles; modality, motor. **ra'mi muscula'res ner'vi fibula'ris profun'di**, NA alternative for *rami musculares nervi peronei profundi*. **ra'mi muscula'res ner'vi fibula'ris superficialis**, NA alternative for *rami musculares nervi peronei superficialis*. **ra'mi muscula'res ner'vi iliohypogast'rici**, muscular branches of iliohypogastric nerve; modality, probably sensory except for an occasional motor twig to the pyramidalis. **ra'mi muscula'res ner'vi ilioinguina'lis**, muscular branches of ilioinguinal nerve, probably sensory in nature. **ra'mi muscula'res nervo'rum intercosta'lium**, muscular branches of the intercostal nerves. **ra'mi muscula'res ner'vi ischia'dici**, muscular branches of the sciatic nerve. **ra'mi muscula'res ner'vi media'ni** [NA], muscular branches of median nerve: they innervate most of the flexor muscles on the front of the forearm and most of the short muscles of the thumb; modality, motor. **ra'mi muscula'res ner'vi musculocuta'nei** [NA], muscular branches of musculocutaneous nerve: they innervate the coracobrachialis, biceps, and brachialis muscles; modality, motor and general sensory. **ra'mi muscula'res ner'vi obturato'rii** [NA], muscular branches of obturator nerve: branches arising from the anterior and posterior rami of the obturator nerve and innervating the obturator externus, gracilis, and adductor muscles, and sometimes the pectineus; modality, motor. **ra'mi muscula'res ner'vi peronae'i commu'nis**, muscular branches of the common peroneal nerve. **ra'mi muscula'res ner'vi perone'i profun'di** [NA], muscular branches of deep peroneal nerve: they innervate the tibialis anterior, extensor hallucis longus, extensor digitorum longus, and peroneus tertius muscles; modality, motor. **ra'mi muscula'res ner'vi perone'i superficialis** [NA], muscular branches of superficial peroneal nerve: they innervate the peroneus longus and peroneus brevis muscles; modality, motor; called also *rami musculares nervi fibularis superficialis* [NA alternative]. **ra'mi muscula'res ner'vi radia'lis** [NA], muscular branches of radial nerve: they innervate the triceps, anconeus, brachioradialis, and extensor carpi radialis muscles; a branch to the brachialis muscle is probably sensory; modality, motor and sensory. **ra'mi muscula'res ner'vi tibia'lis** [NA], muscular branches of tibial nerve: they supply muscles of the back of the leg; modality, motor. **ra'mi muscula'res ner'vi ulna'ris** [NA], muscular branches of ulnar nerve: they innervate the flexor carpi ulnaris muscle and the ulnar half of flexor digitorum profundus; modality, motor. **ra'mi muscula'res plex'us lumb'a'lis**, muscular branches of the lumbar plexus. **r. mus'culi stylopharyn'gei ner'vi glossopharyn'gei** [NA], stylopharyngeal branch of glossopharyngeal nerve: it supplies the stylopharyngeal muscle; modality, motor; called also *r. stylopharyngeus nervi glossopharyngei*. **r. mylohyoi'deus arte'riae alveola'ris inferio'ris** [NA], mylohyoid branch of inferior alveolar nerve: it descends with the mylohyoid nerve in the mylohyoid sulcus to supply the floor of the mouth. **ra'mi nasa'les anterio'res ner'vi ethmoida'lis anterio'ris**, rami nasaes nervi ethmoidales anteriores. **r. nasa'lis exter'nus ner'vi ethmoida'lis anterio'ris** [NA], external nasal branch of anterior ethmoidal nerve: essentially a continuation, or terminal branch, of the anterior ethmoidal nerve, it innervates the skin of the dorsal part of the nose; modality, general sensory. **ra'mi nasa'les exter'ni**

ner'vi infraorbita'lis [NA], external nasal branches of infra-orbital nerve: they innervate the skin of the side of the nose; modality, general sensory. **ra'mi nasa'les inter'ni ner'vi ethmoida'lis anterio'ris** [NA], internal nasal branches of anterior ethmoidal nerve: through medial and lateral branches, they innervate the nasal septum and the mucous membrane of the lateral wall of the nasal cavity; modality, general sensory. **ra'mi nasa'les inter'ni ner'vi infraorbita'lis** [NA], internal nasal branches of infraorbital nerve: they innervate the mobile septum of the nose; modality, general sensory. **ra'mi nasa'les latera'les ner'vi ethmoida'lis anterio'ris** [NA], lateral nasal branches of anterior ethmoidal nerve: branches arising from the internal nasal branches of the anterior ethmoidal nerve and innervating the mucosa of the lateral wall of the nasal cavity; modality, general sensory. **ra'mi nasa'les media'les ner'vi ethmoida'lis anterio'ris** [NA], medial nasal branches of anterior ethmoidal nerve: branches arising from the internal nasal branches of the anterior ethmoidal nerve and supplying the nasal septum; modality, general sensory. **ra'mi nasa'les ner'vi ethmoida'lis anterio'ris** [NA], nasal branches of anterior ethmoidal nerve: the internal and external nasal branches of the anterior ethmoidal nerve, and their subdivisions; called also *rami nasaes anteriores nervi ethmoidalis anteriores*. **ra'mi nasa'les posterio'res inferio'res [latera'les] gan'glii pterygopalati' ni** [NA], **ra'mi nasa'les posterio'res inferio'res [latera'les] gan'glii sphenopalati'ni**, [lateral] inferior posterior nasal branches of pterygopalatine ganglion: they are usually branches of the greater palatine nerve and they supply the middle and inferior nasal meatuses and inferior concha; modality, general sensory. **ra'mi nasa'les posterio'res superio'res [latera'les] gan'glii pterygopalati'ni** [NA], **ra'mi nasa'les posterio'res superio'res [latera'les] gan'glii sphenopalati'ni**, [lateral] superior posterior nasal branches of pterygopalatine ganglion: they supply the superior and middle nasal conchae and the posterior ethmoidal sinuses; modality, general sensory. **ra'mi nasa'les posterio'res superio'res media'les gan'glii pterygopalati'ni** [NA], **ra'mi nasa'les posterio'res superio'res media'les gan'glii sphenopalati'ni**, medial superior posterior nasal branches of pterygopalatine ganglion: they are usually branches of the nasopalatine nerve, and they supply the nasal septum; modality, general sensory. **r. obturato'rius arte'riae epigastricae inferio'ris** [NA], obturator branch of inferior epigastric artery: a vessel connecting the pubic branches of the inferior epigastric and the obturator arteries. The obturator artery is sometimes replaced by an accessory obturator that arises from the inferior epigastric artery by way of this communication. **r. occipita'lis arte'riae auricula'ris posterio'ris** [NA], occipital branch of posterior auricular artery: it is distributed to the epicranium muscle. **ra'mi occipita'les arte'riae cer'ebri posterio'ris** [NA], occipital branches of posterior cerebral artery: they supply the cortex of the occipital lobe. **ra'mi occipita'les arte'riae occipita'lis** [NA], occipital branches of occipital artery: a medial and a lateral branch of the occipital artery, distributed to the scalp and, through the meningeal branch, to the dura mater. **r. occipita'lis ner'vi auricula'ris posterio'ris** [NA], occipital branch of posterior auricular nerve: a branch supplying the occipital belly of the occipitofrontalis muscle; modality, motor. **ra'mi oesopha'gei arte'riae gastricae sinis'trae**, *rami esophagei arteriae gastricae sinistrae*. **ra'mi oesopha'gei arte'riae thyreoideae inferio'ris**, *rami esophagei arteriae thyroideae inferioris*. **ra'mi oesopha'gei ner'vi recurrentis**, *rami esophagei nervi laryngei recurrentis*. **ra'mi oesopha'gei ner'vi va'gi**, esophageal branches of vagus nerve. **ra'mi orbita'les arte'riae cer'ebri anterio'ris** [NA], orbital branches of anterior cerebral artery: branches from the anterior cerebral artery to the cortex of the medial part of the orbital surface of the frontal lobe. **ra'mi orbita'les arte'riae cer'ebri me'diae** [NA], orbital branches of middle cerebral artery: they pass to the cortex of the lateral part of the orbital surface of the frontal lobe. **ra'mi orbita'les gan'glii pterygopalati'ni** [NA], **ra'mi orbita'les gan'glii sphenopalati'ni**, orbital branches of pterygopalatine ganglion: branches passing from the pterygopalatine ganglion through the inferior orbital fissure to supply orbital periosteum and the ethmoidal and sphenoidal sinuses; modality, general sensory and parasympathetic. **r. os'sis is'chii** [NA], ramus of ischium: the flattened bar of bone that projects from the inferior end of the body of the ischium in an anterosuperomedial direction to meet the inferior ramus of the pubis. It forms part of the border of the obturator foramen. Called also *r. inferior ossis ischii*. **r. os'sis pu'bis**, see *r. inferior ossis pubis* and *r. superior ossis pubis*. **r. ova'ricus arte'riae uteri'nae** [NA], **r. ova'rii arte'riae uteri'nae**, ovarian branch of uterine artery: the terminal branch of the uterine artery, which supplies the ovary and anastomoses with the ovarian artery. **r. palma'ris ner'vi media'ni** [NA], palmar branch of median nerve: a branch arising from the median nerve in the lower part of the forearm and supplying the skin of the outer part of the palm; modality, general sensory. **r. palma'ris ner'vi ulna'ris** [NA], palmar branch of ulnar nerve: it arises from the ulnar nerve in the lower part of

the forearm, supplying the cutaneous structures of the medial part of the palm; modality, general sensory. Called also *r. volaris manus nervi ulnaris*. **r. palma'ris profun'dus arte'riae ulna'ris** [NA], deep palmar branch of ulnar artery: it accompanies the deep palmar branch of the ulnar nerve and joins the radial artery to form the deep palmar arch; called also *r. volaris profundus arteriae ulnaris*. **r. palma'ris superficia'lis arte'riae radia'lis** [NA], superficial palmar branch of radial artery: a branch arising from the radial artery in the lower part of the forearm and supplying the thenar eminence; called also *r. volaris superficialis arteriae radialis*. **ra'mi palpebra'les inferio'res ner'vi infraorbita'lis** [NA], inferior palpebral branches of infraorbital nerve: they supply the skin and conjunctiva of the lower eyelid; modality, general sensory. **r. palpebra'lis infe'rior ner'vi infratrochlea'ris**, see *rami palpebrales nervi infratrochlearis*. **ra'mi palpebra'les ner'vi infratrochlea'ris** [NA], palpebral branches of infratrochlear nerve: they help supply the eyelids; modality, general sensory. **r. palpebra'lis supe'rior ner'vi infratrochlea'ris**, see *rami palpebrales nervi infratrochlearis*. **ra'mi pancreat'ici arte'riae liena'lis** [NA], pancreatic branches of splenic artery: branches that supply the pancreas, arising from the splenic artery during its tortuous course along the superior border of the body of the pancreas. **ra'mi pancreat'ici arte'riae pancreat'icoduodena'lis superio'ris** [NA], pancreatic branches of superior pancreaticoduodenal artery: vessels that help supply the pancreas from its anterior and inferior surfaces. **ra'mi parieta'les aor'tae abdomina'lis**, parietal branches of the abdominal aorta. **ra'mi parieta'les aor'tae thoraca'lis**, parietal branches of the thoracic aorta. **ra'mi parieta'les arte'riae cer'ebri anterio'ris** [NA], parietal branches of anterior cerebral artery: they supply the cortex of the parietal lobe except on the lower part of the lateral surface. **ra'mi parietal'les arte'riae cer'ebri me'diae** [NA], parietal branches of middle cerebral artery: they supply the cortex of the lower lateral surface of the parietal lobe. **ra'mi parietal'les arte'riae hypogast'ricae**, parietal branches of the hypogastric artery. **r. parietal'is arte'riae menin'geae me'diae** [NA], parietal branch of middle meningeal artery: a vessel that arises in the middle cranial fossa, grooves the temporal and parietal bones, and supplies the posterior dura mater. **r. parietal'is arte'riae tempora'lis superficia'lis** [NA], parietal branch of superficial temporal artery: the posterior terminal branch of the superficial temporal artery, supplying the scalp in the parietal region. **r. parietooccipita'lis arte'riae cer'ebri posterio'ris** [NA], parietooccipital branch of posterior cerebral artery: a vessel that supplies the cortex of the medial surface of the hemisphere up to the area of the parietooccipital sulcus. **ra'mi paroti'dei arte'riae tempora'lis superficia'lis** [NA], parotid branches of superficial temporal artery: vessels supplying the parotid gland and the temporomandibular joint. **ra'mi paroti'dei ner'vi auriculotempora'lis** [NA], parotid branches of auriculotemporal nerve: branches that bear postganglionic fibers from the otic ganglion to the parotid gland; modality, parasympathetic. **ra'mi paroti'dei ve'nae facia'lis** [NA], parotid branches of facial vein: small veins from the substance of the parotid gland which follow the parotid duct and open into the facial vein; called also *venae parotideae anteriores*. **ra'mi pectora'les arte'riae thoracoacromia'lis** [NA], pectoral branches of thoracoacromial artery: they descend between the pectoralis major and minor muscles, supplying these muscles and the mammary gland. **ra'mi perforan'tes arte'riae mamma'riae inter'nae**, *rami perforantes arteriae thoracicae internae*. **ra'mi perforan'tes arteria'rum metacarpea'rum palma'rium** [NA], **ra'mi perforan'tes arteria'rum metacarpea'rum vola'rium**, perforating branches of palmar metacarpal arteries: vessels connecting the palmar metacarpal arteries and deep palmar arch with the dorsal metacarpal arteries, between the bases of the metacarpal bones and in the interosseous spaces. **ra'mi perforan'tes arteria'rum metatarsa'rum planta'rium** [NA], perforating branches of plantar metatarsal arteries: vessels connecting the plantar metatarsal arteries with the dorsal metatarsal arteries through the interosseous spaces. **r. per'forans arte'riae perone'ae** [NA], perforating branch of peroneal artery: a branch passing forward from the peroneal artery where the interosseous membrane and the tibiofibular syndesmosis are continuous, and descending to supply the syndesmosis and the ankle joint. **ra'mi perforan'tes arte'riae thora'cicae inter'nae** [NA], perforating branches of internal thoracic artery: six branches, one in each of the upper six intercostal spaces, supplying the pectoralis major muscle and adjacent skin; the second, third, and fourth branches give off mammary branches. Called also *rami perforantes arteriae mammae internae*. **ra'mi pericard'iaci aor'tae thoraca'lis**, *rami pericardiaci aortae thoracicae*. **ra'mi pericard'iaci aor'tae thora'cicae** [NA], pericardiac branches of thoracic aorta: small branches from the aorta distributed to the surface of the pericardium. **r. pericard'iacus ner'vi phren'ici** [NA], pericardiac branch of phrenic nerve: a branch arising from the phrenic or accessory phrenic nerve and supplying the pericardium; modality, general sensory. **ra'mi perinea'les ner'vi cuta'nei fem'oris posterio'ris**

[NA], perineal branches of posterior femoral cutaneous nerve: branches arising from the posterior femoral cutaneous nerve at the lower margin of the gluteus maximus muscle and innervating the skin of the external genitalia; modality, general sensory. **r. petro'sus arte'riae menin'geae me'diae** [NA], **r. petro'sus superficialis arte'riae menin'geae me'diae**, petrosal branch of middle meningeal artery: a branch that arises in the region of the petrous part of the temporal bone, entering the hiatus for the greater petrosal nerve and anastomosing with the stylomastoid artery. **ra'mi pharyn'gei arte'riae pharyn'geae ascenden'tis** [NA], pharyngeal branches of ascending pharyngeal artery: irregular vessels supplying the pharynx. **ra'mi pharyn'gei arte'riae thyroi'deae inferio'ris** [NA], pharyngeal branches of inferior thyroid artery: vessels that supply the pharynx. **r. pharyn'geus gan'glii pterygopalati'ni** [NA], a nerve branch running from the posterior part of the pterygopalatine ganglion, through the pharyngeal canal with the pharyngeal branch of the maxillary artery, to the mucous membrane of the nasal part of the pharynx posterior to the auditory tube; called also *pharyngeal branch of pterygopalatine ganglion*. **ra'mi pharyn'gei ner'vi glossopharyn'gei** [NA], pharyngeal branches of glossopharyngeal nerve: they innervate the mucous membrane of the oropharynx; modality, general sensory. **ra'mi pharyn'gei ner'vi va'gi** [NA], pharyngeal branches of vagus nerve: they innervate pharyngeal muscles and mucosa; modality, motor and general sensory. **ra'mi phrenicoabdomina'les ner'vi phren'ici** [NA], phrenicoabdominal branches of phrenic nerve: branches of the phrenic or accessory phrenic nerve that supply the diaphragm and contribute to the celiac plexus; modality, general sensory and motor. **r. plantaris profun'dus arte'riae dorsa'lis pe'dis** [NA], deep plantar branch of dorsalis pedis artery: the main terminal branch of the dorsalis pedis artery, which passes through the first intermetatarsal space to the sole to form the plantar arch. **ra'mi posterio'res arteria'rum intercosta'lium**, see *r. dorsalis arteriarum intercostalium posteriorum* [III-XI]. **r. posterio'rior arte'riae obturato'riae** [NA], posterior branch of obturator artery: it passes backward around the lateral margin of the obturator foramen, on the obturator membrane, supplying muscles around the ischial tuberosity and giving off an acetabular branch. **r. posterio'rior arte'riae recurren'tis ulna'ris** [NA], posterior branch of ulnar recurrent artery: it runs to the back of the medial epicondyle, supplying the elbow joint and neighboring muscles. **r. posterio'rior arte'riae rena'lis** [NA], the posterior branch of the renal artery, supplying the posterior segment of the kidney. **r. posterio'rior arte'riae thyroi'deae superio'ris** [NA], posterior branch of superior thyroid artery: a vessel supplying the posterior part of the thyroid gland. **r. posterio'rior duc'tus hepatic'i dex'tri** [NA], the posterior branch of the right hepatic duct. **r. posterio'rior fissu'rae cer'e'bri latera'lis** [Syl/vii], *r. posterior sulci lateralis cerebri*. **r. posterio'rior ner'vi auricula'ris mag'ni** [NA], posterior branch of great auricular nerve: a branch, formed by division of the great auricular nerve, that innervates the skin over the mastoid process and the back of the external ear; modality, general sensory. **ra'mi posterio'res nervo'rum cervica'lium**, rami dorsales nervorum cervicalium. **r. posterio'rior ner'vi coccy'gei**, *r. dorsalis nervi coccygei*. **r. posterio'rior ner'vi laryn'gei inferio'ris**, posterior branch of inferior laryngeal nerve. **ra'mi posterio'res nervo'rum lumb'a'lium**, rami dorsales nervorum lumbalium. **r. posterio'rior ner'vi obturato'rii** [NA], posterior branch of obturator nerve: a branch that descends to innervate the knee joint, giving muscular branches to the obturator externus, adductor magnus, and sometimes the adductor brevis muscle; modality, general sensory and motor. **ra'mi posterio'res nervo'rum sacra'lium**, rami dorsales nervorum sacralium. **r. posterio'rior nervo'rum spina'lium**, *r. dorsalis nervorum spinalium*. **ra'mi posterio'res nervo'rum thoraca'lium**, rami dorsales nervorum thoraciorum. **r. posterio'rior ramo'rum cutaneo'rum latera'lium** [abdomina'lium et pectora'lium] *arteria'rum intercosta'lium*, posterior branch of (abdominal and thoracic) lateral cutaneous branches of intercostal arteries. **r. posterio'rior ramo'rum cutaneo'rum latera'lium** [abdomina'lium et pectora'lium] *nervo'rum intercosta'lium*, posterior branch of (abdominal and thoracic) lateral cutaneous branches of intercostal nerves. **r. posterio'rior sul'ci latera'lis cer'e'bri** [NA], posterior branch of lateral cerebral sulcus: the part of the lateral cerebral sulcus that runs obliquely posteriorly between the temporal and the parietal lobes; called also *r. posterior fissurae cerebri lateralis* [Sylvii]. **r. profun'dus arte'riae cervica'lis ascenden'tis**, deep branch of ascending cervical artery. **r. profun'dus arte'riae circumflex'ae fem'oris media'lis** [NA], deep branch of medial circumflex femoral artery: a branch ascending toward the trochanteric fossa, and anastomosing with gluteal branches. **r. profun'dus arte'riae glu'teae superio'ris** [NA], deep branch of superior gluteal artery: a branch passing forward between the gluteus medius and minimus muscles, and dividing into superior and inferior branches. **r. profun'dus arte'riae planta'ris media'lis** [NA], deep branch of medial plantar artery: it supplies the anteromedial aspect of the sole,

anastomosing with the medial three plantar metatarsal arteries. **r. profun'dus arte'riae transver'sae col'li** [NA], deep branch of transverse cervical artery: it descends to supply medial and deep back muscles; sometimes replaced by an artery stemming directly from the subclavian artery (*arteria scapularis descendens*). Called also *arteria scapularis descendens* [dorsalis] [NA alternative] and *r. descendens arteriae transversae colli*. **r. profun'dus ner'vi planta'ris latera'lis** [NA], deep branch of lateral plantar nerve: it accompanies the lateral plantar artery on its medial side and the plantar arch, innervating the interossei, the second, third, and fourth lumbrical, and the adductor hallucis muscles, and some articulations; modality, general sensory. **r. profun'dus ner'vi radia'lis** [NA], deep branch of radial nerve: a branch arising from the radial nerve and winding laterally around the radius to the back of the forearm, supplying the supinator, extensor digitorum, extensor digiti minimi, and extensor carpi ulnaris muscles, and often the extensor carpi radialis brevis muscle. Its continuation, the posterior interosseous nerve, supplies distal forearm muscles and the carpal and intercarpal joints; modality, motor. **r. profun'dus ner'vi ulna'ris** [NA], deep branch of ulnar nerve: the deep branch that is accompanied by the deep palmar branch of the ulnar artery, rounds the hook of the hamate bone, and follows the deep palmar arch beneath the flexor tendons, supplying the wrist joint, the interossei, third and fourth lumbrical, and adductor pollicis muscles, and usually the deep head of the flexor pollicis brevis muscle; modality, general sensory and motor. **ra'mi pterygoi'dei arte'riae maxilla'ris** [NA], **ra'mi pterygoi'dei arte'riae maxilla'ris inter'nae**, pterygoid branches of maxillary artery: they supply the pterygoid muscles. **r. pu'bicus arte'riae epigas'tricae inferio'ris** [NA], pubic branch of inferior epigastric artery: it arises from the inferior epigastric artery near the deep inguinal ring and descends on the back of the pubis, anastomosing through an obturator branch with the pubic branch of the obturator artery. **r. pu'bicus arte'riae obturato'riae** [NA], pubic branch of obturator artery: it ascends on the pelvic surface of the ilium, anastomosing with its fellow of the other side and with the pubic branch of the inferior epigastric artery. **r. of pubis**, see *r. inferior ossis pubis* and *r. superior ossis pubis*. **r. of pubis, ascending**, *r. superior ossis pubis*. **r. of pubis, descending**, *r. inferior ossis pubis*. **ra'mi pulmona'les plex'us cardi'aci**, rami pulmonales systematis autonomici. **ra'mi pulmona'les systema'tis autonom'ici** [NA], pulmonary branches of autonomic system: branches from the sympathetic trunks and cardiac plexus, which, via the pulmonary plexuses, accompany the blood vessels and bronchi into the lungs; modality, sympathetic and visceral afferent. **r. rena'lis ner'vi splanchn'ici mino'ris** [NA], renal branch of lesser splanchnic nerve: a branch from the lesser splanchnic nerve to the aorticorenal ganglion; modality, sympathetic preganglionic fibers and visceral afferent. **ra'mi rena'les ner'vi va'gi** [NA], **ra'mi rena'les plex'us coeli'aci**, renal branches of vagus nerve: branches passing from the vagal trunks via the celiac plexus to the kidney; modality, parasympathetic and visceral afferent. **r. saphe'nus arte'riae ge'nus descen'dens** [NA], saphenous branch of descending genicular artery: a vessel that accompanies the saphenous nerve between the sartorius and gracilis muscles on the medial side of the knee, supplying the skin and anastomosing with the medial inferior genicular artery. **r. saphe'nus arte'riae ge'nu supre'mae**, *r. saphenus arteriae genus descendens*. **ra'mi scrota'les anterio'res arte'riae femora'lis** [NA], anterior scrotal branches of femoral artery: branches arising from the external pudendal arteries and supplying the anterior scrotal region in the male; called also *arteriae scrotales anteriores*. **ra'mi scrota'les posterio'res arte'riae puden'dae inter'nae** [NA], posterior scrotal branches of internal pudendal artery; two branches arising from the internal pudendal artery in the anterior part of the ischiorectal fossa, helping to supply the ischiocavernosus and bulbospongiosus muscles, and distributed to the scrotum; called also *arteriae scrotales posteriores*. **r. sinis'ter arte'riae hepat'icae pro'priae** [NA], left branch of proper hepatic artery: it supplies the left lobe of the liver. **r. sinis'ter arte'riae pulmona'lis**, *arteria pulmonalis sinistra*. **r. sinis'ter ve'nae por'tae** [NA], the left branch of the portal vein, distributed to the left lobe of the liver. **r. si'nus carot'ici ner'vi glosso-pharyn'gei** [NA], branch of glossopharyngeal nerve to carotid sinus: a branch that supplies the pressoreceptors and chemoreceptors of the carotid sinus and carotid body with visceral afferent fibers. **ra'mi spina'les arte'riae cervica'lis ascenden'tis** [NA], spinal branches of ascending cervical artery: they help supply the vertebral canal. **r. spina'lis arte'riae iliolumba'lis**, *r. spinalis rami lumbalis arteriae iliolumbalis*. **ra'mi spina'les arte'riae intercosta'lis supre'mae** [NA], spinal branches of highest intercostal artery: vessels arising from the dorsal branches of the first two posterior intercostal arteries, entering intervertebral foramina with the corresponding two spinal nerves to help supply the contents of the vertebral canal. **r. spina'lis arteria'rum lumb'a'lium** [NA], spinal branch of lumbar arteries: a branch arising from the dorsal branch of the lumbar arteries and entering an intervertebral foramen with the

spinal nerve to help supply the contents of the vertebral canal. **ra/mi spina/les arteria/rum sacra/lum latera/lum** [NA], spinal branches of lateral sacral arteries: vessels arising from the two lateral sacral arteries and entering the pelvic sacral foramina to help supply the contents of the vertebral canal. **r. spina/lis arte/riae subcosta/lis** [NA], spinal branch of subcostal artery: a spinal branch corresponding to those arising from the dorsal branches of the posterior intercostal arteries; it enters the vertebral canal to help supply the contents of the canal. **ra/mi spina/les arteria/riae vertebra/lis** [NA], spinal branches of vertebral artery: vessels supplying the contents of the cervical part of the vertebral canal. **r. spina/lis ra/mi dor-sa/lis arteria/rum intercosta/lum posterio/rum** [III-XI] [NA], **r. spina/lis ramo/rum posterio/rum arteria/rum intercosta/lum**, spinal branch of dorsal branch of posterior intercostal arteries [III-XI]: one of the two branches into which the dorsal branch of a posterior intercostal artery divides, passing through the intervertebral foramen with the corresponding spinal nerve to help supply the contents of the vertebral canal. **r. spina/lis ra/mi lumba/lis arte/riae iliolumba/lis** [NA], spinal branch of lumbar branch of iliolumbar artery; it passes through the intervertebral foramen between the fifth lumbar vertebra and the sacrum to help supply the contents of the vertebral canal. **r. spina/lis vena/rum intercosta/lum**, **r. spinalium venarum intercostalium posterio/rum** [IV-XI]. **r. spina/lis vena/rum intercosta/lum posterio/rum** [IV-XI] [NA], spinal branch of posterior intercostal veins: a vessel, the vena comitans of the arterial spinal branch, that emerges from the vertebral canal and contributes to the dorsal branch of each posterior intercostal vein. **r. stape/dius arte/riae stylomasto/deae** [NA], stapedia branch of stylomastoid artery: a variable branch supplying the stapedius muscle and tendon. **ra/mi sterna/les arte/riae mamma/riae inter-nae**, rami sternales arteriae thoracicae internae. **ra/mi sterna/les arte/riae thora/cicae inter-nae** [NA], sternal branches of internal thoracic artery: they supply the sternum and the transversus thoracis muscle. **ra/mi sternocleidomasto/dei arte/riae occipita/lis** [NA], sternocleidomastoid branches of occipital artery: branches of the occipital artery, usually an upper and a lower, that supply the sternocleidomastoid and adjacent muscles. **r. sternocleidomasto/deus arte/riae thyroi/deae superio/ris** [NA], sternocleidomastoid branch of superior thyroid artery: a branch that arises from the superior thyroid artery, but sometimes directly from the external carotid artery, passing across the carotid sheath to supply the middle portion of the sternocleidomastoid muscle. **ra/mi stria/ti arte/riae cer/ebri me/diae** [NA], striate branches of middle cerebral artery: central branches that supply the basal ganglia, thalamus, and internal capsule. **r. stylohyoi/deus ner/vi facia/lis** [NA], stylohyoid branch of facial nerve: a branch that arises from the facial nerve just below the base of the skull to innervate the stylohyoid muscle; modality, motor. **r. stylopharyngeus ner/vi glossopharyngei**, **r. musculi stylopharyngei nervi glossopharyngei**. **ra/mi submaxilla/res gan/glii submaxilla/ris**, rami glandulares ganglii submandibularis. **ra/mi subscapula/res arte/riae axilla/ris** [NA], subscapular branches of axillary artery: they supply the subscapularis muscle. **r. superficialis arte/riae circumflex/ae fem/oris media/lis**, the superficial branch of the medial circumflex femoral artery. **r. superficialis arte/riae glu/teae superio/ris** [NA], superficial branch of superior gluteal artery; it ramifies to supply the gluteus maximus muscle. **r. superficialis arte/riae planta/ris media/lis** [NA], superficial branch of medial plantar artery: it supplies the medial side of the great toe. **r. superficialis arte/riae transver/sae col/li** [NA], superficial branch of transverse cervical artery: a branch that arises from the transverse cervical artery at the anterior border of the levator scapulae muscle, supplying the levator scapulae, trapezius, and splenius muscles. When there is no deep branch, the superficial branch is the continuation of the transverse cervical called the superficial cervical artery. Called also *arteria cervicalis superficialis* [NA alternative] and *r. ascendens arteriae transversae colli*. **r. superficialis ner/vi planta/ris latera/lis** [NA], superficial branch of lateral plantar nerve: a branch that arises from the lateral plantar nerve at the lateral border of the quadratus plantae muscle and passes forward, dividing into a lateral part that innervates skin of the lateral side of the sole and little toe, joints of the toe, and the flexor digiti minimi brevis muscle, and a medial part, a common plantar digital nerve, that gives two proper plantar digital nerves to the adjacent sides of the fourth and fifth toes; modality, general sensory. **r. superficialis ner/vi radia/lis** [NA], superficial branch of radial nerve: the continuation of the radial nerve that accompanies the radial artery in the forearm, winds dorsalward, supplies the lateral side of the back of the hand, and divides into dorsal digital nerves that supply the skin of the dorsal surface and adjacent surfaces of the thumb, index, and middle fingers, and sometimes the radial side of the ring finger; modality, general sensory. **r. superficialis ner/vi ulna/ris** [NA], superficial branch of ulnar nerve: the branch of the ulnar nerve in the hand that supplies the palmaris brevis muscle and divides into a proper palmar digital nerve for

the medial side of the little finger, a common palmar digital nerve giving off two proper nerves to supply adjacent sides of the little and fourth fingers, and sometimes palmar digital nerves also for the adjacent sides of the third and fourth fingers; modality, general sensory and motor. **r. superio/ris arte/riae glu/teae superio/ris** [NA], superior branch of superior gluteal artery: the upper division of the deep branch of the superior gluteal artery, extending as far as the anterior superior iliac spine and helping supply the gluteus medius, gluteus minimus, and tensor fasciae latae muscles. **ra/mi superio/res ner/vi cuta/nei col/li**, rami superiores nervi transversi colli. **r. superio/ris ner/vi oculomoto/rii** [NA], superior branch of oculomotor nerve: the upper and smaller of the two branches of the oculomotor nerve, which supplies the superior rectus muscle and, terminally, the levator palpebrae superioris; modality, motor. **ra/mi superio/res ner/vi transver/si col/li** [NA], superior branches of transverse cervical nerve: the upper of the branches that arise from the transverse cervical nerve near the anterior border of the sternocleidomastoid muscle, innervating skin and subcutaneous tissue in the anterior cervical region; modality, general sensory. Called also *rami superiores nervi cutanei colli*. **r. superio/ris os/sis is/chii**, a name formerly given to what is now considered the lower part of the body of the ischium (corpus ossis ischii). **r. superio/ris os/sis pu/bis** [NA], superior **r. of pubis**, the bar of bone projecting from the body of the pubic bone in a posterosuperolateral direction to the iliopectic eminence, and forming part of the acetabulum. **r. suprahyoi/deus arte/riae lingua/lis** [NA], suprahyoid branch of lingual artery: it passes along the upper border of the hyoid bone, supplying suprahyoid muscles and anastomosing with its fellow of the other side; called also *r. hyoideus arteriae lingualis*. **ra/mi supprarena/les superio/res arte/riae phren/icae inferio/ris**, see *arteria suprarenalis superior*. **r. sympathicus ad gan/glion cilia/re** [NA], sympathetic branch to ciliary ganglion: a branch bearing sympathetic fibers, postganglionic from the superior cervical ganglion and derived from the internal carotid plexus, to the ciliary ganglion, for distribution by the short ciliary nerves to the dilator pupillae, orbitalis, and tarsal muscles, and blood vessels of the eyeball. Called also *radices sympathicae ganglii ciliaris*. **r. sympathicus ad gan/glion subman-dibula/re** [NA], sympathetic branch to submandibular ganglion: a branch bearing sympathetic fibers, postganglionic from the superior cervical ganglion and derived from a plexus on the facial artery, to the submandibular ganglion, for distribution to the submandibular gland. Called also *radix sympathica ganglii submaxillaris*. **ra/mi tempora/les arte/riae cer/ebri me/diae** [NA], temporal branches of middle cerebral artery: vessels that supply the cortex of the lateral surface of the temporal lobe, and the temporal pole. **ra/mi tempora/les arte/riae cer/ebri posterio/ris** [NA], temporal branches of posterior cerebral artery: vessels that supply the cortex of the inferior and medial surfaces of the temporal lobe. **ra/mi tempora/les ner/vi facia/lis** [NA], temporal branches of facial nerve: terminal branches of the facial nerve that innervate the anterior and superior auricular muscles, the frontal belly of the occipitofrontal muscle, and the orbicularis oculi and corrugator muscles; modality, motor. **ra/mi tempora/les superficialis ner/vi auriculotempora/lis** [NA], superficial temporal branches of auriculotemporal nerve: branches to the skin of the scalp in the temporal region; modality, general sensory. **r. tento/rii ner/vi ophthal/mici** [NA], tentorial branch of ophthalmic nerve: a branch that arises from the ophthalmic nerve close to its origin from the trigeminal ganglion, turning back to innervate the dura mater of the tentorium cerebelli and falx cerebri; modality, general sensory. Called also *nervus tentorii*. **ra/mi thy/mici arte/riae thora/cicae inter-nae** [NA], thymic branches of internal thoracic artery: branches distributed to the thymus gland in the anterior mediastinum; called also *arteriae thymicae*. **r. thyrohyoi/deus ner/vi hypoglos/si**, **r. thyrohyoideus ansae cervicalis**. **r. thyrohyoi/deus an/sae cervica/lis** [NA], thyrohyoid branch of ansa cervicalis: a branch from the superior root of the ansa cervicalis, innervating the thyrohyoid muscle; modality, motor. **r. tonsilla/ris arte/riae facia/lis** [NA], **r. tonsilla/ris arte/riae maxilla/ris exter/ni**, tonsillar branch of facial artery: a vessel ascending from the facial artery on the pharynx to supply the tonsil and the root of the tongue. **ra/mi tonsilla/res ner/vi glossopharyngei** [NA], tonsillar branches of glossopharyngeal nerve: they supply the mucosa over the palatine tonsil and the adjacent portion of the soft palate; modality, general sensory. **ra/mi trachea/les arte/riae thyroi/deae inferio/ris** [NA], tracheal branches of inferior thyroid artery: vessels supplying the trachea. **ra/mi trachea/les ner/vi laryn/gei recurren/tis** [NA], **ra/mi trachea/les ner/vi recurren/tis**, tracheal branches of recurrent laryngeal nerve: they are distributed to the tracheal mucosa; modality, general sensory. **r. transver/sus arte/riae circumflex/ae fem/oris latera/lis** [NA], transverse branch of lateral circumflex femoral artery: a branch that pierces the vastus lateralis muscle, turning around the femur to anastomose with the transverse branch of the medial circumflex femoral artery and with other arteries, deep to the gluteus maximus muscle. **r. transver/sus arte/riae circumflex/ae fem/oris media/-**

lis [NA], transverse branch of medial circumflex femoral artery: it passes between the quadratus femoris and adductor magnus muscles, supplying them, and then turning around the femur to anastomose with the transverse branch of the lateral circumflex femoral artery and with other arteries, deep to the gluteus maximus muscle. **r. tu/bae plex/us tympan/ici** [Jacobsoni], r. tubarius plexus tympanici. **r. tuba/rius arte/riae uteri/nae** [NA], tubal branch of uterine artery: it supplies the uterine tube and the round ligament. **r. tuba/rius plex/us tympan/ici** [NA], tubal branch of tympanic plexus: a branch given to the auditory tube from the tympanic plexus; modality, general sensory. Called also **r. tubae plexus tympanici** [Jacobsoni]. **r. ulna/ris ner/vi cuta/nei antebrachii media/lis** [NA], ulnar branch of medial antebrachial cutaneous nerve: a branch that innervates the skin of the posteromedial and medial aspects of the forearm; modality, general sensory. **ra/mi ureter/ici arte/riae duc/tus deferen/tis** [NA], ureteral branches of artery of ductus deferens: they supply the lower portion of the ureter. **ra/mi ureter/ici arte/riae ova/ri-cae** [NA], ureteral branches of ovarian artery: they are distributed to the ureter. **ra/mi ureter/ici arte/riae rena/lis** [NA], ureteral branches of renal artery: they supply the upper portion of the ureter. **ra/mi ureter/ici arte/riae tes-ticula/ris** [NA], ureteral branches of testicular artery: they are distributed to the ureter. **ra/mi ventra/les nervo/rum cervica/lium** [NA], ventral branches of cervical nerves: the upper four form the cervical plexus, and the lower four form most of the brachial plexus; called also **rami anteriores nervorum cervica-lium**. **r. ventra/lis ner/vi coccyg/ei** [NA], ventral branch of coccygeal nerve: the ventral branch of the last spinal nerve, which emerges from the sacral hiatus and helps form the coccygeal plexus; called also **r. anterior nervi coccygei**. **ra/mi ven-tra/les nervo/rum lumba/lium** [NA], ventral branches of lumbar nerves: the ventral branches of the five lumbar sacral nerves. The upper four branches form the lumbar plexus, and the fifth and a part of the fourth participate in formation of the sacral plexus. Called also **rami anteriores nervorum lumbalium**. **ra/mi ventra/les nervo/rum sacra/lium** [NA], ventral branches of sacral nerves: the ventral branches of the five sacral spinal nerves. The upper four branches emerge from the sacrum through the anterior sacral foramina and help form the sacral plexus; the fifth emerges through the sacral hiatus and, with a communication from the fourth, participates in formation of the coccygeal plexus. Called also **rami anteriores nervorum sacralium**. **r. ventra/lis nervo/rum spina/lium** [NA], ventral branch of spinal nerves: the larger, usually, of the two branches into which each spinal nerve divides almost as soon as it emerges from the intervertebral foramen; the ventral branches supply the ventral and lateral parts of the trunk and all parts of the limbs. Called also **r. anterior nervorum spinalium**. **ra/mi ventra/les nervo/rum thoraco/rii** [NA], ventral branches of thoracic nerves: the ventral branches of the first eleven thoracic spinal nerves situated between the ribs, the first three of which give branches to the brachial plexus as well as to the thoracic wall, the fourth, fifth, and sixth supply only the thoracic wall, and the seventh to eleventh are thoracoabdominal in distribution. Called also **intercostal nerves**, **nervi intercostales** [NA alternative], and **r. anteriores nervorum thoracalium**. The anterior primary division of the twelfth thoracic nerve is subcostal rather than intercostal in position, differing in course and relationships from the other ventral branches, and is known as the subcostal nerve (**nervus subcostales** [NA]). **ra/mi vestibula/res arte/riae audi-tiv/ae inter/nae**, rami vestibulares arteriae labyrinthi. **ra/mi vestibula/res arte/riae labyrin/thi** [NA], vestibular branches of labyrinthine artery: vessels supplying the vestibule of the ear. **ra/mi viscera/les aor/tae abdomina/lis**, visceral branches of the abdominal aorta. **ra/mi viscera/les aor/tae thoraca/lis**, visceral branches of the thoracic aorta. **ra/mi viscera/les arte/riae hypogas/tricae**, visceral branches of the hypogastric artery. **r. vola/ris ma/nus ner/vi ulna/ris**, r. palmaris nervi ulnaris. **r. vola/ris ner/vi cuta/nei antibrach/ii media/lis**, r. anterior nervi cutanei antibrachii medialis. **r. vola/ris profun/dus arte/riae ulna/ris**, r. palmaris profundus arteriae ulnaris. **r. vola/ris superficia/lis arte/riae radia/lis**, r. palmaris superficialis arteriae radialis. **ra/mi zygomat/ici ner/vi facia/lis** [NA], zygomatic branches of facial nerve: branches that cross the zygomatic bone and innervate the orbicularis oculi muscle; modality, motor. **r. zygomatofacia/lis ner/vi zygomat/ici** [NA], zygomatofacial branch of zygomatic nerve: a branch that passes from the lateral wall of the orbit, piercing the zygomatic bone to supply overlying skin; modality, general sensory. **r. zygomatocotempora/lis ner/vi zygomat/ici** [NA], zygomatocotemporal branch of zygomatic nerve: a branch that passes from the lateral wall of the orbit, piercing the zygomatic bone to innervate skin of the anterior temporal region; modality, general sensory.

rancid (ran/sid) [L. *rancidus*] having a musty, rank taste or smell; applied to fats that have undergone decomposition, with the liberation of fatty acids.

rancidify (ran-sid'/i-fi) to decompose, with the liberation of fatty acids; a term applied especially to the decomposition of fats.

rancidity (ran-sid'/i-te) the quality of being rancid.

Randolph's test (ran/dolfs) [Nathaniel Archer *Randolph*, American physician, 1858–1887] see under tests.

range (rānj) 1. the difference between the upper and lower limits of a variable or of a series of values. 2. the portion of the earth in which a given species is found. **r. of accommoda-tion**, the alteration in the refractive state of the eye produced by accommodation. It is the difference in diopters between the refraction by the eye adjusted for its far point and that when adjusted for its near point. Called also *amplitude of accommoda-tion*. **r. of audibility**, see under *limit*. **r. of motion**, the range, measured in degrees of a circle, through which a joint can be extended and flexed.

ranimycin (ran-i-mi/sin) an antibacterial antibiotic derived from a variant of *Streptomyces lincolnensis*.

ranine (ra'nin) [L. *raninus*; *rana* frog] pertaining to (a) a frog; (b) a ranula, or to the lower surface of the tongue; (c) the sublingual vein.

Ranke's angle (rahn/kēz) [Hans Rudolph *Ranke*, Dutch anatomi-st, 1849–1887] see under *angle*.

Ranke's complex, formula, stages (rahn/kēz) [Karl Ernst *Ranke*, Munich internist, 1870–1926] see *primary complex*, under *complex*, and see under *formula* and *stage*.

ranula (ran'u-lah) [L., dim. of *rana* frog] a cystic tumor beneath the tongue, due to obstruction and dilatation of the sublingual or submaxillary duct or of a mucous gland. **pancreatic r.**, a retention cyst of the pancreatic duct.

ranular (ran'u-lar) pertaining to or of the nature of ranula.

Ranunculus (rah-nung'ku-lus) a genus of plants, the crowfoots and buttercups, certain species of which are poisonous; see also *risus sardonius*.

Ranvier's crosses, etc. (rahn-ve-āz') [Louis Antoine *Ranvier*, French pathologist, 1835–1922] see under *cross*, *disk*, *mem-brane*, *node*, and *segment*.

Raoult's law (rah-ōlz') [François Marie *Raoult*, French physicist, 1830–1901] see under *law*.

raphania (rah-fa'ne-ah) [L. *raphanus*; Gr. *raphanos* radish] a chronic poisoning ascribed to the seeds of wild radish.

raphe (ra'fe) [Gr. *rhaphe*] a seam; [NA] a general term for the line of union of the halves of various symmetrical parts. **ab-dominal r.**, linea alba. **amniotic r.**, the line of junction of the amniotic folds in the amnion of those vertebrates in which it is formed by folding. **r. anococcyg/ea**, **anococcygeal r.**, ligamentum anococcygeum. **r. cor/poris callo/si**, see *stria longitudinalis medialis corpus callosi* and *stria longitudinalis lateralis corporis callosi*. **longitudinal r. of tongue**, sulcus medianus linguae. **median r. of neck**, posterior, liga-mentum nuchae. **r. of medulla oblongata**, **r. medul/lae oblonga/tae** [NA], the line of union of the two halves of the medulla oblongata. **r. pala/ti** [NA], **palatine r.**, a narrow whitish streak in the midline of the palate, extending from the incisive papilla to the tip of the uvula; it may present as a ridge in front and as a groove posteriorly. **palpebral r.**, **lateral**, **r. palpebra/lis latera/lis** [NA], a thin horizontal band of connective tissue extending from the external angle of the rima palpebralis to the lateral margin of the orbit. **r. pe/nis** [NA], a narrow dark streak or ridge continuous posteriorly with the raphe scroti and extending forward for a variable distance along the midline on the under side of the penis; in the newborn it may extend to the tip of the glans. **r. perine/i** [NA], **r. of peri-neum**, a ridge along the median line of the perineum, continuous anteriorly with the raphe scroti and ending posteriorly at the anus. **r. pharyn/gis** [NA], **r. of pharynx**, a more or less distinct band of connective tissue extending downward from the base of the skull along the posterior wall of the pharynx in the median plane, and giving attachment to the constrictor muscles of the pharynx. **r. of pons**, **r. pon/tis** [NA], the line of union of the right and left halves of the pons. **pterygomandibu-lar r.**, **r. pterygomandibula/ris** [NA], a tendinous line between the buccinator and the constrictor pharyngis superior muscles, from which the middle portions of both muscles originate. **r. scro/ti** [NA], **r. of scrotum**, a ridge along the surface of the scrotum in the median line, dividing it into nearly equal lateral parts.

rapport (rah-por') [Fr.] a relation of harmony and accord between two persons, as between patient and physician.

raptus (rap'tus) [L.] a sudden, violent attack. **r. haemor-rhagicus**, a sudden massive hemorrhage. **r. mani/acus**, a sudden, violent maniacal attack. **r. melancholicus**, an attack of frenzy or agitation occurring in melancholia. **r. ner-vo/rum**, a sudden, violent attack of nervousness.

rarefaction (rār'ē-fak'shun) [L. *rarefactio*] the condition of being or becoming less dense; diminution in density and weight, but not in volume.

Ras. abbreviation for *L. rasu/rae*, scrapings or filings.

rash (rash) a temporary eruption on the skin, as in urticaria; a drug eruption or viral exanthem. **brown-tail r.**, see under *dermatitis*. **butterfly r.**, see *butterfly* (def. 4). **cable r.**, chloracne. **caterpillar r.**, a local eruption attributed to poi-

soning by the hairs of caterpillars. **crystal r.** (*obs.*), miliaria crystallina. **diaper r.**, a cutaneous reaction in an infant, localized to the areas ordinarily covered by, and in contact with, the diaper, and sparing the folds of skin. It is due to various primary irritants, such as ammonia in decomposed urine, with histopathological changes varying with the causative factor; improperly processed diapers and other contact factors may also be responsible for such irritation. **drug r.**, drug eruption. **heat r.**, miliaria rubra. **hydatid r.**, an urticarial eruption which sometimes follows tapping or rupture of a hydatid cyst. **lily r.**, dermatitis affecting those who pick daffodils and narcissi in early spring. **mulberry r.** (*obs.*), a peculiar eruption of typhus, looking like that of measles. **nettle r.** (*obs.*), urticaria. **nickel r.**, a rash sometimes occurring in refiners of nickel. **rose r.**, roseola. **wandering r.**, geographic tongue.

rasion (ra'zhun) [L. *rasio*] the grating of drugs with a file.

Rasmussen's aneurysm (ras'mus-ens) [Fritz Waldemar Rasmussen, Danish physician, 1834-1877] see under *aneurysm*.

raspatory (ras'pah-to-re) [L. *raspatorium*] a file or rasp for surgical use; a xyster.

RAST radioallergosorbent test; see under *tests*.

rasura (rah-su'rah) [L.] scrapings or filings.

rat (rat) a small, aggressive, and omnivorous rodent of the genus *Rattus* and related genera of the family Muridae, commonly found about human habitations. Rats not only cause great economic loss, but are vectors of human disease; they harbor at least eleven different species of intestinal parasites that may be transmitted to man, such as tapeworms, roundworms, and trichinae; they are the reservoirs for the infective agents of plague, typhus, Weil's disease, and rat-bite fever. Albino mutants of *R. norvegicus* are used as laboratory animals. **albino r.**, white r. **black r.**, *Rattus rattus*, the European black rat and the one most commonly responsible for transmitting plague to man by means of its flea (*Xenopsylla cheopis*). **brown r.**, *Rattus norvegicus*; also called the barn rat, gray rat, Norway rat, sewer rat, and wharf rat. It is larger than the black rat, has a brownish gray color, and short ears and tail. **Egyptian r.**, *Rattus rattus alexandrinus*, a black rat originally found in North Africa, but now distributed worldwide. **Holtzman r.**, a strain of albino rat descended originally from S-D strain which originated from Wistar Institute sometime before 1929. **Long-Evans r.**, a strain of rat, developed at the University of Rochester, characterized by a brownish to black color of the head and shoulders. **roof r.**, Egyptian r. **Sprague-Dawley r.**, a strain of albino rat developed by the Sprague-Dawley Animal Company, which is widely used in experimental work because of its calmness and ease of handling. **white r.**, an albino form of *Rattus rattus* or of *R. norvegicus* which is much used as a laboratory animal. **Wistar r.**, a strain of albino rat developed at the Wistar Institute but which has spread so widely to other institutions that there is probably marked dilution of the strain. **wood r.**, a rat of the genus *Neotoma*; they are hosts of fleas and ticks. Called also *pack rat*, *trade rat*, *mountain rat*, and *brush rat*.

rate (rāt) an expression of the speed or frequency with which a certain event or circumstance occurs in relation to a certain period of time, a specific population, or some other fixed standard. **attack r.**, the rate at which new cases of a specific disease occur; see *incidence*. **basal metabolic r.**, an expression of the rate at which oxygen is utilized by the body cells, or the calculated equivalent heat production by the body, in a fasting subject at complete rest. Abbreviated B.M.R. See also *basal metabolism*, under *metabolism*. **birth r.**, an expression of the number of births occurring during one year. The *crude birth rate* is the ratio of births to the total population; the *refined birth rate* is the ratio of births to the female population; the *true birth rate* is the ratio of births to the female population of child-bearing age, that is, between the ages of 15 and 45. **case r.**, morbidity r. **case fatality r.**, the number of deaths caused by a specific disease, expressed as a percentage of or otherwise related to the total number of cases of the disease. **circulation r.**, an expression of the amount of blood pumped per minute by the heart through the body. **death r.**, the ratio of the total number of deaths in a specified area to the population, generally figured in terms of number of deaths per 1,000, 10,000, or 100,000 of population. The *crude death rate* is the ratio of the number of deaths within a given time (as one year) to the number of people alive at the middle of the period. The *specific death rate* is the proportion of deaths per annum in an age group or other specified group of the population per 1,000 of the mean annual number of people in that group. Called also *mortality r.* See also *mortality* (def. 2). **dose r.**, the amount of any agent administered per unit of time. **erythrocyte sedimentation r.**, an expression of the extent of settling of erythrocytes, per unit time, in a column of fresh citrated or otherwise treated blood. **fatality r.**, the number of deaths caused by a specific circumstance or disease, expressed as the absolute or relative number of deaths among the individuals encountering the circumstance or having the disease. **five-year survival r.**, an expression of the number of survivors with no trace of disease five years after each has been diagnosed or treated for the same disease. **glomerular filtration r.**, an expression of the quantity of glomerular filtrate formed each

minute in all nephrons of both kidneys, calculated by measuring the clearance of a specific substance, e.g., inulin or creatinine. **growth r.**, an expression of the increase in size of an organic object per unit time, calculations usually being made as to both the absolute and the relative increment. **heart r.**, the number of contractions of the ventricles of the heart per unit of time (usually a minute). It usually corresponds to the pulse rate, but occasionally some of the contractions of the left ventricle fail to produce peripheral pulse waves, so that the rate of the pulse at the wrist is less than that of the heart. **lethality r.**, fatality r. **men-delian r.**, an expression of the numerical relations of the occurrence of distinctly contrasted mendelian characters in succeeding generations of hybrid offspring. **morbidity r.**, the number of cases of a given disease occurring during a specified period per 1,000, 10,000, or 100,000 of population. **mortality r.**, death r. **oocyst r.**, the percentage of wild female mosquitoes found to contain oocysts in the midgut. **output exposure r.**, in radiology, the exposure to radiation at a specified point per unit of time, usually expressed in roentgens per minute. **parasite r.**, the percentage of persons, in a particular age group or area, in whom parasites, especially malarial parasites, can be found. **pulse r.**, the rate of pulsation noted in a peripheral artery per minute, normally from 50 to 100. **respiration r.**, an expression of the number of movements of the chest, indicative of inspiration and expiration, occurring per minute. **sedimentation r.**, the rate at which a sediment is deposited in a given volume of solution, especially when subjected to the action of a centrifuge; see also *erythrocyte sedimentation r.* **sickness r.**, morbidity r. **sporozoite r.**, the percentage of wild female mosquitoes found to contain sporozoites in the glands. **still-birth r.**, an expression of the relation of the number of stillbirths to the total number of births.

Rathke's pouch, etc. (rahth'kez) [Martin Heinrich Rathke, German anatomist, 1793-1860] see under *column*, *cyst*, *fold*, *pouch*, *trabecula*, and *tumor*.

raticide (rat'i-sid) an agent destructive to rats.

ratio (ra'she-o) [L.] an expression of the quantity of one substance or entity in relation to that of another; the relationship between two quantities expressed as the quotient of one divided by the other. **A-G r.**, albumin-globulin r., the ratio of albumin to globulin in the blood serum, plasma, or the urine in various types of renal disease. **arm r.**, a figure expressing the relation of the length of the longer arm of a mitotic chromosome to that of the shorter arm. **birth-death r.**, vital index. **body-weight r.**, body weight in grams divided by stature in centimeters. **cardiothoracic r.**, the ratio of the transverse diameter of the heart to the internal diameter of the chest at its widest point just above the level of the dome of the diaphragm, a rough guide to cardiac enlargement, being normally less than 0.5. **cell color r.**, the result obtained by dividing the percentage of red cells by the percentage of hemoglobin. **concentration r.**, the ratio of the average concentration of a solid in the urine to its concentration in the blood. **curative r.**, therapeutic r. **D-N r.**, dextrose-nitrogen r., the ratio between the dextrose and the nitrogen of the urine. **expiratory exchange r.**, the ratio of carbon dioxide output to oxygen uptake in respiration. **G-N r.**, glucose-nitrogen r., D-N r. **grid r.**, in radiology, the ratio of the height of the lead strips to the width of the interspacing of a grid. **hand r.**, the ratio of the length of the hand to its width. **holdaway r.**, a means of expressing the relationship of the pogonion and the lower incisor to the nasion-basion plane; used in cephalometrics as a diagnostic aid. **karyoplasmic r.**, nucleocytoplasmic r. **ketogenic-anti-ketogenic r.**, the proportion between substances that form glucose in the body and those that form fatty acids. **lecithin-sphingomyelin r.** (L/S r.), the ratio of lecithin to sphingomyelin concentration in the amniotic fluid, used to predict the degree of pulmonary maturity of the fetus and thus the risk of respiratory difficulties. **nucleocytoplasmic r.**, **nucleoplasmic r.**, the ratio of nuclear to cytoplasmic volume. **nutritive r.**, the ratio between the digestible protein and the digestible fats and carbohydrates in a ration in stock feeding. **respiratory exchange r.**, expiratory exchange r. **sex r.**, an expression of the number of males in a population to the number of females, usually stated as the number of males per 100 females. **therapeutic r.**, the fraction of the minimal lethal dose of a drug that is therapeutically effective; called also *curative r.* **urea excretion r.**, the ratio of the number of milligrams of urea in the urine excreted in one hour to the number of milligrams in 100 ml. of blood; the normal ratio is 50.

ration (ra'shun) [L. *ratio* proportion] a fixed allowance of food or drink per day or other unit of time. **basal r.**, a ration giving the required energy, but lacking in one or more vitamins.

rational (rash'un-al) [L. *rationalis* reasonable] based upon reason; characterized by possession of one's reason.

rationale (rash'un-al') [L.] a rational exposition of principles; the logical basis of a procedure.

rationalization (rash'un-al-i-za'shun) an unconscious defense mechanism by which one justifies attitudes and behavior that would otherwise be intolerable.

rat-tails (rat'tälz) a swollen condition of the hair papillae over the flexor tendons of a horse's legs, due to filth and bacteria.

rattlesnake (rat'l-snāk) any of the New World pit vipers of the genera *Crotalus* and *Sistrurus*, having a series of cornified interlocking segments at the tip of the tail; when disturbed they vibrate the tail to produce the characteristic rattling or buzzing sound. See table accompanying *snake*.

Rattus (rat'us) a genus of small rodents, the rats (see *rat*).
R. norvegicus, the brown rat. **R. rat'tus**, the black rat.
R. rat'tus alexandrinus, the Egyptian, or roof, rat.

Rau's apophysis, process (row)[Johann J. Rau (Ravius), Dutch anatomist, 1658-1719] processus anterior mallei.

Rauber's layer (row'berz) [August Antinous Rauber, German anatomist, 1841-1917] see under *layer*.

Rauchfuss' sling, triangle (rowsh'foos) [Karl Andreyevich Rauchfuss, pediatrician in Leningrad, 1835-1915] see under *sling*, and see *Grocco's sign* (def. 1), under *sign*.

rausch (rowsh) [Ger. "intoxication"] light general anesthesia with ether only to the point where, if questioned sharply, the patient will not reply; called also *etherausch*.

rauschbrand (rowsh'brahnt) [Ger.] blackleg.

Rau-Sed (row'sed) trademark for a preparation of reserpine.

Rausepa (raw-ser'pah) trademark for a preparation of rauwolfia serpentina.

Rauwolid (row'wi-loid) trademark for preparations of alseroxylon.

Rauwolfia (raw-wul'fe-ah) a genus of apocyanaceous tropical trees and shrubs, including over 100 species, and providing numerous alkaloids, including reserpine, of medical interest. Many species have been used in South America, Africa, and Asia, as a source of several medicines. **R. serpenti'na**, (L.) Benth. ex Kurz, a small shrub native to India and the Orient, containing many alkaloids, of which reserpine and rescinnamine are the most important therapeutically; the root is used as the whole root or as isolated alkaloids as a hypotensive, tranquilizer, and sedative.

rauwolfia (raw-wul'fe-ah) any member of the genus *Rauwolfia*: the dried root or an extract of the dried root of *Rauwolfia*. **r. serpenti'na** [USP], the dried root of *Rauwolfia serpentina*, sometimes with fragments of rhizome and aerial stem bases attached, containing not less than 0.15 per cent of reserpine-rescinnamine group alkaloids, calculated as reserpine; used as an antihypertensive. It is also used as a sedative and tranquilizer. **r. serpenti'na, powdered** [USP], rauwolfia serpentina reduced to a very fine powder adjusted, if necessary, to contain between 0.15 and 0.20 per cent of reserpine-rescinnamine group alkaloids.

RAV Rous associated virus.

Ravius (ra've-us) see *Rau*.

ray (ra) [*L. radius* spoke] a line emanating from a center, as (a) a more or less distinct portion of radiant energy (light or heat), proceeding in a specific direction (used in the plural as a general term for any form of radiant energy, whether vibratory or particulate), or (b) one of the individual elements at the distal end of the limb of an early embryo, foretelling development of the metacarpal or metatarsal bones and the phalanges of the digits.
actinic r., a light ray which produces chemical changes. In general, light rays become more actinic as one passes from the red through the spectrum to the violet and even into the ultraviolet.
alpha r's, α -r's, high-speed helium nuclei which have been ejected from radioactive substances. Owing to their high velocity (one tenth that of light) their kinetic energy is so great that a single alpha particle produces a microscopic flash of light when it hits a spintharoscope; when it hits another atom (as of nitrogen) it may cause it to disintegrate. **anode r's**, positive r's. **antirachitic r's**, ultraviolet rays between 2700 and 3020 A.U. **astral r.**, one of the rays of an aster. Called also *polar r.* **bactericidal r's**, rays that are destructive to bacteria, i.e., those from 1850 to 2600 A.U. **Becquerel r's**, former name for rays emitted from uranium and other radioactive substances, and now known as alpha, beta, and gamma rays. **beta r's, β -r's**, electrons ejected from radioactive substances with velocities which may be as high as 0.98 of the velocity of light. **Blondlot r's**, n r's. **border r's, borderline r's, grenz r's**. **Bucky's r's, grenz r's**. **caloric r.**, radiant energy which is converted into heat when applied to the body. **canal r's**, positive rays in a vacuum tube; so called from having been first obtained by allowing the discharge from the anode to pass through a perforated (canalized) cathode. **cathode r's**, negative particles of electricity streaming out in a vacuum tube at right angles to the surface of the cathode and away from it irrespective of the position of the anode. They move in a straight line unless deflected by a magnet. By striking on solids they generate roentgen rays. See also *electron stream*. **central r.**, the straight line passing through the center of the radiation source and the center of the final beam-limiting diaphragm. **characteristic r.**, when a metallic surface is exposed to roentgen rays a secondary radiation, called its characteristic ray, is emitted which is nearly homogeneous as to wavelength and is approximately proportional to the reciprocal of the square of the atomic weight of the metal. **chemical r.**,

actinic r. **convergent r.**, a ray which is approaching a focus; it may be produced by passage through a convex lens or by reflection from a concave mirror. **cosmic r's**, a form of very penetrating radiations which apparently move through interplanetary space in every direction; called also *Millikan rays* and *ultra x-rays*. **delta r's, δ -r's**, secondary beta rays produced in a gas by the passage of alpha particles. **digital r.**, a digit of the hand or foot and the corresponding portion of the metacarpus or metatarsus, considered as a continuous structural unit. **direct r.**, primary r. **direction r.**, the path of a ray of light from the point of fixation to the retina. **divergent r's**, rays coming from a source nearer than infinity. **Dorno's r's**, the active biological ultraviolet rays, i.e., those below 2890 A.U. **dynamic r's**, rays that are active physically or therapeutically. **erythema-producing r's**, rays that cause erythema, 2050 to 3100 A.U. **Finsen r's**, see under *light*. **gamma r's, γ -r's**, electromagnetic radiation of short wavelengths emitted by the nucleus of an atom during a nuclear reaction. They consist of high energy photons, have no mass and no electric charge, and travel with the speed of light and are usually associated with beta rays. **glass r's**, the rays formed in a roentgen-ray tube by the cathode rays striking the glass wall of the tube, so called to distinguish them from the roentgen rays originating at the anticathode. **Goldstein's r's**, rays formed when roentgen rays pass through some transparent medium; called also *s r's*. **grenz r's**, very soft roentgen rays having electromagnetic vibrations of wavelength about 2 A.U., lying between the roentgen rays and ultraviolet rays. **H r's**, a stream of hydrogen nuclei. **hard r's**, roentgen rays of short wavelength and great penetrative power. **heat r's**, see *radiant heat*, under *heat*. **hertzian r's**, see under *wave*. **incident r.**, see reflection, def. 2., and refraction, def. 2. **indirect r's**, rays formed at the surface of the glass of the cathode ray tube. **infrared r's**, radiations just beyond the red end of the spectrum; their wavelengths range between 0.75 and 1000 μ m; see *infrared*. **infra-roentgen r's, grenz r's**. **intermediate r's**, wavelengths between the ultraviolet and the roentgen rays. **Lenard r's**, cathode rays after they have passed outside the discharge tube. **luminous r's**, the visible rays of the spectrum. **Lyman r's**, electromagnetic vibrations of wavelength between 600 and 12,300 A.U. **medullary r.**, any cortical extension of a bundle of tubules from a malpighian pyramid of the kidney. **Millikan r's**, cosmic r's. **minin r's**, rays generated by passing incandescent light through dark-blue glass. **monochromatic r's**, rays characterized by a definite wavelength, as secondary rays. **n r's**, an alleged form of radiation, the identity of which is not well established. Called also *Blondlot r's*. A variety of n rays (called *n' rays*) differ from n rays in diminishing the luminosity of light and of faintly luminous surfaces. **necrobiotic r's**, short ultraviolet rays which kill living cells. **Niewenglowski's r's**, luminous rays given out by substances which have been exposed to the sun. **paracathodic r's**, rays formed by the impaction of cathode rays against a body (the anticathode) in their path. **parallel r's**, rays which come from a source at an infinite distance; divergent rays may be made parallel by means of a convex lens or a concave mirror. **pigment-producing r's**, rays that cause pigmentation, with a wavelength of 2500-3000 A.U. **polar r.**, astral r. **positive r's**, streams of positively charged atoms traveling at high speed from the anode of a partially evacuated tube under the influence of an applied voltage. **primary r.**, a ray given off directly from a radioactive substance. **reflected r.**, see reflection, def. 3. **refracted r.**, see refraction, def. 2. **roentgen r's**, electromagnetic vibrations of short wavelengths (from 5 A.U. down) or corresponding quanta (wave mechanics) that are produced when electrons moving at high velocity impinge on various substances, especially the heavy metals. They are commonly generated by passing a current of high voltage (from 10,000 volts up) through a Coolidge tube (see under *tube*). They are able to penetrate most substances to some extent, some much more readily than others, and to affect a photographic plate. These qualities make it possible to use them in taking roentgenograms of various parts of the body, thus revealing the

Standard stationary anode x-ray tube; diagram in longitudinal section. (Meschan.)

presence and position of fractures or foreign bodies or of radiopaque substances that have been purposely introduced. They can also cause certain substances to fluoresce and this makes fluoroscopy possible, by which the size, shape and movements of various organs such as the heart, stomach and intestines can be observed. By reason of the high energy of their quanta, they strongly ionize tissue through which they pass by means of the photoelectrons, both primary and secondary, which they liberate. Because of this effect they are used in treating various pathological conditions. Called also *x-rays*. **s r's**, Goldstein's r's. **Sagnac r's**, secondary beta rays formed when gamma rays are reflected from a metal surface. **scattered r's**, roentgen rays which, during their passage through a substance, have been deviated in direction and modified by an increase in wavelength. **Schumann r's**, rays of wavelengths between 1850 and 1220 A.U. **secondary r.**, rays emitted by the matter on which a beam of roentgen ray impinges. **soft r's**, roentgen rays of long wavelength and little penetrative power. **titanium r.**, the radiation produced between metallic electrodes which consist of a tungsten alloy containing titanium. **transition r's**, grenz r's. **ultraviolet r's**, those invisible rays of the spectrum which are beyond the violet rays; their wavelengths range between 4 and 400 nm.; see *ultraviolet*. **ultra x-r.**, Millikan r's. **vital r's**, ultraviolet rays, between 2900 and 3200 A.U., which are the rays that act on the body therapeutically. **W r's**, intermediate r's. **x-r's**, the name given by Röntgen to roentgen rays.

Raymond's apoplexy (ra-maw'ses-tan') [Fulgence Raymond, French neurologist, 1844-1910] see under *apoplexy*.

Raymond-Cestan (ra-maw'ses-tan') [F. Raymond; Etienne Jacques Marie Raymond Cestan, French surgeon, 1867-1912] see under *syndrome*.

Raynaud's disease (gangrene), phenomenon (ra-nôz') [Maurice Raynaud, French physician, 1834-1881] see under *disease* and *phenomenon*.

Rb chemical symbol for *rubidium*.

R.B.C. red blood cell; red blood [cell] count (see *blood count*, under *count*).

RBE relative biological effectiveness; see under *effectiveness*.

R.C.M. Royal College of Midwives.

R.C.N. Royal College of Nursing.

R.C.O.G. Royal College of Obstetricians and Gynaecologists.

R.C.P. Royal College of Physicians.

R.C.S. Royal College of Surgeons.

R.C.V.S. Royal College of Veterinary Surgeons.

R.D. reaction of degeneration; see under *reaction*.

rd. abbreviation for *rutherford*.

RDE receptor-destroying enzyme.

R.E. radium emanation (see *radon*); right eye.

Re chemical symbol for *rhenium*.

re- [L.] a prefix signifying *back*, *again*, *contrary*, etc.

reablement (re-a'b'l-ment) rehabilitation.

reabsorb (re'ab-sorb') to absorb again; to undergo or to subject to reabsorption (q.v.); to resorb.

reabsorption (re'ab-sorp'shun) 1. the act or process of absorbing again, as the selective absorption by the kidneys of substances (glucose, proteins, sodium, etc.) already secreted into the renal tubules, and their return to the circulating blood. 2. resorption.

react (re-akt') 1. to respond to a stimulus. 2. to enter into chemical action.

reactance (re-ak'tans) the weakening of an alternating electric current caused by passage through a coil of wire.

reactant (re-ak'tant) an original substance entering into a chemical reaction.

reaction (re-ak'shun) [*re-* + L. *agere* to act] 1. opposite action, or counteraction; the response to stimulation. 2. the phenomena caused by the action of chemical agents; a chemical process in which one substance is transformed into another substance or substances. For specially named reactions not defined here, see under *tests*. 3. in psychology, the mental and/or emotional state that develops in any particular situation. **Abderhalden's r.**, a serum reaction based upon the obsolete hypothesis that when a foreign protein gets into the blood the body reacts by elaborating a ferment which causes disintegration of the protein. Such a ferment, called a *protective ferment* (*defensive ferment*, *protective enzyme*, *abwehrfermente*), is specific for the particular protein which caused its formation. This reaction was first applied to the diagnosis of pregnancy on the principle that in the blood of pregnant women there is present a proteolytic ferment which will cause cleavage of placental albumin and placental peptone. The same principle has been applied to the diagnosis of cancer because the blood of cancer patients contains a ferment which digests coagulated cancer protein. Similarly, in schizophrenia, the brain becomes degenerated and furnishes to the blood substances which excite the formation of a ferment capable of decomposing proteins of human brain. This is the *Abderhalden-Fauser* or the *Fauser reaction*. The same principle has also been applied to the diagnosis of syphilis, tuberculosis, and the acute infections. **Abderhal-**

den-Fauser r., see under *Abderhalden's r.* **Abelin's r.**, a reaction for ascertaining the presence of arsphenamine in the urine. **accelerated r.**, a reaction or response which occurs in a shorter time than is usual. **acetic acid r.**, Rivalta's r. **acetonitrile r.**, Hunt's r. **acid r.**, 1. a surplus of hydrogen ions in a solution or a pH below 7. 2. any test by which an acid reaction is recognized, such as the reddening of blue litmus. **Acree-Rosenheim r.**, see under *tests*. **acrosome r.**, a sequence of structural changes that occur in spermatozoa when in the vicinity of an ovum in the oviduct, and that are believed to facilitate entry of a spermatozoon into the ovum: the outer membrane of the acrosome fuses at multiple points with the overlying plasma membrane of the sperm head, creating openings through which the enzymes of the acrosome are liberated. **acute situational r.**, a transient disorder, occurring in an individual without underlying mental disorder, in response to overwhelming environmental stress. **Adamkiewicz's r.**, see under *tests*. **adjustment r.**, one elicited by a change in situation or environment, sometimes evidenced as a transient personality disorder. **agglutinoid r.**, see *prozone*. **alarm r.**, the total of all nonspecific phenomena elicited by sudden exposure to stimuli which affect large portions of the body and to which the organism is not adapted quantitatively or qualitatively. One of the most striking manifestations of this reaction is the rapid involution of the lymphoid tissues due to the action of hormones. Abbreviated AR. **alkaline r.**, 1. the presence in a solution of more hydroxyl ions than hydrogen ions, i.e., a pH greater than 7. 2. any test by which an alkaline reaction is recognized, such as the bluing of red litmus. **allergic r.**, a local or general reaction characterized by altered reactivity of the animal body to an antigenic substance. **allograft r.**, the rejection of an allogeneic graft by a normal host; called also *homograft r.* **alphanaphthol r.**, Molisch's test, defs. 2 and 3. **anamnesic r.**, see under *response*. **anaphylactic r.**, the reaction which occurs in anaphylactic shock; see *anaphylaxis*. **anaphylactoid r.**, pseudonanaphylaxis. **anatoxin r.**, an intradermic reaction in which anatoxin (toxoid) is used. **anergastic r.**, a psychosis due to a brain lesion and manifested by impairment of memory and judgment and by fits, palsy, and coma. **antalgic r.**, a bodily reaction or response having the purpose of avoiding pain. **antigen r. of Debré and Paraf**, a complement fixation reaction for the diagnosis of urinary tuberculosis, using for antigen the patient's urine, for antibody a known tuberculosis serum. **antigen-antibody r.**, the specific combination of antigen with homologous antibody resulting in the reversible formation of antigen-antibody complexes that differ in solubility according to the antigen-antibody ratio. The binding of a ligand by an antibody molecule may be considered a competitive partitioning of ligand between the active site and aqueous medium, with the complex being stabilized by the interaction of both polar and apolar forces. The relative stability of antigen-antibody complexes is dependent upon the ability of the ligand to interact with the apolar active site rather than with the polar aqueous medium. Antigen-antibody reactions may result in precipitation, agglutination, complement-dependent reactions, neutralization, or cytotoxic effects. **antiglobulin r.**, the agglutination of particles (usually erythrocytes) that have been (1) sensitized by the adsorption of soluble antigen, (2) treated with antibody to that antigen, and (3) treated with antiserum to the serum globulin of the animal species that produced the antibody. **antitryptic r.**, the reaction produced by the blood upon mixtures of trypsin and casein solutions. Such reaction is modified by various disease conditions, such as cancer and tuberculosis, and by pregnancy. **anxiety r.**, see under *neurosis*. **Arakawa's r.**, see under *reagent*. **Arias-Stella r.**, changes in the cells of the endometrial epithelium consisting chiefly of bizarre-shaped hyperchromatic enlarged nuclei associated with a loss of cellular polarity; cytoplasmic vacuolization is occasionally present. The changes are thought to be associated with the presence of chorionic tissue in an intrauterine or extrauterine site, and are seen in some cases of ectopic pregnancy. **arsphenamine r.**, Abelin's r. **Arthus r.**, the development of an inflammatory lesion, classically an ulcer, marked by edema, hemorrhage, and necrosis, that occurs within hours after interdermal injection of an antigen to which the animal already has precipitating antibody. It is generally considered an immediate hypersensitivity, or is classed as a type III reaction. Antigen-antibody complexes formed in the presence of complement adhere to the vascular epithelium and are encircled by fibrin, blood platelets, and polymorphonuclear neutrophils. Plugging of the vessels is followed by exudation into surrounding tissues of fluid laden with the neutrophils. *Arthus-type reaction* refers to numerous hypersensitivity states in which antigen-antibody complexes initiate the lesion, including serum sickness, glomerulonephritis, and farmer's lung. Called also *Arthus phenomenon*. **Ascoli's r.**, miostagmin r. **associative r.**, a reaction in which the response is withheld until the idea presented has suggested an associated idea. **axon r.**, **axonal r.**, the series of changes in the ganglion cell (central chromatolysis with displacement of the nucleus) following the severing of its axon. **Bachman r.**, see under *tests*. **bacteriolytic r.**, the reaction which brings about specific bacteriolysis. **Bareggi's r.**, the formation in a test tube of an unretracted clot, with but little serum, from the

blood of typhoid fever; if the blood is from a patient with tuberculosis, the clot retracts with the separation of much serum. **Bekhterev's r.**, in cases of tetany the minimum of electric current needed to arouse muscular contraction needs to be diminished at every interruption or change of density in order to prevent tetanic contraction. **Bence Jones r.**, the precipitation of protein by heat followed by its redissolving on boiling and being precipitated again on cooling. **Besredka's r.**, a complement deviation reaction for tuberculosis. **biphasic r.**, a reaction made up of two parts, as flexion followed by extension. Cf. *uniphasic r.* **Bittorf's r.**, in renal colic the pain produced by squeezing the testicle or pressing the ovary radiates to the kidney. **biuret r.**, see under *tests*. **Blackman r.**, the fundamental thermochemical dark reaction in which carbon dioxide fixation takes place during photosynthesis. **blanching r.**, Schultz-Charlton r. **Boltz's r.**, see under *tests*. **Bordet and Gengou r.**, complement fixation. **Braun-Husler r.**, see under *tests*. **Brieger's cachexia r.**, cachexia r. **Brodie r.**, the extremely sensitive reaction of cats to foreign proteins. Intravenous doses of egg white or blood serum that have no appreciable effect on guinea pigs or rabbits produce marked fall of blood pressure in anesthetized cats. **Brown's r.**, see under *tests*, def. 1. **Bruck's nitric acid r.** (for syphilis), the precipitate formed when nitric acid is added to syphilitic serum is less soluble in an excess of dilute nitric acid than the precipitate from normal serum. **Buscaino r.**, see under *tests*. **cachexia r.**, increase in the antitryptic power of the blood serum seen in malignant disease and other diseases characterized by cachexia. **cadaveric r.**, total loss of electrical response in the affected muscles in familial periodic paralysis. **Calmette's r.**, ophthalmic r. **Cammidge's r.**, pancreatic r. **cancer r.**, see specific reactions, including *antitryptic r.*, *cachexia r.*, *Freund's r.*, *Klein's r.*, *miostagmin r.*, *Penn seroflocculation r.*, *Stammier's r.* See also *cancer test*, under *tests*. **Cannizzaro's r.**, the reaction which aldehydes may undergo in alkali or when brought in contact with animal tissue; one molecule of the aldehyde is reduced to the corresponding alcohol and another molecule is simultaneously oxidized to the corresponding acid. Cf. *aldehyde mutase*. **capsular r.**, the reaction of the capsular substance of bacteria with a homologous antibody. **carbamino r.**, alpha-amino acids unite with CO₂ in the presence of alkalis or alkaline earths to form salts of carbamino-carboxylic acids. This reaction is used in studying the course of protein digestion. See *formol titration*, under *method*. **Casoni's r.**, see *Casoni's intradermal test*, under *tests*. **chain r.**, a nuclear (neutron) reaction which once started will proceed and multiply of its own accord by emitting particles that propagate the reaction in adjacent nuclei. **Chantemesse's r.**, the ophthalmic reaction for typhoid fever; see *ophthalmic r.* **Chediak's r.**, see under *tests*. **Chopra antimony r.**, dilute the patient's serum with ten volumes of physiological salt solution and add an equal volume of 4 per cent antimony solution. A flocculent precipitate denotes a positive reaction, which may occur in sera of patients with kala-azar or with splenomegaly due to other causes. **chromaffin r.**, see *chromaffin*. **citochol r.**, see *Sachs-Witebsky test*, under *tests*. **coagulation r.**, **coagulo r.**, a test for syphilis based on the fact that syphilitic sera inhibit the coagulation of the blood by interference with thrombin production more than do normal sera; called also *Hirschfeld-Klinger r.* **cockade r.**, see *Römer's test*, under *tests*. **colloidal gold r.**, see under *tests*. **complement fixation r.**, see under *fixation*. **compluetic r.**, Wassermann r. **conglobation r.**, see *Müller's test* (def. 3), under *tests*. **conglutination r.**, a characteristic agglutination reaction obtained by a mixture of conglutinin, cells (e.g., bacteria or red cells), fresh complement, and a cell-specific immune serum from which the agglutinins have been removed by absorption. See *conglutinin*. **conjunctival r.**, ophthalmic r. **consensual r.**, 1. crossed reflex. 2. a reaction that takes place independently of the will. See *consensual*. **conversion r.**, the conversion type of hysterical neurosis; see under *neurosis*. **coupled r.**, a series of linked reactions. **Cronin Lowe r.**, see under *tests*. **cross r.**, the interaction of an antibody with antigen that did not specifically stimulate its synthesis; it may be weaker than the reaction of an antibody with its homologous antigen; the interaction of an antigen with an antibody formed against a different antigen with which the first antigen shares identical or closely related antigenic determinants. **cutaneous r.**, 1. cutireaction. 2. a reaction produced by applying to an abrasion or by injecting into the skin a solution of a protein or a pollen to which the patient is sensitive. **cutituberculin r.**, Moro's r. **Dale r.**, an *in vitro* test for anaphylactic sensitization in the guinea pig; a small amount of the antigen added to a tissue bath in which is immersed the excised uterine horn (smooth muscle) of an anaphylactically sensitized guinea pig, causes contraction of the sensitized uterine muscle. Called also *Schultz-Dale reaction*. Schultz employed intestinal muscle; Dale used uterine muscle from virgin guinea pigs. **D'Amato's r.**, see under *tests*. **dark r.**, in photosynthesis, the series of reactions by which fixation of carbon dioxide into carbohydrate is accomplished; these reactions are driven by the products of the light reaction and do not require the presence of light. **Deehan's typhoid r.**, a cutaneous test for typhoid fe-

ver. **defense r.**, 1. a mental reaction which shuts out from consciousness ideas that are not acceptable to the ego. 2. conduct that tends to conceal some aspects of one's life from others. **r. of degeneration**, the reaction to electric stimulation of muscles whose nerves have degenerated. It consists of a loss of response to a faradic stimulus in a muscle, and to galvanic and faradic stimulus in a nerve. Galvanic irritability of the muscle is increased. Abbreviated Ea. R. (Ger. *Entartungs-Reaktion*) and R.D. **r. of degeneration, franklinic**, a form of reaction elicited by static electricity and similar to the reaction produced by the faradic current. **delayed r.**, a reaction, such as an allergic reaction, occurring hours to days after exposure to an inducer; called also *delayed response*. **delayed-blanch r.**, an unusual, paradoxical reaction to the intradermal injection of acetylcholine or methacholine, associated with atopic disease; characteristically, instead of the usual erythematous wheal and flare, a delayed blanch occurs within the flare 3 to 5 minutes after the injection and persists for 15 to 30 minutes. **depot r.**, a red reaction of the skin around the point of entrance of the needle in the subcutaneous tuberculin test. **depressive r.**, any neurotic depressive reaction in which insight is impaired to a lesser degree than in psychotic depression; see also *depression* (def. 3). **dermotuberculin r.**, Pirquet's r. **desmoid r.**, (for gastric secretion and motility): a bag of rubber tissue containing methylene blue and iodoform, and tied with a string of soft catgut, is administered to the patient: normal gastric juice will digest the string and liberate the stain, which will appear in the urine after five or six hours. **desmoplastic r.**, see *desmoplastic*. **Detre's r.** (obs.), differential cutireaction. **dialzo r.**, Ehrlich's dialzo r. **Dick r.**, see under *tests*. **digitonin r.**, the formation of a precipitate on treating a sterol, such as cholesterol or ergosterol, with digitonin; employed to define cholesterol esters which do not precipitate in total serum cholesterol determinations. **displacement r.**, a chemical reaction in which a reactant displaces a functional group from a substrate and becomes bound in the position formerly occupied by the leaving group; see also *displacement*. **dissociative r.**, the dissociative type of hysterical neurosis; see under *neurosis*. **Dochez and Avery's r.**, see *precipitin r.*, def. 1. **Dold's r.**, see under *tests*. **dopa r.**, the reaction by which dopa is changed into melanin under the influence of dopa-oxidase. **dysergastic r.**, a disorder characterized by disorientation, hallucinations, daydreams and fears, due to impaired cerebral circulation and to the resulting reduced nutrition of the brain. **E-E r.**, Foshay's r. **egg yellow r.**, a yellow foam appearing in Ehrlich's dialzo reaction before the addition of ammonia; believed to indicate acute pneumonia. **Ehrlich's dialzo r.**, a reaction of a pure pink or red color resulting from the action of diazotized sulfanilic acid and ammonia upon certain aromatic substances, e.g., urobilinogen, found in the urine in some conditions. This reaction has diagnostic value in hepatic disease, typhoid fever, and measles and prognostic value in tuberculosis. **electric r.**, a reaction, such as muscular contraction, caused by the application of electricity to the body. **epiphanin r.**, on the introduction of Weichardt's reagent into a solution of sera and antigen, the solution is rendered more alkaline (positive reaction); the reaction was used especially in the serodiagnosis of syphilis. **erythematous-edematous r.**, Foshay's r. **erythrocyte sedimentation r.**, see under *rate*. **erythrophore r.**, a red coloration appearing in certain male fishes after the injection of gonadal hormone. **r. of exhaustion**, reaction to electric stimulation seen in conditions of exhaustion. In it the reaction normally produced by a certain current can be reproduced only by an increase in the current. **Fahraeus r.**, erythrocyte sedimentation rate. **fatigue r.**, rise of temperature on muscular effort. **Fausser r.**, see under *Abderhalden's r.* **Felix-Weil r.**, Weil-Felix r. **Fernandez r.**, a reaction analogous to the tuberculin reaction, occurring three to four days after intradermal injection of lepromin; see also *lepromin test*, under *tests*. Cf. *Mitsuda r.* **Feulgen's r.**, see under *tests*. **fixation r.**, complement fixation. **flocculation r.**, see *Sachs-Georgi test*, under *tests*. **Florence's r.**, see under *tests*. **focal r.**, the reaction that occurs at or about the site of an infection or the point of an injection. It may be induced by the injection of a specific agent, such as tuberculin, mallein, or a bacterial vaccine, or by the use of nonspecific agents. **Fornet's r.**, a reaction for syphilis: the serum of the patient is treated with serum taken from a paretic; if syphilis is present, a flocculent ring will appear at the line of contact of the two serums. **Foshay's r.**, a spreading redness about a slightly elevated central edema developing at the site of the intradermal injection of an antiserum specific for the infection from which the patient is suffering; called also *erythematous-edematous r.* and *E-E reaction*. **Freund's r.**, **Freund-Kaminer r.**, the serum of noncancerous persons destroys cancer cells, while that of cancer patients has no lytic effect. **fright r.**, involuntary contraction of extraocular and facial muscles of animals during states of fright and anger. **fuchsinophil r.**, certain substances when stained with fuchsin retain the stain on being treated with picric acid alcohol. **Gangi's r.**, a test of a liquid to determine whether it is a transudate or exudate, utilizing hydrochloric acid. **Gerhardt's r.**, see under *tests*. **Ghilarducci's r.**, contraction of the muscles of a limb when the active electrode is placed on a part somewhat

removed from them. **Gmelin's r.**, see under *tests*. **Goetsch's skin r.**, a test for hyperthyroidism based on local reaction to hypodermic injection of epinephrine. **gold r.**, colloidal gold test. **graft-vs.-host r.**, the immunological reaction of a graft rich in immunologically competent cells against the genetically nonidentical tissues of the recipient. The graft is not rejected because of the recipient's immunological immaturity (as in the newborn) or its genetic make-up (as in F₁ hybrid disease), or because it has been treated with whole-body irradiation or immunosuppression. Tissues especially rich in immunologically competent cells capable of inducing a graft-vs.-host reaction include the spleen, lymph nodes, thoracic duct lymph, and to a lesser degree the bone marrow and peripheral blood. Clinical symptoms include skin rash, diarrhea, and evidence of hepatic dysfunction. Called also *graft-versus-host disease*. See also *runt disease*. **Grignard's r.**, see under *reagent*. **gross stress r.**, an acute emotional reaction incident to severe environmental stress, e.g., in military operations or civilian disasters; called also *stress r.* **group r.**, see *group agglutination*, under *agglutination*. **Gruber's r.**, **Gruber-Widal r.**, Widal's test. **Gubler's r.**, the formation of a brown color on gradually adding nitrosonitric acid to urine; seen in urobilin jaundice. **Gunning r.**, see under *tests*. **Hanganatziu-Deicher r.**, following the parenteral administration of heterogenic serum, human blood serum agglutinates certain heterogenic erythrocytes, particularly those of sheep, horses, hares, and guinea-pigs. **Hecht-Weinberg-Gradwohl modification of the Wassermann r.** (*obs.*), the natural antisheep amboceptor and the natural hemolytic complement found in the patient's fresh serum are utilized instead of the antisheep-rabbit amboceptor and guinea-pig complement of the regular test. **hemagglutination-inhibition r.**, the inhibition by antibodies of viral agglutination of red cells. **hemiopic pupillary r.**, reaction in certain cases of hemianopia in which the stimulus of light thrown upon one side of the retina causes the iris to contract, while light thrown on the other side arouses no response. Called also *Wernicke's r.* **hemoclastic r.**, laking of blood due to hemolysis; see *hemoclastic crisis*, under *crisis*. **Henle's r.**, the medullary cells of the adrenals stain dark brown on treatment with chromium salts. **Henry's melanin r.**, see under *tests*. **Herxheimer's r.**, Jarisch-Herxheimer r. **heterophil antibody r.**, a reaction produced by antibody against a heterophil antigen, as in the Paul-Bunnell test. **Hill r.**, the primary reaction of photosynthesis in which light is absorbed and used by chlorophyll. **Hirschfeld-Klinger r.**, coagulation r. **homograft r.**, allograft r. **Hunt's r.**, the acetonitrile resistance of white mice is increased by treatment of the mice with blood from a patient with hyperthyroidism; called also *acetonitrile reaction*. **hunting r.**, periods of vasoconstriction alternating with periods of vasodilatation in a finger or other part exposed to temperatures below 15° C. **hypersensitivity r.**, see *hypersensitivity*. **Ide r.**, see under *tests*. **r. of identity**, if the antigens in two solutions are identical, a continuous line of precipitation will be formed between them and a solution of homologous antibody when the three solutions are placed in separate wells forming a triangle on a gel diffusion plate (as in the Ouchterlony test). If the line of precipitation is continuous but has a spurlike projection (*r. of partial identity*), the antigens are not identical but share antigenic determinants. If two intersecting lines are formed (*r. of nonidentity*), the antigens are unrelated. **immediate r.**, a reaction, such as an allergic reaction, occurring seconds to minutes after exposure to an inducer; called also *immediate response*. **immune r.**, 1. specifically altered reactivity of the animal body following exposure to antigen, manifested as antibody production, cell-mediated immunity, or immunological tolerance; called also *immune response*. 2. the formation of a papule and areola without the development of a vesicle following smallpox vaccination; indicative of a high degree of immunity. **indophenol r.**, see under *tests*. **intracutaneous r.**, a reaction following an injection into the substance of the skin; such a reaction may have diagnostic value as in the Schick test, Dick test, tuberculin test, etc. **intracuti r.**, see *Frei test*, under *tests*. **intra-dermal r.**, intracutaneous r. **involutional psychotic r.**, involutional melancholia. **Israelson's r.**, see under *tests*. **Ito-Reenstierna r.**, see under *tests*. **Jaffé r.**, creatinine when treated with picric acid in strongly alkaline solution gives an intense red color. **Jarisch-Herxheimer r.**, transiently increased discomfort in skin lesions and temperature elevation occurring within two hours after the start of antibiotic treatment of secondary syphilis and of relapsing fever (*Borrelia recurrentis*); it occurs in many but not all who receive antibiotic therapy. **johnin r.**, a skin reaction like the tuberculin reaction, produced by filtrates of cultures of *Mycobacterium paratuberculosis* (johnin); used in the diagnosis of Johne's disease. **Jolly's r.**, failure of response to faradic stimulation in a muscle, the power of voluntary contraction as well as the response to galvanic stimulation being retained. **Jones-Mote r.**, a mild skin reaction of the delayed hypersensitivity type occurring after challenge with protein antigens. **Kafka's r.**, see under *tests*. **Kahn's albumin A r.**, see under *tests*, def. 2. **Keller-Killian r.** (*for 2-desoxy sugars*), dissolve the sugar in glacial acetic acid that contains some ferric chloride, underlay it with concentrated sulfuric acid and the

upper layer will take on a deep blue color. **K. H. r.**, a combined complement fixation and hemagglutination reaction used in the diagnosis of glanders. **Klein r.**, a modification of Freund's reaction for cancer, using for carcinolysis a cell suspension from an adenocarcinoma of the mouse. **Koch's r.**, see *tuberculin test*, under *tests*. **Koler r.**, Adamkiewicz's test. **Konsuloff's r.**, see under *tests*. **Kottmann's r.**, see under *tests*. **Landau's r.**, see under *tests*. **Lange's r.**, 1. colloidal gold test. 2. see under *tests*. **lengthening r.**, the elongation of the extensor muscles which permits flexion of a limb; called also *clasp-knife reflex*. **lentochole r.**, see *Sachs-Georgi test*, under *tests*. **lepra r.**, a recurring episode in the course of lepromatous leprosy, characterized by fever, malaise, neuralgia, aggravation and extension of existing lesions, and appearance of new ones, and often by erythema multiforme, sometimes by erythema bullosum or exudativum, but most often by erythema nodosum leprosum, with tender intradermal and subcutaneous red nodules 1 to 3 cm. in diameter scattered over the extremities and, to a lesser extent, the trunk. **lepromin r.**, see under *tests*. **leukemic r.**, **leukemoid r.**, a peripheral blood picture resembling that of leukemia or indistinguishable from it on the basis of morphologic appearance alone. **Lewis' r.**, the urticaria produced by histamine; see *histamine test*, def. 2, under *tests*. **Lieben's r.**, see under *tests*. **Liebermann-Burchardt r.**, a green color is produced when concentrated sulfuric acid in acetic anhydride is added to a mixture of chloroform solution of cholesterol. **light r.**, in photosynthesis, the photochemical process in which a series of reactions driven by light energy results in the generation of ATP and reduced coenzymes (NADH or NADPH); these substances then drive the dark reaction. **Lignières' r.**, see under *tests*. **lignin r.**, a color reaction given by wood cellulose, consisting of a yellow color with aniline salts and a red color with a solution of phloroglucinol in concentrated hydrochloric acid. **local r.**, a reaction similar to a focal reaction occurring at the point of injection. **Loeb's decidua r.**, the presence of a glass bead or other irritant causes the formation of a small deciduoma in the uterine mucosa when corpora lutea are developing normally. **Loewi's r.**, see under *tests*. **Lohmann r.**, an easily reversible reaction occurring in muscle, in which the high-energy phosphate bond of ATP is transferred to creatine, forming creatine phosphate; the reaction is catalyzed by creatine kinase. **luetin r.**, Noguchi's luetin r. **Machado r.**, **Machado-Guerreiro r.**, see under *tests*. **Malmesje r.**, see under *tests*. **manic-depressive r.**, see under *psychosis*. **Manoiloff's (Manoilov's) r.**, 1. a blood reaction once used in comparing the blood of the parents and of their alleged child for the determination of the paternity of the child. 2. an obsolete test for pregnancy: the serum of a pregnant woman decolorizes to yellow the blue mixture prepared by mixing serum with 2 per cent aqueous solution of theobromine sodium salicylate colored with Nile blue; called also *Manoiloff's test*. **Mantoux r.**, see under *tests*. **Marañón's r.**, see under *sign.* **Marchi's r.**, failure of the myelin sheath of a nerve to become discolored when treated with osmic acid. **Mátéfy's r.**, see under *tests*. **Meinicke r.**, see under *tests*. **Millon's r.**, see under *tests*. **miostagmin r.**, **miostagminic r.**, an obsolete blood serum test to confirm the diagnosis of malignant tumors, syphilis, typhoid, etc., based on the fact that when the antibodies of a disease and its corresponding antigens are brought together, there is a lowering of the surface tension of the mixture. **Mitsuda r.**, a reaction marked by the development of a papulonodular lesion at the site of intradermal injection of lepromin, occurring three to four weeks after injection; it indicates cellular immunity (rather than infection with *Mycobacterium leprae*). See also *lepromin test*, under *tests*. Cf. *Fernandez r.* **mixed cell agglutination r.**, the mixed clumping of different cell types owing to the reaction of antibody with different antigenic determinants on the cells. **mixed leukocyte r.**, **mixed lymphocyte r.**, the appearance of blast cells in a culture of leukocytes from two individuals; histocompatibility varies inversely with the number of blast cells. **Moeller's r.**, see *rhinoreaction*. **Molisch's r.**, see under *tests*. **Moloney r.**, the intradermal injection of diluted diphtheria toxoid as a control in the Schick test. **Montenegro r.**, see under *tests*. **Morelli's r.**, see under *tests*. **Moritz r.**, **Rivalta's r.** **Moro's r.**, an eruption of pale or red papules on a cutaneous area after application of an ointment of 5 ml. of old tuberculin and 5 gm. of anhydrous lanolin; other percutaneous tests, e.g., the Vollmer patch test, have replaced Moro's test. **mouse tail r.**, stiffening of the tail in rats and mice following the administration of a small dose of morphine. **Much's r.**, **Much-Holzmann r.**, inhibition of the hemolytic action of cobra venom on the red blood cells, reported to occur in schizophrenia and manic-depressive psychosis but not confirmed by subsequent research; called also *psychoreaction*. **Müller's r.**, see *Müller's test*, def. 3, under *tests*. **myasthenic r.**, progressively diminished response of a muscle to repeated electric stimuli. **myotonic r.**, failure of muscle to relax immediately upon cessation of voluntary or electrically induced contraction. **Nadi r.**, the production of a blue color when alphanaphthol and dimethyl paraphenylenediamine are injected into animals; see *indophenol test*. **Nagler's r.**, the production of turbidity in human blood serum by the addition of the toxin of *Clostridium perfringens* indicates the presence

of that organism. The development of opalescence is due to the toxin's lecithinase action. Antiserum specifically inhibits the reaction. **near-point r.**, constriction of the pupil when the gaze is fixed on a near point. **Neill-Mooser r.**, a reaction in laboratory animals produced by inoculation with rickettsiae of murine typhus. The inflammatory exudate of the scrotal swelling contains large mononuclear cells filled with rickettsiae. **Neisser's r.**, a general reaction sometimes following an initial dose of arsphenamine, characterized by transitory increase of headache in cerebral syphilis and of the lightning pains in tabes. **Neufeld's r.**, when pneumococci and other capsulated microorganisms are mixed with specific immune serum there occurs in addition to agglutination a swelling (quellung) of the capsules of the organisms, owing to the binding of antibody with the capsular polysaccharide; called also *capsular swelling* and *quellung r.* **neurotonic r.**, muscular contraction persisting after the stimulus which produced it has ceased. **neutral r.**, the presence of an equal number of H^+ and OH^- ions in a solution, i.e., a pH of 7.0. **ninhydrin r.**, see *triketohydrindene hydrate test*, under *tests*. **nitritoid r.**, see under *crisis*. **Noguchi's r.** 1. a modification of the Wassermann reaction. Noguchi modifies as follows: (a) He prepares the antigen by extracting a lipid substance from the liver and heart of dogs and cows. (b) Instead of using sheep's corpuscles in the hemolytic series, he employs human corpuscles, owing to the fact that a certain percentage of human sera tested produced hemolysis of the sheep's corpuscles. (c) In his test, therefore, he obtains the hemolytic amboceptor by immunizing rabbits with washed normal human corpuscles. (d) Another important improvement in the technique is the preservation of the specific antigen and the hemolytic amboceptor, which rapidly lose their strength in solution, in a dried form by soaking measured strips of filter paper (0.5 mm. square) with each. 2. a reaction seen in general paralysis and tabes. To 1 ml. of the cerebrospinal fluid is added 0.5 ml. of a solution of 10 per cent butyric acid in normal salt solution. This is heated, and then there is added 0.1 ml. of a 4 per cent sodium hydroxide solution. This is again heated. In about three hours the tube is examined. In tabes and general paralysis a characteristic flocculent precipitate forms, which gradually settles so that after twenty-four hours there is a bulky precipitate at the bottom of the tube, the supernatant fluid being clear. The test indicates an increased amount of globulin in the cerebrospinal fluid. **Noguchi's luetin r.** (1909), a papular response 6 to 24 hours after intradermal injection of killed *Treponema pallidum*, occurring in tertiary but not in primary or secondary syphilis; the procedure is no longer used. See *luetin r.* of nonidentity, see *r. of identity*. **Nonne-Apelt r.**, 2 ml. of cerebrospinal fluid is mixed with an equal quantity of a neutral saturated solution of ammonium sulfate and compared after three minutes with another tube containing spinal fluid only; if there is no difference or only a faint opalescence the reaction is said to be *negative*. If there is an opalescence or turbidity the reaction is said to be *positive phase 1*, which indicates an excess of globulin in the fluid and points to nervous disorder. A normal fluid treated with heat and acetic acid only becomes turbid and is called *positive phase 2*. **nuclear r.**, upon the addition of fuchsin-sulfonic acid to any solution containing aldehydes, a bluish-red color is produced. **obsessive-compulsive r.**, a neurotic reaction pattern marked by the intrusion of insistent, repetitive, and unwanted thoughts, or the compulsion to repetitively perform certain acts or carry out certain rituals. **Oestreicher's r.**, xanthidrol r. **ophthalmic r.**, local reaction of the conjunctiva following instillation into the eye of toxins of typhoid fever and tuberculosis. The reaction is much more severe in persons affected with these diseases than in the healthy or those affected with some other disease. Called also *Calmette's ophthalmoreaction*. See also *Calmette's tuberculin*, under *tuberculin*. **orbicularis r.**, Westphal-Piltz phenomenon. **oxidase r.**, the formation of dark-blue granulations in myeloid cells when treated with alphanaphthol and dimethyl paraphenylenediamine. See *indophenol test*, under *tests*. **Pagano's r.**, an obsolete tuberculin reaction following application of the tuberculin to the urinary meatus. **pain r.**, dilatation of the pupil on a feeling of pain. **pallidin r.**, a red papular response in a syphilitic patient on intradermal injection of an extract prepared from the lung of an infant with syphilitic pneumonia. The reaction is said to be negative in the uninfected. The test is of historical interest only. **pancreatic r.** (for ascertaining the presence of pancreatitis or malignant disease of the pancreas): two specimens of urine, one of which is treated with mercuric chloride, are boiled with hydrochloric acid for ten minutes, and after the excess of acid has been neutralized with lead carbonate, are examined by the phenylhydrazine test. A difference in the amount of deposit yielded by the two specimens indicates the presence of pancreatic disease. Called also *Cambridge's r.* **Pandy's r.**, see under *tests*. **paraller-gic r.**, see *parallergy*. **paraserum r.**, agglutination of strains of typhoid and dysentery bacilli with those of paratyphoid, *Escherichia coli*, mutable cholera, and other infections. **Parish's r.**, an allergic reaction which follows the making of a Schick test; the symptoms appear within a few hours and may be quite severe. **passive cutaneous anaphylaxis r.**, passive cutaneous anaphylaxis. **Pasteur's r.**, see under *effect*. **paternity r.**, Manoiloff's r., def 1. See also *paternity test*, under *tests*.

Paul-Bunnell r., see under *tests*. **PCA r.**, passive cutaneous anaphylaxis. **Penn seroflocculation r.** (for cancer): plasma separated from a small amount of the patient's blood is mixed with a lipid fraction derived from the liver of a patient who died of cancer. Resulting turbidity constitutes a negative reaction. **percutaneous r.**, Moro's r. **periodic acid-Schiff r.**, a tissue section is exposed to periodic acid, which oxidizes hydroxyl groups on adjacent carbon atoms or adjacent hydroxyl groups and amino groups to aldehydes, and then is stained with Schiff's reagent, which forms an additional product with aldehydes to produce a red or magenta reaction product; used to test for glycogen, epithelial mucins, neutral polysaccharides, and glycoproteins; called also *PAS r.* **peroxidase r.**, the appearance of deep-blue granules in leukocytes of marrow origin when stained with Goodpasture's stain, distinguishing them from cells of lymphatic origin. **Petri r.**, see under *tests*. **Petzetaki's r.**, see under *tests*. **Pfeiffer's r.**, see under *phenomenon*. **phobic r.**, a neurosis in which the principal feature is the presence of a specific irrational fear that is out of proportion to apparent stimuli; see also *phobia*. **photochemical r.**, photoreaction. **Piazza's r.**, see under *tests*. **Pinkerton-Moorer r.**, swelling and redness of guinea pig scrotum on intraperitoneal injection of *Rickettsia prowazekii*; formerly used to distinguish between murine and epidemic typhus. **Pirquet's r.**, appearance of a papule with a red areola 24-48 hours after introduction of two small drops of old tuberculin by slight scarification; a positive test indicates previous infection but does not distinguish clinical disease. Called also *dermotuberculin r.*, *Pirquet's test*, *scarification test*, and *von Pirquet's cutireaction or test*. **P-K r.**, Prausnitz-Küstner r. **Porges-Meier r.**, see under *tests*. **Porter-Silber r.**, the reaction of the dihydroxyacetone side chains of 17-hydroxycorticosteroids with phenylhydrazine in acid, which produces a yellow color in the steroids; a sensitive index of adrenocortical function. **Posner's r.**, see under *tests*. **post-partum r.**, any emotional disturbance occurring after childbirth. **Prausnitz-Küstner r.**, a skin reaction for the detection and assay of human reagin (IgE). The intradermal inoculation of a nonatopic individual with serum containing reaginic antibody results in fixation of the reaginic antibody to the epidermal mast cells and diffusion of the other immunoglobulins away from the site of injection. Injection of specific antigen into the site of reagin attachment 48 hours later results in the immediate appearance of a wheal-and-flare response that can be graded in intensity. The danger of transferring serum hepatitis has precluded the use of this test clinically. The test was also used to determine a donor's sensitivity to various antigens. **precipitin r.**, 1. (for pneumococcus infection of types I, II, III): equal volumes of clear urine are mixed with antipneumococcus sera of types I, II, and III, and incubated for an hour. A cloudy to heavy flocculent precipitate indicates a positive reaction. Called also *Dochez and Avery's r.* 2. the specific precipitation of a soluble divalent ligand (i.e., antigen) in liquid or in gel by its specific antibody in the presence of electrolytes. **prozone r.**, see *prozone*. **psychogalvanic r.**, variations in the electric current passed through the body when the subject undergoes emotional disturbance of any kind. **psychophysiologic asthenic r.**, psychologic nervous system r., neurasthenic neurosis. **psychotic depressive r.**, severe nonrecurrent depression of psychotic intensity, sometimes characterized by loss of contact with reality and, frequently, by psychomotor retardation, feelings of guilt, impaired thinking ability, and suicidal attempts. **puncture r.**, swelling and redness at the point where tuberculin is injected subcutaneously; diagnostic of tuberculosis. **quanti-Pirquet r.**, the Pirquet reaction applied with a view to the amount or activity of the tuberculous infection; dilutions of 1 in 10 and 1 in 100 of old tuberculin rather than undiluted tuberculin are applied to the scarified cuticle. Abbreviated Q.P. **quellung r.** [Ger. "swelling"], Neufeld's r. **recurrent r.**, revivescence, def. 2. **reflex-like r.**, a reaction to physical agents, consisting of urticaria with systemic symptoms such as asthma, dermatoses, etc. **reverse passive Arthus r.**, the reaction produced when precipitating antibody is inoculated into a skin site in an experimental animal followed in 30 minutes to 2 hours by the intravenous inoculation of the homologous antigen. Thus the usual anatomical locations of precipitating antibody and antigen in an Arthus reaction are reversed. **reversible r.**, a chemical reaction which occurs in either direction, depending on conditions; a reaction in which the products react to re-form the reactants. **Rivalta's r.**, a reaction for distinguishing fluids of transudation and exudation, utilizing acetic acid. **Roger's r.**, the existence of albumin in the sputum, indicating tuberculosis. **Römer's r.**, see under *tests*. **Rosenbach's r.**, the formation of a deep-red color when concentrated nitric acid containing a small amount of nitrous acid is gradually added to boiling urine, indicative of an increase in the putrefactive processes of the intestine. **Rubino's r.** (for leprosy), the inactivated blood serum of leprosy individuals when added to a suspension of washed and formalinized sheep erythrocytes causes the latter to agglutinate and to sediment rapidly. The test is correct in about 70 per cent of the cases. **Rumpf's traumatic r.**, see *Rumpf's sign* (def. 1), under *sign*. **Russo r.**, a reaction of the urine of typhoid patients on adding 4 drops of a solution of

methylene blue to 15 ml. of urine. In the first stage of typhoid the urine becomes light green; at the height of the disease, an emerald color; and during the decline a bluish color. **Sachs-Georgi r.**, see under *tests*. **Sachs-Witebsky r.**, see under *tests*. **Sahl's r.**, desmold r. **Schardinger's r.**, a reaction of oxidation or reduction made possible by a simultaneous and compensating reaction of reduction or oxidation. Cf. *Cannizzaro's reaction*. This reaction is used to distinguish between fresh milk and milk which has been heated. The milk is treated with aldehyde and methylene blue or indigo blue; if the milk is fresh the dye is reduced to a colorless compound. **Schick r.**, see under *tests*. **Schönbein's r.**, iodine is set free when potassium iodide and iron sulfate are added to a solution of hydrogen peroxide. **Schultz-Charlton r.**, when scarlet fever antitoxin or scarlet fever convalescent serum is injected into an area of the skin showing a bright red rash, a blanching of the skin at the site of the injection occurs. Serum from scarlet fever patients does not produce this reaction. **Schultz-Dale r.**, see *Dale r.* **second-set r.**, see under *phenomenon*. **sedimentation r.**, erythrocyte sedimentation rate. **Seifert's r.**, epiphanin r. **Selivanoff r.**, **Seliwanow's r.**, see under *tests*. **seroanaphylactic r.**, an anaphylactic reaction produced by the use of blood serum. **seroenzyme r.**, Abderhalden's r. **serum r.**, seroreaction. **shortening r.**, the shortening that succeeds the lengthening reaction when a limb is brought back into the extended position. **Shwartzman r.**, see under *phenomenon*. **sigma r.**, a flocculation reaction for the diagnosis of syphilis, being a modification of the Sachs-Georgi reaction in which a series of tests are made to determine which one of the tests produces flocculation. **skin r.**, cutaneous r. See also *cutireaction*. **small-drop r.**, miostagmin r. **Smith's r.**, anaphylaxis produced by the injection of a relatively large second dose of foreign blood serum (e.g., horse antitoxin) into a guinea pig sensitized by an earlier injection of a small dose of the same serum; see also *Theobald Smith phenomenon*, under *phenomenon*. **Stammeler's r.**, cancer serum when added to a tumor extract clears up the opalescence normal to the extract: normal sera fail to act in this manner. **startle r.**, the various psychophysiological phenomena, including involuntary motor and autonomic reactions, evidenced by an individual in reaction to a sudden, unexpected stimulus, as a loud noise. **stemming r.**, resistance in the leg of a standing animal to forward displacement. **Straus' r.**, when material containing virulent glanders bacilli is inoculated into the peritoneal cavity of male guinea-pigs, scrotal lesions develop. **stress r.**, 1. gross stress r. 2. alarm r. **syphilis r.**, see specific reactions, including *Bruck's nitric acid r.*, *coagulation r.*, *D'Amato's r.*, *epiphanin r.*, *false positive r.*, *Fornet's r.*, *Hecht-Weinberg-Gradwohl modification of Wassermann r.*, *Jarisch-Herxheimer r.*, *miostagmin r.*, *Noguchi's r.*, *Noguchi's luetin r.*, *pallidin r.*, *Targowla r.*, *Wassermann r.*, *Wasserman r.*, *provocative*. See also *syphilis test*, under *tests*. **Szent-Györgyi r.**, a deep violet color develops when a 1 per cent solution of ascorbic acid is mixed with a solution of ferrous sulfate; this color disappears on reduction with sodium hyposulfite. **Tanret's r.**, see under *tests*. **Targowla r.**, a reaction for the presence of syphilis based on the fact that a mixture of normal cerebrospinal fluid with elixir paregoric produces a colloidal suspension, whereas if the spinal fluid is syphilitic a precipitate is formed. **tendon r.**, see under *reflex*. **thyroid function r.**, see specific reactions, including *Goetsch's skin r.* and *Hunt's r.* See also *thyroid function test*, under *tests*. **toxin-antitoxin r.**, see *immunoreaction*. **Trambusti's r.**, tuberculin is injected into the skin by a needle inserted parallel to the cutaneous surface; any reddening within the site of the injection is positive. Called also *endodermoreaction*. **trigger r.**, see under *action*. **tryptophan r.**, see under *tests*. **tuberculin r.**, see under *tests*. **tuberculosis r.**, see specific reactions including *antigen r.* of *Debré* and *Paraf*, *antitryptic r.*, *Besredka's r.*, *depot r.*, *Ehrlich's diazo r.*, *Lignières' r.*, *Malmjeide r.*, *Moro's r.*, *Pagano's r.*, *Pirquet's r.*, *puncture r.*, *quanti-Pirquet r.*, *Trambusti's r.* See also *tuberculosis test*, under *tests*. **Turnbull's blue r.**, blue-black coloration produced when tissue containing chemically active iron is treated with potassium ferrocyanide and hydrochloric acid. **typhoid fever r.**, see specific reaction, including *Bareggi's r.*, *Chantemesse's r.*, *D'Amato's r.*, *Deehan's typhoid r.*, *Ehrlich's diazo r.*, *miostagmin r.*, *Russo's r.* See also *typhoid fever test*, under *tests*. **uniphasic r.**, a reaction consisting of flexion only. Cf. *biphasic r.* **vaccination r.**, the local and systemic reaction to vaccination. **vestibular pupillary r.**, dilatation of the pupils arising from stimulation of the external auditory canal. **Voges-Proskauer r.**, see under *tests*. **von Pirquet's r.**, *Pirquet's r.* **Wassermann r.**, a test for syphilis based on the fixation of complement. **Wassermann r.**, **provocative**, a Wassermann reaction preceded by administration of arsphenamine. This procedure may result in a positive reaction in a patient who had previously given negative results. **Weichbrodt's r.**, three parts of a 1 per cent solution of sublimate solution are added to seven parts of cerebrospinal fluid; cloudiness of the mixture indicates pathologic changes in the fluid, especially syphilis. **Weil-Felix r.**, the diagnostic agglutination of *Proteus X* bacteria by the blood sera of typhus fever cases due, apparently, to the presence of a common antigen. **Weinberg's r.**, see under

tests. **Wernicke's r.**, hemiopic pupillary r. **wheel-flare r.**, a cutaneous sensitivity reaction to skin injury or administration of antigen, due to production of histamine and characterized by edematous elevation and erythematous flare; see also *triple response*, under *response*. **white-graft r.**, an immune reaction to a tissue graft, e.g., a skin graft, as a result of which the grafted tissue does not become vascularized and is rapidly rejected. **Widal's r.**, see under *tests*. **Wolff-Calmette r.**, ophthalmic r. **Wolff-Eisner r.**, ophthalmic r. **xanthoproteic r.**, see *Mulder's test*, under *tests*. **xanthidrol r.**, when tissue from a uremic patient is fixed in a solution of xanthidrol in glacial acetic acid, a large deposit of xanthidrol occurs in the tissue. **zed r.**, a reaction which appears in infants in cases of starvation after the starvation is relieved; it consists of a slight gain in weight, elevation of temperature, and the appearance of watery stools containing a large number of cells.

reaction-formation (re-ak'shun for-ma'shun) a psychic mechanism by which a person unconsciously assumes an attitude which is the reverse of, and a substitute for, a repressed antisocial impulse.

reactivate (re-ak'tivāt) to make active again; especially the restoring of the activity to immune serum that has had its activity destroyed.

reactivation (re-ak'ti-va'shun) the restoration of activity to something that has been inactivated. **r. of serum**, restoration of immunological activity to serum by adding fresh complement.

reactivity (re'ak-tiv'i-te) the process or property of reacting.

reactor (re-ak'tor) a person or thing that reacts. **nuclear r.**, a device in which the chain reaction of neutron-induced nuclear fission is sustained in a self-supporting reaction at a controlled rate.

Reactrol (re-ak'trol) trademark for a preparation of clemizole hydrochloride.

Read's formula (rēdz) [Jay Marion Read, American physician, born 1889] see under *formula*.

reading (rēd'ing) understanding of written or printed symbols representing words. **lip r.**, **speech r.**, the understanding of speech through observation of the movement of the lips of the speaker.

reagent (re-a'jent) [re- + L. *agere* to act] 1. a substance employed to produce a chemical reaction so as to detect, measure, produce, etc., other substances. 2. the subject of a psychological experiment, especially one who reacts to a stimulus. **acid molybdate r.**, Folin's acid molybdate r. **Acree-Rosenheim r.**, solution of formaldehyde, 1 part; water, 5000 parts. **Almén's r.**, to 5 grains of tannic acid in 240 ml. of 50 per cent alcohol add 10 ml. of 25 per cent acetic acid. **amino-acid r.**, a 0.5 per cent solution of the sodium salt of beta-naphthaquinone sulfonate acid freshly prepared. **Anstie's r.**, potassium dichromate 3.33 gm., concentrated sulfuric acid 250 ml., water to make 500 ml. **Arakawa's r.**, a complicated mixture containing guaiac resin and benzidine for use in testing for peroxidase in milk. If the peroxidase content of breast milk is adequate, the presence of maternal beriberi is excluded. **arsenic-sulfuric acid r.**, Rosenthaler's r. **Barfoed's r.**, see under *tests*. **Benedict-Hopkins-Cole r.**, 250 ml. of a saturated solution of oxalic acid is added slowly to 10 gm. of powdered magnesium kept cool. Filter, acidify with acetic acid, and make up to 1 liter. **benzidine r.**, saturate 2 ml. of glacial acetic acid with benzidine and add 1 ml. of 3 per cent hydrogen peroxide. **Bertrand's r.**, A. copper solution: Copper sulfate, 40 gm., to 1 liter of water. B. alkaline solution: Rochelle salt, 200 gm., sodium hydroxide, 150 gm., to 1 liter of water. C. iron solution: ferric sulfate, 50 gm., sulfuric acid, 200 gm., to 1 liter of water. D. permanganate solution: potassium permanganate, 5 gm., to 1 liter of water. By heating the alkaline copper solution (made from solutions A and B) with dextrose, cuprous oxide is formed. This is treated with the ferric sulfate solution, and the ferrous sulfate so formed is titrated with the solution of potassium permanganate. **Bial's r.**, orcinol 1.5 gm., fuming hydrochloric acid 500 gm., ferric chloride (10 per cent) 20–30 drops. **biuret r.**, see *Gies' biuret test*, under *tests*. **Black's r.**, 5 gm. of ferric chloride and 0.4 gm. of ferrous chloride dissolved in 100 ml. of water. **Blum's r.**, see under *tests*. **Bogg's r.**, dissolve 25 gm. of phosphotungstic acid in 125 ml. of water. Dilute 25 ml. of concentrated HCl to 100 ml. Mix the two solutions. **Bohme's r.**, two reagents for use in testing for indol. **Bonchardat's r.**, a general alkaloidal reagent, consisting of 1 per cent of iodine dissolved in a 1 per cent solution of potassium iodide. **Brucke's r.**, 50 gm. of KI, 120 gm. of HgI₂, water up to 1000 ml.: a modification of Meyer's reagent. **Cramer's 2.5 r.**, 0.4 gm. of mercuric oxide and 6 gm. of potassium iodide dissolved in 100 ml. of water with the reagent so adjusted that 10 ml. will be neutralized to the phenolphthalein end point by 2.5 ml. of N/10 acid. **Cross and Bevan's r.**, two parts of concentrated hydrochloric acid and 1 part of zinc chloride by weight; used for dissolving cellulose. **Deniges' r.**, the reagent used in Deniges' test (def. 2). **diazo r.**, a reagent consisting of two solutions which are mixed just prior to the test in the proportion of 25 ml. of solution A to 0.75 ml. of B. Solution A: sulfanilic acid, 1 gm.; distilled water, 1000 ml.

Solution B: sodium nitrite, 0.5 gm.; distilled water, 100 ml. **dinitrosalicylic acid r.**, Sumner's r. **Edlefsen's r.**, an alkaline permanganate solution for testing for sugar in the urine. **Ehrlich's aldehyde r.**, 4 gm. of paradimethylaminobenzaldehyde in a mixture of 80 ml. of concentrated hydrochloric acid and 380 ml. of ethyl alcohol. **Ehrlich's diazo r.**, Solution A: dissolve 5 gm. of sodium nitrite in 1 liter of distilled water. Solution B: dissolve 5 gm. of sulfanilic acid and 50 ml. of HCl in 1 liter of distilled water. For use mix 1 part of A with 50 to 100 parts of B. **Erdmann's r.**, a reagent for testing for alkaloids, consisting of nitric and sulfuric acids. **Esbach's r.**, a mixture of a 1 per cent aqueous solution of picric acid and a 2 per cent solution of citric acid; used in quantitative estimation of albumin in urine. **Exton's r.**, dissolve 200 gm. of $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$ in 800 ml. of water. Cool and add 50 gm. of sulfosalicylic acid and 25 ml. of a 0.4 per cent solution of bromophenol blue. Make up to 1 liter. **Folin's r.**, boil 100 gm. of sodium tungstate and 80 ml. of 85 per cent orthophosphoric acid in 750 ml. of water for two hours. Cool and dilute 1 liter. **Folin's acid molybdate r.**, dissolve 150 gm. of sodium molybdate in 300 ml. of water. Filter and add 2 to 3 drops of bromine and shake. Later add 225 ml. of 85 per cent phosphoric acid and 150 ml. of 25 per cent sulfuric acid. Aerate off the bromine, add 75 ml. of 90 per cent acetic acid, and dilute to 1 liter. **Folin's alkaline copper tartrate r.**, dissolve 12 gm. of sodium tartrate (or 15 gm. of Rochelle salt), 7 gm. of anhydrous sodium carbonate, and 20 gm. of sodium bicarbonate in 600 ml. of water. Dissolve 5 gm. of copper sulfate in 200 ml. of water. Mix the solutions and dilute to 1 liter. **Folin's sugar r.**, solution A: dissolve 5 gm. copper sulfate in 100 ml. of hot water, cool, and add 60 to 70 ml. of glycerin. Solution B: dissolve 125 gm. of anhydrous potassium carbonate in 400 ml. of water. Mix 1 part of solution A and 2 parts of solution B just before using. **Folin-McEllroy r.**, dissolve 100 gm. of sodium pyrophosphate, 30 gm. of disodium phosphate, and 50 gm. of dry sodium carbonate in 1 liter of water. Dissolve 13 gm. of copper sulfate in 200 ml. of water and pour into the first solution. **formalin-sulfuric acid r.**, see *Marquis' test*, under *tests*. **Fröhde's r.**, see under *tests*. **Frohn's r.**, see under *tests*. **general r.**, a reagent that indicates the general class of bodies to which a substance belongs. **Gies' biuret r.**, see under *tests*. **Grignard's r.**, any of several compounds of magnesium with an organic radical and a halogen; these reagents undergo reactions with many substances producing important products. **Hager's r.**, a reagent for detecting sugar in the urine, consisting of iron ferrocyanide and potassium hydroxide. **Hahn oxine r.**, a 5 per cent solution of hydroxyquinoline in alcohol. **Haines' r.**, copper sulfate, 2 parts; potassium hydroxide, 7.5 parts; glycerin, 15 parts; distilled water, 150 parts. **Ilosvay's r.**, a reagent used as a test for nitrites. It is prepared by treating a mixture of 0.5 gm. of sulfanilic acid and 150 ml. of dilute acetic acid with 0.1 gm. of naphthylamine, and then with 20 ml. of boiling water. The sediment produced by this reaction is dissolved in 150 ml. of dilute acetic acid. The suspected substance is heated with this reagent to 80° C., when a red color is formed if nitrites are present. **Izar's r.**, equal parts of linoleic acid and ricinoleic acid. **Lloyd's r.**, a specially fine preparation of fuller's earth obtained by elutriation; used to absorb alkaloids from solutions. **Mandelin's r. (for alkaloids)**, 1 part of ammonium vanadate in 200 parts of cold concentrated sulfuric acid. **Marme's r.**, a solution of cadmium iodide and potassium iodide for the precipitation of alkaloids. **Marquis' r.**, see under *tests*. **Mayer's r.**, see under *tests*. **Mecke's r.**, 1 part of selenious acid in 200 parts of concentrated sulfuric acid. **Meyer's r.**, phenolphthalein, 0.032 part; decinormal sodium hydroxide, 21 parts; enough water to make 100 parts; used in testing for blood, which even in minute quantities gives the solution a purple color. **Millon's r.**, see under *tests*. **Mörner's r.**, a solution of 1 volume of formalin, 45 volumes of distilled water, 55 volumes of concentrated sulfuric acid; used as a test for tyrosine. See under *tests*. **Nadi r.**, a mixture of alphanaphthol and dimethyl paraphenylenediamine, which combine to form indophenol blue from cytochrome C under the influence of cytochrome oxidase. See *indophenol test*, under *tests*. **Nakayama r.**, ferric chloride, 0.4 gm., concentrated hydrochloric acid, 1 ml., 95 per cent alcohol, 99 ml. **Nessler's r.**, an aqueous solution of 5 per cent of potassium iodide, 2.5 per cent of mercuric chloride, and 16 per cent of potassium hydroxide; used as a test for ammonia. **Ninhydrin r.**, trademark for a preparation of triketohydrindene hydrate (q.v.). **Noguchi's r.**, butyric acid 10 parts, 0.9 per cent sodium chloride 90 parts. **Nylander's r.**, see under *tests*. **Obermayer's r.**, a solution of 2 gm. of ferric chloride in 1 liter of hydrochloric acid. **Penzoldt's r.**, see under *tests*. **Porges-Meier r.**, see under *tests*. **Rosenthaler's r. (for alkaloids)**, 1 part of potassium arsenate in 100 parts of concentrated sulfuric acid. **Sahli's r.**, mix equal parts of a 48 per cent solution of potassium iodide and an 8 per cent solution of potassium iodate. **Schaer's r. (for alkaloids)**, one volume of 30 per cent pure hydrogen peroxide in 10 volumes of concentrated sulfuric acid. Use while fresh. **Scheibler's r.**, a reagent made by boiling sodium tungstate with half as much phosphoric acid and water, precipitating with barium chloride, dissolving in hot dilute hydrochloric acid, treating with sulfuric acid, and evaporating. **Schiff's r.**, a reagent for testing for the presence

of aldehydes, prepared by dissolving 0.25 gm. of fuchsin in 1 liter of water and decolorizing by passing sulfur dioxide into it. In the presence of aldehyde the blue color is restored. **Schweitzer's r.**, a solution of cupric hydroxide, $\text{Cu}(\text{OH})_2$, in ammonia water; used as a solvent for cellulose. Called also *cuprammonia*. **Scott-Wilson r.**, (1) mercuric cyanide, 5 gm., (2) sodium hydroxide, 90 gm., (3) silver nitrate, 1.45 gm. Dissolve each separately in water and cool. Add (2) to (1), then add (3) with constant stirring. **selenious-sulfuric acid r.**, Mecke's r. **Soldaini's r.**, see under *tests*. **Sörensen's r.**, an acetate buffer solution for combining with Pardy's test for albumin: 188 gm. of sodium acetate and 56.5 gm. of glacial acetic acid brought up to 1 liter with distilled water. **Spiegler's r.**, see under *tests*. **splenic r.**, any drug or stimulus which causes the spleen to contract. **Stokes' r. (for oxyhemoglobin)**, a solution containing 2 per cent of ferrous sulfate and 3 per cent of tartaric or citric acid; for use, add ammonium hydroxide to a small portion until the precipitate redissolves, thus forming ammonium ferrotartrate. **Sumner's r.**, to 10 gm. crystallized phenol add 22 ml. of 10 per cent NaOH and dilute to 100 ml. To 6.9 gm. of sodium bisulfite add 69 ml. of the alkaline phenol solution. To this add a solution containing 300 ml. of 4.5 per cent NaOH, 255 gm. $\text{NaKC}_4\text{H}_4\text{O}_6 \cdot 4\text{H}_2\text{O}$, and 880 ml. of 1 per cent dinitrosalicylic acid; used for the estimation of sugar in normal and diabetic urine. **Takata's r.**, the reagent (a mixture of mercuric chloride solution and basic fuchsin solution) used in Takata-Ara test. **Tanret's r. (for albumin in urine, etc.)**: mercuric chloride, 1.35 gm.; potassium iodide, 3.32 gm.; acetic acid, 20 ml.; distilled water, to make 80 ml.; it gives a white precipitate with albumin. **Triboulet's r.**, bichloride of mercury, 3.5 gm., acetic acid, 1 ml., water, 100 ml. **Tsuchiya r.**, an acid alcoholic solution of phosphotungstic acid for detecting small amounts of protein in the urine. **Uffelman's r.**, see under *tests*. **vanadic-sulfuric acid r.**, Mandelin's r. **Weichardt's r.**, a system composed of sulfuric acid, and barium hydroxide, together with catalytic agents; it was added to the solution of serum and antigen in the epiphanin reaction. **Wolff's r.**, phosphotungstic acid, 0.3 gm.; concentrated hydrochloric acid, 1 ml.; absolute alcohol, 20 ml.; distilled water, 200 ml.

reagin (re'ah-jin) 1. antibody of a specialized immunoglobulin class (IgE) which attaches to tissue cells of the same species from which it is derived, and which interacts with its antigen to induce the release of histamine and other vasoactive amines. A form of cytotropic antibody, it is present in the serum of naturally hypersensitive individuals and can confer specific immediate hypersensitivity in nonreactive individuals. Called also *Prausnitz-Küstner (P-K) antibody* and *reaginic antibody*. 2. a complement-fixing antibody interacting with cardiolipin in the Wassermann reaction. **atopic r.**, the reagin of humans.

reaginic (re'ah-jin-ik) pertaining to reagin.

realgar (re'al-gar') [Arabic *rahi al-ghar* powder of the mine] arsenic disulfide, As_2S_2 ; a pigment.

reamer (re'mer) an instrument used in dentistry for enlarging root canals.

reamputation (re'am-pu-ta'shun) the repeated performance of an amputation.

reattachment (re'ah-tach'ment) 1. the recementing of a dental crown or other prosthesis. 2. the reattachment to the alveolus of a tooth that has been loosened or replanted.

Réaumur's scale, thermometer (ra'o-merz') [René Antoine Ferschault Réaumur, French natural philosopher, 1683-1757] see under *scale* and *thermometer*.

rebase (re-bās') to replace the base material of a denture without changing the occlusal relations of the teeth.

rebound (re'bownd) a reversed response on the withdrawal of a stimulus; see also under *phenomenon* and *tenderness*. **REM r.**, the phenomenon in which a subject deprived of REM (rapid eye movement) sleep for a prolonged period will, on being permitted to sleep undisturbed, compensate by having about 60 per cent more REM sleep than he normally would.

recalcification (re-kal'si-fi-ka'shun) the restoration of calcium salts to the bodily tissues.

recall 1. (rē-kol') to remember or recollect. 2. (rē-kol', re'kol') the process of bringing a memory into consciousness.

recapitulation (re'kah-pit'u-la'shun) see under *theory*.

receiver (re-sēv'er) 1. a vessel for collecting a gas or a distillate. 2. the portion of an apparatus by which electric energy is converted into signals which may be seen or heard.

receptaculum (re'sep-tak'u-lum), pl. *receptacula* [L.] a receptacle or container; that which serves for receiving or containing something. **r. chyli**, cisterna chyli. **r. gan'glii petrosi**, fossula petrosa. **r. Pecquet'i**, cisterna chyli.

receptolysin (re'sep-tol'i-sin) a substance that splits up or hydrolyzes receptors or receptor materials.

receptor (re-sep'tor) 1. a specific molecule on the surface or within the cytoplasm of a cell that recognizes and binds with other specific molecules, as the chemical group on the surface of an immunocompetent cell that binds with antigen, or the cell molecules that bind with hormone or neurotransmitter molecules and react with other molecules that respond in a specific way.

2. a term first used by Ehrlich to describe a hypothetical group in a cell, which has the power of combining with and thus anchoring a haptophore group of a toxin or other substance. Receptors may remain attached to cells or may be cast off into the blood serum. In either case, they retain their combining power and so function as antibodies. See *Ehrlich's side-chain theory*, under *theory*. 3. a sensory nerve terminal which responds to stimuli of various kinds; see *exteroceptive*, *interoceptive*, and *proprioceptive*. **adrenergic r's**, postulated sites on effector organs innervated by postganglionic adrenergic fibers of the sympathetic nervous system, classified as α -adrenergic and β -adrenergic receptors according to their reaction to norepinephrine and epinephrine, respectively, and to certain blocking and stimulating agents. Called also *adrenoceptor* and *adrenoreceptor*. **α -adrenergic r's**, adrenergic receptors that respond to norepinephrine and to such blocking agents as phenoxybenzamine and phentolamine. **β -adrenergic r's**, adrenergic receptors that respond to epinephrine and to such blocking agents as propranolol; they are of two types: β_1 (lipolysis and cardiostimulation) and β_2 (bronchodilation and vasodilation). **cholinergic r's**, receptor sites on effector organs innervated by cholinergic nerve fibers and which respond to the acetylcholine secreted by these fibers. **complement r.**, a cell-surface receptor structure capable of binding activated complement components. For example, component C3b is bound to neutrophils, B-lymphocytes, and macrophages. **contact r.**, a sense organ which responds to stimuli from objects in contact with the body. **contiguous r.**, a receptor which must be in direct contact with the stimulant, such as touch and taste receptors. **distance r.**, a sense organ which responds to stimuli from objects remote from the body, as a receptor for the stimuli of hearing, vision, or smell. **dominant r.**, an unknown physiologic configuration located at the site of action of a drug which by combining with the drug enables it to exert its physiologic action. **r. of the first order**, in Ehrlich's side-chain theory, a receptor which possesses a haptophore group only, and therefore serves only as a connecting link between the toxin and the tissues; this order of receptors includes only the antitoxins. **gustatory r.**, a receptor for the sense of taste; a taste bud. **H₁, H₂ r's**, see *histamine*. **pressure r.**, a receptor for stimuli of pressure or touch; a touch corpuscle. **r. of the second order**, in Ehrlich's side-chain theory, a receptor which possesses both a haptophore group for anchoring or holding the foreign toxin, and a zymophore group for its digestion; this group includes the agglutinins, the precipitins, and the opsonins. **secondary r's**, unknown substances, other than the dominant receptor, located at points other than the site of action which combine with a drug and so lessen its combination with the dominant receptor and its physiologic activity. **sessile r.**, in Ehrlich's side-chain theory, a receptor which cannot be given off to form an antibody. **r. of the third order**, in Ehrlich's side-chain theory, a receptor which possesses two combining groups only, a haptophore group for combining with the foreign toxin, and a complementophile group which combines with the complement that carries the zymotoxic element; this group includes the lysins. **visual r.**, the layer of rods and cones of the retina. **volume r's**, postulated receptors which respond to increased plasma extracellular fluid volume and stimulate corrective measures.

recess (re'ses) a small empty space, hollow, or cavity; called also *recessus*. **accessory r. of elbow**, recessus sacciformis articulationis cubiti. **acetabular r.**, fossa acetabuli. **Arlt's r.**, a small sinus occasionally present in the lower part of the lacrimal sac. **chiasmatic r.**, recessus opticus. **cochlear r. of vestibule**, recessus cochlearis vestibuli. **conarial r.**, recessus pinealis. **costodiaphragmatic r. of pleura**, recessus costodiaphragmaticus pleurae. **costomediastinal r. of pleura**, recessus costomediastinalis pleurae. **duodenal r.**, inferior, recessus duodenalis inferior. **duodenal r., superior**, recessus duodenalis superior. **eliphtical r. of vestibule**, recessus ellipticus vestibuli. **epitympanic r.**, recessus epitympanicus. **r. of fourth ventricle**, lateral, recessus lateralis ventriculi quarti. **hepatorenal r.**, recessus hepatorenalis. **Hyrtil's r.**, recessus epitympanicus. **ileocecral r., inferior**, recessus ileocecalis inferior. **ileocecral r., superior**, recessus ileocecalis superior. **infundibular r.**, recessus infundibuli. **infundibuliform r.**, recessus pharyngeus. **r. of infundibulum**, recessus infundibuli. **intersigmoidal r.**, recessus intersigmoideus. **laryngopharyngeal r.**, recessus piriformis. **r. of lesser omental cavity**, recessus lienalis. **r. of nasopharynx**, lateral, recessus pharyngeus. **omental r., inferior**, recessus inferior omentalis. **omental r., superior**, recessus superior omentalis. **optic r.**, recessus opticus. **paracolic r's**, sulci paracolici. **paraduodenal r.**, recessus paraduodenalis. **r. of pelvic mesocolon**, recessus intersigmoideus. **pharyngeal r.**, recessus pharyngeus. **pharyngeal r., middle**, bursa pharyngea. **phrenicohepatic r's**, see *recessus subhepatici*, *recessus subphrenici*, and *recessus hepatorenalis*. **pineal r.**, recessus pinealis. **piriform r.**, recessus piriformis. **pleural r's**, recessus pleurales. **Reichert's r.**, recessus cochlearis vestibuli. **retroannular r.**, a deep groove formed by the cell membrane immediately behind the annulus of spermatozoa of some species. **retrocecal r.**, recessus retrocecalis.

retroduodenal r., recessus retroduodenalis. **r. of Rosenmüller**, recessus pharyngeus. **sacciform r. of articulation of elbow**, recessus sacciformis articulationis cubiti. **sacciform r. of distal radioulnar articulation**, recessus sacciformis articulationis radioulnaris distalis. **sphenoethmoidal r.**, recessus sphenoethmoidalis. **sphenoethmoidal r., bony**, recessus sphenoethmoidalis osseus. **spherical r. of vestibule**, r. sphericus vestibuli. **splenic r.**, recessus lienalis. **subhepatic r's**, recessus subhepatici. **subphrenic r's**, recessus subphrenici. **subpopliteal r.**, recessus subpopliteus. **suprapineal r.**, recessus suprapinealis. **supratonsillar r.**, fossa supratonsillaris. **Tarini's r.**, recessus anterior fossae interpeduncularis [Tarini]. **triangular r.**, recessus triangularis. **r's of Tröltzsch**, see *recessus membranae tympani anterior* and *recessus membranae tympani posterior*. **r. of tympanic membrane, anterior**, recessus membranae tympani anterior. **r. of tympanic membrane, posterior**, recessus membranae tympani posterior. **r. of tympanic membrane, superior**, recessus membranae tympani superior. **utricular r.**, utriculus, def. 2. **r. of vestibule**, recessus sphericus vestibuli.

recession (re-sesh'un) [L. *recedere* to draw back or away] the act of drawing away or back. In dentistry, the retraction of the gingival margin and underlying tissue away from the neck of a tooth, resulting in exposure of the cementum. **angle r.**, recession of the angle of the anterior chamber of the eye; see also under *glaucoma*. **clitoral r.**, surgical displacement of the clitoris by suturing the corpus back to the ramus; done to reduce its apparent size in clitoral hypertrophy. **r. of ocular muscle**, surgical displacement of the insertion of an ocular muscle posteriorly; done to weaken the stronger muscle in strabismus.

recessive (re-ses'iv) 1. tending to recede; not exerting a ruling or controlling influence; in genetics, incapable of expression unless (the responsible allele is) carried by both members of a pair of homologous chromosomes. 2. a recessive allele or trait.

recessus (re-ses'sus), pl. *reces'sus* [L.] a recess; a small empty space, hollow, or cavity; [NA] a general term for such potential spaces. **r. anterior fos/sae interpeduncularis** [Tari'ni], the portion of the interpeduncular fossa that passes under the corpora mamillaria; called also *Tarini's recess* and *Tarini's space*. **r. chi/asmatis**, r. opticus. **r. cochlea/ris vestib/uli** [NA], cochlear recess of vestibule: a small depressed area on the medial wall of the vestibule of the ear, situated just below the posterior end of the crista vestibuli, and perforated with foramina through which nerve fibers pass to the posterior portion of the ductus cochlearis. Called also *Reichert's recess*. **r. costodiaphragmaticus pleu/rae** [NA], costodiaphragmatic recess of pleura: the pleural recess situated at the junction of the costal and diaphragmatic pleurae; called also *sinus phrenicocostalis*. **r. costomediastina/lis pleu/rae** [NA], costomediastinal recess of pleura: a wedge-shaped space, not completely filled with lung tissue, along the line at which the costal pleura meets the mediastinal pleura in front; called also *sinus costomediastinalis pleurae*. **r. duodena/lis infe'rior** [NA], inferior duodenal recess: a pocket in the peritoneum on the left side of the ascending portion of the duodenum, bounded by the inferior duodenal fold. **r. duodena/lis supe'rior** [NA], **r. duodenojejuna/lis**, superior duodenal recess: a peritoneal pocket behind the superior duodenal fold. **r. ellip/ticus vestib/uli** [NA], elliptical recess of the vestibule: an oval depressed area in the roof and medial wall of the vestibule of the inner ear, situated above and behind the crista and pierced by 25 to 30 small foramina through which nerves come from the internal acoustic meatus to the utricle, which occupies the depression. **r. epitympan/icus** [NA], epitympanic recess: the upper portion of the tympanic cavity, extending above the level of the tympanic membrane and containing the greater part of the incus and the upper half of the malleus. **r. hepatorena/lis** [NA], hepatorenal recess: a peritoneal pouch between the liver and the kidney. **r. ileoceca/lis infe'rior** [NA], inferior ileocecal recess: a peritoneal pocket situated behind the ileocecal fold, above the vermiform appendix, below the ileum, and medial to the cecum. **r. ileoceca/lis supe'rior** [NA], superior ileocecal recess: a peritoneal pocket situated behind and below the vascular cecal fold, above the ileum and medial to the lower end of the ascending colon. **r. infe'rior omenta/lis** [NA], inferior omental recess: the lower portion of the omental bursa, including its extension down into the great omentum. It is bounded in front by the posterior wall of the stomach, and behind by the pancreas, the transverse colon and its mesocolon, the left suprarenal gland, and part of the left kidney. **r. infundib/uli** [NA], recess of infundibulum: a funnel-shaped depression in the anterior part of the floor of the third ventricle of the brain, within the infundibulum of the hypophysis. **r. intersigmoi/deus** [NA], intersigmoidal recess: a shallow peritoneal pocket running downward and to the left at the base of the sigmoid mesocolon. **r. latera/lis fos/sae rhomboi/dei**, r. lateralis ventriculi quarti. **r. latera/lis ventric/uli quar'ti** [NA], lateral recess of fourth ventricle: a narrow, curved prolongation of the cavity of the fourth ventricle of the brain, extending laterally onto the dorsal surface of the inferior cerebellar peduncle; it contains a lateral prolongation of the choroid plexus and provides for the passage of cerebrospinal

fluid into the subarachnoid space. **r. liena'/lis** [NA], splenic recess: an extension of the omental bursa to the left behind the gastroligament ligament almost to the spleen. **r. membra'nae tym'pani ante'rior** [NA], anterior recess of tympanic membrane: a pocket in the tympanic membrane formed by the tunica mucosa between the anterior malleolar fold and the anterior superior part of the pars tensa of the membrane, ending blindly above. **r. membra'nae tym'pani poste'rior** [NA], posterior recess of tympanic membrane: a pocket in the tympanic membrane formed by the tunica mucosa between the posterior malleolar fold and the posterior superior part of the pars tensa of the membrane, ending blindly above. **r. membra'nae tym'pani supe'rior** [NA], superior recess of tympanic membrane: a recess in the tympanic membrane formed by the tunica mucosa between the neck of the malleus and the pars flaccida of the membrane, and ending blindly below. Called also *Prussak's pouch or space*. **r. op'ticus** [NA], optic recess: a depression in the floor of the third ventricle of the brain, between the chiasma behind and the lamina terminalis in front. **r. paracol'ici**, sulci paracolici. **r. paraduodena'/lis** [NA], paraduodenal recess: a pocket occasionally found in the peritoneum behind a fold containing a branch of the left colic artery. **r. pharyn'geus** [NA], **r. pharyn'geus** [Rosenmüller], pharyngeal recess: a wide, slitlike lateral extension in the wall of the nasopharynx, cranial and dorsal to the pharyngeal orifice of the auditory tube; called also *Rosenmüller's cavity, fossa, or cavity*. **r. phrenicohepat'ici**, see *r. subhepat'ici*, *r. subphren'ici*, and *r. hepatorenalis*. **r. pinea'/lis** [NA], pineal recess: an extension of the third ventricle into the stalk of the pineal body. **r. pirifor'mis** [NA], piriform recess: a pear-shaped fossa in the wall of the laryngeal pharynx lateral to the arytenoid cartilage and medial to the lamina of the thyroid cartilage. **r. pleura'/les** [NA], pleural recesses: the spaces where the different portions of the pleura join at an angle and which are never completely filled by lung tissue; called also *sinus pleurae*. **r. pneumatoenter'icus**, either of the paired embryonic excavations alongside the dorsal mesogastrium, the right one sometimes persisting as the infracardiac bursa. **r. poste'rior fos'sae interpeduncula'ris** [Tari'ni], the portion of the interpeduncular fossa that slightly undermines the anterior margin of the pons. **r. pro utric'ulo**, *r. ellipticus vestibuli*. **r. retroceca'/lis** [NA], retrocecal recess: a peritoneal pocket extending upward behind the cecum and sometimes behind the colon. **r. retroduodena'/lis** [NA], retroduodenal recess: an occasional peritoneal pocket extending behind the horizontal and ascending parts of the duodenum. **r. saccifor'mis articulatio'nis cu'biti**, sacciform recess of articulation of elbow: the distal bulging of the articular capsule of the elbow joint, situated between the incisura radialis ulnae and the circumferentia articularis radii. **r. saccifor'mis articulatio'nis radioulna'ris dista'lis** [NA], sacciform recess of distal radioulnar articulation: a bulging of the synovial membrane of the articular capsule of the distal radioulnar joint, which extends proximally between the radius and ulna beyond the point of their articular surfaces. **r. sphenoethmoida'/lis** [NA], sphenoethmoidal recess: the most superior and posterior part of the nasal cavity, above the superior nasal concha, into which the sphenoidal sinus opens. **r. sphenoethmoida'/lis os'seus** [NA], bony sphenoethmoidal recess: a small region in the skull, posterosuperior to the superior nasal concha and just anterior to the body of the sphenoid bone; the sphenoid sinus opens into it. **r. spher'icus vestib'uli** [NA], spherical recess of vestibule: a circular depressed area in the anteroinferior portion of the medial wall of the vestibule of the inner ear. It is pierced by 12 to 15 small foramina through which nerves come from the internal acoustic meatus to the sacculi, which occupies the depression. **r. splenia'/lis**, *r. lienalis*. **r. subhepat'ici** [NA], subhepatic recesses: peritoneal pockets located beneath the liver. **r. subphren'ici** [NA], subphrenic recesses: peritoneal pockets located beneath the diaphragm. **r. subpoplite'us** [NA], subpopliteal recess: a prolongation of the synovial tendon sheath of the popliteus muscle outside the knee joint into the popliteal space; called also *bursa musculi poplitei*. **r. supe'rior omenta'/lis** [NA], superior omental recess: a rather long, narrow peritoneal pocket leading from the vestibule upward toward the liver, between the inferior vena cava on the right, the esophagus on the left, the gastrohepatic ligament in front, and the diaphragm behind. **r. suprapinea'/lis** [NA], suprapineal recess: the posterior extension of the third ventricle of the brain above and around the pineal body. **r. triangula'ris**, triangular recess: a small triangular recess on the anterior wall of the third ventricle of the brain, its base below on the anterior commissure and its sides formed by the converging columns of the fornix.

recidivation (re-sid'f-i-va'shun) recidivism.

recidivism (re-sid'f-i-vizm) 1. the repetition of an offense, or crime. 2. the relapse or recurrence of a disease.

recidivist (re-sid'f-i-vist) [Fr. *récidiviste*, from L. *recidere* to fall back] one who tends to relapse, especially a person who tends to return to criminal habits after treatment or punishment.

recipe (res'f-i-pe) 1. [L.] take; used at the head of a physician's prescription, and usually indicated by the symbol R. See *prescrip-*

tion. 2. a formula for the preparation of a specific combination of ingredients.

recipient (re-sip'e-ent) one who receives, as blood in transfusion, or a tissue or organ graft. **universal r.**, a person thought to be able to receive blood of any "type" without agglutination of the donor cells.

receptor (re-sip'e-o-mo'tor) [L. *recipere* to receive + *motor* mover] pertaining to the reception of motor impressions.

reciprocation (re-sip'ro-ka'shun) [L. *reciprocare* to move backward and forward] the complementary interaction of two distinct entities. Applied in dentistry to the means by which one part of a prosthesis or orthodontic appliance is made to counter the effect created by another part, as in a properly designed partial denture clasp.

Recklinghausen's canals, disease, disease of bone (rek'ling-how'zenz) [Friedrich Daniel von Recklinghausen, German pathologist, 1833-1910] see under *canal*, and see *neurofibromatosis* and *osteitis fibrosa cystica*.

reclination (rek'li-na'shun) [L. *reclinatio*] (obs.) couching.

Reclus' disease (ra-klez') [Paul Reclus, French surgeon, 1847-1914] see under *disease*.

recognin (re-kog'nin) any of a group of protein fragments produced from cancer cells that are capable of recognizing specific cells; they include astrocytin and malignin.

recognition (rek'og-nish'un) 1. the act of recognizing or state of being recognized. 2. in immunology, a term used to describe the functional changes occurring in immunologically competent cells on contact with antigen, involving recognition of antigen and resulting in combination of antigen with a receptor on the cell surface; called also *antigen r.*

recombinant (re-kom-bi'nant) 1. the new cell or individual that results from genetic recombination. 2. pertaining or relating to such cells or individuals. See also under *DNA*. **r. DNA**, see under *DNA*.

recombination (re'kom-bi-na'shun) the reunion, in the same or a different arrangement, of formerly united elements which have become separated. In genetics, the formation of new combinations of genes as a result of crossing over between homologous chromosomes. **bacterial r.**, the Mendelian segregation of marker characters, usually nutritional requirements, in mixed cultures of variant strains of bacteria derived from a common parent strain; studied most extensively with a strain of coliform bacillus designated K-12.

recompression (re'kom-presh'un) the restoration of pressure, especially the return to conditions of normal pressure after exposure to greatly diminished atmospheric pressure.

recon (re'kon) [recombination + Gr. *on* neuter ending] the smallest unit of genetic material capable of recombination, presumably a series of three nucleotide bases (a triplet). Cf. *cistron* and *muton*.

reconstitution (re'kon-sti-tu'shun) 1. a type of regeneration in which a new organ forms by the rearrangement of tissues rather than from new formation at an injured surface. 2. The restoration to original form of a substance previously altered for preservation and storage, as the restoration to a liquid state of blood serum or plasma that has been dried and stored.

reconstruction (re'kon-struk'shun) to reassemble or re-form from constituent parts. **image r. from projections**, radiography in which two- or three-dimensional images of an object are reconstructed from a set of mathematical projections, as in transverse axial tomography.

recontour (re-kon'toor) to give new shape or contour to. In dentistry, to change the contour of a crown or a complete or partial denture.

record (rek'ord) a permanent or long-lasting account of something (as on film, in writing, etc.); in dentistry, a registration. **face-bow r.**, a registration by means of a face-bow of the position of the hinge axis and/or the condyles; used to orient the maxillary cast to the opening and closing axis of the articulator. **functional chew-in r.**, a record of the natural chewing movements of the mandible made on an occlusion rim by teeth or scribing studs. **interocclusal r.**, a record of the positional relation of the teeth or jaws to each other, made on occlusal surfaces of occlusion rims or teeth in a plastic material which hardens, such as plaster of Paris, wax, or zinc oxide and eugenol paste. **interocclusal r., centric**, a record of the centric jaw position (relation). **interocclusal r., eccentric**, a record of a jaw relation other than the centric relation. **interocclusal r., lateral**, a record of a lateral eccentric jaw position. **interocclusal r., protrusive**, a record of a protruded eccentric jaw position. **jaw relation r.**, a registration of any positional relationship of the mandible in reference to the maxillae; these records may be of any of the many vertical, horizontal, or orientation relations. **maxillomandibular r.**, a record of the relation of the mandible to the maxillae. **occluding centric relation r.**, a registration of centric relation made at the established occlusal vertical dimension. **problem-oriented r. (POR)**, an approach to patient care record keeping that focuses on those specific health problems of the patient that require immediate

attention and on the structuring of a cooperative health care plan designed to cope with the identified problems. The components basic to the POR are: *the data base*, which provides information obtained from the variety of sources required for each patient regardless of diagnosis or presenting problems; *the problem list*, which contains those major problems currently needing attention and serves as the basis of a plan of care; *the plan*, which specifies what is to be done with regard to each problem; *the progress notes*, which document the observations, assessments, nursing care plans, physician's orders, etc., of all health care personnel directly involved in the care of the patient. See also *SOAP*. **profile r.**, a registration or record of the profile of a patient. **protrusive r.**, a registration of a forward position of the mandible with reference to the maxillae. **terminal jaw relation r.**, a record of the relationship of the mandible to the maxilla made at the vertical relation of occlusion and at the centric position.

recrement (rek/rē-ment) [L. *recrementum*] the saliva or other material which, after secretion, is reabsorbed into the blood.

recrementitious (rek/rē-men-tish'us) of the nature of a recrement.

recrudescence (re/'kroo-des'ens) [L. *recrudescere* to become sore again] the recurrence of symptoms after a temporary abatement. See *relapse*. The chief distinction between a recrudescence and a relapse is the time interval, a recrudescence occurring after some days or weeks, a relapse after some weeks or months.

recrudescent (re/'kroo-des'ent) [L. *recrudescens*] breaking out afresh.

recruitment (re-krōōt'ment) 1. the gradual increase to a maximum in a reflex when a stimulus of unaltered intensity is prolonged. 2. in audiology, an abnormally rapid increase in the loudness of a sound caused by a slight increase in its intensity.

Rect. abbreviation for L. *rectifica'tus*, rectified.

rectal (rek'tal) pertaining to the rectum.

rectalgia (rek-tal'je-ah) [*rectum* + *-algia*] proctalgia.

rectectomy (rek-tek'to-me) [*rectum* + Gr. *ektomē* excision] proctectomy.

rectification (rek'ti-fi-ka'shun) [L. *rectificatio*] 1. the act of making straight, pure, or correct. 2. redistillation of a liquid to purify it. 3. conversion of alternating current to direct current. **spontaneous r.**, a transverse lie which rectifies itself before labor begins.

rectified (rek'ti-fid) refined; made straight; converted to direct current (DC).

rectifier (rek'ti-fi'er) a device for obtaining a direct (unidirectional) current from an alternating current. **thermionic r.**, a rectifier consisting of an electric valve in which the electrons are supplied by a heated electrode.

rectischial (rek-tis'ke-ak) pertaining to the rectum and the ischium.

rectitis (rek-ti'tis) proctitis. **epidemic gangrenous r.**, see under *proctitis*.

recto- [L. *rectum*] a combining form designating relationship to the rectum. See also words beginning *procto-*.

rectoabdominal (rek'to-ab-dom'i-nal) pertaining to the rectum and abdomen.

rectocele (rek'to-sēl) [*recto-* + Gr. *hēlē hernia*] hernial protrusion of part of the rectum into the vagina; called also *proctocele*.

rectoclysis (rek-tok'li-sis) proctoclysis.

rectococcygeal (rek'to-kok-sij'e-al) pertaining to the rectum and the coccyx.

rectococcyx (rek'to-kok'si-pek-se) proctococcyx.

rectocolitis (rek'to-ko-li'tis) coloproctitis.

rectocutaneous (rek'to-ku-ta'ne-us) pertaining to the rectum and the skin.

rectocystotomy (rek'to-sis-tot'o-me) proctocystotomy.

rectolabial (rek'to-la'be-al) pertaining to or communicating with the rectum and a labium majus, as a rectolabial fistula.

rectoperineorrhaphy (rek'to-per'i-ne-or'ah-fe) proctoperineorrhaphy.

rectopexy (rek'to-pek'se) proctopexy.

rectoplasty (rek'to-plas'te) proctoplasty.

rectoromanoscope (rek'to-ro-man'o-skōp) an endoscope for examining the rectum and sigmoid.

rectoromanoscopy (rek'to-ro'mah-nos'ko-pe) [*rectum* + L. *romanum* sigmoid + Gr. *skopein* to examine] inspection of the rectum and sigmoid through an endoscope.

rectorrhaphy (rek-tor'ah-fe) [*rectum* + Gr. *rhaphe* suture] proctorrhaphy.

rectoscope (rek'to-skōp) proctoscope.

rectoscopy (rek-tos'ko-pe) proctoscopy.

rectosigmoid (rek'to-sig'moid) the lower portion of the sigmoid and upper portion of the rectum.

rectosigmoidectomy (rek'to-sig'moi-dek'to-me) excision of the rectum and sigmoid.

rectostenosis (rek'to-stē-no'sis) stenosis, or stricture, of the rectum.

rectostomy (rek-tos'to-me) [*rectum* + Gr. *stomoun* to provide with a mouth, or opening] surgical formation of a permanent opening into the rectum for the relief of stricture.

rectotome (rek'to-tōm) prototome.

rectotomy (rek-tot'o-me) proctotomy.

rectourethral (rek'to-u-re'thral) pertaining to or communicating with the rectum and urethra, as a rectourethral fistula.

rectouterine (rek'to-u'ter-in) pertaining to the rectum and uterus.

rectovaginal (rek'to-vaj'i-nal) pertaining to or communicating with the rectum and vagina, as a rectovaginal fistula.

rectovesical (rek'to-ves'i-kal) pertaining to or communicating with the rectum and urinary bladder, as a rectovesical fistula.

rectovestibular (rek'to-ves-tib'u-lar) pertaining to or communicating with the rectum and the vestibule of the vagina, as a rectovestibular fistula.

rectovulvar (rek'to-vul'var) pertaining to or communicating with the rectum and vulva, as a rectovulvar fistula.

Rectules (rek'tūlz) trademark for a preparation of chloral hydrate.

rectum (rek'tum) [L. "straight"] [NA] the distal portion of the large intestine, beginning anterior to the third sacral vertebra as a continuation of the sigmoid and ending at the anal canal; called also *intestinum rectum*.

rectus (rek'tus) [L.] straight; [NA] a general term denoting a straight structure, as a muscle (see entries beginning *musculus rectus*).

recumbent (re-kum'bent) lying down.

recuperation (re-ku'per-a'shun) [L. *recuperatio*] the recovery of health and strength.

recurrence (re-kur'ens) [L. *re-* again + *currere* to run] the return of symptoms after a remission.

recurrent (re-kur'ent) [L. *recurrens* returning] 1. running back, or toward the source. 2. returning after intermissions.

recurvation (re'kur-va'shun) [L. *recurvatio*] a backward bending or curvature.

red (red) [L. *rubrum*] 1. one of the primary colors produced by the longest waves of the visible spectrum. 2. a red dye or stain. **alizarin r.**, the sodium salt of alizarin monosulfonate. **alizarin r. S**, alizarin water-soluble r., sodium alizarinsulfonate. **aniline r.**, basic fuchsin. **bordeaux r.**, cerasine. **bromophenol r.**, an indicator, dibromophenol-sulfonphthalein, (CH₂-Br₂OH)₂C₆H₄·SO₂·ONa. **carmine r.**, a stain, C₁₁H₁₂O₇, derived from carmine. **cerasine r.**, sudan III. **cholera r.**, see *cholera red test*, under *tests*. **Congo r.**, chemical name: 3,3'-[4,4'-biphenylene-bis(azo)]bis[4-amino-1-naphthalenesulfonic acid] disodium salt. An odorless dark red or reddish brown powder, C₃₂H₂₂N₆Na₂O₆S₂, which decomposes on exposure to acid fumes. It is used as a diagnostic aid in amyloidosis, and has been used as an antihemolytic and detoxicant. See also under *tests*. **cotton r.**, Congo r. **cotton r. 4 B**, benzopurpurine 4 B. **cresol r.**, an indicator, ortho-cresol-sulfonphthalein, (CH₃·C₆H₃·OH)₂C₆H₄·SO₂·ONa, used in the determination of the hydrogen ion concentration. It has a pH range of 7.2 to 8.8, being yellow at 7.2 and red at 8.8. **dianil r. 4 C**, dianin r. 4 B, benzopurpurine 4 B. **direct r.**, Congo r. **direct r. 4 B**, benzopurpurine 4 B. **fast r.**, amaranth. **fast r. B or P**, cerasine. **indigo r.**, **indoxyl r.**, a coloring matter produced by heating an aqueous solution of indoxyl to 130° C. **magdala r.**, a basic dye used for staining connective tissue. It is a mixture of monoamino- and diamino-naphthosafraanins. The diamino compound is NH₂C₁₀H₅·N₂Cl(C₁₀H₇)·C₁₀H₅·NH₂. **methyl r.**, a dye, para-dimethyl-amino-azo-benzene-ortho-carboxylic acid, (CH₃)₂N·C₆H₄·N·C₆H₄·COOH, used as an indicator in the determination of hydrogen ion concentration and has a pH range of 4.4 to 6, being red at 4.4, and yellow at 6. **naphthaline r.**, magdala r. **naphthol r.**, amaranth. **neutral r.**, a dye, amino-dimethyl-amino-toluphenazonium chloride, (CH₃)₂N·C₆H₃·N₂C₆H₂(CH₃)·NH₂·HCl. As an indicator it has a pH range of 6.8 to 8, being red at 6.8 and yellow at 8. **oil r.**, sudan III. **oil r. IV**, scarlet r.

orange r., the red oxide of lead, Pb_3O_4 , used as a pigment. **phenol r.**, phenolsulfonphthalein. **provisional r.**, a colored lipin obtained from rhodopsin. **scarlet r.**, chemical name: ortho-tolylazo-ortho-tolylazo-beta-naphthol. A fat-soluble azo dye, $C_{24}H_{20}N_4O$, which has some power to stimulate the proliferation of cells, and has been used to enhance wound healing. Called also *oil r. IV*, *ponceau 3B*, *rubrum scarlatinum*, *scarlet R*, *scharlach R*, and *Sudan IV*. **scarlet r. sulfonate**, the sodium salt of azo-benzene-disulfonic acid azobeta-naphthol; used for the same purpose as scarlet red. **senitol r.**, a dye, $C_{24}H_{20}N_4O_2$, $C_6H_5N(I) \cdot C_2H_5$, with a highly selective germicidal action on staphylococci; it is also used to sensitize photographic plates to red rays of light. **sudan r.**, magdala r. **toluylene r.**, the base, the hydrochloride of which is neutral red. **tony r.**, sudan III. **trypan r.**, an acid azo dye used as a vital stain and which possesses some trypanocidal activity. **vital r.**, chemical name: 3-amino-4-[[4'-(2-amino-6-sulfo-1-naphthyl)azo]-3,3'-dimethyl-4-biphenyl]azo]-2,7-naphthalene disulfonic acid trisodium salt. A dye, which is introduced directly into the circulation by venipuncture for the purpose of estimating the volume of the blood in the body by determining the concentration of the dye in the blood plasma. **wool r.**, amaranth.

redecussate (re-'de-kus'āt) to form a secondary decussation.

redfoot (red/'foot) a fatal condition of unknown etiology affecting newborn lambs, in which the sensitive lamina of the feet become exposed owing to detachment of the overlying horn.

redia (re-'de-ah), pl. *rediae* [named after F. Redi, Italian naturalist, 1626-1698] a larval stage of certain trematode parasites, which develops in the body of a snail host and gives rise to daughter rediae, or to the cercariae.

rediae (re-'de-e) plural of *redia*.

redifferentiation (re-'dif-er-en'she-a'shun) the return of a dedifferentiated tissue or part to its original or another more or less similar condition.

Redig. in pulv. abbreviation for L. *rediga'tur in pul'verem*, let it be reduced to powder.

Red. in pulv. abbreviation for L. *reduc'tus in pul'verem*, reduced to powder.

redintegration (red-in-'tē-gra'shun) [L. *redintegratio*] 1. the restoration or repair of a lost or damaged part. 2. that type of psychic process in which a part of a complex stimulus provokes the complete reaction that was previously made to the complex stimulus as a whole (Hollingworth).

redislocation (re-'dis-lo-ka'shun) dislocation recurring after reduction.

Redisol (red/'i-sol) trademark for a preparation of crystalline vitamin B_{12} ; see *cyanocobalamin*.

Redlich-Obersteiner (red/'likh o'ber-sti'ner) see *Obersteiner-Redlich*.

redox (red/'oks) oxidation-reduction.

redressement (rē-dres-'maw') [Fr.] 1. a second or repeated dressing. 2. correction of a deformity. **r. forcé**, forcible correction of a deformity, especially a procedure for the immediate correction of knock knee.

red tide (red tid) see *Gonyaulax*.

reduce (re-dūs') [re- + L. *ducere* to lead] 1. to restore to the normal place or relation of parts, as to *reduce* a fracture. 2. in chemistry, to submit to reduction. 3. to decrease in weight.

reduced (re-dūst') 1. returned to the proper place or position, as a *reduced* fracture. 2. restored to a metallic form, as, *reduced* iron. 3. altered by a chemical change involving a gain of electrons.

reducible (re-du'si-b'l) permitting of reduction; capable of being reduced.

reductant (re-duk'tant) the electron donor in an oxidation-reduction (redox) reaction.

reductase (re-duk'tās) any enzyme that has a reducing action on chemical compounds; a hydrogenase. **5α-r.**, an enzyme that catalyzes the irreversible reduction of testosterone to dihydrotestosterone. **acetaldehyde r.**, an enzyme that catalyzes the reduction of acetaldehyde to alcohol. It consists of a protein and a prosthetic group, nicotinamide adenine dinucleotide (NAD). **acetoacetyl-CoA r.**, an enzyme that catalyzes the conversion of D-3-hydroxyacyl CoA and NADP to 3-oxo-acyl-CoA and reduced NADP. **cytochrome r.**, a flavoprotein enzyme that catalyzes the simultaneous reduction of cytochrome C and the oxidation of reduced nicotinamide adenine dinucleotide (NADH). **quinone r.**, an enzyme that catalyzes the transfer of hydrogen from reduced pyridine nucleotides to suitable quinones—mostly 1,4-naphthoquinones or benzoquinones.

reduction (re-duk'shun) [L. *reductio*] 1. the correction of a fracture, luxation, or hernia. 2. in chemistry, the addition of hydrogen to a substance, or more generally, the gain of electrons. **r. of chromosomes**, the passing of the members of a chromosome pair to the daughter cells during meiosis, each daughter cell receiving half the diploid number. **closed r.**, the manipulative reduction of a fracture without incision. **r. en masse**, reduction of a strangulated hernia included within its sac, so that the

strangulation is not relieved. **open r.**, reduction of a fracture after incision into the fracture site. **tuberosity r.**, the surgical excision of excessive fibrous or bony tissue in the area of the maxillary tuberosity prior to the construction of prosthetic appliances. **weight r.**, the lessening of one's body weight by a specific regimen which is especially designed for that purpose.

reductone (re-duk'tōn) glucic acid.

redundant (re-dun'dant) more than necessary; superfluous.

reduplication (re-'du-pli-ka'shun) [L. *reduplicatio*] 1. a doubling back. 2. the recurrence of paroxysms of a double type. 3. a doubling of parts, connected at some point, the extra part being usually a mirror image of the other.

reduviid (re-du'vi-id) belonging to the family Reduviidae.

Reduviidae (re-'du-vi'i-de) a family of winged hemipterous insects of the suborder Heteroptera, called cone-nose bugs or kissing bugs; they are also known as assassin bugs because they prey on other insects. They attack man and other mammals; some species transmit Chagas' disease. It includes the genera *Eratyrus*, *Eutriatoma*, *Panstrongylus*, *Reduvius* (type genus), *Rhodnius*, and *Triatoma*.

Reduvius (re-du've-us) a genus of hemipterous blood-sucking insects. **R. persona'tus**, a species whose bite may cause nausea, generalized urticaria, or other allergic symptoms.

redwater (red/'wah-ter) 1. Texas fever. 2. bacillary hemoglobinuria.

Reed's cells (rēdz) [Dorothy Reed, American pathologist] Sternberg-Reed cells.

re-education (re-'ed-u-ka'shun) the training of a disabled or mentally disordered person in the endeavor to restore his lost competence.

reef (rēf) an infolding or tuck of tissue, as a tuck made in plication.

reentry (re-en'tre) in cardiology, a postulated mechanism by which a premature heart beat can be coupled to the normal beat: the normal sinus impulse activates the heart except for an area of diminished responsiveness; by the time this abnormal area is activated, the remainder of the heart has recovered, and the impulse "reenters" the normal zone from the abnormal area, eliciting a premature contraction.

Rees's test (rēs'ez) [George Owen Rees, English physician, 1813-1889] see under *tests*.

refect (re-fekt') to induce refectation.

refection (re-fek'shun) [L. *reficere* to restore] recovery; repair: applied specifically to the ability of the flora of the cecum of rats to synthesize vitamins of the B group from deficient diets and supply them to the host animal.

refectious (re-fek'shus) capable of causing, or pertaining to, refectation.

refine (re-fin') to purify or free from foreign matter.

reflected (re-flekt'ed) turned or bent back; mirrored.

reflection (re-flek'shun) [L. *reflexio*] 1. a turning or bending back; a bending back upon its course. 2. an image produced by reflection. 3. in physics, the turning back of a ray of light, sound, or heat when it strikes against a surface that it does not penetrate. The ray before reflection is known as the *incident ray*; after reflection, it is the *reflected ray*.

reflector (re-flek'tor) a device for reflecting light or sound. **dental r.**, a mouth mirror.

reflex (re'fleks) [L. *reflexus*] 1. reflected. 2. a reflected action or movement; the sum total of any particular involuntary activity. See *reflex arc* and *reflex action*. 3. a reflection or a reflected image of an object. **abdominal r's**, contractions of the abdominal muscles on scratching the abdominal wall. **abdomino-cardiac r.**, any reflex in the heart produced by stimulating the abdominal sympathetic nerves. Cf. *Livierato's sign* and *Prevel's sign*, under *sign*. **Abrams' r.**, reflex contraction of the lung following stimulation of the chest wall. **Abrams' heart r.**, contraction of the myocardium, with reduction in the area of cardiac dullness, which results when the skin of the precordial region is irritated. It is observed with the fluoroscope. **accommodation r.**, the coordinated changes that occur when the eye adapts itself for near vision; they are constriction of the pupil, convergence of the eyes, and increased convexity of the lens. **Achilles tendon r.**, triceps surae jerk. **acoustic r.**, contraction of the stapedius muscle in response to intense sound. Called also *stapedial r.* **acquired r.**, conditioned response. **adductor r.**, on tapping the tendon of the adductor magnus with the thigh in abduction, contraction of the adductors results. **adductor r. of foot**, Hirschberg's sign. **allied r's**, reflexes in which two afferent stimuli use the same common pathway or produce effects on two synergistic muscles. **anal r.**, contraction of the anal sphincter on irritation of the skin of the anus. **ankle r.**, triceps surae jerk. **antagonistic r's**, reflex movements occurring not in the muscle which has been stretched but in its antagonist. **anticus r.**, Piotrowski's sign. **Aschner's r.**, oculocardiac r. **atriopressor r.**, rise in arterial blood pressure (vasoconstriction) attributed to a change of pressure in the right atrium and great veins. **attention r. of pupil**, al-

teration of size in the pupil when the attention is suddenly fixed; called also *Piltz's r.* **attitudinal r's**, those reflexes having to do with the position of the body. **audito-oculogyric r.**, a turning of both eyes in the direction of a sudden sound. **auditory r.**, any reflex caused by stimulation of the auditory nerve, especially momentary closure of both eyes produced by a sudden sound. **aural r.**, any reflex connected with the auditory apparatus. **auricle r.**, involuntary movement of the ear produced by auditory stimuli. **auriculocervical nerve r.**, Snellen's *r.* **auriculopalpebral r.**, Kehrer's *r.* **autonomic r.**, a response of smooth muscle, glands, and conducting tissue of the heart, which alters the functional state of the innervated organ. **axon r.**, a reflex resulting from a stimulus applied to one branch of a nerve which sets up an impulse that moves centrally to the point of division of the nerve where it is reflected down the other branch to the effector organ. **Babinski's r.** (1896), dorsiflexion of the big toe on stimulating the sole of the foot; it occurs in lesions of the pyramidal tract, and indicates organic, as distinguished from hysteric, hemiplegia. Called also *Babinski's sign* or *toe sign*. **Babkin r.**, pressure by the examiner's thumbs on the palms of both hands of the infant results in opening of the infant's mouth; it is elicited in many newborn infants, normal and abnormal, except when lethargic or comatose. **Bainbridge r.**, rise in pressure in, or increased distention of, the large somatic veins or the right atrium, with acceleration of the heart beat. **Barkman's r.**, contraction of the rectus abdominis muscle on the same side after stimulation of the skin just below one of the nipples. **basal joint r.**, finger-thumb *r.* **behavior r.**, conditioned response. **Bekhterev's r.**, 1. *deep*: passive flexion of the toes and foot in a plantar direction is followed by flexion in a dorsal direction and by flexive movements of the knee and hip. 2. *hypogastric*: contraction of the muscles of the lower abdomen on stroking the skin of the inner surface of the thigh. 3. *pupil*: dilatation of the pupil on exposure to light; sometimes seen in tabes and general paralysis. 4. tickling of the mucosa of the nasal cavity with a feather or piece of paper produces contraction of the facial muscles on the same side of the face; called also *nasal r.* **Bekhterev-Mendel r.**, Mendel-Bekhterev *r.* **biceps r.**, contractions of the biceps muscle of the arm when its tendon is tapped; this reflex is normal but when greatly increased it indicates the same disease as increased knee jerk. **bladder r.**, any of the reflexes of the bladder necessary for effortless evacuation of urine and subconscious maintenance of continence: vesical contraction following distention of the bladder, vesical contraction evoked by urethral flow, vesical contraction evoked by proximal urethral distention, relaxation of the urethra resulting from running liquid in the urethra, distention of the bladder resulting in relaxation of the external sphincter, relaxation of the proximal urethral smooth muscle by distention of the bladder, and vesical contraction related to running liquid through the urethra. **blink r.**, corneal *r.* **Brain's r.**, an extension of the hemiplegic flexed arm when the patient assumes the quadrupedal position; called also *quadrupedal extensor reflex*. **bregmocardiac r.**, pressure upon the bregmatic fontanel slows the action of the heart. **Brissaud's r.**, contraction of the tensor muscle of fascia lata on tickling the sole. **Brudzinski's r.**, see under *sign*. **bulbocavernous r.**, a tap on the dorsum of the penis causes retraction of the bulbocavernous portion. **bulbomimic r.**, in coma from apoplexy, pressure on the eyeball causes contraction of the facial muscles on the side opposite to the lesion; in coma from toxic causes the reflex occurs on both sides. Called also *facial r.* and *Mondonesi's r.* **carotid sinus r.**, pressure on, or in, the carotid artery at the level of its bifurcation causing reflex slowing of the heart rate; this reflex originates in the wall of the sinus of the internal carotid artery. See *carotid sinus syndrome*, under *syndrome*. **cerebral cortex r.**, Haab's *r.* **Chaddock r.**, stimulation below the external malleolus produces extension of the great toe; it occurs in lesions of the pyramidal tract. **chain r.**, a series of reflexes, each serving as a stimulus to the next one, representing a complete activity. **chin r.**, stroking of the chin causes closing of the mouth. **choked r.**, in skiascopy, absence of movement of the retinal illumination on reaching the point of reversal. **ciliary r.**, the movement of the pupil in accommodation. **ciliospinal r.**, painful stimulation of the skin of the neck dilates the pupil. **clasp-knife r.**, lengthening reaction. **cochleo-orbicular r.**, **cochleopalpebral r.**, contraction of the orbicularis palpebrarum muscle when a sharp, sudden noise is made close to the ear; does not occur in total deafness from labyrinthine disease. **cochleopupillary r.**, a reaction of the iris (contraction of the pupil followed by dilatation) to a loud sound. **cochleostapedial r.**, the reflex contraction of the stapedius muscle from noises. **concealed r.**, one elicited by a stimulus but concealed by a more dominant reflex elicited by the same stimulus. **conditional r.**, conditioned response. **conditioned r.**, see under *response*. **conjunctival r.**, closure of the eyelid when the conjunctiva is touched. **consensual r.**, crossed *r.* **consensual light r.**, stimulation of one eye by light produces a reflex response in the opposite pupil. **convergence r.**, convergence of the visual axes with fixation on a near point. **convulsive r.**, one in which several muscles contract convulsively without coordination. **coordinated r.**, one in which several muscles react so as to produce an orderly and

useful movement. **corneal r.**, irritation of the cornea results in reflex closure of the lids; called also *blink r.*, *eyelid closure r.*, and *lid r.* **corneomandibular r.**, **corneopterygoid r.**, movement of the lower jaw toward the side opposite the eye whose cornea is lightly touched, the mouth being open. **corneo-mental r.**, unilateral wrinkling of the muscles of the chin when pressure is applied to the cornea. **coronary r.**, the reflex that controls the caliber of the coronary blood vessels. **cough r.**, the sequence of events initiated by the sensitivity of the lining of the airways of the lung and mediated by the medulla as a consequence of impulses transmitted by the vagus nerve, resulting in coughing, i.e., the clearing of the passageways of foreign matter. **cranial r.**, any reflex whose paths are connected directly with the brain. **cremasteric r.**, stimulation of the skin on the front and inner side of the thigh retracts the testis on the same side. The presence of this reflex indicates integrity of the first lumbar nerve segment of the spinal cord or its root; absence indicates damage of the first lumbar nerve segment or its root or lesion of the corticospinal tract. Cf. *Geigel's r.* **crossed r.**, stimulation of one side of the body often causes also a corresponding response on the other side, especially in the eye. **cuboido-digital r.**, Mendel-Bekhterev *r.* **cutaneous pupillary r.**, dilatation of the pupil on pinching the skin of the cheek or neck. **dartos r.**, the patient stands with his feet wide apart and the examiner suddenly applies cold to the perineum; the dartos muscle undergoes vermicular contraction. **dazzle r.**, a reflex by which a strong light shining on the eyes causes an immediate closing of the eyelids which lasts as long as the stimulus. **deep r.**, one elicited by a sharp tap on the appropriate tendon or muscle to induce brief stretch of the muscle, followed by contraction. Called also *tendon r.* **defecation r.**, rectal *r.* **defense r.**, contraction and extension motions in a paralyzed limb produced by plantar flexion of the toes. **delayed r.**, a reflex which occurs some time after the stimulus provoking it has been received. **depressor r.**, a reflex to stimulation resulting in decreased activity of the motor center. **digital r.**, see *Hoffmann's sign*, def. 2, under *sign*. **direct r.**, a contraction on the same side as that of the stimulation. **direct light r.**, when a ray of light is thrown upon the retina through the pupil there is immediate contraction of the sphincter iridis, reducing the size of the pupillary aperture. **diving r.**, a reflex involving cardiovascular and metabolic adaptations to conserve oxygen occurring in animals during diving into water; observed in reptiles, birds, and mammals, including man. **doll's eye r.**, when the premature infant's head is rotated laterally, the eyes are pulled synergistically in the opposite direction, then return to the middle of the palpebral fissure. **dorsal r.**, contraction of the back muscles in response to stimulation of the skin along the erector spinae. **dorsocuboidal r.**, Mendel-Bekhterev *r.* **elbow r.**, triceps *r.* **embrace r.**, Moro's *r.* **emergency light r.**, excessive stimulation of the retina by light produces contraction of the pupils, closure of the eyelids, and lowering of the eyebrows. **enterogastric r.**, inhibition of gastric motility when irritants enter the duodenum. **epigastric r.**, contraction of the abdominal muscles caused by stimulating the skin of the epigastrium or over the fifth and sixth intercostal spaces near the axilla. **Erben's r.**, slowing down of the pulse upon bending head and trunk strongly forward; said to indicate vagal excitability. **erector spinae r.**, contraction of the erector spinae muscle on irritation of the skin along its border. **Escherich's r.**, see under *sign*. **esophagosallyvory r.**, Roger's *r.* **ether r.**, the sudden and increased flow of duodenal secretion following the introduction of ether and certain other substances into the duodenum. **external auditory meatus r.**, Kisch's *r.* **eyeball compression r.**, **eyeball-heart r.**, **oculocardiac r. **eyelid closure r.**, 1. corneal *r.* 2. conjunctival *r.* **facial r.**, bulbomimic *r.* **faucial r.**, reflex vomiting caused by irritation of the fauces. **femoral r.**, Remak's *r.* **finger-thumb r.**, passive flexion of the metacarpophalangeal joint of one of the fingers causes flexion of the basal joint and extension of the terminal joint of the thumb. **flexion r. of leg**, tapping of the tendons of the semimembranosus and semitendinosus muscles causes flexion of the leg. **flexor r.**, **paradoxical**, dorsiflexion of the great toe or of all the toes when the deep muscles of the calf are pressed upon. **fontanel r.**, Grünfelder's *r.* **foveolar r.**, the ophthalmoscopic reflex in the form of a dot caused by the foveola. **front-tap r.**, a tap on the skin muscles of the extended leg contracts the gastrocnemius. **fusion r.**, the reflex which tends to merge the images on the two retinas into a single impression. **gag r.**, pharyngeal *r.* **gastrocolic r.**, an increase in intestinal and colonic peristaltic activity following entrance of food into the empty stomach. **gastroileal r.**, an increase in ileal motility and opening of the ileocecal valve when food enters the empty stomach. **gastropancreatic r.**, an increase in pancreatic secretion induced by distention of the corpus of the stomach; it is mediated by the vagus nerve. **Gault's cochleopalpebral r.**, cochleopalpebral *r.* **Geigel's r.**, a reflex in the female corresponding to the cremasteric reflex in the male; i.e., on stroking of the inner anterior aspect of the upper thigh there is a contraction of the muscular fibers at the upper edge of Poupart's ligament. **genital r.**, any reflex irritability due to disorder of the genital organs. **Gifford's r.**, **Gifford-Galassi r.**, con-**

traction of the pupil when an effort is made to close the lids, which are held apart. **gluteal r.**, a stroke over the skin of the buttock contracts the glutei muscles. **Gordon's r.**, flexor r., paradoxical. **grasp r.**, **grasping r.**, a reflex consisting of a grasping motion of the fingers or of the toes in response to stimulation. **Grünfelder's r.**, dorsal flexion of the great toe with a fan-wise spreading of the other toes elicited by continued pressure at the corner of the posterior lateral fontanel; occurs in the presence of disease of the middle ear in children up to the age of five years. **gustolacrimal r.**, an anomalous reflex by which food taken into the mouth tends to stimulate the secretion not only of saliva but also of tears. **H-r.**, a monosynaptic reflex elicited by stimulating a nerve, particularly the tibial nerve, with an electric shock. **Haab's r.**, bilateral pupillary contraction when the patient sits in a darkened room, and without accommodation or convergence directs his attention to a bright object already within the field of vision. Called also *cerebral cortex r.* **heart r.**, **Abrams' heart r.** **heel-tap r.**, a reflex occurring in disease of the pyramidal tract and consisting of fanning and plantar flexion of the toes produced by tapping the patient's heel. **hepatojugular r.**, see under *reflux*. **Hering-Breuer r.**, the nervous mechanism which tends to limit the respiratory excursions. Stimuli from the sensory endings in the lungs and perhaps in other parts passing up the vagi tend to limit both inspiration and expiration in ordinary breathing. **Hirschberg's r.**, tickling of the sole at the base of the great toe causes adduction of the foot. **Hoffmann's r.**, see under *sign*, def. 2. **Hughes's r.**, see *virile r.*, def. 2. **hypochondrial r.**, sudden inspiration caused by quick pressure beneath the lower border of the ribs. **ileogastric r.**, inhibition of gastric motility by distension of the ileum. **inborn r.**, unconditioned r. **indirect r.**, crossed r. **infraspinal r.**, obtained by tapping a certain spot over the shoulder blade, on a line bisecting the angle formed by the spine of the bone and its inner border; outward rotation of the arm occurs, with simultaneous straightening of the elbow. **inguinal r.**, Geigel's r. **interscapular r.**, a stimulus applied between the scapulae contracts the scapular muscles; called also *scapular r.* **intestinointestinal r.**, when a part of the intestine becomes overdistended or its mucosa becomes excessively irritated, activity in other parts of the intestine is inhibited as long as the distention persists. **inverted radial r.**, a flexion of the fingers without movement of the forearm, produced by tapping the lower end of the radius; it indicates disease of the fifth cervical segment of the spinal cord associated with damage of the pyramidal tract below that level. **iris contraction r.**, pupillary r. **ischemic r.**, the elevation of arterial pressure in response to cerebral ischemia. **jaw r.**, **jaw jerk r.**, closure of the mouth caused by a downward blow on the lower jaw while it hangs passively open. It is seen only rarely in health, but is very noticeable in lesions of the corticospinal tract. **Joffroy's r.**, twitching of the gluteal muscles on pressure against the nates in spastic paralysis. **Juster r.**, extension of the fingers instead of flexion on stimulation of the palm. **juvenile r.**, a glistening white reflection from the smooth surface of the retina in young people. **Kehrer's r.**, **Kisch's r.**, closure of the eye as a result of tactile or thermal stimulation of the deepest part of the external auditory meatus and tympanum. **knee jerk r.**, quadriceps jerk. **Kocher's r.**, contraction of the abdominal muscle on compression of the testicle. **lacrima r.**, secretion of tears elicited by touching the conjunctiva over the cornea. **Landau r.**, when an infant is held in the prone position, the entire body forms a convex upward arc; gentle pressure on the head or gravity flexes the neck and hip, reversing the arc. **laryngeal r.**, irritation of the fauces and larynx causing cough. **laughter r.**, laughter brought on by tickling. **let-down r.**, the ejection or release of milk from the alveoli of the breast into the ducts, caused by a combination of neurogenic and hormonal reflexes involving the hormone oxytocin and, to a lesser extent, vasopressin; called also *milk ejection* and *milk let-down r.* **lid r.**, corneal r. **Liddell and Sherrington r.**, stretch r. **light r.**, 1. a luminous image reflected from the membrana tympani. 2. a circular spot of light seen reflected from the retina with the retinoscopic mirror. 3. contraction of the pupil when light falls on the eye. **lip r.**, a reflex movement of the lips of sleeping babies which occurs on tapping near the angle of the mouth. **Livierato's r.**, **Abrams' heart r.** **Lóvén r.**, general vasodilatation of an organ when its afferent nerve is stimulated; this secures a maximal supply of blood to the organ, together with a general rise of blood pressure. **lumbar r.**, dorsal r. **Lust's r.**, abduction of the foot with dorsal flexion on percussion of the common peroneal nerve. **McCarthy's r.**, contraction of the orbicularis oculi muscle on tapping the supraorbital nerve. **McCormac's r.**, percussing the patellar tendon produces adduction of the opposite leg. **McDowall r.**, a decrease in systemic blood pressure following vagotomy, due to abolishment of the afferent impulses from the atria, which normally induce vasoconstriction. **Magnus and de Kleijn neck r's**, extension of both ipsilateral limbs, or one, or part of a limb, and increase of tonus on the side to which the chin is turned when the head is rotated to the side, and flexion with loss of tonus on the side to which occiput points. Essentially it is a sign of *decerebrate rigidity*. **mandibular r.**, jaw r. **Marinesco-**

Radovici r., palm-chin r. **mass r.**, a reflex exhibited by the entire area controlled by the portion of the spinal cord which has been injured. **Mayer's r.**, opposition and adduction of the thumb combined with flexion at the metacarpophalangeal joint and extension at the interphalangeal joint, on downward pressure of the index finger. **Mendel's r.**, **Mendel's dorsal r. of foot**, **Mendel-Bekhterev r.** **Mendel-Bekhterev r.**, percussion of the dorsum of the foot normally causes dorsal flexion of the second to fifth toes; in certain organic nervous conditions it causes plantar flexion of the toes. Called also *cuboidodigital r.*, *dorsocuboidal r.*, *Mendel-Bekhterev r.*, and *tarsophalangeal r.* **milk ejection r.**, **milk let-down r.**, let-down r. **Mondonesi's r.**, bulbomimic r. **Morley's peritoneocutaneous r.**, when any of the cerebrospinal nerve endings in the peritoneum or subperitoneal tissues are irritated, pain will be referred to the corresponding segmental skin area. **Moro's r.**, **Moro embrace r.**, flexion of an infant's thighs and knees, fanning and then clenching of the fingers, with the arms first thrown outward then brought together in an embrace attitude, produced by a sudden stimulus, such as striking the table on either side of the child. It is seen normally in infants up to 3 to 4 months of age. Called also *embrace r.* and *startle r.* **motor r.**, a reflex brought about by stimulation upon the periphery of the motor mechanism. **muscular r.**, a reflex movement due to the stretching of a muscle. **myenteric r.**, contraction of the intestine above and relaxation below a portion of the intestine that is irritated or distended. **myopic r.**, Weiss's r. **myotatic r.**, stretch r. **nasal r.**, 1. irritation of the Schneiderian membrane provokes sneezing. 2. see *Bekhterev's r.*, def. 4. **nasolabial r.**, sudden retroversion of the head, stretching of the back, retroversion of the arms at the shoulder, extension and pronation of the forearms, and extension and adduction of the legs, elicited by a slight vertical sweeping motion touching the tip of the nose; it frequently occurs in healthy infants, and disappears around the fifth month of age. **nasomental r.**, contraction of the mentalis muscle on tapping the side of the nose with a percussion hammer. **neck righting r.**, rotation of the trunk in the direction in which the head of the supine infant is turned; this reflex is absent or decreased in infants with spasticity. **nociceptive r's**, reflexes initiated by painful stimuli. **nostril r.**, reduction of the size of the opening of the nares, said to occur on the affected side in pulmonary disease. **obliquus r.**, stimulation of the skin below Poupart's ligament contracts a part of the external oblique muscle. **oculocardiac r.**, a slowing of the rhythm of the heart following compression of the eyes or pressure on the carotid sinus. A slowing of from 5 to 13 beats per minute is normal; one of from 13 to 50 or more is exaggerated; one of from 1 to 5 is diminished. If ocular compression produces acceleration of the heart, the reflex is called *inverted*. See also *Aschner's phenomenon*, under *phenomenon*. **oculocephalogyric r.**, the reflex by which the movements of the eye, the head, and the body are directed in the interest of visual attention. **oculopharyngeal r.**, rapid deglutition together with spontaneous closing of the eyes. **oculopupillary r.**, trigeminus r. **oculosensory cell r.**, trigeminus r. **oculovagal r.**, pressure on the eyeball induces atrioventricular beats or rhythm. **Oppenheim's r.**, see under *sign*. **opticofacial winking r.**, closure of the lids when an object is brought suddenly into the field of vision. **orbicular oculi r.**, normal contraction of the orbicularis oculi muscle, with resultant closing of the eye, on percussion at the outer aspect of the supraorbital ridge, over the glabella, or around the margin of the orbit. **orbicularis r.**, Westphal's pupillary r. **orthocardiac r.**, see *Livierato's test*, 2d def. **palatal r.**, **palatine r.**, stimulation of the palate causing swallowing. **palm-chin r.**, twitching of the chin produced by stimulating (scratching) the palm. **palmomental r.**, palm-chin r. **paraserum r.**, group agglutination; paragglutination. **patellar r.**, quadriceps jerk. **patelloadductor r.**, crossed adduction of the thigh produced by tapping the quadriceps tendon as in the patellar reflex. **pathologic r.**, one which is not normal, but is the result of a pathologic condition, and may serve as a sign of disease. **pectoral r.**, the subject's arm is placed half way between adduction and abduction and the examiner's finger in the muscle tendon near the humerus: a sharp blow of the finger elicits adduction and slight internal rotation. **penile r.**, **penis r.**, bulbocavernosus r. **perception r.**, a reflex movement occurring when a perception is formed in consciousness. **perianal r.**, anal r. **peritoneointestinal r.**, inhibition of motility of the stomach and intestine resulting from retroperitoneal irritation or hemorrhage. **pharyngeal r.**, contraction of the constrictor muscle of the pharynx elicited by touching the back of the pharynx; called also *gag r.* **phasic r.**, an active and coordinated movement occurring as a response to stimulation. **Philippson's r.**, excitation of the knee extensor in one leg induced by inhibition in the knee extensor of the other leg. **pilomotor r.**, the production of goose flesh on stroking the skin; trichographism. **Piltz's r.**, attention r. of pupil. **placing r.**, flexion followed by extension of the leg when the infant is held erect and the dorsum of the foot is drawn along the under edge of a table top; it is obtainable in the normal infant up to the age of six weeks. **plantar r.**, irritation of the sole contracts the toes. **platysmal r.**, the act of nipping the platysma contracts the pupil.

postural r., a reflex which consists of some assumption of posture. **prepotential r's**, instincts. **pressor r.**, a reflex to stimulation resulting in increased activity of a motor center. **Preyer's r.**, involuntary movements of the ears produced by auditory stimulation. **proprioceptive r.**, a reflex that is initiated by stimuli arising from some function of the reflex mechanism itself. **psychic r.**, a reflex aroused by a stored-up impression of memory, such as the secretion of saliva at the sight or thought of good tasting food. **psychocardiac r.**, increase in the pulse rate on recalling an individual emotional experience. **psychogalvanic r.**, decreased electric resistance of the body as a result of mental or emotional agitation. **pulmonocoratory r.**, reflex vasoconstriction of the coronary arteries, mediated by the vagus nerves. **pupillary r.**, 1. contraction of the pupil on exposure of the retina to light. 2. any reflex involving the iris, resulting in change in the size of the pupil, occurring in response to various stimuli, e.g., change in illumination or point of fixation, sudden loud noise, emotional stimulation. **pupillary r., paradoxical**, stimulation of the retina by light dilates the pupil. **Puusepp's r.**, abduction of the little toe on stimulating the posterior external part of the sole of the foot; indicative of lesion of the extrapyramidal and pyramidal tracts. **quadriceps r.**, contraction of the quadriceps and extension of the leg when the quadriceps tendon is tapped between the patella and the tibial tubercle. **quadrupedal extensor r.**, Brain's r. **radial r.**, flexion of the forearm, following tapping on the lower end of the radius; when the fingers flex as well, it indicates hyperreflexia. **rectal r.**, the process by which the accumulation of feces in the rectum excites defecation; called also *defecation r.* **red r.**, a luminous red appearance seen upon the retina. **regional r.**, segmental r. **Remak's r.**, plantar flexion of the first three toes and sometimes of the foot, with extension of the knee on stroking of the upper anterior surface of the thigh. **renointestinal r.**, inhibition of motility of the intestine resulting from renal irritation. **renorenal r.**, a reflex pain or anuria in a sound kidney in cases in which the other kidney is diseased. **resistance r.**, Babinski r. **retrobulbar pupillary r.**, slight dilatation of the pupil which contracts under light stimulation, and then dilates while the light stimulation is still present. **Riddoch's mass r.**, in severe injury of the spinal cord, stimulation below the level of the lesion produces flexion reflexes of the lower extremity, evacuation of the bowels and bladder, and sweating of the skin below the level of the lesion. **righting r.**, the ability to assume optimal position when there has been a departure from it. **Roger's r.**, salivation on irritation of the esophagus. **rooting r.**, a reflex in the newborn in which stimulation of the side of the cheek or the upper or lower lip causes the infant to turn his mouth and face to the stimulus. **Rossolimo's r.**, on tapping the plantar surface of the toes, plantar flexion of the toes occurs when there are lesions of the pyramidal tract. **Ruggeri's r.**, acceleration of the pulse following strong convergence of the eyeballs toward something very close to the eyes; it indicates sympathetic excitability. **Saenger's r.**, see under *sign*. **scapular r.**, interscapular r. **scapulohumeral r.**, adduction with outward rotation of the humerus produced by percutting along the inner edge of the scapula. **Schäffer's r.**, flexion of the foot and toes on pinching the Achilles tendon at its middle third; seen in organic hemiplegia. **scrotal r.**, a slow, vermicular contraction of the dartos muscle obtained by stroking the perineum or by applying a cold object to it. **segmental r.**, a reflex controlled by a single segment or region of the spinal cord. **senile r.**, a gray reflection from the pupil of aged people due to hardening of the lens. **sexual r.**, the reflex of erection and ejaculation produced by stimulation of the genitals. **shot-silk r.**, see *shot-silk retina*, under *retina*. **simple r.**, a reflex involving a single muscle. **skin r.**, a reflex which occurs on stimulation of the skin. **skin pupillary r.**, dilatation of the pupil produced by irritation of the skin of the neck. **Snellen's r.**, unilateral congestion of the ear upon stimulation of the distal end of the divided auriculocervical nerve. **sole r.**, plantar r. **Somogyi's r.**, widening of the pupils on deep inspiration and their contraction on expiration; said to indicate irritable weakness or instability of the cardiac vagus. **somatointestinal r.**, inhibition of intestinal motility when the skin over the abdomen is stimulated. **spinal r.**, any reflex whose arc is connected with a center in the spinal cord. **stapedial r.**, acoustic r. **startle r.**, Moro's r. **static r.**, the reflex pose and righting of the body. **statotomic r's**, attitudinal r's. **stepping r.**, 1. movements of progression elicited when the infant is held upright and inclined forward with the soles of the feet touching a flat surface; it is obtainable in the normal infant up to the age of six weeks. 2. extension of the hind leg of a dog on pressing the plantar surface of the foot. **Stookey r.**, with the leg semiflexed at the knee, the tendons of the semimembranosus and the semitendinosus muscles are tapped: flexion of the leg results. **stretch r.**, reflex contraction of a muscle in response to passive longitudinal stretching; called also *Liddell and Sherrington r.* and *myotatic reflex*. **Strümpell's r.**, leg movement with adduction of the foot produced by stroking the thigh or abdomen. **sucking r.**, sucking movements of the mouth elicited by the touching of an object to an infant's lips. **superficial r.**, any withdrawal re-

flex elicited by noxious or tactile stimulation of the skin, cornea, or mucous membrane, including the corneal reflex, pharyngeal reflex, cremasteric reflex, etc. **supinator longus r.**, tapping on the lower end of the radius produces flexion of the forearm. **supraorbital r.**, McCarthy's r. **suprapatellar r.**, with the leg extended the index finger of the examiner is crooked above the patella and is struck; the result is a kick-back of the patella. **suprapubic r.**, stroking the abdomen above Poupart's ligament causes deviation of the linea alba toward the side that is stroked. **supraumbilical r.**, epigastric reflex. **swallowing r.**, palatal r. **tapetal light r.**, the glowing of eyes in the dark, just as do the eyes of carnivorous animals. **tarsophalangeal r.**, Mendel-Bekhterev r. **tendon r.**, involuntary contraction of a muscle after brief stretching caused by percussion of its tendon; tendon reflexes include the biceps reflex, triceps reflex, quadriceps reflex, etc. Called also *deep r.*, *tendon jerk* or *reaction*. **threat r.**, sudden closure of the eyes at a sign of danger. **Throckmorton's r.**, a variation of the Babinski reflex elicited by percussion of the metatarsophalangeal region in the dorsum of the foot. **tibioadductor r.**, tapping of the tibia on the inner side of the leg results either in homolateral adduction of the leg or crossed adduction from side to side. **toe r.**, strong flexion of the great toe flexes all the muscles of the lower extremity; it is seen in pathologic states in which there is hyperreflexia. **tonic r.**, the passing of an appreciable period of time after the occurrence of a reflex before relaxation; a reflex which maintains the reflex contractions that are the basis of posture and attitude. **tonic neck r.**, a reflex in the newborn consisting of extension of the arm and sometimes of the leg on the side to which the head is forcibly turned, with flexion of the contralateral limbs. **trained r.**, conditioned response. **triceps r.**, contraction of the belly of the triceps muscle and slight extension of the arm when the tendon of the muscle is tapped directly, with the arm flexed and fully supported and relaxed. **triceps surae r.**, plantar flexion of the foot elicited by a tap on the Achilles tendon preferably while the patient kneels on a bed or chair, the feet hanging free over the edge; ankle jerk. **trigeminus r.**, stimulation of the cornea or of the eyelid results in dilatation of the ipsilateral and the contralateral pupil; called also *oculopupillary r.* and *oculosensory cell r.* **ulnar r.**, tapping of the styloid process of the ulna results in pronation of the hand. **unconditioned r.**, see under *response*. **urinary r's**, bladder r. **vaccinoid r.**, a slight cutaneous reaction to vaccination in a person partially immune to smallpox. **vagus r.**, abnormal sensitiveness to pressure over the course of the vagus nerve. **vascular r.**, constriction of an artery produced by peripheral irritation. **vasopressor r's**, rise in pressure from reflex vasoconstriction. **vertebra prominens r.**, pressure upon the last cervical vertebra of an animal reduces the tone of all four limbs. **vesical r.**, desire to urinate produced by moderate distention of the bladder. **vesicointestinal r.**, inhibition of intestinal motility due to irritation of the bladder. **vestibular r's**, the reflexes for maintaining the position of the eyes and body in relation to changes in orientation of the head; the neural pathways are complex, traveling from the vestibular nerve to the vestibular nuclei and thence to the involved muscles of the eye and body. **vestibulo-ocular r.**, nystagmus or deviation of the eyes in response to stimulation of the vestibular system by angular acceleration or deceleration or by irrigation of the ears with warm or cool water or air (caloric test). **virile r.**, 1. bulbocavernosus reflex. 2. a reflex in the flaccid penis elicited by pulling upward the foreskin or glans penis, when a sudden downward jerk results. Called also *Hughes's r.* **visceral r.**, that in which the stimulus is set up by some state of an internal organ. **viscerocardiac r.**, reflex alteration in cardiac rhythm or contractility caused by visceral excitation. **visceromotor r.**, contraction of abdominal muscles (abdominal rigidity) over a diseased viscus. **viscerosensory r.**, a region of sensitiveness to pressure on some part of the body due to disease of some internal organ. **viscerotrophic r.**, degeneration of any peripheral tissue as a result of chronic inflammation of any of the viscera. **von Mering r.**, relaxation of overlying abdominal muscles following ingestion of food. **water-silk r.**, see *shot-silk retina*, under *retina*. **Weiss's r.**, a curved reflection seen with the ophthalmoscope on the fundus of the eye to the nasal side of the disk; believed to be indicative of myopia. **Westphal's pupillary r.**, **Westphal-Piltz r.**, contraction of the pupil associated with closure or attempted closure of the eye. **zygomatic r.**, lateral motion of the lower jaw to the percussed side on percussion over the zygoma.

reflexogenic (re-flek''so-jen''ik) [*reflex* + Gr. *gennan* to produce] producing or increasing reflex action.

reflexogenous (re''fleks-oj''ē-nus) reflexogenic.

reflexograph (re-flek''so-graf) [*reflex* + Gr. *graphein* to write] an instrument for graphically recording a reflex.

reflexology (re''flek-sol''o-je) the science or study of reflexes.

reflexometer (re''flek-som''ē-ter) [*reflex* + L. *metrum* measure] an instrument for measuring the force necessary to produce myotatic contraction.

reflexophil (re-flek''so-fil) [*reflex* + Gr. *philein* to love] characterized by activity of reflexes.

reflexotherapy (re-flek''so-ther''ah-pe) treatment by irritation of any area of the body distant from the lesion.

reflux (re-fluks) [re- + L. *fluxus* flow] a backward or return flow. **esophageal r.**, **gastroesophageal r.**, reflux of the stomach contents into the esophagus. **hepatojugular r.**, distention of the jugular vein induced by pressure over the liver; it suggests insufficiency of the right heart; formerly called **hepatojugular reflex**. **intrarenal r.**, reflux of urine into the renal parenchymal tissue. **urethrovesiculo-differential r.**, the passage of a liquid, sperm, or injected substance from the posterior urethra into the genital system. **vesicoureteral r.**, **vesicoureteric r.**, the passage of urine from the bladder back into a ureter; called also **vesicoureteral regurgitation**.

refract (re-frakt') [L. *refringere* to break apart] 1. to cause to deviate. 2. to ascertain errors of ocular refraction.

refracta dosi (re-frak'tah do'si) [L.] in repeated and divided doses.

refractile (re-frak'til) capable of refracting.

refraction (re-frak'shun) 1. the act or process of refracting; specifically the determination of the refractive errors of the eye and their correction by glasses. 2. the deviation of light in passing obliquely from one medium to another of different density. The deviation occurs at the surface of junction of the two mediums, which is known as the refracting surface. The ray before refraction is called the *incident ray*; after refraction it is the *refracted ray*. The point of junction of the incident and the refracted ray is known as the *point of incidence*. The angle between the incident ray and a line perpendicular to the refracting surface at the point of incidence is known as the *angle of incidence*; that between the refracted ray and this perpendicular is called the *angle of refraction*. The sine of the angle of incidence divided by the sine of the angle of refraction gives the *relative index of refraction*. **double r.**, that in which the incident ray is divided into two refracted rays, so as to produce a double image. Double refraction is produced by Iceland spar. See *Nicol prism*, under *prism*. **dynamic r.**, the normal accommodation of the eye which is being continually exerted without conscious effort. **ocular r.**, the refraction of light produced by the mediums of the normal eye and resulting in the focusing of images upon the retina. **static r.**, the refraction of the eye when its accommodation is paralyzed.

refractionist (re-frak'shun-ist) one skilled in determining the refracting power of the eyes and correcting refractive defects.

refractive (re-frak'tiv) pertaining to or subserving a process of refraction; having the power to refract.

refractivity (re-frak-tiv'i-te) the quality of being refractive; the power or ability to refract.

refractometer (re-frak-tom'ē-ter) [*refraction* + Gr. *metron* measure] 1. an instrument for measuring the refractive power of the eye. 2. an instrument for determining the indexes of refraction of various substances, particularly for determining the strength of lenses of spectacles.

refractometry (re-frak-tom'ē-tre) the measurement of refractive power with the refractometer.

refractor (re-frakt'or) a device for retinoscopic examination of the eye to determine its refractive power.

refractory (re-frak'to-re) [L. *refractorius*] not readily yielding to treatment.

refracture (re-frak'chur) the operation of breaking over again a bone which has been fractured and has united with a deformity; called also *anacclasis*.

refrangibility (re-fran'jī-bil'i-te) susceptibility of being refracted; the quality of being refrangible.

refrangible (re-fran'jī-b'l) susceptible of being refracted.

refresh (re-fresh') to freshen; to denude a wound of epithelium to enhance tissue repair.

refrigerant (re-frij'er-ant) [L. *refrigerans*] 1. relieving fever and thirst. 2. a cooling remedy. The refrigerants consist of cooling, acidulous drinks and evaporating lotions. Called also *algefacient*.

refrigeration (re-frij'er-a'shun) [L. *refrigeratio*] the therapeutic application of or exposure to low temperatures.

refringent (re-frin'jent) [L. *refringens*] refractive.

Refsum's disease (syndrome) (ref'soomz) [Sigvald Refsum, Norwegian physician] see under *disease*.

refusion (re-fu'shun) [L. *refusio*] the temporary removal and subsequent return of blood to the circulation.

R.E.G. radioencephalogram.

regainer (re-gān'er) a spacing appliance used to restore space in the dental arches.

regel (ra'gel) [Ger.] menstruation. **klei'ne r.** ["small menstruation"], a slight bloody discharge from the uterus at the time of ovulation.

regeneration (re-jen'er-a'shun) [re- + L. *generare* to produce, bring to life] the natural renewal of a structure, as of a lost tissue or part. **epimorphic r.**, epimorphosis. **morphallactic r.**, morphallaxis.

regimen (rej'i-men) [L. "guidance"] a strictly regulated scheme of diet, exercise, or other activity designed to achieve certain ends.

regio (re'je-o), pl. *regio'nes* [L. "a space enclosed by lines"] a region: a plane area with more or less definite boundaries; [NA] a general term for certain areas on the surface of the body within certain defined boundaries. **r. abdomina'lis latera'lis**, **r. lateralis abdominis** [dextra et sinistra]. **regio'nes abdo-minis** [NA], the various anatomical regions of the abdomen, including [NA] the hypochondriac, epigastric, lateral, umbilical, inguinal, and pubic regions. See illustration under *abdomen*. **r. acromia'lis**, the region of the shoulder overlying the acromion. **r. ana'lis** [NA], anal region: the portion of the perineal region surrounding the anus. **r. antebrachii ante'rior** [NA], anterior antebrachial region: the anterior, or palmar, region of the forearm; called also *regio antibrachii volaris*. **r. antebrachii poste'rior** [NA], **r. antibrachii dorsa'lis**, posterior antebrachial region: the posterior, or dorsal, region of the forearm. **r. antibrachii radia'lis**, radial antebrachial region: the radial aspect of the forearm. **r. antibrachii ul-na'ris**, ulnar antebrachial region: the ulnar aspect of the forearm. **r. antibrachii vola'ris**, **r. antibrachii ante'rior**. **r. auricula'ris**, auricular region: the region of the head on either side, about the ear. **r. axilla'ris** [NA], axillary region: the region of the chest about the axilla. **r. bra'chii ante'rior** [NA], anterior brachial region: the anterior region of the arm. **r. bra'chii latera'lis**, the lateral aspect of the arm. **r. bra'chii media'lis**, the medial aspect of the arm. **r. bra'chii poste'rior** [NA], posterior brachial region: the posterior region of the arm. **r. bucca'lis** [NA], buccal region: the region of the cheek. **r. calca'nea** [NA], calcaneal region: the region about the heel. **regio'nes cap'itis** [NA], the various anatomical regions of the head, including the frontal, parietal, occipital, temporal, and infratemporal regions. **r. clavicula'ris**, clavicular region: the region of the front of the chest, overlying the clavicle. **regio'nes col'li** [NA], the various anatomical regions of the neck, including the anterior, sternocleidomastoid, lateral, and posterior regions. **r. col'li ante'rior** [NA], the anteromedial region of the neck. **r. col'li latera'lis** [NA], posterior region of neck: the region of the neck lateral to the regio sternocleidomastoidea; called also *trigonum colli laterale*. **r. col'li poste'rior** [NA], the posterior region of the neck, between the regio occipitalis above and the regions of the back below. **regio'nes cor'poris** [NA], **regio'nes cor'poris huma'ni**, regions of the body: the various anatomical areas, or subdivisions, demarcated on the surface of the human body for purpose of topographical description. **r. costa'lis latera'lis**, the lateral region of the thorax, or chest, overlying the ribs. **r. cox'ae**, the region of the hip. **r. cru'ris ante'rior** [NA], anterior crural region: the anterior region of the leg. **r. cru'ris latera'lis**, the lateral aspect of the leg. **r. cru'ris media'lis**, the medial aspect of the leg. **r. cru'ris poste'rior** [NA], posterior crural region: the posterior region of the leg. **r. cu'biti ante'rior** [NA], anterior cubital region: the anterior region about the elbow. **r. cu'biti latera'lis**, the lateral aspect of the elbow. **r. cu'biti media'lis**, the medial aspect of the elbow. **r. cu'biti poste'rior** [NA], posterior cubital region: the posterior or dorsal region about the elbow. **r. del-toi'dea** [NA], deltoid region: the region overlying the deltoid muscle. **regio'nes digita'les ma'nus**, the regions of the fingers. **regio'nes digita'les pe'dis**, the regions of the toes. **regio'nes dorsa'les digito'rum ma'nus**, the dorsal aspect of the several fingers. **regio'nes dorsa'les digito'rum pe'dis**, the dorsal aspect of the several toes. **r. dorsa'lis ma'nus**, **dorsum manus**. **r. dorsa'lis pe'dis**, **dorsum pedis**. **regio'nes dor'si** [NA], the various anatomical regions of the back, including the vertebral, sacral, scapular, infrascapular, and lumbar regions. **r. epigas'trica** [NA], epigastric region: the upper middle region of the abdomen, located within the sternal angle; called also *antecardium* and *epigastrium*. **regio'nes extremita'tis inferio'ris**, **regiones membri inferioris**. **regio'nes extremita'tis superio'ris**, **regiones membri superioris**. **regio'nes faci'e** [NA], the various anatomical regions of the face. **r. fem'oris ante'rior** [NA], the anterior region of the thigh. **r. fem'oris latera'lis**, the lateral aspect of the thigh. **r. fem'oris media'lis**, the medial aspect of the thigh. **r. fem'oris poste'rior** [NA], the posterior region of the thigh. **r. fronta'lis** [NA], frontal region: the region of the head overlying the frontal bone; the forehead. **r. genu ante'rior**, **r. genu ante'rior**. **r. genu poste'rior**, **r. genu poste'rior**. **r. ge'nus ante'rior** [NA], the anterior region about the knee; called also *r. genu ante'rior*. **r. ge'nus poste'rior** [NA], the posterior region about the knee; called also *r. genu posterior*. **r. glu'tea** [NA], gluteal region: the region overlying the gluteal muscles. **r. hyoi'dea**, hyoid region: the part of the anterior region of the neck about the hyoid bone. **r. hypochondria'ca** [dext'ra et sinis'tra] [NA], hypochondriac region (right and left): the upper lateral region of the abdomen, about the costal cartilages, on either side of the epigastric region. **r. hypogas'trica**, **r. pubica**. **r. infra-clavicula'ris** [NA], infraclavicular region: the region of the chest just below the clavicle. **r. inframamma'lis**, **inframammary** region: the region of the front of the chest situated below either mamma and above the lower border of the twelfth rib. **r. infraorbita'lis** [NA], infraorbital region: the region

beneath the eye, adjacent to the regio nasalis. **r. infra-scapula/ris** [NA], infrascapular region: the region of the back below the scapula and lateral to the lower thoracic vertebrae. **r. infratempora/ris** [NA], infratemporal region: the region of the head on either side, about the infratemporal fossa. **r. inguina/ris** [dex'tra et sinis'tra] [NA], inguinal region (right and left): the region of the abdomen on either side, lateral to the pubic region and about the inguinal canal. Called also *iliac region*. **r. interscapula/ris**, interscapular region: the region of the back between the scapulae. **r. labia/ris infe'rior**, inferior labial region: the region of the face about the lower lip. **r. labia/ris supe'rior**, superior labial region: the region of the face about the upper lip. **r. laryn'gea**, laryngeal region: the part of the anterior region of the neck overlying the larynx. **r. latera/ris abdo'minis** [dex'tra et sinis'tra], [NA], lateral abdominal region (right and left): the region of the abdomen on either side of the umbilical region; called also *regio abdominalis lateralis*, *external abdominal region*, and *lumbar region*. **r. lumba/ris** [NA], lumbar region: the region of the back lying lateral to the lumbar vertebrae. **r. malleola/ris latera/ris**, the region overlying the lateral malleolus. **r. malleola/ris media/ris**, the region overlying the medial malleolus. **r. mamma/ris** [NA], mammary region: the region of the front of the chest, about the mammary gland. **r. mastoi'dea**, mastoid region: the region of the head on either side, about the mastoid process of the temporal bone. **r. media'na dor'si**, *r. vertebra/ris*. **regio'nes mem'bri infe'rio/ris** [NA], the various anatomical regions of the lower limb; called also *regiones extremitatis infe'rioris*. **regio'nes mem'bri superio/ris** [NA], the various anatomical regions of the upper limb; called also *regiones extremitatis superioris*. **r. menta/ris** [NA], mental region: the region of the chin. **r. nasa/ris** [NA], nasal region: the region of the face about the nose. **r. nu'chae**, nuchal region: the part of the posterior region of the neck adjoining the regio lateralis colli. **r. occipita/ris** [NA], occipital region: the region of the head overlying the occipital bone. **r. olec'rani**, olecranal region: the region of the elbow overlying the olecranon. **r. ol-facto'ria** [NA], olfactory region: the upper part of the nasal cavity, the mucosa of which contains most of the receptors for the sense of smell. **r. ora/ris** [NA], oral region: the region of the face about the mouth. **r. orbita/ris** [NA], orbital region: the region of the face about the eye; called also *ocular region*. **r. palpebra/ris infe'rior**, inferior palpebral region: the region of the lower eyelid. **r. palpebra/ris supe'rior**, superior palpebral region: the region of the upper eyelid. **r. parieta/ris** [NA], parietal region: the region of the head on either side, about the parietal bone. **r. parotideomasseter'ica** [NA], parotideomasseteric region: the region of the face on either side, about the parotid gland and masseter muscle. **r. patella/ris**, the region of the knee overlying the patella. **regio'nes pecto'ris** [NA], pectoral regions: the various regions of the chest, including the infraclavicular, mammary, and axillary regions. **r. pecto'ris ante'rior**, the anterior aspect of the thorax, or chest. **r. pecto'ris latera/ris**, the lateral aspect of the thorax, or chest. **r. perinea/ris** [NA], perineal region: the region overlying the pelvic outlet, including the anal and urogenital regions. **regio'nes planta/res digito'rum pe'dis**, the plantar aspect of the several toes. **r. planta/ris pe'dis**, planta pedis. **r. pu'bica** [NA], pubic region: the middle portion of the most inferior region of the abdomen, located below the umbilical region and between the inguinal regions. Called also *r. hypogastrica*, *hypogastric region*, and *hypogastrium*. **r. puden-da/ris**, the region of the external genital organs (scrotum or vulva). **r. respirato'ria** [NA], respiratory region: the part of the nasal cavity below the olfactory region. **r. retromalleola/ris latera/ris**, the region back of the lateral malleolus. **r. retromalleola/ris media/ris**, the region back of the medial malleolus. **r. sacra/ris** [NA], sacral region: the region of the back overlying the sacrum. **r. scapula/ris** [NA], scapular region: the region of the back overlying the scapula. **r. sterna/ris**, the region of the front of the chest overlying the sternum. **r. sternocleidomastoi'dea** [NA], sternocleidomastoid region: the region of the neck overlying the sternocleidomastoid muscle. **r. subhyoi'dea**, subhyoid region: the part of the anterior region of the neck below the hyoid bone. **r. submaxilla/ris**, trigonum submandibulare. **r. submenta/ris**, submental region: the part of the anterior region of the neck beneath the chin. **r. supraorbita/ris**, supraorbital region: the region of the head immediately above the orbit. **r. suprascapula/ris**, suprascapular region: the region of the back above the scapula. **r. suprasterna/ris**, suprasternal region: the part of the anterior region of the neck above the sternum. **r. sura/ris**, the posterior aspect of the leg, overlying the calf. **r. tempora/ris** [NA], temporal region: the region of the head on either side, about the temporal bone. **r. thyreo'i'dea**, thyroid region: the part of the anterior region of the neck about the thyroid gland. **r. trochanter'ica**, the portion of the lateral region of the thigh overlying the greater trochanter. **r. umbilica/ris** [NA], umbilical region: the region of the abdomen about the umbilicus. **regio'nes unguicula/res digito'rum ma'nus**, the region of the several fingers about the nails. **regio'nes unguicula/res digito'rum pe'dis**, the region of the several toes

about the nails. **r. urogenita/ris** [NA], urogenital region: the portion of the perineal region surrounding the urogenital organs. **r. vertebra/ris** [NA], vertebral region: the middle region of the back, overlying the vertebral column; called also *r. mediana dors*. **regio'nes vola/res digito'rum ma'nus**, volar region of fingers: the palmar aspect of the several fingers. **r. vola/ris ma'nus**, palma manus. **r. zygoma'ti'ca** [NA], zygomatic region: the region of the face on either side, about the zygomatic bone.

region (re'jun) a plane area with more or less definite boundaries; see also *regio*. **abdominal r's**, the various anatomical regions of the abdomen; see *regiones abdominis* [NA], and illustration under *abdomen*. **abdominal r., external, abdominal r., lateral**, see *regio lateralis abdominis* [dextra et sinistra]. **r. of accommodation**, the space including all points to which the eye can be adjusted by accommodation. **anal r.**, regio analis. **antebrachial r., anterior**, regio antebrachii anterior. **antebrachial r., posterior**, regio antebrachii posterior. **antebrachial r., radial**, regio antebrachii radialis. **antebrachial r., ulnar**, regio antebrachii ulnaris. **antebrachial r., volar**, regio antebrachii anterior. **anterior r. of neck**, regio colli anterior. **auricular r.**, regio auricularis. **axillary r.**, regio axillaris. **basilar r.**, the base of the skull. **brachial r., anterior**, regio brachii anterior. **Broca's r.**, see under *convolution*. **buccal r.**, regio buccalis. **calcaneal r.**, regio calcanea. **ciliary r.**, the part of the eye occupied by the ciliary body and its adjuncts. **clavicular r.**, regio clavicularis. **crural r., anterior**, regio cruris anterior. **crural r., posterior**, regio cruris posterior. **cubital r., anterior**, regio cubiti anterior. **cubital r., posterior**, regio cubiti posterior. **deltoid r.**, regio deltoidea. **dorsal r's of fingers**, regiones dorsales digitorum manus. **dorsal r's of toes**, regiones dorsales digitorum pedis. **dorsal lip r.**, the mesodermal tissue around the dorsal lip of the blastopore; it is the organizer which by induction initiates and controls the early development of the embryo. **encephalic r.**, lamina alaris. **epigastric r.**, regio epigastrica. **extrapolar r.**, that region of the body which lies outside the influence of the poles in electrotherapy. **facial r's**, the areas into which the face is divided, including the buccal (side of oral cavity), *infraorbital* (below the eye), *mental* (chin), *nasal* (nose), *oral* (lips), *orbital* (eye), *parotideomasseter* (angle of the jaw), and *zygomatic* (cheek bone); called also *regiones faciei* [NA]. **frontal r.**, regio frontalis. **genitourinary r.**, regio urogenitalis. **gluteal r.**, regio glutea. **homology r's**, looped structures, comprising approximately 100 amino acid residues and fastened by disulfide bonds, that show similarities in primary structure from one region to another. They represent the building blocks or units of immunoglobulin molecules. **hyoid r.**, regio hyoidea. **hypochondriac r.**, see *regio hypochondriaca* [dextra et sinistra]. **hypogastric r.**, regio pubica. **I r.**, that part of the major histocompatibility complex where immune response genes are present. **iliac r.**, regio inguinalis. **infraclavicular r.**, regio infraclavicularis. **inframammary r.**, regio inframammaris. **infraorbital r.**, regio infraorbitalis. **infrascapular r.**, regio infrascapularis. **infratemporal r.**, regio infratemporalis. **inguinal r.**, see *regio inguinalis* [dextra et sinistra]. **interscapular r.**, regio interscapularis. **labial r., inferior**, regio labialis inferior. **labial r., superior**, regio labialis superior. **laryngeal r.**, regio laryngea. **lumbar r., 1.** regio lumbalis. **2.** regio lateralis abdominis. **mammary r.**, regio mammalis. **mastoid r.**, regio mastoi'dea. **mental r.**, regio mentalis. **motor r.**, the ascending frontal and parietal convolutions of the cerebrum; called also *rolandic r.* **mylohyoid r.**, the region on the lingual surface of the mandible to which the mylohyoid muscle is attached. **r. of nape**, regio nuchae. **nasal r.**, regio nasalis. **nuchal r.**, regio nuchae. **occipital r.**, regio occipitalis. **ocular r.**, regio orbitalis. **olecranal r.**, regio olecrani. **olfactory r.**, regio olfactoria. **opticostriate r.**, the basal ganglia and the capsule. **oral r.**, regio oralis. **orbital r.**, regio orbitalis. **palpebral r., inferior**, regio palpebralis inferior. **palpebral r., superior**, regio palpebralis superior. **parietal r.**, regio parietalis. **parietotemporal r.**, sensory r. **parotideomasseteric r.**, regio parotideomasseterica. **pectoral r's**, the areas into which the anterior surface of the chest is divided; see *regiones pectoris* [NA]. **perineal r.**, regio perinealis. **plantar r's of toes**, regiones plantares digitorum pedis. **posterior r. of neck**, regio colli posterior. **precordial r.**, a part of the anterior surface of the body covering the heart and the pit of the stomach. **prefrontal r.**, the part of the frontal lobe of the cerebrum in front of the precentral fissures. **presumptive r.**, an area of the blastula which has been proved under normal conditions to develop into a specific organ or type of tissue. **pterygomaxillary r.**, the region of the face about the zygoma and the prominences of the lower jaw. **pubic r.**, regio pubica. **respiratory r.**, regio respiratoria. **rolandic r., motor r.** **sacral r.**, regio sacralis. **scapular r.**, regio scapularis. **sensory r.**, a part of the cerebral cortex located in part behind the central sulcus; called also *parietotemporal r.* **sternocleidomastoid r.**, regio sternocleidomastoidea. **subauricular r.**, fossa retromandibularis. **subhyoid r.**, regio subhyoidea. **submaxillary r.**, trigonum submandibulare.

- submental r.**, regio submental. **supraclavicular r.**, the region above the clavicle. **supraorbital r.**, regio supraorbitalis. **suprasternal r.**, regio suprasternalis. **temporal r.**, regio temporalis. **thyroid r.**, regio thyroidea. **trabecular r.**, the region of the embryonic skull from which the sphenoid bone is developed. **umbilical r.**, regio umbilicalis. **urogenital r.**, regio urogenitalis. **vertebral r.**, regio vertebralis. **vestibular r.**, the lowest and the movable portion of the nose; it is lined with stratified squamous cell epithelium and possesses hairs and sebaceous glands. **volar r's of fingers**, regiones volares digitorum manus. **volar r. of hand**, palma manus. **zygomatic r.**, regio zygomatica.
- regional** (re'jun-al) pertaining to, limited to, or affecting a certain region or regions.
- regiones** (re'je-o'néz) [L.] plural of *regio*.
- registant** (rej'is-trant) a nurse who is listed on the books of a registry as available for duty.
- registrar** (rej'is-trar) 1. an official keeper of records. 2. in British hospitals, a resident specialist who acts as assistant to the chief or attending specialist.
- registration** (rej'is-tra'shun) the act of recording. In dentistry, the making of a record of the jaw relations present, or of those desired, in order to transfer them to an articulator to facilitate proper construction of a dental prosthesis. **maxillomandibular r.**, see under *record*.
- registry** (rej'is-tre) 1. an office where a nurse may have his or her name listed as being available for duty. 2. a central agency for the collection of pathologic material and related clinical, laboratory, x-ray, and other data in a specified field of pathology, so organized that the data can be properly processed and made available for study.
- Regitine** (rej'i-tén) trademark for a preparation of phentolamine.
- regression** (re-gresh'un) [L. *regressio* a return] 1. a return to a former or earlier state. 2. a subsidence of symptoms or of a disease process. 3. in biology, the tendency in successive generations toward the mean; see *Galton's law of regression*, under *law*. 4. the turning backward of the libido to an early fixation at infantile levels because of inability to function in terms of reality. **atavistic r.**, a process by which the mind ceases to function at a logical critical level and reverts to a biologically more primitive mode of functioning.
- regressive** (re-gres'iv) going back; subsiding; characterized by regression.
- regular** (reg'u-lar) [L. *regularis*; *regula* rule] normal or conforming to rule; occurring at proper or fixed intervals.
- regulation** (reg'u-la'shun) [L. *regula* rule] 1. the act of adjusting or state of being adjusted to a certain standard. 2. in biology, the adaptation of form or behavior of an organism to changed conditions. 3. the power of a pregastrula stage to form a whole embryo from a part. **menstrual r.**, removal of the uterine contents, without dilatation, by application of a vacuum through a cannula introduced into the uterus.
- Reg. umb.** abbreviation for L. *regio umbilici*, umbilical region.
- regurgitant** (re-gur'ji-tant) [re- + L. *gurgitare* to flood] flowing back or in the opposite direction from normal.
- regurgitation** (re-gur'ji-ta'shun) [re- + L. *gurgitare* to flood] a backward flowing, as the casting up of undigested food, or the backward flowing of blood into the heart, or between the chambers of the heart when a valve is incompetent. **aortic r.**, the backflow of blood from the aorta into the left ventricle, owing to imperfect functioning (insufficiency or incompetence) of the aortic semilunar valve. **mitral r.**, the backflow of blood from the left ventricle into the left atrium, owing to inadequate functioning (insufficiency) of the mitral valve. **pulmonic r.**, the backflow of blood from the pulmonary artery into the right ventricle, owing to inadequate functioning (insufficiency) of the pulmonic semilunar valve. **tricuspid r.**, the backflow of blood from the right ventricle into the right atrium, owing to imperfect functioning (insufficiency) of the tricuspid valve. **valvular r.**, regurgitation of the blood through the orifices of the heart valves owing to imperfect closing (insufficiency or incompetence) of the valves; named, according to the valve affected, *aortic, mitral, pulmonic, or tricuspid r.* **vesicoureteral r.**, see under *reflux*.
- rehabilitation** (re'hah-bil'i-ta'shun) 1. the restoration of normal form and function after injury or illness. 2. the restoration of an ill or injured patient to self-sufficiency or to gainful employment at his highest attainable skill in the shortest possible time.
- rehabilitatee** (re'hah-bil'i-te') the subject of rehabilitation.
- rehalation** (re'hah-la'shun) [re- + L. *halare* to breathe] re-breathing.
- Rehfuß's test (method), tube** (ra'fus) [Martin Emil Rehfuß, American physician, 1887-1964] see under *tests* and *tube*.
- rehydration** (re'hi-dra'shun) the restoration of water or of fluid content to a body or to substance which has become dehydrated.
- Reichel's cloacal duct** (ri'kelz) [Friedrich Paul Reichel, German obstetrician, born 1858] see under *duct*.
- Reichert's canal**, etc. [Karl Bogislaus Reichert, German anatomist, 1811-1883] see under *canal, cartilage, membrane, recess, scar, and substance*.
- Reichmann's disease (syndrome)** (rik'manz) [Nikolas Reichmann, Warsaw physician, 1851-1918] gastrosuccorhea.
- Reichstein** (rik'stün), Tadeus. Polish chemist in Switzerland, born 1897; co-winner, with E. C. Kendall and P. S. Hench, of the Nobel prize for medicine and physiology in 1950.
- Reid's base line** (rēdz) [Robert William Reid, Scottish anatomist, 1851-1939] see *base line*, under *line*.
- Reid Hunt's reaction, test** [Reid Hunt, American pharmacologist, 1870-1948] see *Hunt's reaction*, under *reaction*.
- Reil's ansa**, etc. (rilz) [Johann Christian Reil, German anatomist, 1759-1813] see under *ansa, insula, ribbon, sulcus, and trigone*.
- reimplantation** (re'im-plan-ta'shun) replacement of tissue or a structure, such as a tooth, in the site from which it was previously lost or removed.
- reinfection** (re'in-fek'shun) a second infection by the same pathogenic agent, or a second infection of an organ such as the kidney by a different pathogenic agent.
- reinforcement** (re'in-fors'ment) the increasing of force or strength. In behavioral science, the presentation of a stimulus so as to modify a response; the stimulus may take the form of a reward or a punishment. **r. of reflex**, the increasing of a reflex response by causing the patient to perform some mental or physical concentration while the reflex is being elicited.
- reinforcer** (re'in-fors'er) anything that produces reinforcement; a reinforcing stimulus.
- rein fusate** (re'in-fu'sāt) fluid for reinfusion into the body, usually after being subjected to a treatment process.
- reinfusion** (re'in-fu'zhun) infusion of body fluid that has previously been withdrawn from the same individual, e.g., reinfusion of ascitic fluid after ultrafiltration.
- reinnervation** (re'in-er-va'shun) the operation of grafting a live nerve to restore the function of a paralyzed muscle.
- reinoculation** (re'in-ok'u-la'shun) an inoculation that follows a previous one with the same virus.
- reintegration** (re'in-te-gra'shun) 1. biological integration after a state of disruption. 2. the resumption of normal mental and physical activity after disappearance of the catatonic state or other psychic disturbance.
- reintubation** (re'in-tu-ba'shun) intubation performed a second time.
- reinversion** (re'in-ver'zhun) restoration to its normal place of an inverted organ, especially restoration of an inverted uterus.
- reinvocation** (re'in-vo-ka'shun) reactivation.
- Reisseisen's muscles** (ris'i-senz) [Franz Daniel Reisseisen, German anatomist, 1773-1828] see under *muscle*.
- Reissner's fiber, membrane** (ris'nerz) [Ernst Reissner, German anatomist, 1824-1878] see under *fiber*, and see *paries vestibularis ductus cochlearis*.
- Reiter's syndrome** (ri'terz) [Hans Reiter, German hygienist, born 1881] see under *syndrome*.
- reiteration** (re-it'er-a-tu're) [L.] repeat or renew, as a prescription.
- rejection** (re-jek'shun) an immune reaction against grafted tissue. In *hyperacute rejection*, there is an immediate response against the graft because of the presence of preformed antibody, resulting in fibrin deposition, platelet aggregation, neutrophilic infiltration, and eventual graft failure. In *acute rejection*, the response occurs after the sixth day and then proceeds rapidly. It is characterized by loss of function of the transplanted organ and by pain and swelling, with leukocytosis and thrombocytopenia. In *chronic rejection*, there is gradual progressive loss of function of the transplanted organ with less severe symptoms than in the acute form. **second-set r.**, see under *phenomenon*.
- rejuvenescence** (re-ju've-nes'ens) [re- + L. *juvenescere* to become young] a renewal of youth or of strength and vigor.
- relapse** (re-laps') [L. *relapsus*] the return of a disease after its apparent cessation. Cf. *recrudescence*. **intercurrent r.**, a relapse occurring before the temperature has reached a normal level. **mucocutaneous r.**, the reappearance of infectious lesions of the mucous membranes and skin after the disappearance of the initial secondary lesions of syphilis. **rebound r.**, return of some of the symptoms of a disease on cessation of treatment, applied especially to the relapse of patients with rheumatoid arthritis on withdrawal of cortisone or ACTH (Hench).
- relation** (re-la'shun) [L. *relatio* a carrying back] the condition or state of one object or entity when considered in connection with another. **acentric r.**, eccentric jaw r. **buccolingual r.**, the position of a tooth or space in the dental arch in relation to the tongue and the cheek. **centric jaw r.**, the most retruded position of the mandible in respect to the maxilla when the condyles are in the most posterior unstrained position in the glenoid fossae from which lateral movement can be made at any given degree of

jaw separation. **dynamic r's**, those existing between two objects or entities when one or both of them are moving or constantly changing. **eccentric jaw r.**, any relation of the mandible to the maxillae other than the centric relation; called also *acentric r.* and *eccentric position*. **eccentric jaw r., acquired**, an eccentric relation of the mandible to the maxilla that is assumed in order to bring the teeth into centric occlusion. **jaw r.**, any relation of the mandible to the maxilla, variously designated as centric, eccentric, median, occlusal, protrusive, and the like. **lateral r.**, the relation of the mandible to the maxilla when the lower jaw is in a position to either side of centric relation. **maxillomandibular r.**, jaw r. **median jaw r.**, any relation of the jaws when the mandible is not moved to either side. **median retruded jaw r.**, centric jaw r. **object r's**, the emotional bonds existing between an individual and another person, as contrasted with his interest in, and love for, himself; usually described in terms of his capacity for loving and reacting appropriately to others. **occlusal jaw r.**, the relation of the mandibular teeth to the maxillary teeth when the jaws are in contact; designated, depending on the relative position of the mandibular teeth, as lateral, protrusive, or retrusive. **posterior border jaw r.**, the most posterior relation of the mandible to the maxilla at any specific vertical relation. **protrusive jaw r.**, that resulting from protrusion of the mandible. **rest jaw r.**, that maintained when the patient is resting comfortably in the upright position, the rest position. **ridge r.**, the relation in space of the mandibular ridge to the maxillary ridge. **static r's**, those existing between two objects or entities when neither one of them is moving or changing in any way. **unstrained jaw r.**, that maintained when a state of balanced tonus exists among all the muscles involved, being achieved without undue or unnatural force and causing no distortion of the tissues of the temporomandibular joints.

relaxant (re-lak'sant) [L. *relaxare* to loosen] 1. lessening or reducing tension. 2. an agent that lessens tension. **muscle r.**, an agent that specifically aids in reducing muscle tension, as those acting at the polysynaptic neurons of motor nerves (e.g., meprobamate) or at the myoneural junction (curare and related compounds).

relaxation (re'lak-sa'shun) 1. a lessening of tension. 2. a mitigation of pain. **isometric r.**, relaxation of a muscle without shortening.

relaxin (re-lak'sin) a water-soluble protein-like principle secreted by the corpus luteum during pregnancy; it produces relaxation of the pubic symphysis and dilation of the uterine cervix in certain animal species. A pharmaceutical preparation, extracted from the ovaries of pregnant sows, has been used in treatment of dysmenorrhea and premature labor, and to facilitate labor at term.

relief (re-lēf') [L. *relevatio*] the mitigation or removal of pain or distress.

relieve (re-lēv') [L. *relevare* to lighten] to mitigate or remove pain or distress.

reline (re-lin') to resurface the tissue side of a denture with new base material in order to achieve a more accurate fit.

reluxation (re'luk-sa'shun) redislocation.

REM rapid eye movements (see under *sleep*).

rem (rem) [roentgen-equivalent-man] the quantity of any ionizing radiation which has the same biological effectiveness as 1 rad of x-rays; 1 rem = 1 rad × RBE (relative biological effectiveness).

Remak's band, fibers, ganglion, plexus, etc. (ra'maks) [Robert Remak, German neurologist, 1815-1865] see *axon*; see *gray fibers*, under *fiber*; see under *ganglion*; and see *plexus submucosus*.

Remak's paralysis (type), reflex, symptom (sign) (ra'maks) [Ernst Julius Remak, German neurologist, 1848-1911] see under *paralysis*, *reflex*, and *symptom*.

remedial (re-me'de-al) [L. *remedialis*] curative, acting as a remedy.

remedy (rem'ē-de) [L. *remedium*] anything that cures, palliates, or prevents disease. **concordant r's**, a homeopathic term for remedies of similar action, but of dissimilar origin. **Ehrlich-Hata r.**, arsphenamine. **inimic r's**, a homeopathic term for remedies whose actions are antagonistic. **tissue r's**, the twelve remedies which, according to the biochemical school of homeopathy, form the mineral bases of the body.

Remijia (re-mij'e-ah) a genus of rubiaceous shrubs. *R. pedunculata* Flueck. furnishes cuprea bark, a source of hydroxycinchonidine.

remineralization (re-min'er-al-i-za'shun) the restoration of mineral elements, as to the human body.

remission (re-mish'un) [L. *remissio*] a diminution or abatement of the symptoms of a disease; also the period during which such diminution occurs.

remittance (re-mit'ens) temporary abatement, without actual cessation, of symptoms.

remittent (re-mit'ent) [L. *remittere* to send back] having periods of abatement and of exacerbation.

remnant (rem'nant) something remaining; a residue; a vestige. **acroblastic r.**, the peripheral part of the acroblast which recedes into the protoplasm of the spermatid and later disintegrates.

remotivation (re-mo'ti-va'shun) in psychiatry, a group therapy technique administered by the nursing staff in a mental hospital, which is used to stimulate the communication skills and an interest in the environment of long-term, withdrawn patients.

ren (ren), pl. *re'nes*, gen. *re'nis* [L.] [NA] either of the two organs (i.e., the kidneys) in the lumbar region that excrete the urine; see *kidney*. **r. mo'bilis**, hypermobile kidney. **r. ungulifor'mis**, horseshoe kidney.

renacidin (re-nas'i-din) hemiacidrin.

renal (re'nal) [L. *renalis*] pertaining to the kidney; nephric.

Renaut's bodies (ren-ōz') [Joseph Louis Renaut, French physician, 1844-1917] see under *body*.

renculi (ren'ku-li) [L.] plural of *renculus*.

renculus (ren'ku-lus), pl. *ren'culi* [L.] reniculus.

Rendu's tremor (ron-duz') [Henri Jules Louis Marie Rendu, French physician, 1844-1902] see under *tremor*.

Rendu-Osler-Weber disease, syndrome (ron-duh'-ōs'ler-web'er) [H. J. L. M. Rendu; Sir William Osler, Canadian-born physician, 1849-1919; Frederick Parkes Weber, British physician, 1863-1962] hereditary hemorrhagic telangiectasia.

renes (re'nēz) 1. [L.] plural of *ren*. 2. (obs.) a therapeutic extract of the kidneys of pigs or sheep.

Renese (ren'ēz) trademark for preparations of polythiazide.

renicapsule (ren'i-kap'sūl) [*ren* + L. *capsula* capsule] an adrenal gland.

reniculi (rē-nik'u-li) [L.] plural of *reniculus*.

reniculus (rē-nik'u-lus), pl. *ren'iculi* [L.] one of the lobules composing the kidney, and consisting of a pyramid and its enclosing cortical substance.

reniform (ren'i-form) [*ren* + L. *forma* form] shaped like a kidney.

renin (re'nin) a proteolytic enzyme synthesized, stored, and secreted by the juxtaglomerular cells of the kidney; it plays a role in regulation of blood pressure by catalyzing the conversion of angiotensinogen to angiotensin I. Its secretion is induced by lowered renal arterial pressure. **big r.**, a relatively inactive protein with a higher molecular weight than normal renin, which is activated after exposure to low pH or to proteolytic enzymes.

reninism (re'nin-izm) a condition marked by overproduction of renin. **primary r.**, a syndrome of hypertension, hypokalemia, hyperaldosteronism, and elevated plasma renin activity, due to proliferation of juxtaglomerular cells.

renipelvic (ren'i-pel'vik) pertaining to the pelvis of the kidney.

reniportal (ren'i-pōr'tal) [*ren* + L. *porta* gate] pertaining to the portal system of the kidneys.

renipuncture (ren'i-punk'tūr) [*ren* + L. *punctura* puncture] surgical incision or puncture of the capsule of the kidney: done for relief of albuminuric pain.

rennet (ren'et) an extract of calf's stomach which contains renin and is used for curdling the milk in cheese making.

rennin (ren'in) the milk-curdling enzyme, an endopeptidase that converts casein to paracasein, found in the gastric juice of human infants (before pepsin formation) and abundantly in that of the calf and other ruminants. A preparation from the stomach of the calf is used to coagulate milk protein to facilitate its digestion. Called also *chymosin*.

renninogen (rē-nin'o-jen) prerennin.

renocortical (re'no-kor'ti-kal) pertaining to the cortex of a kidney.

renocutaneous (re'no-ku-ta'ne-us) pertaining to the kidneys and skin.

renocystogram (re'no-sis'to-gram) renogram.

renogastric (re'no-gas'trik) pertaining to the kidney and stomach; nephrogastric.

Renografin (re'no-graf'in) trademark for a solution of diatrizoate meglumine and diatrizoate sodium for injection.

renogram (re'no-gram) a graphic record of kidney function produced by externally monitoring the level of radioactivity in the bladder as a radiopharmaceutical agent enters it from the kidney via the ureters; called also *renocystogram*.

renography (re-nog'rah-fe) [*ren* + Gr. *graphein* to write] radiography of the kidney.

renointestinal (re'no-in-tes'ti-nal) pertaining to the kidney and intestine.

renopathy (ne-nop'ah-the) [*ren* + Gr. *pathos* disease] nephropathy.

renoprival (re'no-pri'val) pertaining to, characterized by, or resulting from deprivation of kidney function.

Renoquid (re'no-kwid) trademark for a preparation of sulfacytine.

renotrophic (re'no-trof'ik) having the ability to increase kidney size.

renotropic (re-'no-trop'ik) having a special affinity for kidney tissue.

renule (ren'ul) an area of the kidney supplied by a branch of the renal artery, usually consisting of three or four medullary pyramids and their corresponding cortical substance.

renunculus (re-nung'ku-lus) reniculus.

reovirus (re-'o-vi'rus) [respiratory and enteric origin + *virus*] a group of ether-resistant RNA viruses, formerly classified as a subgroup of the echoviruses. Reoviruses are separable into three serotypes, and have been isolated from healthy children, children with febrile and afebrile upper respiratory disease, children with diarrhea, and many animals.

reoxidation (re-ok/'si-da'shun) the act of taking up oxygen again, as the hemoglobin of the blood.

reoxygenation (re-ok/'si-jen-a'shun) in radiobiology, the phenomenon in which hypoxic (and thus radioresistant) tumor cells become more exposed to oxygen (and thus more radiosensitive) by coming into closer proximity to capillaries after death and loss of other tumor cells due to previous irradiation.

Rep. abbreviation for *L. repeta'tur*, let it be repeated.

rep (rep) [roentgen equivalent physical] an unofficial unit of amount of radiation of any kind which yields an amount of energy transferred to the tissue equal to that transferred by 1 roentgen of hard x- or γ -radiation (200 kv. or greater). This amount of energy turns out to be about 93 ergs per gram of water or soft tissue.

repair (re-pär') the physical or mechanical restoration of damaged or diseased tissues by the growth of healthy new cells or by surgical apposition.

repacity (re-pa'ten-se) [*re* + *L. patens* open] reestablishment of the opening in a part or vessel which has been closed.

repellent (re-pel'ent) [*L. repellere* to drive back] 1. able to repel or drive off; also an agent so acting, as *insect repellent*. 2. (*obs.*) capable of dispersing a swelling; also an agent or remedy which causes a swelling to disappear.

repeller (re-pel'er) an instrument used in labor of animals to push back the fetus until the head and limbs can be properly placed for normal delivery.

repercolation (re'per-ko-la'shun) [*L. re*-again + *percolare* to filter] a second or repeated percolation with the same materials.

repercussion (re'per-kush'un) [*L. re-percussio* rebound] 1. the driving in of an eruption or the scattering of a swelling. 2. bal-lottement.

repercussive (re'per-kus'iv) 1. causing or pertaining to reper-cussion. 2. an agent causing repercussion; a repellent.

repetatur (re'pe-ta'tür) [*L.*] let it be renewed.

replant (re-plant') to restore a structure to its original site, as to reinsert a tooth into the alveolar socket from which it has been displaced.

replantation (re'plan-ta'shun) the restoration of an organ or other structure to its original site. In dentistry, the reinsertion of a tooth into the alveolus from which it was removed or otherwise lost.

replenisher (re-plen'ish-er) an agent that restores what has been lost, used up, or is lacking.

repletion (re-ple'shun) [*L. repletio*] the condition of being full.

replication (rep'li-ka'shun) 1. a turning back of a part so as to form a duplication. 2. repetition of an experiment to ensure accuracy. 3. the process of duplicating or reproducing, as the replication of an exact copy of a polynucleotide strand of DNA or RNA. **conservative r.**, replication of DNA in which the original molecule remains intact and a completely new molecule is formed. **dispersive r.**, nonconservative r. **nonconser-vative r.**, replication of DNA in which parental nucleotide bases are distributed in both strands of each daughter molecule; called *dispersive r.* **semiconservative r.**, replication of DNA in which the strands separate longitudinally and each strand serves as a template for its new mate, so that each daughter molecule has one new and one parental strand.

replicon (rep'li-kon) an autonomously replicating aggregate of DNA in a bacterium (e.g., chromosome, plasmid).

Repoise (re-pōz') trademark for preparations of butaperazine.

repolarization (re-po'lar-i-zä'shun) the reestablishment of po-larity, especially the return of cell membrane potential to resting potential after depolarization.

reposition (re'po-zish'un) [*L. repositio*] replacement in the nor-mal position.

repositioning (re'po-zish'un-ing) the replacing of a structure or part to its normal site. **jaw r.**, the changing of any relative position of the mandible to the maxilla, usually by altering the occlusion of the natural or artificial teeth. **muscle r.**, surgical replacement of a muscle attachment into a more acceptable functional position.

repositor (re-poz'i-tor) an instrument used in returning dis-placed organs to the normal position. **Aveling's r.**, an appa-ratus for exerting continuous pressure on the fundus of the inverted uterus in order to secure replacement.

repository (re-poz'i-to-re) a place where something is stored; used in pharmacology to refer to the injection, usually intramus-cularly, of a long-acting drug, which is slowly absorbed and is therefore prolonged in its action.

repression (re-presh'un) the act of restraining, inhibiting, or suppressing. In psychiatry, the thrusting back from consciousness into the unconscious sphere of ideas or perceptions of a disagree-able nature. In genetic theory, inhibition of gene transcription by a repressor; called also *gene r.* Cf. *depression*, def. 2. **coordi-nate r.**, parallel diminution of the concentrations of the several enzymes of a metabolic pathway, resulting from increases in the level of repressor. **endproduct r.**, enzyme r. **enzyme r.**, interference, usually by the endproduct of a pathway, with synthesis of the enzymes of that pathway. **gene r.**, see *repression*. **reactive r.**, a psychosis resulting from repression.

repressor (re-pres'or) [*L. "a restrainer"*] that which restrains or inhibits. In genetic theory, a substance produced by a regulator gene which acts through the cytoplasm to prevent initiation by the operator gene of protein synthesis by the operon.

reproduction (re'pro-duk'shun) [*L. re*-again + *productio* produc-tion] 1. the production of offspring by organized bodies. 2. the creation of a similar object or situation; duplication; replication. **asexual r.**, reproduction without the fusion of sexual cells, as by fission or budding. **bisexual r.**, see *sexual r.* **cytogenic r.**, reproduction in which the new individual proceeds from a single germ cell or zygote. **sexual r.**, reproduction by the fusion of a female sexual cell with a male sexual cell (*bisexual r.*, *amphigony*, *gamogenesis*, *syngamy*) or by the development of an unfertilized egg (*unisexual r.*, *parthenogenesis*). **somatic r.**, reproduction in which the new individual proceeds from a multicellular fragment produced by fission or budding. **unisexual r.**, see *sexual r.*

reproductive (re'pro-duk'tiv) subserving or pertaining to the production of offspring.

repromicin (rep'ro-mi'cin) chemical name: 12,13-deepoxy-12,13-didehydro-4'-deoxycirramycin A₁; an antibiotic, C₂₁H₂₁NO₆.

reproterol hydrochloride (re'pro-ter'öl) chemical name: 7-[3-[[2-(3,5-dihydroxyphenyl)-2-hydroxy ethyl]amino]propyl]-3,7-dihydro-1,3-dimethyl-1*H*-purine-2,6-dione monohydrochloride; a bronchodilator, C₁₈H₂₃N₅O₆·HCl.

reptilase (rep'til-ās) an enzyme from Russell's viper venom used in determining blood clotting time.

reptile (rep'til) any member of the class Reptilia.

Reptilia (rep-til'e-ah) a class of aquatic or terrestrial, cold-blooded vertebrates, including snakes, lizards, turtles, alligators, and crocodiles, as well as the extinct dinosaurs, which have bodies covered with horny scales or plates and breathe by means of lungs; most lay eggs outside of the body.

repullulation (re-pul'u-la'shun) [*L. re*-back + *pullulare* to sprout out] renewed growth by sprouting.

repulsion (re-pul'shun) [*L. re*-back + *pellere* to drive] the act of driving apart or away; a force which tends to drive two bodies apart. It is the opposite of attraction. In genetics, occurrence on opposite chromosomes in a double heterozygote of the two mutant alleles of interest. Cf. *coupling*.

RES reticuloendothelial system.

rescinnamine (re-sin'ah-min) [NF] an alkaloid, the 3,4,5-trimethoxycinnamic acid ester of methyl reserpate, obtained from *Rauwolfia serpentina* and other species of *Rauwolfia*. It occurs as a white or pale buff to cream colored crystalline powder, C₂₃H₄₂N₂O₆; used as an antihypertensive and also as a tranquilizer.

resect (re-sekt') to remove part of an organ or tissue.

resectable (re-sek'tah-b'l) capable of being resected; lending it-self to resection.

resection (re-sek'shun) [*L. resectio*] excision of a portion of an organ or other structure. **gastric r.**, partial gastrectomy; see *gastrectomy*. **root r.**, apicoectomy. **Schede's r.**, see under *operation* (def. 1). **submucous r.**, excision of a portion of a deviated nasal septum after first laying back a flap of mucous membrane, which is replaced, or repositioned, after the operation. **transurethral r.**, resection of the prostate by means of an in-strument passed through the urethra. **wedge r.**, removal of a triangular wedge of tissue, as from the ovary in an operation designed to stimulate ovarian function in patients with Stein-Lev-enthal syndrome.

resectoscope (re-sek'to-skōp) an instrument with a wide-angle telescope and an electrically activated wire loop for transurethral removal or biopsy of lesions of the bladder, prostate, or urethra.

resectoscopy (re'sek-tos'ko-pe) resection or biopsy of lesions by means of the resectoscope.

resene (res'en) any one of a class of resin derivatives.

reserpine (res'er-pēn, rē-ser'pin) [USP] chemical name: 3,4,5-trimethoxybenzoyl methyl reserpate. An alkaloid, C₂₃H₄₀N₂O₆, isolated from the root of *Rauwolfia serpentina* and other species of *Rauwolfia*, and occurring as a white or pale buff to slightly yellowish crystalline powder; used as an antihypertensive, and also as a sedative, administered orally and intramuscularly.

Reserpoid (res'er-poid) trademark for a preparation of reserpine.

reserve (re-zerv') 1. to hold back for future use. 2. a supply, beyond that ordinarily used, which may be utilized in an emergency. **alkali r.**, **alkaline r.**, the amount of conjugate base components of the blood buffers; since bicarbonate is the most important of these conjugate bases, the term blood bicarbonate is often preferred to alkali reserve. **cardiac r.**, the potential ability of the heart to perform a wide range of work beyond that required under basal conditions, depending on changing demands of various physiological or pathological states.

reservoir (rez'er-vwar) a place or cavity for storage; for anatomical structures serving as a storage space for fluids, see *cisterna* [NA]. Also, an alternate host or passive carrier of a pathogenic organism. **chromatin r.**, karyosome. **r. of infection**, the nonclinical source of infection, such as the alternate host or the passive carrier of a pathogenic organism. **Pecquet's r.**, *cisterna chyli*. **r. of virus**, the alternate host or the passive carrier of a virus, from which the virus is transmitted to a person who shows clinical signs of infection.

reshaping (re-shāp'ing) a restoration or change of shape, as of a crown, bridge, or denture.

resident (rez'i-dent) a graduate and licensed physician receiving training in a specialty in a hospital.

residual (re-zid'u-ah) [L.] plural of *residuum*.

residual (re-zid'u-al) [L. *residuus*] remaining or left behind.

residue (rez'i-du) [L. *residuum*, from *re-* back + *sidere* to sit] 1. a remainder; that which remains after the removal of other substances. In biochemistry, the portion of a molecule that remains after it has lost some of its components, as an amino acid residue, which loses a water molecule when it is joined to another amino acid. 2. see *Vaughn's split products*, under *product*. **day r.**, an occurrence or experience from the preceding day which may induce a dream at night.

residuum (re-zid'u-um), pl. *resid'ua* [L.] a residue or remainder. **gastric r.**, the contents of the stomach during the interdigestive period, as in the morning before eating. **sporal r.**, residual body.

resilience (re-zil'e-ens) [L. *resilire* to leap back] elasticity; the property of returning to the former shape, size, or state after distortion.

resiliency (re-zil'yen-se) the property of being resilient; resilience. In orthodontics, usually applied to the amount of energy absorbed by a wire when it is stressed, not to exceed its proportional limit. This is energy absorbed owing to elastic deformation.

resilient (re-zil'e-ent) [L. *resiliens*] elastic; returning to its former shape or size after distortion.

resilin (rē-zil'in) an elastic protein present in the wing-hinge of dragonflies, locusts, and fleas, which stores and releases energy with extremely high efficiency.

resin (rez'in) [L. *resina*] 1. a solid or semisolid, amorphous, organic substance, of vegetable origin or produced synthetically. True resins are insoluble in water, but are readily dissolved in alcohol, ether, and volatile oils. 2. resin. **acrylic r's**, a class of thermoplastic resins, ethylene derivatives containing a vinyl group, produced by polymerization of acrylic or methacrylic acid or their derivatives; used in the fabrication of medical prostheses and dental restorations and appliances. **activated r.**, self-curing r. **anion-exchange r.**, see *ion-exchange r.* **auto-polymer r.**, self-curing r. **azure A carbacrylic r.**, azuresin. **carbacylamine r's**, a mixture of 87.5 per cent of cation exchangers, carbacrylic resin, and potassium carbacrylic resin, with 12.5 per cent of the anion exchanger, polyaminemethylene resin; used to increase fecal excretion of sodium in the treatment of edema. **cation-exchange r.**, see *ion-exchange r.* **cholestyramine r.** [USP], a strongly basic anion exchange resin in the chloride form, consisting of styrene-divinylbenzene copolymer with quaternary ammonium functional groups, having an affinity for bile acids, which it binds into an insoluble complex that is excreted in the feces, resulting in elimination of bile acids from the enterohepatic circulation and in increased oxidation of cholesterol to bile acids; administered orally for the relief of pruritus associated with cholestasis occurring in partial biliary obstruction and as adjunctive therapy to diet in the management of patients with elevated cholesterol due to primary type II hyperlipoproteinemia (patients with pure hypercholesterolemia). **cold-curing r.**, self-curing r. **composite r.**, an acrylic resin to which a filler substance, e.g., glass beads and rods or quartz, has been added to produce a material whose properties are better than or radically different from those of its components; used in dental restorations. **copolymer r.**, one that is produced by the concurrent and joint polymerization of two or more different monomers or polymers. **direct filling r.**, a synthetic resin used for direct filling of dental cavities. **heat-curing r.**, one that requires the use of heat to effect its polymerization. **ion exchange r.**, a high molecular weight, insoluble polymer of simple organic compounds with the ability to exchange its attached ions for other ions in the surrounding solution. They are classified as (a) *cation* or *anion exchange resins*, depending on

which ions the resin exchanges, and (b) *carboxylic, sulfonic, etc.*, depending on the nature of the active groups. *Cation exchange resins* are used to restrict intestinal sodium absorption in edematous states; *anion exchange resins* are used as antacids in the treatment of ulcers. **podophyllum r.** [USP], a powdered mixture of resins removed from podophyllum by percolation with alcohol and subsequent precipitation upon addition of acidified water; used as a topical caustic in the treatment of certain papillomas as a 25 per cent dispersion in compound benzoin tincture, or as a solution in alcohol. Formerly used as a cathartic. Called also *podophyllin*. **polyamine-methylene r.**, a polyethylene polyamine methylene substituted resin of diphenylol dimethylmethane and formaldehyde in basic form; because of its quick-resin action it has been used as a gastric antacid. **quick-cure r.**, self-curing r. **self-curing r.**, any resin which can be polymerized by the addition of an activator and a catalyst without the use of external heat. **styrene r.**, polystyrene. **synthetic r.**, an amorphous, organic, semisolid or solid material produced from simpler compounds by polymerization or condensation. **vinyl r.**, a thermoplastic resin, an ethylene derivative containing the vinyl radical, $\text{CH}_2\text{CH}-$.

resina (re-zi'nah) [L.] resin.

Resinat (rez'i-nat) trademark for preparations of polyamine-methylene resin.

resinoid (rez'i-noid) 1. resembling a resin. 2. a substance resembling a resin. 3. a dry therapeutic precipitate prepared from a vegetable tincture.

resinotannol (rez'i-no-tan'ol) any resin alcohol which gives a tannin reaction.

resinous (rez'i-nus) [L. *resinosus*] of the nature of a resin.

resistance (re-zis'tans) [L. *resistentia*] 1. opposition, or counter-acting force, as the opposition by a conductor to the passage of an electric current or the opposition to air flow produced by the air passages. 2. in psychoanalysis, opposition to the coming into consciousness of repressed material. 3. the natural ability of a normal organism to remain unaffected by noxious agents in its environment, such as poisons, toxins, irritants, and pathogenic microorganisms. Resistance is for the most part a genetic endowment of an entire species with respect to a particular agent. If the resistance is absolute, all members of the species are insusceptible to a specific agent. If the resistance is relative, racial and individual differences become manifest within the species, one race or member being more resistant than another. See also *immunity*. **acid alcohol r.**, the power of a bacterium to resist the action of acid and alcohol. **drug r.**, the ability of a microorganism to withstand the effects of a drug that are lethal to most members of its species. Primary drug resistance refers to initial infection by a resistant organism; secondary drug resistance to resistance that develops during the course of therapy. **essential r.**, the resistance within the cells of a battery to a galvanic current. **external r.**, **extraordinary r.**, the resistance in the part of a circuit outside the battery cells. **hemolytic r.**, erythrocyte fragility. **inductive r.**, see *reactance*. **internal r.**, **essential r.** **peripheral r.**, the resistance to the passage of the blood through the small blood vessels, especially the arterioles. **vital r.**, the natural resistance of an individual to the untoward effects of infections, diseases in general, fatigue, overwork, etc.

resite (res'it) an insoluble, infusible compound formed by further reaction of resole under heat.

resole (res'ol) a condensation polymer of an alcohol formed by interaction of phenol and formaldehyde, which is of relatively low molecular weight, thermoplastic, and alcohol soluble.

resolution (rez'o-lu'shun) [L. *resolutum*, from *resolvere* to unbind] 1. the subsidence of a pathologic state, as the subsidence of an inflammation, or the softening and disappearance of a swelling. 2. the perception as separate of two adjacent objects or points. In microscopy, it is the minimal distance at which two adjacent objects can be distinguished as separate. The resolving power of an instrument depends on the wavelength of the radiation used and the numerical aperture of the system; it is expressed in microns distance or lines per millimeter.

resolve (re-zolv') [L. *resolvere*] 1. to restore to the normal state after some pathologic process. 2. to separate a thing into its component parts.

resolvent (re-zol'vent) [L. *resolvens* dissolving] 1. promoting resolution or the dissipation of a pathologic growth. 2. an agent that promotes resolution.

resonance (rez'o-nans) [L. *resonantia*] 1. the prolongation and intensification of sound produced by the transmission of its vibrations to a cavity, especially a sound elicited by percussion. Decrease of resonance is called *dullness*; absence of resonance, *flatness*. 2. a vocal sound as heard in auscultation. 3. mesomerism. **amphoric r.**, a sound resembling that produced by blowing over the mouth of an empty bottle. **bandbox r.**, the extremely resonant sound elicited by percussion in cases of emphysema of the lungs. **bell-metal r.**, a peculiar sound heard in pneumothorax when a coin placed on the chest wall is struck by another coin. **cough r.**, a peculiar auscultatory sound elicited by coughing. **cracked-pot r.**, a peculiar sound

elicited by percussion over a pulmonary cavity that communicates with a bronchus. **electron spin r.**, in spectrometry, a measure of electron spin as an indication of the extent of activity of free radicals in an organic reaction. **hydatid r.**, a peculiar sound heard in the combined auscultation and percussion of a hydatid cyst. **nuclear magnetic r.**, a measure of the magnetic moment of atomic nuclei to determine the nature of covalent bonds in an organic reaction. **osteal r.**, the sound elicited by percussion over a bony structure. **shoulder-strap r.**, pulmonary resonance in the apex of the lung above the clavicle. **skodaic r.**, increased percussion resonance at the upper part of the chest, with flatness below it. **tympanic r.**, the drumlike reverberation of a cavity full of air. **tympanitic r.**, the peculiar sound elicited by percussing a tympanitic abdomen. **vesicular r.**, the normal pulmonary resonance. **vesiculotympanic r.**, a resonance partly vesicular and partly tympanic. **vocal r.**, the sound of ordinary speech as heard through the chest wall. **whispering r.**, the auscultatory sound of whispered words heard through the chest wall. **wooden r.**, vesiculotympanic r.

resonant (rez/o-nant) giving a vibrant sound on percussion.

resonator (rez/o-na'ter) an instrument used to intensify sounds. In electricity, an electrical circuit in which oscillations of a certain frequency are set up by oscillations of the same frequency in another circuit. **Oudin r.**, a coil of wire of adjustable number of turns which is designed to be connected to a source of high-frequency current, such as a spark gap and induction coil, for the purpose of applying an effluve to a patient.

resorb (re-sorb', re-zorb') to take up or absorb again; to undergo resorption.

resorcin (rē-zor'sin) resorcinol.

resorcinism (rē-zor'si-nizm) chronic poisoning by resorcinol, resulting in methemoglobinemia, paralysis, and damage to the capillaries, kidneys, heart, and nervous system.

resorcinol (rē-zor'si-nol) [USP] chemical name: 1,3-benzenediol. A bactericidal, fungicidal, keratolytic, exfoliative, and antipruritic agent, $C_6H_6O_2$, occurring as white, or nearly white, needle-shaped crystals or powder; used especially as a topical keratolytic in the treatment of acne and other dermatoses, such as seborrheic dermatitis. Called also *resorcin*. **r. monoacetate** [USP], a viscous, pale yellow or amber liquid with a faint odor and a burning taste; applied topically to the scalp as a keratolytic and antiseborrheic.

resorcinolphthalein (re-zor'si-nol-thal'e-in) fluorescein.

resorcinum (re'zor-si'num) resorcinol.

resorption (re-sorp'shun) [L. *resorbere* to swallow again] the loss of substance through physiologic or pathologic means, such as loss of dentin and cementum of a tooth, or of the alveolar process of the mandible or maxilla. **bone r.**, a type of bone loss (resorption) due to osteoclastic activity. **idiopathic r.**, resorption of calcified tissues without apparent cause. **internal r. of teeth**, an unusual form of tooth resorption beginning centrally in a tooth, and apparently initiated by inflammatory hyperplasia of the pulp. **root r.**, a type of resorption in which cementum and/or dentin is lost from the roots, usually the apical portion, of teeth. Depending on the site of origin, the condition may be qualified as internal or external root resorption. **tubular r.**, resorption by renal tubular cells of elements of the fluid filtered at the glomerulus.

respirable (rē-spir'ah-b'l) suitable for respiration, or able to be respired.

respiration (res'pī-ra'shun) [L. *respiratio*] 1. the exchange of oxygen and carbon dioxide between the atmosphere and the cells of the body. The process includes ventilation (inspiration and expiration), the diffusion of oxygen from pulmonary alveoli to the blood and of carbon dioxide from the blood to the alveoli, and the transport of oxygen to and carbon dioxide from the body cells. 2. the exergonic metabolic processes in living cells by which molecular oxygen is taken in, organic substances are oxidized, free energy is released, and carbon dioxide, water, and other oxidized products are given off by the cell; called also *cell r.* **abdominal r.**, respiration maintained by contribution of the diaphragm and respiratory muscles. Cf. *thoracic r.* **absent r.**, that in which the respiratory sounds are suppressed. **accelerated r.**, respiration at a faster than normal frequency. **aerobic r.**, the oxidative transformation of certain substrates into secretory products, the released energy being used in the process of assimilation. **amphoric r.**, that which is characterized by amphoric resonance, or a quality like that of the sound produced by blowing over the mouth of an empty jar. It is heard over tuberculous or bronchiectatic cavities, in pneumothorax, in compression of lung from effusion. **anaerobic r.**, a form of respiration in which energy is released from chemical reactions in which free oxygen takes no part. **artificial r.**, that which is maintained by artificial means. Among the various methods of artificial respiration are the following: *Buist's method* is employed in asphyxiation of the newborn, and consists of holding the infant alternately on the stomach and back. *Eve's method*: "... the victim is laid face downward on a stretcher and is well wrapped with blankets. His wrists and ankles are lashed to the handles. Then he is hoisted on

a trestle or sling and rocking is begun. The first tilt should be head down and steep (50 degrees) and should produce full expiration by the weight of the abdominal contents pressing on the diaphragm. It will also force aortic blood through the coronaries and empty the stomach and lungs of water. Then full inspiration is produced by tilting the foot end down to 50 degrees. The rocking is done a dozen times a minute through an angle of 45 degrees each way." (J.A.M.A.) *Method of Marshall Hall*: Put the body prone, gently press on the back, then removing the back pressure, turn the body on its side and press a little more, repeating this formula sixteen times every minute. It is known as the method of *prone or postural respiration*, or "ready method." *Howard method*: Place the body supine, with a cushion under the back, so that the head is lower than the abdomen; the arms are held over the head, forcible pressure is made with both hands inward and upward, over the lower ribs, about sixteen times per minute. *Mouth-to-mouth method*: The rescuer applies his mouth directly to the mouth of the patient and regularly inflates the patient's lungs with his own expired air. *Schafer's method*: Patient prone with forehead on one of his arms; straddle across patient with knees on either side of his hips, and press with both hands firmly upon the back over the lower ribs; then raise your body slowly, at the same time relaxing the pressure with your hands. Repeat this forward and backward movement about every five seconds. *Silvester's method*: Patient supine. The arms are pulled firmly over the head to raise the ribs, and kept there until air ceases to enter the chest. The arms are brought down to the chest, and are pressed against it for a second or so after air ceases to escape. This formula is repeated sixteen times per minute. See also *respirator*. **asthmoid r.**, respiration in which expiration is accompanied by a wheezing sound like that of bronchial asthma. **Austin Flint r.**, cavernous r. **Biot's r.**, breathing characterized by irregular periods of apnea alternating with periods in which four or five breaths of identical depth are taken; seen in patients with increased intracranial pressure. **Bouchut's r.**, respiration in which the inspiratory phase is shorter than the expiratory phase; seen in children with bronchopneumonia. **bronchial r.**, tubular r. **broncho-cavernous r.**, that which is intermediate in character between bronchial and cavernous; it is heard over a lung cavity with solidified lung tissue adjacent to it. **bronchovesicular r.**, a variety intermediate between the bronchial and vesicular forms. **cavernous r.**, a respiration marked by a peculiar prolonged hollow resonance, usually due to a cavity in the lung; it is heard in the same conditions as amphoric respiration. **cell r.**, respiration, def. 2. **cerebral r.**, Corrigan's r. **Cheyne-Stokes r.**, breathing characterized by rhythmic waxing and waning of the depth of respiration, with regularly recurring periods of apnea; seen especially in coma resulting from affection of the nervous centers. **cogwheel r.**, a form with a peculiar jerky inspiration; breathing in which the expiratory and inspiratory sounds are not continuous, but are split into two or more separate sounds. Called also *interrupted r.* **collateral r.**, the entrance of air into alveoli through pulmonary alveolar pores and other pathways so that a lobe may remain aerated even though its bronchiole is obstructed. **controlled diaphragmatic r.**, the intentional use of abdominal respiration for the purpose of limiting the motion of the apices of the lung. **Corrigan's r.**, a shallow and frequent blowing respiration in a low fever. **costal r.**, that which is performed mainly by the rib muscles. **diaphragmatic r.**, that which is mainly performed by the diaphragm. **divided r.**, respiration marked by a pause between the inspiratory and expiratory sounds. **electrophrenic r.**, artificial respiration induced by electric stimulation of the phrenic nerve. Abbreviated EPR. **external r.**, the exchange of gases between the lungs and the blood. **fetal r.**, gaseous interchange through the placenta. **forced r.**, deliberate hyperventilation. **granular r.**, a vesicular respiration, giving a sound as if the air were passing through a tube with an uneven surface. **harsh r.**, bronchovesicular r. **indefinite r.**, a respiratory sound so feeble or so confused that it is difficult to assign to it a definite character. **internal r.**, the exchange of gases between the body cells and the blood; called also *tissue r.* **interrupted r.**, cogwheel r. **jerky r.**, cogwheel r. **Kussmaul's r.**, **Kussmaul Kien r.**, air hunger; see under *hunger*. **labored r.**, that which is performed with difficulty. **meningitic r.**, short and rapid breathing interrupted by pauses of ten to thirty seconds; occurring in healthy persons during sleep it has no important significance, but in meningitis it is regarded as an unfavorable sign. **metamorphosing r.**, bronchocavernous r. **nervous r.**, Corrigan's r. **paradoxical r.**, respiration in which a lung, or a portion thereof, is deflated during inspiration and inflated during expiration. **periodic r.**, Cheyne-Stokes r. **puerile r.**, that in which the breathing sounds are more intense than those of normal adult respiration and resemble those of childhood. **rude r.**, bronchovesicular r. **Seitz's metamorphosing r.**, a variety of bronchial respiration consisting of an inspiratory murmur, beginning as a tubular bronchial sound and ending as either a cavernous or an amphoric tone. **slow r.**, that in which there are less than twelve respirations in each minute. **stertorous r.**, that which is accompanied by abnormal snoring sounds. **supplementary r.**, puerile r. **suppressed r.**, respiration without any appreciable sound, as may occur in

Place one hand under the patient's chin and the other on top of his head. Lift up on the chin and push down on the top of the head to tilt the head backwards.

While holding the jaw forward pinch the nostrils closed with the other hand to prevent leakage of air through the nose.

Blowing into the lungs causes the chest to expand. When the chest has expanded adequately remove your mouth from the patient's so that he can exhale.

Put the thumb of the hand under the jaw into the patient's mouth; grasp the jaw and pull it forward.

Take a deep breath; place your mouth tightly over the patient's and blow forcefully into his lungs.

Repeat this sequence of maneuvers every 3 to 4 seconds until other means of ventilation are available.

If you cannot open his mouth blow through his nose. In infants cover both mouth and nose with your mouth. Blow gently into a child's mouth, and in infants use only small puffs from your cheeks.

The patient is placed in a supine position on a rigid support so that there is no give under the patient as pressure is applied. The individual applying the pressure stands or kneels at right angles to the patient. He places the heel of one hand with the heel of the other on top of it on the sternum, just cephalad to the xiphoid process.

Firm pressure is applied vertically downward about 60 times a minute. At the end of each pressure stroke the hands are relaxed to permit full expansion of the chest. The position of the operator should be such that he can use his body weight while applying the pressure. Sufficient pressure should be exerted to move the sternum 3 or 4 cm. toward the vertebral column.

Children up to 10 years of age require the force of only one hand.

Only moderate pressure by the finger tips on the middle third of the sternum should be used on infants.

* Kouwenhoven, W. B., Jude, J. R., and Knickerbocker, G. G.: Closed Chest Cardiac Massage. J.A.M.A. 173:1064, 1960.

TECHNIQUE OF RESUSCITATION BY CLOSED CHEST CARDIAC MASSAGE

(Kouwenhoven, Jude, and Knickerbocker, J.A.M.A. 173:1064, 1960.)

extensive consolidation of the lung, or pleuritic effusion. **thoracic r.**, respiration performed by the intercostal and other thoracic muscles. Cf. *abdominal r.* **tissue r.**, internal r. **transitional r.**, bronchovesicular r. **tubular r.**, that which has high-pitched sounds, not unlike those made by blowing through a tube; it is heard in consolidation of lung, compression of lung, and sometimes over lung infiltrated with tumor. **vesiculocavernous r.**, cavernous respiration with a vesicular quality; it indicates a cavity surrounded by healthy lung tissue. **vicarious r.**, increased action in one lung when that of the other lung is diminished. **wavy r.**, cogwheel r.

respirator (res'pī-ra'tor) an apparatus to qualify the air that is breathed through it, or a device for giving artificial respiration or to assist in pulmonary ventilation. **cabinet r.**, one which encloses the entire body. **cuirass r.**, an apparatus which is applied only to the chest, either completely surrounding the trunk or applied only to the front of the chest and abdomen. **Drinker r.**, an apparatus for producing artificial respiration over long periods of time, consisting of a metal tank, enclosing the body of the patient, with his head outside, and within which artificial respiration is maintained by alternating negative and positive pressure. Popularly called *iron lung*. **Engström r.**, a volume-controlled respirator used after open-heart surgery as short-term prophylaxis to avoid hypoxia and respiratory acidosis and to prevent excessive fatigue caused by the increased work of breathing in the early postoperative period.

respiratory (re-spi'rah-to're) [*re-* + *L. spirare* to breathe] pertaining to respiration.

respiratory system see under *system*.

respirometer (res'pī-rom'ē-ter) an instrument for determining the character of the respiratory movements.

response (re-spons') [*L. respondere* to answer, reply] an action or movement due to the application of a stimulus. **anamnesic r.**, in immunology, the rapid reappearance of antibody in the blood following the administration of an antigen to which the subject had previously developed a primary immune response; called also *memory r.*, *recall r.*, *booster r.*, *second set r.*, and *secondary immune r.* **autoimmune r.**, the immune response in which antibodies or immune lymphoid cells are produced against the body's own tissues. **booster r.**, anamnestic r. **conditioned r.**, one that does not occur naturally in the animal but that may be developed by regular association of some physiological function with an unrelated outside event, such as ringing of a bell or flashing of a light. Soon the physiological function starts whenever the outside event occurs (Pavlov, 1911). Called also *conditioned reflex*. **delayed r.**, see under *reaction*. **galvanic skin r.**, the alteration in electrical resistance of the skin associated with sympathetic nerve discharge. **immediate r.**, see under *reaction*. **immune r.**, specifically altered reactivity of the animal body following exposure to antigen, manifested as antibody production, cell-mediated immunity, or immunological tolerance; called also *immune reaction*. **memory r.**, anamnestic r. **primary immune r.**, the immune response to initial stimulation by an antigen; it is characterized by a latent period before the synthesis of specific antibody is begun. **recall r.**, anamnestic r. **recall titer r.**, an increase in specific agglutinins stimulated by a booster injection, as of tetanus toxoid; similar to the nonspecific anamnestic reaction. **reticulocyte r.**, increase in the formation of reticulocytes in response to a bone marrow stimulus, such as that provided by administration of a hematinic agent. **secondary immune r.**, anamnestic r. **second set r.**, anamnestic r. **triple r. (of Lewis)**, a physiologic reaction of the skin to stroking with a blunt instrument: first a red line develops at the site of stroking, owing to the release of histamine or a histamine-like substance, then a flare develops around the red line, and lastly a wheal is formed as a result of local edema. **unconditioned r.**, an unlearned response, i.e., one that occurs naturally; called also *unconditioned reflex*. Cf. *conditioned r.*

rest (rest) 1. repose after exertion. 2. a fragment of embryonic tissue that has been retained within the adult organism; called also *embryonic*, *epithelial*, and *fetal r.* 3. in dentistry, a metallic extension from a removable partial denture which contacts a tooth or dental restoration and aids in supporting the prosthesis. **aberrant r.**, choristoma. **adrenal r.**, accessory adrenal tissue, sometimes found in the ovary or testis. **bed r.**, confinement of a patient to bed. **carbon r.**, the amount of carbon in the deproteinized blood. **embryonic r.**, **epithelial r.**, **fetal r.**, see *rest*, def. 2. **incisal r.**, a metallic extension from a removable partial denture which engages on the incisal surface of an anterior tooth to aid in supporting the prosthesis. **lingual r.**, a metallic extension from a removable partial denture onto the lingual surface of an anterior tooth to aid in supporting or acting as an indirect retainer for the prosthesis. **Malassez's r.**, an epithelial remnant of Hertwig's sheath in the periodontal membrane, which sometimes develops into a dental cyst. **occlusal r.**, a metallic extension from a removable partial denture which engages on the occlusal surface of a tooth to aid in supporting the prosthesis. **precision r.**, a partial denture rest that consists of closely interlocking parts. **recessed r.**, a rigid extension of a partial denture which contacts a definite seat prepared in the

surface of a tooth. **suprarenal r.**, adrenal r. **surface r.**, a rigid extension of a partial denture which contacts the unaltered extracoronal surface of a tooth. **Walshard's cell r's**, see under *islet*.

restbite (rest'bit) the relation of the teeth when the jaw is at rest.

restenosis (res'stē-no'sis) recurrent stenosis, especially of a valve of the heart, after surgical correction of the primary condition. **false r.**, stenosis recurring after failure to divide either commissure of the cardiac valve beyond the area of incision of the papillary muscles. **true r.**, restenosis occurring after complete opening of one or both of the commissures of the cardiac valve involved.

restibrachium (res'ti-bra'ke-um), pl. *restibra'chia* [*L. restis* rope + *brachium* arm] (*obs.*) pedunculus cerebellaris inferior.

restiform (res'ti-form) [*L. restis* rope + *forma* form] shaped like a rope.

restis (res'tis), pl. *res'tes* [*L. "rope"*] (*obs.*) pedunculus cerebellaris inferior.

restitutio (res'ti-tu'she-o) [*L.*] restitution. **r. in'tegrum**, complete return to health.

restitution (res'ti-tu'shun) [*L. restitutio*] 1. an active process of restoration. 2. the spontaneous realignment of the fetal head with the fetal body, after delivery of the head.

restoration (res'to-ra'shun) 1. reconstruction to effect return to a previous state, as of health. 2. the partial or complete reconstruction of a body part, or the device used as its replacement. In dentistry, the act of restoring a tooth to its original condition by the filling of a cavity and replacement of lost parts, or the material used in such a procedure. **buccal r.**, the replacement, usually with silver alloy, gold, or plastic, of the buccal portion of a posterior tooth lost through caries or injury. **prosthetic r.**, the replacement of a lost or absent body part with an artificial structure, or the device or material used for such replacement, such as, in dentistry, an inlay, crown, bridge, or partial or complete denture, or other appliance to replace tissues missing from the mouth.

restorative (re-stōr'ah-tiv) (*obs.*) 1. promoting a return to health or to consciousness. 2. a remedy that aids in restoring health, vigor, or consciousness; called also *anastatic*.

restraint (re-strānt') the forcible confinement of a violently psychotic or irrational person. **chemical r.**, the quieting of a violently psychotic or irrational person by means of narcotics.

resublimed (re'sub-lim'd) subjected to repeated processes of sublimation.

resultant (re-zul'tant) any of the products of a chemical reaction.

resupination (re'su-pī-na'shun) [*L. resupinare* to turn on the back] 1. the act of turning upon the back or dorsum. 2. the position of one lying upon the back.

resuscitation (re-sus'i-ta'shun) [*L. resuscitare* to revive] the restoration to life or consciousness of one apparently dead; it includes such measures as artificial respiration and cardiac massage. **cardiopulmonary r. (CPR)**, the reestablishing of heart and lung action as indicated for cardiac arrest or apparent sudden death resulting from electric shock, drowning, respiratory arrest, and other causes. The two major components of CPR are artificial ventilation and closed chest cardiac massage; see illustration accompanying *respiration*. **r. of the heart**, restoration of spontaneous cardiac contractions. See illustration accompanying *respiration*.

resuscitator (re-sus'i-ta'tor) an apparatus for initiating respiration in cases of asphyxia. **cardiopulmonary r.**, an apparatus that simultaneously assists the patient's breathing and applies external cardiac massage.

resuture (re-soo'tūr) secondary suture.

retainer (re-tān'er) an appliance or device for retaining anything in position. In dentistry, an appliance which aids in maintaining in the proper position a tooth whose malposition has been corrected, or which helps keep a fixed or removable partial denture in place. **continuous bar r.**, Kennedy bar. **direct r.**, a clasp or attachment applied to an abutment tooth, by which a removable partial denture is maintained in position; called also *clasp*. **Hawley r.**, a removable palatal wire and acrylic appliance used as a stabilizing appliance or, with modifications, to move teeth. It usually incorporates a labial wire and an acrylic palate. **indirect r.**, a removable partial denture component which aids the action of a direct retainer by functioning through lever action on the opposite side of the fulcrum line. **matrix r.**, a mechanical device designed to engage the ends of a matrix band or strip and to tighten the matrix around the tooth.

retamine (ret'ah-min) an alkaloid, C₁₁H₂₅N₂O, from the young branches and bark of *Genista sphaerocarpa*.

retardate (re-tar'dāt) a mentally retarded individual.

retardation (re'tar-da'shun) [*L. retardare* to slow down, impede] delay; hindrance; delayed development. **mental r.**, subnormal general intellectual development, originating during the developmental period, and associated with impairment of either learning

and social adjustment or maturation, or both. The disorder is classified according to intelligence quotient as follows: *borderline*, 68-83; *mild*, 52-67; *moderate*, 36-51; *severe*, 20-35; and *profound*, less than 20. Formerly called *feeble-mindedness* and *mental deficiency*. **psychomotor r.**, underactivity of both mind and body, as seen in depressive disorders. **r. of thought**, delay in thinking in which either the process of thought is set in motion slowly (*initial r.*), or the thought or action once having started is performed slowly (*executive r.*).

retching (rech'ing) a strong involuntary effort to vomit.

rete (re'te), pl. *re'tia* [L. "net"] a net or meshwork; used in anatomical nomenclature as a general term to designate a network, especially of arteries or veins. **acromial r., r. acromia/le** [NA], a network formed by ramification of the acromial branch of the thoracoacromial artery on the acromion process. **r. arterio/sum** [NA], an anastomotic network formed by arteries just before they become arterioles or capillaries. **articular r.**, a network of anastomosing blood vessels in or around a joint. **articular cubital r., articular r. of elbow**, r. articulare cubiti. **articular r. of knee**, r. articulare genus. **r. articular/re cu'biti** [NA], articular rete of elbow: an arterial network formed on the posterior aspect of the elbow by the posterior ulnar recurrent, inferior and superior ulnar collateral, and interosseous recurrent arteries. **r. articular/re ge'nu**, r. articulare genus. **r. articular/re ge'nus** [NA], articular rete of knee: an extensive arterial rete on the capsule of the knee joint, supplying branches to the contiguous bones and joints. It is formed by the genicular arteries, the termination of the deep femoral artery, the descending branch of the lateral circumflex artery, and the tibial recurrent artery. **calcaneal r., r. calca'nei**, r. calca'neum [NA], an arterial rete on the posterior and lower surfaces of the calcaneus, receiving branches from the calcaneal branches of the peroneal artery and the lateral malleolar branches of the peroneal artery. **r. cana'lis hypoglossi**, plexus venosus canalis hypoglossi. **carpal r., dorsal**, r. carpi dorsale. **r. car'pi dorsale** [NA], dorsal carpal rete: an arterial rete formed by the dorsal radial carpal and dorsal ulnar carpal arteries and giving off the second, third, and fourth dorsal metacarpal arteries to the dorsum of the hand and the second, third, and fourth fingers. **r. cuta'neum**, the network of arteries at the boundary between the corium and the tela subcutanea. **dorsal venous r. of foot**, r. venosum dorsale pedis. **dorsal venous r. of hand**, r. venosum dorsale manus. **r. dorsa/le pe'dis**, an arterial rete on the dorsum of the foot. **epidermal r.**, stratum germinativum epidermidis [Malpighii]. **r. foram'inis ova'lis**, plexus venosus foraminis ovalis. **r. of Haller**, r. Halle'ri, r. testis. **malleolar r., lateral**, r. malleolare laterale. **malleolar r., medial**, r. malleolare mediale. **r. malleola/re latera/le** [NA], lateral malleolar rete: a small arterial rete on the lateral malleolus, formed by the lateral anterior malleolar artery, the perforating branch of the peroneal artery, and the lateral tarsal artery. **r. malleola/re media/le** [NA], medial malleolar rete: a small arterial rete on the medial malleolus, formed by the medial anterior malleolar artery and branches from the posterior tibial artery. **r. Malpighi**, stratum germinativum epidermidis [Malpighii]. **r. mira'bile**, 1. [NA], a vascular network formed by division of an artery or a vein into a large number of smaller vessels that subsequently reunite into a single vessel; in the human this occurs only in the arterioles that supply the glomeruli of the kidney. 2. arterial anastomosis of the brain occurring between the external and internal carotid arteries as a result of longstanding thrombosis of the internal carotid arteries. **r. na'si**, a venous plexus in the inferior nasal concha. **r. olec'rani**, r. articulare cubiti. **r. ova'rii**, a homologue of the rete testis, developed in the early female fetus, but vestigial in the adult. **r. of patella**, r. patel'lae [NA], a network of arterial branches surrounding the patella, and derived from the various arteries of the knee. **plantar r., plantar venous r.**, r. venosum plantare. **r. subpapilla/re**, the network of arteries at the boundary between the papillary and reticular layers of the corium. **r. test'is** [NA], r. test'is [Halle'ri], a network of channels, formed by the straight seminiferous tubules, traversing the mediastinum testis and draining into the efferent ductules; called also *rete of Haller*. **r. vasculo/sum**, a network of anastomosing blood vessels. **r. veno/sum** [NA], venous network: an anastomotic network of small veins. **r. veno/sum dorsa/le ma'nus** [NA], dorsal venous rete of hand: a venous network on the back of the hand, formed by the dorsal metacarpal veins. **r. veno/sum dor'sale pe'dis** [NA], dorsal venous rete of foot: a superficial network of anastomosing veins on the dorsum of the foot proximal to the transverse venous arch, draining into the great and the small saphenous veins. **r. veno/sum planta/re** [NA], plantar venous rete: a thick venous rete in the subcutaneous tissue of the sole of the foot. **re'tia veno'sa vertebra'rum**, networks of veins inside the vertebral canal.

retention (re-ten'shun) [L. *retentio*, from *retentare* to hold firmly back] the process of keeping in position, as (a) the persistent keeping within the body of matters normally excreted, or (b) in dentistry, the maintaining of a dental prosthesis in proper position in the mouth, against all forces that might tend to dislodge it. **direct r.**, maintenance of the position of a removable partial

denture in the mouth by means of direct retainers. **indirect r.**, retention in the mouth of a removable partial denture by means of indirect retainers. **surgical r.**, retention in the mouth of a dental prosthesis by means of attachments embedded in the oral tissues. **r. of urine**, accumulation of urine within the bladder because of inability to urinate.

retethelioma (re'te-the-le-o'mah) malignant lymphoma.

retia (re'te-ah) [L.] plural of *rete*.

retial (re'te-al) pertaining to or of the nature of a rete.

reticula (re'tik'u-lah) [L.] plural of *reticulum*.

reticular (re'tik'u-lar) [L. *reticularis*] pertaining to or resembling a net.

reticulated (re'tik'u-lät'ed) reticular.

reticulation (re'tik'u-la'shun) [L. *reticulum* a net] in radiology, a network of wrinkles or corrugations in the emulsion of an x-ray film resulting from sharp temperature differences between processing solutions. **dust r.**, an early stage of pneumoconiosis, seen especially in coal miners, which may go on to an anthracosilicosis.

reticulin (re'tik'u-lin) a scleroprotein from the connective fibers of reticular tissue. **r. M.**, an internal secretion produced by the reticuloendothelial system.

reticulitis (re'tik'u-li'tis) inflammation of the reticulum of a ruminant animal.

reticulocyte (re'tik'u-lo-sit') a young red blood cell showing a basophilic reticulum under vital staining.

reticulocytogenic (re'tik'u-lo-si'to-je'n'ik) causing the formation of reticulocytes.

reticulocytopenia (re'tik'u-lo-si'to-pe'ne-ah) [*reticulocyte* + Gr. *penia* poverty] a decrease in the number of reticulocytes of the blood.

reticulocytosis (re'tik'u-lo-si-to'sis) an increase in the number of reticulocytes in the peripheral blood.

reticuloendothelial (re'tik'u-lo-en'do-the'le-al) pertaining to tissues having both reticular and endothelial attributes; see under *system*.

reticuloendothelioma (re'tik'u-lo-en'do-the-le-o'mah) malignant lymphoma.

reticuloendotheliosis (re'tik'u-lo-en'do-the-le-o'sis) hyperplasia of reticuloendothelial tissue. **leukemic r.**, leukemia marked by splenomegaly and by an abundance of large, mononuclear abnormal cells with numerous, irregular cytoplasmic projections that give them a flagellated or hairy appearance in the bone marrow, spleen, liver, and peripheral blood; called also *hairy-cell leukemia*. See also *hairy cell*, under *cell*. **systemic aleukemic r.**, Letterer-Siwe disease.

reticuloendothelium (re'tik'u-lo-en'do-the'le-um) the tissue of the reticuloendothelial system.

reticulohistiocytary (re'tik'u-lo-his'te-o-si'ter-e) pertaining to or composed of histiocytes of the reticuloendothelial system.

reticulohistiocytoma (re'tik'u-lo-his'te-o-si-to'mah) a granulomatous aggregation of lipid-laden histiocytes and multinucleated giant cells; it may be solitary with no systemic involvement (*reticulohistiocytic granuloma*), or multiple with systemic involvement (*multicentric reticulohistiocytosis*).

reticulohistiocytosis (re'tik'u-lo-his'te-o-si-to'sis) the formation of multiple reticulohistiocytomas. **multicentric r.**, a rare systemic disease, usually affecting women, manifested by polyarthritis of the hands and large joints, frequently leading to crippling absorption of the phalanges, and the development of reticulohistiocytomas of the skin and mucous membranes. The course varies—there may be involution, it may remain stationary, or it may progress, terminating in death. Called also *lipid or lipid dermatoarthritis*. Cf. *reticulohistiocytic granuloma*.

reticuloid (re'tik'u-loid) 1. resembling reticulosis. 2. a condition resembling reticulosis. **actinic r.**, dermatosis aggravated by exposure to light, usually affecting the elderly, characterized by a chronic eczematous eruption predominantly on the exposed skin of the face, hands, and forearms, and extending to contiguous unexposed areas. Often there are episodes of almost universal erythroderma. In severe cases, edematous plaques produce gross furrowing and distortion of features. The eruption clears slowly on avoidance of light.

reticuloma (re'tik'u-lo'mah) histiocytic malignant lymphoma.

reticulopenia (re'tik'u-lo-pe'ne-ah) reticulocytopenia.

reticuloperithelium (re'tik'u-lo-per'i-the'le-um) retoperithelium.

reticulopituitary (re'tik'u-lo-pi-tu'i-sit) see *pituitary*.

reticulopod (re'tik'u-lo-pod) rhizopodium.

reticulopodium (re'tik'u-lo-po-de-um) rhizopodium.

reticulosarcoma (re'tik'u-lo-sar-ko'mah) malignant lymphoma, undifferentiated or histiocytic.

reticulosis (re'tik'u-lo'sis) an abnormal increase in cells derived from or related to reticuloendothelial cells. **familial hemophagocytic r.**, familial histiocytic r. **familial histiocytic r.**, a fatal hereditary disorder transmitted as an autosomal recessive trait, characterized by anemia, granulocytopenia,

thrombocytopenia, phagocytosis of blood cells, diffuse proliferation of histiocytes of various organs, and enlargement of the liver, spleen, and lymph nodes; called also *familial hemophagocytic r.* and *histiocytic medullary r.* **histiocytic medullary r.**, familial histiocytic r. **lipomelanotic r.**, dermatopathic lymphadenopathy. **malignant mast cell r.**, a very rare, occasionally fatal form of systemic mastocytosis in which there is massive mast cell infiltration of various organs, resulting in impairment of their function. **midline malignant r.**, lethal midline granuloma thought to be due to lymphoma.

reticulothelium (rē-tik'ū-lo-the'le-um) the retothelium. **agranular r.**, see *endoplasmic r.*

reticulum (rē-tik'ū-lum), pl. *retic'ula* [L., dim. of *rete* net] 1. a network, especially a protoplasmic network in cells, as the flattened double membrane sheets of the endoplasmic reticulum. 2. reticular tissue. 3. the second division of the stomach of a ruminant animal. **Chiari's r.**, Chiari's network. **Ebner's r.**, a network of cells in the seminiferous tubules. **endoplasmic r.**, an ultramicroscopic organelle of nearly all cells of higher plants and animals, consisting of a more or less continuous system of membrane-bound cavities that ramify throughout the cytoplasm of a cell. Two forms have been distinguished: *granular reticulum* (chromidial substance, ergastoplasm), which bears large numbers of ribosomes on the outer surface of its membrane and is basophilic, and *agranular reticulum*, which contains no ribosomes and has no distinctive staining properties. Called also *superior protoplasm*. **granular r.**, see *endoplasmic r.* **retic'ula lie'nis**, trabeculae lienis. **sarcoplasmic r.**, a special form of agranular reticulum found in the sarcoplasm of striated muscle and comprising a system of smooth-surfaced tubules forming a plexus around each myofibril. **stellate r.**, the soft, middle part of the enamel organ of a developing tooth, the cells being separated by an increase in the gelatinous intercellular substance which forces the cells apart without breaking the intercellular connections, giving them a stellate appearance and providing protection later for the enamel-forming cells.

retiform (re'ti-form, ret'i-form) [L. *rete* net + *forma* form] resembling a network.

retina (ret'i-nah) [L.] [NA] the innermost of the three tunics of the eyeball, surrounding the vitreous body and continuous posteriorly with the optic nerve. It is divided into the *pars optica*, which rests upon the choroid, the *pars ciliaris*, which rests upon the ciliary body, and the *pars iridica*, which rests upon the posterior surface of the iris. Grossly, the retina is composed of an outer, pigmented layer (stratum pigmenti) and an inner, transparent layer, the optic part of which is the cerebral stratum (stratum cerebrale). The latter consists of nine layers, named from within outward, as follows (see illustration): (1) the membrana limitans interna; (2) the nerve fiber layer; (3) the layer of ganglion cells; (4) the inner molecular, or plexiform, layer; (5) the inner nuclear layer; (6) the outer molecular, or plexiform, layer; (7) the outer nuclear layer; (8) the membrana limitans externa; (9) the layer of rods and cones (called also *Jacob's membrane* and *bacillary layer*). The pigmentary layer overlying the optic portion is continued forward over the inner surface of the ciliary body, constituting the *pars ciliaris retinae*. The various layers are connected transversely by fibers of connective tissue (*fibers of Müller*). The layer of rods and cones forms the percipient element of the retina (i.e., the element that responds to visual stimuli by a photochemical reaction), and is connected with the nerve fiber layer by nerve fibers which join to form the optic nerve. In the center of the posterior part of the retina is the *macula lutea*, the most sensitive portion of the retina; and in the center of the macula lutea is a depression, the *fovea centralis*, from which the rods are absent.

Schematic representation of the layers of the adult human retina.

About 0.25 cm. inside the fovea is the point of entrance of the optic nerve and its central artery (*central artery of the retina*). At this point the retina is incomplete and forms the *blind spot*. **coarctate r.**, a funnel-shaped condition of the retina caused by a fluid exudation between the retina and the choroid. **lower r.**, the lower half of the retina. **nasal r.**, the nasal half of the retina. **physiological r.**, the part of the retina that contains receptors sensitive to light (*pars optica retinae* [NA]). **shot-silk r.**, an opalescent effect, as of changeable silk, sometimes seen in the retinas of young persons. **temporal r.**, the outer half of the retina. **tigroid r.**, the "striped" retina seen in a blond fundus in which the choroidal vessels can be seen, or in certain tapetoretinal degenerations. **upper r.**, the upper half of the retina. **watered-silk r.**, shot-silk retina.

Retin-A (ret'in) trademark for a preparation of tretinoin.

retinaculum (ret'i-nak'ū-lum), pl. *retinac'ula* [L. "a rope, cable"] 1. a structure which retains an organ or tissue in place; [NA] a general term for such a structure. 2. an instrument or device for retracting tissues during surgery. See *tenaculum*. **r. of arcuate ligament**, r. ligamenti arcuati. **r. cap'sulae articula'ris cox'ae**, one of the longitudinal folds of the cervical portion of the articular capsule of the hip. **caudal r.**, r. *cauda'le* [NA], a fibrous band that extends from the tip of the coccyx to the adjacent skin and thus forms the foveola coccygea; called also *ligamentum caudale integumenti communis*. **r. cos'tae ul'timae**, ligamentum lumbocostale. **retinac'ula cu'tis** [NA], bands of connective tissue attaching the corium to the subcutaneous tissue. **extensor r. of foot, inferior**, r. musculorum extensorum pedis inferioris. **extensor r. of foot, superior**, r. musculorum extensorum pedis superioris. **extensor r. of hand**, r. extensorum manus. **r. extenso'rum ma'nus** [NA], extensor retinaculum of hand: the distal part of the antebrachial fascia, overlying the extensor tendons; called also *ligamentum carpi dorsale*. **flexor r. of foot**, r. musculorum flexorum pedis. **flexor r. of hand**, r. flexorum manus. **r. flexo'rum ma'nus** [NA], flexor retinaculum of hand: a heavy fibrous band continuous with the distal part of the antebrachial fascia, completing the carpal canal through which pass the tendons of the flexor muscles of the hand and fingers; called also *ligamentum carpi transversum*. **r. ligamen'ti arcua'ti**, retinaculum of arcuate ligament: a band of converging fibers passing from the convex lower margin of the arcuate popliteal ligament to the head of the fibula. **r. musculo'rum extenso'rum pe'dis infe'rius** [NA], inferior extensor of foot: a thickened band of the fascia cruris passing from each malleolus across the front of the ankle joint, there crossing the other and passing onto the dorsum of the foot; called also *ligamentum cruciatum cruris*. **r. musculo'rum extenso'rum pe'dis supe'rius** [NA], superior extensor retinaculum of foot: the thickened lower portion of the fascia on the front of the leg, attached to the tibia on one side and the fibula on the other, and serving to hold in place the extensor tendons that pass beneath it; called also *ligamentum transversum cruris*. **r. musculo'rum fibula'rium infe'rius**, NA alternative for r. musculorum peroneorum inferius. **r. musculo'rum fibula'rium supe'rius**, NA alternative for r. musculorum peroneorum superioris. **r. musculo'rum flexo'rum pe'dis** [NA], a strong band of fascia that extends from the medial malleolus down onto the calcaneus. It holds in place the tendons of the tibialis posterior, flexor digitorum, and flexor hallucis muscles as they pass to the sole of the foot, and gives protection to the posterior tibial vessels and tibial nerve. Called also *ligamentum laciniatum* and *flexor r. of foot*. **r. musculo'rum peroneo'rum infe'rius**, r. musculorum peroneorum inferius. **r. musculo'rum peroneo'rum supe'rius**, r. musculorum peroneorum superioris. **r. musculo'rum peroneo'rum infe'rius** [NA], a fibrous band that arches over the tendons of the peroneal muscles and holds them in position on the lateral side of the calcaneus; called also *inferior peroneal r.* **r. musculo'rum peroneo'rum supe'rius** [NA], a fibrous band that arches over the peroneal tendons and helps to hold them in place below and behind the lateral malleolus; it extends from the malleolus downward and backward to the calcaneus. Called also *superior peroneal r.* **r. patel'lae late'ra'le** [NA], lateral patellar retinaculum: a fibrous membrane from the tendon of the vastus lateralis muscle, attached to the lateral margin of the patella and then along the side of the patellar ligament, and inserted into the tibia as far distal as the fibular collateral ligament; it also blends with the iliotibial tract of the fascia lata. Called also *lateral patellar ligament*. **r. patel'lae media'le** [NA], medial patellar retinaculum: a fibrous membrane from the tendon of the vastus medialis muscle, attached to the medial margin of the patella and then along the side of the patellar ligament, and inserted into the tibia as far distal as the tibial collateral ligament. **patellar r., lateral**, r. patellae laterale. **patellar r., medial**, r. patellae mediale. **peroneal r., inferior**, r. musculorum peroneorum inferius. **peroneal r., superior**, r. musculorum peroneorum superioris. **r. ten'dinum**, a tendinous restraining structure, such as an annular ligament. **r. ten'dinum musculo'rum extenso'rum**, r. extensorum manus. **r. ten'dinum musculo'rum extenso'rum infe'rius**, r. musculorum extensorum pedis inferius. **r. ten'dinum musculo'rum extenso'rum supe'rius**, r.

musculorum extensorum pedis superius. **r. ten'dinum musculo'rum flexo'rum**, r. flexorum manus. **retinac'ula un'guis** [NA], structures homologous to the retinacula cutis, attaching the nail to underlying tissue. **Weitbrecht's r.**, retinacular fibers attached to the neck of the femur.

retinal (ret'/i-nal) 1. pertaining to the retina. 2. the aldehyde of retinol, derived by the oxidative enzymatic splitting of absorbed dietary carotene, and having vitamin A activity. In the retina, retinal combines with opsins to form visual pigments. One isomer, 11-*cis* retinal combines with opsin in the rods (scotopsin) to form rhodopsin, or visual purple. Another, all-*trans* retinal (*trans-r.*; visual yellow; xanthopsin), results from the bleaching of rhodopsin by light, in which the 11-*cis* form is converted to the all-*trans* form. Retinal also combines with opsins in the cones (photopsins) to form the three pigments responsible for color vision. Called also *retinal*, and *retinene*.

retinal₁ (ret'/i-nal) retinal.

retinal₂ (ret'/i-nal) dehydroretinal.

retinascope (ret'/i-nah-skōp) retinoscope.

retine (ret'/ēn) a substance stated to be widely distributed in animal cells, which is characterized by its ability to retard cell division and growth. Cf. *promine*.

retinene (ret'/i-nēn) the aldehyde of vitamin A, occurring in two forms: *retinene*, is the aldehyde of retinol (see *retinal*, def. 2), and *retinene₂* is the aldehyde of dehydroretinol.

retinitis (ret'/i-ni'tis) inflammation of the retina; used in the older ophthalmological literature to denote impairment of sight, perversion of vision, edema, and exudation into the retina, and occasionally by hemorrhages into the retina. **actinic r.**, retinitis due to exposure to actinic light rays. **r. albumin'rica**, that which is associated with kidney disease. **apoplectic r.**, that which is characterized by extravasations of blood within the retina. **central angiospastic r.**, **r. centra'lis sero'sa**, central serous retinopathy. **r. circina'ta**, **circinate r.**, circinate retinopathy. **Coats' r.**, exudative retinopathy. **diabetic r.**, see under *retinopathy*. **r. discifor'mans**, a degenerative disease of the retina marked by an elevated grayish white mass in the macular region of both eyes; called also *central disk-shaped retinopathy*. **exudative r.**, exudative retinopathy. **r. gravaida'rum**, gravidic r. **gravidic r.**, inflammation of the retina occurring along with the albuminuria of pregnancy. **r. haemorrh'a'gica**, retinitis marked by profuse retinal hemorrhage. **hypertensive r.**, retinitis occurring in the course of arterial hypertension. **Jacobson's r.**, syphilitic r. **Jensen's r.**, retinohoroiditis juxtapapillaris. **leukemic r.**, a variety seen in leukemia, and marked by hemorrhage and paleness of the retina; called also *splenic r.* **metastatic r.**, retinitis caused by the location of septic emboli in the retinal vessels. **r. nephrit'ica**, retinal changes associated with nephritis; called also *renal r.* **r. pigmento'sa**, a group of diseases, frequently hereditary, marked by progressive loss of retinal response (as elicited by the electroretinogram), retinal atrophy, attenuation of the retinal vessels, and clumping of the pigment, with contraction of the field of vision. It may be transmitted as a dominant, recessive, or X-linked trait and is sometimes associated with other genetic defects. **r. proliferans**, **proliferating r.**, a condition sometimes resulting from intraocular hemorrhage, with neovascularization and the formation of fibrous tissue bands extending into the vitreous from the surface of the retina; retinal detachment is sometimes a sequel. **r. puncta'ta albes'cens**, a variety characterized by the presence of minute white spots in the fundus. **punctate r.**, a form marked by the presence of a number of white or yellowish spots scattered over the fundus. **renal r.**, r. nephritica. **serous r.**, simple inflammation of the superficial layers of the retina. **solar r.**, retinitis due to excessive exposure to sunlight. **splenic r.**, leukemic r. **r. stella'ta**, a star-shaped figure in the macular area of the retina seen in various conditions. **striate r.**, a form marked by the presence of gray or yellowish streaks just back of the retinal vessels. **suppurative r.**, retinitis due to pyemic infection. **syphilitic r.**, **r. syphilit'ica**, retinitis complicating syphilitic iritis. **uremic r.**, retinitis occurring in uremia.

retinoblastoma (ret'/i-no-blas-to'mah) a tumor arising from retinal germ cells.

retinochoroid (ret'/i-no-ko'roid) pertaining to the retina and the choroid.

retinochoroiditis (ret'/i-no-ko-ro'i-di'tis) inflammation of the retina and choroid. **r. juxtapapilla'ris**, a condition seen in young healthy subjects marked by a small inflammatory area on the fundus close to the papilla; called also *Jensen's retinitis* or *retinochoroiditis*.

retinodialysis (ret'/i-no-di-al'i-sis) [*retina* + Gr. *dialysis* separation] disinsertion of the retina; detachment of the retina at its peripheral insertion.

retinograph (ret'/i-no-graf) a photograph of the retina.

retinography (ret'/i-nog'rah-fe) photography of the retina.

retinoid (ret'/i-noid) 1. resembling the retina. 2. any derivative of retinal, whether naturally occurring or synthetic. 3. [Gr. *rhētinē* resin + *eidos* form] resembling a resin.

retinol (ret'/i-nol) vitamin A₁, the form of vitamin A found in mammals; it is a 20-carbon alcohol, C₂₀H₃₀O, that is reversibly dehydrogenated by enzymatic action into its aldehyde, retinal (q.v.). Called also *retinol₁*.

retinol₁ (ret'/i-nol) retinol.

retinol₂ (ret'/i-nol) dehydroretinol.

retinomalacia (ret'/i-no-mah-la'she-ah) [*retina* + Gr. *malakos* soft + *-ia*] softening of the retina.

retinopapillitis (ret'/i-no-pap'/i-li'tis) inflammation of the retina and the optic papilla.

retinopathy (ret'/i-nop'ah-the) [*retina* + Gr. *pathos* disease] any noninflammatory disease of the retina. **central disk-shaped r.**, retinitis disciformans. **central serous r.**, a usually self-limiting condition marked by acute localized detachment of the neural retina or retinal pigment epithelium in the region of the macula, with hypermetropia; called also *central angiospastic retinitis* and *retinitis centralis serosa*. **circinate r.**, a condition marked by a circle of white spots enclosing the macular area, leading to complete foveal blindness; called also *retinitis circinata* or *circinate retinitis*. **diabetic r.**, retinopathy associated with diabetes mellitus, which may be of the background type, progressively characterized by microaneurysms, intraretinal punctate hemorrhages, yellow, waxy exudates, cotton-wool patches, and macular edema, or of the proliferative type, characterized by neovascularization of the retina and optic disk, which may project into the vitreous, proliferation of fibrous tissue, vitreous hemorrhage, and retinal detachment. Called also *diabetic retinitis*. **exudative r.**, a condition marked by masses of white or yellowish exudate in the posterior part of the fundus oculi, with deposit of cholesterolin and blood debris from retinal hemorrhage, and leading to destruction of the macula and blindness. Called also *exudative retinitis*, and *Coats' disease* or *retinitis*. **hypertensive r.**, that associated with essential or malignant hypertension; changes may include irregular narrowing of the retinal arterioles, hemorrhages in the nerve fiber layers and the outer plexiform layer, exudates and cotton-wool patches, arteriosclerotic changes, and, in malignant hypertension, papilledema. **leukemic r.**, a condition occurring in leukemia, with paleness of the fundus resulting from infiltration of the retina and choroid with leukocytes, and swelling of the disk with blurring of its margin. **pigmentary r.**, see *retinitis pigmentosa*. **proliferative r.**, the proliferative type of diabetic retinopathy (q.v.). **Purtscher's angiopathic r.**, Purtscher's disease.

retinoschisis (ret'/i-nos'ki-sis) [*retina* + Gr. *schisis* division] splitting of the retina: in the *juvenile form* the splitting occurs in the nerve fiber layer, and in the *adult form* in the external plexiform layer. The disorder is usually more benign and slowly progressive than retinal detachment.

retinoscope (ret'/i-no-skōp') an instrument for performing retinoscopy.

retinoscopy (ret'/i-nos'ko-pe) [*retina* + Gr. *skopein* to examine] an objective method for investigating, diagnosing, and evaluating refractive errors of the eye, by projection of a beam of light into the eye and observation of the movement of the illuminated area on the retina surface and of the refraction by the eye of the emergent rays. Called also *pupilloscopy*, *skiascopy*, *skiametry*, and *shadow test*.

retinosis (ret'/i-no'sis) a general term for degenerative, noninflammatory conditions of the retina.

retinotopic (ret'/i-no-top'ik) relating to the organization of the visual pathways and visual area of the brain.

retinotoxic (ret'/i-no-tok'sik) exerting a toxic or deleterious effect upon the retina.

retisolation (ret'/i-so-lu'shun) [L. *rete* net + *solution*] dissolution of the Golgi apparatus.

retispersion (ret'/i-sper'shun) [L. *rete* net + *spargere* to throw about] migration of the Golgi apparatus from its normal position to the periphery of the cell.

retoperithelium (re'to-per'i'the'le-um) [L. *rete* net + Gr. *peri* around + *thelē* papilla] the layer of cells covering a reticular framework.

retort (re-tort') [L. *retorta* bent back] a long-necked globular vessel formerly used in distillation.

Retortamonas (re'tor-tam'o-nas) [L. *retortus* bent back + Gr. *monas* unit] a genus of biflagellate protozoa of the family Bodonidae, order Protomastigida, usually having a piriform or fusiform body tapered at the posterior end; they are parasites in the intestines of various animals. *R. blattae* is found in the intestine of cockroaches, *R. caviae* in the cecum of guinea pigs, *R. intestinalis* in the human intestine, *R. ovis* in the intestine of sheep, and *R. cuniculi* in the cecum of rabbits. Called also *Embadomonas*.

retothel (re'to-thel) reticuloendothelial.

retothelial (re'to-to-the'le-al) pertaining to the retothelium; containing reticulum cells.

retothelium (re'to-to-the'le-um) [L. *rete* net + Gr. *thelē* papilla] the layer of cells covering a reticular tissue.

retractile (re-trak'til) [L. *retractilis*] susceptible of being drawn back.

retraction (re-trak'shun) [L. *retractio*, from *re-* back + *trahere* to draw] the act of drawing back; the condition of being drawn back. **clot r.**, the drawing away of a blood clot from the wall of a vessel; it is a function of blood platelets. **gingival r.**, the apical advancement of the line of attachment of the gingiva on a tooth surface. **mandibular r.**, the condition of the mandible when the gnathion lies posterior to the orbital plane.

retractor (re-trak'tor) 1. an instrument for maintaining operative exposure by separating the edges of a wound and holding back underlying organs and tissues; many shapes, sizes, and styles are available. 2. any retractile muscle. **Emmet's r.**, a self-retaining vaginal speculum. **Moorehead's r.**, a retractor used in dentistry.

retrad (re'trad) [L. *retro* backward] toward a posterior or dorsal part.

retrieval (re-tre'val) in psychology, the process of obtaining memory information from wherever it has been stored.

retro- (ret'ro, re'tro) [L. *retro* backward] a prefix signifying backward, or located behind.

retroaction (ret'ro-ak'shun) action in a reversed direction; re-action.

retroauricular (ret'ro-aw-rik'u-lar) behind the auricle.

retrobronchial (ret'ro-brong'ke-al) behind the bronchi.

retrobuccal (ret'ro-buk'al) pertaining to the back part of the mouth.

retrobulbar (ret'ro-bul'bar) [*retro-* + L. *bulbus* bulb] 1. behind the pons. 2. behind the eyeball.

retrocalcaneobursitis (ret'ro-kal-ka'ne-o-bur-si'tis) achillobursitis.

retrocardiac (ret'ro-kar'de-ak) behind the heart.

retrocatheterism (ret'ro-kath'ë-ter-izm) the passing of a catheter through a suprapubic opening downward through the urethra to the external meatus.

retrocecal (ret'ro-se'kal) behind the cecum.

retrocervical (ret'ro-ser've-kal) behind the cervix uteri.

retrocession (ret'ro-sesh'un) [L. *retrocessio*] a going backward; backward displacement; specifically a dropping backward of the entire uterus.

Retrocession of uterus.

retroclavicular (ret'ro-klah-vik'u-lar) behind the clavicle.

retroclulsion (ret'ro-kloo'zhun) [*retro-* + L. *claudere* to close] closure of a bleeding artery by means of a pin passed over, behind, and under the vessel.

retrocochlear (ret'ro-kok'le-ar) 1. behind the cochlea. 2. denoting the eighth cranial nerve and cerebellopontine angle as opposed to the cochlea.

retrocolic (ret'ro-kol'ik) behind the colon.

retrocollic (ret'ro-kol'ik) pertaining to the back of the neck; nuchal.

retrocollis (ret'ro-kol'is) [*retro-* + L. *collum* neck] spasmodic wryneck in which the head is drawn directly backward.

retrocruial (ret'ro-kru'al) situated at the back of the leg, or crus.

retrocursive (ret'ro-kur'siv) [*retro-* + L. *curro* to run] marked by stepping backward.

retrodeviation (ret'ro-de've-a'shun) a general term inclusive of retroversion, retroflexion, retroposition, etc.

retrodisplacement (ret'ro-dis-pläs'ment) backward or posterior displacement.

retroesophageal (ret'ro-ë-sof'ah-je'al) posterior to the esophagus.

retrofilling (ret'ro-fil'ing) a method of filling the root canal of a tooth from the apex of a root which has been surgically exposed.

retroflexed (ret'ro-flekst) [*retro-* + L. *flexus* bent] bent backward; in a state of retroflexion.

retroflexion (ret'ro-flek'shun) [L. *retroflexio*] the bending of an organ so that its top is turned backward; specifically, the bending backward of the body of the uterus toward the cervix, resulting in a sharp angle at the point of bending.

Retroflexion of uterus.

retrogasserian (ret'ro-gas-se're-an) pertaining to the sensory (posterior) root of the trigeminal (gasserian) ganglion.

retrognathia (ret'ro-nath'e-ah) [*retro-* + Gr. *gnathos* jaw + *-ia*] position of the jaws back of the frontal plane of the forehead.

retrognathic (ret'ro-nath'ik) pertaining to or characterized by retrognathia.

retrognathism (ret'ro-nath'ism) retrognathia.

retrograde (ret'ro-grād) [*retro-* + L. *gradi* to step] going backward; retracing a former course; catabolic.

retrography (re-trog'rah-fe) [*retro-* + Gr. *graphein* to write] mirror writing.

retrogression (ret'ro-gresh'un) [*retro-* + L. *gressus* course] degeneration; deterioration; regression; return to an earlier, less complex condition.

retroinfection (re'tro-in-fek'shun) infection of the mother by the fetus.

retroinsular (ret'ro-in'su-lar) [*retro-* + L. *insula* island] situated or occurring behind the insula.

retroiridian (re'tro-i-rid'e-an) behind the iris.

retrojection (ret'ro-jek'shun) [*retro-* + L. *jacere* to throw] irrigation of a cavity by injection of fluid.

retrolabyrinthine (re'tro-lab'y-rin'then) behind the labyrinth of the ear.

retrolental (re'tro-len'tal) behind the lens of the eye.

retrolenticular (re'tro-len-tik'u-lar) [*retro-* + *lenticular*] retrolental.

retrolingual (ret'ro-ling'gwal) behind the tongue.

retromammary (ret'ro-mamm'ar-e) behind the mammary gland.

retromandibular (re'tro-man-dib'u-lar) behind the mandible of the lower jaw.

retromastoid (re'tro-mas'toid) behind the mastoid process.

retromesenteric (ret'ro-mes'en-ter'ik) behind the mesentery.

retromorphosis (re'tro-mor-fo'sis) [*retro-* + Gr. *morphē* form] retrograde metamorphosis.

retro nasal (ret'ro-na'zal) [*retro-* + L. *nasus* nose] behind the nose.

retro-ocular (ret'ro-ok'u-lar) [*retro-* + L. *oculus* eye] behind the eye.

retroparotid (re'tro-pah-rot'id) behind the parotid gland.

retropatellar (ret'ro-pah-tel'ar) situated behind the patella.

retroperitoneal (re'tro-per'i-to-ne'al) behind the peritoneum.

retroperitoneum (re'tro-per'i-to-ne'um) the retroperitoneal space.

retroperitonitis (re'tro-per'i-to-ni'tis) inflammation in the retroperitoneal space.

retropharyngeal (re'tro-fah-rin'je-al) [*retro-* + *pharyngeal*] situated or occurring behind the pharynx.

retropharyngitis (re'tro-far'in-ji'tis) inflammation of the posterior part of the pharynx.

retropharynx (re'tro-far'inks) the posterior part of the pharynx.

retroplacental (re'tro-plah-sen'tal) behind the placenta.

retroplasia (ret'ro-pla'se-ah) [*retro-* + Gr. *plasis* formation + *-ia*] retrograde metaplasia; degeneration of a tissue or cell into a more primitive type.

retropleural (re'tro-plōō'al) behind the pleura; posterior to the pleural cavity.

retroposed (re'tro-pōzd) [*retro-* + L. *positus* placed] displaced backward or posteriorly.

retroposition (re'tro-po-zish'un) backward displacement.

retropulsion (re'tro-pul'shun) [*retro-* + L. *pellere* to drive] 1. a driving back, as of the fetal head in labor. 2. a tendency to walk

backward, as in some cases of *tabes dorsalis*; *opisthoplegia*. 3. an abnormal gait in which the body is bent backward.

retrorectal (re'tro-rek'tal) behind the rectum.

retroresine (re'tro-ror-sin) a poisonous alkaloid, $C_{18}H_{25}O_6N$, from *Senecio retroresus*, which may cause a fatal cirrhosis of the liver in horses and cattle that eat the plant.

retrosinus (re'tro-si'nus) the air cells behind the sigmoid sinus in the mastoid process of the temporal bone.

retrospendylolisthesis (re'tro-spon'di-lo-lis-the'sis) posterior displacement of one vertebral body on the subjacent body.

retrostalsis (re'tro-stal'sis) reversed or backward peristaltic action.

retrosternal (re'tro-ster'nal) [*retro-* + *sternum*] situated or occurring behind the sternum.

retrosymphysial (re'tro-sim-fiz'e-al) behind the symphysis pubis.

retrotarsal (re'tro-tar'sal) behind the tarsus of the eye.

retrouterine (re'tro-u'ter-in) [*retro-* + *uterus*] behind the uterus.

retrovaccination (re'tro-vak'si-na'shun) the inoculation of a heifer with vaccine virus from a human subject, also vaccination with virus obtained from a cow which has been previously thus inoculated.

retroversion (re'tro-ver'zhun) [*L. retroversio*; *retro* back + *versio* turning] the tipping of an entire organ backward. **r. of uterus**, the turning backward of the entire uterus in relation to the pelvic axis.

retroverted (re'tro-vert'ed) in a condition of retroversion.

retrovesical (re'tro-ves'i-kal) behind the urinary bladder.

retrovirus (re'tro-vi'rus, re'tro-vi'rus) a large group of RNA viruses that includes the leukoviruses and lentiviruses.

retrusion (re-troo'zhun) [*L. re-* back + *trudere* to shove] 1. the state of being located posterior to the normal position, as malposition of a tooth posteriorly in the line of occlusion. 2. the backward movement or position of the mandible.

Retzius' fibers, space (cavity), veins (re'tze-us) [Anders Adolf Retzius, Swedish anatomist, 1796-1860] see under *fiber* and *vein*, and see *spatium retropubicum*.

Retzius' foramen, lines (striae, stripes) (re'tze-us) [Magnus Gustav Retzius, Swedish anatomist, 1842-1919] see *apertura lateralis ventriculi*, and see *incremental lines*, under *line*.

reunient (re-un'yent) [*L. re-* again + *unire* to unite] effecting the union of divided tissues or organs.

Reuss's color charts (tables) (rois'ez) [August Ritter von Reuss, Vienna ophthalmologist, 1841-1924] see under *chart*.

revaccination (re'vak-si-na'shun) a second vaccination.

revascularization (re-vas'ku-lar-i-za'shun) the restoration of an adequate blood supply to a part by means of a blood vessel graft, as in aortocoronary bypass.

revellent (re-vel'ent) [*L. re-* back + *vellere* to draw] causing revulsion; revulsive.

Reverdin's graft (method, operation) needle (ra-ver-danz') [Jacques Louis Reverdin, surgeon at Geneva, 1842-1929] see *epidermic graft*, under *graft*, and see under *needle*.

reversal (re-ver'sal) a turning or change in the opposite direction. **r. of gradient**, a changing of direction of the fecal stream due to an area of irritation causing local spasticity of the intestine with higher tonus than that of the proximal area.

reversible (re-ver'si-b'l) capable of going through a series of changes in either direction, forward or backward, as a reversible chemical reaction.

reversion (re-ver'zhun) [*L. re* back + *versio* turning] 1. a returning to a previous condition; regression. 2. in genetics, inheritance from some remote ancestor of a character which has not been manifest for several generations. Cf. *atavism*. **antigenic r.**, a change in the antigenic structure of adult cells to that of immature cells; such reversion may follow neoplastic change. **Mantoux r.**, a term suggested to designate the change from the tuberculin-positive to the tuberculin-negative state, occasionally observed with the passage of time in subjects immunized with B.C.G. vaccine. Mantoux reversion, the opposite of Mantoux conversion, may be an indication for revaccination with B.C.G. vaccine.

Revilliod's sign (ra-ve-yōz') [Jean Léonard Adolphe Revilliod, Swiss physician, 1835-1918] see under *sign*.

revivescence (re'vi-ves'ens) [*L. revivescere* to revive] 1. the renewal of vital activities. 2. the reappearance of a local (cutaneous) reaction on the subcutaneous administration of tuberculin to a patient who has previously had a diagnostic (cutaneous) tuberculin test. Called also *recurrent reaction*.

revivification (re-viv'i-fi-ka'shun) [*L. re-* again + *vivus* alive + *facere* to make] 1. restoration to life or consciousness. 2. refreshing of diseased surfaces to promote their union.

revolute (rev'o-lūt) turned back or curled back.

revulsant (re-vul'sant) [*L. revulsans*] revulsive.

révulseur (ra'vul-ser') [Fr.] (*obs.*) an instrument with many fine needle points used in the performance of *baunscheidtism*.

revulsion (re-vul'shun) [*L. revulsio*; from *re-* back + *vellere* to draw] the act of drawing blood from one part to another, as in counterirritation; the diminution of morbid action in any part of the body by irritation in another.

revulsive (re-vul'siv) [*L. re-* back + *vellere* to draw] 1. effecting revulsion. 2. an agent causing revulsion; a counterirritant.

Reynals see *Duran-Reynals*.

Reynold's test (ren'oldz) [James Emerson Reynold, Scottish physician, 1844-1920] see under *tests*.

Rezipas (rez'i-pas) trademark for a preparation of para-aminosalicylic acid.

RF rheumatoid factor.

Rf symbol for *rutherfordium*.

R.F.A. right fronto-anterior (position of the fetus).

R.F.P. right frontoposterior (position of the fetus).

R.F.P.S.(Glasgow) Royal Faculty of Physicians and Surgeons of Glasgow.

R.F.T. right frontotransverse (position of the fetus).

R.G.N. Registered General Nurse (Scotland).

Rh 1. chemical symbol for rhodium. 2. symbol for *rhesus factor* (see under *factor*).

Rh_{null} symbol for a rare blood type in which all Rh factors are lacking; see also under *syndrome*.

Rhabdiasoidea (rab'di-ah-soi'de-ah) in some classifications, a superfamily of phasmsids, including the genus *Strongyloides*.

rhabditic (rab-dit'ik) pertaining or belonging to *Rhabditis*, or to the Rhabditoidea.

rhabditiiform (rab-dit'i-form) rhabdoid.

Rhabditis (rab-di'tis) [Gr. *rhabdos* rod] a genus of minute phasmsid nematodes of the superfamily Rhabditoidea, living mostly in damp earth, and as an accidental parasite in man. *R. hominis* and *R. intestinalis* have been found in the stools. *R. niellyi* is found in the skin. *R. pellio* (*R. genitalis*, *Leptodera pellio*) is sometimes found in the genitourinary organs.

rhabditoid (rab'di-toid) rhabdoid.

Rhabditoidea (rab'di-toi'de-ah) a superfamily of phasmsids, some members of which are free-living and others are parasites of plants and animals; it includes the genera *Rhabditis* and *Strongyloides*.

rhabdium (rab'de-um) [Gr. *rhabdion* a little rod] a voluntary muscle fiber.

rhabdo- (rab'do) [Gr. *rhabdos* rod] a combining form meaning rod-shaped or denoting relationship to a rod.

rhabdocyte (rab'do-sit) [*rhabdo-* + *-cyte*] (*obs.*) metamyelocyte.

rhabdoid (rab'doid) [Gr. *rhabdo-eides* like a rod, striped looking] resembling a rod; rod-shaped.

Rhabdomonas (rab'do-mo'nas) [*rhabdo-* + Gr. *monas* unit] a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, made up of irregular long rods or filaments, occurring singly. It includes three species, *R. gracilis*, *R. linsbaueri*, and *R. rosea*.

rhabdomyoblastoma (rab'do-mi'o-blas-to'mah) [*rhabdo-* + Gr. *mys* muscle + *blastos* germ + *-oma*] rhabdomyosarcoma.

rhabdomyochondroma (rab'do-mi'o-kon-dro'mah) benign mesenchymoma.

rhabdomyolysis (rab'do-mi-ol'i-sis) [*rhabdo-* + Gr. *mys* muscle + *lysis* dissolution] disintegration or dissolution of muscle, associated with excretion of myoglobin in the urine. **exertional r.**, that due to intense, prolonged physical exertion, with symptoms often resembling those elicited by exercise in persons with occlusive arterial disease.

rhabdomyoma (rab'do-mi-o'mah) a benign tumor derived from striated muscle; called also *myoma striocellulare*.

rhabdomyomoxoma (rab'do-mi'o-mik-so'mah) benign mesenchymoma.

rhabdomyosarcoma (rab'do-mi'o-sar-ko'mah) a highly malignant tumor of striated muscle derived from primitive mesenchymal cells and exhibiting differentiation along rhabdomyoblastic lines, including but not limited to the presence of cells with recognizable cross striations. It occurs in three forms: the *pleomorphic* form affects predominantly the extremities of adults; the *alveolar* form, occurring mainly in adolescents and young adults, affects muscles of the extremities, trunk, orbital region, etc.; the *embryonal* form, occurring predominantly in infants and children, affects the head and neck, the lower genitourinary tract, pelvis, and extremities.

Rhabdonema (rab'do-ne'mah) *Rhabditis*.

rhabdosarcoma (rab'do-sar-ko'mah) rhabdomyosarcoma.

rhabdovirus (rab'do-vi'rus) [*rhabdo-* + *virus*] any of a group of morphologically similar, bullet-shaped or bacilliform RNA viruses, including the viruses of vesicular stomatitis and rabies.

rhachi- for words beginning thus, see those beginning *rachi-*.
rhacoma (ra-ko'mah) [Gr. *rhakōma* rags] a pendulous scrotum.
rhacocrania (re'bo-kra'ne-ah) [Gr. *rhaihos* crooked + *kranion* skull + *-ia*] torticollis, or wryneck.
rhacboscelia (re'bo-se'le-ah) [Gr. *rhaihos* crooked + *skelos* leg + *-ia*] genu varum (bowleg), or genu valgum (knock knee).
rhacobosis (re-bo'sis) [Gr. *rhaihos* crooked + *-osis*] crookedness of the legs or of any normally straight part.
rhagades (rag'ah-dēz) [pl. of Gr. *rhagas* rent] fissures, cracks, or fine linear scars in the skin, especially such lesions around the mouth or other regions subjected to frequent movement.
rhagadiform (ra-gad'i-form) [Gr. *rhagas* rent + L. *forma* shape] resembling rhagades.
-rhage [Gr. *rhēgnynai* to burst forth] word termination meaning a breaking or bursting forth, a profuse flow, as hemorrhage.
rhagiocrine (raj'e-o-krin) [Gr. *rhax* grape + *krinein* to separate] denoting colloid vacuoles in the cytoplasm of gland cells that represent a stage in the development of secretory granules.
rhagionid (raj'e-on'id) a fly of the family Rhagionidae.
Rhagionidae (raj'e-on'i-de) a family of biting flies, the snipe flies, of the order Diptera; the genera, *Spaniopsis*, *Suragina*, and *Symphoromyia*, contain species that are vicious biters.
rhanninose (ram'nī-nōs) a trisaccharide which occurs in the glycosides rutin and xanthorhamnin.
rhannose (ram'nōs) 6-deoxy-L-mannose, C₆H₁₂O₅.
rhannoside (ram'no-sid) a glycoside which on hydrolysis yields rhannose.
Rhamnus (ram'nus) [L.; Gr. *rhamnos* a kind of prickly shrub] a genus of rhamnaceous trees and shrubs, often with a purgative bark and fruit. Among them are *R. cathartica* L., or buckthorn, *R. purshiana* D.C. (the source of cascara sagrada), and *R. frangula* L. *R. californica* L., California buckthorn or coffee tree, has been used in rheumatism. *R. croceus* Nutt. is a species of buckthorn with edible red fruit, the excessive use of which tinges the skin red.
rhapania (rah-fa'ne-ah) raphania.
rhaphe (ra'fe) [Gr. *rhaphē*] raphe.
-rhaphe [Gr. *rhaphē* a seam] a word termination meaning joining in a seam, or suture of the part designated by the stem to which it is affixed, as blepharorrhaphy.
rhatany (rat'ah-ne) [Port. *ratanhia*] *Krameria*. **Brazilian r.**, *Krameria argentea*. **Peruvian r.**, *Krameria triandra*.
Rhazes (ra'zes) (c. 860 to c. 932 A.D.) a famous Arabian physician (although born in Persia), who was distinguished for his many writings, his treatise on smallpox and measles being particularly outstanding.
rhe (re) [Gr. *rheos* current] the unit of fluidity, being the reciprocal of the unit of velocity or centipoise.
-rhea [Gr. *rhein* to flow, run, gush] a word termination meaning flow.
rhagma (reg'mah) [Gr. *rhēgma* rent] a rupture, rent, or fracture.
rhematogenous (reg'mah-toi'jē-nus) [*rhagma* + Gr. *gennan* to produce] arising from a rhagma, as rhematogenous detachment of the retina.
Rhein's picks (rinz) [M. L. *Rhein*, American dentist, 1860-1928] instruments for opening and enlarging root canals at the apex.
rhenum (re'ne-um) a chemical element, atomic number 75, atomic weight 186.2, symbol Re.
rheo- (re'o) [Gr. *rheos* current] a combining form denoting relationship to an electric current, or to a flow, as of fluids.
rheobase (re'o-bās) [*rheo-* + Gr. *basis* step] the minimum potential of electric current necessary to produce stimulation (L. Lapicque, 1909).
rheobasic (re'o-ba'sik) pertaining to a rheobase.
rheocord (re'o-kord) [*rheo-* + Gr. *chordē* chord] rheostat.
rheology (re-o'l'o-je) the science of the deformation and flow of matter, such as the flow of blood through the heart and blood vessels.
Rheomacrodex (re'o-mak'ro-deks) trademark for a preparation of dextran 40.
rheometer (re-om'ē-ter) [*rheo-* + Gr. *metron* measure] galvanometer.
rheonome (re'o-nōm) [*rheo-* + Gr. *nemein* to distribute] an apparatus for determining the effect of irritation on a nerve.
rheophore (re'o-fōr) [*rheo-* + Gr. *phoros* carrying] an electrode.
rheoscope (re'o-skōp) [*rheo-* + Gr. *skopein* to examine] an instrument for detecting the presence of an electric current.
rheostat (re'o-stat) [*rheo-* + Gr. *histanai* to place] an appliance for regulating the resistance and thus controlling the amount of current entering an electric circuit.
rheostosis (re'os-to'sis) [*rheo-* + *ostosis*] a condition of hyperostosis marked by the presence of streaks in the bones; see also *melorheostosis*.
rheotachygraphy (re'o-tah-kig'rah-fe) [*rheo-* + Gr. *tachys* swift

+ *graphein* to write] the photographic record of the curve of variation in experiments upon the electromotive action of muscles.

rheotaxis (re'o-tak'sis) [*rheo-* + Gr. *taxis* arrangement] the orientation of an organism in a stream of liquid, with its long axis parallel with the direction of fluid flow. **negative r.**, rheotaxis with movement of the organism in the same direction as that of the liquid. **positive r.**, rheotaxis with movement of the organism in the opposite direction to that of the liquid.

rheotome (re'o-tōm) [*rheo-* + Gr. *tomē* a cutting] a device in a faradic battery for interrupting the current with an adjustable speed control.

rheotrope (re'o-trōp) [Gr. *rheos* current + *trepein* to turn] an instrument for reversing an electric current.

rheotropism (re-ot'ro-pizm) rheotaxis.

rhethocythemia (res'to-si-the'me-ah) [Gr. *rhainein* to break, ruin + *-cyte* + *haima* blood + *-ia*] (*obs.*) the occurrence of broken-down erythrocytes in the blood.

Rheum (re'um) a genus of cathartic polygonaceous plants; see *rhubarb*.

rheum, rheuma (rōōm, roo'mah) [Gr. *rheuma* flux] any watery or catarrhal discharge. **epidemic r.**, influenza.

rheumapya (roo'mah-pi'rah) [Gr. *rheuma* flux + *pyr* fire] acute rheumatism; rheumatic fever.

rheumarthrit (roo'mar-thri'tis) rheumatoid arthritis.

rheumatalgia (roo'mah-tal'je-ah) chronic rheumatic pain.

rheumatic (roo-mat'ik) [Gr. *rheumatikos*] pertaining to or affected with rheumatism.

rheumaticosis (roo-mat'i-ko'sis) a term suggested to express the general condition seen in the rheumatism of childhood.

rheumatid (roo'mah-tid) any skin lesion or eruption etiologically associated with rheumatism.

rheumatism (roo'mah-tizm) [L. *rheumatismus*; Gr. *rheumatismos*] any of a variety of disorders marked by inflammation, degeneration, or metabolic derangement of the connective tissue structures of the body, especially the joints and related structures, including muscles, bursae, tendons and fibrous tissue. It is attended by pain, stiffness, or limitation of motion of these parts. Rheumatism confined to the joints is classified as arthritis. **apoplectic r.**, rheumatism associated with brain hemorrhage. **articular r.**, acute, rheumatic fever. **articular r., chronic**, see *rheumatoid arthritis*, under *arthritis*, and *osteoarthritis*. **Besnier's r.**, chronic arthrosynovitis. **cerebral r.**, acute rheumatic fever marked by chorea, delirium, convulsions, and coma. **desert r.**, the primary stage of coccidioidomycosis. **gonorrheal r.**, acute articular rheumatism associated with gonorrheal urethritis, and frequently producing ankylosis of the joints. **r. of the heart**, involvement of the heart by the rheumatic fever process. **Heberden's r.**, rheumatism of the finger joint, marked by the formation of nodosities. **inflammatory r.**, rheumatic fever. **lumbar r.**, lumbago. **MacLeod's capsular r.**, a rheumatoid arthritis with effusion into the synovial capsules, bursae, and sheaths. **muscular r.**, fibrositis. **nodose r.**, 1. articular rheumatism with the formation of nodules in the region of the joints. 2. rheumatoid arthritis. **osseous r.**, rheumatoid arthritis. **palindromic r.**, a condition in which there are repeated episodes of arthritis and peri-arthritis without fever and without producing irreversible changes in the joints. **Poncet's r.**, tuberculous rheumatism. **subacute r.**, a mild but protracted form of rheumatism. **tuberculous r.**, see under *arthritis*. **visceral r.**, that which involves a viscus, more commonly the heart or pericardium.

rheumatismal (roo'mah-tiz'mal) pertaining to or of the nature of rheumatism.

rheumatogenic (roo'mah-to-jen'ik) [*rheumatism* + Gr. *gennan* to produce] producing or causing rheumatism.

rheumatoid (roo'mah-toid) [Gr. *rheuma* flux + *eidos* form] resembling rheumatism.

rheumatologist (roo'mah-tol'o-jist) a specialist in rheumatic conditions.

rheumatology (roo'mah-tol'o-je) the branch of medicine dealing with rheumatic disorders, their causes, pathology, diagnosis, treatment, etc.

rheumatopyra (roo'mah-to-pi'rah) rheumapya.

rheumatosis (roo'mah-to'sis) any disorder attributed to rheumatic origin.

rheumic (roo'mik) pertaining to a rheum or flux.

rhaxis (rek'sis) [Gr. *rhēxis* a breaking forth, bursting] the rupture of an organ or vessel.

Rh factor see under *factor*.

rhigosis (ri-go'sis) [Gr. *rhigōsis* a shivering] the cold sense; the perception of cold.

rhigotic (ri-got'ik) pertaining to rhigosis.

rhin- see *rhino-*.

rhinal (ri'nal) [Gr. *rhīs* nose] pertaining to the nose.

rhinalgia (ri-nal'je-ah) [*rhin-* + *-algia*] pain in the nose.

rhinallergosis (rīn'al-er-go'sis) [*rhin-* + *allergy* + *-osis*] allergic rhinitis.

rhinedema (rī'nē-de'mah) [*rhin-* + *edema*] edema of the nose.

rhinencephalia (rī'nēn-sē-fa'le-ah) rhinocephaly.

rhinencephalon (rī'nēn-sēf'ah-lon) [*rhin-* + Gr. *enkephalos* brain] 1. a term generally applied to certain parts of the brain previously thought to be concerned entirely with olfactory mechanisms, including the olfactory nerves, bulbs, tracts, and subsequent connections (all olfactory in function) and the limbic system (not primarily olfactory in function); it is homologous with the olfactory portions of the brain in lower animals. Called also *olfactory brain* and *smell brain*. 2. one of the portions of the telencephalon in the embryo.

rhinencephalus (rī'nēn-sēf'ah-lus) rhinocephalus.

rhinenchysis (rī-nēn'kī-sis) [*rhin-* + Gr. *enchein* to pour in] injection of a medicinal fluid into the nose.

rhinesthesia (rī'nes-the'ze-ah) [*rhin-* + Gr. *aisthēsis* perception] the sense of smell.

rhineurynter (rī'n-u-rin'ter) [*rhin-* + Gr. *eurynēin* to widen] a dilatable rubber bag for distending a nostril.

rhinion (rīn'e-on) [Gr., dim. of *rhis*] the lower end of the suture between the nasal bones.

rhinism (rī'nizm) a nasal quality of voice.

rhinitis (rī-ni'tis) [*rhin-* + *-itis*] inflammation of the mucous membrane of the nose. **acute catarrhal r.**, coryza, or cold in the head; an acute congestion of the mucous membrane of the nose, marked by dryness, followed by increased mucous secretion from the membrane, impeding respiration through the nose, and some pain. **allergic r.**, **anaphylactic r.**, a general term used to denote any allergic reaction of the nasal mucosa; it may occur perennially (*nonseasonal allergic rhinitis*) or seasonally (*hay fever*). **atopic r.**, nonseasonal allergic r. **atrophic r.**, a chronic form marked by wasting of the mucous membrane and the glands. **atrophic r. of swine**, a disease of very young swine that may result in marked displacement or atrophy of the turbinate bones in severe cases, due to severe persistent inflammation of the nasal mucosa; the primary inflammatory reaction may be caused by a variety of agents, including a virus (see *inclusion-body r.*). **r. caseosa**, rhinitis with a caseous, gelatinous, and fetid discharge. **chronic catarrhal r.**, a form characterized by hypertrophy and later by atrophy of the mucous and submucous tissues. **croupous r.**, fibrinous r. **dyscrinic r.**, rhinitis associated with and dependent on endocrine imbalance. **fibrinous r.**, a form characterized by the development of a false membrane; called also *croupous r.* **gangrenous r.**, a gangrene-like inflammation of the nasal mucosa. **hypertrophic r.**, a form in which the mucous membrane thickens and swells. **inclusion-body r.**, atrophic rhinitis of swine due to a viral infection, frequently marked by atrophy of the turbinate bones and distortion of the snout, sneezing, stunting of growth, and, histologically, by the presence of inclusion bodies in scrapings of the nasal mucous membranes. **membranous r.**, chronic rhinitis with the formation of a membranous exudate. **nonseasonal allergic r.**, allergic rhinitis that may occur continuously or intermittently all year round; it is caused by an allergen to which the individual is more or less always exposed, such as house dust, danders, and food, and is characterized by sudden attacks of sneezing, swelling of the nasal mucosa with a profuse watery discharge, itching of the eyes, and lacrimation. Called also *atopic* or *perennial r.* Cf. *hay fever*. **perennial r.**, nonseasonal allergic r. **pseudomembranous r.**, a form in which the inflamed region is covered with an opaque exudation. **purulent r.**, chronic rhinitis with the formation of pus. **scrofulous r.**, tuberculous rhinitis. **r. sicca**, a variety of atrophic rhinitis in which the secretion is entirely absent. **syphilitic r.**, a variety caused by syphilis, and marked by ulceration, caries of the nasal bone, and a fetid discharge. **tuberculous r.**, a variety due to tuberculosis, and attended with ulceration, caries of the nasal bone, and ozena. **vasomotor r.**, 1. a form of nonallergic rhinitis in which transient changes in vascular tone and permeability, with the same symptoms as in allergic rhinitis, are brought on by such stimuli as mild chilling, fatigue, anger, and anxiety. 2. any condition of allergic or nonallergic rhinitis, as opposed to infectious rhinitis.

rhino-, rhin- (rī'no, rīn, rin) [Gr. *rhis* nose] a combining form denoting relationship to the nose, or a noselike structure.

rhinomanometer (rī'no-an'ē-mom'ē-ter) [*rhino-* + *anemometer*] an apparatus for measuring the air passing through the nose during respiration.

rhinoantritis (rī'no-an'tri'tis) [*rhino-* + *antrum* + *-itis*] inflammation of the nasal cavity and the antrum of Highmore.

rhinobyon (rī-no'be-on) [*rhino-* + Gr. *byein* to plug] a nasal tampon.

rhinocanthectomy (rī'no-kan-thek'to-me) rhinomectomy.

rhinocele (rī'no-sēl) rhinococele.

Rhinocephalus annulatus (rī'no-sēf'ah-lus an'u-la'tus) *Boophilus annulatus*.

rhinocephalus (rī'no-sēf'ah-lus) a fetus exhibiting rhinocephaly.

rhinocephaly (rī'no-sēf'ah-le) [*rhino-* + Gr. *kephalē* head + *-ia*] a developmental anomaly characterized by the presence of a proboscis-like nose above eyes partially or completely fused into one.

rhinocheiloplasty (rī'no-kī'lo-plas'te) [*rhino-* + Gr. *cheilos* lip + *plassein* to form] plastic surgery of the nose and lip.

rhinocleisis (rī'no-kli'sis) [*rhino-* + Gr. *kleisis* closure] obstruction of the nasal passages.

rhinococele (rī'no-sēl) [*rhino-* + Gr. *koilia* hollow] the ventricle of the olfactory lobe of the brain.

rhinodacryolith (rī'no-dak're-o-lith') [*rhino-* + Gr. *dakryon* tear + *lithos* stone] a lacrimal concretion in the nasal duct.

rhinodynia (rī'no-din'e-ah) [*rhino-* + Gr. *odynē* pain + *-ia*] pain in the nose.

rhinodontomophthoromycosis (rī'no-en'to-mof'tho-ro-mi-ko'sis) rhinophycomycosis.

Rhinoestrus (rīn-es'trus) a genus of flies of the family Oestridae whose larvae occur in the nasal passages of horses in Europe, Asia and Africa; they may deposit larvae in the human eye.

rhinogenous (rī-noj'ē-nus) [*rhino-* + Gr. *gennan* to produce] arising in the nose.

rhinokyphosis (rī'no-kī-fo'sis) [*rhino-* + Gr. *kyphos* hump] the presence of an abnormal hump in the ridge of the nose.

rhinolalia (rī'no-la'le-ah) [*rhino-* + Gr. *lalia* speech] a nasal quality of voice due to some disease or defect of the nasal passages. **r. aperta**, that which is caused by undue patency of the posterior nares. **r. clausa**, that which is due to undue closure of the nasal passages. **open r.**, *r. aperta*.

rhinolaryngitis (rī'no-lar'in-jī'tis) inflammation of the mucous membrane of the nose and larynx.

rhinolaryngology (rī'no-lar'in-gol'o-je) [*rhino-* + Gr. *larynx* larynx + *-logy*] the sum of knowledge concerning the nose and larynx and their diseases.

rhinolith (rī'no-lith) [*rhino-* + Gr. *lithos* stone] a nasal stone or concretion.

rhinolithiasis (rī'no-lī-thi'ah-sis) a condition associated with the formation of rhinoliths.

rhinologist (rī-nol'o-jist) a specialist in rhinology.

rhinology (rī-nol'o-je) [*rhino-* + *-logy*] the sum of knowledge regarding the nose and its diseases.

rhinomanometer (rī'no-mah-nom'ē-ter) [*rhino-* + *manometer*] a manometer used in rhinomanometry.

rhinomanometry (rī'no-mah-nom'ē-tre) measurement of the airflow and pressure within the nose during respiration; nasal resistance or obstruction can be calculated from the data obtained.

rhinometer (rī-nom'ē-ter) [*rhino-* + Gr. *metron* measure] an instrument for measuring the nose or its cavities.

rhinomectomy (rī'nom-mek'to-me) [*rhin-* + Gr. *omma* eye + *ektomē* excision] excision of the inner canthus of the eye.

rhinomycosis (rī'no-mi-ko'sis) fungal infection of the nasal mucosa.

rhinonecrosis (rī'no-nē-kro'sis) necrosis of the nasal bones.

rhinonemmeter (rī'no-nem'ē-ter) a device for measuring nasal air flow rates.

rhinoneurosis (rī'no-nu-ro'sis) a neurosis or functional disease of the nose.

rhinopathia (rī'no-path'e-ah) rhinopathy. **r. vasomotoria**, vasomotor rhinitis.

rhinopathy (rī-nop'ah-the) [*rhino-* + Gr. *pathos* disease] any disease of the nose.

rhinopharyngeal (rī'no-fah-rin'je-al) nasopharyngeal.

rhinopharyngitis (rī'no-far'in-jī'tis) inflammation of the nasopharynx. **r. mu'tilans**, gangosa.

rhinopharyngocele (rī'no-fah-ring'go-sēl) a tumor, usually an arocele, of the nasopharynx.

rhinopharyngolith (rī'no-fah-ring'go-lith) [*rhino-* + Gr. *pharynx* pharynx + *lithos* stone] calculus of the nasal pharynx.

rhinopharynx (rī'no-far'inks) nasopharynx (pars nasalis pharyngis [NA]).

rhinophonia (rī'no-fo'ne-ah) [*rhino-* + Gr. *phōnē* voice] a nasal twang or quality of voice.

rhinophore (rī'no-fōr) [*rhino-* + Gr. *phoros* bearing] a nasal cannula to facilitate breathing.

rhinophycomycosis (rī'no-fi'ko-mi-ko'sis) a fungal infection caused by *Entomophthora coronata*, marked by development of large polyps in the subcutaneous tissues of the nose and paranasal sinuses; orbital involvement with unilateral blindness may follow. It usually leads to cerebral involvement. Called also *phycomycosis entomophthorae* and *rhinodontomophthoromycosis*.

rhinophyma (re'no-fi'mah) [*rhino-* + Gr. *phyma* growth] a form of rosacea characterized by redness, sebaceous hyperplasia, and nodular swelling and congestion of the skin of the nose.

rhinoplastic (rī'no-plas'tik) pertaining to rhinoplasty.

rhinoplasty (rī'no-plas'te) [*rhino-* + Gr. *plassein* to form] a plastic surgical operation on the nose, either reconstructive,

Rhinophyma (Homans).

restorative, or cosmetic. **Carpue's r.**, Indian r. **English r.**, that in which a nose is formed out of flaps from the cheeks. **Indian r.**, the reconstruction of a nose by a flap of skin taken from the forehead, with its pedicle at the root of the nose; called also *Carpue's operation*. **Italian r.**, *tagliacotian r.* **tagliacotian r.**, the reconstruction of a nose by a flap of skin taken from the arm, the flap remaining attached to the arm until union has taken place; called also *Italian* or *tagliacotian operation*.

rhinopneumonitis (ri'no-nu'mo-ni'tis) [*rhino-* + Gr. *pneumōn* lung + *-itis*] inflammation of the nasal and pulmonary mucous membranes. **equine viral r.**, a highly contagious disease of horses caused by a herpesvirus, which is marked by a mild respiratory infection in young animals and abortion in young mares exposed to the infection for the first time; in the latter instance, it is called *equine virus abortion*.

rhinopolypus (ri'no-pol'i-pus) a nasal polyp.

rhinoptia (ri-nop'she-ah) esotropia.

rhinoreaction (ri'no-re-ak'shun) the nasal tuberculin reaction; an exudation appearing on the nasal mucous membrane after the application thereto of a solution of tuberculin in patients affected with tuberculosis. Called also *Moeller's reaction*.

rhinorrhagia (ri'no-ra'je-ah) [*rhino-* + Gr. *rhēgnynai* to burst forth] nosebleed; epistaxis.

rhinorrhaphy (ri-nor'ah-fe) [*rhino-* + Gr. *rhaphe* suture] an operation for epicanthus performed by excising a fold of skin from the nose and closing the opening with sutures.

rhinorrhea (ri'no-re'ah) [*rhino-* + Gr. *rhoia* flow] the free discharge of a thin nasal mucus. **cerebrospinal r.**, discharge of cerebrospinal fluid through the nose.

rhinosalpingitis (ri'no-sal-pin-jit'is) [*rhino-* + Gr. *salpinx* tube + *-itis*] inflammation of the nasal mucosa and the eustachian tube.

rhinoscleroma (ri'no-skle-ro'mah) [*rhino-* + Gr. *sklēroma* a hard swelling] a granulomatous disease involving the nose and nasopharynx. The growth forms hard patches or nodules, which tend to increase in size and are painful on pressure. The disease occurs in Egypt, Eastern Europe, and Central and South America and is ascribed to the presence of the *Klebsiella rhinoscleromatis*.

rhinoscope (ri'no-skōp) [*rhino-* + Gr. *skopein* to examine] a speculum for use in nasal examinations.

rhinoscopic (ri'no-skop'ik) pertaining to rhinoscopy.

rhinoscopy (ri-nos'ko-pe) the examination of the nasal passages, either through the anterior nares (*anterior r.*) or through the nasopharynx (*posterior r.*). **median r.**, examination of the nasal cavity and the openings of the ethmoid cells, etc., by means of a long nasal speculum.

rhinosporidiosis (ri'no-spo-rid'e-o'is) a fungal disease caused by *Rhinosporidium seeberi*, which is endemic in India and Ceylon and sporadic in other parts of the world; the fungus reproduces in tissue by endospores in a spherule similar to that seen in coccidioidomycosis. It affects man and other animals, and is characterized by the development of large pedunculated polyps on the mucosa of the nose, eyes, ears, and sometimes on the penis or vagina.

Rhinosporidium seeberi (ri'no-spo-rid'e-um se'ber-i) the fungus which causes rhinosporidiosis.

rhinostegnosis (ri'no-steg-no'sis) [*rhino-* + Gr. *stegnōsis* obstruction] obstruction of a nasal passage.

rhinostenosis (ri'no-stē-no'sis) narrowing of a nasal passage.

rhinotomy (ri-not'o-me) [*rhino-* + Gr. *tomē* a cutting] incision into the nose.

rhinotracheitis (ri'no-tra'ke-i'tis) [*rhino-* + L. *trachea* + *-itis*] inflammation of the nasal mucous membranes and trachea. **feline r.**, **feline viral r.**, an acute, febrile, herpesvirus infection of the upper respiratory tract and conjunctivae affecting young kittens; it is marked by a mucopurulent discharge from the eyes and nose, photophobia, coughing, and sneezing. **infectious r.**, **infectious bovine r.**, an acute, infectious, febrile disease of cattle, caused by a herpesvirus and marked by inflammation and ulceration of the upper respiratory tract, which may be followed

by pneumonia, coughing, profuse discharge from the eyes and nose, excessive salivation, anorexia, and, in pregnant cows, abortion.

rhinovaccination (ri'no-vak'si-na'shun) the application of vaccine or other immunizing material to the mucous membrane of the nose.

rhinoviral (ri'no-vi'ral) pertaining to or caused by rhinoviruses.

rhinovirus (ri'no-vi'rus) any of a subgroup of the picornaviruses considered to be etiologically associated with the common cold and certain other upper respiratory ailments; over 90 antigenically distinct strains are known to cause the common cold. Called also *coryzavirus*.

rhiotin (ri'o-tin) a biotin vitamin which is active for *Rhizobium* but not for yeast, is avidin-combinable, and stable to acid or neutral autoclaving.

Rhipicentor (ri'pi-sen'tor) [Gr. *rhipis* fan + *kentein* to prick or stab] a genus of ticks. The bite of *R. bicornis* (*Ixodes bicornis*), a Mexican tick that infests the cougar, may cause a high fever in the human adult and may kill a child.

Rhipicephalus (ri'pi-sef'ah-lus) [Gr. *rhipis* fan + *kephalē* head] a genus of cattle ticks, species of which are the agents in transmitting *Babesia* of cattle fever, and other diseases. **R. appendicula'tus**, the brown tick; it transmits *Theileria parva*, the cause of East Coast fever in African cattle. **R. bur'sa**, a species that transmits *Babesia ovis*, which causes icterohematuria and carcage of sheep. **R. capen'sis**, an African species found on cattle and horses, which may transmit *Theileria parva*, the cause of East Coast fever. **R. decolora'tus**, a species regarded as the transmitter of *Borrelia theileri*, the cause of tickborne relapsing fever, of *Rickettsia conorii*, causing tickborne typhus, and of bovine anaplasmosis in some parts of Africa. **R. evert'si**, an African species found on horses and cattle; it may transmit *Theileria parva* and *Rickettsia conorii*. **R. sanguin'eus**, the brown dog tick, a species found on many domestic animals; it transmits *Rickettsia rickettsii*, the cause of Rocky Mountain spotted fever, *R. conorii*, the cause of tickborne typhus and Boutonneuse fever in man, and *Babesia canis*, the cause of malignant jaundice in dogs. **R. si'mus**, the black pitted tick, a species which transmits *Theileria parva*, the cause of East Coast fever.

rhitud- for words beginning thus, see those beginning *rhytid-*.

rhizagra (ri-zag'rah) [*rhizo-* + Gr. *agra* seizure] an ancient forceps which was used for extracting roots of teeth.

rhizanesthesia (ri-zan'es-the'ze-ah) anesthesia produced by injecting a local anesthetic into the spinal arachnoid space.

rhizo- (ri'zo) [Gr. *rhiza* root] a combining form denoting relationship to a root.

Rhizobiaceae (ri-zo'be-a'se-e) a family of Schizomycetes (order Eubacteriales), made up of rod-shaped, sparsely flagellated cells without endospores; it includes three genera, *Agrobacterium*, *Chromobacterium*, and *Rhizobium*.

Rhizobium (ri-zo'be-um) a genus of microorganisms of the family Rhizobiaceae, order Eubacteriales, made up of gram-negative, rod-shaped, symbiotic nitrogen-fixing bacteria, producing nodules on the roots of leguminous plants and fixing free nitrogen in this symbiosis. It includes six species, *R. japonicum*, *R. leguminosa'rūm*, *R. lupi'ni*, *R. melilo'ti*, *R. phase'oli*, and *R. trifol'i*.

rhizoblast (ri'zo-blast) a delicate fibril connecting the basal granule and nucleus of a protozoan.

rhizodontropy (ri'zo-don'tro-pe) [*rhizo-* + Gr. *odous* tooth + *tropos* a turn] the fixation of an artificial crown upon the natural root of a tooth.

rhizodontology (ri'zo-don'tri-pe) perforation of the root of a tooth for the escape of morbid matter.

Rhizoglyphus (ri-zog'li-fus) a genus of mites. **R. parasit'i-cus**, the coolie-itch mite, which lives on the ground in India and is reported to cause sore feet in the tea plantation workers.

rhizoid (ri'zoid) [*rhizo-* + Gr. *eidos* form] rootlike; resembling a root.

rhizoidal (ri-zoi'dal) rhizoid.

rhizolysis (ri-zoi'li-sis) interruption of spinal nerve roots by coagulation with radiofrequency waves.

Rhizomastigida (ri'zo-mas-tij'i-dah) an order of protozoa of the class Zoomastigophora, subphylum Mastigophora, embracing organisms having both flagella and pseudopodia; it includes the genus *Histomonas*.

rhizome (ri'zōm) [Gr. *rhizōma* root stem] the subterranean root stock of a plant.

rhizomelic (ri-zo-mel'ik) [*rhizo-* + Gr. *melos* limb] pertaining to or involving the hip joint and shoulder joint.

rhizomeningomyelitis (ri'zo-mē-nin'go-mi'ē-li'tis) radiculomeningomyelitis.

rhizoneure (ri'zo-nūr) [*rhizo-* + Gr. *neuron* nerve] a nerve cell which forms a nerve root.

rhizoplast (ri'zo-plast) [*rhizo-* + Gr. *plastos* formed] a fibril

that connects the blepharoplast to the nucleus in some flagellate protozoa; called also *zygoplast*.

Rhizopoda (ri-zo-p'o-dah) [*rhizo-* + Gr. *pous* foot] 1. a class of protozoa of the subphylum Sarcodina, having lobopodia, filopodia, or rhizopodia, and including the orders Amoebida and Mycetozoida. 2. Sarcodina.

rhizopodium (ri'zo-po'di-um), pl. *rhizopo'dia* [*rhizo-* + Gr. *pous* foot] a filamentous pseudopodium, finer than a filopodium, characterized by branching and anastomosis of the branches; cf. *axopodium*, *filopodium*, and *lobopodium*.

Rhizopus (ri-zo'pus) a genus of fungi of the family Mucoraceae, order Mucorales; see *mucormycosis*. *R. arrhizus* and *R. oryzae* have been isolated from uncontrolled acidotic diabetics demonstrating cerebral infections, and *R. rhizopodiformis* has been isolated from cutaneous lesions of diabetics and severely burned patients.

rhizotomist (ri-zot'o-mist) in Greek medicine, a vagrant gatherer of medicinal herbs and simples.

rhizotomy (ri-zot'o-me) [*rhizo-* + Gr. *tomē* a cutting] interruption of the roots of spinal nerves within the spinal canal. **anterior r.**, division of the anterior or motor spinal nerve roots; done for relief of essential hypertension. **posterior r.**, division of the posterior or sensory spinal nerve roots; done for relief of intractable pain. **retrogasserian r.**, transection of the sensory root fibers of the trigeminal nerve for the permanent relief of trigeminal neuralgia; called also *retrogasserian neurotomy*.

rhodamine (ro-dah'min) [Gr. *rhodon* rose + *amine*] a red fluorescent dye.

rhodanate (ro'dah-nāt) a salt of thiocyanic acid.

rhodanine (ro-dah'nin) chemical name: 2-thioxo-4-thiazolidinone. An acid, C₃H₃NOS₂, used in the synthesis of phenylalanine. Called also *rhodanic acid*.

rhodium (ro'de-um) [Gr. *rhodon* rose] a hard and rare metal of the platinum group; atomic number, 45; atomic weight, 102.905; symbol, Rh.

Rhodnius prolixus (rod'ne-us pro-lik'sus) a reduviid bug of South America capable of transmitting *Trypanosoma cruzi*, the etiologic agent of Chagas' disease.

rhodo- (ro'do) [Gr. *rhodon* rose] a combining form meaning red.

Rhodobacteriineae (ro'do-bak'ter-e-i'ne-e) a suborder of Schizomycetes (order Pseudomonadales), made up of spherical or rod-, vibrio-, or spiral-shaped cells containing bacteriochlorophyll or other green pigments resembling chlorophyll, and usually one or more carotenoid pigments. It includes three families, *Athiorhodaceae*, *Chlorobacteriaceae*, and *Thiorhodaceae*.

rhodogenesis (ro'do-jen'ē-sis) [*rhodo-* + Gr. *genesis* production] the restoration of the purple tint to rhodopsin after it has become bleached by the action of light.

Rhodomicrobium (ro'do-mi-kro'be-um) a genus of microorganisms of the family Hyphomicrobiaceae, order Hyphomicrobiales, made up of ovoid cells connected by filaments, growing in colonies which are salmon pink to orange red. The type species is *R. vannielii*.

rhodophane (ro'do-fān) [*rhodo-* + Gr. *phainein* to show] a red pigment, or chromophane, from the retinal cones of birds and fishes.

rhodophylactic (ro'do-fi-lak'tik) tending to preserve or restore the retinal purple; pertaining to rhodophylaxis.

rhodophylaxis (ro'do-fi-lak'sis) [*rhodo-* + Gr. *phylaxis* defense] the supposed property of the retinal epithelium of protecting and increasing the power of the retinal purple to regain its color after bleaching.

rhodoporphyrin (ro'do-por'fi-rin) a porphyrin, C₃₃H₃₄O₄N₄, derived from chlorophyll.

Rhodopseudomonas (ro'do-su'do-mo'nas) a genus of microorganisms of the family Athiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as motile, spherical or rod-shaped cells. It includes four species, *R. capsulata*, *R. gelatino'sa*, *R. palustris*, and *R. spheroides*.

rhodopsin (ro-dop'sin) [*rhodo-* + Gr. *opsis* vision] visual purple: a photosensitive purple-red chromoprotein in the retinal rods which is bleached to visual yellow (all-trans retinal) by light, thereby producing stimulation of the retinal sensory endings. It is a conjugated protein, the prosthetic group of which is 11-cis retinal.

Rhodospirillum (ro'do-spi-ril'lum) a genus of microorganisms of the family Athiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as motile, spiral-shaped cells. It includes four species, *R. fulvum*, *R. molischianum*, *R. photometricum*, and *R. rubrum*.

Rhodothece (ro'do-the'se) a genus of microorganisms of the family Thiorhodaceae, suborder Rhodobacteriineae, order Pseudomonadales, occurring as single spherical cells, each with a wide capsule. The type species is *R. pendens*.

Rhodotorula (ro'do-tor'u-lah) a genus of imperfect yeasts. **R. glutinis**, a nonpathogenic species from air, potatoes, and the skin in seborrhea; its cells are cylindrical, oval, or spherical and it forms a rosy pigment. Called also *Saccharomyces glutinis*.

R. ru'bra, a skin contaminant which rarely causes opportunistic infections in man.

rhodotoxin (ro'do-tok'sin) a poisonous compound from the flowers and leaves of various shrubs and trees, such as *Rhododendron*; it is also found in honey from *Rhododendron* flowers.

RhoGAM (ro'gam) trademark for a preparation of Rh₀ (D) immune globulin.

rhombencephalon (rom'ben-sef'ah-lon) [Gr. *rhombos* rhomb + *enkephalos* brain] 1. [NA] the part of the brain developed from the posterior of the three primary brain vesicles of the embryonic neural tube; it comprises the metencephalon (cerebellum and pons) and myelencephalon (medulla oblongata). 2. the most caudal of the three primary brain vesicles in the embryo, later dividing into the metencephalon and myelencephalon. Called also *hindbrain*.

rhombocoele (rom'bo-sēl) [Gr. *rhombos* rhomb + *koilia* cavity] the terminal distention of the canal of the spinal cord.

rhomboid (rom'boid) [Gr. *rhombos* rhomb + *eidos* form] having a shape similar to a rectangle that has been skewed to one side so that the angles are oblique. **Michaelis's r.**, a diamond-shaped area over the posterior aspect of the pelvis formed by the dimples of the posterior-superior spines of the ilia, the lines formed by the gluteal muscles, and the groove at the end of the spine.

rhombomere (rom'bo-mēr) neuromere, def. 1.

rhonchal, rhonchial (rong'kal, rong'ke-al) pertaining to, or of the nature of, a ronchus.

rhonchus (rong'kus), pl. *ron'chi* [L.; Gr. *rhonchos* a snoring sound] a rattling in the throat; also a dry, coarse rale in the bronchial tubes, due to a partial obstruction. See *rale*.

Rhopalopsyllus cavicola (ro'pah-lo-sil'us kah-vik'o-lah) the South American cavy flea, which transmits *Pasteurella pestis*.

rotanium (ro-ta'ne-um) a gold-palladium alloy said to possess the same physical qualities as platinum.

rhubarb (roo'barb) the dried rhizome and root of *Rheum officinale* Baill., used in fluidextract or aromatic tincture as a cathartic. The common garden rhubarb, *R. raphanistrum* L., is edible and devoid of cathartic principles.

Rhuphos (roo'fos) see *Rufus of Ephesus*.

Rhus (rus) [L., gen. *rhois*] a genus of anacardiaceous vines and shrubs, many of them poisonous. Some species contain a highly allergenic oleoresin mixture known as *urushiol*; contact with these species produces a severe dermatitis in sensitive persons (see *rhus dermatitis*, under *dermatitis*). The most important toxic species are *R. radicans* L. (poison ivy), *R. diversiloba* L. (poison oak or western poison oak), and *R. vernix* L. (poison sumac). Extracts of the leaves and twigs of these plants (poison ivy extract, poison oak extract) have been used in the prophylaxis and treatment of dermatitis associated with these species. Called also *Toxicodendron*.

Rhynchocoela (rin-ko-sēl'ah) [Gr. *rhynchos* snout, bill, beak + *-coele*] the ribbon worms, a phylum of slender, flat, soft, often brightly colored, acoelomate worms which have unsegmented bodies and an eversible proboscis that lies in a special cavity in front of the mouth; most species are marine inhabitants. Called also *Nemertea* and *Nemertina*.

rhynchocoelan (rin-ko-sēl'an) a ribbon worm; any individual of the Rhynchocoela; called also *nemertean*.

rhystomatouria (ri'o-sto'mah-tu're-ah) [Gr. *rhein* to flow + *stoma* mouth + *ouron* urine + *-ia*] the excretion of urinary elements by the salivary glands.

rhyparia (ri-pa're-ah) [Gr. "filth"] materia alba.

rhythm (rith'm) [L. *rhythmus*; Gr. *rhythmos*] a measured movement; the recurrence of an action or function at regular intervals.

alpha r., a uniform rhythm of waves in the normal electroencephalogram, showing an average frequency of 10 per second; called also *Berger r.* See under *wave*.

atrioventricular r., nodal r. **Berger r.**, alpha r. **beta r.**, a rhythm in the electroencephalogram consisting of waves smaller than those of the alpha rhythm, having an average frequency of 25 per second; see under *wave*.

biological r., the established regularity with which certain phenomena recur in living organisms. **cantering r.**, gallop r. **circadian r.**, the regular recurrence in cycles of approximately 24 hours from one stated point to another, as certain biological activities which occur at that interval, regardless of constant darkness or other conditions of illumination.

circus r., circus movement or contraction; a movement travelling in circular fashion around a ring of muscle.

coupled r., heart beats occurring in pairs, the second beat of the pair usually being a ventricular premature beat; see also *bigeminal pulse* and *bigeminy*.

delta r., see under *wave*. **ectopic r.**, a heart rhythm initiated by a focus outside the sinoatrial node.

escape r., a heart rhythm initiated by lower centers when the sinoatrial node fails to initiate impulses, its rhythmicity is depressed, or its impulses are completely blocked.

fetal r., embryocardia. **gallop r.**, an auscultatory finding of three (triple r.) or four heart sounds, the extra sound(s) by convention being in diastole and related either to atrial contraction (*fourth sound*, *presystolic gallop*), to early rapid filling of a ventricle with an altered ventricular compliance (*protodiastolic gallop*), or to con-

currence of atrial contraction and ventricular early rapid filling (*summation gallop*). **gallop r.**, **systolic**, systolic gallop. **gamma r.**, a rhythm of waves in the electroencephalogram having a frequency of 50 per second. **idioventricular r.**, a cardiac rhythm wherein the ventricle follows an intrinsic pacemaker different from that of the atrium; see *atrioventricular dissociation*, under *dissociation*. **infradian r.**, the regular recurrence in cycles of more than 24 hours from one stated point to another, as certain biological activities which occur at such intervals, regardless of conditions of illumination. **isochronal r.**, see *cilium* (def. 3). **metachronal r.**, see *cilium* (def. 3). **nodal r.**, heart rhythm initiated in the specialized junctional tissue, i.e., the atrioventricular node and the main (His) bundle. Called also *nodal arrhythmia*. **nyctohemeral r.**, a day and night rhythm. **pendulum r.**, alternation in the rhythm of the heart sounds in which the diastolic sound is equal in time, character, and loudness to the systolic sound, the beat of the heart resembling the tick of a watch. **reciprocal r.**, a heart rhythm produced with the occurrence of many reciprocal beats. **sinus r.**, normal heart rhythm originating in the sinoatrial node. **theta r.**, see under *wave*. **triple r.**, the cadence produced when three heart sounds recur in successive cardiac cycles; see also *gallop r.* **ultradian r.**, the regular recurrence in cycles of less than 24 hours from one stated point to another, as certain biological activities which occur at such intervals, regardless of conditions of illumination. **ventricular r.**, the ventricular contractions which occur in cases of complete heart block.

rhythmeur (rith-mer') a device for making rhythmic interruptions of the current in an x-ray machine.

rhythmical (rith-me-kal) characterized by rhythm.

rhythmicity (rith-mis'i-te) in cardiology, the ability to beat, or the state of beating, rhythmically without external stimuli.

rhythmophone (rith'mo-fon) [Gr. *rhythmos* rhythm + *phōnē* voice] (*obs.*) an instrument for magnifying the sounds of the heart beat.

rhythmotherapy (rith'mo-ther'ah-pe) [Gr. *rhythmos* rhythm + *therapeia* treatment] the use of rhythm in treating disease, as the beating of time in treating stammering.

rhytidectomy (rit'i-dek'to-me) [Gr. *rhytis* wrinkle + *ektomē* excision] excision of skin for the elimination of wrinkles.

rhytidoplasty (rit'i-do-plas'te) plastic surgery for the elimination of wrinkles from the skin.

rhytidosis (rit'i-do'sis) [Gr. *rhytidōsis*; *rhytis* wrinkle] a wrinkling of the cornea.

rib (rib) any one of the paired elastic arches of bone, twelve on either side, that extend from the thoracic vertebrae toward the median line on the ventral aspect of the trunk, forming the major part of the thoracic skeleton. The upper seven (true ribs) are connected ventrally with the sternum. The lower five (false ribs) are not. Collectively called *costae* [NA]. **abdominal r's**, **asternal r's**, false r's. **bicipital r.**, an anomalous rib resulting from fusion of the anterior part of the seventh cervical vertebra with the first thoracic rib. **cervical r.**, a supernumerary rib arising from a cervical vertebra. **false r's**, the lower five ribs on either side, which are not directly attached to the sternum; called also *costae spuriae* [NA]. **floating r's**, the lower two ribs on either side, which ordinarily have no ventral attachment. **slipping r.**, a rib whose attaching cartilage is repeatedly dislocated. **spurious r's**, false r's. **sternal r's**, true r's. **Stiller's r.**, an abnormally movable tenth rib. **true r's**, the upper seven ribs on either side, which are connected to the sides of the sternum by their costal cartilages; called also *costae verae* [NA]. **vertebral r's**, floating r's. **vertebrocostal r's**, the upper three false ribs of either side, articulating with the vertebrae and connected by cartilage to the costal cartilage of the ipsilateral seventh rib. **vertebrosternal r's**, true r's. **Zahn's r's**, see under *line*.

ribaminol (ri-bah'mi-nöl) chemical name: ribonucleic acid compound with 2-(diethylamino)ethanol; a memory adjuvant.

ribavirin (ri'bah-vi'rin) chemical name: 1β-D-ribofuranosyl-1H-1,2,4-triazole-3-carboxamide; an antiviral, C₈H₁₂N₄O₆.

Ribbert's theory (rib'er'ts) [Moritz Wilhelm Hugo Ribbert, German pathologist, 1855-1920] see under *theory*.

ribbon (rib'un) a band-like structure. **r. of Reil**, the rostral part of the lemniscus medialis. **synaptic r.**, 1. a dense lamella surrounded by a halo of synaptic vesicles, found at a right angle to the apex of the synaptic ridge in the outer plexiform layer of the retina. 2. a similar structure found in varying numbers in the cytoplasm of the hair cells of the ear.

Ribes's ganglion (rēbz) [François Ribes, French surgeon, 1800-1864] see under *ganglion*.

ribitol (ri'bi-tol) an alcohol corresponding to the sugar ribose; it is a constituent of a class of teichoic acids.

ribodesose (ri-bo'des-ōs) D-2-deoxyribose.

riboflavin (ri'bo-fla'vin) the heat-stable factor of the vitamin B complex, 6,7-dimethyl-9-[1'-D-ribityl]-isoalloxazin, C₁₇H₂₀N₄O₆; called also *lactoflavin* and *vitamin B₂*. A water-soluble vitamin, it serves as a component of two coenzymes or prosthetic groups (FAD and FMN) of flavoproteins, which function as hydrogen

carriers in oxidation-reduction processes. It occurs in milk, muscle, liver, kidney, eggs, grass, malt, leafy young vegetables, and various algae, and is an essential nutrient for man, the requirement being related to body size, metabolic rate, and growth rate. Deficiency of the vitamin is known as *ariboflavinosis* (q.v.). A standardized preparation [USP], occurring as a yellow to orange-yellow, crystalline powder, containing 98 to 102 per cent of riboflavin, calculated on the dried basis, is used in the treatment and prophylaxis of riboflavin deficiency, administered orally and parenterally. **r. kinase**, an enzyme (a phosphotransferase) that catalyzes the conversion of free riboflavin and ATP to flavin mononucleotide (FMN) and ADP. **r. phosphate**, flavin mononucleotide.

ribonuclease (ri'bo-nu'kle-ās) an enzyme of the transferase class which catalyzes the depolymerization of ribonucleic acid.

ribonucleoprotein (ri'bo-nu'kle-o-pro'te-in) a substance composed of both protein and ribonucleic acid.

ribonucleoside (ri'bo-nu'kle-o-sid) a nucleoside in which the purine or pyrimidine base is combined with ribose.

ribonucleotide (ri'bo-nu'kle-o-tid) a nucleotide in which the purine or pyrimidine base is combined with ribose.

ribose (ri'bo-prēn) chemical name: N-(3-methyl-2-butenyl)-adenosine; an antineoplastic, C₄₃H₅₈N₂O₁₃.

ribopyranose (ri'bo-pi'rah-nōs) ribose in cyclic hemiacetal form.

ribose (ri'bōs) an aldopentose, CH₂OH(CHOH)₃CHO, found in ribonucleic acid (RNA) and in adenosine triphosphate (ATP).

ribosome (ri'bo-sōm) any of the intracellular ribonucleoprotein particles concerned with protein synthesis; they consist of reversibly dissociable units and are found either bound to membranes or free in the cytoplasm. They may occur singly or in clusters (polysomes). Ribosomes within cell organelles and in prokaryotic cells generally are smaller than the cytoplasmic ribosomes of eukaryotic cells. Ribosomes of glandular cells have been called *ergastoplasm*, and those of nerve cells *Nissl bodies*.

ribosyl (ri'bo-sil) a glycosyl radical, C₅H₉O₄, formed from ribose.

5-ribosyluridine (ri'bo-sil-u'rī-dēn) pseudouridine.

ribothymidine (ri'bo-thi'mī-dēn) the ribosyl analogue of thymidine, a rare base found in small amounts in transfer-RNA.

ribulose (ri'bu-lōs) the 2-ketose isomer of ribose.

R.I.C. Royal Institute of Chemistry.

rice (ris) the cereal plant, *Oryza sativa*; also its seed or grain.

The grain consists mainly of starch, and is used as a food and as a dusting powder. **r. polishings**, fine yellowish powder from the pericarp and germ of rice; used in vitamin B deficiency. **white r.**, rice from which the outer brown coats have been removed; a diet composed too exclusively of white rice is apt to produce beriberi.

Richards (rich'ardz), Dickinson W. United States physician, born 1895; co-winner, with Werner T. O. Forssmann and André F. Cournaud, of the Nobel prize for medicine and physiology in 1956, for developing new techniques to measure more precisely lung and heart function.

Richardson's sign (rich'ard-sunz) [Sir Benjamin Ward Richardson, London physician, 1828-1896] see under *sign*.

Richet (re-shā'), Charles Robert. French physiologist, 1850-1935, noted for his discovery of anaphylaxis; winner of the Nobel prize for medicine and physiology in 1913.

Richet's aneurysm (re-shāz') [Didier Dominique Alfred Richet, French surgeon, 1816-1891] a fusiform aneurysm.

Richter's hernia (rik'terz) [August Gottlieb Richter, surgeon in Göttingen, 1742-1812] see under *hernia*.

Richter-Monro line (rik'ter mon-ro') see *Monro-Richter*, and under *line*.

ricin (ri'sin) a poisonous substance (phytotoxin) found in the seeds of the castor oil plant (*Ricinus communis*).

ricinism (ri'si-nizm) intoxication caused by inhalation or ingestion of a poisonous principle of castor bean, producing superficial inflammation of the respiratory mucosa with hemorrhages into the lungs, or edema of the gastrointestinal tract with hemorrhages.

Ricinus (ris'i-nus) [L.] the name of a genus of euphorbiaceous plants. The seeds of *R. communis*, or castor oil plant, are highly poisonous but afford castor oil. The leaves of the castor oil plant are galactagogic.

rickets (rik'ets) [thought to be a corruption of Gr. *rhachitis* a spinal complaint] a condition caused by deficiency of vitamin D, especially in infancy and childhood, with disturbance of normal ossification. The disease is marked by bending and distortion of the bones under muscular action, by the formation of nodular enlargements on the ends and sides of the bones, by delayed closure of the fontanels, pain in the muscles, and sweating of the head. Vitamin D and sunlight together with an adequate diet are curative, provided that the parathyroid glands are functioning properly. **acute r.**, infantile scurvy. **adult r.**, osteomalacia. **beryllium r.**, a form of rickets produced by adding beryllium to an otherwise normal diet. **fat r.**, a form in which the infant is

plump and seems well nourished. **fetal r.**, achondroplasia. **glissonian r.**, rickets as described by Glisson. **hemorrhagic r.**, infantile scurvy. **hepatic r.**, a rickets-like condition with cirrhosis of the liver. **late r.**, rickets occurring in older children. **lean r.**, rickets with wasting and progressive emaciation. **pseudodeficiency r.**, vitamin D-resistant r. **refractory r.**, vitamin D-resistant r. **renal r.**, a condition characterized by rachitic changes in the skeleton and resulting from dysfunction of the kidneys; see *renal osteodystrophy*, under *osteodystrophy*. **scurvy r.**, rachitic changes in the skeleton associated with infantile scurvy. **tardy r.**, late r. **vitamin D-refractory r.**, vitamin D-resistant r. **vitamin D-resistant r.**, a condition almost indistinguishable from ordinary rickets clinically but resistant to unusually large doses of vitamin D; it is often familial but may occur sporadically. In *hypophosphatemic vitamin D-resistant rickets*, hypophosphatemia is the main characteristic, while in *hypocalcemic vitamin D-resistant rickets*, the serum concentration of phosphate is within normal limits or nearly so, and the concentration of calcium is abnormally low. Called also *pseudodeficiency r.* and *vitamin D-refractory r.*

rickettsemia (rik-et-se-me-ah) the presence of rickettsiae in the blood.

Rickettsia (ri-ket/se-ah) [Howard Taylor Ricketts, American pathologist, 1871–1910] a genus of the tribe Rickettsiae, family Rickettsiaceae, order Rickettsiales, made up of small rod-shaped to coccoid, often pleomorphic microorganisms occurring intracytoplasmically or free in the lumen of the gut in lice, fleas, ticks, and mites, by which they are transmitted to man and other animals. The various species are separated into a typhus group, a spotted fever group, a tsutsugamushi group, and a miscellaneous group. **R. akamu'shi**, *R. tsutsugamushi*. **R. ak'ari**, the etiologic agent of rickettsialpox, transmitted by the mite *Allodermamyssus sanguineus* from the reservoir of infection in house mice. **R. australis**, the etiologic agent of North Queensland tick typhus, possibly transmitted by Ixodes ticks. **R. burnetii**, *Coxiella burnetii*. **R. ca'nis**, the etiologic agent of canine rickettsiosis in Africa, the Mediterranean region, and India. **R. cono'rii**, the etiologic agent of boutonneuse fever (Marseilles fever, Mediterranean fever), and possibly also Indian tick typhus, Kenya typhus, and South African tick-bite fever; transmitted by *Rhipicephalus* and *Haemaphysalis* ticks. **R. diapor'ica**, *Coxiella burnetii*. **R. moo'seri**, *R. typhi*. **R. murico'la**, *R. typhi*. **R. nippon'ica**, *R. orientalis*. **R. tsutsugamushi**. **R. pedic'uli**, *R. quintana*. **R. prowaze'kii**, the etiologic agent of epidemic typhus and the latent infection Brill's disease, which are transmitted from man to man via *Pediculus humanus* var. *corporis*. **R. quinta'na**, the probable etiologic agent of trench fever, observed in World Wars I and II, and transmitted by the human body louse. **R. rickett'sii**, the etiologic agent of Rocky Mountain spotted fever, transmitted by *Dermacentor*, *Rhipicephalus*, *Haemaphysalis*, *Amblyomma* and *Ixodes* ticks. **R. sennet'sui**, a species isolated in Japan, associated with a disease having all the characteristics of infectious mononucleosis. **R. siber'ica**, *R. sibericus*, a species closely related to *R. cono'rii*; it is the causative agent of Siberian tick typhus. Called also *Dermacentroxenus sibericus*. **R. tsutsugamu'shi**, the etiologic agent of scrub typhus, transmitted by larval mites of the genus *Trombicula*, including *T. akamushi* and *T. deliensis*, from rodent reservoirs of infection; called *Dermacentroxenus orientalis*, *R. akamushi*, *R. nipponica*, and *R. orientalis*. **R. ty'phi**, the etiologic agent of flea-borne murine typhus. **R. wolhyn'ica**, *R. quintana*.

rickettsia (ri-ket/se-ah), pl. *rickettsiae*. An individual organism of the family Rickettsiaceae.

Rickettsiaceae (ri-ket/se-a/se-e) a family of the order Rickettsiales, made up of small rod-shaped, ellipsoidal, coccoid, or diplococcus-shaped, often pleomorphic microorganisms often occurring intracellularly in arthropods, by which they are transmitted to man and other animals, causing disease. It includes three tribes, Ehrlichieae, Rickettsieae, and Wolbachieae.

rickettsiae (rik-et/se-e) plural of *rickettsia*.

rickettsial (ri-ket/se-al) caused by rickettsiae.

Rickettsiales (ri-ket/se-a/lēz) a taxonomic order made up of small, rod-shaped or coccoid, often pleomorphic microorganisms occurring as elementary bodies that typically multiply only inside the cells of the host. Found as parasites in both vertebrates and invertebrates, which may serve as vectors, they may be pathogenic for both man and other animals. The order includes three families, Anaplasmataceae, Bartonellaceae, and Rickettsiaceae.

rickettsialpox (ri-ket/se-al-poks") a febrile disease marked by a vesiculopapular eruption, resembling chickenpox clinically and caused by *Rickettsia akari*, transmitted from mice to men by the mite *Allodermamyssus sanguineus*. Recognized first in New York, the condition is also called *Kew Gardens spotted fever*.

rickettsicidal (ri-ket/si-si'dal) destructive to rickettsiae.

Rickettsieae (rik-et/si'e-e) a tribe of the family Rickettsiaceae, order Rickettsiales, made up of small pleomorphic, mostly intracellular organisms occurring as parasites in arthropods and causing disease in vertebrate hosts. It includes three genera, *Coxiella*, *Rickettsia*, and *Cowdria*.

Rickettsiella (ri-ket/se-el'ah) [*rickettsia* + *-ella* diminutive ending] a genus of tribe Wolbachieae, family Rickettsiaceae, order Rickettsiales, made up of minute intracellular rickettsia-like organisms, parasitic on the Japanese beetle (*Popillia japonica*) and nonpathogenic for mammals. The type species is *R. popil'liae*.

rickettsiosis (ri-ket/se-o'sis) infection with rickettsiae. **canine r.**, an often fatal febrile disease of dogs in Africa, the Mediterranean area, and India, caused by *Rickettsia canis*, which is transmitted by the brown dog tick (*Rhipicephalus sanguineus*). It is characterized by high fever, mucopurulent discharge from the nose and eyes, gastritis, thirst, anorexia, emaciation, fetid breath, enlargement of lymph and spleen, erythematous pustules on the axilla and groin, hysteria, convulsions, meningoencephalitis, and paralysis; dogs that recover may become carriers.

rickettsiostatic (ri-ket/se-o-stat'ik) inhibiting the growth and activity of rickettsiae.

Ricolesia (ri'ko-le'ze-ah) [*Rickettsia* + J. D. W. A. Coles] a genus (incertae sedis) of coccoid microorganisms, occurring as four species, *R. bo'vis*, *R. ca'prae*, *R. conjunctiv'ae*, and *R. lestoquar'dii*, producing a keratoconjunctivitis in cattle, goats, fowl, and swine, respectively.

Ricord's treatment (re-korz') [Philippe Ricord, French physician, 1800–1889] see under *treatment*.

rietal (rik'tal) pertaining to a fissure.

rietus (rik'tus) [L.] 1. a fissure or cleft. 2. a gaping, as of the mouth.

Riddoch's reflex (rid'oks) [George Riddoch, British neurologist, 1888–1947] see under *reflex*.

Rideal-Walker coefficient (rid'e-al-waw'ker) [Samuel Rideal, English chemist, 1863–1929; J. F. Ainslie Walker, English chemist] phenol coefficient.

ridge (rij) a projection or projecting structure; see also *crest* and *crista*. **alveolar r.**, **residual**, the bony ridge remaining after disappearance of the alveoli from the alveolar process following removal or loss of the teeth. **basal r.**, cingulum. **bicipital r.**, **anterior**, crista tuberculi minoris. **bicipital r.**, **external**, crista tuberculi majoris. **bicipital r.**, **internal**, crista tuberculi minoris. **bicipital r.**, **outer**, **bicipital r.**, **posterior**, crista tuberculi majoris. **buccocervical r.**, a ridge on the buccal surface just above the cemento-enamel junction of posterior teeth. **buccogingival r.**, **buccocervical r.**. **bulbar r's**, spiral endocardial thickenings in the bulbus cordis that fuse and form the bulbar septum, separating the bulbus cordis into aortic and pulmonary trunks. **center of r.**, the buccolingual midline of the residual alveolar ridge. **cerebral r's of cranial bones**, juga cerebrale ossium cranii. **crest of r.**, the highest continuous surface of the residual alveolar ridge, but not necessarily the center of the ridge. **deltoid r.**, tuberositas deltoidea humeri. **dental r.**, any linear elevation on the crown of a tooth named according to the surface on which it is located, such as buccal or lingual, or in recognition of some other characteristic. **dermal r's**, cristae cutis. **epicondylar r.**, **lateral**, supracondylar r., **lateral**. **epicondylar r.**, **medial**, supracondylar r., **medial**. **epipericardial r.**, a ventral ridge separating the ventral ends of the branchial arches in the embryo from the pericardial swelling. **gastrocnemial r.**, a ridge on the posterior surface of the femur, giving attachment to the gastrocnemius muscle. **genital r.**, the more medial portion of the urogenital ridge, which gives rise to the gonad. **germ r.**, **genital r.**. **gluteal r. of femur**, tuberositas glutea femoris. **healing r.**, an indurated ridge that normally forms deep to the skin along the length of a healing wound and extends about 1 cm. on each side of the wound. **r. of humerus**, tuberositas deltoidea humeri. **incisal r.**, that portion of the crown of an anterior tooth which makes up the actual incisal portion. **interarticular r. of head of rib**, crista capitis costae. **interosseous r. of fibula**, margo interosseus fibulae. **interosseous r. of radius**, margo interosseus radii. **interosseous r. of tibia**, margo interosseus tibiae. **interosseous r. of ulna**, margo interosseus ulnae. **intertrochanteric r.**, crista intertrochanterica. **interureteric r.**, a smooth ridge extending across the bladder from one ureteral opening to the other, produced by a transverse bundle of muscle fibers; called also *plica interureterica* [NA], and *plica ureterica*. **linguocervical r.**, cingulum. **linguogingival r.**, linguocervical r. **longitudinal r. of hard palate**, raphe palati. **Mall's r.**, pulmonary r. **mammary r.**, milk line. **r. of mandibular neck**, a blunt, smooth ridge passing obliquely downward and forward from the mandibular condyle on the medial surface of the mandibular neck and ramus, serving as their buttress. **marginal r's**, rounded borders of the enamel which form the mesial and distal margins of the occlusal surfaces of posterior teeth and of the lingual surfaces of anterior teeth. **mesonephric r.**, the more lateral portion of the urogenital ridge, which gives rise to the mesonephros. **middle r. of femur**, linea pectinea femoris. **milk r.**, see under *line*. **mylohyoid r.**, linea mylohyoidea mandibulae. **r. of neck of rib**, crista colli costae. **r. of nose**, agger nasi. **oblique r.**, 1. a variable linear elevation obliquely crossing the occlusal surface of a maxillary molar tooth, formed by union of two triangular ridges. 2. tuberositas masseterica. **oblique r's of scapula**, lineae musculares scapulae. **palatine r's**,

transverse, plicae palatinae transversae. **Passavant's r.**, see under *bar.* **pectoral r.**, crista tuberculi majoris. **pharyngeal r.**, Passavant's bar. **pterygoid r.**, crista infratemporalis. **pulmonary r.**, a ridge along the common cardinal vein in the embryo, which develops into the pleuropericardial membrane. **radial r. of wrist**, eminentia carpi radialis. **residual r.**, alveolar r., residual. **rough r. of femur**, linea aspera femoris. **semicircular r. of parietal bone, inferior**, linea temporalis inferior ossis parietalis. **semicircular r. of parietal bone, superior**, linea temporalis superior ossis parietalis. **sublingual r.**, frenulum linguae. **superciliary r.**, arcus superciliaris. **supinator r.**, crista musculi supinatoris. **supplemental r.**, an abnormal ridge on the surface of a tooth. **supracondylar r., lateral**, a prominent, curved ridge on the lateral surface of the humerus, giving attachment in front to the brachioradialis and extensor carpi radialis longus muscles. **supracondylar r., medial**, a prominent, curved ridge on the medial surface of the humerus, giving attachment to the brachialis muscle in front and to the medial head of the triceps behind. **supraorbital r.**, arcus superciliaris. **suprarenal r.**, a caudal projection of the dorsal portion of the pleuroperitoneal membrane of the embryo, in which the adrenal cortex develops. **synaptic r.**, a wedge-shaped projection in the retina of a cone pedicle or of a rod spherule, on either side of which lie the horizontal cells whose dendrites are inserted into the ridge. **taste r's**, papillae foliatae. **tentorial r.**, a ridge on the inner surface of the cranium just above the groove for the transverse sinus, to which the tentorium is attached. **transverse r.**, a linear elevation extending transversely across the occlusal surface of a posterior tooth, formed by union of two triangular ridges. **transverse r's of sacrum**, lineae transversae ossis sacri. **transverse r's of vaginal wall**, rugae vaginales. **trapezoid r.**, linea trapezoidae. **triangular r.**, a linear elevation descending from the tip of a cusp toward the central part of the occlusal surface of a posterior tooth. **tubercular r. of sacrum**, crista sacralis mediana. **ulnar r. of wrist**, eminentia carpi ulnaris. **urethral r.**, carina urethralis vaginae. **urogenital r.**, a longitudinal ridge or fold in the embryo, lateral to the root of the mesentery, which later subdivides longitudinally into the mesonephric and the genital ridge. **wolfian r.**, mesonephric r.

ridgel (rid'jel) ridgling.

ridging (rij'ing) in plastic surgery, a visible line or ridge at the margin of an area that has been surgically planed; occasionally encountered when beveling at the junction of treated and untreated areas has not been performed.

ridgling (rij'ling) an animal, especially a horse, with one or both testes undescended.

Ridley's sinus (rid'lēz) [Humphrey Ridley, English anatomist, 1653-1708] sinus circularis.

Riedel's lobe, struma (disease, thyroiditis) (re'delz) [Bernhard Moritz Carl Ludwig Riedel, surgeon in Jena, 1846-1916] see under *lobe* and *struma*.

Rieder's cell, cell leukemia, lymphocyte (re'derz) [Hermann Rieder, German roentgenologist, 1858-1932] see under *cell*, *leukemia*, and *lymphocyte*.

Riegel's pulse (re'gelz) [Franz Riegel, German physician, 1843-1904] see under *pulse*.

Riegler's test (rēg'lerz) [Emanuel Riegler, German chemist, 1854-1929] see under *tests*.

Riehl's melanosis (rēlz) [Gustav Riehl, Vienna dermatologist, 1855-1943] see under *melanosis*.

Riesman's pneumonia, sign (rēs'manz) [David Riesman, American physician, 1867-1940] see under *pneumonia* and *sign*.

Rieux's hernia (re-uhz') [Léon Rieux, French surgeon] retrocecal hernia.

R.I.F. right iliac fossa.

Rifadin (rif'ah-din) trademark for a preparation of rifampin.

rifamide (rif'ah-mid) chemical name: 4-O-[2-(diethylamino)-2-oxoethyl]rifamycin. A semisynthetic antibacterial antibiotic, C₄₃H₅₈N₂O₁₃, derived from rifamycin B, having the actions of the other rifamycins; it has been used in the treatment of respiratory infections due to gram-positive cocci and in biliary tract infections due to gram-negative and gram-positive organisms. See also *rifamycin*.

rifampicin (rif'am-pī-sin) the international nonproprietary name for rifampin.

rifampin (rif'am-pin) [USP] chemical name: 3-[[[4-methyl-1-piperazinyl]imino]methyl]rifamycin. A semisynthetic derivative of rifamycin SV, C₄₃H₅₈N₄O₁₂, occurring as a red-brown, crystalline powder, having the antibacterial actions of the rifamycin (q.v.) group of antibiotics; administered orally. Called also *rifampicin*.

rifamycin (rif'ah-mi'sin) any of a family of antibiotics biosynthesized by a strain of *Streptomyces mediterranei*, effective against a broad spectrum of bacteria, including gram-positive cocci, some gram-negative bacilli, and *Mycobacterium tuberculosis* and certain other mycobacteria. The five components are designated A, B, C, D, and E; rifamycins O, S, and SV are derivatives of the B

component, and AG and X are derivatives of the O component. In the United States the rifamycins are used only for the initial treatment and re-treatment of pulmonary tuberculosis and for treatment of asymptomatic nasopharyngeal carriers of *Neisseria meningitidis*; they have been used in other countries to treat various infectious diseases due to susceptible organisms, such as leprosy, gonorrhea, and biliary tract and respiratory infections. Formerly called *rifomycin*.

rifomycin (rif'o-mi'sin) former name for rifamycin.

Riga-Fede disease [Antonio Riga, Francesco Fede, Italian physicians of the nineteenth century] see under *disease*.

right-handed (rit-han'ded) using the right hand preferentially, or more skillfully than the left, in voluntary motor acts. See also *laterality*.

rigidity (ri-jid'i-te) [L. *rigiditas*; *rigidus* stiff] stiffness or inflexibility, chiefly that which is abnormal or morbid; rigor. **anatomical r.**, rigidity of the cervix uteri in labor so that it dilates to only a limited extent, beyond which uterine contractions are of no avail. **cadaveric r.**, rigor mortis. **clasp-knife r.**, increased resistance of the extensors (induced by passive flexion of a joint), which suddenly gives way on exertion of further pressure. **cogwheel r.**, rigidity of a muscle which gives way in a series of little jerks when the muscle is passively stretched. **decerebrate r.**, the posture produced in an experimental animal by decerebration (q.v.), marked by rigid extension of the legs. It occurs in man as a result of lesions of the upper part of the brain stem and is manifested as follows: the patient lies in rigid extension with his arms internally rotated at the shoulder, extended at the elbow, and pronated, his fingers flexed at the interphalangeal joints and extended at the metacarpophalangeal joints, and his legs extended at the hips and knees, with the ankles and toes flexed. **hemiplegic r.**, rigidity of the paralyzed limbs in hemiplegia. **lead-pipe r.**, the diffuse muscular rigidity seen in parkinsonism. **muscle r.**, muscular r., tetanus, def. 2. **mydriatic r.**, Westphal's pupillary reflex. **pathologic r.**, rigidity of the cervix uteri in labor from some disease. **post-mortem r.**, rigor mortis. **spasmodic r.**, rigidity of the cervix uteri due to spasmodic contraction.

rigor (rig'or, ri'gor) [L.] 1. a chill. 2. rigidity. **acid r.**, coagulation of the protein of muscle produced by acids. **calcium r.**, systolic cardiac arrest caused by an excess of calcium. **heat r.**, rigidity of muscles induced by heat. **r. mor'tis**, the stiffening of a dead body, accompanying the depletion of adenosine triphosphate in the muscle fibers. **r. nervo'rum**, tetanus, def. 2. **r. tre'mens**, parkinsonism. **water r.**, a condition of rigor in a muscle caused by immersing it in water.

rim (rim) a border, or edge. **bite r.**, occlusion r. **occlusion r.**, a border constructed on temporary or permanent denture bases for the purpose of recording the maxillomandibular relation and for positioning the teeth. **record r.**, occlusion r.

rima (ri'mah), pl. *ri'mae* [L.] a cleft or crack; [NA] a general term for such an opening. **r. a'ni**, **r. clu'nium**, crena ani. **r. cornea'lis**, corneal fissure. **ri'mae cu'tis**, sulci cutis. **r. glot'tidis** [NA], the elongated opening between the true vocal cords and between the arytenoid cartilages; called also *fissure of glottis*. **r. glot'tidis cartilagin'ea**, pars intercartilaginea rimae glottidis. **r. glot'tidis membrana'cea**, pars intermembranacea rimae glottidis. **intercartilaginous r.**, pars intercartilaginea rimae glottidis. **intermembranous r.**, pars intermembranacea rimae glottidis. **r. o'ris** [NA], the longitudinal opening of the mouth, between the lips; called also *oral fissure*. **r. palpebra'rum** [NA], the longitudinal opening between the eyelids; called also *palpebral fissure*. **r. puden'di** [NA], the cleft between the labia majora in which the urethra and vagina open; called also *puddental fissure*. **r. respirato'ria**, pars intercartilaginea rimae glottidis. **r. vestib'uli** [NA], the space between the right and left vestibular folds of the larynx; called also *fissure of vestibule*. **r. voca'lis**, pars intermembranacea rimae glottidis. **r. vul'vae**, r. pudendi.

Rimactane (rim-ak'tān) trademark for a preparation of rifampin.

rimae (ri'me) [L.] plural of *rima*.

rimal (ri'mal) pertaining to a rima.

rimantadine hydrochloride (ri-man'tah-dēn) chemical name: α -methyl-1-adamantanemethylamine. An antiviral agent, C₁₂H₂₁N·HCl, which has been used in the prophylaxis of influenza type A.

Rimifon (rim'i-fon) trademark for a preparation of isoniazid.

rimiterol hydrobromide (rim'i-ter'ōl) chemical name: (R*,S*)- α -(3,4-dihydroxyphenyl)-2-piperidinemethanol hydrobromide. An adrenergic, C₁₂H₁₇NO₃·HBr, used as a bronchodilator.

rimose (rim'ōs) [L. *rima* crack] marked by cracks and fissures.

rimula (rim'u-lah), pl. *rim'ulae* [L.] a minute fissure, especially of the spinal cord or brain.

rinderpest (rind'er-pest) [Ger. *Rinder* cattle + *pest* plague] cattle plague.

Rindfleisch's cells, folds (rint'flish-ez) [Georg Eduard Rindfleisch, German physician, 1836-1908] see *eosinophil*, and under *fold*.

ring (ring) [L. *annulus, circulus, orbiculus*] 1. any annular or circular organ or area; for names of specific anatomical structures, see under *anulus*. 2. in chemistry, a collection of atoms united in a continuous or closed chain. **abdominal r., deep**, anulus inguinalis profundus. **abdominal r., external**, anulus inguinalis superficialis. **abdominal r., internal**, anulus inguinalis profundus. **abdominal r., superficial**, anulus inguinalis superficialis. **Alb's r.**, a ring-shaped shadow observed in a roentgenogram of the skull, caused by an aneurysm of a cerebral artery. **amnion r.**, the attached margin of the amnion about the umbilicus of the fetus. **annular r's**, round or oval opacities surrounding a translucent area in the roentgenogram, indicative of cavitation of the lung in tuberculosis; called also *pleural rings*. **atrial r.**, the ring surrounding the opening between the atrium and ventricle of the primitive vertebrate heart; represented in the mammalian heart by the atrioventricular node. **Balbani's r's**, a series of loops of the chromonemata of polytene chromosomes, similar in nature to chromosome puffs and in appearance to lampbrush chromosomes. **Band's r.**, pathologic retraction r.; see *retraction r.* **benzene r.**, the closed hexagon of carbon atoms in benzene (C_6H_6), from which the different benzene compounds are derived by replacement of the hydrogen atoms. **Bickel's r.**, Waldeyer's tonsillar ring. **Braun's r.**, pathologic retraction r.; see *retraction r.* **Cabot's r's**, see *Cabot's ring bodies*, under *body*. **Cannon's r.**, in the roentgenogram after a barium meal, a narrow area or focal contraction at the mid-third of the transverse colon, representing the junction of the primitive midgut and hindgut and marking an area of overlap between the superior and inferior nerve plexuses. **carbocyclic r.**, a chemical ring which includes only carbon atoms. **casting r.**, refractory flask. **ciliary r.**, orbiculus ciliaris. **ciliary r. of iris**, anulus iridis major. **closing r. of Winkler-Waldeyer**, a slight thickening at the edge of the placenta, due to piling up of fetal and maternal tissues. **conjunctival r.**, anulus conjunctivae. **constriction r.**, a contracted area of the uterus, allegedly possible at any level, occurring where the resistance of the uterine contents is slight, as over a depression in the contour of the fetal body, or below the presenting part. Cf. *retraction r.* **contact r.**, the wound inflicted at the site of entrance of a bullet on the surface of the body. **contraction r.**, see *constriction r.* and *retraction r.* **coronary r.**, see under *band*. **crural r.**, anulus femoralis. **Döllinger's r.**, Schwalbe's r. **femoral r.**, anulus femoralis. **fibrocartilaginous r. of tympanic membrane**, anulus fibrocartilagineus membranæ tympani. **fibrous r., interpubic**, discus interpubicus. **fibrous r's of heart**, anuli fibrosi cordis. **fibrous r. of intervertebral disk**, anulus fibrosus disci intervertebralis. **Fleischer keratoconus r.**, an incomplete annular pigmented line at the base of the cone in keratoconus. **Fleischer-Strümpell r.**, Kayser-Fleischer r. **furan r.**, a ring containing four atoms of carbon and one of oxygen. **germ r.**, the proliferating marginal zone of the early blastoderm that is about to become the lips of the blastopore. **glaucomatous r.**, a light yellowish ring around the optic disk in glaucoma, indicating atrophy of the choroid. **Gräfenberg's r.**, a flexible ring of silver wire inserted into the uterus to prevent conception. **greater r. of iris**, anulus iridis major. **heterocyclic r.**, a chemical ring which includes atoms of different elements. **homocyclic r.**, a chemical ring in which all the members are atoms of the same element. **infancy r.**, a line of arrested calcification sometimes seen near the incisal edges of anterior permanent teeth; it forms at approximately one year of age. **inguinal r., deep**, anulus inguinalis profundus. **inguinal r., external**, anulus inguinalis superficialis. **inguinal r., internal**, anulus inguinalis profundus. **inguinal r., superficial**, anulus inguinalis superficialis. **isocyclic r.**, homocyclic r. **Kayser-Fleischer r.**, a gray-green to red-gold pigmented ring at the outer margin of the cornea, seen in progressive lenticular degeneration and pseudosclerosis; called also *Fleischer-Strümpell r.* **lesser r. of iris**, anulus iridis minor. **Liesegang r's**, see under *phenomenon*. **Löwe's r.**, a ring in the visual field caused by the macula lutea. **Lower's r's**, anuli fibrosi cordis. **lymphoid r.**, Waldeyer's tonsillar ring. **Maxwell's r.**, a ring resembling Löwe's, but smaller and fainter. **neonatal r.**, a line of demarcation in the enamel and dentin of a deciduous tooth, indicating the transition from prenatal to postnatal calcification. **Newton's r's**, colored rings seen on the surface of thin, transparent membranes, as soap-bubbles, due to light wave interference. **Ochsner's r.**, a circular mucosal thickening at the opening of the pancreatic duct into the common bile duct. **periosteal bone r.**, see under *collar*. **pleural r's**, annular r's. **pyran r.**, a ring containing five atoms of carbon and one of oxygen. **retraction r.**, a ringlike thickening and indentation occurring in normal labor at the junction of the isthmus and corpus uteri, delineating the upper contracting portion and the lower dilating portion (*physiologic retraction r.*), or a persistent retraction ring in abnormal or prolonged labor that obstructs expulsion of the fetus (*pathologic retraction r.*). Cf. *constriction r.* **Schatzki's r.**, a web or ring in the lower esophagus in some patients with dysphagia; revealed radiographically after barium swallow. **Schwalbe's r.**, **Schwalbe's anterior border r.**, a circular ridge composed of

collagenous fibers surrounding the outer margin of Descemet's membrane (lamina limitans posterior corneae). Called also *Schwalbe's line* and *Döllinger's r.* **signet r.**, the stage in the erythrocytic cycle of a malarial plasmodium consisting of a thin ring of protoplasm with a nucleus at one side; called also *ring stage*. **Soemmering's r.**, a doughnut-shaped opacity behind the pupil, occurring after cataract surgery or secondary to trauma as a result of contact between the anterior capsule and the posterior capsule, which traps varying amounts of lens substance peripherally; called also *Soemmering's ring cataract*. **tendinous r., common**, anulus tendineus communis. **tracheal r's**, cartilagine tracheales. **tympanic r.**, anulus tympanicus. **umbilical r.**, anulus umbilicalis. **vascular r.**, a developmental anomaly of the aortic arches wherein the trachea and esophagus are encircled by vascular structures, many variations being possible. **r. of Vieussens**, limbus fossae ovalis. **Vossius' lenticular r.**, a ring of pigment on the crystalline lens caused by pressure of the pupillary margin against the lens following a contusion injury. **Waldeyer's tonsillar r.**, the circular series of lymphoid tissue formed by the lingual, pharyngeal, and faucial tonsils. **Zinn's r.**, anulus tendineus communis.

ring-bone (ring'bōn) exostosis involving the first or second phalanx of the horse, resulting in lameness if the articular surfaces are affected. **low r.**, buttress foot.

Ringer's injection, irrigation (mixture, solution) (ring'ēr-z) [Sydney Ringer, English physiologist, 1835-1910] see under *injection* and *irrigation*.

ringschwiele (ring'shve-lē) [Ger. *ring* ring + *schwiele* callosity, wheal] a large pigmented plaque at the ora serrata, caused by a laminated proliferation of the retinal pigment epithelium, occurring as a result of long-standing retinal detachment or other injury to the eye.

ringworm (ring'wurm) a popular name for a group of fungal diseases of the skin of man and domestic animals, marked by the formation of ring-shaped pigmented patches covered with vesicles or scales, and caused by dermatophytes. See also *tinea*. Among domestic animals, *Trichophyton* is the most common cause in cattle; it also causes fur-shipping in chinchillas. *Microsporum* is the usual cause in dogs and cats. **r. of the beard**, tinea barbae. **black-dot r.**, tinea capitis caused by *Trichophyton violaceum* or *T. tonsurans*, with a distinctive appearance resulting from the breaking of the hairs at the scalp surface. **r. of the body**, tinea corporis. **r. of feet**, tinea pedis. **r. of groin**, tinea cruris. **r. of the nails**, onychomycosis. **r. of the scalp**, tinea capitis. **Tokelau r.**, tinea imbricata.

Rinne's test (rin'nēz) [Heinrich Adolf Rinne, German otologist, 1819-1868] see under *tests*.

Riolan's anastomosis, arch, etc. (re'o-lanz') [Jean Riolan, French physician and physiologist, 1580-1657] see under *anastomosis*, *arch*, *bone*, *muscle*, *nosegay*, and *ossicle*.

riomitsin (ri'o-mit'sin) oxytetracycline.

Riopan (ri'o-pan) trademark for preparations of magaldrate.

Ripault's sign (re-pōz') [Louis Henry Antoine Ripault, French physician, 1807-1856] see under *sign*.

ripazepam (ri-pah'zē-pam) chemical name: 1-ethyl-4,6-dihydro-3-methyl-8-phenylpyrazolo[4,3-e][1,4]diazepin-5(1*H*)-one; a minor tranquilizer, $C_{15}H_{16}N_4O$.

R.I.P.H. Royal Institute of Public Health.

R.I.P.H.H. Royal Institute of Public Health and Hygiene.

Risley's prism (riz'lēz) [Samuel Doty Risley, American ophthalmologist, 1845-1920] see under *prism*.

risocaine (riz'o-kān) chemical name: 4-aminobenzoic acid propyl ester; a local anesthetic and antipruritic, $C_{10}H_{13}NO_2$.

RIST radioimmunosorbent test; see under *tests*.

Ristella melaninogenica (ris-tel'ah mel'ah-nin-o-jen'i-kah) *Bacteroides melaninogenicus*.

ristocetin (ris'to-se'tin) an antibiotic substance produced by the fermentation of *Nocardia lurida*; formerly used in treatment of severe staphylococcal infections resistant to other antibiotics.

risus (ri'sus) [L.] laughter. **r. cani'nus**, r. sardonius. **r. sardonius**, a grinning expression produced by spasm of the facial muscles; so called from a plant of Sardinia, probably one of the genus *Ranunculus*, or crowfoot, which was believed to produce it.

Ritalin (rit'ah-lin) trademark for preparations of methylphenidate hydrochloride.

Ritgen maneuver (method) (rit'gen) [Ferdinand August Marie Franz von Ritgen, German gynecologist, 1787-1867] see under *maneuver*.

ritodrine (rit'o-drēn) chemical name: (R^*,S^*)-4-hydroxy- α -[1-[[2-(4-hydroxyphenyl)ethyl]amino]ethyl]benzene methanol. A β_{2A} -adrenergic agent, $C_{17}H_{21}O_3$, used as a smooth muscle (uterine muscle) relaxant to delay uncomplicated premature labor.

Ritter's disease (rit'ēr-z) [Gottfried Ritter von Rittershain, German physician, 1820-1883] dermatitis exfoliativa neonatorum.

Ritter's law, tetanus (rit'ēr-z) [Johann Wilhelm Ritter, German physicist, 1776-1810] see under *law* and *tetanus*.

Ritter-Rollet phenomenon (sign) (rit'er-ro-la') [J. W. Ritter] see under *phenomenon*.

Ritter-Valli law [J. W. Ritter; Eusebio Valli, Italian physician, 1755-1816] see under *law*.

ritual (rich'u-al) in psychiatry, a series of repetitive acts performed compulsively to relieve anxiety, as in obsessive-compulsive neurosis.

rivalry (ri'val-re) a state of competition or antagonism. **binocular r.**, **retinal r.**, the apparent alternate displacement of two figures when viewed together, there being no fusion into a continuous picture of the images of the two eyes. **sibling r.**, competition between siblings for the love, affection, and attention of one or both parents or for other recognition or gain.

Rivalta's reaction (test) (re-val'tahz) [Fabio Rivalta, pathologist in Bologna, born 1863] see under *reaction*.

Riva-Rocci sphygmomanometer (re'vah-ro'che) [Scipione Riva-Rocci, Italian physician, 1863-1937] see under *sphygmomanometer*.

Riverius' draft (re-ve're-us) Rivière's potion.

Rivière's potion (re've-ärz') [Lazare Rivière, French physician, 1589-1655] see under *potion*.

Riviere's sign (riv-ērz') [Clive Riviere, British physician, 1873-1929] see under *sign*.

Rivinus's ducts (canals), gland, incisure (foramen, notch, segment) (re-ve'nus) [Augustus Quirinus Rivinus, anatomist and botanist in Leipzig, 1652-1723] see *ductus sublinguales minores, glandula sublinguales, and incisura tympanica* [Rivini].

rivus (ri'vus), pl. *ri'vi* [L.] a brook, or little stream. **r. lacrima/lis** [NA], the pathway by which the tears reach the lacrimal lake from the excretory ductules of the lacrimal gland.

riziform (riz'i-form) resembling grains of rice.

RKY roentgenkymography.

RLF retrolental fibroplasia.

R.L.L. right lower lobe (of lungs).

R.M.A. right mentoanterior (position of the fetus).

R.M.L. right middle lobe (of lungs).

R.M.N. Registered Mental Nurse (England and Wales).

R.M.O. Regional Medical Officer (British).

R.M.P. right mentoposterior (position of the fetus).

R.M.T. right mentotransverse (position of the fetus).

R.N. Registered Nurse.

Rn chemical symbol for *radon*.

RNA (ar'en-a) ribonucleic acid (see under *acid*). **messenger RNA, ribosomal RNA, soluble RNA, transfer RNA**, see definitions on *ribonucleic acid*, under *acid*.

RNase ribonuclease.

R.N.M.S. Registered Nurse for the Mentally Sub-Normal.

R.O.A. right occipitoanterior (position of the fetus).

roach (röch) see *Blatta*.

roaring (rör'ing) a condition in the horse marked by a rough sound on inspiration and sometimes on expiration, due to some obstruction in the respiratory tract or to paralysis of the vocal cords.

Robalate (ro'bah-lät) trademark for preparations of dihydroxy-aluminum aminoacetate.

Robaxin (ro-bak'sin) trademark for preparations of methocarbamol.

Robbins (rob'binz), Frederick C. American pediatrician, born 1916; co-winner, with John F. Enders and Thomas H. Weller, of the Nobel prize in medicine and physiology for 1954, for the discovery that poliomyelitis viruses multiply in human tissue.

robenidine hydrochloride (ro-ben'i-dēn) chemical name: 1,3-bis[(*p*-chlorobenzylidene)amino]guanidine monohydrochloride; a coccidiostat for poultry, $C_{15}H_{15}Cl_2N_5 \cdot HCl$.

Robert's ligament (ro-bärz') [Cesar Alphonse Robert, French surgeon, 1801-1862] see under *ligament*.

Robert's pelvis (ro'bärts) [Heinrich Ludwig Ferdinand Robert, German gynecologist, 1814-1874] see under *pelvis*.

Roberts' test (rob'erts) [Sir William Roberts, English physician, 1830-1899] see under *tests*.

Robertson's pupil (rob'ert-sunz) see *Argyll Robertson*, and under *pupil*.

Robertson's sign (rob'ert-sunz) [William Egbert Robertson, American physician, 1869-1956] see under *sign*.

robin (ro'bin) a poisonous substance (phytotoxin) found in the bark of the North American locust tree (*Robinia pseudacacia*).

Robin's syndrome (ro-bāz') [Pierre Robin, French pediatrician, 1867-1950] Pierre Robin syndrome.

Robinson's circle (rob'in-sunz) [Frederick Byron Robinson, American anatomist, 1857-1910] see under *circle*.

Robinul (ro'bi-nul) trademark for preparations of glycopyrrrolate.

Robison ester, ester degeneration (ro'bi-sun) [Robert Robi-

son, British chemist, 1884-1941] see under *ester*, and *degeneration*.

Robitussin (ro'bi-tus'in) trademark for preparations of guaifenesin.

roborant (rob'o-rant) [L. *roborans* strengthening] conferring strength; strengthening.

Robson's point, position (rōb'sonz) [Sir Arthur William Mayo Robson, London surgeon, 1853-1933] see under *point* and *position*.

Rochalimaea (ro'kah-li-me'ah) a genus of the tribe Rickettsiae, family Rickettsiaceae, order Rickettsiales, resembling the genus *Rickettsia*, but usually found extracellularly in the arthropod host. **R. quinta'na**, the etiologic agent of trench fever, transmitted by the body louse *Pediculus humanus*; formerly called *Rickettsia quintana*.

rod (rod) a straight, slim mass of substance; specifically, one of the rodlike bodies of the retina. See *retinal r.s.* **Corti's r.s.**, **pillar cells**; see under *cell*. **enamel r.s.**, the approximately parallel rods or prisms forming the enamel of teeth. They are enclosed in a sheath of organic matter (the enamel rod sheath, or prism sheath) and are embedded in the interprismatic or cement substance. **germinal r.**, a sporozoite. **r.s. of Heidenhain**, the rodlike cells of the renal tubules. **König's r.s.**, a series of steel bars each of which gives a note of certain pitch when struck. **Maddox r.s.**, a set of parallel cylindrical glass rods used in testing for heterophoria. **Meckel's r.**, Meckel's cartilage. **muscle r.**, myofibril. **olfactory r.**, the slender apical portion of an olfactory bipolar neuron, a modified dendrite, extending as a cylindrical process from the nucleus to surface of the epithelium. **Reichmann's r.**, a short ivory rod with circular grooves and intervening projections, used in auscultatory percussion of the stomach. **retinal r.s.**, highly specialized cylindrical segments of the visual cells containing rhodopsin; together with the retinal cones they form the light-sensitive elements of the retina; called also *rod cells*.

rodenticide (ro-den'ti-sid) 1. destructive to rodents. 2. any agent for destroying rodents.

rodentine (ro-den'tin) pertaining to a rodent.

rodocaine (ro'do-kān) chemical name: *trans*-(2-chloro-6-methylphenyl)octahydropyridine-1-propanamide; a local anesthetic, $C_{18}H_{25}ClN_2O$.

roentgen (rent'gen) [for Wilhelm Conrad Röntgen, German physicist, 1845-1923, who discovered roentgen rays in 1895; winner of the Nobel prize in physics for 1901] the international unit of x- or γ-radiation. It is the quantity of x- or γ-radiation such that the associated corpuscular emission per 0.001293 gm. of air produces in air ions carrying 1 electrostatic unit of electrical charge of either sign. Abbreviated R.

roentgenkymograph (rent'gen-ki'mo-graf) the apparatus used in roentgenkymography.

roentgenkymography (rent'gen-ki-mog'rah-fe) a technique of graphically recording the movements of an organ or structure on a single x-ray film; abbreviated RKY.

roentgenocardiogram (rent'gen-o-kar'de-o-gram) a polygraphic tracing of cardiac pulsation made by the roentgen rays.

roentgenocinematography (rent'gen-o-sin'ē-mah-tog'rah-fe) moving picture roentgenography.

roentgenogram (rent-gen'o-gram") a film produced by roentgenography. **cephalometric r.**, a roentgenogram of the full lateral view of the head, for the purposes of making cranial measurements; called also *cephalogram*. **lateral oblique jaw r.**, a roentgenogram of the mandible that unilaterally reveals the mandible from symphysis to condyle. **lateral ramus r.**, a roentgenogram of the mandibular ramus and condyle. **lateral skull r.**, a roentgenogram of the sinuses and lateral aspects of the skeletal structures of the cranium. **maxillary sinus r.**, a roentgenogram of the maxillary sinuses and the zygoma that permits direct comparison of the two sides; called also *Water's view r.* **submental vertex r.**, a roentgenogram that permits visualization of the lateral movements of the condyle, lateral displacement of the condyle and/or the coronoid process, and the contour of the zygomatic arches. **Towne projection r.**, a roentgenogram of the mandibular condyles and the midfacial skeleton. **Water's view r.**, maxillary sinus r.

roentgenograph (rent'gen-o-graf") roentgenogram.

roentgenographic (rent'gen-o-graf'ik) pertaining to or produced by roentgenography.

roentgenography (rent'gen-og'rah-fe) [roentgen + Gr. *graphein* to write] the making of a record (roentgenogram) of internal structures of the body by passage of x-rays through the body to act on specially sensitized film. See also *radiography*. **body section r.**, a special technique to show in detail images of structures lying in a predetermined plane of tissue, while blurring or eliminating detail in images of structures in other planes. See *tomography*. Called also *analytical roentgenography* and *sectional roentgenography*. Various mechanisms and methods for such roentgenography have been given various names, such as *lamina-graphy, laminography, planigraphy, radiotomy, stratigraphy, and vertigraphy*. **double contrast r.**, mucosal relief roent-

genography. **mass r.**, examination by x-rays of the general population or of large groups of the population. **miniature r.**, the taking of miniature x-ray photographs. **miniature r., mass**, the use of miniature x-ray film in mass roentgenography. **mucosal relief r.**, a technique for revealing any abnormality of the intestinal mucosa, involving injection and evacuation of a barium enema, followed by inflation of the intestine with air under light pressure. The light coating of barium on the walls of the inflated intestine in the roentgenogram reveals clearly even small abnormalities. **selective r.**, roentgenography of certain segments of the population, chosen on some specific basis such as symptoms, or some other basis. **serial r.**, the taking of several exposures of a selected area at arbitrary intervals. **spot-film r.**, the making of localized instantaneous roentgenographic exposures during the course of a fluoroscopic examination.

roentgenokymograph (rent/'gen-o-ki/'mo-graf) roentgen-kymograph.

roentgenologist (rent/'gē-nol/'o-jist) a physician who specializes in diagnosis and treatment by the roentgen rays; radiologist.

roentgenology (rent/'gē-nol/'o-je) [roentgen rays + -logy] the branch of radiology which deals with the diagnostic and therapeutic use of roentgen rays.

roentgenolucent (rent/'gē-nol/'u-sent) allowing roentgen rays to pass through; radiolucent.

roentgenometer (rent/'gē-nom/'ē-ter) an instrument for measuring the intensity of roentgen rays.

roentgenometry (rent/'gē-nom/'ē-tre) 1. measurement of the intensity of x-rays. 2. the direct measurement of structures shown in the roentgenogram with or without the necessity of correcting for magnification.

roentgenopaque (rent/'gen-o-pāk') radiopaque.

roentgenoparent (rent/'gen-o-par/'ent) radioparent.

roentgenoscope (rent-'gen/'o-skōp) a fluoroscope; an apparatus for examining the body by means of the fluorescent screen excited by the roentgen rays.

roentgenoscopy (rent/'gē-nos/'ko-pe) [roentgen rays + Gr. *skopein* to examine] examination by means of roentgen rays; fluoroscopy.

roentgenotherapy (rent/'gen-o-ther/'ah-pe) [roentgen rays + Gr. *therapeia* treatment] therapeutic use of roentgen rays.

roeteln (ret/'eln) [Ger.] rubella.

Roger's disease, reaction, symptom (ro-zhāz') [Henri Louis Roger, French physician, 1809-1891] see under *disease, reaction, and symptom*.

Roger-Josué test (ro-zha' zho-zu-a') [H. L. Roger; Otto Josué, French physician, 1869-1923] see *blister test, under tests*.

Rogers' sphygmomanometer (roj/'erz) [Oscar H. Rogers, American physician, born 1857] see under *sphygmomanometer*.

Röhl's marginal corpuscles (rālz) [Wilhelm Röhl, German physician, 1881-1929] see under *corpuscle*.

roka (ro/'kah) a tree of Arabia and Africa, *Trichilia emetica* Vahl.; it affords various remedial products.

Rokitansky's disease, diverticulum, pelvis (ro/'ki-tan/'skēz) [Karl Freiherr von Rokitansky, pathologist in Vienna, 1804-1878] see *acute yellow atrophy, under atrophy, see spondylolisthetic pelvis, under pelvis, and see under diverticulum*.

rolandic (ro-lan/'dik) described by or named in honor of Luigi Rolando.

Rolando (ro-lan/'do), Luigi. An Italian anatomist (1773-1831), known for his studies on the brain and spinal cord, who had a number of anatomical structures named in his honor. See under *angle, area, cell, column, fasciculus, fiber, fissure, funiculus, line, point, substance, tubercle, and zone*.

rolandometer (ro/'lan-dom/'ē-ter) an instrument for determining the positions of the various fissures of the surface of the brain.

role (rōl) the behavior pattern that an individual presents to others. **gender r.**, the image projected by a person that identifies him or her as being boy or girl, man or woman. It is the public expression of gender identity. Cf. *gender identity, under identity*.

rolletamide (ro-let/'ah-mid) chemical name: 3',4',5'-trimethoxy-3-(3-pyrrolidin-1-yl)acrylophenone; a hypnotic, C₁₈H₁₉NO₄.

rolitetetracycline (ro/'le-tet/'rah-si/'klēn) [USP] chemical name: 4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-N-(1-pyrrolidinylmethyl)-2-naphthacenecarboxamide. A semisynthetic broad-spectrum antibiotic of the tetracycline group, C₂₇H₃₃N₃O₈, occurring as a light yellow crystalline powder having an amine-like odor; used as an antibacterial administered intravenously or intramuscularly. **r. nitrate**, a salt of rolitetetracycline, having the same actions and uses as the base.

roll (rōl) a cylindrical structure. **cotton r.**, a small cylinder of cotton, for use in dentistry. **iliac r.**, a mass shaped like a sausage, located in the left iliac fossa and produced by a collection of feces or by induration of the walls of the sigmoid fossa; called also *sigmoid sausage*. **jelly r.**, see under *hypothesis*. **scleral r.**, the posterior lip of the internal scleral furrow to which the ciliary body is attached.

roller (rōl/'er) a small cylinder of rolled cotton, linen, or flannel for surgical use. **massage r.**, a proprietary apparatus for use in electric massage.

Roller's nucleus (rol/'erz) [Christian Friedrich Wilhelm Roller, German neurologist, 1802-1878] see under *nucleus*.

Rolleston's rule (rol/'es-tonz) [Sir Humphrey Davy Rolleston, London physician, 1862-1944] see under *rule*.

Rollet's chancre (ro-lāz') [Joseph Pierre Martin Rollet, French surgeon and syphilographer, 1824-1894] mixed chancre.

Rollet's stroma (rol/'ets) [Alexander Rollet, Austrian physiologist, 1834-1903] see under *stroma*.

Rollier's radiation, treatment (rol-yāz') [Auguste Rollier, Swiss physician, 1874-1954] see under *radiation and treatment*.

Romaña's sign (ro-mahn/'yahz) [Cecilio Romaña, Brazilian physician] see under *sign*.

romanopexy (ro-man/'o-pek/'se) [L. *romanum* the sigmoid + Gr. *pēxis* fixation] sigmoidopexy.

romanoscope (ro-man/'o-skōp) sigmoidoscope.

Romanovsky's (Romanowsky's) stain (method) (ro'-man-of/'skēz) [Dimitri Leonidovich Romanovsky, Russian physician, 1861-1921] see *Table of Stains*.

Romberg's disease (triphoneurosis), sign, spasm, station (rom/'bergz) [Moritz Heinrich Romberg, physician in Berlin, 1795-1873] see *facial hemiatrophy, under hemiatrophy, and see under sign, spasm, and station*.

rombergism (rom/'berg-izm) the tendency of a patient to fall when he closes his eyes while standing still with his feet close together (Romberg's sign), due to loss of joint position sensation, as in tabes dorsalis.

Römer's test (reaction) (re/'merz) [Paul Heinrich Römer, hygienist in Greifswald, (c)1876-1916] see under *tests*.

Romilar (ro/'mil-ar) trademark for preparations of dextromethorphan hydrobromide.

Rommelaere's sign (rom/'el-a-erz') [Guillaume Rommelaere, Belgian physician, 1836-1916] see under *sign*.

Rondomycin (ron/'do-mi/'sin) trademark for a preparation of methacycline hydrochloride.

rongeur (raw-'zhur') [Fr. "gnawing, biting"] an instrument for cutting tissue, particularly bone.

Roniacol (ro-ni/'ah-kol) trademark for preparations of nicotiny alcohol.

ronidazole (ro-nid/'ah-zōl) chemical name: 1-methyl-5-nitro-1H-imidazole-2-methanol carbamate (ester); a veterinary antiprotozoal, C₈H₈N₄O₄.

Rönne's nasal step (ren/'ēz) see under *step*.

ronnel (ron/'el) chemical name: phosphorothioic acid, O,O-dimethyl O-(2,4,5-trichlorophenyl) ester; a cholinesterase inhibitor, C₈H₈Cl₃O₃PS, used as an insecticide, effective against flies, roaches, screw worms, and cattle grub.

röntgenography (rent/'gen-og/'rah-fe) roentgenography.

roof (roof) a covering structure. **r. of orbit**, paries superior orbitae. **r. of skull**, calvaria. **r. of tympanum**, tegmen tympani, def. 1.

room (rōom) a place in a building enclosed and set apart for occupancy or for performance of certain procedures. **anechoic r.**, an echo-free room used for acoustical testing. **delivery r.**, a hospital room to which an obstetrical patient is taken for delivery. **intensive therapy r.**, intensive care unit. **labor r.**, predelivery room. **operating r.**, a room in a hospital equipped and used for surgical operations. **postdelivery r.**, a recovery room for the care of obstetrical patients immediately after delivery. **predelivery r.**, a hospital room where an obstetrical patient remains during the first stage of labor, i.e., from the time the pains begin until she is ready for delivery; called also *labor r.* **recovery r.**, a hospital unit adjoining operating or delivery rooms, with special equipment and personnel for the care of postoperative or postpartum patients until they may safely be returned to general nursing care in their own rooms or wards.

rooming-in (rōom/'ing-in) the practice of keeping a newly born infant in a crib near the mother's bed, instead of in a nursery, during the hospital stay.

root (root) the lowermost part, or a structure by which something is firmly attached. For official names of various anatomical structures, see under *radix*. **anatomical r.**, the portion of a tooth that is covered by cementum; see *radix dentis* [NA]. **r. of ansa cervicalis, inferior**, radix inferior ansae cervicalis. **r. of ansa cervicalis, superior**, radix superior ansae cervicalis. **r. of arch of vertebra**, pediculus arcus vertebrae. **belladonna r.**, the dried root of *Atropa belladonna*, which contains various anticholinergic alkaloids; called also *deadly nightshade root*. See *belladonna*. **bitter r.**, gentian. **clinical r.**, radix clinica. **r. of clitoris**, crus clitoridis. **cochlear r. of acoustic nerve**, radix inferior nervi vestibulocochlearis. **cranial r's of accessory nerve**, radices craniales nervi accessorii. **dandelion r.**, taraxacum. **deadly nightshade r.**, belladonna r. **facial r.**, radix nervi facialis. **r. of hair**, ra-

dix pili. **insane r.**, hyoscyamus. **intermediate r. of olfactory trigone**, stria intermedia trigoni olfactorii. **licorice r.**, glycyrrhiza. **lingual r.**, that root of a posterior tooth, especially a maxillary molar, which is situated nearest the tongue. **long r. of ciliary ganglion**, ramus communicans nervi nasociliaris cum ganglione ciliari. **r. of lung**, radix pulmonis. **mandrake r.**, podophyllum. **r. of median nerve**, lateral, radix lateralis nervi mediani. **r. of median nerve**, medial, radix medialis nervi mediani. **r. of mesentery**, radix mesenterii. **motor r. of ciliary ganglion**, radix oculomotoria ganglii ciliaris. **motor r. of spinal nerves**, radix ventralis. **motor r's of submandibular ganglion**, rami communicantes ganglii submandibularis cum nervo linguale. **motor r. of trigeminal nerve**, radix motoria nervi trigemini. **r. of nail**, radix unguis. **nerve r's**, the series of paired bundles of nerve fibers which emerge at each side of the spinal cord, termed dorsal or posterior (see *radix dorsalis*), or ventral or anterior (see *radix ventralis*) according to their position. There are 31 pairs (8 cervical, 12 thoracic, 5 lumbar, 5 sacral, and 1 coccygeal), each corresponding dorsal and ventral root joining to form a spinal nerve. Called also *spinal r's*. Certain cranial nerves, e.g., the trigeminal, also have nerve roots. **r. of nose**, radix nasi. **oculomotor r. of ciliary ganglion**, radix oculomotoria ganglii ciliaris. **olfactory r.**, internal, stria medialis trigoni olfactorii. **r. of optic tract**, lateral, radix lateralis tractus optici. **r. of optic tract**, medial, radix medialis tractus optici. **orizaba jalap r.**, ipomea. **orris r.**, orris. **palatine r.**, that root of a maxillary molar tooth which is situated nearest the palate; lingual root. **r. of penis**, radix penis. **physiological r.**, the portion of a tooth proximal to the gingival crevice, or embedded in the dental alveolus. **puccoon r.**, red r., sanguinaria. **retained r.**, a tooth root, or part of a root, remaining in the soft tissue or in bone following trauma, extensive tooth decay, or incomplete extraction. **sensory r. of ciliary ganglion**, ramus communicans ganglii ciliaris cum nervo nasociliaris. **sensory r. of spinal nerves**, radix dorsalis. **sensory r. of trigeminal nerve**, radix sensoria nervi trigemini. **short r. of ciliary ganglion**, radix oculomotoria ganglii ciliaris. **spinal r's**, nerve r's. **spinal r's of accessory nerve**, radices spinales nervi accessorii. **r. of spinal nerves**, anterior, radix ventralis. **r. of spinal nerves**, dorsal, r. of spinal nerves, posterior, radix dorsalis. **r. of spinal nerves**, ventral, radix ventralis. **sweet r.**, glycyrrhiza. **r. of tongue**, radix linguae. **r. of tooth**, radix dentis. **vestibular r. of acoustic nerve**, radix superior nervi vestibulocochlearis. **vestibular r. of auditory nerve**, radix superior nervi vestibulocochlearis. **r. of vestibulocochlear nerve**, inferior, radix inferior nervi vestibulocochlearis. **r. of vestibulocochlear nerve**, superior, radix superior nervi vestibulocochlearis.

R.O.P. right occipitoposterior (position of the fetus).

ropizine (ro'pī-zēn) chemical name: 4-(diphenylmethyl)-N-[(6-methyl-2-pyridinyl)methylene]-1-piperazine; an anticonvulsant, $C_{24}H_{26}N_4$.

Rorschach test (ror'shahk) [Hermann Rorschach, Swiss psychiatrist, 1884–1922] see under *tests*.

rosacea (ro-za'she-ah) a chronic disease affecting the skin of the nose, forehead, and cheeks, marked by flushing, followed by red coloration due to dilatation of the capillaries, with the appearance of papules and acne-like pustules. Called *acne rosacea*. Long-standing rosacea is associated with rhinophyma.

rosamicin (ro'zāh-mī'sin) a macrolide antibiotic, $C_{31}H_{53}NO_9$, derived from *Micromonospora rosaria*, having a broad spectrum of antibacterial activity against gram-positive bacteria and some activity against gram-negative bacteria; the butyrate, propionate, sodium phosphate, and stearate salts have antibacterial activity similar to that of the base.

rosaniline (ro-zan'ī-lin) a basic dye derived from triphenylmethane, $C_{20}H_{21}N_3O$, occurring as reddish brown crystals, which is soluble in acids and alcohol and slightly soluble in water. It is used, usually as the hydrochloride, in the preparation of other dyes and as a component of basic fuchsin.

rosary (ro'zah-re) a structure resembling a string of beads. **rachitic r.**, rachitic beads; see under *bead*.

rose (rōz) [L. *rosa*] any plant or species of the genus *Rosa*. The flowers of *R. gallica*, *R. damascena*, *R. alba*, *R. centifolia*, and varieties of these species afford rose oil. **r. bengal**, a dye, the dichlor- or the tetrachlorerythrosin, $NaO \cdot (C_6H_4)_2 \cdot O_2C \cdot C_6H_2Cl_2 \cdot COONa$.

Rose's position (ro'zez) [Frank Atcherly Rose, British surgeon] see under *position*.

Rose's test (ro'zez) [Joseph Constantin Rose, German physician, 1826–1893] see under *tests*.

Rose's tetanus (ro'zez) [Edmund Rose, German physician, 1836–1914] see *kopf-tetanus*.

rosein (ro'ze-in) fuchsin.

Rosenbach's sign, etc. (ro'zen-bahks) [Ottomar Rosenbach, physician in Berlin, 1851–1907] see under *sign*, *syndrome*, and *tests*.

Rosenbach's tuberculin (ro'zen-bahks) [F. J. R. Rosenbach, German physician, 1843–1923] see under *tuberculin*.

Rosenmüller's body (organ), gland (node), valve, recess (cavity, fossa) (ro'zen-mil'erz) [Johann Christian Rosenmüller, German anatomist, 1771–1820] see *epophoron*, *nodi lymphatici inguinalis profundus*, *plica lacrimalis*, and *recessus pharyngeus*.

Rosenthal's canal (ro'zen-tahlz) [Isidor Rosenthal, German physiologist, 1836–1915] canalis spiralis modioli.

Rosenthal's test (ro'zen-tahlz) [Sanford Morris Rosenthal, American physician, born 1897] see under *tests*.

Rosenthal's vein (ro'zen-tahlz) [Friedrich Christian Rosenthal, German anatomist, 1779–1829] vena basalis.

roseola (ro-ze'o-lah, ro'ze-o'lah) [L.] any rose-colored rash, as in measles, syphilis, etc.; sometimes used alone to mean roseola infantum. **r. infan'tilis**, **r. infan'tum**, exanthema subitum. **syphilitic r.**, an eruption of rose-colored spots in early secondary syphilis; called also *syphilitic exanthema* and *macular syphilitic*. **r. typho'sa**, rose spots.

Roser's sign (ro'zerz) [Wilhelm Roser, German surgeon, 1817–1888] see under *sign*.

roset (ro-zet') rosette.

rosette (ro-zet') [Fr.] any structure or formation resembling a rose, such as (a) the clusters of polymorphonuclear leukocytes around a globule of lysed nuclear material, as observed in the test for disseminated lupus erythematosus, or (b) a figure formed by the chromosomes in an early stage of mitosis. **malarial r.**, a stage in the asexual cycle of malarial plasmodia at which the parasites have attained full growth and are arranged around the periphery of the erythrocyte in the form of small bodies resembling a rosette and ready to break up into merozoites; seen especially in *Plasmodium malariae* and *P. ovale*.

rosin (roz'in) [L. *resina*] [NF] the solid resin obtained from *Pinus palustris* Mill. (Pinaceae) and other species of pine, occurring as sharply angular, translucent, amber-colored fragments, frequently covered with yellow dust. It contains about 90 per cent resin and 10 per cent neutral matter. Most of the resin acids are isomeric with abietic acid, $C_{30}H_{48}O_4$. It is used as a stiffening agent in the preparation of plasters and ointments. Formerly called *colophony*.

Rosin's test (ro'zenz) [Heinrich Rosin, Berlin physician, born 1855] see under *tests*.

Rosmarinus (ros'mah-ri'nus) [L. "sea-dew"] a genus of labiate plants. *R. officinalis*, or common rosemary, affords the fragrant volatile oil of rosemary.

rosoxacin (ro-soks'ah-sin) chemical name: 1-ethyl-1,4-dihydro-4-oxo-7-(4-pyridinyl)-3-quinolinecarboxylic acid; an antibacterial, $C_{17}H_{14}N_2O_3$.

Ross's black spores, cycle (ros'ez) [Sir Ronald Ross, British physician and protozoologist, 1857–1932, noted for his demonstration of the life history of the malarial parasite and proof of its transmission by the bite of the female anopheline mosquito; winner of the Nobel prize for medicine in 1902] see under *spore* and *cycle*.

Ross's bodies (ros'ez) [Edward Halford Ross, English pathologist, born 1875] see under *body*.

Rossbach's disease (ros'bahks) [Michael Josef Roszbach, German physician, 1842–1894] hyperchlorhydria.

Rossel's test (ros-elz') [Otto Rossel, Swiss physician, 1875–1911] see under *tests*.

Rossolimo's reflex (sign) (ros'o-le'mōz) [Gregorij Ivanovich Rossolimo, Russian neurologist, 1860–1928] see under *reflex*.

Rostan's asthma (ros-tahz') [Louis Léon Rostan, Paris physician, 1790–1866] cardiac asthma.

rostellum (ros-tel'um), pl. *rostel'la* [L. "little beak"] a small protuberance or beak, especially the fleshy protuberance of the scolex of a tapeworm, which may or may not bear hooks.

rostrad (ros'trad) 1. toward a rostrum; situated nearer the rostrum in relation to a specific point of reference. 2. cephalad.

rostral (ros'tral) [L. *rostralis*, from *rostrum* beak] 1. pertaining to or resembling a rostrum; having a rostrum or beak. 2. situated toward a rostrum or toward the beak (oral and nasal region), which may mean superior (in relationships of areas of the spinal cord) or anterior or ventral (in relationships of brain areas).

rostralis (ros-tra'lis) [L.] rostral.

rostrate (ros'trāt) [L. *rostratus* beaked] having a beaklike process.

rostriform (ros'tri-form) [L. *rostrum* beak + *forma* form] shaped like a beak.

rostrum (ros'trum), pl. *ros'trums* or *ros'tra* [L. "beak"] a beak-like appendage or part; [NA] a general term for such a structure. **r. cor'poris callo'si** [NA], **r. of corpus callosum**, the anterior and lower end of the corpus callosum. **sphenoidal r.**, **r. sphenoida'le** [NA], the prominent ridge on the inferior surface of the sphenoid bone that articulates with a deep depression between the wings of the vomer.

R.O.T. right occipitotransverse (position of the fetus).

Rot see *Roth*.

rot (rot) 1. decay. 2. a disease of sheep, and sometimes of man, caused by *Fasciola hepatica*. **Barcoo r.**, desert sore. **black r.**, a condition sometimes seen in storage eggs, even when kept in a refrigerator; it is caused by *Proteus melanovogenes*. **foot r.**, a disease of the feet of cattle and sheep, marked by decay of the hoof and an offensive discharge; it is caused by *Fusobacterium necrophorum* in cattle and *Bacteroides nodosus* in sheep, especially on soft, wet pasture. Called also *leg ill*. **liver r.**, a disease of sheep and cattle caused by the liver fluke, *Fasciola hepatica*. **pizzle r.**, enzootic balanoposthitis. **sheath r.**, enzootic balanoposthitis.

rotameter (ro-tam'ē-ter) a flow-rate meter of variable area with a rotating float in a tapered tube, used for measuring the gases in administering an anesthetic.

rotary (ro'ter-e) marked by or produced by rotation.

rotate (ro'tāt) to turn around an axis; to twist.

rotation (ro-ta'shun) [L. *rotatio*, *rotare* to turn] the process of turning around an axis; movement of a body about its axis, called the *axis of r*. In labor, the turning of the fetal head through 90 degrees so that the long diameter of the head corresponds with the long diameter of the pelvic outlet. It should occur naturally, but if it does not the rotation must be accomplished manually or instrumentally by the obstetrician. See also *maneuver*. In dentistry, the rotation of a malturned tooth in its central axis into a normal position; also malposition of a tooth due to turning around a longitudinal axis. **molecular r.**, the figure obtained by multiplying the specific rotation by the molecular weight and dividing by 100. **optical r.**, the quality of certain optically active substances whereby the plane of polarized light is changed, so that it is rotated in an arc the length of which is characteristic of the substance. **specific r.**, the arc through which a substance rotates the plane of polarization as observed in a polarimeter. **van Ness r.**, fusion of the knee joint and rotation of the ankle to function as the knee; done to correct a congenitally missing femur.

rotatory (ro'tah-to're) occurring in or caused by rotation.

rotavirus (ro'tah-vi'rus) [L. *rota* wheel + *virus*] a group of doubled-stranded RNA viruses having a wheel-like appearance and responsible for acute infantile gastroenteritis and for diarrhea in mice, calves, and pigs.

Rotch's sign (roch'es) [Thomas Morgan *Rotch*, physician in Boston, 1849-1914] see under *sign*.

röteln (ret'eln) [Ger.] rubella.

rotenone (ro'tē-nōn) a poisonous compound, $C_{23}H_{32}O_6$, from derris root and other roots; used as an insecticide and as a scabicide.

rotexed (ro'tekst) rotated and bent to one side.

rotxion (ro-tek'shun) act of rotating and flexing; also the state of being rotated and flexed.

Roth's (Rot's) disease, syndrome (rōts) [Vladimir Karlovich *Roth*, Russian neurologist, 1848-1916] meralgia paraesthetica.

Roth's spots, vas aberrans (rōts) [Moritz *Roth*, Swiss physician, 1839-1915] see under *spot*, and see *ductuli aberrantes*.

Roth-Bernhardt disease, syndrome (rōt-bern'hart) [Vladimir K. *Roth*, Russian neurologist, 1848-1916; Martin *Bernhardt*, neurologist in Berlin, 1844-1915] meralgia paraesthetica.

rotifer (ro'ti-fer) any individual of the class Rotifera.

Rotifera (ro-ti'fer-ah) [L. *rota* wheel + *ferre* to bear] a class of small, usually transparent, mostly free-living animals of the phylum Aschelminthes, the rotifers, which characteristically possess a corona of cilia around the anterior end, a cleft foot at the posterior end, and internal jaws. In some systems of classification, they are considered to be a separate phylum.

rotlauf (rot'lowf) [Ger.] swine erysipelas.

rotoxamine (ro-toks'ah-mēn) chemical name: (-)-2-[(4-chlorophenyl)(2-pyridinyl)methoxy]-*N,N*-dimethylethanamine. The *l*-isomer of carbinoxamine, $C_{16}H_{16}ClN_2O$, having antihistaminic potency about twice that of the racemic form. **r. tartrate**, the tartrate salt of rotoxamine, $C_{16}H_{15}ClN_2O \cdot C_4H_4O_6$, occurring as a white to creamy white, crystalline powder, having the same actions as the base; used in the treatment of allergic disorders, administered orally.

Rotter's test (rot'erz) [H. *Rotter*, physician in Budapest] see under *tests*.

rotllera (rot'ler-ah) kamala.

rotllerin (rot'ler-in) a powerful and toxic chromene derivative, $C_{30}H_{28}O_8$, obtained from *Kamala* or *Mallotus philippinensis* (Lam.) Muell.-Arg. (Euphorbiaceae); called also *mallotoxin*.

rotula (rot'u-lah) [L., dim. of *rota* wheel] 1. the patella. 2. any disklike bony process. 3. a troche or lozenge.

rotulad (rot'u-lad) toward the patella, or the patellar aspect.

rotular (rot'u-lar) pertaining to the patella.

rotz (rōts) [Ger.] glands in horses.

rouge (rōzh) a fine red powder composed of iron oxide (Fe_2O_3), usually in cake form but sometimes impregnated on paper or cloth; used in dentistry as a polishing agent for restorations of gold and precious metal alloys.

rouget du porc (roo-zha' du pork') [Fr.] the urticarial form of swine erysipelas.

Rouget's bulb (roo-zhāz') [Antoine D. *Rouget*, French physiologist] bulb of the ovary.

Rouget's cells, muscle (roo-zhāz') [Charles Marie Benjamin *Rouget*, French physiologist and anatomist, 1824-1904] see *pericyte*, and see under *cell*.

rough (ruf) not smooth; having an irregular, roughened surface.

roughage (ruf'ij) indigestible material such as fibers, cellulose, etc., in the diet.

Rougnon-Heberden disease (roon-yaw'-heb'er-den) [Nicholas François *Rougnon* de Magny, French physician, 1727-1799; William *Heberden*, Sr., English physician, 1710-1801] angina pectoris.

rouleau (roo-lo'), pl. *rouleaux* [Fr. "roll"] a roll of red blood corpuscles like a pile of coins.

Human red blood cells arranged in rouleaux (Funke).

rouleaux (roo-lo') [Fr.] plural of *rouleau*.

roundworm (rownd'wurm) any worm of the class Nematoda; a nematode.

Rous sarcoma, test (rows) [Francis Peyton *Rous*, American pathologist, born 1879; co-winner, with Charles B. Huggins, of the Nobel prize in medicine for 1966; for his discovery of tumor-inducing viruses] see under *sarcoma* and *tests*.

Roussel's law, sign (roo-selz') [Theophile *Roussel*, French physician, 1816-1903] see under *law* and *sign*.

Roussy-Dejerine syndrome (roo-se'-deh'zher-ēn') [Gustave *Roussy*, French pathologist, 1874-1948; Joseph Jules *Dejerine*, French neurologist, 1849-1917] thalamic syndrome.

Roussy-Lévy disease (roo-se' la've) [Gustave *Roussy*] see under *disease*.

Roux's anastomosis (operation) (rōōz) [César *Roux*, Swiss surgeon] see under *anastomosis*.

Roux's operation (rōōz) [Philibert Joseph *Roux*, Paris surgeon, 1780-1854] see under *operation*.

Roux's serum (rōōz) [Pierre Paul Emile *Roux*, French bacteriologist, 1853-1933] *antidiphtheria serum* (def. 2); see under *serum*.

Roux-en-Y see under *anastomosis*.

Rovighi's sign (ro-vig'ēz) [Alberto *Rovighi*, Bologna physician, 1856-1919] see under *sign*.

Rowntree-Geraghty test (roun'tre; ger'ah-te) [Leonard George *Rowntree*, American physician, born 1883; John Timothy *Geraghty*, Baltimore physician, 1876-1924] the phenolsulfonphthalein test.

RPF renal plasma flow.

R. Ph. abbreviation for Registered Pharmacist.

rpm revolutions per minute.

RPS renal pressor substance.

R.Q. respiratory quotient.

-rrhage, -rrhagia [Gr. *rhegnynai* to burst forth] word terminations denoting excessive flow.

-rrhea [Gr. *rhoia* flow] a word termination denoting flow or discharge.

R.R.L. Registered Record Librarian.

rRNA ribosomal RNA; see *ribonucleic acid*, under *acid*.

R.S.A. right sacroanterior (position of the fetus).

R.S.B. Regimental Stretcher Bearer.

R.Sc.A. right scapuloanterior (position of the fetus).

R.S.C.N. Registered Sick Children's Nurse.

R.Sc.P. right scapuloposterior (position of the fetus).

R.S.M. Royal Society of Medicine.

R.S.N.A. Radiological Society of North America.

R.S.P. right sacroposterior (position of the fetus).

R.S.T. right sacrotransverse (position of the fetus).

R.S.T.M.H. Royal Society of Tropical Medicine and Hygiene.

RSV Rous sarcoma virus.

R.T. reading test.

RTF resistance transfer factor; see *R factor*, under *factor*.

R.U. rat unit.

Ru chemical symbol for *ruthenium*.

rub (rub) an auscultatory sound caused by the rubbing together

of two serous surfaces, as in pericardial rub; called also *friction r.* **friction r.**, see *rub.* **pericardial r.**, a scraping or grating noise heard with the heart beat, usually a to-and-fro sound, associated with an inflamed pericardium. **pleural r.**, **pleuritic r.**, a rub produced by friction between the visceral and costal pleurae.

rubber-dam (rub'er-dam) a sheet of thin latex rubber used by dentists to isolate teeth from the fluids of the mouth during dental treatment.

rubefacient (roo'bē-fa'shent) [L. *ruber* red + *facere* to make] 1. reddening the skin. 2. an agent that reddens the skin by producing active or passive hyperemia.

rubella (roo-bel'ah) German measles: a mild viral infection characterized by a pink discrete and confluent macular exanthem. After an incubation period of 14 to 21 days, lymph node enlargement (postauricular, posterior cervical, and elsewhere) often precedes the appearance of a pink, macular eruption, occurring first on the face before spreading rapidly to involve the trunk and finally the extremities. No rash occurs in up to 40 per cent of those with the infection. Rhinorrhea, sore throat, bulbar and occasionally palpebral conjunctivitis precede or accompany the exanthem, which lasts little more than 3 to 4 days before fading. Arthralgia is common, and monoarticular arthritis occurs in 20 per cent of patients, more so in adults than children. Transplacental infection of the fetus in the first trimester produces developmental abnormalities of the heart, eyes, brain, bone, and ears in up to 40 per cent of cases without interrupting the pregnancy. See also under *syndrome*. In certain non-English-speaking countries, the disease is called *rubeola*.

rubeola (roo-be'o-lah, ru'be-o'lah) [L. *ruber* red] a synonym of measles in English and of German measles (see *rubella*) in French and Spanish.

rubeosis (roo'be-o'sis) redness. **r. i'ridis**, a condition characterized by a new formation of vessels and connective tissue on the surface of the iris, frequently seen in diabetics (*r. i'ridis diabet'ica*) and following occlusion of the central retinal vein or artery. It gives rise to severe intractable glaucoma. **r. ret'inae**, a name proposed for a condition characterized by formation of new vessels in front of the optic papilla in retinitis proliferans, seen in nondiabetics, as well as in diabetics (*r. ret'inae diabet'ica*), and usually leading to retinal detachment.

ruber (roo'ber) [L.] red.

rubescence (roo-bes'ent) [L. *rubescere* to become red] reddish; becoming red.

rubidiol (roo-bid'e-ol) a solution in oil of rubidium and potassium mercuric iodide, used externally as a resolvent.

rubidium (roo-bid'e-um) [L. *rubidus* red] a rare metallic alkaline element; atomic number, 37; atomic weight, 85.47; symbol, Rb. **r. and ammonium bromide**, a substance, RbBr + 3NH₄Br, used like potassium bromide.

rubidomycin (roo-bid'o-mi'sin) daunorubicin.

rubiginous, rubiginose (roo-bij'i-nus; roo-bij'i-nōs) [L. *rubigo* rust] having a rusty, brownish color; said of sputum.

rubin (roo'bin) fuchsin.

Rubin's test (roo'binz) [Isidor Clinton Rubin, New York physician, 1883–1958] see under *tests*.

Rubner's law, test (rōb'nēr-z) [Max Rubner, German physiologist, 1854–1932] see under *law* and *tests*.

rubor (roo'bor) [L.] redness, one of the cardinal signs of inflammation.

rubriblast (roo'brī-blast) pronormoblast.

rubric (roo'bric) red; specifically, pertaining to the red nucleus.

rubricyte (roo'brī-sīt) [L. *rubrum* red + Gr. *kytos* cell] polychromatic normoblast.

rubrospinal (roo'bro-spi'nal) pertaining to the red nucleus and the spinal cord.

rubrothalamic (roo'bro-thah-lam'ik) pertaining to the red nucleus and the thalamus.

rubrum (roo'brum) [L.] red. **r. Con'go**, Congo red. **r. scarlati'num**, scarlet red.

Rubus (roo'bus) [L.] a genus of rosaceous plants, including the blackberries, raspberries, brambles, dewberries, and cloudberrries. The root barks of several species of blackberry are tonic and astringent, and have been used in diarrhea. The fruits of *R. idae'us* L. and *R. strigo'sus* Michx. (Rosaceae), red raspberries, are used in pharmacy as vehicles for syrups, etc. See *raspberry juice*, under *juice*.

Ruck's watery extract tuberculin [Karl von Ruck, American physician, 1849–1922] see under *tuberculin*.

ructus (ruk'tus) [L.] the belching of wind; eructation. **r. hys-teri'cus**, a hysterical condition in which wind is belched frequently and noisily.

Rudbeckia (rud-bek'e-ah) [O. *Rudbeck*, 1630–1702, and O. *Rudbeck, Jr.*, 1660–1740] a genus of composite-flowered herbs of North America; the cone flower, *R. lacini'a'ta*, thimble weed, is diuretic and tonic.

rudiment (roo'di-ment) 1. primordium; the first indication of a

structure in the course of its development. 2. a structure that has remained undeveloped, or one with little or no function at present but which was functionally developed earlier either in the individual or in its phylogenetic ancestors. **lens r.**, a thickening of the ectoderm of the sides of the embryonic head, from which the crystalline lens develops. **r. of vaginal process**, vestigium processus vaginalis.

rudimentary (roo'di-men'tah-re) 1. imperfectly developed. 2. vestigial.

rudimentum (roo'di-men'tum), pl. *rudimen'ta* [L. "a first beginning"] 1. [NA] the first indication of a structure in the course of its development; a primordium. 2. a vestigial structure. **r. processus vaginalis**, vestigium processus vaginalis.

rue (roo) [L. *Ruta*] the rutaceous herb, *Ruta graveolens*; the volatile oil (*oleum rutae*) from the leaves is an irritant poison.

rufescence (roo'fē-sin) a substance obtained from a mollusk, *Haliotis rufescens*, which corresponds to the bile pigments in man.

Ruffini's brushes (organ), corpuscles (cylinders) (roo-fe'nēz) [Angelo Ruffini, Italian anatomist, 1864–1929] see under *brush* and *corpuscle*.

rufiopin (roo'fe-o'pin) a reddish yellow, crystalline substance, C₁₄H₁₆O₄, derivable from opianic acid, and isomeric with rufigallic acid.

rufous (roo'fus) [L. *rufus* red] 1. dull red. 2. having reddish hair and a ruddy complexion.

Rufus (roo'fus) of Ephesus (c. 100 A.D.) a physician and anatomist whose surviving writings are noteworthy, particularly those on anatomy, gout, the pulse, and clinical history taking.

rugae (roo'gae), pl. *ru'gae* [L.] a ridge, wrinkle, or fold, as of mucous membrane. **rugae gas'tricae**, rugae of stomach. **r. palati'na**, any one of the transverse ridges extending outward on both sides of the raphe of the palate. **rugae of stomach**, large folds of the mucous membrane of the stomach, occurring especially in the corpus, which are seen when the stomach is empty or undistended. **rugae of vagina, ru'gae vagi-na'les** [NA], small transverse folds of the mucous membrane of the vagina extending outward from the columns.

rugae (roo'je) [L.] plural of *ru'ga*.

Ruge-Philipp test (roo'gah-fil'ip) [Reinhold Ruge, German hygienist, 1862–1936; Ernst Philipp, German gynecologist, born 1893] see under *tests*.

rugine (roo-zhēn') a raspatory.

rugitus (roo'ji-tus) [L. "roaring"] rumbling in the intestines caused by movement of flatus; see *borborygmus*.

rugoscopy (roo-gos'ko-pe) the study of the patterns of the grooves and ridges (rugae) of the palate to identify individual patterns.

rugose, rugous (roo'gōs, roo'gus) [L. *rugosus*] characterized by wrinkles.

rugosity (roo-gos'i-te) [L. *rugositas*] 1. the condition of being wrinkled. 2. a fold, wrinkle, or ruga.

R.U.L. right upper lobe (of a lung).

rule (rōol) [L. *regula*] a statement of conditions commonly observed in a given situation, or a statement of a prescribed course of action to obtain a result. **Abegg's r. (obs.)**, all atoms have the same number of valences. **Allen's r.**, the extended body parts of warm-blooded species (tail, ears, and limbs) are relatively shorter in the colder regions of a species range than in the warmer. **Anstie's r.**, one used in connection with life insurance examination: the maximum amount of absolute alcohol which can be taken without injury by an adult is 1½ oz. daily. This is equivalent to about 3 oz. of whisky, brandy, gin, or rum; about 4 glasses of sherry or other strong wine; to 1 pint of claret, champagne, or other light wine; to 3 glasses of strong ale or porter; or 5 glasses of beer or light ale. **Arey's r.**, the total length of an embryo or fetus in inches, for the first five months, equals the numerical sum of the numbers of the previous lunar months since conception; for the last five lunar months, it equals the product of the number of the month multiplied by 2. **Bartholomews' r. of fourths**, if the uterine fundus is one-fourth of the way from the pubic symphysis to the umbilicus, the pregnancy is of two months duration; one-half of the way, three months duration; three-quarters of the way, four months duration; at the umbilicus, five months duration. The fundus then rises one-quarter of the way to the ensiform process each month until the ninth, when it sinks to the level it occupied at eight months. **Bastedo's r.**, the dose of a drug for a child is obtained by multiplying the adult dose by the child's age in years, adding 3 to the product, and dividing the sum by 30. **Bergmann's r.**, the body size of geographical races of warm-blooded species is smaller in the warmer parts of the species range than in the colder parts of the range. **Budin's r.**, a bottle-fed baby should not take more than 1/10 of its own weight of cow's milk per day. **Clark's r.**, the dose of a drug for a child is obtained by multiplying the adult dose by the weight of the child in pounds and dividing the result by 150. **Cowling's r.**, the dose of a drug for a child is obtained by multiplying the adult dose by the age of the child at his next birthday and dividing by 24. **delivery date r.**, Nägele's r. **dermatomal r.**, visceral pain is referred to the dermatomes supplied by

the posterior roots through which the visceral afferent impulses reach the spinal cord. **Durham's r.**, a court decision which states that the M'Naghten rule (q.v.) and irresistible impulse test (q.v.) are not compatible with modern psychiatric thought, and holds that "an accused is not criminally responsible if his unlawful act was the product of mental disease or mental defect." **Fried's r.**, the dose of a drug for an infant less than 2 years old is obtained by multiplying the child's age in months by the adult dose and dividing the result by 150. **Gibson's r.**, in pneumonia, if the pulse pressure in millimeters of mercury does not fall below the pulse rate, the prognosis is good; if it does, prognosis is bad. **Haase's r.**, the total length of an embryo or fetus in centimeters, for the first five months, equals the square of the number of lunar months since conception; for the last five months it equals the product of the number of the month multiplied by 5. **Hardy-Weinburg r.**, if mating is random with respect to genotype, and if p is the frequency of an allele A , and q the frequency of a , then the frequency of genotypes AA , Aa , and aa will be p^2 , $2pq$, and q^2 , respectively. **Hudson's lactone r.**, molecular optical rotation of a carbohydrate or its derivatives is given as the sum of the rotation contributions at each asymmetric center. Certain other empirical conclusions may also be drawn from existing data. **Jackson's r.**, after epileptic attacks, simple nervous processes are more quickly recovered from than complex ones. **Liebermeister's r.**, in febrile tachycardia, the pulse beats increase at the rate of about eight to every degree centigrade of temperature. **Lossen's r.**, in hemophilia, only women transmit the condition, only men inherit it. **McDonald's r.**, the length in centimeters of the abdominal contour from the upper margin of the pubic symphysis to the fundus divided by 3.5 gives the duration of pregnancy in lunar months. **M'Naghten r.**, "to establish a defense on the ground of insanity, it must be clearly proved that at the time of committing the act the party accused was laboring under such a defect of reason from disease of the mind as not to know the nature and quality of the act he was doing, or, if he did know it, that he did not know he was doing what was wrong." **Nägele's r.** (for predicting day of labor), subtract three months from the first day of the last menstruation and add seven days. **octet r.**, when atoms combine to form molecules, they tend to share or transfer electrons until eight (four pairs) are in the valence shell of each atom. **phase r.**, a homogeneous chemical substance of n components is capable of $n + 1$ modifications of phase; e.g., the phases of H_2O are ice, water, and steam. A heterogeneous chemical system of p coexistent phases and c variable components has $p + 2 - c$ degrees of freedom or variations of phase, i.e., the sum of its coexistent phases and its possible changes of phase exceeds the number of its components by 2. **Quetelet's r.**, the body weight of an adult ought to be as many kilograms as his body length in centimeters exceeds 100. **Rollleston's r.**, the ideal systolic pressure for an adult is the figure represented by 100 plus half the age in years. **Schütz's r.**, **Schütz-Borissov r.**, the amount of substrate decomposed in the same time interval by varying enzyme concentrations is not always proportional to the concentration of the enzyme, but is often proportional to the square root of this quantity. **van't Hoff's r.**, the velocity of chemical reactions is increased twofold or more for each rise of $10^\circ C$. in temperature; called also *van't Hoff's law*. Cf. *temperature coefficient*, *under coefficient*. **Weinberg's r.**, the total number of dizygotic twins in any population is twice the number of twins of different sex, and the sum of these subtracted from the total number of all twins gives the number of monozygotic twins. **Young's r.**, the dose of a drug for a child is obtained by multiplying the adult dose by the age in years and dividing the result by the sum of the child's age plus 12.

rumbatron (rum'bah-tron) a high efficiency radio oscillator in which atoms are shattered and which employs electrons as the bombarding particles.

rumen (roo'men) the first stomach of a ruminant, or cud-chewing animal; also called *paunch*.

rumenitis (roo'mē-ni'tis) inflammation of the rumen.

rumenotomy (roo'mē-not'o-me) [*rumen* + Gr. *tomē* a cutting] the operation of cutting into the rumen of an animal for the purpose of removing foreign bodies or impacted food or for evacuating gases.

ruminant (roo'mī-nant) 1. chewing the cud. 2. one of the order of animals which have a stomach with four complete cavities (1, rumen; 2, reticulum; 3, omasum; 4, abomasum), through which the food passes in digestion. The division includes oxen, sheep, goats, deer, and antelopes.

rumination (roo'mī-na'shun) [*L. ruminatio*] 1. the casting up of the food to be chewed a second time, as in cattle. In man, the regurgitation of food after almost every meal, part of it being vomited and the rest swallowed: a condition seen in infants. See *mercyism*. 2. meditation. **obsessive r.**, the constant preoccupa-

pation with certain thoughts, with inability to dismiss them from the mind.

ruminative (roo'mī-na'tiv) characterized by rumination; constantly dwelling on certain topics or ideas.

Rummo's disease (room'ōz) [Gaetano *Rummo*, Italian physician, 1853-1917] cardiopneumonia.

rump (rump) the buttock or gluteal region.

Rumpel-Leede phenomenon (sign, test) (room'pel-la'dē) [Theodor *Rumpel*, German physician, 1862-1923; Stockbridge *Carl Leede*, German physician, born 1882] see under *phenomenon*.

Rumpf's sign (symptom, reaction) (roompfs) [Heinrich Theodor Maria *Rumpf*, German physician, born 1851] see under *sign*.

Runeberg's anemia (disease, type) **formula** (roo'nē-bergs) [Johan Wilhelm *Runeberg*, Finnish physician, 1843-1918] see under *anemia* and *formula*.

Ruphos (roo'fos) see *Rufus of Ephesus*.

rupia (roo'pe-ah) [Gr. *rhypos* filth] thick, dark, raised, lamellated, adherent crusts on the skin somewhat resembling oyster shells, as in late recurrent secondary syphilis.

rupial (roo'pe-al) pertaining to or resembling rupia.

rupioid (roo'pe-oid) resembling rupia.

rupture (rup'chur) 1. forcible tearing or disruption of tissue. 2. a hernia. **defense r.**, a breaking down of the body's defense against infection, such as is seen when silica particles inhaled by a worker break down the resistance against tuberculosis.

Rusconi's anus (roos-ko'nēz) [Mauro *Rusconi*, Italian biologist, 1776-1849] the blastopore.

rush (rush) a powerful wave of contractile activity which travels extremely long distances down the small intestine; it is caused by intense irritation or unusual distention. Called also *peristaltic r.*

Russell's bodies (rus'elz) [William *Russell*, physician in Edinburgh, 1852-1940] see under *body*.

Russell effect (rus'el) [W. J. *Russell*, British physicist] see under *effect*.

Russell's viper, viper venom (rus'elz) [Patrick *Russell*, Aleppo physician, 1727-1805] see under *viper* and *venom*.

Russo's reaction (test) (roo'sōz) [Mario *Russo*, Italian physician, born 1866] see under *reaction*.

rust (rust) 1. iron oxide or hydroxide, forming a reddish deposit on metallic iron where the latter has been exposed to moisture; also a similar deposit on other metals that have been exposed to dampness. 2. a fungal disease of plants characterized by the formation of rust-like spots on them.

Rust's disease, phenomenon (sign), **syndrome** (roosts) [Johann Nepomuk *Rust*, German surgeon, 1775-1840] see under *disease*, *phenomenon*, and *syndrome*.

rut (rut) [*L. rugitus* roaring] 1. the period or season of heightened sexual activity in some male mammals that coincides with the season of estrus in the females. 2. estrus.

rutaecarpine (roo'te-kar'pin) a crystalline alkaloid, $C_{18}H_{19}ON_3$, from *Evodia rutaecarpa*, a small Asiatic shrub or tree.

ruthenium (roo-the'ne-um) a rare, very hard metallic element; symbol, Ru; atomic weight, 101.07; atomic number, 44.

rutherford (ruth'er-ford) [Ernest *Rutherford*, British physicist, 1871-1937] the unit representing one million disintegrations of radioactive matter per second. Abbreviated rd.

rutherfordium (ruth'er-ford'e-um) [named for Sir Ernest *Rutherford*, British physicist, 1871-1937] a transuranic element, atomic number 104, atomic weight 261, symbol Rf, produced by an induced nuclear reaction.

rutidosis (roo'ti-do'sis) rhytidosis.

rutilism (roo'ti-lizm) [*L. rutilis* red, inclining to golden yellow] red-headedness.

rutin (roo'tin) chemical name: 3,3',4',5,7-penta-hydroxyflavone-3-rutinoside. A bioflavonoid, $C_{27}H_{30}O_{16}$, occurring as a greenish yellow powder, obtained from buckwheat or other sources, which has been reported to reduce capillary fragility.

rutinose (roo'ti-nōs) rhamnosidoglucose, a disaccharide occurring in rutin.

rutoside (roo'to-sid) rutin.

Ruysch's glomeruli, membrane (tunic), **muscle, tube, veins** (roish'ez) [Frederic *Ruysch*, Dutch anatomist, 1638-1731] see *glomeruli renis*, *lamina choriocapillaris*, and *venae vorticosae*, and see under *muscle* and *tube*.

RV residual volume.

R.V.H. right ventricular hypertrophy.

rye (ri) the cereal plant, *Secale cereale*, and its nutritious seed. **spurred r.**, see *ergot*, def. 1.

Ryle tube (ril) [G. A. *Ryle*, British physician] see under *tube*.

S chemical symbol for sulfur.

S. abbreviation for Latin *se'mis* half; *sacral* (in vertebral formulas); *siemens*; *sig'na* mark (see *prescription* and *signature*, def. 2); *smooth* (colony); *sinis'ter* left; *subject*; *supravergence*; and *Svedberg unit of sedimentation coefficient* (10^{-13} sec.).

Σ the capital of Greek sigma; symbol for summation.

σ sigma, the eighteenth letter of the Greek alphabet; symbol for one-thousandth part of a second and standard deviation.

S.A. abbreviation for L. *secun'dum ar'tem*, according to art.

Saathoff's test (saht'ofs) [Lühbard Saathoff, German physician, 1877-1929] see under *tests*.

S.A.B. Society of American Bacteriologists.

saber-legged (sa'ber-legd) having the angle of the hock more acute than normal, so that the hind feet stand well under the body; said of horses.

Sabin's vaccine (sa'binz) [Albert Bruce Sabin, American virologist, born 1906] live oral poliovirus vaccine; see under *vaccine*.

sabinism (sab'i-nizm) poisoning by savin.

sabinol (sab'i-nol) a terpene alcohol, $(\text{CH}_3)_2\text{CH}\cdot\text{C}_6\text{H}_5(\text{OH})\cdot\text{CH}_2$, from the evergreen shrub, *Juniperus sabina* L., which is the chief constituent of savin oil; see *savin*.

Sabouraud's agar (sab'oo-rōz) [Raymond Jacques Adrien Sabouraud, French dermatologist, 1864-1938] see under *culture media*.

Sabouraudia (sab'oo-ro'de-ah) *Trichophyton*.

Sabouraudites (sab'oo-ro-di'tēz) *Microsporum*.

sabulous (sab'u-lus) [L. *sabulosus*; *sabulum* sand] gritty or sandy.

saburra (sah-bur'ah) [L.] foulness of the stomach, mouth, or teeth.

saburral (sah-bur'al) [L. *saburra* sand] pertaining to or of the nature of sordes, or of foulness of the stomach.

sac (sak) [L. *saccus*; Gr. *sakkos*] a pouch; a baglike organ or structure. **abdominal s.**, a serous sac in the embryo which develops into the abdominal cavity. **air s's**, alveoli pulmonis. **allantoic s.**, the dilated portion of the allantois which becomes a part of the placenta in many mammals. **alveolar s's**, sacculi alveolares. **amniotic s.**, amnion. **aneurysmal s.**, the chamber of a sacculated aneurysm. **aortic s.**, the homologue in mammalian embryos of the ventral aorta, from which arise the series of aortic arches. **chorionic s.**, the mammalian chorion. **conjunctival s.**, saccus conjunctivae. **dental s.**, the dense fibrous layer of mesenchyme surrounding the enamel organ and dental papilla. **dural s.**, the continuation of the dura mater below the caudal end of the spinal cord. **embryonic s.**, the blastocyst. **enamel s.**, the enamel organ during the stage in which its outer layer forms a sac enclosing the whole dental germ. **endolymphatic s.**, saccus endolymphaticus. **epiploic s.**, omental bursa. **gestation s.**, the extraembryonic membranes that envelop the embryo or fetus; in man, the fused amnion and chorion. **greater s. of peritoneum**, the peritoneum of the peritoneal cavity proper. **heart s.**, the pericardium. **hernial s.**, the pouch of peritoneum enclosing a hernia. **Hilton's s.**, sacculus laryngis. **lacrimal s.**, saccus lacrimalis. **laryngeal s.**, ventriculus laryngis. **lesser s. of peritoneal cavity**, omental bursa. **Lower's s's**, sacculated portions of the jugular vein at exit of the vein from the skull. **omental s.**, omental bursa. **pericardial s.**, pericardium. **pleural s.**, cavum pleurae. **serous s.**, the sac made up of the pleura, pericardium, and peritoneum. **splenic s.**, recessus lienalis. **tear s.**, saccus lacrimalis. **vitelline s.**, yolk s. **yolk s.**, the extraembryonic membrane that connects with the midgut; at the end of the fourth week of development it expands into a pear-shaped vesicle (*umbilical vesicle*) connected to the body of the embryo by a long narrow tube (*yolk stalk*). In marsupial and placental mammals, it produces a complete vitelline circulation in the early embryo and then undergoes regression; in oviparous vertebrates, it encloses the yolk mass, breaks down yolk, and makes it available to the developing organism.

sacbrood (sak'brōōd) an infectious disease of the larvae of bees, caused by a virus.

saccade (sah-kād') the series of involuntary, abrupt, rapid, small movements or jerks of both eyes simultaneously in changing the point of fixation.

saccadic (sah-kad'ik) [Fr. *saccader* to jerk] denoting the rapid involuntary small movements of both eyes simultaneously in changing the point of fixation on a visualized object, such as the series of jumps the eyes make in scanning a line of print.

saccate (sak'āt) [L. *saccatus*] 1. shaped like a sac. 2. contained in a sac.

saccharascope (sak'ah-rah-skōp) [Gr. *sakcharon* sugar + *skopein* to examine] a fermentation saccharimeter; see *saccharimeter*.

saccharase (sak'ah-rās) β-fructofuranosidase.

saccharate (sak'ah-rāt) a salt of saccharic acid.

saccharated (sak'ah-rāt'ed) [L. *saccharatus*, from *saccharum* sugar] charged with or containing sugar.

saccharephidrosis (sak'ar-ef'ī-dro'sis) [Gr. *sakcharon* sugar + *ephidrosis* sweating] the discharge of sugar in the sweat.

saccharide (sak'ah-rid) one of a series of carbohydrates, including the sugars. The saccharides are divided into monosaccharides, disaccharides, trisaccharides, etc., or into oligosaccharides and polysaccharides, according to the number of saccharide groups ($\text{C}_n\text{H}_{2n}\text{O}_{n-1}$) composing them.

sacchariferous (sak'ah-rif'er-us) [L. *saccharum* sugar + *ferre* to bear] containing or yielding sugar.

saccharification (sak'ar-ī-fi-ka'shun) [L. *saccharum* sugar + *facere* to make] conversion into sugar.

saccharimeter (sak'ah-rim'ē-ter) [L. *saccharum* sugar + *metrum* measure] a device for estimating the proportion of sugar in a solution. It is either a polarimeter, indicating the proportion of sugar by the number of degrees through which it rotates the plane of polarization, or a hydrometer, indicating the proportion of sugar by the specific gravity of the solution. **Einhorn's s.**, a form of fermentation saccharimeter. **fermentation s.**, a saccharimeter in the form of a bent graduated tube and closed at one end. The amount of sugar in the urine is indicated by the gas which collects at the closed end when yeast is added to the urine. **Lohnstein's s.**, an instrument for performing a quantitative fermentation test of sugar in the urine.

saccharin (sak'ah-rin) [NF] chemical name: 1,2-benzisothiazolin-3-(2*H*)-one-1,1-dioxide. A white crystalline compound, $\text{C}_7\text{H}_5\text{NO}_3$, several hundred times sweeter than sucrose; used as a sweetening agent in pharmaceutical preparations. **s. calcium** [USP], a salt, $\text{C}_{14}\text{H}_8\text{CaN}_2\text{O}_6\cdot 3\frac{1}{2}\text{H}_2\text{O}$, used as a non-nutritive sweetener when sugar is contraindicated. **s. sodium** [USP], a salt, $\text{C}_7\text{H}_4\text{NNaO}_3\cdot 2\text{H}_2\text{O}$, used like the calcium salt.

saccharine (sak'ah-rin) [L. *saccharinus*] sugary; having a sweet taste.

saccharinol (sah-kar'ī-nol) saccharin.

saccharinum (sak'ah-rī'num) saccharin.

saccharo- (sak'ah-ro) [L. *saccharum*; Gr. *sakcharon* sugar] a combining form denoting relationship to sugar.

saccharobiose (sak'ah-ro-bi'ōs) a disaccharide.

saccharocoria (sak'ah-ro-ko're-ah) abhorrence of sugar.

saccharogalactorrhea (sak'ah-ro-gah-lak'to-re'ah) [*saccharo-* + Gr. *gala* milk + *rhoia* flow] the secretion of milk containing an excess of sugar.

saccharolytic (sak'ah-ro-lit'ik) [*saccharo-* + Gr. *lysis* dissolution] capable of chemically splitting up sugar.

saccharometabolic (sak'ah-ro-met'ah-bol'ik) pertaining to the metabolism of sugar.

saccharometabolism (sak'ah-ro-mē-tab'o-lizm) the metabolism of sugar.

saccharometer (sak'ah-rom'ē-ter) saccharimeter.

Saccharomyces (sak'ah-ro-mi'sēz) [*saccharo-* + Gr. *mykēs* fungus] a genus of ascomycetous fungi of the family Saccharomycetaceae, the yeasts. **S. al'bicans**, *Candida albicans*.

Saccharomyces (de Rivas).

S. an'ginae, *Candida albicans*. **S. apicula'tus**, *Kloeckera apiculatus*. **S. baya'nus**, a species from fermenting wine and beer; called also *S. pastorianus*. **S. cant'liei**, a species reported from a tropical blastomycosis; it is now known to be *Pityrosporon ovale*. **S. capillit'ii**, a species from the scalp, with spherical cells, said to cause alopecia seborrheica; it is now known to be *Pityrosporon ovale*. **S. carlsbergen'sis**, a species used in microbiological assay in measuring vitamin B₆ in the urine, and in the brewing of beer. **S. cerevis'iae**, a species with oval or spherical cells, known as *brewers'* or *bakers'* yeast; it causes alcoholic fermentation, and is a very rare cause of lung disease. **S. dairen'sis**, a species with oval or elliptical cells that produces a fermentation in milk; called also *S. galacticolus*.

S. ellipsoideus, a form from wine yeast, forming elliptical cells, solitary or in branching chains; it causes alcoholic fermentation in wines. **S. exiguus**, a form in beer yeast, whose cells are elliptical and solitary, or in branching chains; it causes late fermentation in beer. **S. galacticus**, **S. dairensis**. **S. glutinis**, *Rhodotorula glutinis*. **S. granulomatosus**, *Cryptococcus neoformans*. **S. guttulatus**, *Saccharomycopsis guttulatus*. **S. hansenii**, *Debaryomyces hansenii*. **S. hominis**, a species once isolated in chronic infectious pyemia; it is now known to be *Bacillus megatherium*. **S. lemonnierii**, a pathogenic fungus found in bronchitis; it was probably *Candida albicans*. **S. lithogenes**, a species from the lymph glands of an ox suffering from carcinoma of the liver; it is pathogenic to animals. It is now known to be *Cryptococcus neoformans*. **S. mesentericus**, *Candida mesenterica*. **S. mycoderma**, *Candida vini*. **S. neoformans**, *Cryptococcus neoformans*. **S. pastorianus**, *S. bayanus*. **S. rubrum**, a Brazilian species reported to cause a parapsoriasis affection; it was probably the skin contaminant *Rhodotorula rubra*. **S. subcutaneus tumefaciens**, a species, which is probably the same as *Cryptococcus neoformans*, once found in a myxoma of the thigh; it is pathogenic for animals. **S. tumefaciens albus**, a species discovered in certain cases of pharyngitis, pathogenic for mice, guinea pigs, and rabbits; it is now known to be *Candida albicans*.

saccharomyces (sak'ah-ro-mi-sēz), pl. *saccharomyces*. An organism of the genus *Saccharomyces*. **Busse's s.**, *Cryptococcus neoformans*.

Saccharomycetacea (sak'ah-ro-mi-sē-ta-se-e), a family of ascomycetous fungi of the order Endomycetales, subclass Hemiascomycetidae, the members of which are usually unicellular yeasts and reproduce sexually by formation of ascospores; it includes the genus *Saccharomyces*.

saccharomycetes (sak'ah-ro-mi-sē'tēz) plural of *saccharomyces*.

saccharomycetic (sak'ah-ro-mi-set'ik) pertaining to or due to the presence of yeastlike fungi.

saccharomycetolysis (sak'ah-ro-mi-sē-toi'i-sis) [*saccharomyces* + Gr. *lysis* dissolution] the splitting up of *saccharomyces*.

Saccharomycopsis (sak'ah-ro-mi-kop'sis) a genus of perfect yeasts of the family Saccharomycetaceae. **S. guttulatus**, a species found in the intestinal tract of herbivorous animals; formerly called *Saccharomycopsis guttulatus*.

saccharopine (sak'ah-ro-pēn') an intermediate compound in the metabolism of lysine.

saccharorrhoea (sak'ah-ro-re'ah) [*saccharo-* + Gr. *rhoia* flow] glycosuria.

saccharosan (sak'ah-ro-san) a form of anhydrosugar.

saccharose (sak'ah-rōs) [*saccharo-* + *-ose*] sucrose.

saccharosuria (sak'ah-ro-su're-ah) [*saccharose* + Gr. *ouron* urine + *-ia*] sucrosuria.

Saccharum (sak'ah-rum) a genus of graminaceous plants. *S. officinarum* L., sugar cane, affords a large part of the commercial supply of sugar.

saccharum (sak'ah-rum) [L.; Gr. *sakcharon*] sugar, especially cane sugar, or sucrose. **s. acerum**, **s. canadense**, maple sugar. **s. lactis**, sugar of milk; lactose. **s. usum**, caramel.

saccharuria (sak'ah-roo're-ah) [*saccharo-* + Gr. *ouron* urine + *-ia*] glycosuria.

sacciform (sak'si-form) [L. *saccus* sac + *forma* form] shaped like a sac or bag.

saccular (sak'u-lar) shaped like a sac.

sacculated (sak'u-lāt'ed) [L. *sacculatus*] characterized by sacculatation or by the presence of sacculi.

sacculatation (sak'u-la'shun) 1. a sacculus, or pouch. 2. the quality of being sacculated, or pursed out with little pouches. **s's of colon**, haustra coli.

saccule (sak'ul) [L. *sacculus*] 1. a little bag or sac. 2. see *sacculus*. **air s's**, **alveolar s's**, *sacculi alveolares*. **laryngeal s.**, **s. of larynx**, *sacculus laryngis*.

sacculi (sak'u-li) [L.] plural of *sacculus*.

sacculocochlear (sak'u-lo-kok'le-ar) pertaining to the sacculus and cochlea.

sacculus (sak'u-lus), pl. *sacculi* [L., dim. of *saccus*] a little bag or sac; applied in official anatomical nomenclature specifically to the smaller of the two divisions of the membranous labyrinth of the vestibule, which communicates with the cochlear duct by way of the ductus reuniens. Called also *s. proprius*, *s. rotundus*, *s. sphaericus*, *s. vestibularis*, and *sacculle*. **sacculi alveolares** [NA], alveolar sacculi: the spaces into which the alveolar ducts open distally, and with which the alveoli communicate; called also *alveolar sacs*. **s. communis**, utriculus. **s. dentis**, a fibrous sac in the jaw which encloses an unerupted tooth, being connected with the overlying gingiva by the gubernaculum dentis. **s. endolymphaticus**, *sacculus endolymphaticus*. **s. lacrimalis**, *sacculus lacrimalis*. **s. laryngis** [NA], laryngeal sacculle: a diverticulum extending upward from the front of the laryngeal ventricle, between the vestibular fold medially and the thyroarytenoid muscle and thyroid cartilage laterally; called also

appendix ventriculi laryngis. **s. Morgagnii**, *ventriculus laryngis*. **s. proprius**, **s. rotundus**, **s. sphaericus**, see *sacculus*. **s. ventriculi**, *s. laryngis*. **s. vestibularis**, see *sacculus*.

saccus (sak'kus), pl. *sac'ci* [L.; Gr. *sakkos*] a sac or pouch; [NA] a general term for a sacklike structure. **s. conjunctivae** [NA], conjunctival sac: the potential space, lined by conjunctiva, between the eyelids and the eyeball. **s. endolymphaticus** [NA], endolymphatic sac: the blind, flattened cerebral end of the endolymphatic duct. **s. lacrimalis** [NA], lacrimal sac: the dilated upper end of the nasolacrimal duct.

Sachs' disease [Bernard (Barney) Sachs, New York neurologist, 1858-1944] see *amaurotic familial idiocy*, under *idiocy*.

Sachs-Georgi test (reaction) [Hans Sachs, German immunologist, 1877-1945; Walter Georgi, German bacteriologist, 1889-1920] see under *tests*.

Sachs-Witebsky test (reaction) (saks' wī-teb'ske) [Hans Sachs; Ernest Witebsky, German-born immunologist in the United States, born 1901] see under *tests*.

Sachse's test (zakh'sez) [Georg Robert Sachse, German chemist, 1840-1895] see under *tests*.

sacrad (sa'krad) toward the sacrum, or sacral aspect.

sacral (sa'kral) [L. *sacralis*] pertaining to or situated near the sacrum.

sacralgia (sa-kral'je-ah) [*sacrum* + *-algia*] pain in the sacrum.

sacralization (sa'kral-i-za'shun) anomalous fusion of the fifth lumbar vertebra to the first segment of the sacrum, so that the sacrum consists of six segments.

sacrarthrogenic (sa'krar-thro-jen'ik) [*sacrum* + Gr. *arthron* joint + *gennan* to produce] resulting from disease of a sacral joint.

sacrectomy (sa-krek'to-me) [*sacrum* + Gr. *ektomē* excision] excision or resection of the sacrum.

sacro- (sa'kro) [L. *sacrum* sacred] a combining form denoting relationship to the sacrum.

sacroanterior (sa'kro-an-te're-or) having the sacrum directed forward; see under *position*.

sacrocoxygeal (sa'kro-kok-sij'e-al) pertaining to or located in the region of the sacrum and coccyx.

sacrocoxyx (sa'kro-kok'siks) the sacrum and coccyx together.

sacrocoxalgia (sa'kro-kok-sal'je-ah) pain in the sacroiliac joint.

sacrocoxitis (sa'kro-kok-si'tis) [*sacro-* + L. *coxa* hip + *-itis*] inflammation of the sacroiliac joint.

sacrodynia (sa'kro-din'e-ah) [*sacro-* + Gr. *odynē* pain] pain in the sacral region.

sacroiliac (sa'kro-il'e-ak) pertaining to the sacrum and ilium; denoting the joint or articulation between the sacrum and ilium and the ligaments associated therewith.

sacroiliitis (sa'kro-il'e-i'tis) inflammation in the sacroiliac joint.

sacroliathesis (sa'kro-lis-the'sis) the condition in which the sacrum lies anterior to the fifth lumbar vertebra.

sacrolumbar (sa'kro-lum'bar) [*sacro-* + L. *lumbus* loin] pertaining to the sacrum and the loin.

sacroperineal (sa'kro-per'i-ne'al) pertaining to the sacrum and the perineum.

sacroposterior (sa'kro-pos-te're-or) having the sacrum directed backward; see under *position*.

sacropromontory (sa'kro-prom'on-to-re) the promontory of the sacrum.

sacrosciatic (sa'kro-si-at'ik) pertaining to the sacrum and the ischium.

sacrospinal (sa'kro-spi'nal) [*sacro-* + L. *spina* spine] pertaining to the sacrum and the spine, or vertebral column.

sacroto (sa-krot'o-me) [*sacro-* + Gr. *temnein* to cut] the operation of cutting out the lower end of the sacrum.

sacrotransverse (sa'kro-trans-vers') relating to the direction of the fetal sacrum in breech presentation; see under *position*.

sacroterine (sa'kro-u'ter-in) pertaining to the sacrum and the uterus.

sacrovertebral (sa'kro-ver'tē-bral) pertaining to the sacrum and the vertebral column.

sacrum (sa'krum) [L. "sacred"] the triangular bone just below the lumbar vertebrae, formed usually by five fused vertebrae (sacral vertebrae) that are wedged dorsally between the two hip bones; called also *os sacrum* [NA]. See Plate accompanying *skeleton*. **assimilation s.**, see *assimilation pelvis*, under *pelvis*. **tilted s.**, a condition marked by separation of the sacroiliac joint and forward displacement of the sacrum.

sactosalpinx (sak'to-sal'pinks) [Gr. *saktos* stuffed + *salpinx* tube] dilatation of the inflamed uterine tube by retained secretions.

saddle (sad'l) a part or section of the base of a partial denture.

sadism (sad'izm) [Marquis de Sade, 1740-1814] sexual perversion in which satisfaction is derived from humiliating or hurting

another. **anal s.**, in Freudian theory, the sadistic manifestations of anal erotism, such as aggressiveness, selfishness, and stinginess. **oral s.**, in Freudian theory, a sadistic form of oral erotism manifested by fantasies of chewing, biting, etc.

sadist (sad'ist) a practitioner of sadism.

sadistic (să-dis'tik) pertaining to or characterized by sadism.

sadomasochism (sad''o-mas'o-kizm) a state characterized by both sadistic and masochistic tendencies.

sadomasochistic (sad''o-mas'o-kis'tik) characterized by both sadism and masochism.

Saemisch's operation (section), ulcer (sa'mish-ez) [Edwin Theodor *Saemisch*, ophthalmologist in Bonn, 1833-1909] see under *operation*, and see *ulcus serpens corneae*.

Saenger's macula (zeng'erz) [Max *Saenger*, gynecologist in Prague, 1853-1903] see *macula gonorrhoeica*.

Saenger's sign (reflex) (zeng'erz) [Alfred *Saenger*, German neurologist, 1861-1921] see under *sign*.

Saff (saf) trademark for a preparation of safflower oil.

Safflor (saf'flor) trademark for a preparation of safflower oil.

safrene (saf'rēn) a hydrocarbon, C₁₀H₁₆, obtained from saffras oil.

safrol (saf'rol) an oily, volatile (melting point, 11° C.) substance, the methylene ether of 3,4-dihydroxyallylbenzene from saffras oil; has been used as anodyne.

safrosin (saf'ro-sin) bluish eosin.

safu (sah'foo) Japanese name for leukopathia punctata reticularis symmetrica.

sagittal (saj'i-tal) [L. *sagittalis*; *sagitta* arrow] 1. shaped like or resembling an arrow; straight. 2. situated in the direction of the sagittal suture; said of an anteroposterior plane or section parallel to the median plane of the body.

sagittalis (saj'i-ta'lis) sagittal; [NA] a general term denoting a structure situated in the direction of the sagittal suture.

sago (sa'go) a starch mainly derived from the pith of various species of palm, chiefly of the genus *Sagus*.

Sahli's reaction, method, test (sah'lēz) [Herman *Sahli*, physician in Bern, 1856-1933] see *desmold reaction*, under *reaction*, and see under *method* and *tests*.

S.A.L. abbreviation for *L. secundum ar'tis le'ges*, according to the rules of art.

sal (sal) [L.] salt. **s. ammoniac**, ammonium chloride. **s. diureticum**, potassium acetate. **s. so'da**, sodium carbonate. **s. volatilē**, **volat'ilis**, ammonium carbonate.

Sala's cells (sal'ahz) [Luigi *Sala*, Italian zoologist, 1863-1930] see under *cell*.

salamander (sal'ah-man'der) [Gr. *salamandra* a kind of lizard] a tailed amphibian, many species of which are used in various types of experiments.

salamanderin (sal'ah-man'der-in) a poisonous base from the skin of a species of salamander.

salantel (sal'an-tel) chemical name: *N*-(3-chloro-4-(4-chlorobenzoyl)phenyl)-2-hydroxy-3,5-diiodobenzamide; a veterinary anthelmintic, C₂₀H₁₁Cl₂I₂NO₃.

salazosulfapyridine (sal'ah-zo-sul'fah-pir'i-den) sulfasalazine.

salbutamol (sal-bu'tah-mol) albuterol.

salcolex (sal'ko-leks) chemical name: choline salicylate (salt) compound with magnesium sulfate (2:1); an analgesic, anti-inflammatory, and antipyretic, [C₁₂H₁₉NO₄]₂·MgSO₄·4H₂O.

saletamide maleate (sal-eth'ah-mid) chemical name: *N*-(2-(diethylamino)ethyl)salicylamide maleate (1:1) (salt); an analgesic, C₁₈H₂₀N₂O₆·C₄H₄O₄.

salicylaldehyde (sal'i-sil-al'dē-hīd) salicylic aldehyde.

salicylamide (sal'i-sil-am'id) chemical name: 2-hydroxybenzamide. An amide of salicylic acid, C₇H₇NO₂, occurring as a white, crystalline powder; used as an analgesic and antipyretic, administered orally.

salicylanilide (sal'i-sil-an'i-lid) chemical name: 2-hydroxy-*N*-phenylbenzamide. A compound usually prepared by the interaction of salicylic acid and aniline, C₁₃H₁₁NO₂, occurring as white or slightly pink crystals; used as a topical antifungal in the treatment of tinea capitis.

salicylase (sah-lis'fī-lās) an enzyme oxidizing salicylaldehyde into salicylic acid.

salicylate (sal'i-sil'āt, sah-lis'fī-lāt) any salt of salicylic acid; the salicylates used as drugs include aspirin, choline salicylate, methyl salicylate, magnesium salicylate, sodium salicylate, and choline magnesium trisalicylate. **s. meglumine**, chemical name: 2-hydroxybenzoic acid compound with 1-deoxy-1-(methylamino)-D-glucitol; an antirheumatic and analgesic, C₇H₁₇NO₅·C₇H₆O₃.

salicylated (sal'i-sil'āt-ed) containing or impregnated with salicylic acid.

salicylazosulfapyridine (sal'i-sil'ah-zo-sul'fah-pir'i-den) sulfasalazine.

salicylemia (sal'i-sil-e'me-ah) [*salicylate* + Gr. *haima* blood + *-ia*] the presence of salicylate in the blood.

salicylic (sal'i-sil'ik) pertaining to the radical salicyl; see under *acid*.

salicylism (sal'i-sil'izm) a group of commonly occurring toxic effects of excessive dosage with salicylic acid or its salts, usually marked by tinnitus, nausea, and vomiting.

salicyltherapy (sal'i-sil-ther'ah-pe) treatment by salicylic acid or salicylates.

salifiable (sal'i-fi'ah-b'l) [L. *sal* salt + *fieri* to become] capable of combining with acids so as to form salts.

salify (sal'i-fi) to convert into a salt.

salimeter (sah-lim'ē-ter) [L. *sal* salt + *metrum* measure] a hydrometer for ascertaining the concentration of saline solutions.

saline (sa'lēn, sa'lin) [L. *salinus*; *sal* salt] salty; of the nature of a salt; containing a salt or salts. **physiological s.**, an isotonic aqueous solution of NaCl for temporarily maintaining living cells.

salinigrin (sal'i-ni'grin) a glycoside, C₁₃H₁₆O₇, from the bark of several species of *Salix* (willow) of the family Salicaceae, and from the needles and sprouts of certain coniferous trees.

salinometer (sal'i-nom'ē-ter) an instrument (hydrometer) for direct reading of the salt content of a liquid.

saliva (sah-li'vah) [L.] the clear, alkaline, somewhat viscid secretion from the parotid, submaxillary, sublingual, and smaller mucous glands of the mouth. It serves to moisten and soften the food, keeps the mouth moist, and contains ptyalin, a digestive enzyme which converts starch into maltose. The saliva also contains mucin, serum albumin, globulin, leukocytes, epithelial debris, and potassium thiocyanate. Certain toxins frequently occur in it. **chorda s.**, submaxillary saliva produced in response to stimulation of the chorda tympani nerve, less viscid and turbid than that of the unstimulated gland. **ganglionic s.**, saliva obtained by irritating the submaxillary gland. **lingual s.**, the secretion of Ebner's glands and other serous glands of the tongue. **parotid s.**, saliva produced by the parotid gland; thinner and less viscid than the other varieties. **ropy s.**, saliva which is highly viscid. **sublingual s.**, that produced by the sublingual gland, the most viscid of all. **submaxillary s.**, that produced by the submaxillary gland. **sympathetic s.**, submaxillary saliva produced in response to stimulation of its sympathetic nerve supply; more viscid and turbid than that of the unstimulated gland.

salivant (sal'i-vant) provoking a flow of saliva.

salivary (sal'i-ver-e) [L. *salivarius*] pertaining to the saliva.

salivate (sal'i-vāt) to produce an excessive flow of saliva.

salivation (sal'i-va'shun) [L. *salivatio*] 1. the secretion of saliva. 2. ptyalism.

salivator (sal'i-va'tor) an agent that causes salivation.

salivatory (sal'i-vah-to're) causing salivation.

salivin (sal'i-vin) ptyalin.

salivolithiasis (sah-li'vo-lī-thi'ah-sis) sialolithiasis.

Salk vaccine (sahlk) [Jonas Edward *Salk*, American physician and virologist, born 1914] see under *vaccine*.

Salkowski's method, test (sal-kow'skēz) [Ernst Leopold *Salkowski*, physiologic chemist in Berlin, 1844-1923] see under *method* and *tests*.

salmiac (sal'me-ak) ammonium chloride.

salmin (sal'min) a toxic substance derived from the milt of salmon.

Salmonella (sal'mo-nel'ah) [Daniel Elmer *Salmon*, American pathologist, 1850-1914] a genus of microorganisms of tribe Salmonellae, family Enterobacteriaceae, order Eubacteriales, made up of rod-shaped, gram-negative, usually but not invariably motile bacteria set apart from other enteric bacilli by failure to ferment lactose. It includes the typhoid-paratyphoid bacilli and bacteria usually pathogenic for lower animals which are often transmitted to man. The genus is separated into species or serotypes on the basis of O and H antigens, the latter occurring in two phases and identified by antigenic formulae taking the general form: O antigen: phase 1 ≠ phase 2 in which the O antigens are designated by Roman numerals, the phase 1 antigens by lower case letters, and the phase 2 antigens by Arabic numerals. More than 1000 different serotypes have been described. **S. abortus e'qui**, a species causing infectious abortion in mares; not found in other animals. Called also *bacillus abortivus equinus*. **S. abortus o'vis**, a species isolated from cases of abortion in sheep. **S. aer'trycke**, *S. typhimurium*. **S. ana'tum**, a species causing keel in ducklings and intestinal disorder in man. **S. choleraesuis**, a parasite of pigs and an important secondary invader in hog cholera. A member of the supeistifer group that also includes *S. paratyphi* C or Eastern type, the Kunzendorf variety or European type, and the Glässer-Voldagsen type that contains two species, *S. typhisuis* and *S. typhisuis* var. *Voldagsen*. Man is occasionally infected. The antigenic formula is VI,VII:(c):1,5. Formerly called *Bacterium cholerae*. **S. enterit'idis**, a widely distributed parasite of rodents occurring as a number of serotypes, namely, var. *Danz*, var. *Chaco*, var. *Essen*, and var. *Jena*. It may

produce epidemic diarrheal disease of rodents, and is a common cause of gastroenteritis in man. The antigenic formula is (I), IX, XII:g,m:—. Called also *Gärtner bacillus*, and formerly *Bacillus enteritis*. **S. gallina/rum**, the causative agent of fowl typhoid, with little or no pathogenicity for man; it has the antigenic formula (I), IX, XII:—:— and is notable because only somatic O antigen is present. **S. hirschfel/dii**, *S. paratyphi* C. **S. mor/gani**, *Proteus morgani*. **S. paraty/phi**, *S. paratyphi* A. **S. paraty/phi** A, an etiologic agent of paratyphoid in man; usually found in man but occurring occasionally in lower animals. The antigenic formula is (I), II, XII:a:—. Called also *S. paratyphi*. **S. paraty/phi** B, an etiologic agent of paratyphoid in man, which also produces the acute syndrome of food-poisoning. Occurs in man and in lower animals. The antigenic formula is (I), IV, (V), XII:b:(1,2). **S. paraty/phi** C, an etiologic agent of paratyphoid in man in Asia, Africa, and southeastern Europe, and an important cause of death in British Guiana; closely related to strains of *S. choleraesuis*. **S. pullo/rum**, the causative agent of bacillary white diarrhea of chickens; serologically identical with *S. gallinarum*. **S. schottmül/leri**, *S. paratyphi* B. **S. sen/-dai**, a species causing paratyphoid in man. **S. suipes/tifer**, *S. choleraesuis*. **S. ty/phi**, *S. typhosa*. **S. typhimu/rum**, a parasite of rodents, especially mice, and the causative agent of mouse typhoid and of food poisoning in man. The antigenic formula is (I), IV, (V), XII:i:1,2,3. Called also *Nocard's bacillus* and *S. aertrycke*. **S. typhisu/is**, a species identical with *S. choleraesuis* except in minor cultural features. **S. typho/sa**, the etiologic agent of typhoid fever, occurring only in man. The antigenic formula is IX, XII(Vi):d:—. Strains containing the Vi (virulence) antigen are designated V strains; those that have partially lost Vi antigen, V-W strains; and those that do not contain Vi antigen, W strains. The species is also subdivided into phage types on the basis of susceptibility to empirically numbered bacteriophages. Called also *S. typhi* and *typhoid bacillus*. Formerly called *Bacillus typhi*, *B. typhosa*, *Eberthella typhi*, and *Bacterium typhosum*.

salmonella (sal'mo-nel'ah), pl. *salmonel'ae*. Any microorganism of the genus *Salmonella*.

salmonellae (sal'mo-nel'e) plural of *salmonella*.

salmonellal (sal-mo-nel'al) caused by salmonellae.

Salmonelleae (sal'mo-nel'e-e) a tribe of the family Enterobacteriaceae, order Eubacteriales, made up of gram-negative, rod-shaped organisms which are usually but not invariably motile by means of peritrichous flagella. It includes two genera, *Salmonella* and *Shigella*.

salmonellosis (sal'mo-nel-lo'sis) infection with certain species of the genus *Salmonella*, usually caused by the ingestion of food containing the organisms or their products and marked by violent diarrhea attended by cramps and tenesmus and/or paratyphoid fever.

salocoll (sal'o-kol) phenocoll salicylate, $C_2H_5O \cdot C_6H_4 \cdot NH \cdot CO \cdot CH_2 \cdot NH_2 \cdot C_6H_4(OH)CO_2H$, a crystalline salt used as an antirheumatic.

salol (sa'lol) phenyl salicylate.

Salomon's test (sal'o-monz) [Hugo Salomon, German physician in Buenos Aires, 1872–1954] see under *tests*.

salpingectomy (sal'pin-jek'to-me) [*salpingo-* + Gr. *ektomē* excision] surgical removal of the uterine tube.

salpingemphraxis (sal'pin-jem-frak'sis) [*salpingo-* + Gr. *emphraxis* stoppage] obstruction of the auditory tube.

salpingian (sal-pin'je-an) pertaining to the auditory or to the uterine tube.

salpingion (sal-pin'je-on) a point at the apex of the petrous bone on its lower surface.

salpingitic (sal'pin-jit'ik) pertaining to or characterized by salpingitis.

salpingitis (sal'pin-jit'is) [*salpingo-* + *-itis* inflammation] 1. inflammation of the uterine tube. 2. inflammation of the auditory tube. **chronic interstitial s.**, inflammation of the uterine tube associated with infiltration of connective tissue and muscle with lymphocytes and plasma cells. **chronic vegetating s.**, inflammation of the uterine tube, with marked hypertrophy of the mucosa. **eustachian s.**, inflammation of the auditory tube. **hemorrhagic s.**, inflammation of the uterine tube associated with rupture of a blood vessel and effusion of blood. **hypertrophic s.**, pachysalpingitis. **s. isth/mica nodo/sa**, a condition marked by nodular thickening of parts of both uterine tubes, most characteristically of the isthmus portion, pathogenically related to adenomyosis of the uterus. **mural s.**, pachysalpingitis. **nodular s.**, inflammation attended with formation of nodules in the wall and mucous lining of the uterine tube. **parenchymatous s.**, pachysalpingitis. **s. prof/luens**, inflammation of the uterine tube, with accumulation in its lumen of fluid that ultimately escapes. **pseudofollicular s.**, inflammation of the uterine tube characterized by agglutination of its walls, causing a formation of saccules. **purulent s.**, inflammation of the uterine tube attended with suppuration; called also *pyosalpingitis*. **tuberculous s.**, infection of the uterine tube by the tubercle bacillus, *Mycobacterium tuberculosis*.

salpingo- (sal-ping'go) [Gr. *salpinx* tube] a combining form de-

noting relationship to a tube, specifically to the uterine or to the auditory tube.

salpingocatheterism (sal-ping'go-kath'ē-ter-izm) catheterization of the auditory tube.

salpingocele (sal-ping'go-sēl) [*salpingo-* + Gr. *kēlē* hernia] hernial protrusion of a uterine tube.

salpingography (sal'ping-gog'rah-fe) [*salpingo-* + Gr. *graphein* to write] roentgenography of the uterine tubes after the injection of an opaque medium.

salpingolithiasis (sal-ping'go-li-thi'ah-sis) the presence of calcareous deposits in the wall of the uterine tubes.

salpingolysis (sal'ping-gol'i-sis) surgical separation of adhesions involving the uterine tubes.

salpingo-oophorectomy (sal-ping'go-o'of-o-rek'to-me) surgical removal of a uterine tube and ovary.

salpingo-oophoritis (sal-ping'go-o'of-o-ri'tis) inflammation of a uterine tube and ovary.

salpingo-oophorocele (sal-ping'go-o-of'or-o-sēl) hernia containing a uterine tube and ovary.

salpingo-oothecitis (sal-ping'go-o'o-the-si'tis) [*salpingo-* + Gr. *ōon* egg + *thēkē* case + *-itis*] salpingo-oophoritis.

salpingo-oothecocoele (sal-ping'go-o'o-the'ko-sēl) [*salpingo-* + Gr. *ōon* egg + *thēkē* case + *kēlē* hernia] salpingo-oophorocele.

salpingo-ovariectomy (sal-ping'go-o-va're-ek'to-me) salpingo-oophorectomy.

salpingo-ovariotomy (sal-ping'go-o-va're-ot'o-me) salpingo-oophorectomy.

salpingoperitonitis (sal-ping'go-per'i-to-ni'tis) inflammation of the peritoneum covering the uterine tube.

salpingopexy (sal-ping'go-pek'se) [*salpingo-* + Gr. *pēxis* fixation] the operation of fixing the uterine tube.

salpingopharyngeal (sal-ping'go-fah-rin'je-al) pertaining to the auditory tube and the pharynx.

salpingoplasty (sal-ping'go-plas'te) [*salpingo-* + Gr. *plassein* to form] plastic operation on the uterine tube. Called also *tuboplasty*.

salpingorrhaphy (sal'ping-gor'ah-fe) [*salpingo-* + Gr. *rhaphe* suture] the stitching of a uterine tube to the ipsilateral ovary after removal of part of the ovary.

salpingoscopy (sal'ping-gos'ko-pe) inspection of the auditory tube.

salpingostaphyline (sal-ping'go-staf'i-lin) pertaining to the auditory tube and the uvula.

salpingostomy (sal-ping'go-sto-mat'o-me) [*salpingo-* + Gr. *stoma* mouth + *tomē* a cutting] surgical resection of a portion of the uterine tube, with creation of a new abdominal ostium.

salpingostomatoplasty (sal-ping'go-sto-mat'o-plas'te) salpingostomy.

salpingostomy (sal'ping-gos'to-me) [*salpingo-* + Gr. *stomoun* to provide with an opening or mouth] 1. formation of an opening or fistula into a uterine tube for the purpose of drainage. 2. surgical restoration of the patency of a uterine tube.

salpingotomy (sal'ping-got'o-me) [*salpingo-* + Gr. *tomē* a cutting] surgical incision of a uterine tube.

salpinx (sal'pinks) [Gr.] a tube. **s. auditi/va**, tuba auditiva. **s. uteri/na**, tuba uterina.

salsalate (sal'sah-lāt) chemical name: 2-hydroxybenzoic acid 2-carboxyphenyl ester; an analgesic and anti-inflammatory, $C_{14}H_{10}O_5$. Called also *salicylsalicylic acid*.

salt (sawlt) [L. *sal*; Gr. *hals*] 1. sodium chloride, or common salt. 2. any compound of a base and an acid; any compound of an acid some of whose replaceable hydrogen atoms have been substituted. 3. [pl.] a saline purgative. See *magnesium sulfate* (Epsom s.), *sodium sulfate* (Glauber's s.), and *potassium sodium tartrate* (Preston's, Rochelle, or Seignette's s.). **acid s.**, any salt in which the combining power of the acid is not completely exhausted. **baker's s.**, ammonium carbonate; sometimes used in leavening cakes. **basic s.**, any salt with more than the normal proportion of the basic elements. **bile s's**, glycocholate and taurocholate, the salts of bile acids synthesized by the liver and stored in and released by the gallbladder; they activate pancreatic lipase, facilitate the digestion of triglyceride fat, and stimulate the metabolism of intestinal mucosal cells. **bone s's**, the crystalline salts deposited in the organic matrix (principally collagen fibers) of bone, composed chiefly of calcium and phosphate. **buffer s.**, a salt, such as sodium bicarbonate and sodium phosphate, the anion of which functions as a conjugate base in a buffer system. **Carlsbad s.**, a mixture of sodium sulfate, potassium sulfate, sodium chloride, and sodium bicarbonate, used as a purgative. **common s.**, sodium chloride, NaCl. **diuretic s.**, potassium acetate. **double s.**, any salt in which the two hydrogen atoms of a dibasic acid have been replaced by two separate metals or basic radicals, as in potassium ammonium tartrate. **Epsom s.**, magnesium sulfate. **Everitt's s.**, potassium ferrous ferrocyanide, $K_2Fe[Fe(CN)_6]$. **Glauber's s.**, sodium sulfate. **halide s.**, **haloid s.**, any binary compound of a metal or basic radical with a halogen—i.e., chlorine, iodine,

bromine, fluorine. **Kissingen s's**, an aperient salt from the waters of a spring at Kissingen, Bavaria. **Monse's s.**, iron subsulfate. **neutral s.**, **normal s.**, any salt which is neither acidic nor basic in reaction. **pancreatic s.**, a mixture of the pancreatic ferments with common salt, used as a digestant. **peptic s.**, common salt mixed with pepsin, used as a digestant. **Plimmer's s.**, sodium antimony tartrate. **Preston's s.**, **Rochelle s.**, **Seignette's s.**, potassium sodium tartrate. **smelling s's**, aromatized ammonium carbonate: stimulant and restorative. **table s.**, sodium chloride, NaCl. **Wurster's s's**, the univalent oxidation products of the aromatic *p*-diamines. They are free radicals which may polymerize in a sufficiently concentrated solution and at low temperatures or in the solid state.

saltation (sal-ta'shun) [L. *saltatio* from *saltare* to jump] the action of leaping, especially (1) chorea, or the dancing which sometimes accompanies it; (2) conduction along myelinated nerves; (3) in genetics, an abrupt variation in species; a mutation.

saltatorial, saltatoric (sal'tah-to're-al; sal'tah-to'rik) saltatory.

saltatory (sal'tah-to're) pertaining to or characterized by saltation; see also under *evolution* and *spasm*.

Salter's incremental lines (saw'l'terz) [Sir James A. Salter, English dentist of the nineteenth century] see under *line*.

salting-out (saw'l'ting-owt) the separation of serum or plasma protein fractions in the serum or plasma by precipitation in increasing concentrations of neutral salts; the hydration of the salt progressively added removes water molecules so that each protein fraction becomes dehydrated and consequently less soluble at a different concentration of the salt.

salt peter (sawlt-pe'ter) [L. *salpetra* or *sal petrae*] potassium nitrate, KNO₃. **Chile s.**, sodium nitrate.

salubrious (sah-lu'bre-us) [L. *salubris*] conducive to health; wholesome.

saluresis (sal'u-re'sis) [L. *sal* salt + Gr. *ourēsis* a making water] the excretion of sodium and chloride ions in the urine.

saluretic (sal'u-ret'ik) 1. pertaining to, characterized by, or promoting saluresis. 2. an agent that promotes saluresis.

Saluron (sal'u-ron) trademark for a preparation of hydroflumethiazide.

salutarium (sal'u-ta're-um) [L. *salus* health] a resort for the preservation of health.

salutary (sal'u-ta're) [L. *salutaris*] favorable to the preservation or restoration of health.

salvarsan (sal'var-san) see *arsphenamine*. **s. copper**, a yellowish-red powder, a combination of arsphenamine and copper, suggested by Ehrlich for use in protozoan infections. **silver s.**, silver arsphenamine. **sulfoxylate s.**, a modified arsphenamine.

salve (sav) a thick ointment or cerate; see *ointment*. **Dreuw's s.**, salicylic acid 10, chrysarobin 20, birch tar 20, green soap 25, petrolatum 25. **fetron s.**, a salve composed of from 3 to 5 per cent of the anilide of stearic acid with petrolatum. **scarlet s.**, a synthetic cell proliferant, toluylazo-toluy-azo-beta-naphthol.

Salvia (sal've-ah) [L.] a genus of labiate plants. The leaves of *S. officinalis* L., sage, contain a volatile oil, and are sudorific, carminative, and astringent. The dried leaves are used as an antisecretory agent in hyperhidrosis, sialorrhea, pharyngitis, and bronchitis, and have been used to check excessive milk secretion. *S. reflexa* L., mint weed, sometimes causes poisoning in stock.

Salyrgan (sal'er-gan) trademark for a preparation of mersalyl.

Salzmann's nodular corneal dystrophy (salz'manz) [Maximilian Salzmann, German ophthalmologist, 1862-1954] see under *dystrophy*.

samaderin (sah-mad'er-in) a light-yellow, bitter, crystalline principle from the fruit and bark of *Samadera indica*, a tree of India, Ceylon, and Java; a decoction of the leaf is used as an emetic and purgative.

samandaridine (sam'an-dar'i-din) an alkaloid, C₂₁H₃₁O₃N, from the skin of various salamanders; less poisonous than samandarine.

samandarine (sah-man'dah-rin) a poisonous alkaloid, C₁₉H₃₁O₂N, from the skin of various salamanders.

samarium (sah-ma're-um) a very rare, metallic element; symbol, Sm; atomic number, 62; atomic weight, 150.35.

Sambucus (sam-bu'kus) [L. "the elder-tree"] a genus of caprifoliaceous trees and shrubs; elder. The dried flowers have been used as a carminative, stimulant, and diuretic; the berries (elder berries) were thought to possess some laxative principles.

sample (sam'p'l) [L. *exemplum* example] a representative part taken to typify the whole. **random s.**, a representative part so chosen that each item has an equal chance of being selected.

Sampson's cyst (samp'sunz) [John Albertson Sampson, American gynecologist, 1873-1946] chocolate cyst.

Sanarelli's serum (san'ah-rel'lēz) [Giuseppe Sanarelli, Rome physician, 1864-1940] see under *serum*.

sanative (san'ah-tiv) [L. *sanare* to heal] having a tendency to heal; curative.

sanatorium (san'ah-to're-um) [L. *sanatorius* conferring health, from *sanare* to cure] 1. an establishment for the treatment of sick persons, especially a private hospital for convalescents or those who are not extremely ill. The term is now applied particularly to an establishment for the open-air treatment of tuberculous patients. 2. a health station; a health resort in a hot region.

sanatory (san'ah-to're) [L. *sanatorius*] conducive to health; salubrious.

Sanctorius (sank-to're-us) [It. Santorio Santorio, 1561-1636] an Italian physician, professor of medicine at Padua, who devised several instruments of precision (e.g., a clinical thermometer and a pulse clock), and made quantitative experiments on basal metabolism; a famous illustration in his most important book, *De statica medicina* (1614), depicts the author in a steel-yard chair, presumably about to weigh himself after a meal.

sand (sand) material occurring in small, gritty particles. **brain s.**, *acervulus*. **intestinal s.**, small gritty particles made up of oxides of calcium and phosphorus, bacteria, bile pigment, etc., formed in the intestine.

sandalwood (san'dal-wood) [L. *santalum*] 1. the fragrant wood of *Santalum album*, white or yellow sandal, and of other trees of the genera *Santalum* and *Fusanus*. See also *santal oil*, under *oil*. 2. the dried heart wood of the leguminous tree *Pterocarpus santalinus*, red sandal or santalum rubrum, used as a coloring agent.

sandarac (san'dah-rak) [Gr. *sandarake*] a white, transparent resin from *Callitris quadrivalvis*, a tree of Africa, used in dentistry in an alcoholic solution as a separating fluid and as a preservative varnish for plastic casts. Sometimes, by extension, used also as a verb to denote treatment with the solution.

sand crack (sand krak) a crack starting at the bearing surface of a horse's hoof; it rarely causes lameness.

Sander's disease (san'derz) [Wilhelm Sander, German physician, 1838-1922] see under *disease*.

Sanders' disease [Murray Sanders, New York bacteriologist, born 1910] epidemic keratoconjunctivitis.

sandfly (sand'fli) a name applied to various two-winged flies of the families Heleidae, Simuliidae, and Psychodidae, but especially to flies of the latter family (of the genus *Phlebotomus*).

Sandril (san'dril) trademark for preparations of reserpine.

Sandström's bodies, glands (zant-strämz) [Ivar Victor Sandström, Swedish anatomist, 1852-1889] see *parathyroid glands*, under *gland*, and see *glandulae thyroideae accessoriae*.

Sandwith's bald tongue (sand'withs) [Fleming Mant Sandwith, British physician, 1853-1918] see under *tongue*.

sane (sān) [L. *sanus*] of sound mind; compos mentis.

Sänger see *Saenger*.

Sanger (Sang'er), Frederick. English biochemist, born 1918; winner of the Nobel prize in chemistry in 1958 for his work on the insulin molecule.

sangui- (sang'gwi) [L. *sanguis* blood] a combining form denoting relationship to blood.

sanguicolous (sang-gwik'o-lus) [*sangui-* + L. *colere* to dwell] inhabiting or living in the blood.

sanguifacient (sang'gwi-fa'shent) [*sangui-* + L. *facere* to make] hematopoietic.

sanguiferous (sang-gwi'fer-us) [*sangui-* + L. *ferre* to bear] conveying or containing blood.

sanguification (sang'gwi-fi-ka'shun) [*sangui-* + L. *facere* to make] hematopoiesis.

sanguimotor, sanguimotory (sang'gwi-mo'tor; sang'wi-mo'tor-e) [*sangui-* + L. *motor* mover] pertaining to blood circulation.

sanguinaria (sang'gwi-na're-ah) the dried rhizome and root of the bloodroot, *Sanguinaria canadensis*, a perennial herb, used as an ingredient of compound white pine syrup. It was formerly used as an expectorant and externally in the treatment of chronic eczema and cancer of the skin. It contains several alkaloids, e.g., sanguinarine.

sanguinarine (sang'gwi-na'rēn) an alkaloid, C₂₀H₁₅NO₅, obtained from sanguinaria and other species of the same family.

sanguine (sang'gwin) [L. *sanguineus*; *sanguis* blood] 1. abounding in blood. 2. ardent; hopeful.

sanguineous (sang-gwin'e-us) abounding in blood; pertaining to the blood.

sanguinolent (sang-gwin'o-lent) [L. *sanguinolentus*] of a bloody tinge.

sanguinopoietic (sang'gwi-no-poi-et'ik) hematopoietic.

sanguinopurulent (sang'gwi-no-pu'ru-lent) containing both blood and pus.

sanguinous (sang'gwi-nus) sanguineous.

sanguirenal (sang'gwi-re'nal) [*sangui-* + L. *ren* kidney] pertaining to the blood and the kidneys.

sanguis (sang/'gwis) [L.] [NA] the blood: the fluid that circulates through the heart, arteries, capillaries, and veins, carrying nutrient and oxygen to the body cells. See *blood*.

sanguivorous (sang-'gwiv'o-rus) [*sangui-* + L. *vorare* to eat] blood-eating; said of female mosquitoes which prefer blood to other nutrients.

sanicult (san/'i-kult) a certain system of quack medicine.

sanies (sa/'ne-ēz) [L.] a fetid, ichorous discharge from a wound or ulcer, containing serum, pus, and blood.

sanio-purulent (sa/'ne-o-pu'roo-lent) partly sanious and partly purulent.

sanioserous (sa/'ne-o-se'rous) partly sanious and partly serous.

sanious (sa/'ne-us) [L. *saniosus*] of the nature of sanies.

sanipractic (san/'i-prak'tik) a system of medical practice based on applied prophylactic and therapeutic sanitation.

sanitarian (san/'i-ta're-an) a person who is expert in matters of sanitation and public health.

sanitarium (san/'i-ta're-um) [L.] an institution for the promotion of health. The word was originally coined to designate the institution established by the Seventh Day Adventists at Battle Creek, Michigan, to distinguish it from institutions providing care for mental or tuberculous patients.

sanitary (san/'i-ta're) [L. *sanitarius*] promoting or pertaining to health.

sanitation (san/'i-ta'shun) [L. *sanitas* health] the establishment of environmental conditions favorable to health; assanation.

sanitization (san/'i-ti-za'shun) the process of making or the quality of being made sanitary; see *sanitize*.

sanitize (san/'i-tiz) to clean and sterilize, as eating or drinking utensils.

sanity (san/'i-te) [L. *sanitas* soundness] soundness, especially soundness of mind.

Sanorex (san/'o-reks) trademark for a preparation of mazindol.

Sansert (san/'sert) trademark for a preparation of methysergide maleate.

Sansom's sign (san/'somz) [Arthur Ernest Sansom, English physician, 1838–1907] see under *sign*.

Sanson's images (san/'sonz) [Louis Joseph Sanson, French physician, 1790–1841] *Purkinje's images*; see under *image*.

santalum (san/'tah-lum) sandalwood. **s. ru'brum**, the dried heart wood of *Pterocarpus santalinus*; used as a coloring agent.

santonica (san-ton/'i-kah) [L.] the dried unexpanded flower heads of *Artemisia maritima*, formerly used as an anthelmintic and stomachic; called also *semen contra*.

santonin (san/'to-nin) a lactone, $C_{15}H_{18}O_3$, which may be obtained from the unexpanded flower heads of *Artemisia maritima* and other species of *Artemisia*; used as an anthelmintic against *Ascaris lumbricoides*. Called also *santoninic acid*.

Santorini's cartilages, etc. (sahn/'to-re'nēz) [Giovanni Domenico Santorini, Italian anatomist, 1681–1737] see under *cartilage*, *duct*, *fissure*, *ligament*, *muscle*, *papilla*, *plexus*, and *tubercle*.

sap (sap) the natural juice of a living organism or tissue. **cell s.**, hyaloplasm, def. 1. **nuclear s.**, karyolymph.

saphena (sah-fe'nah) [L.; Gr. *saphēnēs* manifest] either of two large superficial veins of the leg; see *vena saphena*.

saphenectomy (saf/'ē-nek'to-me) [*saphena* + Gr. *ektomē* excision] excision of a saphenous vein.

sapheous (sah-fe'neus) pertaining to or associated with a saphena; applied to certain arteries, nerves, veins, etc.

sapid (sap/'id) [L. *sapidus*] having or imparting an agreeable taste.

sapin (sa/'pin) a nontoxic ptomaine, $C_8H_{14}N_2$, isomeric with cadaverine and neuridine.

sapo (sa/'po) [L. "soap"] 1. soap; a compound of a fatty acid with a suitable base. 2. white castile soap made of soda and olive oil, used in pills, suppositories, plasters, and liniments: detergent. **s. anima'lis**, s. domesticus. **s. cine'reus**, gray soap, or mercurial salve soap, a soap containing 50 per cent, by weight, of mercury and 5 per cent of benzoated fat. **s. domes'ticus**, a preparation of a soft soap made of animal fat and potash. **s. du'rus**, soda soap. **s. mol'lis**, soft soap. **s. mol'lis medicina'lis**, green soap. **s. vir'idis**, green soap.

sapogenin (sah-poj/'ē-nin) a compound resulting from the decomposition of saponin, $C_{14}H_{22}O_2$.

saponaceous (sa/'po-na'shus) [L. *sapo* soap] of a soapy quality or nature.

Saponaria (sa/'po-na're-ah) a genus of plants. The root of *S. officinalis*, or soapwort, has alterative properties and was formerly used in skin diseases. It contains saponin, saponarin, and sapotoxin.

saponarin (sa/'po-na'rin) a glycoside, $C_{27}H_{30}O_{16}$, from *Saponaria officinalis* L. (Caryophyllaceae).

saponatus (sa/'po-na'tus) [L.] charged or mixed with soap.

saponification (sah-pon/'fi-ka'shun) [L. *sapo* soap + *facere* to

make] the act or process of converting fats into soaps and glycerol by heating with alkalis. In chemistry, the term now denotes hydrolysis, of an ester by an alkali, resulting in the production of a free alcohol and an alkali salt of the ester acid.

saponin (sap/'o-nin) a group of glycosides, widely distributed in plants, such as *Quillaja saponaria* Molina (Rosaceae) and *Saponaria officinalis* L. (Caryophyllaceae), and characterized by (1) their property of forming a durable foam when their watery solutions are shaken, (2) by their ability to dissolve red blood cells even in high dilutions, and (3) by their having sapogenin as their aglycones. **cholan s's**, a group of saponins that on hydrolysis yield sterol-like compounds. **triterpenoid s's**, a group of saponins that on hydrolysis yield 1,2,7-trimethyl naphthalene.

sapophore (sap/'o-for) [L. *sapor* taste + Gr. *phoros* bearing] the group of atoms in the molecule of a compound that gives the substance its characteristic taste.

sapotalene (sap/'o-tal'ēn) a hydrocarbon, 1,2,7-trimethylnaphthalene, formed by the reduction of sapogenin.

sapotoxin (sa/'po-tok'sin) any of various toxic saponins found in such plants as *Quillaja saponaria* Molina (Rosaceae) and *Saponaria officinalis* L. (Caryophyllaceae).

Sappey's fibers, ligament, nucleus, veins (sahp-pāz') [Marie Philibert Constant Sappey, French anatomist, 1810–1896] see under *fiber* and *ligament*, and see *venae paraumbicales* and *nucleus ruber*.

sapphism (saf/'izm) [*Sappho*, Greek poetess, about 600 B.C.] homosexuality between women; lesbianism.

Sappinia diploidea (sah-pin'e-ah di-plōi'de-ah) a coprozoic ameba of the order Amoebida, class Rhizopoda, having a definite cuticle, two closely associated nuclei, and a few short lobopodia; found in the feces of various animals.

saprin (sa/'prin) [Gr. *sapros* rotten] a ptomaine, $C_5H_{14}N_2$, from decaying visceral substances; not poisonous.

sapro- (sap/'ro) [Gr. *sapros* rotten] a combining form meaning rotten or putrid, or designating relationship to decay or to decaying material.

saprobe (sah-prōb) a name proposed for a vegetable organism living on dead or decaying organic matter.

saprobic (sah-prōb-ik) of the nature of, or being a saprobe.

Saprolegnia (sap/'ro-leg'ne-ah) [*sapro-* + Gr. *legnon* border] a genus of partially saprophytic, phycmycetous water molds of the order Saprolegniales, subclass Oomycetes. *S. ferax* is destructive to salmon and to various water animals.

Saprolegniales (sap/'ro-leg'ne-a'lēz) an order of mostly saprophytic molds of the subclass Oomycetes, class Phycomycetes, which have an extensive mycelial thallus that has no cross walls, including the genera *Saprolegnia* and *Achlya*. These fungi are commonly called "water molds," although some inhabit soil.

saprophilous (sah-proff'i-lus) [*sapro-* + Gr. *philein* to love] saprophytic.

saprophyte (sap/'ro-fit) [*sapro-* + Gr. *phyton* plant] any organism, such as a bacterium, living upon dead or decaying organic matter. Cf. *autophyte*.

saprophytic (sap/'ro-fit'ik) of the nature of or pertaining to a saprophyte; growing on dead or decomposing organic matter.

saprophytism (sap/'ro-fi-tizm) the condition of being a saprophyte.

Saprospira (sap/'ro-spi'rah) [*sapro-* + Gr. *speira* coil] a genus of microorganisms of the family Spirochaetaceae, order Spirochaetales, made up of actively motile cells containing spiral protoplasm without evident axial filament and with a definite periplast membrane found free-living in marine ooze. It contains three species, *S. gran'dis*, *S. lep'ta*, and *S. punc'tum*, the type species being *S. gran'dis*.

saprozoic (sap/'ro-zo'ik) [*sapro-* + Gr. *zōon* animal] living on dead or lifeless matter; said of animal organisms.

saprozoite (sap/'ro-zo'it) an animal organism living upon dead or decaying animal matter.

saralasin acetate (sar-al'ah-sin) chemical name: 1-(N-methylglycine)-5-L-valine-8-L-alaninangiotensin II acetate (salt) hydrate. An angiotensin-II antagonist, $C_{42}H_{85}N_{13}O_{10} \cdot xC_2H_4O_2 \cdot xH_2O$, used as an antihypertensive in the treatment of severe hypertension and in the production of renin-dependent hypertension.

Sarbó's sign (sar'bōz) [Arthur von Sarbó, Budapest neurologist, born 1867] see under *sign*.

Sarcina (sar-si'nah) a genus of microorganisms of the family Micrococcaceae, order Eubacteriales, occurring as spherical, gram-positive cells in cubical packets of eight cells, found in soil and water as saprophytes and rarely observed in disease processes.

sarcina (sar-si'nah), pl. *sar'cinae* [L.] 1. a spherical bacterium occurring predominantly in cubical packets of eight cells as a consequence of failure of daughter cells to separate following cell division in three planes. 2. an organism of the genus *Sarcina*.

sarcinae (sar-si'ne) [L.] plural of *sarcina*.

sarcitis (sar-si'tis) [*sarco-* + *-itis*] myositis.

sarco- (sar'ko) [Gr. *sarx*, *sarkos* flesh] a combining form denoting relationship to flesh.

Sarcobiot (sar'ko-bi'ot) [*sarco-* + Gr. *bios* life] a species of fly which deposits its larvae in or near living animal tissue.

sarcoblast (sar'ko-blast) [*sarco-* + Gr. *blastos* germ] the primitive cell which develops into a muscle cell.

sarcocarcinoma (sar'ko-kar'si-no'mah) sarcoma and carcinoma combined.

sarcocele (sar'ko-sēl) [*sarco-* + Gr. *kēlē* tumor] any fleshy swelling or tumor of the testis.

sarcocol (sar'ko-kol) [L. *sarcocolla*; *sarco-* + Gr. *kolla* glue] a nauseous gum-resin from various species of *Penaea*, a shrub of southern Africa.

sarcocyst (sar'ko-sist) [*sarco-* + Gr. *kystis* bladder] 1. an individual organism of the genus *Sarcocystis*. 2. a sarcosporidian cyst; one of the cylindrical cysts containing banana-shaped spores, found in the muscles of those infected with *Sarcocystis*.

sarcocystin (sar'ko-sis'tin) a toxin obtained from species of *Sarcocystis*.

Sarcocystis (sar'ko-sis'tis) [*sarco-* + Gr. *kystis* bladder] a genus of sporozoa of the order Sarcosporidia (considered to be of uncertain status by some authorities), which parasitize mammals, birds, and reptiles. Infection, which occurs following ingestion of the spores, is manifested by the formation of cysts (sarcosporidian cysts, or sarcocysts) containing the parasites in the host's muscles. Representative species include *S. lindemanni* in man, *S. tenella* in sheep, *S. miescheriana* in pigs, *S. bertrami* in horses, and *S. muris* in rats and mice.

sarcocyte (sar'ko-sit) [*sarco-* + *-cyte*] the middle layer of ectoplasm of a protozoan lying between the epicyte and the myocyte.

sarcode (sar'kōd) [*sarco-* + Gr. *eidos* form] (*obs.*) the protoplasm of animal cells.

Sarcodina (sar'ko-di'nah) [Gr. *sarkōdēs* fleshlike] a subphylum of Protozoa, including all the amebae, both free-living and parasitic, characterized by the ability to produce pseudopodia during most of the life cycle; flagella, when present, develop only during the early stages. It includes the class Rhizopoda. Called also *Rhizopoda*.

sarcoenchondroma (sar'ko-en'kon-dro'mah) *chondrosarcoma*.

sarcogenic (sar'ko-jen'ik) [*sarco-* + Gr. *gennan* to produce] forming flesh.

sarcoglia (sar-kog'le-ah) [*sarco-* + Gr. *glia* glue] the substance which composes the eminences of Doyen at the entrance of nerves into muscle fibers.

sarcocydrocele (sar'ko-hi'dro-sēl) *sarcocele* combined with *hydrocele*.

sarcoid (sar'koid) [*sarco-* + Gr. *eidos* form] 1. tubercloid; characterized by noncaseating epithelioid cell tubercles. 2. pertaining to or resembling sarcoidosis. 3. (*obs.*) resembling flesh; fleshy. **s. of Boeck**, sarcoidosis. **Darier-Roussy s.**, a form of sarcoidosis characterized by the large size of the nodules and their subcutaneous location. **multiple benign s.**, sarcoidosis. **Schaumann's s.**, sarcoidosis. **Spiegler-Fendt s.**, lymphadenosis benigna cutis.

sarcoidosis (sar'koi-do'sis) a chronic, progressive, generalized granulomatous reticulosis of unknown etiology, involving almost any organ or tissue, including the skin, lungs, lymph nodes, liver, spleen, eyes, and small bones of the hands and feet. It is characterized histologically by the presence in all affected organs or tissues of noncaseating epithelioid cell tubercles. Laboratory findings may include hypercalcemia and hypergammaglobulinemia; there is usually diminished or absent reactivity to tuberculin, and, in most active cases, a positive Kveim reaction. The acute form has an abrupt onset and a high spontaneous remission rate, whereas the chronic form, insidious in onset, is progressive. Formerly called *Besnier-Boeck disease*, *Boeck's disease*, *benign lymphogranulomatosis*, and *sarcoid of Boeck*. **s. cor'dis**, involvement of the heart in sarcoidosis, with lesions ranging from a few asymptomatic, microscopic granulomas to widespread infiltration of the myocardium by large masses of sarcoid tissue. **muscular s.**, sarcoidosis involving the skeletal muscles, with sarcoid tubercles, interstitial inflammation with fibrosis, and disruption and atrophy of the muscle fibers.

sarcolactate (sar'ko-lak'tāt) any salt of sarcolactic acid.

sarcolemma (sar'ko-lem'ah) [*sarco-* + Gr. *lemma* husk] the delicate plasma membrane which invests every striated muscle fiber.

sarcolemmic (sar'ko-lem'ik) pertaining to or of the nature of sarcolemma.

sarcolemmous (sar'ko-lem'us) sarcolemmic.

sarcolysis (sar-kol'i-sis) [*sarco-* + Gr. *lysis* dissolution] disintegration of the soft tissues; disintegration of flesh.

sarcolyte (sar'ko-lit) 1. a cell concerned in the disintegration of the soft tissues. 2. a disintegrating muscle fiber.

sarcolytic (sar'ko-lit'ik) pertaining to, characterized by, or causing sarcolysis.

sarcoma (sar-ko'mah), pl. *sarcomas* or *sarco'mata* [*sarco-* + *-oma*] a tumor made up of a substance like the embryonic connective tissue; tissue composed of closely packed cells embedded in a fibrillar or homogeneous substance. Sarcomas are often highly malignant. See also *chondrosarcoma*, *fibrosarcoma*, *lymphosarcoma*, *melanosarcoma*, *myxosarcoma*, *osteosarcoma*, etc. **Abernethy's s.**, a variety of fatty tumor found principally on the trunk. **adipose s.**, liposarcoma. **alveolar soft part s.**, a variety having a reticulated fibrous stroma enclosing groups of sarcoma cells, which resemble epithelial cells and are enclosed in alveoli walled with connective tissue. **ameloblastic s.**, the malignant counterpart of ameloblastic fibroma. **botryoid s.**, **s. botryoides**, a variety of embryonal rhabdomyosarcoma, arising in submucosal tissue, presenting grossly as a polypoid grape-like structure, and found most often in young children or infants in the upper vagina, cervix uteri, or neck of urinary bladder. **chicken s.**, a sarcoma of chickens which may be of several various cell types. **chloromatous s.**, chloroma. **chondroblastic s.**, see *osteogenic s.* **s. col'li u'teri hydro'picum papilla're**, botryoid s. **deciduocellular s.**, choriocarcinoma. **embryonal s.**, Wilms' tumor. **endometrial stromal s.**, a pale, polypoid, fleshy, malignant tumor of the endometrial stroma, usually arising from the uterine fundus. **Ewing's s.**, see under *tumor*. **fascial s.**, a sarcoma arising in the fasciae about the joints, especially in the lower extremities. **fibroblastic s.**, see *osteogenic s.* **fowl s.**, chicken s. **giant cell s.**, a malignant form of giant cell tumor of bone; see under *tumor*. **granulocytic s.**, chloroma. **Hodgkin's s.**, Hodgkin's disease of the lymphocytic depletion type. **idiopathic multiple pigmented hemorrhagic s.**, Kaposi's s. **Jensen's s.**, a malignant tumor in mice transmissible to healthy mice by transplanting a small portion of the tumor. **Kaposi's s.**, a multifocal, metastasizing, malignant reticulosis with features resembling those of angiosarcoma, principally involving the skin, although visceral lesions may be present; it usually begins on the distal parts of the extremities, most often on the toes or feet, as reddish blue or brownish soft nodules and tumors. Called also *multiple idiopathic hemorrhagic s.* and *idiopathic multiple pigmented hemorrhagic s.* **Kupffer cell s.**, angiosarcoma of the liver in adults. **leukocytic s.**, leukosarcoma. **lymphatic s.**, lymphosarcoma. **melanotic s.**, malignant melanoma. **mixed cell s.**, malignant mesenchymoma. **multiple idiopathic hemorrhagic s.**, Kaposi's s. **osteoblastic s.**, see *osteogenic s.* **osteogenic s.**, a malignant primary tumor of bone composed of a malignant connective tissue stroma with evidence of malignant osteoid, bone, and/or cartilage formation. Depending on which component is dominant, three major subtypes are recognized: osteoblastic, fibroblastic, and chondroblastic. Called also *osteosarcoma*, *osteoid s.* and *osteolytic s.* **osteoid s.**, osteogenic s. **osteolytic s.**, osteogenic s. **parosteal s.**, a sarcoma situated close to the outer surface of a bone. **polymorphous s.**, malignant mesenchymoma. **reticulocytic s.**, **reticuloendothelial s.**, reticulum cell s. **reticulum cell s.**, malignant lymphoma of the undifferentiated or histiocytic type, depending on the degree of differentiation of the malignant cells. **retothelial s.**, reticulum cell s. **Rous s.**, a peculiar sarcoma-like growth found in some fowls; from it can be obtained a filterable virus, the first known to cause tumors, which on inoculation into other fowls produces similar growths. **serocystic s.**, a proliferous cyst with intracystic growths. **synovial s.**, synoviosarcoma. **telangiectatic s.**, a sarcoma which develops such a rich vascular network that the endothelial cells are mistaken for the neoplastic element.

sarcomagenesis (sar'ko-mah-jen'ē-sis) the production of sarcoma.

sarcomagenic (sar'ko-mah-jen'ik) causing sarcoma.

sarcomata (sar-ko'mah-tah) plural of *sarcoma*.

sarcomatoid (sar-ko'mah-toid) resembling sarcoma.

sarcomatosis (sar'ko-mah-to'sis) a condition characterized by the formation of sarcomas. **s. cu'tis**, the development of sarcomatous growths on the skin. **general s.**, the occurrence of sarcomas in several parts of the body at the same time.

sarcomatous (sar-ko'mah-tus) pertaining to or of the nature of sarcoma.

sarcomere (sar'ko-mēr) [*sarco-* + Gr. *meros* part] the contractile unit of myofibrils; sarcomeres are repeating units, delimited by the Z bands along the length of the myofibril.

sarcomphalocoele (sar'kom-fal'o-sēl) [*sarco-* + Gr. *omphalos* navel + *kēlē* tumor] a fleshy tumor of the umbilicus.

Sarcophaga (sar-kof'ah-gah) [*sarco-* + Gr. *phagein* to eat] a genus of flies of the family Sarcophagidae. The larvae of several

Sarcophaga carnaria.

species have been found in wounds, ulcers, the nasal passages, and sinuses. The most important species is *S. haemorrhoidalis*. Other species are *S. carna'ria*, *S. fuscicauda*, *S. dux*, *S. nificor'nis*, and *S. rubicor'nis*.

Sarcophagidae (sar'ko-faj'i-de) a family of flies of the order Diptera, including the flesh flies; two genera *Sarcophaga* (type genus) and *Wohlfahrtia* produce myiasis in man and domestic animals.

sarcoplasm (sar'ko-plazm) [*sarco-* + Gr. *plasma* anything formed or molded] the interfibrillary matter of the striated muscles; the substance in which the fibrillae of the muscle fiber are embedded.

sarcoplasmic (sar'ko-plaz'mik) composed of or containing sarcoplasm; see also under *reticulum*.

sarcoplast (sar'ko-plast) [*sarco-* + Gr. *plastos* formed] an interstitial cell of a muscle, itself capable of being transformed into a muscle.

sarcopoietic (sar'ko-poi-et'ik) [*sarco-* + Gr. *poiein* to make] producing flesh or muscle.

Sarcopsylla (sar'kop-sil'ah) *Tunga*. **S. pen'etrans**, *Tunga penetrans*.

Sarcoptes (sar-kop'tēz) [*sarco-* + Gr. *koptein* to cut] a genus of acarids, including *S. scabiei* (*Acarus scabiei*), the itch mite of humans, which produces scabies (q.v.). Varieties of *S. scabiei* cause mange of domestic animals, including pigs, horses, cows, and dogs.

Sarcoptes scabiei, male and female.

sarcoptic (sar-kop'tic) of, relating to, or caused by *Sarcoptes*.

sarcoptidosis (sar-kop'ti-do'sis) infestation with *Sarcoptes*.

sarcosine (sar'ko-sēn) chemical name: *N*-methylglycine. An amino acid intermediate between glycine and dimethyl glycine in the one-carbon cycle, $C_3H_7NO_2$, found in shellfish, peanut protein, actinomycins, and, in low levels, in normal human blood.

sarcosis (sar'ko-sis) [*sarco-* + *-osis*] abnormal increase of flesh.

sarcosome (sar'ko-sōm) [*sarco-* + Gr. *sōma* body] former name for one of the mitochondria of a myofibril.

Sarcosporidia (sar'ko-spo-rid'e-ah) an order of sporozoan parasites found in the cardiac and striated muscles of vertebrates. It includes the genus *Sarcocystis*.

sarcosporidia (sar'ko-spo-rid'e-ah) plural of *sarcosporidium*.

sarcosporidiasis (sar'ko-spo-rī-di'ah-sis) sarcosporidiosis.

sarcosporidiosis (sar'ko-spo-rid'e-o'sis) the condition of being infected with the sporozoan *Sarcocystis*.

sarcosporidium (sar'ko-spo-rid'e-um), pl. *sarcosporid'ia*. An individual organism of the order Sarcosporidia.

sarcostosis (sar'kos-to'sis) [*sarco-* + Gr. *osteon* bone] ossification of fleshy tissues.

sarcostyle (sar'ko-stil) [*sarco-* + Gr. *stylos* column] 1. a myofibril. 2. a bundle of myofibrils; called also *column of Kolliker* and *muscle column*.

sarcotherapeutics (sar'ko-ther'ah-pu'tiks) treatment of disease by the use of animal extracts.

sarcotherapy (sar'ko-ther'ah-pe) sarcotherapeutics.

sarcotic (sar-kot'ik) [Gr. *sarkōtikos*] promoting the growth of flesh.

sarcotubules (sar'ko-tu'būlz) membrane-limited structures that extend throughout the sarcoplasm and form a closely meshed canalicular network around each myofibril.

sarcous (sar'kus) pertaining to flesh or to muscular tissues.

sardonic (sar-don'ik) [L. *sardonius*; Gr. *Sardonikos* Sardinian] denoting a kind of spasmodic or tetanic grin or involuntary smile, as *risus sardonius*.

sarmentocymarin (sar-men'to-si'mah-rin) a cardiac glycoside, $C_{30}H_{46}O_8$, from the seeds of *Strophanthus sarmentosus*. On hydrolysis, it yields sarmentogenin and sarmentose.

sarmentogenin (sar'men-toj'ē-nin) an aglycone, $C_{23}H_{34}O_5$, from sarmentocymarin; it has been studied as a possible source of cortisone.

sarmentose (sar'men-tōs) a methyl ether of a 2-desoxyhexomethyl sugar from sarmentocymarin.

Sarothamnus (sa'ro-tham'nus) [Gr. *saron* broom + *thamnus* shrub] *Cytisus*.

sarpicillin (sar'pī-sil'in) chemical name: 6-(2,2-dimethyl-5-oxo-4-phenyl-1-imidazolidinyl)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid; an antibacterial, $C_{21}H_{27}N_3O_5S$.

Sarracenia (sar'ah-se'ne-ah) [Michel Sarrazin, Quebec physician

and naturalist, 1659–1734] a genus of polypetalous plants, known as *side-saddle flower* and *pitcher plant*, type of the order Sarraceniaceae. *S. purpurea* is the commonest of the pitcher plants of North America. The secretion of the pitcher of this plant is said to contain digestant enzymes. It is a stimulant, diuretic, and aperient.

sarsa (sar'sah), gen. *sar'sae* [L.; Sp. *sarça* briar] sarsaparilla.

sarsaparilla (sar'sap-ah-ril'ah) [L.; Sp. "briar vine"] the dried root of *Smilax aristolochiaefolia* Mill. (Liliaceae) and other related species; used as a flavoring agent in beverages, and in the treatment of psoriasis. It contains sarsasapogenin, a precursor in the manufacture of compounds in the pregnane series. Called also *sarsa*.

sarsasapogenin (sar'sah-sap'o-jen'in) a steroid sapogenin from sarsaparilla, used in the synthesis of hormones of the pregnane series.

Sassafras (sas'ah-fraz) [L.] a genus of lauraceous trees. The root bark of *S. albidum* Nutt. (Lauraceae) (*S. variifolia*, *S. officinale*), or sassafras, a tree of North America, is used as an aromatic and flavoring agent, and was formerly used as a sudorific. The volatile oil contains safrene and safrol. It is the source of the popular American beverage, root beer.

satellite (sat'ē-lit) [L. *satelles* companion] 1. a vein that closely accompanies an artery, such as the brachial. 2. a minor, or attendant, lesion situated near a larger one. 3. a globoid mass of chromatin attached at the secondary constriction to the ends of the short arms of acrocentric autosomes. 4. exhibiting satellitism. **bacterial s.**, satellite colony. **chromosomal s.**, see *satellite*. **nucleolar s.**, a small mass of chromatin found next to the nucleolar membrane in most nerve cells of the female; sex chromatin.

satellitism (sat'ē-li-tizm) the phenomenon in which certain bacterial species grow more vigorously in the immediate vicinity of colonies of other unrelated species (e.g., *Hemophilus influenzae* near a colony of streptococci), owing to the production of an essential metabolite by the latter species.

satellitosis (sat'ē-li-to'sis) accumulation of neuroglial cells about neurons; seen whenever neurons are damaged.

satiety (sah-ti'e-ty) [L. *satis* sufficient + *-etystate* or condition of] sufficiency, or satisfaction, as full gratification of appetite or thirst, with abolition of the desire to ingest food or liquids.

Satterthwaite's method (sat'er-thwāts) [Thomas Edward Satterthwaite, New York physician, 1843–1934] see under *method*.

Sattler's layer (sat'lerz) [Hubert Sattler, Austrian ophthalmologist, 1844–1928] see under *layer*.

saturated (sach'ē-rāt'ed) 1. having all the chemical affinities satisfied. 2. unable to hold in solution any more of a given substance. 3. denoting a fatty acid having only single bonds in its carbon chain.

saturation (sach'ē-ra'shun) [L. *satratio*] 1. the act of saturating or condition of being saturated. 2. in radiotherapy, the delivery of a maximum tolerable tissue dose within a short time period and then maintaining this biologic effect for an extended period of time by additional smaller fractional doses. 3. an effervescing draft or potion. **oxygen s.**, a measure of the degree to which oxygen is bound to hemoglobin, given as a percentage calculated by dividing the maximum oxygen capacity into the actual oxygen content and multiplying by 100.

saturnine (sat'ur-nin) [L. *saturninus*; *saturnus* lead] pertaining to or produced by lead; having the dull, heavy properties associated with lead.

saturnism (sat'ur-nizm) [L. *saturnus* lead] lead poisoning.

satyriasis (sat'i-ri'ah-sis) [Gr. *satyros* satyr] excessive sexual desire in the male. Cf. *nymphomania*.

satyromania (sat'i-ro-ma'ne-ah) [Gr. *satyros* satyr + *mania* madness] satyriasis.

saucer (saw'ser) a rounded, shallow depression. **auditory s.**, see under *placode*.

saucerization (saw'ser-i-za'shun) 1. the excavation of tissue to form a shallow shelving depression usually performed to facilitate drainage from infected areas of bone. 2. the shallow, saucer-like depression on the upper surface of a vertebra which has suffered a compression fracture.

Sauer's vaccine (sow'erz) [Louis W. Sauer, American pediatrician, born 1885] see under *vaccine*.

Sauerbruch's cabinet, prosthesis (sow'er-brooks) [Ernst Ferdinand Sauerbruch, surgeon in Berlin, 1875–1951] see under *cabinet* and *prosthesis*.

Saundby's test (sawnd'bēz) [Robert Saundby, English physician, 1849–1918] see under *tests*.

Saunders' disease, sign (sawn'derz) [Edward Watt Saunders, physician in St. Louis, 1854–1927] see under *disease* and *sign*.

sauroid (saw'roid) [Gr. *sauros* lizard + *eidos* form] resembling a reptile.

Saussure's hygrometer (so-sūr'z) [Horace Bénédict de Saussure, Swiss physicist, 1740–1779] see under *hygrometer*.

savin (sav'in) [L. *sabina*] the evergreen shrub, *Juniperus sabina*

L. Cupressaceae. The fresh tops afford an acrid volatile oil which has been used in folk medicine for its emmenagogic, antirheumatic, and anthelmintic properties, and is used in perfumery. A preparation of the young twigs was formerly used as a diuretic.

saw (saw) a cutting instrument with a cutting or serrated edge. **Adams' s.**, a small straight saw with a long handle, for osteotomy. **amputating s.**, one for use in performing amputations. **bayonet s.**, a surgical bone saw used for the excision of the nasal dorsal hump. **Butcher's s.**, an amputating saw with a blade that can be set at various angles. **chain s.**, one in which the teeth are set upon links, the saw being moved by pulling upon one or the other handle. **crown s.**, a form of trephine. **Fara-beuf's s.**, a saw the blade of which can be set at any desired angle. **Gigli's wire s.**, a flexible wire with saw teeth. **Hey's s.**, a

Gigli's wire saw as used in removing segment of the skull.

small saw for enlarging orifices in bones. **hole s.**, a trephine. **separating s.**, a saw for separating teeth. **Shrady's s.**, **subcutaneous s.**, a saw for bone work operated through a fenestrated cannula which has been introduced alongside the bone by a trocar.

saxitoxin (sak'si-tok'sin) a term used to designate the toxin obtained from poisonous mussels (*Mytilus*), clams (*Saxidomus*), and plankton (*Gonyaulax*), said to have the molecular formula $C_{10}H_{17}N_7O_4 \cdot 2HCl$. The term is used interchangeably with paralytic shellfish poison or gonyaulax poison (q.v. under *poison*).

Sayre's apparatus, etc. (sa'erz) [Lewis Albert Sayre, American surgeon, 1820–1900] see under *apparatus*, *bandage*, *jacket*, and *operation*.

Sb chemical symbol for *antimony* (*L. stibium*).

SbCl₃ antimony trichloride.

Sb₂O₃ antimony trioxide.

Sb₂O₅ antimony pentoxide.

Sb₄O₆ antimony trioxide.

S.C. closure of the semilunar valves.

Sc chemical symbol for *scandium*.

scab (skab) 1. crust. 2. to become covered with a crust or scab.

foot s., sheep scab. **head s.**, any acariasis of the head, especially the sarcoptic scab of the head of sheep. **sheep s.**, a disease of sheep caused by the mite *Psoroptes ovis*, which infests the skin at the base of the hairs. A scab is formed which comes off, bringing the wool along with it.

scabetic (skah-bet'ik) scabietic.

scabicide (ska'bi-sid) 1. destructive to *Sarcoptes scabiei*; used in the treatment of scabies. 2. an agent for destroying *Sarcoptes scabiei*.

scabies (ska'bēz) [*L.*, from *scabere* scratch] a contagious skin disease due to the itch mite, *Sarcoptes scabiei*, which bores into the stratum corneum, forming coniculi or burrows. The disease is attended with intense itching, together with the eczema caused by scratching. **bovine s.**, a disease of cattle resembling sheep scab, which is caused by *Psoroptes ovis*. **Norwegian s.**, a rare form associated with an immense number of mites and with marked scales and crusts.

scabietic (ska'be-et'ik) pertaining to or affected with scabies.

scala (ska'lah), pl. *sca'lae* [*L.* "staircase"] a stairlike structure; applied especially to various passages of the cochlea. **s. me'dia**, **s. of Löwenberg**, ductus cochlearis. **s. tym'pani** [NA], the perilymph-filled part of the cochlea that is continuous with the scala vestibuli at the helicotrema, is separated from other

cochlear structures by the spiral lamina and the cochlear duct, and ends blindly near the fenestra cochleae. Called also *tympanic canal of cochlea*. **s. vestib'uli** [NA], the perilymph-filled part of the cochlea that begins in the vestibule, is separated from other cochlear structures by the spiral lamina and the cochlear duct, and becomes continuous with the scala tympani at the helicotrema. Called also *vestibular canal*.

scalariform (skah-lar'i-form) [*L. scalaris* like a ladder + *forma* shape] resembling the rungs of a ladder.

scald (skawld) 1. a burn caused by hot liquid or hot, moist vapor. 2. to burn with hot liquid or steam.

scale (skāl) 1. [*Fr. écale* shell, husk] a thin, compacted, platelike structure, as of cornified epithelial cells, on the surface of the body, or shed from the skin. 2. [*L. scala*, usually pl., *sca'lae*, a series of steps] a scheme or device by which some property may be evaluated or measured, such as a linear surface bearing marks at regular intervals, representing certain predetermined units. 3. to remove material from a body surface, as incrustated material from the surface of the teeth. **absolute s.**, a temperature scale with zero at the absolute zero of temperature. **Apgar s.**, see under *score*. **Baumé's s.**, a scale for expressing the specific gravity of fluids. **Bloch's s.**, a series of solutions of tincture of benzoin in glycerinated water, employed to determine, by comparison of turbidity, the amount of albumin precipitated in urine or other fluid by heat. **Brazelton behavioral s.**, a method for assessing infant behavior by its responses to environmental stimuli. **Cattell Infant Intelligence S.**, a test for evaluating the developmental status of infants in the first two years of life. **Celsius s.**, a temperature scale with the ice point at 0 and the normal boiling point of water at 100 degrees (100° C.). See Table. **centigrade s.**, one in which the interval

TABLE OF EQUIVALENTS OF CELSIUS (CENTIGRADE) AND FAHRENHEIT TEMPERATURE SCALES

CELSIUS	FAHR.	CELSIUS	FAHR.	CELSIUS	FAHR.
Deg.	Deg.	Deg.	Deg.	Deg.	Deg.
-40	-40.0	9	48.2	57	134.6

between two established points is divided into 100 equal units, such as the Celsius scale. See Table. **Charrière s.**, a scale for grading the size of urethral sounds and catheters; see *French s.* **Clark's s.**, a scale used in denoting the hardness of water, based on the number of grains of calcium carbonate per imperial gallon. **Columbia Mental Maturity S.**, a test of specific kinds of mental function and general abilities, suitable for children (ages 3 to 12) with no speech or with limited physical capabilities, such as those with cerebral palsy. **Dunfermline s.**, a scheme used in denoting the nutritional status of children: 1, superior condition; 2, passable condition; 3, requiring supervision; 4, requiring medical treatment. **Fahrenheit s.**, a temperature scale with the ice point at 32 and the normal boiling point of water at

212 degrees (212° F.). See Table. **French s.**, a scale used for denoting the size of catheters, sounds, and other tubular instruments, each unit being roughly equivalent to 0.33 mm. in diameter, i.e., 18 French indicates a diameter of 6 mm. **Gaffky s.**, a scale used in denoting the prognosis in tuberculosis, based on the number of tubercle bacilli in the sputum. **gray s.**, see under *ultrasonography*. **hydrometer s.**, a scale used for expressing the specific gravity of liquids. **Kelvin s.**, an absolute scale on which the unit of measurement corresponds with that of the Celsius (centigrade) scale, but the ice point is at 273.15 degrees (273.15° K). **Kent Emergency S.**, a rapid screening test for determining the mental age of a child, consisting of a set of oral questions graded according to age. **Rankine s.**, an absolute scale on which the unit of measurement corresponds with that of the Fahrenheit scale, but the ice point is at 491.67 degrees (491.67° R). **Réaumur s.**, a temperature scale with the ice point at 0 and the normal boiling point of water at 80 degrees (80° R.). **Tallqvist's s.**, a series of lithographed colors formerly used to quantitate hemoglobin. **temperature s.**, a scale used for expressing the degree of heat, which is based on absolute zero as a reference point (absolute scale), or with a certain value arbitrarily assigned to such temperatures as the ice point and boiling point of water under certain stipulated conditions, the range between and beyond them being divided into a designated number of identical units. **Wechsler Adult Intelligence S. (W.A.I.S.)**, a test consisting of verbal and performance elements, designed to measure adult intelligence. **Wechsler Intelligence S. for Children**, an intelligence test used to identify the retarded child.

scalene (ska'lēn) [Gr. *skalēnos* uneven] 1. unequally three sided. 2. pertaining to one of the scalene muscles.

scaleneotomy (ska'lē-nek'to-me) [*scalenus* + Gr. *ektomē* excision] the operation of resecting a scalenus muscle.

scalenotomy (ska'lē-not'o-me) [*scalenus* + Gr. *tomē* a cutting] the operation of severing the scaleni muscles close to their insertion on the ribs to restrict respiratory activity of the upper part of the thorax and thus induce apical rest in pulmonary tuberculosis.

scalenus (ska-le'nus) [L.; Gr. *skalēnos*] uneven; a name given to various muscles of the neck. See *Table of Musculi*.

scaler (ska'ler) a dental instrument used in removing calculus from the surface of the teeth. **chisel s.**, a straight instrument which curves slightly as the blade extends from the shank, the straight cutting edge, at the end of the instrument, being beveled at a 45 degree angle. **deep s.**, a dental instrument designed for use in removal of subgingival calculus. **hoe s.**, one made with different angular relationships of shank and handle, but with the blade bent at a 99 degree angle, and the flattened termination surface beveled at an angle of 45 degrees. **sickle s.**, a node-shaped instrument, available in various sizes and shapes, designed for the removal of tenacious supragingival deposits of calculus. **superficial s.**, a dental instrument designed for use in removal of supragingival calculus. **wing s.**, a variation of the sickle scaler, consisting of a short curved blade with a flare at the very edge; used for the removal of supragingival calculus.

scaling (skāl'ing) removal of calculus material from the exposed tooth surfaces and that part of the teeth covered by the marginal gingiva.

scall (skawl) (*obs.*) 1. any scaly, or scabby, disease of the skin. 2. favus of animals. **honeycomb s.** (*obs.*), an eruption consisting of small ulcers separated by raised edges. **milk s.**, *crusta lactea*.

scalp (skalp) that part of the skin of the head, exclusive of the face and ears, which normally is covered with hair. **gyrate s.**, *cutis verticis gyrata*.

scalpel (skal'pel) [L. *scalpellum*] a small surgical knife with a straight handle and, usually, a blade with a convex edge.

scalpriform (skal'prī-form) shaped like a chisel.

scaly (ska'le) [L. *squamosus*] 1. scalelike. 2. characterized by scales.

scammonia (skah-mo'ne-ah) scammony.

scammony (skam'o-ne) [L. *scammonium*, *scammonia*] the plant *Convolvulus scammonia* L. (Convolvulaceae), of Asia Minor and Syria; the root affords a gummy and resinous exudate, which has anthelmintic and cathartic properties. **Mexican s.**, *ipomea*.

scan (skan) 1. shortened form of *scintiscan*, q.v.; variously designated, according to the organ under examination, as *brain scan*, *kidney scan*, *thyroid scan*, etc. 2. a visual display of ultrasonographic echoes. An *A-scan* is a display on a cathode ray tube in which one axis represents the time required for return of the echo and the other corresponds to the strength of the echo. In *B-scan*, the position of a bright dot on the tube corresponds to the time elapsed, and the brightness of the spot to the strength of the echo; movement of the transducer across the skin surface yields a two-dimensional cross-sectional display. **CAT s.**, computerized axial tomography; see under *tomography*.

scandium (skan'de-um) a very rare metallic element; symbol, Sc; atomic number, 21; atomic weight, 44.956.

scanner (skan'er) something that scans; a scintiscanner.

EMI s., an instrument for reconstructing tomographic images for display on a cathode ray tube; see *computerized axial tomography*, under *tomography*. **scintillation s.**, scintiscanner.

scanning (skan'ning) 1. the act of examining visually, as a small area or different isolated areas, in detail. 2. a manner of utterance characterized by somewhat regularly recurring pauses. **radioisotope s.**, the production of a two-dimensional picture (scintiscan, or scan), representing the gamma rays emitted by a radioactive isotope concentrated in a specific tissue of the body, such as the brain or thyroid gland.

scanography (skan-og'rah-fe) a method of making radiographs by the use of a narrow slit beneath the tube in such a manner that only a line or sheet of x-rays is employed and the x-ray tube moves over the object so that all the rays of the central beam pass through the part being radiographed at the same angle.

scansion (skan'shun) scanning.

Scanzoni's maneuver (operation) (skan-tso'nēz) [Friedrich Wilhelm Scanzoni, German obstetrician, 1821-1891] see under *operation*.

scapha (ska'fah) [L. "a skiff"] [NA] the long curved depression which separates the helix from the anthelix; called also *scaphoid fossa* and *fossa helix*.

scaphion (ska'fe-on) [Gr. *skaphion* a small bowl or basin] basis cranii externa.

scapho- [Gr. *skaphē* skiff or light boat] a combining form meaning boat-shaped.

scaphocephalia (skaf'o-sē-fa'le-ah) scaphocephaly.

scaphocephalic (skaf'o-sē-fal'ik) pertaining to or characterized by scaphocephaly.

scaphocephalism (skaf'o-sef'ah-lizm) scaphocephaly.

scaphocephalous (skaf'o-sef'ah-lus) scaphocephalic.

scaphocephaly (skaf'o-sef'ah-le) [Gr. *skaphē* skiff + *kephalē* head] a condition in which the skull is abnormally long and narrow, as a result of premature closure of the sagittal suture, with heavy centers of ossification in the line of the suture; usually accompanied by inflammation and atrophy of the optic papillae and by mental retardation. Called also *sagittal synostosis*.

scaphohydrocephalus (skaf'o-hi'dro-sef'ah-lus) hydrocephalus in which the head assumes a boatlike shape.

scaphohydrocephaly (skaf'o-hi'dro-sef'ah-le) scaphohydrocephalus.

scaphoid (skaf'oid) [Gr. *skaphē* skiff + *eidos* form] shaped like a boat; navicular. Used especially in reference to the most lateral bone in the proximal row of carpal bones (*os scaphoideum* [NA]). See also *os naviculare*.

scaphoiditis (skaf'oi-di'tis) inflammation of the scaphoid bone. **tarsal s.**, inflammation involving the navicular (scaphoid) bone of the tarsus. See also *Köhler's bone disease* (def. 1), under *disease*.

Scaptocosa (skap'to-co'sah) a genus of wolf spiders. **S. rapto-ria**, a species of Brazil that has a powerful hemolytic venom that has been shown to cause necrotic arachnidism.

scapula (skap'u-lah), pl. *scap'ulae* [L.] [NA] the flat, triangular bone in the back of the shoulder; the shoulder blade. See illustration. **alar s.**, *s. alata*, winged s. **elevated s.**, Sprengel's deformity. **Graves' s.**, scaphoid s. **scaphoid s.**, a scapula in which the vertebral border is more or less concave. **winged s.**, a scapula having a prominent vertebral border.

scapulargia (skap'u-lal'je-ah) pain in the scapular region.

scapular (skap'u-lar) of or pertaining to the scapula.

scapulary (skap'u-la're) a shoulder bandage, with the appearance of a pair of suspenders or braces, to hold in place a body bandage or girdle.

scapulectomy (skap'u-lek'to-me) [*scapula* + Gr. *ektomē* excision] the surgical removal of the scapula or a part of it (resection).

scapuloanterior (skap'u-lo-an-te're-or) denoting a position of the fetus in transverse lie, with the scapula directed anteriorly.

scapuloclavicular (skap'u-lo-klah-vik'u-lar) pertaining to the scapula and the clavicle.

scapulodynia (skap'u-lo-din'e-ah) [*scapula* + Gr. *odynē* pain + *-ia*] pain in the region of the shoulder.

scapulohumeral (skap'u-lo-hu'mer-al) pertaining to the scapula and the humerus.

scapulopexy (skap'u-lo-pek'se) [*scapula* + Gr. *pēxis* fixation] surgical fixation of the scapula.

scapuloposterior (skap'u-lo-pos-te're-or) denoting a position of the fetus in transverse lie, with the scapula directed posteriorly.

scapus (ska'pus), pl. *scap'i* [L.] shaft; [NA] a general term for a shaftlike structure. **s. pe'nis**, corpus penis. **s. pi'li** [NA], hair shaft: the major portion of a hair, designating especially the portion that extends beyond the surface of the skin.

scar (skahr) [Gr. *eschara* the scab or eschar on a wound caused by burning] a mark remaining after the healing of a wound or other morbid process; a cicatrix. By extension applied to other visible manifestations of an earlier event. **hypertrophic s.**, one formed by exuberant cicatrization, giving it the appearance of a keloid but without the latter's tendency to progressive extension,

Right scapula, dorsal view: 1, supraspinous fossa. 2, infraspinous fossa. 3, superior margin. 4, lateral margin. 5, glenoid cavity. 6, inferior angle. 7, neck of scapula. 8, medial margin. 9, spine. 10, triangular commencement of spine, upon which the tendon of the trapezius muscle moves. 11, acromion. 12, arterial foramen. 13, coracoid process.

and recurrence after excision. **Reichert's s.**, an area over the implanting blastocyst of some species consisting of a fibrous membrane in place of the decidual tissue. **white s. of ovary**, corpus albicans, def. 1.

scarf (skahr) a broad strip of fabric. **Mayor's s.**, a triangular bandage for immobilizing the upper limbs.

scarification (skar'i-fi-ka'shun) [L. *scarificatio*, Gr. *skariphismos* a scratching up] production in the skin of many small, superficial scratches or punctures, as for the introduction of smallpox vaccine. The term is sometimes used erroneously for scarring.

scarificator (skar'i-fi-ka'tor) scarifier.

scarifier (skar'i-fi'er) an instrument bearing many sharp points, used in scarification.

scarlatina (skahr'lah-te'nah) [L. "scarlet"] scarlet fever; see under *fever*. **s. angino'sa**, scarlet fever associated with painful pharyngitis, with tonsillar enlargement or peritonsillar abscess. Called also *Fothergill's disease*. **s. haemorrhagica**, scarlet fever in which there is extravasation of the blood into skin and mucous membranes. **puerperal s.**, a scarlet rash sometimes seen in puerperal fever.

scarlatinal (skahr-lat'i-nal) pertaining to or due to scarlatina (scarlet fever).

scarlatinella (skahr-lat'i-nel'ah) Duke's disease.

scarlatiniform (skahr'lah-tin'i-form) resembling scarlatina.

scarlatinoid (skahr-lat'i-noid) scarlatiniform.

scarlet (skar'let) 1. bright red tinged with orange or yellow. 2. a scarlet dye. **Biebrich s.**, **water-soluble**, an azo dye used as a plasma stain, $C_6H_4(SO_2 \cdot ONa) \cdot N:N \cdot C_6H_2(SO_2 \cdot ONa) \cdot N:N \cdot C_6H_3 \cdot OH$. **s. G**, scarlet III. **s. R**, scarlet red.

Scarpa's fascia, etc. (skar'pahz) [Anthony Scarpa, Italian anatomist and surgeon, 1747-1832] see under *fascia*, *fluid*, *foramen*, *ganglion*, *ligament*, *membrane*, *nerve*, *operation*, *sheath*, *shoe*, *staphyloma*, and *triangle*.

SCAT sheep cell agglutination test.

scatemia (skah-te'me-ah) [scato- + Gr. *haima* blood + -ia] alimentary toxemia in which the chemical poisons are absorbed through the intestine.

scato- (skat'o) [Gr. *skōr*, *skatos* dung] a combining form denoting relation to dung, or fecal matter; see also words beginning *skato-*.

scatol (ska'töl) skatole.

scatologic (skat'o-loj'ik) pertaining to fecal matter, or to scatology.

scatology (skah-tol'o-je) [scato- + -logy] the study of the feces.

scatoma (skah-to'mah) [scato- + -oma] stercoroma.

scatophagy (skah-to'ah-je) [scato- + Gr. *phagein* to eat] the eating of excrement.

scatophilia (skat'o-fil'e-ah) [scato- + Gr. *philein* to love] a perverted fondness for dung.

scatocopy (skah-tos'ko-pe) [scato- + Gr. *skopein* to examine] inspection of the feces.

scatter (skat'er) the diffusion or deviation of roentgen rays produced by a medium through which the rays pass. Backward diffusion is called *backscatter*.

scattergram (skat'er-gram) a graph in which the values found in a statistical study are represented by separate, unconnected symbols (dots, crosses, hollow or solid circles, etc.).

scattering (skat'er-ing) in radiology, a change in direction of a photon or subatomic particle as the result of a collision or interaction.

scatula (skat'u-lah) [L. "parallelepiped"] an oblong paper box for powders or pills.

scavenger (skav'en-je) a substance that influences the course of a chemical reaction by ready combination with free radicals, e.g., diphenylpicrylhydrazyl.

Sc.D. Doctor of Science.

Sc.D.A. abbreviation for L. *scapulodextra anterior* (right scapulo-anterior, a presentation of the fetus).

Sc.D.P. abbreviation for L. *scapulodextra posterior* (right scapulo-posterior, a presentation of the fetus).

Scedosporium (se-do-spo're-um) *Monosporium*.

scelalgia (ske-lal'je-ah) [Gr. *skelos* leg + *algos* pain + -ia] pain in the leg.

Sceleth treatment (ske'leth) [Charles Edward Sceleth, Chicago physician, 1873-1942] see under *treatment*.

scelotyrbie (sel-o-ter'be) [Gr. *skelos* leg + *tyrbē* disorder] spastic paralysis of the legs.

Schacher's ganglion (shah'kerz) [Polycarp Gottlieb Schacher, German physician, 1674-1737] the ciliary ganglion.

Schachowa's spiral tubes (shah'ko-vahz) [Seraphina Schachowa, Russian histologist in Bern, born 1854] tubuli renales.

Schafer's method (sha'ferz) [Sir Edward Albert Sharpey-Schafer, English physiologist, 1850-1935] see under *respiration*, *artificial*.

Schäffer's reflex (shef'erz) [Max Schäffer, German neurologist, 1852-1923] see under *reflex*.

Schamberg's dermatosis (disease) (sham'bergz) [Jay Frank Schamberg, Philadelphia dermatologist, 1870-1934] progressive pigmentary dermatosis.

Schanz's disease, syndrome (shants'ez) [Alfred Schanz, German orthopedist, 1868-1931] see under *disease* and *syndrome*.

scharlach R (shar'lak) scarlet red.

Schaudinn's fluid (shaw-dinz') [Fritz Richard Schaudinn, German bacteriologist, 1871-1906] see under *fluid*.

Schaumann's bodies, sarcoidosis (disease, lymphogranuloma, syndrome) (shaw'manz) [Jörgen Schaumann, Swedish dermatologist, 1879-1953] see under *body* and *sarcoidosis*.

Schauta's operation (shaw'tahz) [Friedrich Schauta, Vienna gynecologist, 1849-1919] see under *operation*.

Schauta-Wertheim operation (shaw'tah-ver'tim) [Friedrich Schauta; Ernst Wertheim, Vienna gynecologist, 1864-1920] Wertheim-Schauta operation.

Schede's clot, operation (method, resection, treatment) (sha'dez) [Max Schede, surgeon in Bonn, 1844-1902] see under *clot* and *operation*.

Scheiner's experiment (shi'nerz) [Christoph Scheiner, German mathematician, 1575-1650] see under *experiment*.

schema (ske'mah) [Gr. *schēma* form, shape] a plan, outline, or arrangement. **Hamberger's s.**, the external intercostal and the intercartilaginous muscles are inspiratory muscles, the internal intercostal muscles are expiratory.

schematic (ske-mat'ik) [Gr. *schēma* form, shape] serving as a diagram or model; see under *eye*.

Scherer's test (shār'erz) [Johann Joseph von Scherer, German physician, 1814-1869] see under *tests*.

schierlievo (skār-lyā'vo) a contagious disorder formerly prevalent in Illyria and Dalmatia, supposed to have been syphilis.

scheroma (ske-ro'mah) xerophthalmia.

Scheuermann's disease, kyphosis (shoi'er-manz) [Holger Werfel Scheuermann, Danish surgeon, 1877-1960] osteochondrosis of the vertebrae; see *osteochondrosis*.

Schick's sign, test (reaction) (shiks) [Béla Schick, Hungarian pediatrician in the United States, born 1877] see under *sign* and *tests*.

Schiefferdecker's disk, symbiosis, theory (she-fer-dek'erz) [Paul Schiefferdecker, Bonn anatomist, 1849-1931] see under *disk*, *symbiosis*, and *theory*.

Schiff's biliary cycle (shiifs) [Moritz Schiff, German physiologist, 1823-1896] see under *cycle*.

Schiff's reagent, test (shiifs) [Hugo (Ugo) Schiff, German chemist in Florence, 1834-1915] see under *reagent* and *tests*.

Schilder's disease (encephalitis) (shi'l'derz) [Paul Ferdinand

Schilder, Austrian neurologist in the United States, 1886–1940] see under *disease*.

Schiller's test (shil'erz) [Walter *Schiller*, Austrian pathologist in the United States, 1887–1960] see under *tests*.

Schilling blood count (shil'ing) [Victor *Schilling*, German hematologist, 1883–1960] see under *count*.

Schilling test (shil'ing) [Robert Frederick *Schilling*, American hematologist, born 1919] see under *tests*.

Schimmelbusch's disease (shim'el-boosh'ez) [Curt *Schimmelbusch*, German surgeon, 1860–1895] cystic disease of the breast; see under *disease*.

schindylesis (skin'di-le'sis) [Gr. *schindylēsis* a splintering] a form of articulation in which a thin plate of one bone is received into a cleft in another, as in the articulation of the perpendicular plate of the ethmoid bone with the vomer.

Schinus (ski'nus) [Gr. *schinos* mastic] a genus of anacardiaceous trees of warm regions. *S. molle*, L., of tropical America (pepper tree), affords a kind of American mastic, and is a mild purgative and aromatic.

Schiøtz's tonometer (she-ets') [Hjalmar *Schiøtz*, Norwegian physician, 1850–1927] see under *tonometer*.

schistasis (skis'tah-sis) a splitting; specifically, a congenital defect consisting of a cleft or fissure of the body, as schistocormia, schistomelia, schistosomia.

schisto- [Gr. *schistos* split] a combining form meaning split or cleft.

schistocelia (shis'', skiz''to-se'le-ah) schistocoelia.

schistocephalus (shis'', skis''to-sef'ah-lus) [*schisto-* + Gr. *kephalē* head] a fetus born with a cleft head.

schistocoelia (shis'', skiz''to-se'le-ah) [*schisto-* + Gr. *koilia* belly] congenital fissure of the abdomen.

schistocormia (shis'', skiz''to-kor'me-ah) [*schisto-* + Gr. *kormos* trunk + *-ia*] a developmental anomaly characterized by a cleft condition of the trunk.

schistocormus (shis'', skiz''to-kor'mus) a fetus exhibiting schistocormia.

schistocystitis (shis''to-sis'tis) [*schisto-* + Gr. *kystis*-bladder] fissure of the bladder.

schistocyte (shis', skis''to-sit) a fragment of a red blood corpuscle, commonly observed in the blood in hemolytic anemias; called also *helmet cell*.

schistocytosis (shis'', skis''to-si-to'sis) the accumulation of schistocytes in the blood.

schistoglossia (shis'', skis''to-glos'e-ah) [*schisto-* + Gr. *glōssa* tongue + *-ia*] bifid tongue.

schistomelia (shis'', skis''to-me'le-ah) [*schisto-* + Gr. *melos* limb + *-ia*] a developmental anomaly characterized by a cleft condition of a limb.

schistomelus (shis-, skis-tom'e-lus) a fetus exhibiting schistomelia.

schistometer (shis-, skis-tom'ē-ter) [*schisto-* + Gr. *metron* measure] (*obs.*) an instrument for measuring the aperture between the vocal cords.

schistoprosopia (shis'', skis''to-pro-so'pe-ah) [*schisto-* + Gr. *prosōpon* face + *-ia*] a developmental anomaly characterized by fissure of the face; schizoprosopia.

schistoprosopus (shis'', skis''to-pros'o-pus) a fetus exhibiting schistoprosopia.

schistorachis (shis-, skis-tor'ah-kis) [*schisto-* + Gr. *rachis* spine] rachischisis.

schistosis (shis-, skis-to'sis) [*Schist* a form of slate + *-osis*] pneumoconiosis in slate workers.

Schistosoma (shis'', skis''to-so'mah) [*schisto-* + Gr. *sōma* body] a genus of trematode parasites or flukes; the blood flukes; sometimes called also *Bilharzia*. *S. bovis*, a species found in the portal system of sheep and oxen in Africa, Mesopotamia, Corsica, Sardinia, and Sicily. *S. haematobium*, a common parasite of Africa, especially Egypt, the Mediterranean littoral, and the Arabian peninsula. The adult worms are found in the veins, especially those of the vesical plexus, producing irritability of the bladder, hematuria, and dysentery. The parasites enter the body through the skin of persons coming in contact with infested waters, the invertebrate hosts being small snails of the genus *Bulinus*, including the subgenus *Physopsis*. Called also *Bilharzia haematobia* and, formerly, *Distoma haematobium* and *D. capense*. *S. indicum*, a species occurring in cattle, sheep, goats, etc., in India and Rhodesia. *S. intercalatum*, a species found in West Central Africa, which causes schistosomiasis intercalatum by penetrating the skin of persons coming in contact with infested water; the proven transmitting hosts are certain snails of the genus *Bulinus*. *S. japonicum*, a species found in Japan, China, the Philippines, Taiwan, the Celebes, and probably Laos and Cambodia, which causes schistosomiasis japonica by penetrating the skin of persons coming in contact with infested waters; the usual transmitting hosts are small snails of the genus *Oncomelania*. *S. mansoni*, a species found in Egypt and elsewhere in Africa as well as in South America and the West Indies, including

Schistosoma haematobium, (male and female) (×6) (Looss).

Puerto Rico, which causes schistosomiasis mansoni by penetrating the skin of persons coming in contact with infested waters; the transmitting hosts are planorbid snails, especially those of the genus *Biomphalaria*. *S. matthei*, a species found in the portal mesenteric vein of sheep, goats, game animals, monkeys, and rarely man in South Africa. *S. spindale*, a species parasitic in water buffalo, cattle, sheep, and goats in India, Malaya, Sumatra, Northern Rhodesia, and South Africa.

schistosomacidal (shis'', skis''to-so'mah-si'dal) schistosomicidal.

schistosomacide (shis'', skis''to-so'mah-sid) schistosomicide.

schistosomal (shis'', skis''to-so'mal) pertaining to or caused by *Schistosoma*.

Schistosomatium (shis'', skis''to-so-ma'she-um) a genus of blood flukes allied to *Schistosoma*. *S. douthitti* is found in the hepatic portal veins of the meadow mouse.

schistosome (shis', skis''to-sōm) an individual of the genus *Schistosoma*.

schistosomia (shis'', skis''to-so'me-ah) [*schisto-* + Gr. *soma* body + *-ia*] a developmental anomaly characterized by a fissure of the abdomen and lower extremities rudimentary or lacking.

schistosomiasis (shis'', skis''to-so-mi'ah-sis) the state of being infected with flukes of the genus *Schistosoma*; sometimes called *bilharziasis*. **cutaneous s.**, a condition resulting from invasion of the skin of bathers by the cercariae of schistosomes, marked by pricking sensation and intense itching; swimmer's itch. **eastern s.**, *s. japonica*. **s. haematobia**, urinary **s. hepatic s.**, schistosomiasis in which the ova of the parasites lodge in the hepatic portal venules, stimulating an inflammatory reaction with fibrosis; portal venous destruction leads to portal hypertension. **s. intercalatum**, an endemic intestinal disease of West Central Africa due to infection by flukes of the species *Schistosoma intercalatum*, with abdominal pain, diarrhea in which the stools may contain blood and mucus, hyperplasia of the mucosa of the rectal valves, inflammation of the rectal walls, and sometimes polyposis. **intestinal s.**, Manson's **s. japonica**, infection by flukes of the species *Schistosoma japonicum*. The acute infection is marked by fever, allergic symptoms, and diarrhea. Chronic effects of infection, which may be very severe, are caused by fibrosis around the eggs deposited by the parasite in the liver, lungs, and central nervous system. Called also *Katayama disease*. **Manson's s.**, **s. mansoni**, infection with flukes of the species *Schistosoma mansoni*, living principally in the inferior and superior mesenteric veins but migrating to deposit their eggs in venules, primarily of the large intestine. Eggs lodging in the liver may lead to peripheral fibrosis, hepatosplenomegaly, and ascites. **Oriental s.**, *s. japonica*. **pulmonary s.**, schistosomiasis in which migrating cercariae cause a type of pneumonia, and the ova, and sometimes the adult worms, cause embolization of pulmonary arterioles. Allergic pneumonia, allergic asthma, and emphysema may occur. **urinary s.**, vesical **s.**, infection with *Schistosoma haematobium*, involving the urinary tract and causing cystitis and hematuria; called also *endemic hematuria*, *genitourinary schistosomiasis*, and *schistosomiasis haematobia*. **visceral s.**, infection with *Schistosoma mansoni* or *S. japonicum*, in contradistinction to urinary schistosomiasis caused by *S. haematobium*.

schistosomicidal (shis'', skis''to-so'mi-si'dal) destructive to schistosomes.

schistosomicide (shis'', skis''to-so'mi-sid) an agent which destroys schistosomes.

Schistosomum (shis'', skis''to-so'mum) *Schistosoma*.

schistosomus (shis'', skis''to-so'mus) a monster exhibiting schistosomia.

schistosternia (shis'', skis''to-ster'ne-ah) [*schisto-* + *sternum*] schistothorax.

schistothorax (shis'', skis''to-tho'raks) [*schisto-* + Gr. *thōrax* chest] a developmental anomaly characterized by fissure of the chest.

schistotrachelus (shis'', skis''to-trah-ke'lus) [*schisto-* + *trachēlos* neck] a fetus with fissure of the neck.

schizamnion (skiz-am'ne-on) [Gr. *schizein* to divide + *amnion*] an amnion formed by cavitation over or in the inner cell mass, as occurs in human development.

schizaxon (skiz-ak'sōn) an axon which is divided into two equal, or nearly equal, branches.

schizencephalic (skiz'en-sē-fal'ik) having abnormal clefts in the brain substance; see under *porencephaly*, def. 2.

schizencephaly (skiz'en-sef'ah-le) [Gr. *schizein* to divide + *enkephalos* brain] schizencephalic porencephaly.

schizo- (skiz'o) [Gr. *schizein* to divide] a combining form meaning divided, or denoting relationship to division.

Schizoblastosporion (skiz'o-blas'to-spo're-on) *Geotrichum*.

schizocephalia (skiz'o-sē-fa'le-ah) a developmental anomaly characterized by a longitudinal fissure of the head.

schizocyte (skiz'o-sit) schistocyte.

schizocytosis (skiz'o-si-to'sis) schistocytosis.

schizogenesis (skiz'o-jen'ē-sis) [*schizo-* + Gr. *genesis* production] reproduction by fission.

schizogenous (skī-zoj'ē-nus) reproducing by fission.

schizogony (skī-zog'o-ne) [*schizo-* + Gr. *gonē* seed] the asexual cycle of sporozoa; particularly the life cycle of the malarial parasite (*Plasmodium*) in the blood corpuscle of man. Cf. *sporogony*.

schizogyria (skiz'o-jī're-ah) a condition in which the cerebral convolutions are marked by wedge-shaped cracks.

schizoid (skiz'oid, skit'soid) 1. resembling schizophrenia: a term applied by Bleuler to the shut-in, unsocial, introspective type of personality (see under *personality*) and by Kretschmer to the physical type resembling that of persons with dementia praecox, i.e., the asthenic dysplastic type. Cf. *cycloid* (def. 2.) and *syntonic*. 2. a person of schizoid personality.

schizoidism (skiz'oid-izm) (obs.) the splitting of the psyche or the personality traits which are characteristic of schizophrenia.

schizokinesis (skiz'o-ki-ne'sis) the condition in which, when an overt specific conditioned response has been extinguished, concomitant nonspecific responses continue to be elicited by the stimulus.

schizomycete (skiz'o-mi-sēt') any organism or species belonging to the Schizomycetes.

Schizomycetes (skiz'o-mi-se'tēz) [*schizo-* + Gr. *mykēs* fungus] a taxonomic class comprising the bacteria; they are typically unicellular organisms, considered plants, which commonly multiply by cell division, and which may be free living, saprophytic, parasitic, or even pathogenic, the last causing disease in plants or animals. It includes 10 orders, *Actinomycetales*, *Beggiatoales*, *Caryophanales*, *Chlamydobacteriales*, *Eubacteriales*, *Hyphomicrobiales*, *Mycoplasmatales*, *Myxobacteriales*, *Pseudomonadales*, and *Spirochaetales*.

schizont (skiz'ont) [*schizo-* + Gr. *ōn*, *ontos* being] the stage in the development of the malarial parasite (*Plasmodium*) following the trophozoite whose nucleus divides into many smaller nuclei. This stage is followed by the *segmenter*, in which the cytoplasm divides to surround each nucleus or merozoite. Called also *monont* and *agamont*. Cf. *sporont*.

schizonticide (skī-zon'tī-sid) an agent that destroys schizonts.

schizonychia (skiz'o-nik'e-ah) [*schizo-* + Gr. *onyx* nail + *-ia*] splitting of the nails.

schizophrenia (skiz'o-fa'ze-ah) the incomprehensible, disordered speech characteristic of schizophrenia.

schizophrenia (skiz'o-fre'ne-ah, skit'so-fre'ne-ah) [*schizo-* + Gr. *phrēn* mind + *-ia*] any of a group of severe emotional disorders, usually of psychotic proportions, characterized by misinterpretation and retreat from reality, delusions, hallucinations, ambivalence, inappropriate affect, and withdrawn, bizarre, or regressive behavior. Popularly and erroneously called *split personality*. In the U.S., formerly called *dementia praecox*, a term still used in Europe for process schizophrenia. **ambulatory s.**, a term applied to the condition of schizophrenics who are nonhospitalized; the individuals in this group appear normal, but may suddenly commit aggressive, antisocial acts. **catatonic s.**, schizophrenia marked by excessive and sometimes violent motor activity and excitement, or by generalized inhibition; called also *catatonia* and *Kahlbaum's disease*. **childhood s.**, schizophrenia having the onset before puberty, characterized by autism, withdrawal, and atypical behavior. **chronic undifferentiated s.**, a condition manifested by schizophrenic symptoms that are of mixed or indefinite type which cannot be classified under other forms of schizophrenia. **hebephrenic s.**, a psychotic state characterized by shallow and inappropriate affect, giggling, silly behavior and mannerisms, regression, and hypochondriasis; called also *hebephrenia*. **latent s.**, a susceptibility to the development of schizophrenia, without a previous history of a psychotic schizophrenic episode. **paranoid s.**, a psychotic state characterized by delusions of grandeur or persecution, often accompanied by hallucinations; called also *dementia paranoides* and *heboid paranoia*. **process s.**, severe, progressive schizo-

phrenia seldom resulting in remission or recovery, believed by many to be caused by organic brain changes although definitive evidence is lacking; cf. *reactive s.* **pseudoneurotic s.**, schizophrenia in which the underlying psychosis is masked by pervasive symptoms of neurosis and anxiety. **reactive s.**, schizophrenia attributed chiefly to environmental conditions, with the expectation of a benign prognosis; cf. *process s.* **residual s.**, a condition manifested by individuals with symptoms of schizophrenia who, after a psychotic schizophrenic episode, are no longer psychotic. **schizo-affective s.**, a subtype of schizophrenia with prominent mood disorder, either manic or depressive. **simple s.**, a slow, insidiously progressive form of schizophrenia, marked by apathy, lack of initiative, indifference, and withdrawal.

schizophreniac (skiz'o-fre'ne-ak) (obs.) schizophrenic, def. 2.

schizophrenic (skiz'o-fren'ik) 1. pertaining to or characterized by schizophrenia. 2. a person affected with schizophrenia.

schizophreniform (skiz'o-fren'ī-form) resembling schizophrenic.

schizophrenosis (skiz'o-fre-no'sis) Southard's term for any disease of the dementia praecox (schizophrenia) group.

Schizophyceae (skiz'o-fi'se-e) [*schizo-* + Gr. *phykos* seaweed] Cyanophyceae.

schizoprosopia (skiz'o-pro-so'pe-ah) ununited fissure of the face, as in harelip, cleft palate, etc.; schistoprosopia.

Schizosaccharomyces hominis (skiz'o-sak'ah-ro-mi'sēz hom'ī-nis) *Saccharomyces hominis*.

Schizosiphon (skiz'o-si'fon) a genus of nematogenous schizomycetes with flagelliform filaments, slender toward the extremity.

schizosis (skī-zo'sis) (obs.) autism.

schizothorax (skiz'o-tho'raks) a fetus with a fissure of the chest wall.

schizotonia (skiz'o-to'ne-ah) [*schizo-* + Gr. *tonos* tension + *-ia*] division of the influx of tone to the muscles, so that, for instance, the flexor groups of the arm become hypertonic, while in the leg the extensors become hypertonic.

schizotrichia (skiz'o-trik'e-ah) [*schizo-* + Gr. *thrix* hair] splitting of the hairs at the ends.

schizotropic (skiz'o-trop'ik) having an affinity for schizonts.

schizotrypanosis, schizotrypanosomiasis (skiz'o-trip'ah-no'sis; skiz'o-trip'ah-no-so-mi'ah-sis) Chagas' disease.

Schizotrypanum cruzi (skiz'o-trip'ah-num kroo'ze) *Trypanosoma cruzi*.

schizozoite (skiz'o-zo'it) [*schizo-* + Gr. *zōon* animal] merozoite.

schlafkrankheit (shlahf-kron'kit) [Ger.] African trypanosomiasis.

schlammfieber (shlahm'fe-ber) [Ger. "slime fever"] a disease resembling leptospiral jaundice, due to *Leptospira grippotyphosa*, which prevailed among young persons who worked in the flooded districts near Breslau in the summer of 1891.

Schlatter's disease (sprain), operation (shlat'erz) [Carl Schlatter, surgeon in Zurich, 1864-1934] see *Osgood-Schlatter disease*, under *disease*, and see under *operation*.

Schlatter-Osgood disease (shlat'er-oz'good) [Carl Schlatter; Robert Bayley Osgood, Boston orthopedist, born 1873] Osgood-Schlatter disease.

Schlemm's canal, ligaments (shlemz) [Friedrich S. Schlemm, German anatomist, 1795-1858] see *sinus venosus sclerae*, and under *ligament*.

Schlepper (shlep'er) [Ger. "tugboat"] a substance that acts as a carrier for a nonimmunogenic or poorly immunogenic substance and induces a good immune response to the substance with which it has been chemically conjugated.

Schlesinger's sign (phenomenon) (shla'zing-erz) [Hermann Schlesinger, Austrian physician, 1866-1934] see under *sign*.

Schlösser's treatment (injection, method) (shles'erz) [Carl Schlösser, German ophthalmologist, 1857-1925] see under *treatment*.

schlusskoagulum (shluss'ko-ag'u-lum) [Ger.] the clot that closes the gap made in the uterine lining by the implanting blastocyst; closing coagulum.

Schmidel's anastomosis (shme'delz) [Casimir Christoph Schmidel, German anatomist, 1718-1792] see under *anastomosis*.

Schmidt's diet, syndrome, test (shmits) [Adolf Schmidt, physician in Bonn, 1865-1918] see under *diet*, *syndrome*, and *tests*.

Schmidt's fibrinoplastin (shmits) [Eduard Oskar Schmidt, German anatomist, 1823-1886] paraglobulin.

Schmidt-Lantermann incisures, segment (shmit'lahn'-ter-mahn') [Henry D. Schmidt, American anatomist, 1823-1888; A. J. Lantermann, American anatomist at Strassburg, 19th century] see *incisures of Lantermann*, under *incisure*, and *medullary segment*, under *segment*.

Schmincke tumor (shmin'kē) [Alexander Schmincke, German pathologist, 1877-1953] lymphoepithelioma.

Schmitz bacillus (shmits) [Karl Eitel Friedrich Schmitz, German physician, born 1889] *Shigella dysenteriae* type 2.

Schmorl's body, disease, nodule (shmorlz) [Christian Georg

- Schmorl*, German pathologist, 1861–1932] see under *body*, *disease*, and *nodule*.
- schmutzdecke** (shmoots/'dek-ě) [Ger.] the carpet-like layer of bacteria, algae, and other microorganisms which forms on the surface of a slow sand filter and which aids in purifying the water.
- Schnabel's caverns** (shnab/'elz) [Isidor *Schnabel*, Vienna ophthalmologist, 1842–1908] see under *cavern*.
- schnauzkrampf** (shnowts/'krampf) [Ger.] a facial grimace resembling pouting.
- Schneider's carmine** (shni/'derz) [Franz Coelestin *Schneider*, German chemist, 1813–1897] see under *carmine*.
- schneiderian membrane** (shni-de/'re-an) [Conrad Victor *Schneider*, German physician, 1614–1680] see under *membrane*.
- Schoemaker's line** (she/'mah-kerz) [Jan *Schoemaker*, Dutch surgeon, 1871–1940] see under *line*.
- Scholz's disease** (shöls/'ez) [Willibald Oscar *Scholz*, German neurologist, born 1889] see under *disease*.
- Schön's theory** (shänz) [Wilhelm *Schön*, German ophthalmologist, 1848–1917] see under *theory*.
- Schönbein's reaction, test** (shän/'bīnz) [Christian Friedrich *Schönbein*, German chemist, 1799–1868] see under *reaction* and *tests*.
- Schönlein's purpura (disease)** (shän/'linz) [Johann Lukas *Schönlein*, German physician, 1793–1864] purpura rheumatica.
- Schönlein-Henoch purpura (disease, syndrome)** (shän-'lin-hen/'ök) [J. L. *Schönlein*; Edouard Heinrich *Henoch*, German pediatrician, 1820–1910] see under *purpura*.
- Schott's treatment (bath)** (shots) [Theodor *Schott*, physician in Nauheim, 1850–1921] see under *treatment*.
- Schottmüller's disease** (shot/'mil-erz) [Hugo *Schottmüller*, physician in Hamburg, 1867–1936] paratyphoid, def. 2.
- schradan** (schra/'dan) octamethyl pyrophosphoramide.
- Schreger's bands, lines, striae** (shra/'gerz) [Bernhard Gottlob *Schreger*, German anatomist, 1766–1825] see *bands of Hunter-Schreger*, under *band*.
- Schreiber's maneuver** (shri/'berz) [Julius *Schreiber*, German physician, 1849–1932] see under *maneuver*.
- Schridde's disease, granules** (shrid/'ez) [Hermann August *Schridde*, German pathologist, born 1875] see under the nouns.
- Schroeder's disease** (shra/'derz) [Robert *Schroeder*, German gynecologist, 1884–1959] see under *disease*.
- Schroeder's syndrome** (shro/'derz) [Henry Alfred *Schroeder*, St. Louis physician, born 1906] see under *syndrome*.
- Schroeder's test** (shra/'derz) [Woldemar von *Schroeder*, German physician, 1850–1898] see under *tests*.
- Schroetter** see *Schrötter*.
- Schrön's granule** (shränz) [Otto von *Schrön*, German pathologist in Naples, 1837–1917] see under *granule*.
- Schrön-Much granules** (shrän-mook) [Otto von *Schrön*; Hans Christian *Much*, German physician, 1880–1932] *Much's granules*.
- Schroth's treatment** (shröts) [Johann *Schroth*, German physician, 1800–1856] see under *treatment*.
- Schrötter's catheter, chorea** (shret/'erz) [Leopold *Schrötter* von Kristelli, Viennese laryngologist, 1837–1908] see under *catheter*, and see *diaphragmatic chorea*, under *chorea*.
- Schuchardt's incision** (shoo/'karts) [Karl August *Schuchardt*, German surgeon, 1856–1901] paravaginal incision.
- Schüffner's dots (granules, punctuation, stippling)** (shif/'nerz) [Wilhelm August Paul *Schüffner*, German pathologist, 1867–1949] see under *dot*.
- Schüle's sign** (she/'lez) [Heinrich *Schüle*, German psychiatrist, 1839–1916] omega melancholicum.
- Schüller's disease (syndrome), phenomenon** (shil/'erz) [Arthur *Schüller*, Vienna neurologist, born 1874] see *Hand-Schüller-Christian disease*, under *disease*, see *osteoporosis circumscripta cranii*, and see under *phenomenon*.
- Schüller's method** (shil/'erz) [Karl Heinrich Anton Ludwig Max *Schüller*, surgeon in Berlin, 1843–1907] see under *method*.
- Schüller-Christian disease (syndrome)** (shil/'er-kris/'chan) [Arthur *Schüller*; Henry A. *Christian*, American physician, 1876–1951] *Hand-Schüller-Christian disease*.
- Schultz's angina (disease, syndrome)** (shoolt/'sez) [Werner *Schultz*, German internist, 1878–1947] agranulocytosis.
- Schultz-Charlton reaction (phenomenon, test)** (shooltsharl/'ton) [Werner *Schultz*; Willy *Charlton*, Berlin physician, born 1889] see under *reaction*.
- Schultz-Dale reaction** (shooltsh-däl) [Werner *Schultz*, German internist, 1878–1947; Sir Henry Hallett *Dale*, British physiologist and pharmacologist, born 1875] see under *reaction*.
- Schultze's bundle (tract), cells** (shoolt/'sez) [Max Johann Sigismund *Schultze*, German biologist, 1825–1874] see *interfascicular fasciculus*, under *fasciculus*, and *olfactory cells*, under *cell*.
- Schultze's fold** (shoolt/'sez) [Bernhard Sigismund *Schultze*, German gynecologist, 1827–1919] see under *fold*.
- Schultze's sign, type** (shoolt/'sez) [Friedrich *Schultze*, German physician, 1848–1934] see *Chvostek's sign*, under *sign*, *tongue phenomenon*, under *phenomenon*, and see (for type) under *acroparesthesia*.
- Schultze's test** (shoolt/'sez) [Ernst *Schultze*, Swiss chemist, 1860–1912] see under *tests*.
- Schultze-Chvostek's sign** (shoolt/'se-vos/'tek) [Friedrich *Schultze*; Franz *Chvostek*, Austrian surgeon, 1835–1884] *Chvostek's sign*.
- Schumm's test** (shoomz) [Otto *Schumm*, German chemist, born 1874] see under *tests*.
- Schürmann's test** (sher/'manz) [Walter *Schürmann*, German serologist, born 1880] see under *tests*.
- Schütz's micrococcus** (shitz/'ez) [Johann Wilhelm *Schütz*, German veterinarian, 1839–1920] *Streptococcus equi*.
- Schwabach's test** (shvah/'baks) [Dagobert *Schwabach*, otologist in Berlin, 1846–1920] see under *tests*.
- Schwalbe's corpuscles, etc.** (shvahl/'bez) [Gustav Albert *Schwalbe*, German anatomist, 1844–1917] see under *corpuscle*, *foramen*, *fissure*, *ring*, *sheath*, and *space*.
- Schwann's cell, membrane (sheath), nucleus, substance** (shvonz) [Theodor *Schwann*, German anatomist and physiologist, 1810–1882; professor of anatomy at Louvain, and the founder of the cell theory] see under *cell* and *nucleus*, and see *myelin* and *neurilemma*.
- schwannitis** (shwon-ni/'tis) schwannosis.
- schwannoglioma** (shwon-'o-gli-o/'mah) schwannoma.
- schwannoma** (shwon-no/'mah) a neoplasm originating from Schwann cells (of the myelin sheath) of neurons; schwannomas include neurofibromas and neurilemmomas. **granular cell s.**, see under *tumor*.
- schwannosis** (shwon-no/'sis) hypertrophy of the sheaths of Schwann.
- Schwartz's test** (shvarts/'es) [Charles Edouard *Schwartz*, French surgeon, born 1852] see under *tests*.
- Schwarz's test** (shvarts/'ez) 1. [Karl Leonhard Heinrich *Schwarz*, German chemist, 1824–1890] see under *tests* (def. 1). 2. [Gottwald *Schwarz*, German roentgenologist, 1880–1959] see under *tests* (def. 2).
- Schwediauer** (shva/'de-ow/'er) see *Swediauer*.
- Schweigger-Seidel sheath** (shvi/'ger-si/'del) [Franz *Schweigger-Seidel*, Leipzig physiologist, 1834–1871] see under *sheath*.
- schweinerotlauf** (shvi/'nē-rot/'lowf) [Ger.] swine erysipelas.
- schweineseuche** (shvi/'nē-zoi/'ke) [Ger.] hemorrhagic septicemia of swine.
- Schweitzer's reagent** (shvit/'serz) [Matthias Eduard *Schweitzer*, German chemist, 1818–1860] see under *reagent*.
- schwelle** (shvel/'ē) [Ger.] threshold, def. 1.
- Schweninger's method** (shven/'in-gerz) [Ernst *Schweninger*, German physician, 1850–1924] see under *method*.
- scia-** for other words beginning thus, see also those beginning *skia-*.
- sciage** (se-azh') [Fr.] a sawing movement in massage.
- scialyscope** (si-al/'i-sköp) an apparatus for throwing one image of an operative field into a darkened room separated from the operating room.
- sciatic** (si-at/'ik) [L. *sciaticus*; Gr. *ischiadikos*] pertaining to or located near the ischium, as the sciatic nerve or vein.
- sciatica** (si-at/'i-kah) [L.] a syndrome characterized by pain radiating from the back into the buttock and into the lower extremity along its posterior or lateral aspect, and most commonly caused by prolapse of the intervertebral disk; the term is also used to refer to pain anywhere along the course of the sciatic nerve.
- SCID** severe combined immunodeficiency disease.
- science** (si/'ens) [L. *scientia* knowledge] 1. the systematic observation of natural phenomena for the purpose of discovering laws governing those phenomena. 2. the body of knowledge accumulated by such means. **applied s.**, that concerned with the application of discovered laws to the matters of everyday living. **behavioral s.**, the interdisciplinary study of the behavior of man and lower animals for the purpose of understanding man as an individual and social being; it involves principally psychology, sociology, and anthropology, but also political science and other social sciences. **pure s.**, that concerned solely with the discovery of unknown laws relating to particular facts.
- scientist** (si/'en-tist) one learned in science, especially one active in some particular field of investigation.
- scieropia** (si-er-o/'pe-ah) [Gr. *skieros* shady + *ōps* eye + *-ia*] visual defect in which objects appear in a shadow.
- scilla** (sil/'ah) [L.] squill.
- scillabiose** (sil/'ah-bi/'ōs) glucosidorhamnose, C₁₂H₂₂O₁₀, obtained by acid hydrolysis of scillaren A.
- scillaren** (sil/'ah-ren) a mixture of cardioactive glycosides, scillaren A and B, from fresh squill.

scilliroside (sil'ir-o-sid) a cardioactive glycoside from red squill that is poisonous to rodents.

scillism (sil'izm) poisoning from squill.

scillitic (sil'it-ik) pertaining to squill.

scintigram (sin'ti-gram) scintiscan.

scintigraphic (sin'ti-graf'ik) pertaining to scintigraphy.

scintigraphy (sin-tig'rah-fe) the production of two-dimensional images of the distribution of radioactivity in tissues after the internal administration of radionuclide, the images being obtained by a scintillation camera. **thyroidal lymph node s.**, radioisotopic thyroidolymphography.

scintillascope (sin-til'ah-skōp) [L. *scintillaspark* + Gr. *skopein* to examine] spinthariscopes.

scintillation (sin'ti-la'shun) [L. *scintillatio*] 1. an emission of sparks. 2. a subjective visual sensation, as of seeing sparks. 3. a particle emitted in disintegration of a radioactive element; see also under *counter*.

scintiphotograph (sin'ti-fo'to-graf) a photograph made with a camera using scintillation energy sources.

scintiphotography (sin'ti-fo-tog'rah-fe) photography of the pattern of radioactivity of tissues after administration of radionuclides.

scintiscan (sin'ti-skan) a two-dimensional representation (map) of the gamma rays emitted by a radioisotope, revealing its varying concentration in a specific tissue of the body, such as the brain, kidney, or thyroid gland.

scintiscanner (sin'ti-skan'er) the system of equipment used in the making of a scintiscan.

sciopody (ski-op'o-de) unusually large feet, especially in children.

scirrho- (skir'o) [Gr. *skirrhos* hard] a combining form meaning hard, or denoting relationship to a hard cancer or scirrhous carcinoma.

scirrroid (skir'oid) [*scirrho-* + Gr. *eidōs* form] resembling scirrhous carcinoma.

scirrhoma (skir-ro'mah) [*scirrho-* + *-oma*] scirrhous carcinoma. **s. caminiano'rum**, chimney-sweeper's cancer, or soot cancer.

scirrhophthalmia (skir'of-thal'me-ah) [*scirrho-* + Gr. *ophthalmos* eye + *-ia*] scirrhous carcinoma of the eye.

scirrhous (skir'us) [L. *scirrhosus*] pertaining to or of the nature of a hard cancer; see also under *carcinoma*.

scirrhous (skir'us) [Gr. *skirrhos*] scirrhous carcinoma.

scission (sizh'un) [L. *scindere* to split] fission; splitting. In chemistry, the splitting of a molecule into two or more simpler molecules.

scissors (siz'erz) a cutting instrument with two opposed shearing blades. **canalicular s.**, delicate scissors with one of the blades probe pointed; used in slitting the lacrimal canal. **canula s.**, scissors used in slitting a canal lengthwise. **craniotomy s.**, strong f-shaped shears for use in opening the fetal head. **de Wecker's s.**, small scissors for operations on the eyeball, in which the blades are operated by pressure on two springs joined at the end like a pair of tweezers. **Fox s.**, delicate, fine-pointed scissors designed for use in interproximal areas of the mouth. **Liston's s.**, scissors for cutting plaster-of-Paris bandages. **Smellie's s.**, short, strong-bladed scissors with external cutting edges, used in craniotomy.

scissors-bite (siz'erz-bit') total lingual cross-bite of the mandible, with the mandibular teeth completely contained within the maxillary dental arch in habitual occlusion.

scissura (si-su'rah), pl. *scissurae* [L.] an incisure; a splitting.

Sc.L.A. abbreviation for L. *scapulolaeva anterior* (left scapulo-anterior; a presentation of the fetus).

Sclavo's serum (sklah'vōz) [Achille Sclavo, Italian physician, 1861-1930] see under *serum*.

sclera (skle'rah), pl. *sklerae* [L.; Gr. *skleros* hard] [NA] the tough white outer coat of the eyeball, covering approximately the posterior five-sixths of its surface, and continuous anteriorly with the cornea and posteriorly with the external sheath of the optic nerve. **blue s.**, a condition of unusual blueness of the sclera; it is a prominent feature of osteogenesis imperfecta, and is seen in certain other abnormalities.

scleradenitis (skle'rad-ē-ni'tis) [*sclero-* + Gr. *adēn* gland + *-itis*] inflammation and hardening of a gland.

scleral (skle'ral) pertaining to the sclera.

scleratitis (skle'rah-ti'tis) scleritis.

scleratogenous (skle'rah-toj'ē-nus) sclerogenous.

sclerectasia (skle'rek-ta'ze-ah) [*sclero-* + Gr. *ektasis* extension + *-ia*] a bulging out of the sclera.

sclerectasis (skle-rek'tah-sis) sclerectasia.

sclerecto-iridectomy (skle-rek'to-ir'i-dek'to-me) the operation of excision of a portion of the sclera and of the iris for glaucoma; called also *Lagrange's operation*.

sclerecto-iridodialysis (skle-rek'to-ir'i-do-di-al'i-sis) sclerectomy and iridodialysis.

sclerectome (skle-rek'tōm) an instrument for performing sclerectomy.

sclerectomy (skle-rek'to-me) [*sclero-* + Gr. *ektomē* excision] 1. excision of the sclera by scissors (Lagrange's operation), by punch (Holth's operation), or by trephining (Elliot's operation). 2. removal of the sclerosed parts of the middle ear after otitis media.

scleredema (skle'rē-de'mah) a chronic disorder of unknown etiology, occurring in both children and adults, characterized by progressive thickening and induration of the dermis, which is mainly a result of accumulation of metachromatic material in the ground substance between the collagen bundles; it typically begins on the nape and upper back and slowly extends downward and anteriorly. Although the disorder is not restricted to adults, it is also called *s. adultorum*, and sometimes, erroneously, *sclerema adultorum*. **s. adulto'rum**, **Buschke's s.**, **scleredema**. **s. neonato'rum**, **sclerema**.

sclerema (skle-re'mah) patchy or generalized progressive hardening of the subcutaneous fat, often with fatal outcome, occurring in infants predisposed by reason of prematurity, marasmus, hypothermia, gastrointestinal or respiratory infection, or gross malformations. The lesions are cold, yellowish, and boardlike. Called also *sclerema neonatorum*, and, erroneously, *scleredema neonatorum*. **s. adipo'sum**, **sclerema**. **s. adulto'rum**, **scleredema**. **s. neonato'rum**, **sclerema**.

sclerencephalia (skle'ren-sē-fa'le-ah) sclerencephaly.

sclerencephaly (skle'ren-sē-fa'le-ah) [*sclero-* + Gr. *enkephalos*] sclerosis of the brain.

sclerenchyma (skle'reng'kī-mah) [Gr. *sklēros* hard + *enchyma* infusion] supportive tissue occurring in many plant stems and roots, composed of thick-walled, usually dead cells impregnated with lignin. Cf. *collenchyma*.

sclerenchymatous (skle'reng-kim'ah-tus) of the nature of sclerenchyma.

sclererythrin (skle-rer'i-thrin) [*sclerotium* + Gr. *erythros* red] a red coloring matter from ergot.

scleriosis (skle-ri'ah-sis) [Gr. *sklēriasis*] a hardened state of an eyelid.

scleritomy (skle'rī-rit'o-me) [*sclera* + *iris* + Gr. *temnein* to cut] incision of the sclera and iris in anterior staphyloma.

scleritis (skle-ri'tis) [*sclera* + *-itis*] inflammation of the sclera; it may be superficial (*episcleritis*) or deep, the latter form causing bulging and thinning of the sclera. **annular s.**, scleritis occurring in a ring around the limbus of the cornea. **anterior s.**, inflammation of the sclera adjoining the limbus of the cornea. **branny s.**, scleritis involving a thickening of the periphery of the cornea. **nodular s.**, that marked by localized dark blue patches in the anterior portion of the sclera, resulting from the choroid being visible through a translucent sclera. **posterior s.**, scleritis involving the sclera and the underlying retina and choroid.

sclero- (skle'ro) [Gr. *sklēros* hard] a combining form meaning hard, often used especially to denote relationship to the sclera.

scleroadipose (skle'ro-ad'i-pōs) composed of fibrous and fatty tissue.

scleroblastema (skle'ro-blas-te'mah) [*sclero-* + *blastema*] the embryonic tissue which takes part in the formation of bone.

scleroblastic (skle'ro-blas-tem'ik) pertaining to the scleroblastema.

sclerocataracta (skle'ro-kat'ah-rak'tah) [*sclero-* + Gr. *katarrhaktēs* waterfall] a hard cataract.

scleroroiditis (skle'ro-ko'roi-di'tis) inflammation of the sclera and the choroid coat, resulting in atrophy of both coats and protrusion of the former. **s. ante'rior**, a form involving the anterior portions of the sclera and causing anterior staphyloma. **s. poste'rior**, a condition seen in progressive myopia in which posterior staphyloma occurs in the region of the optic disk.

scleroconjunctival (skle'ro-kon'junkt-i'val) pertaining to the sclera and conjunctiva.

scleroconjunctivitis (skle'ro-kon-junkt'i-vi'tis) inflammation of the sclera and the conjunctiva.

sclerocornea (skle'ro-kor'ne-ah) the sclera and the cornea considered as forming a single coat or layer.

sclerocorneal (skle'ro-kor'ne-al) pertaining to the sclera and the cornea.

sclerodactylia (skle'ro-dak-til'e-ah) sclerodactyly.

sclerodactyly (skle'ro-dak'ti-le) [*sclero-* + Gr. *daktylos* finger] localized scleroderma of the digits, as in acrosclerosis.

scleroderma (skle'ro-der'mah) [*sclero-* + Gr. *derma* skin] chronic hardening and shrinking of the connective tissues of any part of the body, including the skin, heart, esophagus, kidney, and lung. The skin may be thickened, hard, and rigid, and pigmented patches may occur. It may be generalized (*systemic* or *diffuse s.*) limited to the distal parts of the extremities and face (*acrosclerosis*) or to the digits (*sclerodactyly*), or localized to oval or linear areas a few centimeters across (*morphea*). **circumscribed s.**, **s. circumscrip'tum**, **morphea**. **diffuse s.**, **systemic s.** **generalized s.**, **systemic s.** **linear s.**, a form of morphea or circumscribed scleroderma in which the lesions occur in a line or

band. A single sagittal linear lesion (*en coup de sabre*) may occur on the scalp and forehead; single or multiple ribbon-like lesions may occur on the extremities, where they extend from the hip to heel or shoulder to hand (*scleroderma en bande*). Called also *linear morphea* or *morphea linearis*. **localized s.**, morphea. **systemic s.**, a form involving large areas of the body surface and internal structures, marked by increase and swelling of collagen fibers, loss or fragmentation of elastic elements, atrophy of rete pegs, deposition of melanin in the basal cells, and retention of calcium; called also *diffuse* or *generalized s.*, *progressive systemic sclerosis*, *diffuse systemic sclerosis*, and *systemic sclerosis*. Cf. *morphea*.

sclerodermatous (skle''ro-der'mah-tous) pertaining to or characterized by scleroderma.

sclerodesmia (skle''ro-des'me-ah) [*sclero-* + Gr. *desmos* ligament + *-ia*] hardening of ligaments.

sclerogenic (skle''ro-jen'ik) sclerogenous.

sclerogenous (skle-roj'ē-nus) [*sclero-* + Gr. *gennan* to produce] producing sclerosis or sclerous tissue.

sclerogummatous (skle''ro-gum'ah-tus) composed of fibrous and gummatous tissue.

scleroid (skle'roid) [*sclero-* + Gr. *eidos* form] having a hard texture.

scleroiditis (skle''ro-i-ri'tis) inflammation of the sclera and of the iris.

sclerokeratitis (skle''ro-ker'ah-ti'tis) 1. inflammation of the sclera and of the cornea. 2. sclerosing keratitis.

sclerokeratoiritis (skle''ro-ker'ah-to-i-ri'tis) inflammation of the sclera, cornea, and iris.

sclerokeratosis (skle''ro-ker'ah-to'sis) sclerokeratitis.

scleroma (skle-ro'mah) [Gr. *sklerōma* induration] a hardened patch or induration, especially of the nasal or laryngeal tissues. **s. respirato'rium**, rhinoscleroma.

scleromalacia (skle''ro-mah-la'she-ah) [*sclero-* + Gr. *malakia* softness] 1. degeneration and thinning (softening) of the sclera, occurring in patients with rheumatoid arthritis; called also *scleromalacia perforans*. 2. Kienbock's name for osteitis deformans.

scleromeninx (skle''ro-me'ninks) [*sclero-* + Gr. *mēninx* membrane] the dura mater.

scleromere (skle''ro-mēr) [*sclero-* + Gr. *meros* part] 1. any segment or metamere of the skeletal system. 2. the caudal half of a sclerotome (def. 3).

sclerometer (skle-rom'ē-ter) [*sclero-* + Gr. *metron* measure] an instrument for determining the hardness of substances.

scleromucin (skle''ro-mu'sin) a slimy, active principle from ergot.

scleromyxedema (skle''ro-mik'sē-de'mah) a variant of lichen myxedematosus which is characterized not only by a generalized eruption of nodules but also by diffuse thickening of the skin.

scleronychia (skle''ro-nik'e-ah) [*sclero-* + Gr. *onyx* nail + *-ia*] a simultaneous thickening and dryness of the nails.

scleronyxis (skle''ro-nik'sis) [*sclero-* + Gr. *nyxis* puncture] surgical puncture of the sclera.

sclero-oophoritis (skle''ro-o-ōf'o-ri'tis) sclerosing inflammation of an ovary.

sclero-oophoritis (skle''ro-o-ō-the-si'tis) sclero-oophoritis.

sclerophthalmia (skle''rof-thal'me-ah) [*sclero-* + Gr. *ophthalmos* eye + *-ia*] the condition in which, from imperfect differentiation of the sclera and cornea, the periphery of the cornea is opaque and only the central part remains clear.

scleroprotein (skle''ro-pro'te-in) [*sclero-* + *protein*] a simple protein which is characterized by its insolubility and fibrous structure, and which usually serves a supportive or protective function in the body; called also *albuminoid*.

sclerosal (skle-ro'sal) sclerous.

sclerosant (skle-ro'sant) a chemical irritant injected into a vein to produce inflammation and eventual fibrosis and obliteration of the lumen, used in the treatment of varicose veins.

sclerosarcoma (skle''ro-sar-ko'mah) [*sclero-* + Gr. *sarkōma* a fleshy excrescence.] a fibrosing sarcoma.

sclerose (skle-rōs') to become sclerotic; to harden.

sclerosed (skle-rōst') affected with sclerosis.

scélrose en plaques (skla-rōz' aw-plak') [Fr.] multiple sclerosis.

sclerosing (skle-rōs'ing) causing or undergoing sclerosis.

sclerosis (skle-ro'sis) [Gr. *sklērosis* hardness] an induration, or hardening; especially hardening of a part from inflammation and in diseases of the interstitial substance. The term is used chiefly for such a hardening of the nervous system due to hyperplasia of the connective tissue or to designate hardening of the blood vessels. **Alzheimer's s.**, presenile dementia. **amyotrophic lateral s.**, a disease marked by progressive degeneration of the neurons that give rise to the corticospinal tract and of the motor cells of the brain stem and spinal cord, and resulting in a deficit of upper and lower motor neurons; it usually ends fatally

within two to three years. Called also *Charcot's syndrome* and *Dejerine type*. **annular s.**, sclerosis of the spinal cord, forming a band around it. **anterolateral s.**, sclerosis of the ventral and lateral columns of the spinal cord, leading to spastic paraplegia; called also *ventrolateral s.* **arterial s.**, arteriocapillary s., arteriosclerosis. **arteriolar s.**, arteriosclerosis. **bone s.**, eburnation. **combined s.**, subacute combined degeneration of the spinal cord; see under *degeneration*. **dental s.**, regressive alteration in tooth substance with calcification of the dentinal tubules, caused by caries or abrasion or occurring with age, and producing translucent zones (transparent dentin). **diaphyseal s.**, diaphyseal dysplasia. **diffuse s.**, a form affecting large areas of the brain and spinal cord. **diffuse systemic s.**, systemic scleroderma. **disseminated s.**, multiple sclerosis. **endocardial s.**, see under *fibroelastosis*. **Erb's s.**, primary lateral spinal sclerosis; see under *lateral s.* **familial centrolobar s.**, a familial form of leukoencephalopathy (q.v.) occurring in early life and running a slowly progressive course into adolescence or adulthood. It is marked by nystagmus, ataxia, tremor, choreoathetotic movements, parkinsonian facies, dysarthria, and mental deterioration. Pathologically, there is diffuse demyelination in the white substance of the brain, which may involve the brain stem, cerebellum, and spinal cord. Called also *aplasia axialis extracorticalis congenita*, *hereditary central leukodystrophy*, and *Pelizaeus-Merzbacher disease*. **focal s.**, multiple s. **gastric s.**, linitis plastica. **hyperplastic s.**, a form of arteriosclerosis seen in small arteries and arterioles as a subintimal thickening of the wall of the vessel. **insular s.**, multiple s. **lateral s.**, a degeneration of the lateral columns of the spinal cord. It may occur as a *primary* affection, resulting in spastic paraplegia, attended with rigidity of the limbs, increase of the tendon reflexes, and absence of nutritive and sensory disturbance; called also *Erb's sclerosis*. Or it may be *secondary* to myelitis, in which there is spastic paraplegia, with sensory and other disturbances; called also *spastic spinal paralysis*. **lobar s.**, presence of narrow, scar-distorted convolutions over a large area (lobe) of the surface of the cerebral hemispheres; seen frequently in cerebral palsy. **Marie's s.**, hereditary form of cerebellar sclerosis. **miliary s.**, sclerosis occurring in minute spots. **Mönckeberg's s.**, see under *arteriosclerosis*. **multiple s.**, a disease in which there are patches of demyelination throughout the white matter of the central nervous system, sometimes extending into the gray matter. Typically, the symptoms of lesions of the white matter are weakness, incoordination, paresthesias, speech disturbances, and visual complaints. The course of the disease is usually prolonged, with remissions and relapses over a period of many years. The etiology is unknown. Called also *disseminated s.* and *insular s.* **Pelizaeus-Merzbacher s.**, familial centrolobar s. **posterior s.**, tabes dorsalis. **posterolateral s.**, subacute combined degeneration of spinal cord; see under *degeneration*. **presenile s.**, presenile dementia. **progressive systemic s.**, systemic scleroderma. **s. re'dux**, chancre redux. **renal arteriolar s.**, arteriosclerosis involving chiefly the renal arterioles, resulting in contracted kidney. **subendocardial s.**, endocardial fibroelastosis. **systemic s.**, see under *scleroderma*. **s. tubero'sa, tuberos s.**, a congenital familial disease characterized pathologically by tumors on the surfaces of the lateral ventricles and sclerotic patches on the surface of the brain and marked clinically by progressive mental deterioration and epileptic convulsions. There may be adenoma sebaceum, congenital tumor of the eye (phakoma), and tumors of the viscera, especially the kidney and heart muscle. Called also *Bourneville's disease* and *epiloia*. **unicellular s.**, the development of bands of fibrous material between the cells of a gland. **vascular s.**, arteriosclerosis. **valvular s.**, fibrous thickening of a cardiac valve, especially the mitral valve. **venous s.**, phlebosclerosis. **ventrolateral s.**, anterolateral s.

scleroskeleton (skle''ro-skel'ē-ton) [*sclero-* + *skeleton*] those parts of the bony skeleton that are formed by the ossification of ligaments, tendons, or fasciae.

sclerostenosis (skle''ro-stē-no'sis) [Gr. *sklēros* hard + *stenōsis* narrowing] induration or hardening combined with contraction.

Sclerostoma (skle-ros'to-mah) *Strongylus*. **S. duodena'le**, *Ancylostoma duodenale*. **S. syn'gamus**, *Syngamus trachea*.

sclerostomy (skle-ros'to-me) [*sclero-* + Gr. *stoma* opening] the surgical creation of an opening through the sclera; it is usually performed in the treatment of glaucoma.

sclerotherapy (skle''ro-ther'ah-pe) the injection of sclerosing solutions in the treatment of hemorrhoids or varicose veins.

sclerotic (skle-rot'ik) [L. *scleroticus*; Gr. *sklēros* hard] 1. hard, or hardening; affected with sclerosis. 2. sclera.

sclerotica (skle-rot'i-kah) [L.] sclera.

scleroticectomy (skle-rot'i-sek'to-me) sclerectomy.

scleroticochoroiditis (skle-rot'i-ko-ko'roid-i'tis) sclerochoroiditis.

scleroticonyxis (skle-rot'i-ko-nik'sis) scleronyxis.

scleroticopuncture (skle-rot'i-ko-punk'tūr) scleronyxis.

scleroticotomy (skle-rot'i-ko'to-me) sclerotomy.

Sclerotinia (skle/'ro-tin/'i-ah) a genus of ascomycetous fungi of the order Helotiales, family Sclerotiniaceae, which includes many pathogens of plants. Its imperfect (sexual) stage is *Monilia*.

Sclerotiniaceae (skle/'ro-tin-i-a/'she-e) a family of ascomycetes of the order Helotiales, series Pyrenomycetes, including the genus *Sclerotinia*.

sclerotitis (skle/'ro-ti/'tis) scleritis.

sclerotium (skle-ro/'she-um) the hard, thick-walled, blackish mass formed by certain fungi, such as the ergot of rye or the sclerotic cells seen in chromomycosis.

sclerotome (skle/'ro-tōm) 1. an instrument used in the incision on a bone giving attachment to the muscles from a single spinal segment. 2. one of the paired masses of mesenchymal tissue, separated from the ventromedial part of a somite, which develop into vertebrae and ribs.

sclerotomy (skle-rot/'o-me) [*sclero-* + Gr. *tomē* a cutting] surgical incision of the sclera. **anterior s.**, the surgical opening of the anterior chamber of the eye, chiefly done for the relief of glaucoma. **posterior s.**, an opening made into the vitreous through the sclera, as for detached retina or the removal of a foreign body.

sclerous (skle/'rus) hard; indurated.

sclerozone (skle/'ro-zōn) [*sclero-* + Gr. *zōnē* zone] any surface on a bone giving attachment to the muscles from a given myotome.

Sc.L.P. abbreviation for L. scapulo-laeva posterior (left scapulo-posterior; a presentation of the fetus).

S.C.M. State Certified Midwife.

scolecēs (sko/'lē-sēz) [L.] plural of *scolex*.

scoleciasis (sko-'lē-si/'ah-sis) [*scolecō-* + *-iasis*] the condition caused by the presence of larvae of moths or butterflies in the body.

scoleciform (sko-les/'i-form) resembling a scolex.

scolecō- (sko/'lē-ko) [Gr. *skōlēx* worm] a combining form denoting relationship to a worm.

scolecoid (sko/'lē-koid) [Gr. *skōlekoidēs* vermiform] 1. resembling a worm. 2. resembling a scolex; hydatid.

scolecology (sko/'lē-kol/'o-je) [*scolecō-* + *-logy*] helminthology.

scolex (sko/'leks), pl. *sco'leces* [Gr. *skōlēx* worm] the attachment (or holdfast) organ, of a tapeworm, generally considered the anterior, or cephalic end.

scolio- (sko/'le-o) [Gr. *skolios* twisted] a combining form meaning twisted or crooked.

scoliokyphosis (sko/'le-o-ki-'fo-sis) [*scolio-* + *kyphosis*] combined lateral (scoliosis) and posterior (kyphosis) curvature of the spine.

scoliorachitic (sko/'le-o-rah-'kit/'ik) affected with scoliosis and rickets.

scoliosimetry (sko/'le-o-se-om/'ē-tre) [*scoliosis* + Gr. *metron* measure] measurement of curvatures, especially those of the vertebral column.

scoliosis (sko/'le-o-'sis) [Gr. *skoliōsis* curvation] an appreciable lateral deviation in the normally straight vertical line of the spine. Cf. *kyphosis* and *lordosis*. **Brissaud's s.**, sciatic s. **cicatri-**

by empyema. **habit s.**, scoliosis due to improper posture. **inflammatory s.**, that which is due to vertebral disease. **ischiatric s.**, that which is due to hip disease. **myopathic s.**, paralytic s. **ocular s.**, **ophthalmic s.**, scoliosis attributed to tilting of the head on account of astigmatism or muscle imbalance. **osteopathic s.**, that which is caused by disease of the vertebrae. **paralytic s.**, lateral curvature of the spinal column due to muscle paralysis; called also *myopathic s.* **rachitic s.**, spinal curvature due to rickets. **rheumatic s.**, that which is due to rheumatism of the dorsal muscles. **sciatic s.**, a list of the lumbar part of the spine away from the affected side in sciatica; called also *Brissaud's s.* **static s.**, that which is due to difference in the length of the legs.

scoliosometer (sko/'le-o-som/'ē-ter) an apparatus for measuring curves, especially those of the spinal column.

scoliotic (sko/'le-ot/'ik) [Gr. *skoliōtos* looking askew] pertaining to or characterized by scoliosis.

scoliotone (sko/'le-o-tōn) an apparatus for the forcible correction of scoliosis.

Scelopendra (sko/'lo-pen/'drah) [Gr. *skolops* anything pointed] a genus of venomous centipedes of the class Chilopoda. The bite of some large species may produce a severe local inflammation attended with pain, glandular enlargement, vomiting, headache, vertigo, and fever. *S. he'ros* and *S. mor'sitans* are American species; *S. gigan'tea* is a tropical species.

scolopsia (sko-'lop/'se-ah) [Gr. *skolops* anything pointed] a suture between two bones that allows motion of one on the other.

scombrine (skom/'brīn) a protamine found in mackerel sperm.

scombroid (skom/'broid) 1. of or pertaining to the suborder Scombroidea. 2. a fish of the suborder Scombroidea. See also under *poisoning*.

Scombroidea (skom-'broi/'de-ah) a suborder of larger, bony, marine fish having oily flesh, including tunas, bonitos, mackerels, albacores, and skipjacks. The flesh of these fish may contain a toxic histamine-like substance and, if ingested, can cause a condition known as *scombroid poisoning* (q.v.).

scombrone (skom/'bron) a histone from spermatozoa of mackerel.

scombrototoxic (skom/'bro-toks/'ik) pertaining to or caused by the histamine-like toxin of scombroid fish; see *scombroid poisoning*, under *poisoning*.

scombrotxin (skom/'bro-toks/'in) the histamine-like toxin formed in scombroid fish by bacterial action; it causes scombroid poisoning.

scoop (skōōp) a spoonlike instrument for evacuating cavities. **Mules's s.**, a form of curet used in eye operations.

scopafungin (sko-pah-'fun/'jin) an antibacterial with antifungal properties derived from a variant of *Streptomyces hygroscopicus*.

scoparin (sko-pa/'rin) chemical name: 8-glycosyl-4',5',7'-trihydroxy-3'-methoxyflavone. A yellowish, crystalline diuretic principle, $C_{22}H_{22}O_{11}$, from scoparius, the tops of *Cytisus scoparius*.

scoparius (sko-pa/'re-us) the tops of *Cytisus scoparius*, (L.) Link. (Leguminosae), or broom, a leguminous shrub; they contain the alkaloid sparteine and the principle scoparin, and are diuretic, purgative, and emetic. Scoparius is also abused by being smoked for its euphoric properties.

-scope (skōp) [Gr. *skopein* to view, examine] a word termination meaning an instrument for examining or observing.

scopin (sko/'pin) a substance formed by the gentle hydrolysis of scopolamine. It is $OH \cdot C_8H_8O \cdot N \cdot CH_3$, and readily changes into oscine.

scopola (sko-po/'lah) the dried rhizome and larger roots of *Scopolia carniolica* Jacq. (Solanaceae). It contains the same constituents as belladonna, is used as an anticholinergic, and is a source of scopoletin.

scopolagnia (sko-'po-lag/'ne-ah) [Gr. *skopein* to view + *lagneia* lust] scopophilia.

scopolamine (sko-pol/'ah-mēn) chemical name: α -(hydroxymethyl)benzeneacetic acid 9-methyl-3-oxa-9-azatricyclo[3.3.1.0^{2,4}]non-7-yl ester. An anticholinergic alkaloid, $C_{17}H_{21}NO_4$, derived from several solanaceous plants, including *Atropa belladonna* L., *Hyoscyamus niger* L., *Datura* species, and *Scopolia* species. It has effects on the autonomic nervous system similar to those of atropine. Called also *hyoscine*. **s. hydrobromide** [USP], the trihydrate salt of scopolamine, $C_{17}H_{21}NO_4 \cdot HBr \cdot 3H_2O$, occurring as colorless or white crystals. It is used as a cerebral sedative, administered orally or subcutaneously, and as a cycloplegic and mydriatic, applied topically to the conjunctiva. **s. methylbromide**, methscopolamine bromide.

scopoletin (sko-pol/'ē-tin) 7-hydroxy-5-methoxycoumarin, a growth factor in plants obtained from scopola.

Scopolia (sko-po/'le-ah) [Johann-Antoni *Scopoli*, physician in Pavia, 1723-1788] a genus of solanaceous plants. *S. carniolica* *atropi'des* of Europe, and *S. japon'ica* and *S. lu'rida*, of Asia, have properties like those of *hyoscyamus* and *belladonna*.

scopometer (sko-pom/'ē-ter) [Gr. *skopein* to examine + *metron* measure] an instrument for measuring the turbidity of solutions, i.e., the density of a precipitate.

Scoliosis

cial s., that which is due to a cicatricial contraction following caries or necrosis. **coxitic s.**, scoliosis in the lumbar region caused by hip disease. **empyematic s.**, that which is caused

scopometry (sko-pom'ē-tre) measurement of the optical density of a precipitate to determine the amount of a substance in suspension.

scophilia (sko-po-fil'e-ah) [Gr. *skopein* to view + *philein* to love] voyeurism; the derivation of sexual pleasure from looking at another's genital organs (*active s.*). 2. exhibitionism; a morbid desire to be seen (*passive s.*).

scopophobia (sko'po-fō'be-ah) [Gr. *skopein* to view + *phobein* to be affrighted by] a morbid dread of being seen.

scoptolagnia (skop'to-lag'ne-ah) scopophilia.

scoptophilia (skop'to-fil'e-ah) scopophilia.

scoptophobia (skop'to-fō'be-ah) scopophobia.

Scopulariopsis (skop'u-la're-op'sis) a genus of imperfect fungi of the family Moniliaceae, order Moniliales. *S. brevicaulis* sometimes causes onychomycosis. Formerly called *Acaulium*.

scopulariopsosis (skop'u-la're-op-so'sis) infection with a fungus of the genus *Scopulariopsis*.

-scopy (skop'e) [Gr. *skopein* to examine] word termination meaning the act of examining.

scorbutic (skōr-bu'tik) [L. *scorbuticus*] pertaining to or affected with scurvy.

scorbutigenic (skōr-bu'ti-jen'ik) causing scurvy.

scorbutus (skōr-bu'tus) [L.] scurvy.

scordinema (skōr'dī-ne'mah) [Gr. *skordinēma*] yawning and stretching with a feeling of lassitude, occurring as a preliminary symptom of some infectious disease.

score (skōr) a rating, usually expressed numerically, based on achievement or the degree to which certain qualities are present.

Apgar s., a numerical expression of the condition of a newborn infant, usually determined at 60 seconds after birth, being the sum of points gained on assessment of the heart rate, respiratory effort, muscle tone, reflex irritability, and color. Cf. *recovery s.*

Bishop s., a score for estimating the prospects of induction of labor, arrived at by evaluating the extent of cervical dilatation, effacement, the station of the fetal head, consistency of the cervix, and the cervical position in relation to the vaginal axis.

recovery s., a number expressing the condition of an infant at various intervals, which should be stipulated, greater than 1 minute after birth, based on the same features assessed by the Apgar score at 60 seconds after birth.

scorings (skōr'ingz) small transverse lines caused by increased density of bone, seen in roentgenograms at the metaphysis of growing bones, and due to temporary cessation of growth.

scorpion (skōr'pe-on) an arthropod of warm countries, having a venomous sting. More important species are *Buthus quinquestratus* of Egypt, *Centruroides suffusus* of Mexico, *Euscorpium italicus*, or black scorpion, of Europe and North Africa, and *Tityus serrulatus* of Brazil.

scorpionism (skōr'pe-un-izm) poisoning by scorpion stings.

scoto- (sko'to) [Gr. *skotos* darkness] combining form denoting relationship to darkness.

scotochromogen (sko'to-kro'mo-jen) [*scoto-* + Gr. *chrōma* color + *gennan* to produce] a microorganism whose pigmentation develops in the dark as well as in the light; specifically, a member of Group II of the so-called "unclassified" mycobacteria, but applicable also to many other organisms.

scotochromogenic (sko'to-kro'mo-jen'ik) pertaining to or characterized by scotochromogenicity.

scotochromogenicity (sko'to-kro'mo-jē-nis'ti-te) the property of forming pigment in the dark, the coloration occurring irrespective of exposure to light.

scotodinia (sko'to-din'e-ah) [Gr. *skotos* darkness + *dinos* whirl] dizziness with blurring of vision and headache.

scotogram, scotograph (sko'to-gram; sko'to-graf) [Gr. *skotos* darkness + *graphein* to write] 1. roentgenogram. 2. the effect produced upon a photographic plate in the dark by certain substances.

scotographic (sko'to-graf'ik) affecting a photographic plate in the dark.

scotography (sko-tog'rah-fe) roentgenography.

scotoma (sko-to'mah), pl. *scotomata* [Gr. *skotōma*] 1. an area of depressed vision within the visual field, surrounded by an area of less depressed or of normal vision. 2. mental s. **absolute s.**, an area within the visual field in which perception of light is entirely lost. **annular s.**, a circular area of depressed vision in the visual field, surrounding the point of fixation. **arcuate s.**, an arc-shaped defect of vision arising in an area near the blind spot, and extending toward it. **aural s.**, **s. au'ris**, loss of ability to perceive auditory stimuli coming from a certain direction. **Bjerrum's s.**, a further development of Seidel's scotoma, the sickle-shaped defect contiguous to the blind spot extending above and below the fixation point and encircling it more or less completely. **central s.**, an area of depressed vision corresponding with the point of fixation and interfering with or entirely abolishing central vision. **centrocecal s.**, a horizontal oval defect in the field of vision situated between and embracing both the point of fixation and the blind spot. **color**

s., an isolated area of depressed or defective vision for color in the visual field. **flittering s.**, teichopsia. **insular s.**, an isolated area of defective or absent vision in the visual field, surrounded on all sides by more nearly normal vision. **mental s.**, in psychiatry, a figurative blind spot in a person's psychological awareness, the patient being unable to gain insight into and to understand his mental problems; lack of insight. See also *scotomization*. **motile s's**, positive scotomas occurring as a result of opacities in the vitreous, muscae volitantes being an example of such a defect. **negative s.**, a scotoma which appears as a blank spot or hiatus in the visual field; a blind spot. **paracentral s.**, an area of depressed vision situated near the point of fixation. **peripapillary s.**, an area of depressed vision in the visual field near that corresponding with the optic disk. **peripheral s.**, an area of depressed vision distant from the point of fixation, toward the periphery of the visual field. **physiologic s.**, that area of the visual field corresponding with the optic disk, in which the photosensitive receptors are absent. **positive s.**, one which appears as a dark spot in the visual field. **relative s.**, an area of the visual field in which perception of light is only diminished, or the loss is restricted to light of certain wavelengths. **ring s.**, annular s. **scintillating s.**, teichopsia. **Seidel's s.**, a further development of an arcuate scotoma, which extends at either or both ends, the concavity of the prolongation always being directed toward the fixation point.

scotomagraph (sko-to'mah-graf) [*scotoma* + Gr. *graphein* to write] an instrument for recording a scotoma.

scotomata (sko-to'mah-tah) plural of *scotoma*.

scotomatous (sko-tom'ah-tus) pertaining to or affected with scotoma.

scotometer (sko-tom'ē-ter) [*scotoma* + Gr. *metron* measure] an instrument for diagnosing and measuring scotomata. **Bjerrum's s.**, campimeter.

scotometry (sko-tom'ē-tre) the measurement of isolated areas of depressed vision (scotomata) within the visual field.

scotomization (sko'tō-mi-za'shun) [*scotoma* + Gr. *-izein* to make into] the development of scotomata, or blind spots, especially the development of mental scotomata (mental "blind spots"), the patient attempting to deny existence of everything which conflicts with his ego.

scotophilia (sko'to-fil'e-ah) [*scoto-* + Gr. *philein* to love] love of darkness; abnormal preference for night over day.

scotophobia (sko'to-fō'be-ah) [*scoto-* + Gr. *phobein* to be affrighted by] morbid fear of darkness.

scotophobin (sko'to-fō-bin) [*scoto-* + Gr. *phobein* to be affrighted by] a peptide composed of 15 amino acids that has been isolated from the brain tissue of rats and mice conditioned to fear the dark; on injection into normal rodents, it is said to induce fear of dark.

scotopia (sko-to'pe-ah) [*scoto-* + Gr. *ōpē* sight + *-ia*] night vision; see also *dark adaptation*.

scotopic (sko-top'ik) pertaining to night vision; said of an eye which has become adapted to the dark. See *dark adaptation*, under *adaptation*.

scotopsin (sko-top'sin) the protein moiety in the rods of the retina that combines with retinal (11-*cis* retinal) to form rhodopsin.

scotосcopy (sko-tos'ko-pe) [*scoto-* + Gr. *skopein* to examine] skiascopy.

scototherapy (sko'to-ther'ah-pe) [*scoto-* + Gr. *therapeia* treatment] treatment of disease by the complete exclusion of light rays.

scours (skowrz) diarrhea or dysentery, especially in newborn animals; see *white s.* **black s.**, acute dysentery in cattle, accompanied by intestinal hemorrhage producing a dark color of the feces; the etiology is unknown. **bloody s.**, black scours in swine. **calf s.**, white scours in calves. **peat s.**, molybdenum poisoning in grazing cattle. **white s.**, an acute infectious disease of calves, lambs, and foals during the first few days after birth, caused by enteropathogenic strains of *Escherichia coli* and marked by fever, dehydration, depression, and diarrhea, with fetid feces that are light in color but may be blood-stained late in the disease. **winter s.**, black scours occurring in cattle when stabled for the winter.

scr. scruple.

scrapie (skra'pe) one of the transmissible spongiform viral encephalopathies occurring in sheep and goats, characterized by severe pruritus, debility, and muscular incoordination, and invariably ending fatally.

scratches (skrach'ez) eczematous inflammation of the feet of a horse.

screeat (skre-a'tus) [L.] paroxysmal hawking and snorting, due to neurosis.

screen (skrēn) 1. a structure resembling a curtain or partition, used as a protection or shield; such a structure used in fluoroscopy; or such a structure on which light rays are projected. 2. to examine by *fluoroscopy* (Great Britain). 3. an agent that affords defense against a deleterious influence, such as a substance

applied to the skin (*skin s.*) to protect against the effects of the sun's rays (*solar s.*) or other noxious influences; called also *protectant* and *protective*. **Bjerrum s.**, tangent s. **fluorescent s.**, 1. a sheet of cardboard, paper, or glass coated with suitable material, which fluoresces visibly, as calcium tungstate, used as an intensifying screen in roentgenography; as the chief part of a fluoroscope; as a substitute for a fluoroscope in a darkened room. 2. a sheet of cardboard, paper, or glass coated with anthracene or other fluorescing materials to observe the ultraviolet radiations. **intensifying s.**, a thin sheet of celluloid or other substance coated with a finely divided substance which fluoresces under the influence of roentgen rays and intended to be used in close contact with the emulsion of a photographic plate or film for the purpose of reinforcing the image. **tangent s.**, a large square of black cloth, stretched on a frame, hung from a roller, and having a central mark for fixation; used with a campimeter to map the field of vision. Called also *Bjerrum screen*. **vestibular s.**, a screen made of acrylic resin that covers the labial or buccal surface of one or both dental arches, extending into the vestibule; it is used to treat oral habits and to stimulate tooth movement.

screening (skrēn'ing) 1. mass examination of the population to detect the existence of a particular disease, as diabetes or tuberculosis. 2. fluoroscopy (Great Britain). **multiphasic s.**, **multiple s.**, the simultaneous use of multiple laboratory procedures for the detection of various diseases, or pathologic conditions, as anemia, diabetes, heart diseases, hypertension, syphilis, and tuberculosis and other pulmonary diseases.

screwworm (skru'werm) the larva of *Cochliomyia hominivorax*.

scribomania (skrib'o-ma'ne-ah) graphorrhea.

scrobiculate (skro-bik'u-lāt) [L. *scrobiculatus*] marked with pits or cavities.

scrobiculus (skro-bik'u-lus) [L. "little trench," "pit"] a small hollow, pit, or cavity. **s. cor'dis**, fossa epigastrica.

scrofula (skrof'u-lah) [L. "brood sow"] primary tuberculosis of the cervical lymph nodes; it may be accompanied by slowly suppurating abscesses and fistulous passages (scrofuloderma), the inflamed structures being subject to a cheesy degeneration. It is essentially a disease of early life. See also *tuberculous lymphadenitis*, under *lymphadenitis*.

scrofuloderma (skrof'u-lo-der'mah) [*scrofula* + Gr. *derma* skin] suppurating abscesses and fistulous passages opening on the skin, secondary to tuberculosis of lymph nodes, most commonly those of the neck (scrofula), and sometimes of bones and joint surfaces. It is essentially a disease of early life. Called also *tuberculosis cutis colliquativa*.

scrofulous (skrof'u-lus) pertaining to or characterized by scrofuloderma or scrofula.

scrotal (skro'tal) pertaining to the scrotum.

scrotoctomy (skro-tek'to-me) [*scrotum* + Gr. *ektomē* excision] excision of a portion of the scrotum.

scrotitis (skro-ti'tis) inflammation of the scrotum.

scrotocele (skro'to-sēl) [*scrotum* + Gr. *kelē* hernia] scrotal hernia.

scrotoplasty (skro'to-plas'te) [*scrotum* + Gr. *plassein* to form] plastic operation on the scrotum.

scrotum (skro'tum) [L. "bag"] [NA] the pouch which contains the testes and their accessory organs. It is composed of skin, the dartos, the spermatic, cremasteric, and infundibuliform fasciae, and the tunica vaginalis. **s. lapillo'sum**, calcareous atheroma of the scrotum. **lymph s.**, elephantiasis scroti. **watering-can s.**, a condition in which the under surface of the scrotum and the perineum are marked by multiple sinuses discharging urine; due to neglected stricture of the perineal urethra.

scruple (skroo'p'l) [L. *scrupulus*, dim. of *scrupus* a sharp stone, a worry or anxiety] 1. a fear of transgression. 2. a unit of mass (weight) of the apothecaries' system, being 20 grains, or the equivalent of 1.296 gm. Abbreviated scr.; symbol ℥.

scrupulosity (skroo'pu-los'i-te) morbid sensitiveness in matters of conscience; preoccupation with transgressions of religious ritual as a manifestation of obsessive-compulsive disorder.

S.C.S. Society of Clinical Surgery.

scultetus (skul-te'tus) [named for Johann Schultes (Scultetus), German surgeon, 1595–1645] scultetus bandage, a many-tailed binder; see under *bandage*.

scurvy (skur've) [L. *scorbutus*] a condition due to deficiency of ascorbic acid (vitamin C) in the diet and marked by weakness, anemia, spongy gums, a tendency to mucocutaneous hemorrhages and a brawny induration of the muscles of the calves and legs. **hemorrhagic s.**, infantile scurvy. **infantile s.**, a nutritional disease of infants characterized by the same symptoms as scurvy in adults; called also *Barlow's disease*. **sea s.**, true scurvy; so called because it was most often seen in mariners.

scute (skūt) [L. *scutum* shield] 1. any squama or scalelike structure. 2. the tympanic scute. **tympanic s.**, the bony plate which divides the upper part of the tympanic cavity from the mastoid cells.

scutiform (sku'ti-form) [L. *scutum* shield + *forma* form] shaped like a shield; thyroid.

scutular (sku'tu-lar) marked by scutula, or small, saucer-shaped crusts.

scutulum (sku'tu-lum), pl. *scutula* [L.] one of the disklike or saucer-like crusts characteristic of favus.

scutum (sku'tum) [L. "shield"] 1. the tympanic scute. 2. the thyroid cartilage. 3. the patella. 4. a hard chitinous plate on the anterior portion of the dorsal surface of the Ixodidae, or hard-bodied ticks. **s. pec'toris**, the sternum.

scybala (sib'ah-lah) [Gr.] plural of *scybalum*.

scybalous (sib'ah-lus) of the nature of or composed of scybala.

scybalum (sib'ah-lum), pl. *scybala* [Gr. *skybalon*] a dry, hard mass of fecal matter in the intestine.

scyllite (sil'it) a hexose from the liver and kidneys of sharks, skates, etc.

scyllitol (sil'i-tol) the 2-isomer of inositol isolated from the dog fish, *Scyllum canicula*, as well as from sharks and rays.

scymnol (sim'nol) a bile alcohol, C₂₇H₄₈O₅, with a 24:26-epoxy group, and a ring-system similar to that of cholic acid; found in the bile of *Scymnus borealis*, a marine fish of the shark family, and in other elasmobranchii.

scyphoid (si'foid) [Gr. *skyphos* cup + *eidos* form] shaped like a cup.

scythropasmus (si'thro-paz'mus) [Gr. *skythrōpasmōs*; *skythōpazein* to look sullen] a dull, fatigued expression, regarded as a grave symptom in serious disease.

scytoblastema (si'to-blas-te'mah) [Gr. *skytos* skin + *blastēma* sprout] the rudimentary skin of the embryo.

Scytonema (si'to-ne'mah) [Gr. *skytos* skin + *nēma* thread] a genus of blue-green algae with cylindrical branching filaments.

S.D. skin dose; standard deviation.

S.D.A. abbreviation for L. *sacroder'tra antērior* (right sacroanterior; a presentation of the fetus), and specific dynamic action.

S.D.E. specific dynamic effect (or action); see under *action*.

S.D.P. abbreviation for L. *sacroder'tra poste'rior* (right sacroposterior; a presentation of the fetus). abbreviation for L. *sacroder'tra transversa* (right sacrotransverse; a presentation of the fetus).

S.E. standard error.

SE sphenothmoidal suture, a cephalometric landmark designating the junction of the sphenoid and ethmoid bones, in the anterior cranial base.

Se chemical symbol for selenium.

seal (sēl) something that effects a firm closure. **border s.**, the contact of the denture border with the underlying or adjacent tissues to prevent the passage of air or other substances. **double s.**, a seal consisting of gutta-percha underneath another material (e.g., temporary cement); used to close the coronal opening in a tooth during endodontic treatment. **posterior palatal s.**, the seal at the posterior border of a denture produced by displacing some of the soft tissue covering the palate by extra pressure developed in the impression or by scraping a depression in the cast. **velopharyngeal s.**, closure between the oral and nasopharyngeal cavities, accomplished by the action of the muscles of the soft palate and the superior constrictor muscle.

seam (sēm) a line of union. **pigment s.**, the portion of the pigmented epithelium of the iris which bends forward around the pupillary border.

searcher (surch'er) a sound used in searching for stone in the bladder; called also *stone searcher*.

seasickness (se'sik-nes) nausea and malaise caused by the motion of a ship at sea.

seat (sēt) a supporting structure. **basal s.**, oral tissues which support a complete or partial denture. **rest s.**, see under *area*.

seatworm (sēt'werm) any oxyurid, especially *Enterobius vermicularis*.

seaweed (se'wēd) a plant growing in the sea, especially one of the algae.

sebaceous (sē-ba'shus) [L. *sebaceus*] 1. pertaining to sebum. 2. secreting a greasy lubricating substance, sebum. See under *gland*.

sebiferous (sē-bif'er-us) [L. *sebiferus*, from *sebum* suet + *ferre* to bear] sebiparous.

Sebileau's bands, hollow (seb'i-lōz') [Pierre Sebileau, French surgeon, 1860–1953] see under *band* and *hollow*.

sebiparous (sē-bip'ah-rus) [L. *sebiparus*; *sebum* suet + *parere* to produce] producing a fatty secretion.

S.E.B.M. Society for Experimental Biology and Medicine.

sebolith (seb'o-lith) [*sebum* + Gr. *lithos* stone] a concretion formed in a sebaceous gland.

seborrhea (seb'o-re'ah) [L. *sebum* suet + Gr. *rhoia* flow] 1. excessive secretion of sebum; called also *hypersteatosis*. 2. seborrheic dermatitis. **s. adipo'sa**, that in which the secretion is oily, especially occurring about the nose and forehead; called also *s. oleo'sa*. **s. congesti'va**, lupus erythematosus. **s. oleo'sa**, seborrhea adiposa. **s. sic'ca**, dry, scaly seborrheic dermatitis.

seborrheal (seb'o-re'al) characterized by or pertaining to seborrhea.

seborrheic (seb'o-re'ik) affected with or of the nature of seborrhea.

seborrheid (seb'o-re'id) seborrheic dermatitis.

seborrhoea (seb'o-re'ah) seborrhea.

seborrhoic (seb'o-ro'ik) seborrheic.

sebotropic (seb'o-trop'ik) having an affinity for or a stimulating effect on sebaceous glands; promoting the excretion of sebum.

sebum (se'bum) [L.] 1. suet. 2. the secretion of the sebaceous glands; a thick, semifluid substance composed of fat and epithelial debris from the cells of the malpighian layer. **cutaneous s.**, **s. cuta'neum**, the fatty secretion of the sebaceous glands. **s. palpebra'le**, the secretion of the tarsal glands.

Secale (se-ka'le) [L. "rye"] a genus of graminaceous plants. **S. cerea'le**, the common rye.

secale cornutum (se-ka'le kor-nu'tum) the name under which ergot was adopted in the first edition of the U.S.P.

secalin (sek'ah-lin) one of the active principles of ergot; said to be identical with trimethylamine, $N(CH_3)_3$.

secalintoxin (sek'ah-lin-tok'sin) a principle obtainable from ergot.

secalose (sek'ah-lös) a carbohydrate obtainable from rye; when dried, it forms a white, hygroscopic powder, convertible by inversion into levulose.

Sechenoff's center (setsh'en-ofs) see *Setschenow*.

seclazone (sek'lah-zön) chemical name: 7-chloro-3,3a-dihydro-2H,9H-isorazolo[3,2-b][1,3]benzoxazin-9-one; an anti-inflammatory with uricosuric properties, $C_{14}H_8ClNO_3$.

secobarbital (se'ko-bar'bi-tal) [USP] chemical name: 5-(1-methylbutyl)-5-(2-propenyl)-2,4,6(1H,3H,5H)pyrimidinetrione. A short-acting barbiturate, $C_{12}H_{14}N_2O_3$, occurring as a white, amorphous or crystalline powder; used as a hypnotic and sedative, administered orally. Called also *quinalbarbitone*. **s. sodium** [USP], the monosodium salt of secobarbital, $C_{12}H_{13}N_2NaO_3$, occurring as a white powder, having the actions and uses of the base; administered orally, intravenously, and intramuscularly.

secodont (se'ko-dont) [L. *secare* to cut + Gr. *odont* tooth] having teeth in which the tubercles of the molars are provided with cutting edges, as in many carnivorous mammals.

Seconal (sek'ö-nol) trademark for preparations of secobarbital.

second (sek'und) the unit of time equal to $\frac{1}{60}$ of a minute.

milliampere s's, in radiographic exposure technique, the product of the milliamperes and the time in seconds.

secondary (sek'un-der'e) [L. *secundarius*; *secundus* second] second or inferior in order of time, place, or importance; derived from or consequent to a primary event or thing.

second intention (sek'und in-ten'shun) see under *healing*.

secreta (se-kre'tah) [L. pl.] secretion products.

secretagogue (se-kre'tah-gog) [secretion + Gr. *agōgos* drawing] 1. stimulating secretion. 2. an agent that stimulates secretion.

secrete (se-kre'te) [L. *secernere*, *secretum* to separate] to separate or elaborate cell products.

secretin (se-kre'tin) a strongly basic polypeptide hormone secreted by the mucosa of the duodenum and jejunum when acid chyme enters the intestine. Carried by the blood, it stimulates the secretion of a watery pancreatic juice high in salt content but low in enzymes. It has a lesser stimulatory effect on bile and intestinal secretion. See also *S cells* (def. 2), under *cell*. **gastric s.**, former term for gastrin.

secretinase (se-kre'ti-nās) an enzymic substance in blood and other body fluids which inactivates secretin.

secretion (se-kre'shun) [L. *secretio*, from *secernere* to secrete] 1. the process of elaborating a specific product as a result of the activity of a gland; this activity may range from separating a specific substance of the blood to the elaboration of a new chemical substance. 2. any substance produced by secretion. **antilytic s.**, saliva secreted by the submaxillary gland with nerves intact, as distinguished from that secreted when the nerve is divided. **external s.**, one that is discharged upon an external or internal surface of the body; the glands of external secretion are the exocrine glands (q.v.). Cf. *internal s.* **internal s.**, any of the specific substances (hormones) that are not discharged by a duct from the body, but are given off into the blood and lymph, and effect a response distant from the site of origin. Such substances are secreted by the organs and structures of the endocrine system (q.v.). Cf. *external s.* **paralytic s.**, secretion from a gland after paralysis or division of its nerve.

secretagogue (se-kre'to-gog) secretagogue.

secretoinhibitory (se-kre'to-in-hib'i-to're) inhibiting secretion; antisecretory.

secretomotor (se-kre'to-mo'tor) exciting or stimulating secretion; said of nerves.

secretomotory (se-kre'to-mo'tor-e) secretomotor.

secretor (se-kre'tor) in genetics, an individual who secretes the

ABH antigens of the ABO blood group in the saliva and other body fluids. Also, the gene that determines this trait.

secretory (se-kre'to-re) pertaining to secretion or affecting the secretions.

sectarian (sek-ta're-an) a practitioner of medicine who "follows a dogma, tenet, or principle based on the authority of its promulgator to the exclusion of demonstration and practice" (Judicial Council A.M.A.).

sectile (sek'til) [L. *sectilis*, from *secare* to cut] 1. susceptible of being cut. 2. one of several parts into which a whole is divided.

sectio (sek'she-o), pl. *sectio'nes* [L., from *secare* to cut] 1. an act of cutting. 2. a section; [NA] a general term for a segment or subdivision of an organ. **s. al'ta**, suprapubic cystotomy. **s. cadav'eris**, necropsy. **sectio'nes cerebel'li** [NA], the various internal anatomical subdivisions of the cerebellum. **sectio'nes corpo'rum quadrigemino'rum**, the anatomical divisions of the corpora quadrigemina. **sectio'nes hypoth'alami** [NA], the various internal anatomical subdivisions of the hypothalamus. **sectio'nes isth'mi**, see *sectiones mesencephali*. **s. latera'lis**, lateral lithotomy. **s. media'na**, median lithotomy. **sectio'nes medul'lae oblonga'tae** [NA], the various internal anatomical subdivisions of the medulla oblongata. **sectio'nes medul'lae spina'lis** [NA], the various internal anatomical subdivisions of the spinal cord. **sectio'nes mesence'phali** [NA], the various internal anatomical subdivisions of the mesencephalon. **sectio'nes pedun'culi cer'ebri**, sectiones mesencephali. **sectio'nes pon'tis** [NA], the various internal anatomical subdivisions of the pons. **sectio'nes telence'phali** [NA], the various internal anatomical subdivisions of the telencephalon. **sectio'nes thalamence'phali** [NA], the various internal anatomical subdivisions of the thalamencephalon.

section (sek'shun) [L. *sectio*] 1. an act of cutting. 2. a cut surface. 3. a segment or subdivision of an organ; called also *sectio* [NA]. **abdominal s.**, laparotomy. **celloidin s.**, a section cut by a microtome from tissue that has been embedded in celloidin. **cesarean s.**, incision through the abdominal and uterine walls for delivery of a fetus. The procedure was included (*lex cesarea*) in the codification of Roman law in 715 B.C., as a means of salvaging a fetus, if living, or of providing for its separate burial, in event of the mother's death. **cesarean s., cervical**, cesarean section in which the lower uterine segment is incised, either intraperitoneally or extraperitoneally. **cesarean s., classic**, cesarean s., corporeal, cesarean section in which the upper segment, or corpus, of the uterus is incised. **cesarean s., extraperitoneal**, cesarean section performed without incision of the peritoneum, the peritoneal fold being displaced upward and the bladder being displaced downward or to the midline, the uterus then being opened by an incision in its lower segment. **cesarean s., Latzko's**, extraperitoneal cesarean section with the incision made through one side of the lower segment of the uterus. **cesarean s., low**, cesarean s., cervical. **cesarean s., Porro** (obs.), cesarean s. **cesarean s., transperitoneal**, cesarean section performed with an incision through the uterovesical fold of peritoneum. **cesarean s., vaginal**, cesarean section performed through an incision through the anterior vaginal wall into the uterine cavity. **coronal s.**, frontal s. **frontal s.**, a section parallel with the long axis of the body and at right angles to a sagittal section; it divides the body into a dorsal and ventral part. Called also *coronal s.* **frozen s.**, a section cut by a microtome from tissue that has been frozen. **paraffin s.**, a section cut by a microtome from tissue which has been embedded in paraffin. **perineal s.**, external urethrotomy. **Pitres' s's**, a series of six coronal sections through the brain: a *prefrontal* section, through the prefrontal part of the frontal lobe; two *frontal* sections, the first being 2 cm. in front of the central sulcus (*pediculofrontal s.*), and the second being through the precentral gyrus; two *parietal* sections, one through the postcentral gyrus, and the other (*pediculoparietal s.*) 3 cm. behind the central sulcus; and an *occipital* section, through the middle of the occipital lobe. **Saemisch's s.**, Saemisch's operation. **sagittal s.**, a section that follows the sagittal suture and runs the entire length of the body, thus dividing the latter into more or less equal right and left halves. **serial s.**, histologic section made in a consecutive order and so arranged for the purpose of microscopical examination. **transverse s.**, one made at right angles to the long axis of a body or structure.

sectiones (sek'she-o'nēz) [L.] plural of *sectio*.

sector (sek'tor) [L. "cutter"] 1. the area of a circle included between an arc and the radii bounding it. 2. an area, zone, or part of something. 3. to divide into sectors.

sectorial (sek-to're-al) [L. *sector* cutter] 1. pertaining or relating to a sector. 2. in genetics, pertaining to the presence of a sector of tissue which carries a somatic mutation and which is therefore different phenotypically from the tissues of the rest of the body; also, an individual having such a sector of tissue (a mosaic). 3. cutting or adapted for cutting, as the molar teeth of carnivores.

secundigravida (se-kun'di-grav'i-dah) [L. *secundus* second + *gravid* pregnant] a woman pregnant for the second time; written *gravida II*.

secundina (se/'kun-di'nah), pl. *secundi'nae* [L., from *secundus* following] that which follows; see *secundines*. **s. oc'uli**, the middle coat of the choroid. **s. u'teri**, the chorion.

secundinae (se/'kun-di'ne) [L.] plural of *secundina*; secundines.

secundines (se-kun'dinz, se-kun-dēnz) [L. *secundinae*] the placenta and membranes expelled after childbirth; the afterbirth.

secundipara (se/'kun-dip'ah-rah) [L. *secundus* second + *parere* to bring forth, produce] a woman who has had two pregnancies which resulted in viable offspring; written para II or II-para.

secundiparity (se-kun'di-par'i-te) the condition of being a secundipara.

secundiparous (se/'kun-dip'ah-rus) having borne two viable offspring in separate pregnancies.

secundum artem (se-kun'dum ar'tem) [L.] in an approved or professional manner.

securinine (se-ku'ri-nēn) an alkaloid, $C_{13}H_{15}NO_2$, obtained from the leaves and roots of *Securinea suffruticosa* Rehder (Euphorbiaceae); its nitrate salt is used in neuroathenic states and cardiac insufficiency, and in the treatment of impotence.

S.E.D. skin erythema dose.

sedation (se-da'shun) [L. *sedatio*] the production of a sedative effect; the act or process of calming.

sedative (sed'ah-tiv) [L. *sedativus*] 1. allaying activity and excitement. 2. an agent that allays excitement. **Battley's s.**, a solution made up of extract of opium, boiling water, alcohol, and cold water. **cardiac s.**, one that abates the force of the heart's action. **cerebral s.**, one which principally affects the brain. **gastric s.**, one which soothes or lessens irritability of the stomach. **general s.**, one which affects all the organs and functions. **intestinal s.**, one which diminishes intestinal irritation; in general, they are also gastric sedatives. **nerve trunk s.**, one which acts upon the trunks of the nerves. **nervous s.**, a sedative which acts upon and through the nervous system; the cerebral, spinal, and nerve trunk sedatives belong to this class. **respiratory s.**, one which affects especially the respiratory centers and organs. **spinal s.**, any drug which abates the functional or abnormal activity of the spinal cord. **vascular s.**, one which affects the vasomotor activities.

sedentary (sed'en-ter'e) [L. *sedentarius*] 1. sitting habitually; of inactive habits. 2. pertaining to a sitting posture.

Sédillot's operation (sa-de-yōz') [Charles Emmanuel Sédillot, French surgeon, 1804–1883] see under *operation*.

sediment (sed'i-ment) [L. *sedimentum*] a precipitate, especially one that is formed spontaneously. **urinary s.**, the deposit of solid matter left after the urine has been allowed to stand for some time.

sedimentable (sed'i-ment'ah-b'l) in microbiology, capable of forming sediment.

sedimentation (sed'i-men-ta'shun) the act of causing the deposit of sediment, especially by the use of a centrifugal machine. **erythrocyte s.**, the sinking of red cells in a volume of drawn blood; see *erythrocyte sedimentation rate*, under *rate*. **formalin-ether s. (Ritchie)**, a technique for detecting parasites in the feces, involving the centrifugation of diluted feces, the addition of formalin and ether to the sample, recentrifugation, and examining the final sediment as a wet mount.

sedimentator (sed'i-men-ta'tor) a centrifugal machine for separating sediments from the urine.

sedoepetose (se'do-pep'tōs) a monosaccharide occurring in herbs of the genus *Sedum*.

seed (sēd) 1. the mature ovule of a flowering plant. 2. semen. 3. a small cylindrical shell of gold or other suitable material, used in application of radiation therapy. 4. to inoculate a culture medium with microorganisms. **cardamom s.** [NF], the dried ripe seed of *Elettaria cardamomum*, a perennial herb of the ginger family of tropical Asia; used as a flavoring agent. **celery s.**, see *Apium*. **larkspur s.**, see *Delphinium*. **plantago s.** [USP], **psyllium s.**, the cleaned dried, ripe seed of *Plantago psyllium*, *P. indica*, or *P. ovata*, used as a fecal softener. The mucilaginous portion of the seeds of *P. ovata* are used in preparing psyllium hydrophilic mucilloid. **radiogold** (^{198}Au s.), a solid piece of radioactive gold wire about 2.5 mm. long and 0.8 mm. thick, used as a permanent interstitial radioactive implant in the treatment of cancer. **radon s.**, a small sealed container or tube for carrying radon, made of gold or glass for insertion into tissues for the treatment of certain malignant diseases; it is visible roentgenographically.

Seeligmüller's sign (za'lik-mil'arz) [Otto Ludovicus G. A. Seeligmüller, German neurologist, 1837–1912] see under *sign*.

Seessel's pouch (pocket) (za'selz) [Albert Seessel, American embryologist and neurologist, 1850–1910] see under *pouch*.

Séglas type (sa-glaz') [Jules Ernest Séglas, French psychiatrist, 1856–1939] see under *type*.

segment (seg'ment) [L. *segmentum* a piece cut off] a portion of a larger body or structure, set off by natural or arbitrarily established boundaries. **bronchopulmonary s.**, one of the smaller subdivisions of the lobes of the lungs; see *segmenta bronchopulmonalia*. **cranial s's**, three segments into which

the bones of the cranium may be divided; they are distinguished as the occipital, the parietal, and the frontal. **frontal s.**, the anterior of the three cranial segments. **hepatic s's**, segmenta hepatis. **interannular s.**, the portion of a nerve fiber between two consecutive nodes of Ranvier. **s's of kidney**, segmenta renalia. **s's of liver**, segmenta hepatis. **medullary s.**, a division of the medullary sheath of a nerve fiber between two Schmidt-Lanterman incisures. **mesoblastic s.**, **mesodermal s.**, a somite. **neural s.**, a neuromere. **occipital s.**, the posterior of the three cranial segments. **parietal s.**, the central of the three cranial segments. **primitive s.**, **protopo-vertebral s.**, somite. **pubic s. of the pelvis**, that portion of the floor of the pelvis which is between the symphysis pubis and the anterior wall of the vagina, which latter it includes. **Ranvier's s's**, the portions of the medullary substance of a nerve fiber between the nodes of Ranvier. **renal s's**, segmenta renalia. **rivianian s.**, **s. of Rivinus**, an irregular notch at the upper border of the tympanic sulcus; called also *incisura tympanica* [Rivini]. **rod s.**, the two segments which make up one of the rods of the retina; the *outer rod s.* is the portion presenting a uniform diameter, while the *inner rod s.* has a slightly increased diameter. **sacral s.**, that portion of the floor of the pelvis which lies between the sacrum and the posterior vaginal wall. **Schmidt-Lanterman s.**, medullary s. **spinal s.**, a portion of the spinal cord to which a pair of spinal nerves is attached by dorsal and ventral roots. **uterine s.**, either of the portions into which the uterus becomes differentiated early in labor: the upper contractile portion (corpus uteri) becomes thicker as labor advances, and the lower noncontractile portion is thin-walled and passive in character.

segmenta (seg-men'tah) [L.] plural of *segmentum*.

segmental (seg-men'tal) pertaining to or forming a segment or a product of division, especially into serially arranged or nearly equal parts; undergoing segmentation.

segmentation (seg'men-ta'shun) 1. division into parts more or less similar, such as somites or metameres. 2. cleavage. **haustral s.**, the formation of pouches in the wall of the large intestine, by alternating contraction and relaxation of circular muscle fibers. It keeps the intestinal contents plastic and assists in propelling them toward the rectum.

segmenter (seg'ment-er) a malarial organism of the stage in which it divides into merozoites in the blood cell. See also *schizont*.

Segmentina (seg'men-ti'nah) a genus of fresh-water snails of the Orient; *S. hemisphaerula*, *S. trochoideus*, and *S. largillierti* are first intermediate hosts of the intestinal fluke *Fasciolopsis buski*.

segmentum (seg-men'tum), pl. *segmen'ta* [L.] a portion of a larger body or structure; [NA] a general term for a part of an organ or other structure set off by natural or arbitrarily established boundaries. **segmen'ta bronchopulmona'lia** [NA], bronchopulmonary segments: the smaller subdivisions of the lobes of the lungs, separated by connective tissue septa and supplied by branches of the respective lobar bronchi. Called also *lobuli pulmonum*. They include: RIGHT LUNG—(*superior lobe*) s. apicale, s. posterius, and s. antierius; (*middle lobe*) s. laterale and s. mediale; (*inferior lobe*) s. apicale (or superius), s. basale mediale (or cardiacum), s. basale antierius, s. basale laterale, and s. basale posterius; LEFT LUNG—(*superior lobe*) s. apicoposterius, s. antierius, s. lingulare superius, and s. lingulare inferius; (*inferior lobe*) s. apicale (or superius), s. subapicale (or subsuperius), s. basale mediale (or cardiacum), s. basale antierius, s. basale laterale, and s. basale posterius. See Plate accompanying *lung*. **segmen'ta hep'atis** [NA], hepatic segments: subdivisions of the hepatic lobes based on arterial and biliary supply and venous drainage; they are the *segmentum antierius* and s. *posterius* of the right lobe, and the s. *mediale* and s. *laterale* of the left lobe. **segmen'ta rena'lia** [NA], renal segments: subdivisions of the kidney that have independent blood supply from branches of the renal artery; they are: *segmentum superius*, s. *antierius superius*, s. *antierius inferius*, s. *inferius*, and s. *posterius*.

segregation (seg're-ga'shun) 1. in genetics the separation of allelic genes during meiosis as homologous chromosomes begin to migrate toward the poles of the cell, so that eventually the members of each pair of allelic genes go to separate gametes. 2. the separation of different elements of a population. 3. the progressive restriction of potencies in the zygote to the various regions of the forming embryo.

segregator (seg're-ga'tor) an instrument for securing the urine from each kidney separately. **Cathelin's s.**, an appliance inserted into the bladder, separating the cavity into two parts so that the urine from each ureter may be collected separately. **Harris' s.**, an instrument for collecting the urine from each kidney separately. **Luy's s.**, an instrument for collecting the urine from each kidney separately.

Séguin's signal symptom (sign) (sa-ganz') [Edouard Séguin, French alienist, 1812–1880] see under *symptom*.

Sehrt's clamp (compressor) (särts) [Ernst Sehrt, German surgeon, born 1879] see under *clamp*.

Seidel's scotoma (sign) (si'delz) [Erich Seidel, German ophthalmologist, 1882–1948] see under *scotoma*.

Seidelin bodies (si'dē-lin) [Harold *Seidelin*, British physician] see under *body*.

Seidlitz powder, powder test (sid'litz) [named from a mineral spring in Bohemia] see under *powder* and *tests*.

Seignette's salt (sin-yets') [Pierre *Seignette*, apothecary in Rochelle, 1660-1719] potassium sodium tartrate.

seisesthesia (sis'es-the'ze-ah) seismesthesia.

seismesthesia (sis'mes-the'ze-ah) [Gr. *seismos* a shaking + *aisthēsis* perception + -ia] tactile perception of vibrations in a liquid or aerial medium.

seismocardiogram (siz'mo-kar'de-o-gram') the graphic record obtained by seismocardiography.

seismocardiography (siz'mo-kar'de-og'rah-fe) [Gr. *seismos* a shaking, shock + *kardia* heart + *graphē* representation by means of lines] the selective recording of cardiac vibrations.

seismotherapy (siz'mo-ther'ah-pe) [Gr. *seismos* a shaking + *therapē*] the treatment of disease by mechanical vibration.

seizure (se'zhur) 1. the sudden attack or recurrence of a disease. 2. an attack of epilepsy. See also *ictus*. **absence s.**, an epileptic seizure marked by a momentary break in the stream of thought and activity, accompanied by a symmetrical 3-c.p.s. spike and wave activity on the electroencephalogram; called also *petit mal epilepsy*. **audiogenic s.**, an epileptic seizure brought on by sound. **cerebral s.**, an attack of epilepsy. **febrile s.**, convulsions associated with high fever, occurring in infants and children. **jackknife s.**, a severe myoclonus appearing in the first 18 months of life and associated with general cerebral deterioration; it is marked by severe flexion spasms of the head, neck, and trunk and extension of the arms and legs. Called also *infantile massive spasms*. **photogenic s.**, an epileptic seizure brought on by light. **psychic s.**, psycholepsy. **psychomotor s.**, psychomotor epilepsy. **uncinate s.**, see under *epilepsy*.

sejunction (se-junk'shun) an interruption of the continuity of association complexes which leads to a breaking up of the personality (Wernicke).

sekisanine (sek-is'ah-nin) an alkaloid, C₁₆H₁₉O₄N, from *Lycoris radiata*.

selachian (sē-la'ke-an) one of a class of vertebrates which includes the sharks and rays.

selection (sē-lek'shun) the play of forces that determines the relative reproductive performance of the various genotypes in a population. **artificial s.**, the interference by man in the selection of the genotypes to produce succeeding generations of a given organism. **natural s.**, the survival in nature of those individuals and their progeny best equipped to adapt to environmental conditions. **sexual s.**, natural selection in which certain characteristics attract male or female members of a species, thus ensuring survival of those characteristics. **truncate s.**, in medical genetics, the selection of families in a population in such a way that one or more kinds of sibships are not ascertained, usually those sibships in which no member is affected with the trait under study.

selective (sē-lek'tiv) having a high degree of selectivity.

selectivity (sē-lek-tiv'i-te) in pharmacology, the degree to which a dose of a drug produces the desired effect in relation to adverse effects.

selene (sē-le'ne) [L.; Gr. *selēnē* moon] a moon-shaped object or structure. **s. unguis** ["moon of the nails"], lunula unguis.

selenide (sel'ē-nid) a compound of selenium with another element or radical.

selenium (sē-le'ne-um) [Gr. *selēnē* moon] a nonmetallic element resembling sulfur; symbol, Se; atomic number, 34; atomic weight, 78.96. It is an essential mineral, being a constituent of the enzyme glutathione peroxidase, and believed to be closely associated with vitamin E in its functions, but it occurs in toxic levels in several kinds of plants growing in soil with high levels, causing disease in grazing animals (see *selenium poisoning*, under *poisoning*). **s. sulfide** [USP], the sulfide salt of selenium, SeS₂, occurring as a reddish brown to bright orange powder; used as a topical antifungal in the treatment of tinea versicolor, as a topical keratolytic, and applied topically to the scalp to control seborrheic dermatitis and dandruff.

selenodont (sē-le'no-dont) [Gr. *selēnē* moon + *odont* tooth] having posterior teeth on which the individual cusps assume a crescentic outline, as in many herbivorous mammals.

selenomethionine (sel'en-o-mē-thi'o-nēn) methionine in which selenium replaces the sulfur atom; the radioactive form (⁷⁵Se) is used in tests of tissue uptake of methionine.

Selenomonas (se'le-no-mo'nas) a genus of microorganisms of the family Spirillaceae, suborder Pseudomonadineae, order Pseudomonadales, made up of motile, kidney- to crescent-shaped cells with blunt ends. It includes three species, *S. palpitans*, *S. ruminantium*, and *S. sputigena*.

selenoplegia, selenoplexia (sē-le'no-ple'je-ah; sē-le'no-plek'-se-ah) [Gr. *selēnē* moon + *plēxis* stroke] a morbid condition once believed to be due to the influence of the moon's rays.

selenosis (se'le-no'sis) selenium poisoning; see under *poisoning*.

self (self) an expression used by Burnet and Fenner to denote an animal's own antigenic constituents, in contrast to "not self," denoting foreign antigenic constituents. The "self" constituents are metabolized without antibody formation, whereas the antigens which are "not self" are eliminated through the immune response mechanism. It was postulated that there exists some mechanism of "self recognition" which enables the organism to distinguish between "self" and "not self."

self-differentiation (self'dif-er-en'she-a'shun) perseverance in a course of development by a part independently of outside influences or changed surroundings.

self-digestion (self'di-jes'chun) autodigestion; autolysis (def. 1).

self-fermentation (self'fer-men-ta'shun) autolysis; (def. 1); autodigestion.

self-fertilization (self'fer-tī-lī-za'shun) the fusion of male and female gametes from the same individual.

self-hypnosis (self'hip-no'sis) hypnosis by autosuggestion.

self-inductance (self'in-duk'tans) the property of an electric circuit which determines, for a given rate of change of current in the circuit, the electromotive force induced in the circuit itself.

self-infection (self'in-fek'shun) autoinfection.

selling (self'ing) continuous cross-fertilization between different proglottids of the same tapeworm.

self-limited (self-lim'it-ed) limited by its own peculiarities, and not by outside influence; said of a disease that runs a definite limited course.

self-suspension (self'sus-pen'shun) the suspension of the body by the head and axillae (*axillocephalic s.*) or by the head (*cephalic s.*) for the purpose of stretching the vertebral column.

self-tolerance (self-tol'er-ans) immunological tolerance to self-antigens; called also *horror autotoxicus*. See also *clonal selection theory*, under *theory*.

selfwise (self'wiz) developing in a previously determined manner despite transplantation to a new and strange location; said of embryonic cells or tissue. Cf. *neighborwise*.

Selivanoff's (Seliwanow's) test (reaction) [Feodor Fedorovich *Selivanoff*, Russian chemist, born 1859] see under *tests*.

sella (sel'ah), pl. *sel'lae* [L.] a saddle-shaped depression. **s. turcica** [NA], a transverse depression crossing the midline on the superior surface of the body of the sphenoid bone, and containing the hypophysis.

sellae (sel'e) [L.] plural of *sella*.

sellanders (sel'an-derz) malanders.

seller (sel'ar) pertaining to the sella turcica.

Sellards' test (sel'ardz) [Andrew Watson *Sellards*, American physician, born 1884] see under *tests*.

Selsun (sel'sun) trademark for a preparation of selenium sulfide. **S. Blue**, trademark for a preparation of selenium sulfide.

Selter's disease (sel'terz) [Paul *Selter*, German pediatricist, born 1866] acrodynia.

semantic (se-man'tik) pertaining to or affecting the meanings or significance of words.

semantics (se-man'tiks) [Gr. *sēmantikos* significant, from *sēma* a sign] the study of the meanings of words and the rules of their use; the study of the relationship between language and significance.

semasiology (se-ma'se-ol'o-je) semantics.

Semb's operation (sāmz) [Carl *Semb*, Oslo surgeon, born 1895] see under *operation*.

semeiography (se'mi-og'rah-fe) [Gr. *sēmeion* sign + *graphein* to write] a description of the signs or symptoms of disease.

semeiology (se'mi-ol'o-je) [Gr. *sēmeion* sign + -logy] symptomatology.

semeiotic (se'mi-ot'ik) [Gr. *sēmeiōtikos*] 1. pertaining to the signs or symptoms of disease. 2. pathognomonic.

semeiotics (se'mi-ot'iks) symptomatology.

semelincident (sem'el-in'si-dent) [L. *semel* once + *incidens* falling upon] attacking only once, as an infectious disease which induces immunity thereafter.

semelparity (sem'el-par'i-te) [L. *semel* once + *parere* to bear] the state, in an individual organism, of reproducing only once in a lifetime.

semelparous (sem-el'pah-rus) pertaining to or characterized by semelparity.

semen (se'men), gen. *sem'inis* [L. "seed"] 1. any seed or seedlike fruit. 2. the thick, whitish secretion of the reproductive organs in the male; composed of spermatozoa in their nutrient plasma, secretions from the prostate, seminal vesicles, and various other glands, epithelial cells, and minor constituents. **s. con'tra**, santonica.

semenologist (se'mē-nol'o-jist) seminologist.

semenology (se'mē-nol'o-je) seminology.

semenuria (se'mē-nu're-ah) seminuria.

semi- (sem'e) [L. *semis* half] a prefix signifying one half, or partly.

semiantigen (sem'e-an'ti-jen) half antigen.

semiapochromat (sem'e-ap'o-kro'mat) [*semi-* + *apo-* + *chromatic* aberration] semiapochromatic objective.

semiachromatic (sem'e-ap'o-kro-mat'ik) see under *objective*.

semicanal (sem'e-kah-nal') a channel which is open on one side; called also *semicanalis*. **s. of auditory tube**, *semicanalis tubae auditivae*. **s. of humerus**, *sulcus intertubercularis humeri*. **s. of tensor tympani muscle**, *semicanalis musculi tensoris tympani*.

semicanales (sem'e-kah-na'lēz) [L.] plural of *semicanalis*.

semicanalis (sem'e-kah-na'lis), pl. *semicana'les* [L.] semicanal: a channel which is open on one side. **s. mus'culi tenso'ris tym'pani** [NA], semicanal of tensor tympani muscle: a small canal hidden in the temporal bone, constituting the superior part of the musculotubal canal, and lodging the tensor tympani muscle. **s. tu'bae audi'ti'vae** [NA], semicanal of auditory tube: a small canal in the temporal bone, opening on the inferior surface of the skull just posterior and superior to the foramen spinosum. It constitutes the inferior part of the musculotubal canal and lodges the auditory tube.

semicartilaginous (sem'e-kar'ti-laj'i-nus) partially cartilaginous.

semicoma (sem'e-ko'mah) a stupor from which the patient may be aroused.

semicomatose (sem'e-ko'mah-tōs) in a condition of semicoma.

semicrista (sem'e-kris'tah), pl. *semicris'tae* [L.] a small or rudimentary crest. **s. incis'i'va**, *crista nasalis maxilla*.

semidecussation (sem'e-de'kus-sa'shun) 1. an incomplete crossing of nerve fibers. 2. *decussatio pyramidum*.

semidiagrammatic (sem'e-di'ah-grah-mat'ik) partly diagrammatic; modified so as to illustrate a principle, rather than to serve as an exact copy of nature.

semiflexion (sem'e-flek'shun) 1. the position of a limb midway between flexion and extension. 2. the act of bringing to such a position.

semifluctuating (sem'e-fluk'chu-āt'ing) giving a somewhat fluctuating sensation on palpation.

semiglutin (sem'e-gloo'tin) a substance, $C_{55}H_{85}N_{17}O_{22}$, derived from gelatin and resembling a peptone.

Semih. abbreviation for L. *semitio'ra*, half an hour.

Semikon (sem'i-kon) trademark for preparations of methapyrilene.

semilunar (sem'e-lu'nar) [L. *semilunaris*; *semi-* half + *luna* moon] resembling a crescent, or half-moon.

semilunare (sem'e-lu-na're) [L.] the second bone of the first row of carpal bones, counting from the thumb side (*os lunatum* [NA]).

semiluxation (sem'e-luk-sa'shun) subluxation.

semimembranous (sem'e-mem'brah-nus) made up in part of membrane or fascia.

seminal (sem'i-nal) [L. *seminalis*] pertaining to seed or to the semen.

seminarcosis (sem'e-nar-ko'sis) twilight sleep.

semination (sem'i-na'shun) [L. *seminatio*] insemination.

seminiferous (se'mi-ni'fer-us) [L. *semen* seed + *ferre* to bear] producing or conveying semen.

seminin (se'min-in) a proteolytic enzyme of human semen.

seminologist (se'mi-nol'o-jist) a specialist in the study of semen and spermatozoa.

seminology (se'mi-nol'o-je) the scientific study of the semen, in relation to the possible causes of infertility in the male.

seminoma (se'mi-no'mah) [*semen* + *-oma*] a radiosensitive, malignant neoplasm of the testis, thought to be derived from primordial germ cells of the sexually undifferentiated embryonic gonad, and occurring as a gray to yellow-white nodule or mass; three histologic variants are recognized: *classical* (typical), the most common type; *anaplastic*; and *spermatocytic*. The classical tumor is composed of fairly well-differentiated sheets or cords of uniform polygonal or round cells (seminoma cells), each cell having abundant clear cytoplasm, distinct cell membranes, a centrally placed round nucleus; and one or more nucleoli. In the female, a grossly and histologically identical neoplasm, known as *dysgerminoma*, occurs. **ovarian s.**, a dysgerminoma of an ovary.

seminormal (sem'e-nor'mal) of one-half the normal or standard strength.

seminose (sem'i-nōs) mannose.

seminuria (se'mi-nu're-ah) [L. *semen* seed + Gr. *ouron* urine + *-ia*] the presence of semen in the urine.

semiography (se'me-og'rah-fe) semeiography.

semiology (se'me-ol'o-je) symptomatology.

semiorbicular (sem'e-or-bik'u-lar) semicircular.

semiotic (se'mi-ot'ik) semeiotic.

semiparasite (sem'e-par'ah-sit) an organism having potential pathogenicity, occurring both as a saprophyte and as a parasite.

semipenniform (sem'e-pen'i-form) penniform on one side; said of a muscle the fibers of which are attached to one side of the tendon.

semipermeable (sem'e-per'me-ah-b'l) permitting the passage of certain molecules and hindering that of others; see under *membrane*.

semiplacenta (sem'e-plah-sen'tah) Strahl's term for a placenta in certain animals in which the fetal and maternal sections of the organ can be separated without tearing.

semiplegia (sem'e-ple'je-ah) hemiplegia.

semipronation (sem'e-pro-na'shun) 1. the act of bringing to a semiprone position. 2. a semiprone position.

semiprone (sem'e-prōn') [L. *semis* half + *pronus* prone] partly prone; see *Sims's position*, under *position*.

semiquantitative (sem'i-kwon'ti-ta'tiv) yielding an approximation of the quantity or amount of a substance; falling short of a quantitative result.

semiquinone (sem'e-kwin'ōn) a free radical derived from quinones or quinone imines by the addition of a single H atom to a molecule.

semirecumbent (sem'e-re-kum'bent) reclining but not completely recumbent.

semis (se'mis) [L.] half; abbreviated ss.

semisideratio (sem'e-sid'er-a'she-o) hemiplegia.

semisomnus (sem'e-som'nus) semicoma.

semisopor (sem'e-so'por) semicoma.

semispeculum (sem'e-spek'u-lum) a blunt gorget shaped like a half-speculum, used in lithotomy.

semistarvation (sem'e-star-va'shun) the so-called hunger cure.

semisulcus (sem'e-sul'kus) [L. *semis* half + *sulcus* furrow] a slight channel on the edge of a bone or other structure, which unites with a similar channel on a corresponding adjoining structure to form a complete sulcus.

semisupination (sem'e-su'pī-na'shun) 1. a position of partial or incomplete supination. 2. the act of bringing to such a position.

semisupine (sem'e-su'pīn) partly but not completely supine.

semisynthetic (sem'e-sin-thet'ik) produced by chemical manipulation of naturally occurring substances.

semitendinous (sem'e-ten'dī-nus) in part having a tendinous structure.

semivalent (sem-iv'ah-lent) (*obs.*) having one-half the power which is normal.

Semmelweis (sem'el-vīs), Ignaz Philipp (1818–1865). A Hungarian physician, who in Vienna (1847–1849) proved that puerperal fever is a form of septicemia, thus becoming the pioneer of antiseptis in obstetrics. The contagiousness of puerperal fever had been affirmed by Oliver Wendell Holmes of Boston in 1843, and important observations had been made even earlier by Alexander Gordon of Aberdeen and Charles White of Manchester.

Semon's law, sign (se'monz) [Sir Felix Semon, German laryngologist in London, 1849–1921] see under *law* and *sign*.

Semon-Hering hypothesis, theory (za'mon-ha'ring) [Richard Wolfgang Semon, German naturalist, 1859–1918; Ewald Hering, German physiologist, 1834–1918] see *mnemonic theory*, under *theory*.

Semoxydrine (sem-ok'sī-drin) trademark for a preparation of methamphetamine hydrochloride.

Semple's treatment, vaccine (sem'p'lz) [Sir David Semple, British physician, 1856–1937] see under *treatment* and *vaccine*.

semustine (sē-mus'tēn) chemical name: *N*-(2-chloroethyl)-*N'*-(4-methylcyclohexyl)-*N*-nitrosourea; an antineoplastic, $C_{10}H_{18}ClN_3O_2$.

Senakot (sen'ah-kot) trademark for preparations of senna.

Senear-Usher syndrome (se-nēr'ush'er) [Francis Eugene Senear, Chicago dermatologist, 1889–1958; Barney Usher, Canadian dermatologist, born 1899] pemphigus erythematousus.

senecifolin (sen'ē-sif'o-lin) a poisonous alkaloid, $C_{18}H_{27}O_8N$, of *Senecio*, found in the vascular bundles of the young plant before flowering.

Senecio (sē-ne'she-o) [L. "old man"] a genus of composite-flowered plants. *S. aureus* L. (golden ragwort) and related species were once used as emmenagogues, but are now listed as poisonous to livestock; they contain senecine, senecifoline, and similar alkaloids. **S. jaco'bae** L. (Compositae), a species causing Pictou's disease in horses and cattle in Nova Scotia; also known as *Tansy ragwort*.

senega (sen'e-gah) [L.] the dried root of *Polygala senega* L. (Polygalaceae), seneca or senega snakeroot, a plant of North America, the main constituents of which are polygalic acid and senegenin; expectorant and emetic. It has been used in veterinary medicine as an expectorant.

senegenin (sen/'ē-jen'in) a bitter saponin, $C_{30}H_{42}ClO_6$, which is an active principle of senega; called also *polygalin*.

senescence (se-nēs'ens) [L. *senescere* to grow old] the process or condition of growing old, especially the condition resulting from the transitions and accumulations of the deleterious aging processes. Cf. *aging*. **dental s.**, deterioration of the teeth and other oral structures as a consequence of advancing age or of premature aging processes.

senescent (se-nēs'ent) exhibiting senescence.

Sengstaken-Blakemore tube (senz/'ta-ken-blāk'mōre) [Robert William Sengstaken, American neurosurgeon, born 1923; Arthur H. Blakemore, American surgeon, born 1897] see under *tube*.

senile (se'nīl) [L. *senilis*] pertaining to or characteristic of old age; manifesting senility.

senilism (se'nīl-izm) premature old age.

senility (sē-nīl'i-te) [L. *senilitas*] old age; the physical and mental deterioration associated with old age.

senium (se'ne-um) [L. "the weakness of old age"] old age; the period of life marked by the weaknesses and deterioration that may accompany advanced years.

Senn's bone plates, operation (senz) [Nicholas Senn, American surgeon, 1844-1908] see under *operation* and *plate*; see also *Kader-Senn operation*, under *operation*.

senna (sen'ah) [USP], the dried leaflets of *Cassia senna* L. (*Allexandria senna*) or of *C. angustifolia* Vahl. (India or Tinnevely senna), (Leguminosae). They contain sennoside A and B, glycosides of rhein, and chrysophanic acid. Used chiefly as a cathartic.

sennoside (sen'o-sid) either of two anthraquinone glucosides, sennoside A and B, found in senna. A mixture of *sennosides A and B* [USP] is used as a cathartic, administered orally.

senograph (se'no-graf) the apparatus used in senography; also, the resultant film.

senography (se-nog'rah-fe) a low voltage, constant-potential x-ray technique designed especially for mammography.

senopia (se-no'pe-ah) [L. *senium* old age + Gr. *ōpē* sight + *-ia*] an apparent decrease in presbyopia in the elderly, which is related to the development of nuclear sclerosis and resultant myopia; called also *second sight*.

sensation (sen-sa'shun) [L. *sensatio*] an impression conveyed by an afferent nerve to the sensorium. **articular s.**, the sensation produced by the contact of moving joint surfaces. **cincture s.**, zonesthesia. **common s.** (Gemeingefühl), the general feeling superinduced by the summation of all the bodily sensation (E. H. Weber, 1846). **concomitant s.**, a secondary sensation, developed, without special stimulation, along with a primary sensation. **cutaneous s.**, dermal s. **delayed s.**, a sensation which is not perceived until some time after the application of the stimulation. **dermal s.**, a sensation that arises from a receptor situated in the skin. **epigastric s.**, a peculiar, weak, sinking or anxious feeling localized in the stomach; a visceral sensation of undefined nature. **external s.**, the effect produced upon the mind by an external object through the medium of the senses. **general s.**, a sensation felt throughout the body. **girdle s.**, zonesthesia. **gnostic s's**, sensations that are perceived by the more recently developed senses, such as those of light touch and the epicritic sensibility to muscle, joint, and tendon vibrations; called also *new sensations*. **internal s.**, a sensation perceptible only to the subject himself, and not connected with any object external to his body. **joint s.**, articular s. **light s.**, the sensation produced when radiant energy of wavelength from 400 to 760 mμ enters a normal eye. **negative s.**, the condition produced by a stimulation below the threshold. **new s's**, gnostic s's. **objective s.**, external s. **palmesthetic s.**, pallesthesia. **primary s.**, a sensation which is the direct result of the reception of a stimulus. **referred s.**, **reflex s.**, a sensation felt at a place other than the point of application of the stimulus. **skin s.**, dermal s. **strain s.**, a sensation as of a strain or straining. **subjective s.**, internal s. **transferred s.**, referred s. **vascular s.**, the sensation felt when there is a change in vascular tone, as in blushing. **s. of warmth**, the comfortable sensation experienced when the environment is not too cold, also the sensation felt when moderate heat is imparted to the body by radiation or contact.

sense (sens) [L. *sensus*, from *sentire* to perceive, feel] a faculty by which the conditions or properties of things are perceived. Hunger, thirst, malaise, and pain are varieties of sense; a sense of equilibrium, of well being (euphoria), and other senses are also distinguished. **chemical s.**, a general sense which causes avoidance reactions in water creatures and residual reactions in man to various irritants, such as onion, pepper, snuff, ammonia, and war gases. **color s.**, the faculty by which various colors are perceived and distinguished. **equilibrium s.**, static s. **form s.**, the ability of the eye to recognize objects as solid. **internal s.**, any sense that is normally stimulated from within the body. **kinesthetic s.**, muscle s. **labyrinthine s.**, static s. **light s.**, the faculty by which different degrees of brilliancy are distinguished. **muscle s.**, **muscular s.**, the faculty by which muscular movements are perceived. **pain s.**,

the sense by which pain is perceived. **posture s.**, a variety of muscular sense by which the position or attitudes of the body or its parts are perceived. **pressure s.**, the faculty by which pressure upon the surface of the body is perceived; called also *baresthesia*. **proprioceptive s.**, proprioceptive sensibility. **seventh s.**, visceral s. **sixth s.**, the general feeling of consciousness of the entire body; cenesthesia. **space s.**, that combination of the senses (chiefly of sight and touch) which gives information as to the relative positions and relations of objects in space. **special s.**, any one of the five senses of seeing, feeling, hearing, taste, and smell. **static s.**, the sense that enables man to maintain an upright position. **stereognostic s.**, the sense by which form and solidity are perceived. **temperature s.**, the faculty by which a person is able to appreciate differences of temperature. **time s.**, the ability to appreciate time intervals, especially in sound and in music. **tone s.**, the power of distinguishing one tone from another. **visceral s.**, the internal and subjective sensations supposed to appertain to the ganglionic portion of the nervous system.

Sensibamine (sen-sib'ah-min) trademark for an equimolar mixture of ergotamine and ergotamine.

sensibilatrice (sen'si-be'lah-trēs') (obs.) antibody.

sensibiligen (sen'si-bil'i-jen) anaphylactogen.

sensibilin (sen'si-bil'in) anaphylactin.

sensibilisin (sen'si-bil'i-sin) anaphylactin.

sensibilisinogen (sen'si-bil'i-sin'o-jen) anaphylactinogen.

sensibility (sen'si-bil'i-te) [L. *sensibilitas*] susceptibility of feeling; ability to feel or perceive. **bone s.**, pallesthesia. **common s.**, cenesthesia. **cortical s.**, the sensibility controlled by the cerebral cortex which is concerned with the recognition and discrimination of sensory impressions. **deep s.**, the sensibility to pressure and movement which exists after the skin area is made completely anesthetic. **electromuscular s.**, sensibility of muscles to electric stimulation. **epicritic s.**, the sensibility to gentle stimulations which furnishes the means for making fine discriminations of touch and temperature; this sensibility exists in the skin only. **joint s.**, arthresthesia. **mesoblastic s.**, deep s. **pallesthetic s.**, **palmesthetic s.**, pallesthesia. **proprioceptive s.**, the largely ignored and unconscious sense that gives us knowledge of the position and state of muscles, joints, limbs, and other parts; see *proprioceptor*. **protopathic s.**, the sensibility to stimulations of pain and temperature which is low in degree and poorly localized. Such sensibility exists in the skin and in the viscera, and acts as a defensive agency against pathologic changes in the tissues. **recurrent s.**, sensibility exhibited in the anterior root of a spinal nerve when the distal portion is stimulated after division. **somesthetic s.**, proprioceptive s. **splanchnesthetic s.**, the consciousness or sensibility dependent on the splanchnic receptors. **vibratory s.**, pallesthesia.

sensibilization (sen'si-bil-i-zā'shun) 1. the act of making more sensitive. 2. sensitization.

sensibilizer (sen'si-bil-iz'er) obsolete term for antibody.

sensible (sen'si-b'l) [L. *sensibilis*] capable of sensation; perceptible to the senses.

sensiferous (sen'si-fer-us) [L. *sensus* sense + *ferre* to carry] transmitting sensations.

sensigenous (sen-sij'ē-nus) [L. *sensus* sense + Gr. *gennan* to produce] producing sensory impulses.

sensimeter (sen-sim'ē-ter) an instrument for measuring the degree of sensitiveness of anesthetic and hyperesthetic areas on the body.

sensitin (sen'si-tin) a name suggested for a nonantigenic substance, prepared from a pathogenic agent (virus, bacterium, or fungus), capable of revealing sensitivity of the delayed type evoked by the agent, such as coccidioidin, histoplasmin, and avian and human tuberculin.

sensitinogen (sen'si-tin'o-jen) a general term including all the antigens which have a sensitizing effect on the body or which produce a hypersusceptible condition, such as anaphylactogen and allergen.

sensitive (sen'si-tiv) [L. *sensitivus*] able to receive or respond to stimuli; often used to mean abnormally responsive to stimulation, or responding quickly and acutely.

sensitivity (sen'si-tiv'i-te) the state or quality of being sensitive; often used to denote a state of abnormal responsiveness to stimulation, or of responding quickly and acutely. **proportional s.**, the relationship in which a response bears some quantitative algebraic relationship to the intensity of the stimulus.

sensitization (sen'si-ti-zā'shun) 1. the initial exposure of an individual to a specific antigen, resulting in an immune response; subsequent exposure then induces a much stronger (secondary or anamnestic) immune response. Said especially of such exposure resulting in a hypersensitivity reaction. 2. the coating of cells with antibody, as in complement-fixation tests and the Schultz-Dale test, as a preparatory step in eliciting an immunological reaction. 3. the preparation of a tissue or organ by one hormone so that it will respond functionally to the action of another. **active s.**, the sensitization that results from the injection of

antigen into an animal. **autoerythrocyte s.**, see under *syndrome*. **passive s.**, the sensitization which results when dead serum containing specific antibodies or immune lymphoid cells from a sensitized animal is injected into a normal animal. **photodynamic s.**, the increased lethal effects of light on microorganisms when certain dyes are present in the solution. **protein s.**, that bodily state in which the individual is sensitive or hypersusceptible to some foreign protein. **Rh s.**, the process or state of becoming sensitized to the Rh factor (i.e., Rh antigen(s), especially D antigen) as when an Rh-negative woman is pregnant with an Rh-positive fetus.

sensitized (sen'si-tizd) rendered sensitive.

sensitizer (sen'si-tiz-er) obsolete term for antibody.

sensitizin (sen'si-ti'zin) anaphylactogen.

sensitogen (sen'si-to-jen) any antigen that elicits sensitizing antibody formation in an atopic individual.

sensitometer (sen'si-tom'ē-ter) a set of sensitive photographic plates for testing the reaction of the eye to light rays.

sensomobile (sen'so-mo'bil) moving in response to a stimulus.

sensomobility (sen'so-mo-bil'i-te) the capacity of man or animals for movement in response to a sensory stimulus.

sensomotor (sen'so-mo'tor) sensorimotor.

sensor (sen'sor) something that senses; a device specifically designed to respond to a physical stimulus (light, heat, pressure, etc.) by generating an impulse that can be measured or otherwise interpreted, or used as a control.

sensorial (sen-so're-al) [L. *sensorialis*] pertaining to the sensorium.

sensoriglandular (sen'so-re-glan'du-lar) producing glandular activity as one of the consequences of stimulation of the sensory nerves.

sensorimetabolism (sen'so-re-mē-tab'o-lizm) the production of some metabolic action as a result of stimulation of the sensory nerves.

sensorimotor (sen'so-re-mo'tor) both sensory and motor.

sensorimuscular (sen'so-re-mus'ku-lar) producing reflex muscular action in response to a sensory impression.

sensorineural (sen'so-re-nu'ral) of or pertaining to a sensory nerve; pertaining to or affecting a sensory mechanism and/or a sensory nerve (see under *deafness* and *hearing loss*).

sensorium (sen-so're-um) [L. *sentire* to experience, to feel the force of] 1. a sensory nerve center. 2. the seat of sensation, located in the brain (*s. communis*); the term is often used to designate the condition of a subject relative to his consciousness or mental clarity.

sensorivascular (sen'so-re-vas'ku-lar) producing vascular changes as a result of stimulation applied through the sensory nerves.

sensorivasomotor (sen'so-re-vas'o-mo'tor) sensorivascular.

sensory (sen'so-re) [L. *sensorius*] pertaining to or subserving sensation.

sensualism (sen'shu-al-izm) [L. *sensus* sense] the condition of being dominated by bodily passions.

sentic (sen'tik) pertaining to the communication of emotions, or to sentics.

sentics (sen'tiks) the scientific study of the communication of emotions, including their expression, recognition, and generation.

sentient (sen'she-ent) [L. *sentiens*] able to feel; sensitive; having sensation or feeling.

sepal (se'pal) one of the divisions of leaves of the calyx of a flower.

sepaloid (sep'ah-loid) resembling or shaped like a sepal.

separator (sep'ah-ra'tor) [L.] a device for effecting a separation; in dentistry, an appliance for forcing adjoining teeth apart. **Harris' s.**, see under *segregator*. **Luys' s.**, see under *segregator*.

separatorium (sep'ah-rah-to're-um) an instrument used in separating the pericranium from the subjacent bone.

sepazonium chloride (sep'ah-zo'ne-um) chemical name: 1-[2-(2,4-dichlorophenyl)-2-[2,4-dichlorophenyl]methoxy]ethyl]-3-(2-phenylethyl)-1*H*-imidazolium chloride; a topical anti-infective, $C_{26}H_{23}Cl_5N_2O$.

sepedogenesis (sep'ē-do-jen'ē-sis) sepedonogenesis.

sepedon (sep'ē-don') [Gr. *sepedōn* rottenness, putrefaction] a septic condition; putridity.

sepedonogenesis (sep'ē-do'no-jen'ē-sis) [*sepedon* + Gr. *genesis* production] the production of septic conditions.

seperidol hydrochloride (sē-per'i-dōl) chemical name: 4-[4-(4-chloro- α , α -trifluoro-*m*-toyl)-4-hydroxypiperidino-4'-fluorobutyrophenone; a tranquilizer, $C_{22}H_{22}ClF_4NO_2 \cdot HCl$.

Sephadex (sef'ah-deks) trademark for gel particles of cross-linked dextran, used in gel filtration; particle size is graded for separating substances of various atomic weights.

sepia (se'pe-ah) [L.; Gr. *sepia* cuttlefish] a dark brown, inksaturated inky juice secreted by cuttlefish (*Sepia*), squidlike cephalo-

pod marine mollusks; also, the dark brown colored pigment originally prepared from the juice.

sepium (se'pe-um) [L.; Gr. *sepia* cuttlefish] the bone or internal shell of the cuttlefish; cuttlebone. It is used in preparing polishing agents and tooth powder, and is hung in bird cages for the purpose of supplying supplementary lime.

sepsin (sep'sin) [Gr. *sepsis* decay] a poisonous crystallizable substance from decaying yeast and from animal matter.

sepsis (sep'sis) [Gr. *sepsis* decay] the presence in the blood or other tissues of pathogenic microorganisms or their toxins; the condition associated with such presence. **s. agranulocytica**, agranulocytosis. **catheter s.**, a complication of intravenous catheterization in which sepsis occurs with no known locus and which resolves on removal of the catheter. **incarcerated s.**, an infection which is latent after the primary lesion has apparently healed, but which may be stirred into activity by a slight trauma. **s. intestinalis**, poisoning from the eating of contaminated food, such as canned meats, ice cream, sausages, or cheese. **s. len'ta**, a condition produced by infection with α -hemolytic streptococci, characterized by a febrile illness with endocarditis. **mouse s.**, **murine s.**, see under *septicemia*. **oral s.**, a disease condition in the mouth or adjacent parts which may affect the general health through the dissemination of toxins. **puerperal s.**, sepsis occurring after childbirth, due to matter absorbed from the parturient canal.

Sepsis violacea (sep'sis vi'o-la'se-ah) the common dung fly, which may be found in houses.

Sept. abbreviation for *L. septem*, seven.

septa (sep'tah) [L.] plural of *septum*.

septal (sep'tal) pertaining to a septum; see also under *area*.

septan (sep'tan) [L. *septem* seven] recurring every seventh (sixth) day, as a fever.

septanose (sep'tah-nōs) a monosaccharide having a seven-numbered ring structure.

septate (sep'tāt) divided by a septum.

septation (sep'ta'shun) division into parts by a septum.

septatome (sep'tah-tōm) septotome.

septavalent (sep'tah-val'ent) septivalent.

septectomy (sep'tek'to-me) [*septum* + Gr. *ektomē* excision] excision of a portion of the nasal septum.

septicemia (sep-te'me-ah) septicemia.

septic (sep'tik) [L. *septicus*; Gr. *septikos*] produced by or due to decomposition by microorganisms; putrefactive.

septicemia (sep'ti-se'me-ah) [*septic* + Gr. *haima* blood + *-ia*] systemic disease associated with the presence and persistence of pathogenic microorganisms or their toxins in the blood. Called also *blood poisoning*. **bronchopulmonary s.**, septicemia resulting from the aspiration of infected wound secretions into the trachea in operations on the larynx. **Bruce's s.**, brucellosis. **cryptogenic s.**, septicemia in which the focus of infection is not evident during life. **fowl s.**, a disease of fowls resembling fowl cholera caused by *Vibrio metschnikovii*, marked by diarrhea, hyperemia of the alimentary canal, and the presence of a blood-tinged yellowish liquid in the small intestine. **hemorrhagic s.**, **s. hemorrhagica**, any of a group of animal diseases caused by *Pasteurella multocida*, marked by the presence of pneumonia and some hemorrhagic areas in the subcutaneous tissues, serous membranes, muscles, lymph glands, and throughout the internal organs. It includes fowl cholera, swine plague, and bovine and swine pneumonias. **s. hemorrhag'ica bo'vum**, hemorrhagic septicemia of cattle. **s. hemorrhag'ica bubalo'rum**, pasteurellosis in the buffalo. **s. hemorrhag'ica o'vum**, hemorrhagic septicemia of sheep. **lymphovenous s.**, infection of the deep cellular planes of the body. **melitensis s.**, brucellosis. **metastasizing s.**, pyemia. **morphine injector's s.**, melioidosis in man. **mouse s.**, an infectious disease of mice, due to *Erysipelothrix insidiosa*. **phlebitic s.**, pyemia. **plague s.**, septicemic plague. **s. plurifor'mis**, hemorrhagic septicemia of sheep. **puerperal s.**, see under *fever*. **rabbit s.**, pasteurellosis in rabbits. **sputum s.**, a form produced by inoculation of certain of the microorganisms of the sputum. **typhoid s.**, general infection with typhoid bacillus.

septicemic (sep'ti-se'mik) pertaining to, or of the nature of, septicemia.

septicine (sep'ti-sin) a ptomaine, or compound of hexylamine and amylamine, from putrid flesh.

septicophlebitis (sep'ti-ko-fle-bi'tis) [*septic* + *phlebitis*] inflammation of the veins, due to septicemia.

septicopyemia (sep'ti-ko-pi-e'me-ah) septicemia and pyemia combined. **cryptogenic s.**, spontaneous septicopyemia. **metastatic s.**, a form marked by septic deposits in the lungs caused by embolism from putrid thrombi. **spontaneous s.**, a variety developing without obvious cause or from a slight wound of the skin; called also *cryptogenic s.*

septicopyemic (sep'ti-ko-pi-e'mik) pertaining to septicopyemia.

septicozymoid (sep'ti-ko-zi'moid) a hypothetical substance

supposed by some to supply the necessary feeding ground for septic processes.

septigravida (sep/'tī-grav/'i-dah) [L. *septem* seven + *gravida* pregnant] a woman pregnant for the seventh time; also written *gravida VII*.

septile (sep/'tīl) of or pertaining to a septum.

septicometritis (sep/'tī-mē-tri'tis) [*septic* + *metritis*] septic inflammation of the uterus.

septineuritis (sep/'te-noo-ri'tis) neuritis due to sepsis. **Nicolaus's s.**, a generalized, diffuse neuritis of the entire nervous system due to the multiplication and migration of viruses in nervous tissue, as occurs in rabies.

septipara (sep-tip/'ah-rah) [L. *septem* seven + *parere* to bring forth, produce] a woman who has had seven pregnancies which resulted in viable offspring; also written *para VII* or *VII-para*.

septivalent (sep/'tī-val'ent) [L. *septem* seven + *valens* able] able to combine with or to replace seven hydrogen atoms.

septomarginal (sep/'to-mar/'ji-nal) pertaining to the margin of a septum.

septonasal (sep-to-na/'zal) pertaining to the nasal septum.

septoplasty (sep/'to-plas'te) [*septum* + Gr. *plassein* to form or mold] surgical reconstruction of the nasal septum.

septostomy (sep-tos/'to-me) [*septum* + Gr. *stomoun* to provide with an opening] surgical creation of an opening in a septum.

balloon atrial s., surgical creation of an opening in the interatrial septum of the heart by passage of a balloon catheter from the right atrium through the septum to the left atrium, at which point the balloon is inflated and the catheter is then withdrawn to create an interatrial septal defect; performed in transposition of the great vessels with an intact septum.

septotome (sep/'to-tōm) an instrument for operating on the nasal septum.

septotomy (sep-tot/'o-me) [*septum* + Gr. *tomē* a cutting] the operation of incising the nasal septum.

septula (sep/'tu-lah) [L.] plural of *septulum*.

septulum (sep/'tu-lum), pl. *sep'tula* [L., dim. of *septum*] a small separating wall or partition; used in anatomical nomenclature as a general term to designate such a structure. **sep'tula testis** [NA], septa of testis: connective tissue lamellae from the inner surface of the tunica albuginea, which unite to form the mediastinum testis.

septum (sep/'tum), pl. *sep'ta* [L.] a dividing wall or partition; [NA] a general term for such a structure. The term is often used alone to refer to the septal area (see under *area*) or to the septum pellucidum. **s. alve'oli**, see *interalveolar s.* and *interradicular s.* **s. atrio'rum cor'dis**, s. interatriale cordis. **atrioventricular s. of heart**, s. atrioventricula're cor'dis [NA], the portion of the membranous part of the interventricular septum between the right atrium and left ventricle. **s. of auditory tube**, s. canalis musculotubarii. **s. auricula'rum**, s. interatriale cordis. **Bigelow's s.**, a layer of hard, bony tissue in the neck of the femur. **bony s. of eustachian canal**, s. canalis musculotubarii. **bony s. of nose**, s. nasi osseum. **bronchial s.**, s. bronchia'le, carina tracheae. **bulbar s.**, a septum, formed by fusion of the bulbar ridges, that divides the bulb of the urethra into aortic and pulmonary trunks. **s. bul'bi ure'thrae**, the fibrous septum dividing the interior of the bulb of the urethra into two approximately equal parts. **s. cana'lis musculotuba'rii** [NA], septum of musculotubal canal: the thin lamella of bone that divides the musculotubal canal into the semicanals for the tensor tympani muscle and the auditory tube. **s. cartilagin'eum na'si**, pars cartilaginea septi nasi. **cervical s.**, intermediate, s. cervica'le interme'dium [NA], a glial-pia mater septum which dips into the posterior intermediate sulcus of the posterior funiculus of the cervical and upper lumbar parts of the spinal cord; it separates the fasciculus gracilis and fasciculus cuneatus. **cloacal s.**, urorectal s. **s. of Cloquet**, s. femorale. **s. corpo'rum cavernoso'rum clitor'idis** [NA], an incomplete fibrous septum between the two lateral halves of the clitoris. **crural s.**, s. femorale. **Douglas's s.**, the septum formed by the union of Rathke's folds, forming the rectum of the fetus. **enamel s.**, enamel cord. **femoral s.**, s. femora'le [NA], s. femora'le [Cloque'ti], the thin fibrous membrane that helps to close the anulus femoralis; it is derived from the fascia transversalis, is perforated for the passage of lymphatic vessels, and is embedded in fat. **s. of frontal sinuses**, s. sinuum frontalis. **gingival s.**, the part of the gingiva interposed between adjoining teeth. **s. glan'dis pe'nis** [NA], s. of glans penis, an incomplete fibrous septum in the median plane of the glans penis, especially below the urethra. **gum s.**, gingival s. **hemal s.**, a structure of lower animals which in man is represented by the linea alba and the transversalis, iliac, and rectovesical fasciae. **interalveolar s.**, one of the partitions of bone separating the alveoli of different teeth (*septa interalveolaria mandibulae* [NA], and *septa interalveolaria maxillae* [NA]). **sep'ta interalveola'ria mandib'ulae** [NA], interalveolar septa of mandible: the partitions between the tooth sockets in the alveolar part of the mandible. **sep'ta interalveola'ria maxil'lae** [NA], interalveolar septa

of maxilla: the partitions between the tooth sockets in the alveolar process of the maxilla. **interatrial s. of heart**, s. interatriale cor'dis [NA], interatrial s., the wall that separates the atria of the heart; called also s. atriorum cordis. **interradicular s.**, interalveolar s. **intermuscular s. of arm**, external, s. intermusculare brachii laterale. **intermuscular s. of arm**, internal, s. intermusculare brachii mediale. **intermuscular s. of arm**, lateral, s. intermusculare brachii laterale. **intermuscular s. of arm**, medial, s. intermusculare brachii mediale. **intermuscular s. of leg**, anterior, s. intermusculare anterius cruris. **intermuscular s. of leg**, posterior, s. intermusculare posterius cruris. **intermuscular s. of thigh**, external, s. intermusculare femoris laterale. **intermuscular s. of thigh**, lateral, s. intermusculare femoris laterale. **intermuscular s. of thigh**, medial, s. intermusculare femoris mediale. **s. intermuscula're ante'rius cru'ris** [NA], s. intermuscula're ante'rius fibula're, anterior intermuscular septum of leg: a fascial sheet in the leg extending between the extensor digitorum longus and peroneal muscles to the anterior fibular crest. **s. intermuscula're bra'chii latera'le** [NA], lateral intermuscular septum of arm: the fascial sheet extending from the lateral border of the humerus to the under surface of the fascia investing the arm; called also s. intermusculare humeri laterale. **s. intermuscula're bra'chii media'le** [NA], medial intermuscular septum of arm: the fascial sheet extending from the medial border of the humerus to the under surface of the fascia investing the arm; called also s. intermusculare humeri mediale. **s. intermuscula're fem'o'ris latera'le** [NA], lateral intermuscular septum of thigh: the fascial sheet in the thigh separating the vastus lateralis muscle from the biceps femoris. **s. intermuscula're fem'o'ris media'le** [NA], medial intermuscular septum of thigh: the fascial sheet in the thigh separating the vastus medialis from the adductor and the pectineus muscles. **s. intermuscula're hu'meri latera'le**, s. intermusculare brachii laterale. **s. intermuscula're hu'meri media'le**, s. intermusculare brachii mediale. **s. intermuscula're poste'rius cru'ris** [NA], s. intermuscula're poste'rius fibula're, posterior intermuscular septum of leg: the fascial sheet extending between the peroneal muscles and soleus to the lateral fibular crest. **interradicular s.**, s. interradicula're, one of the thin bony partitions separating the crypts of a dental alveolus occupied by the separate roots of a multi-rooted tooth. **interventricular s. of heart**, s. interventricula're cor'dis [NA], the partition that separates the left ventricle from the right ventricle, consisting of a muscular and a membranous part; called also s. ventriculorum cordis. **s. intra-alveola'rium**, interradicular s. **Körner's s.**, petrosquamosal lamina. **s. lin'guae** [NA], lingual s., the median vertical fibrous part of the tongue. **s. lu'cidum**, septum pellucidum. **mediastinal s.**, s. mediastina'le, mediastinum, def. 2. **s. membrana'ceum na'si**, pars membranacea septi nasi. **s. membrana'ceum ventriculo'rum cor'dis**, pars membranacea septi interventricularis cordis. **membranous s. of nose**, pars membranacea septi nasi. **s. mo'bile na'si**, mobile s. of nose, pars mobilis septi nasi. **s. muscula're ventriculo'rum cor'dis**, pars muscularis septi interventricularis cordis. **s. of musculotubal canal**, s. canalis musculotubarii. **nasal s.**, s. na'si [NA], the partition separating the two nasal cavities in the midplane, composed of cartilaginous, membranous, and bony parts. **s. na'si os'seum** [NA], osseous septum of nose: the bone of the skull interposed between the openings of the nose, consisting primarily of the vomer below and the perpendicular plate of the ethmoid bone above. Called also *bony s. of nose*. **neural s.**, a prolongation, chiefly in the lower vertebrates, of the general investing fascia, extending medially from the surface toward the skeleton; represented in man by the ligamentum nuchae and the supraspinous and interspinous ligaments. **orbital s.**, s. orbita'le [NA], a fibrous membrane anchored to the periorbita along the entire margin of the orbit, extending to the levator palpebrae superioris muscle in the upper lid and to the tarsal plate in the lower lid; called also *tarsal membrane*. **osseous s. of nose**, s. nasi osseum. **parietal s.**, cuspis posterior valvae atrioventricularis sinistae. **s. pectinifo'rme**, s. penis. **pellucid s.**, s. pellu'cidum [NA], a triangular double membrane separating the anterior horns of the lateral ventricles of the brain; situated in the median plane, it is bounded by the corpus callosum and the body and columns of the fornix. **s. pe'nis** [NA], the fibrous sheet between the two corpora cavernosa of the penis, formed by union of the tunicae albugineae of the two sides. **pharyngeal s.**, the transitory partition which separates the mouth cavity from the pharynx in the embryo; called also *buccopharyngeal membrane*. **placental s.**, tissue that divides the placenta into cotyledons. **s. pon'tis**, raphe pontis. **posterior median cervical s.**, s. pos'ticum, a glial-pia mater septum which dips into the posterior median sulcus of the spinal cord and separates the two posterior funiculi. **s. pri'mum**, a septum in the embryonic heart, dividing the primitive atrium into right and left chambers. **rectovaginal s.**, s. rectovagina'le [NA], the membranous partition between the rectum and the vagina. **rectovesical s.**, s. rectovesica'le [NA], a membranous partition separating the rectum from the

prostate and urinary bladder. **s. re/nis**, see *columnae renales*. **s. scro/ti** [NA], **s. of scrotum**, a fibromuscular partition in the median plane, dividing the scrotum into two nearly equal parts. **s. secun/dum**, a septum in the embryonic heart to the right of the septum primum; after birth it fuses with the septum primum to close the foramen ovale. **s. si/nuum fronta/lium** [NA], septum of frontal sinuses: a thin lamina of bone, in the lower front part of the frontal bone, that lies more or less in the median plane and separates the frontal sinuses. **s. si/nuum sphenoida/lium** [NA], **sphenoidal s.**, **s. of sphenoidal sinuses**, a thin lamina of bone in the body of the sphenoid bone, lying more or less in the median plane and separating the sphenoidal sinuses. **spurious s.**, **s. spu/rum**, a structure formed by union of the two folds, one on either side, guarding the opening of the sinus venosus into the dorsal wall of the right atrium of the heart in the early embryo. **subarachnoidal s.**, an incomplete fibrous sheath which lies in the median plane and which connects the arachnoid to the pia mater along the posterior median sulcus of the cervical and upper thoracic parts of the spinal cord. **septa of testis**, septula testis. **s. of tongue**, **s. linguae**. **tracheoesophageal s.**, the septum that, during the fourth week of embryonic development, separates the trachea from the ventral surface of the foregut. **transverse s. of ampulla**, crista ampullaris. **s. tu/bae**, process cochleariformis. **urorectal s.**, the caudally and outwardly growing wedge of endoderm-covered mesoderm that divides the cloaca into urogenital sinus and rectum; called also *cloacal s.* **s. of ventricles of heart**, **s. ventriculo/rum cor/dis**, **s. interventricular cordis**.

septuplet (sep'tu-plet, sep-tup'let, sep-too'plet) [L. *septuplum* a group of seven] one of seven offspring produced in one gestation period.

seq. luce. abbreviation for L. *sequen'ti lu'ce*, the following day.

sequel (se'kwel) sequela.

sequela (se-kwe'lah), pl. *seque'lae* [L.] any lesion or affection following or caused by an attack of disease.

sequelae (se-kwe'le) [L.] plural of *sequela*.

sequence (se'kwens) a connected series of things or events. **nearest neighbor s.**, in biochemistry, the relative frequency with which pairs of the four nucleotide bases occur next to one another.

sequester (se-kwes'ter) [L.; Fr. *sequestrer* to shut up illegally] to detach or separate abnormally a small portion from the whole; see *sequestration* and *sequestrum*.

sequestra (se-kwes'trah) [L.] plural of *sequestrum*.

sequestral (se-kwes'tral) pertaining to or of the nature of a sequestrum.

sequestrant (se-kwes'trant) a sequestering agent, as, for example, cholestyramine resin, which binds bile acids in the intestine, thus preventing their absorption.

sequestration (se'kwes-tra'shun) [L. *sequestratio*] 1. the formation of a sequestrum. 2. the isolation of a patient. 3. a net increase in the quantity of blood within a limited vascular area, occurring physiologically, with forward flow persisting or not, or produced artificially by the application of tourniquets. **pulmonary s.**, loss of connection of lung tissue with the bronchial tree and with the pulmonary veins, the tissue receiving its arterial supply from the systemic circulation. The mass may be completely separated anatomically and physiologically from normally connected lung (*extralobar pulmonary s.*) or be in anatomical contiguity with and partly surrounded by normal lung (*intralobar pulmonary s.*).

sequestrectomy (se'kwes-trek'to-me) [*sequestrum* + Gr. *ektomē* excision] the surgical removal of a sequestrum.

sequestrotomy (se'kwes-trot'o-me) [*sequestrum* + Gr. *tomē* a cutting] sequestrectomy.

sequestrum (se-kwes'trum), pl. *seques'tra* [L.] a piece of dead bone that has become separated during the process of necrosis from the sound bone. **primary s.**, a sequestrum that is en-

Illustrating the formation of a sequestrum: A, A, Sound bone; B, B, new bone; C, C, granulations lining involucrum; D, cloaca; E, sequestrum (DaCosta).

tirely detached. **secondary s.**, a sequestrum that is partially detached and may be pushed into place. **tertiary s.**, a sequestrum that is separated by only a slight dividing line and remains in its place.

sequeiosis (se'kwoi-o'sis) a form of allergic alveolitis due to in-

halation of and tissue reaction to dust from moldy redwood bark; species of *Graphium* provide the offending antigen.

Ser serine.

sera (se'rah) [L.] plural of *serum*.

seractide acetate (ser-ak'tid) chemical name: 25-L-aspartic acid-26-L-alanine-27-glycine-30-L-glutamine-31-L-serine- α^{1-39} -corticotropin (pig); a synthetic adrenocorticotrophic hormone, $C_{207}H_{308}N_{56}O_{56}S \cdot (C_2H_4O_2)_x \cdot xH_2O$.

seral (sēr'al) of or pertaining or relating to a sere, as a seral stage.

seralbumin (se'ral-bu'min) serum albumin; the albumin of the blood.

serangitis (se'ran-ji'tis) [Gr. *sēranx* cavern + *-itis*] cavernitis.

serapheresis (se'rah-fē-re'sis) [*serum* + Gr. *aphairesis* removal] the production of serum by permitting the clotting of plasma derived by plasmapheresis.

Serapion (sē-ra'pe-on) of Alexandria (c. 280 B.C.) a Greek physician who is believed to have been one of the founders of the Empiric school of medicine.

Serax (ser'aks) trademark for a preparation of oxazepam.

sere (sēr) the entire sequence of ecological communities that successively occupy a given area, the transitory communities of which are called *seral stages*, or seral communities. The series finally lead to a stable, mature climax community.

seremion (se-rem'pe-on) a fatal form of measles occurring in the West Indies.

serendipity (ser'en-dip'i-te) the discovery of some important scientific fact, by accident or sagacity, which was not the original objective of the quest.

Serenium (sē-re'ne-um) trademark for a preparation of ethoxazene hydrochloride.

Serenoa (ser'e-no'ah) [*Sereno* Watson] a genus of palms. *S. serula'ta* is the saw palmetto or sabal of the southern United States. A fluidextract of the berries is diuretic, expectorant, and aphrodisiac, and has been used in diseases of the prostate and bladder.

Serentil (sē-ren'til) trademark for preparations of mesoridazine besylate.

seretin (ser'e-tin) carbon tetrachloride.

Serfin (ser'fin) trademark for a preparation of reserpine.

Sergent's white adrenal line (sār-zhaw'z) [Emile *Sergent*, French physician, 1867-1943] see under *line*.

serglobulin (ser-glob'u-lin) paraglobulin.

serial (se're-al) arranged in or forming a series.

serialograph (se're-al'o-graf) an apparatus for making series of x-ray pictures.

sericin (ser'i-sin) silk glue or silk gelatin; a protein, $C_{15}H_{25}N_5O_3$, derivable from silk.

sericite (se'ri-sit) a form of mica or muscovite, a complex silicate, causing pneumoconiosis.

Sericopelma (ser'i-ko-pel'mah) a genus of huge hairy spiders of the family Theraphosidae. **S. commu'nis**, a large black species found in the Canal Zone whose venom is harmful to man.

series (sēr'ēz) [L. "row"] 1. a group or succession of objects or substances arranged in regular order or forming a kind of chain.

In electricity, an arrangement of the parts of a circuit by connecting them successively to form a single path for the current. Parts thus arranged are in series. 2. a taxonomic category subordinate to a subclass and superior to an order, as the Basidiomycetes.

aliphatic s., the compounds having an open chain structure; see *open chain*, under *chain*. **aromatic s.**, the compounds derived from benzene.

erythrocyte s., **erythrocytic s.**, the group of developing cells which sequentially and ultimately culminate in the mature erythrocytes. For immature forms in this series, see *normoblast*.

fatty s., methane and its derivatives and the homologous hydrocarbons. **granulocyte s.**, **granulocytic s.**, the succession of developing cells that ultimately culminate in the mature granulocyte or granular leukocyte (*basophil*, *eosinophil*, or *neutrophil*); it begins with the myeloblast, which matures to form sequentially the promyelocyte, myelocyte, metamyelocyte, and mature segmented (polymorphonuclear) cell. Called also *myeloid*, *myelocytic*, or *leukocytic s.* See also *granular leukocytes*, under *leukocyte*.

Hofmeister s., the sequence of ions arranged with respect to their effects on the solubility of proteins, e.g., on their salting-out effects; called also *lyotropic s.*

homologous s., a series of compounds each member of which differs from the one preceding it by the radical CH_2 .

leukocytic s., **granulocytic s.** **lymphocyte s.**, **lymphocytic s.**, the succession of developing cells that ultimately culminate in the lymphocyte; it begins with the lymphoblast which matures to form sequentially the promonocyte, prolymphocyte, and mature lymphocyte.

lyotropic s., Hofmeister s. **monocyte s.**, **monocytic s.**, the succession of developing cells that ultimately culminate in the monocyte; it begins with the monoblast, which matures to form sequentially the promonocyte and the mature cell.

myeloid s., **myelocytic s.**, **granulocytic s.** **plasmacyte s.**, **plasmacytic s.**, the succession of developing cells that ultimately culminate in the plasma cell; it

begins with the plasmablast, which matures to form sequentially the proplasmacyte and the mature cell. **thrombocyte s., thrombocytic s.**, the succession of developing cells that ultimately culminates in the blood platelets (thrombocytes); it begins with the megakaryoblast, which matures to form sequentially the promegakaryocyte, megakaryocyte, and the mature cell.

seriflux (se'ri-fluks) [L. *serum* whey + *fluxus* flow] a thin, watery discharge.

serifuge (se'ri-fūj) a small centrifuge for use with sera.

serine (se'rēn) chemical name: 2-amino-3-hydroxypropionic acid. A naturally occurring, nonessential amino acid, $C_3H_7NO_3$. It may be synthesized from glycine, and is used as a dietary supplement and feed additive, in biological studies and tests, and in culture media.

serioscopy (se're-os'ko-pe) roentgenographic visualization of the body in a series of parallel planes by means of multiple exposures. Two or more roentgenograms are taken from different directions. They are laid on each other and moved until the projections of the various planes of the object coincide consecutively.

seriscission (se'r'i-sizh'un) [L. *sericum* silk + *scindere* to cut] the division of soft tissues by an encircling silk ligature pulled tightly.

seroalbuminous (se'ro-al-bu'mī-nus) containing serum and albumin.

seroalbuminuria (se'ro-al-bu'mī-nu're-ah) the presence in the urine of serum albumin.

seroanaphylaxis (se'ro-an'ah-fi-lak'sis) anaphylaxis produced by the use of blood serum.

serochrome (se'ro-krōm) [*serum* + Gr. *chrōma* color] the coloring matter of normal serum.

serocolitis (se'ro-ko-li'tis) inflammation of the serous surface of the colon.

seroconversion (se'ro-kon-ver'shun) the development of antibodies in response to infection or administration of a vaccine.

seroconvert (se'ro-kon-vert') to develop antibodies in response to a vaccine.

seroculture (se'ro-kul-tūr) a bacterial culture on blood serum.

serocystic (se'ro-sis'tik) made up of serous cysts.

serodiagnosis (se'ro-di'ag-no'sis) diagnosis made by means of reactions taking place in the blood serum.

serodiagnostic (se'ro-di'ag-nos'tik) pertaining to serodiagnosis.

seroenteritis (se'ro-en'tē-ri'tis) inflammation of the serous coat of the intestine.

seroenzyme (se'ro-en'zim) an enzyme existing in the blood serum.

seroepidemiologic (se'ro-ep'i-de'me-o-loj'ik) pertaining to serologic studies as used to delineate epidemiologic patterns of a disease.

seroepidemiology (se'ro-ep'i-de'me-o-lo'je) the study of disease in a human community by subjecting a portion of the population to a specific serologic test of immunity.

sero-fast (se'ro-fast') serum-fast.

serofibrinous (se'ro-fib'rin-us) both serous and fibrinous.

serofibrous (se'ro-fi'brus) pertaining to serous and fibrous surfaces; as, *serofibrous* apposition.

seroflocculation (se'ro-flok'u-la'shun) flocculation produced in blood serum by an antigen. Cf. *Henry test*, under *tests*.

serofluid (se'ro-floo'id) a serous fluid.

serogastria (se'ro-gas'tre-ah) the presence of blood serum in the stomach; protein-losing gastropathy.

serogenesis (se'ro-jen'ē-sis) 1. the production of a serum. 2. the regular appearance of the natural antibodies during the life of an individual.

seroglobulin (se'ro-glob'u-lin) serum globulin; the globulin of the blood serum.

seroglycoid (se'ro-gli'koid) a glycoprotein found in serum albumin.

serohemorrhagic (se'ro-hem'o-raj'ik) characterized by serum and blood.

serohepatitis (se'ro-hep'ah-ti'tis) inflammation of the peritoneal coat which covers the liver; perihepatitis.

seroimmunity (se'ro-i-mu'nī-te) immunity produced by anti-serum; passive immunity.

serolactescent (se'ro-lak-tes'ent) resembling serum and milk.

serolemma (se'ro-lem'ah) [*serous* + Gr. *lemma* sheath] the membrane from which the serosa or chorion is developed.

serolipase (se'ro-li'pās) lipase from blood serum.

serological, serologic (se'ro-loj'ik; se'ro-loj'ē-kal) pertaining to serology.

serologist (se-rol'o-jist) one who is an expert in serology.

serology (se-rol'o-je) [*serum* + *-logy*] the study of antigen-antibody reactions in vitro. **diagnostic s.**, serodiagnosis.

serolysin (se-rol'i-sin) a lysin present in the blood serum.

seroma (sēr-o'mah) a tumor-like collection of serum in the tissues.

seromembranous (se'ro-mem'brah-nus) both serous and membranous; composed of serous membrane.

seromucoid (se'ro-mu'koid) seromucous.

seromucous (se'ro-mu'kus) partly serous and partly mucous.

seromucus (se'ro-mu'kus) a secretion which is part serum and part mucus.

seromuscular (se'ro-mus'ku-lar) pertaining to the serous and muscular coats of the intestine.

Seromycin (se'ro-mi'sin) trademark for preparations of cycloserine.

seronegative (se'ro-neg'ah-tiv) serologically negative; showing negative results on serological examination; showing a lack of antibody.

seronegativity (se'ro-neg'ah-tiv'i-te) the state of being seronegative, or of showing negative results on serological examination.

seroneutralization (se'ro-nu'tral-i-za'shun) neutralizing by use of serum.

seroperitoneum (se'ro-per'i-to-ne'um) the presence of free fluid in the peritoneum; ascites.

seropheresis (se'ro-fē-re'sis) serapheresis.

serophysiology (se'ro-fiz'e-o-lo'je) the study of the physiologic mechanism of serum action.

seroplastic (se'ro-plas'tik) serofibrinous.

seropneumothorax (se'ro-nu'mo-tho'raks) pneumothorax with a serous effusion in the pleural cavity.

seropositive (se'ro-poz'i-tiv) serologically positive; showing positive results on serological examination; showing a high level of antibody.

seropositivity (se'ro-poz'i-tiv'i-te) the state of being seropositive, or of showing positive results on serological examination.

seroprevention (se'ro-pre-ven'shun) a method of inducing passive immunity by the injection of immunoglobulins.

seroprognosis (se'ro-prog-no'sis) the prognosis of a disease based on study of its seroreactions.

seroprophylaxis (se'ro-pro'fi-lak'sis) the injection of immune serum or convalescent serum for protection purposes.

seropurulent (se'ro-pu'roo-lent) both serous and purulent.

seropus (se'ro-pus') serum mingled with pus.

seroreaction (se'ro-re-ak'shun) a reaction occurring in a serum or as a result of the action of a serum. Cf. *fixation of the complement*.

serorelapse (se'ro-re-laps') a definite rise in serological titer occurring after treatment.

seroresistant (se'ro-re-zis'tant) pertaining to seroresistance; showing a seropositive reaction to a pathogen after treatment.

seroresistance (se'ro-re-zis'tans) failure of the serological titer to fall satisfactorily after treatment.

seroreversal (se'ro-re-vers'al) a fall in serological titer after treatment.

serosa (se-ro'sah; se-ro'zah) 1. any serous membrane (tunica mucosa). 2. the tunica serosa. 3. the chorion.

serosal (se-ro'sal) pertaining to or composed of serosa.

serosamucin (se-ro'sah-mu'sin) a protein resembling mucin, found in inflammatory ascitic exudates.

serosanguineous (se'ro-sang-gwin'e-us) pertaining to or containing both serum and blood.

seroscopy (se-ros'ko-pe) [*serum* + Gr. *skopein* to examine] diagnostic examination of serum with the agglutinoscope.

serose (se'rōs) an albumose obtained from serum albumin.

seroserous (se'ro-se'rus) pertaining to two or more serous membranes.

serositides (se'ro-si'ti-dēz) plural of *serositis*.

serositis (se'ro-si'tis), pl. *serositides* [*serous membrane* + *-itis*] inflammation of a serous membrane. **multiple s.**, polyserositis.

serosity (se-ros'i-te) the quality possessed by serous fluids.

serosurvey (se'ro-sur'va) a screening test of the serum of persons at risk to determine susceptibility to a particular disease.

serosynovial (se'ro-si-no've-al) both serous and synovial.

serosynovitis (se'ro-sin'o-vi'tis) synovitis with effusion of serum.

serotherapeutic (se'ro-ther'ah-pu'ti-kal) pertaining to serotherapy.

serotherapist (se'ro-ther'ah-pist) one who treats disease by serotherapy.

serotherapy (se'ro-ther'ah-pe) [*serum* + Gr. *therapeia* treatment] the treatment of disease by the injection of blood serum from immune individuals, especially immunized animals.

serothorax (se'ro-tho'raks) hydrothorax.

serotonergic (se'ro-tōn-er'jik) serotoninergic.

serotonin (se'ro-to'nin) chemical name: 3-(2-aminoethyl)-5-indolol. A vasoconstrictor, $C_{10}H_{12}N_2O$, found in various animals from coelenterates to vertebrates, in bacteria, and in many plants. In humans, it is released by the blood platelets and is found in high concentrations in many body tissues, including the intestinal mucosa, pineal body, and central nervous system. Produced enzymatically from tryptophan by hydroxylation and decarboxylation, serotonin has many physiologic properties; e.g., it inhibits gastric secretion, stimulates smooth muscle, serves as a central neurotransmitter, and is a precursor of melatonin. Called also *enteramine*, *thrombocytin*, *thrombotonin*, *5-hydroxytryptamine*, and *5-HT*.

serotoninergic (se'ro-to'nin-er'jik) 1. containing or activated by serotonin, as the neurons of the raphe nuclei of the brain stem. 2. of or pertaining to neurons that secrete serotonin, which, in turn, stimulates release of pituitary hormones. Called also *serotonergic*.

serotoxin (se'ro-tok'sin) 1. a toxin formed in and from blood serum when the latter is treated with kaolin, barium sulfate, or in other ways. 2. anaphylatoxin, which is formed in the body and responsible for anaphylactic shock.

serotype (se'ro-tip) 1. the type of a microorganism as determined by the kinds and combinations of constituent antigens present in the cell. 2. a taxonomic subdivision of bacteria based on the kinds and combinations of constituent antigens present in the cell, or a formula expressing the antigenic analysis on which such a subdivision is based. **heterologous s.**, a related but not identical serotype. **homologous s.**, an identical serotype.

serous (se'rūs) [L. *serosus*] 1. pertaining to or resembling serum. 2. producing or containing serum, as a serous gland or cyst.

serovaccination (se'ro-vak'si-na'shun) injection of serum combined with bacterial vaccination to produce passive immunity by the former and active immunity by the latter.

serozyme (se'ro-zīm) [L. *serum* + Gr. *zymē* yeast] (*obs.*) Bordet's name for the prothrombin present in the blood serum.

Serpasil (ser'pah-sil) trademark for preparations of reserpine.

serpentaria (ser'pen-ta're-ah) [L. *serpens* snake] the dried rhizome and roots of *Aristolochia serpentaria*, Virginia snakeroot, and *A. reticulata*, or Texas snakeroot, herbs of North America. *Serpentaria* is an astringent bitter, the major bitter principle of which is aristolochic acid. Formerly used as an analgesic and in the treatment of snakebite.

Serpentes (ser'pen-tēz) *Ophidia*.

serpiginous (ser-pij'i-nus) [L. *serpere* to creep] having a wavy or much indented margin, as a lesion in noduloulcerative cutaneous syphilis.

serrated (ser'āt-ed) [L. *serratus*, from *serra* saw] having a saw-like edge.

Serratia (sē-ra'she-ah) [named for Serafino Serrati, an Italian physicist of the 18th century] a genus of bacteria of the tribe Serratiaeae, family Enterobacteriaceae, order Eubacteriales. It is made up of small, motile, gram-negative rods which produce characteristic red pigments and are saprophytic on decaying plant or animal materials. The organisms are opportunistic pathogens, especially causing nosocomial infections. The type species is *S. marcescens*. Formerly called *Erythrobacillus*.

Serratiaeae (ser'ah-ti'e-e) a tribe of the family Enterobacteriaceae, order Eubacteriales, made up of small, gram-negative rods which produce characteristic red pigments and are saprophytic on decaying plant or animal materials. It includes a single genus, *Serratia*.

serration (sē-ra'shun) [L. *serratio*] a structure or formation with teeth like those of a saw; the condition of being serrated.

serratus (ser-ra'tus) [L.] serrated.

serrefine (sār-fēn') [Fr.] a small spring forceps for compressing bleeding vessels.

Serres' angle, glands (sārz) [Antoine Etienne Reynaud Augustin Serres, French physiologist, 1786-1868] see *metafacial angle*, under *angle*, and see under *gland*.

serrulate (ser'u-lāt) [L. *serrulatus*] marked or bordered with small serrations or projections.

Sertoli's cell, column (ser-to'lēz) [Enrico Sertoli, Italian histologist, 1842-1910] see under *cell* and *column*.

serum (se'rum), pl. *serums* or *se'ra* [L. "whey"] 1. the clear portion of any animal liquid separated from its more solid elements; especially the clear liquid (*blood s.*) which separates in the clotting of blood from the clot and the corpuscles. 2. blood serum from animals that have been inoculated with bacteria or their toxins. Such serum, when introduced into the body, produces passive immunization by virtue of the antibodies which it contains. 3. see *blood serum*, under B. **ACS s.**, antireticular cytotoxic s. **active s.**, a serum that contains complement. **allergenic s.**, **allergic s.**, a serum which produces hypersensitivity (anaphylaxis) to antigen injections. **anallergenic s.**, **anallergic s.**, a serum which does not produce hypersensitivity (anaphylaxis) to serum injections. **antibothropic s.**, serum used to produce immunization against the bites of rattlesnakes. **anti-**

cholera s., a serum made by injecting horses with killed and/or live cultures of *Vibrio cholerae*, or with toxins or other products of the germs. **anticomplementary s.**, a serum which interferes with or destroys the activity of complement. **anticrotallus s.**, an antivenomous serum which is protective against the poison of the rattlesnake. **antidiphtheric s.**, diphtheria antitoxin. **antihepatic s.**, serum of an animal into which has been injected liver matter from another animal; this serum is destructive to the liver of animals of the species from which the injected matter was taken. **antilymphocyte s.**, (**ALS**), serum from animals immunized with lymphocytes from a different species; it is a powerful immunosuppressive agent that inhibits the humoral immune response and especially the cell-mediated immune response, its major effect being the destruction of the circulatory pool of lymphocytes. **antimeninogococcus s.**, a polyvalent serum prepared by injecting first an autolysate of the strains and later living cultures (method of Flexner and Jobling); called also *Flexner's serum*. **antiophidic s.**, antivenomous s. **antipancratic s.**, serum of an animal into which has been injected pancreatic extract from another animal; this serum is destructive to the pancreas of animals of the species from which the injected matter was taken. **antipertussis s.**, blood serum from patients convalescent from pertussis. **antipest s.**, antiplague s. **antiphagocytic s.**, a serum which destroys phagocytes. **antiplague s.**, a serum obtained from animals which have been repeatedly immunized with killed or living plague microorganisms (*Pasteurella pestis*), or with both, or with some preparation of the microorganisms. **antiplatelet s.**, a serum that destroys blood platelets by lysis, agglutination, or by other mechanism. **antipneumococcus s. (horse)**, a serum obtained from the blood of horses which have been injected with pneumococci of various types. **antipneumococcus s. (rabbit)**, serum obtained from blood of rabbits immunized by cultures of pneumococci of any one of the several types. **antirabies s.** [**USP**], a sterile solution containing antiviral substances obtained from the blood serum or plasma of a healthy animal, usually the horse, that has been immunized against rabies by means of vaccine; used as a passive immunizing agent. **antireticular cytotoxic s.**, a serum made by inoculating horses with an extract of spleen and bone marrow; said to have, in small doses, a stimulating effect on the reticuloendothelial system, and in large doses a cytotoxic effect on that system. Abbreviated **ACS**. Called also *Bogomolets' s.* **antisarcomatous s.**, serum from an animal into which sarcoma tissue has been injected. **antiscarlalinal s.**, see *Dick's s.* and *Moser's s.* **anti-snakebite s.**, antivenomous s. **antispermotoxic s.**, antispermotoxin. **antistaphylococcus s.**, a serum raised by injection of a staphylococcus vaccine (e.g., autogenous vaccine) into a suitable animal. **antistreptococcus s.**, a serum obtained from the blood of animals which have been injected with killed or living streptococci or with both. **antitetanic s. (A.T.S.)**, tetanus antitoxin. **antitoxic s.**, a serum which contains antitoxin. **antitubercle s.**, a serum prepared by injecting an animal with killed or with living tubercle bacilli (*Mycobacterium tuberculosis*) or with both or with a preparation of the microorganisms. **antitularense s.**, Foshay's s. **antityphoid s.**, serum containing antibody to the typhoid bacillus. **antivenomous s.**, a serum used as a remedy for snake bite, prepared from the blood of animals which have been immunized against the venom of serpents; called also *Calmette's s.* See also *antivenin*. **articular s.**, synovia. **bacteriolytic s.**, a serum which contains the bacteriolysis of a microorganism. **Banzhaf's s.**, a concentrated and purified antipneumococcus serum. **Bardel's s. (obs.)**, a mixture of sodium chloride, phenol, sodium phosphate, sodium sulfate, and water. **Bargen's s.**, a serum prepared from cultures of an organism from the lesions of chronic ulcerative colitis. **blister s.**, the serous fluid found in a blister. **Blondel's s.**, the serum of fresh milk, prepared by filtration after coagulation and neutralization. **blood s.**, see *blood serum*, under B. **Bogomolets' s.**, antireticular cytotoxic s. **Calmette's s.**, antivenomous s. **Cattani's s.**, a mixture of sodium chloride, sodium carbonate, and boiled distilled water, for injection in infectious diseases. **Cheron's s.**, a mixture of crystalline phenol, sodium chloride, sodium phosphate, sodium sulfate, and boiled distilled water; formerly used for injection in infectious diseases. **chicken s.**, serum containing antibodies, prepared by the immunization of chickens. **convalescence s.**, **convalescent s.**, **convalescents' s.**, blood serum from a patient who is convalescent from an infectious disease; such a serum was once used as a prophylactic injection in such diseases as measles, scarlet fever, whooping cough, etc. **cytotropic s.**, a serum containing cytotropic antibodies. **despecciated s.**, serum which has lost its species-specific qualities. **Dick's s.**, **Dochez's s.**, antitoxic serum once used for the treatment of scarlet fever, obtained by immunizing horses with the toxin of the streptococcus of scarlet fever. **Dopter's s.**, a serum effective against the parameningococcus. **Dorset-Niles s.**, a serum for immunizing against hog cholera. **Dunbar's s.**, an antitoxin from the pollen of ragweed, goldenrod, rye, etc.; used in the treatment of hay fever. **endotheliolytic s.**, serum which destroys endothelial cells; it is obtained from the blood of animals immunized with endothelial cells. **s. equi/nun**, horse s. **Felix Vi s.**, a typhoid antiserum rich in Vi

(virulence) antibodies. **Felton's s.**, a concentrated antipneumococcus horse serum. **Flexner's s.**, antimeningococcus s. **foreign s.**, serum from an animal to be injected into one of another species. **Foshay's s.**, a serum once used in the treatment of tularemia. **gastrotoxic s.**, a serum toxic to the gastric mucous membrane. **glycerin s.**, blood serum which contains 5 per cent of glycerin; used as a culture medium for tubercle bacilli. **heterologous s.**, 1. serum obtained from an animal belonging to a species different from that of the recipient. 2. serum prepared from an animal immunized by an organism differing from that against which it is to be used. **Hoffmann's s.**, epitheliolysin. **hog cholera s.**, serum obtained from hogs having some immunity, either following recovery from an attack of the disease or as a result of an injection of hog cholera serum, made hyperimmune by intravenous injection, at intervals of three to four weeks, of blood from a hog sick with hog cholera; once used in the prevention and in the cure of hog cholera. **homologous s.**, 1. serum obtained from an animal belonging to the same species as the recipient. 2. serum prepared from an animal immunized by the same organism against which it is to be used. **horse s.**, serum obtained from the blood of horses. **hyperimmune s.**, a serum unusually rich in antibody, obtained by a vigorous course of active immunization. **immune s.**, a serum containing one or more antibodies, especially one in which the antibody content has been increased by recovery from its specific infection or by injection with its specific antigen. **inactivated s.**, serum which has been heated to 56° C. for 30 minutes, to destroy the lytic activity of contained complement components. **leukocytolytic s.**, serum that destroys leukocytes; it is from the blood of animals immunized with leukocytes. **leukotoxic s.**, a serum that destroys leukocytes. **Löffler's s.**, see *Löffler's blood serum*, under *blood serum*. **lymphatolytic s.**, serum which destroys lymphatic tissues, such as the spleen and lymph glands. **Merz's s.**, a preparation containing hamamelis extract in tubes for use in hemorrhoids. **monovalent s.**, antiserum containing antibody to only one strain or species of microorganism or only one kind of antigen. **Moser's s.**, antistreptococcus serum produced by inoculating horses with several kinds of streptococci from the blood of scarlet fever patients. **motile s.**, an immune serum containing flagellar agglutinins. **multipartial s.**, polyvalent s. **muscle s.**, muscle plasma deprived of its myosin. **nephrolytic s.**, **nephrotoxic s.**, a serum having a specific toxic effect on the kidney, produced by immunizing an animal with a brei or emulsion of kidney tissue. **neurolytic s.**, **neurotoxic s.**, a serum having a specific toxic effect on the brain and spinal cord, produced by immunizing an animal with a brei or emulsion of nerve tissue. **normal s.**, serum from a normal untreated animal. **pericardial s.**, liquor pericardii. **petit s.**, a nonsensitizing, nontoxic, but vaccinating substance derived from serum by mixing with 2 parts of 90 per cent alcohol, treating the resulting precipitate with physiologic salt solution, and filtering. Cf. *Vaughan's split products*, under *product*. **plague s.**, antiplague s. **polyvalent s.**, antiserum containing antibody to more than one strain or species of microorganism or to more than one kind of antigen; it is produced by mixing monovalent sera or by immunizing the animal with multiple antigen. **pooled s.**, the mixed serum from a number of individuals. **pregnancy s.**, blood serum taken from pregnant women. **prophylactic s.**, a serum for immunizing against a disease. **Roux's s.**, diphtheria antitoxin. **salvarsanized s.**, blood serum taken from a patient after an intravenous injection of salvarsan; see *Swift-Ellis treatment*, under *treatment*. **Sanarelli's s.**, a serum used in protective inoculation against yellow fever. **specific s.**, antiserum containing antibody to a specific microorganism or antigen. **streptococcus s.**, antistreptococcus s. **thymotoxic s.**, a serum which has a specific toxic effect on thymus tissue. **thyrolytic s.**, **thyrotoxic s.**, a serum having a specific destructive or toxic effect on thyroid tissue. **truth s.**, a misnomer for the drugs sometimes employed to facilitate interviews; especially applied to sodium amobarbital and sodium thiopental when used in criminal interrogation. The agent used is not a serum and its use does not guarantee truthfulness. **Yersin's s.**, antiplague s.

serumal (se-roo'mal) pertaining to or formed from serum.

serum-fast (se'rum-fast) resistant to the destructive effect of serum; said of bacteria.

serumuria (se'rum-u're-ah) albuminuria.

Serv. abbreviation for *L. ser'va*, keep, preserve.

Servetus (ser-ve'tus), Michael (1511-1553). A Spanish theologian who also wrote, among other subjects, on geography, astrology, and medicine. His *Christianismi restitutio* (1553) contains the first printed description of the lesser circulation; Servetus was burned at the stake for heresy the same year, and only three copies of the book have survived.

servomechanism (ser'vo-mek'ah-nizm) a control system in which feedback is used to control errors in another system. The term is also applied to biological systems, such as the mechanism that controls the diameter of the pupil of the eye according to the amount of incident light.

sesame (ses'ah-me) [*L. sesamum*; Gr. *sēsamon*] the plant *Sesa-*

mum indicum L.; also its oil-bearing seeds. The oil, called oil of benne, is used like olive oil. The seeds are demulcent, and are used as a laxative. Currently also used in topical skin lotions, as an emollient, and as a parenteral vehicle for intramuscular injections.

sesamoid (ses'ah-moid) [*L. sesamoides*; Gr. *sēsamon* sesame + *eidos* form] 1. denoting a small nodular bone embedded in a tendon or joint capsule. 2. a sesamoid bone. See under *bone*.

sesamoiditis (ses'ah-moi-di'tis) inflammation of the sesamoid bones and surrounding structures of a horse's foot.

sesqui- [*L. sesqui* a half more] a prefix meaning one and a half.

sesquih. abbreviation for *L. sesquihora*, an hour and a half.

sesquihora (ses'kwe-ho'rah) [*L.*] an hour and a half.

sesquioxide (ses'kwe-ok'sid) a compound of three parts of oxygen with two of another element.

sesquisulfate (ses'kwe-sul'fāt) a sulfate containing three parts of sulfuric acid united with two of another element.

sesquisulfide (ses'kwe-sul'fid) a sulfide containing three parts of sulfur united with two of another element.

sessile (ses'il) [*L. sessilis*] attached by a base; not pedunculated or stalked.

Sessinia (ses-sin'e-ah) a genus of blistering beetles, coconut beetles, of certain Pacific islands.

sesunc. abbreviation for *L. sesunc'ia*, an ounce and a half.

set (set) 1. to align bones or bone fragments, as in reducing a fracture. 2. in psychology, a readiness to perceive or respond in a certain way because of past experience, requirements of a task, etc. **phalangeal s.**, a surgical office procedure for correction of deformities of the lesser toes, involving incision to reach the bony joint and manipulation for proper positioning.

seta (se'tah), pl. *se'tae* [*L.*] 1. bristle. 2. any bristle-like structure, such as the multicellular stalk of certain plants.

setaceous (se-ta'shus) [*L. setaceus*; *seta* bristle] slender and rigid, like a bristle.

Setaria (se-ta're-ah) a genus of filarial nematodes. **S. cer'vi**, **S. cervi'na**, **S. labiatopapillosa**. **S. equi'na**, a species found in the abdominal cavity of the horse and related species, buffalo, cattle, and sometimes man. **S. labiatopapillo'sa**, a species found in the peritoneal cavity of cattle and various game animals in Africa.

Setchenow's centers (nuclei) (sech'ē-nofs) [Ivan Mikhailovich Setchenow, Russian neurologist, 1829-1905, the father of Russian physiology and neurology] see under *center*.

setiferous (se-tif'er-us) [*L. seta* bristle + *ferre* to bear] bearing bristles; covered with bristles.

setigerous (se-tij'er-us) [*L. seta* bristle + *gerere* to carry] setiferous.

seton (se'ton) [*Fr. seton*; *L. seta* bristle] a thread of silk, linen, or other finely drawn material for passage through a sinus, fistula, or epithelial tract, often to serve as a guide for subsequent dilatation with instruments of larger diameter.

setup (set'up) the arrangement of teeth on a trial denture base. **diagnostic s.**, a procedure involving dissection of teeth from a plaster model and repositioning of the teeth in desired positions to aid in case analysis preliminary to constructing an appliance.

Seutin's bandage (su-tanz') [Louis Joseph Seutin, Brussels surgeon, 1793-1862] see under *bandage*.

Sever's disease (se'verz) [James Warren Sever, Boston orthopedic surgeon, born 1878] see under *disease*.

sevoflurane (se-vo-floo'rān) chemical name: fluoromethyl-2,2,2-trifluoro-1-(trifluoromethyl)ethyl ether; an inhalation anesthetic, C₄H₂F₆O.

sevum (se'vum) [*L.*] suet.

sewage (su'ij) the matters found in sewers; it consists of the excreta of man and animals, and other waste material from homes and other structures inhabited by man. **activated s.**, sewage mixed with activated sludge. **domestic s.**, sewage from dwellings, business buildings, factories, or institutions. **septic s.**, sewage undergoing anaerobic putrefaction.

sex (seks) [*L. sexus*] 1. the fundamental distinction, found in most species of animals and plants, based on the type of gametes produced by the individual or the category into which the individual fits on the basis of that criterion; ova, or macrogametes, are produced by the female, and spermatozoa, or microgametes, are produced by the male, the union of these distinctive germ cells being the natural prerequisite for the production of a new individual in sexual reproduction. 2. to determine the sex of an organism. **chromosomal s.**, sex as determined by the presence of the XX (female) or the XY (male) genotype in somatic cells, and without regard to phenotypic manifestations; called also *genetic s.* **endocrinologic s.**, the phenotypic manifestations of sex determined by endocrine influences, such as breast development, etc. **genetic s.**, **chromosomal s.** **gonadal s.**, the sex as determined on the basis of the gonadal tissue present, whether ovarian or testicular. **morphological s.**, sex determined on the basis of the morphology of the external genitals. **nuclear s.**, the sex as determined on the basis of the presence or absence

of sex chromatin in somatic cells, its presence normally indicating the XX (female) genotype, and its absence the XY (male) genotype. **psychological s.**, the self-image of the gender role of an individual. **social s.**, the complex of attitudes, expectations, etc., that a society attaches to the male and female roles.

sex-conditioned (seks/'kon-dish/und) sex-influenced.

sexdigitate (seks-dij/'i-tāt) [L. *sex* six + *digitus* digit] having six fingers on the hand or six toes on the foot.

seduction (seks-duk/'shun) in bacterial genetics, the process whereby part of the bacterial chromosome is attached to the autonomous F factor (sex factor) and thus is transferred with high frequency from the donor (male) bacterium to the recipient (female); called also *F*-duction.

sex-influenced (seks-siv/'floo-enst) denoting an autosomal trait that is expressed differently, either in frequency or degree, in males and females, as for example, the trait of baldness; called also *sex-conditioned*.

sexivalent (sek-siv/'ah-lent) [L. *sex* six + *valere* to have power] able to combine with or displace six atoms of hydrogen.

sex-limited (seks-lim/'it-ed) denoting a genetic trait exhibited by one sex only, although not determined by an X-linked gene.

sex-linked (seks-linkt') determined by a gene located on a sex chromosome. Although a trait may be X-linked or Y-linked, virtually all clinically significant sex-linked traits are transmitted by genes located on the X chromosome, and the terms sex-linked and X-linked are used synonymously.

sexology (seks-ol/'o-je) that branch of science which deals with sex and sexual relations from the biological point of view.

sexopathy (seks-op/'ah-the) abnormality or perversion of sexual expression.

sextan (seks/'tan) [L. *sextanus* of the sixth] recurring every sixth day; said of fevers.

sextigravida (seks/'ti-grav/'i-dah) [L. *sextus* sixth + *gravida* pregnant] a woman pregnant for the sixth time; also written *gravida VI*.

sextipara (seks-tip/'ah-rah) [L. *sextus* sixth + *parere* to bring forth, produce] a woman who has had six pregnancies which resulted in viable offspring; also written *para VI* or *VI-para*.

sextuplet (seks/'tu-plet) [L. *sextus* sixth] one of six offspring produced in one gestation period.

sexual (seks/'u-al) [L. *sexualis*] 1. pertaining to sex. 2. a person considered in his sexual relations. **contrary s.**, a sexual invert.

sexuality (seks/'u-al/'i-te) 1. the characteristic quality of the male and female reproductive elements. 2. the constitution of an individual in relation to sexual attitudes or activity. **pre-genital s.**, the sexuality of early infantile life before object love and the genital zone have become dominant.

Seyderhelm's solution (si/'der-helmz) [Richard Seyderhelm, Göttingen physician, 1888-1940] see under *solution*.

S.-G. Sachs-Georgi test.

S.G.O. Surgeon-General's Office.

SGOT serum glutamic-oxaloacetic transaminase; see *glutamic-oxaloacetic transaminase*, under *transaminase*.

SGPT serum glutamic-pyruvic transaminase; see *glutamic-pyruvic transaminase*, under *transaminase*.

SH serum hepatitis.

shadow (shad/'o) 1. an attenuated image of an actual object, as a faded or colorless erythrocyte. 2. a figure or image created by the interruption of light or other rays, such as the representation on a roentgenogram of radiopaque structures. **bat's wing s.**, a roentgenographic shadow that radiates through both lungs from the hilar region toward the periphery, leaving a clear zone at the apices, periphery, and bases. **blood s.**, a phantom corpuscle. **heart s.**, the shadow of the heart on a roentgenogram. **Purkinje's s's**, see under *image*.

shadow-casting (shad/'o-kast/'ing) a technique for increasing the visibility of ultramicroscopic specimens under the microscope by applying a coating of chromium, gold, or other metal.

shadowgram, shadowgraph (shad/'o-gram, shad/'o-graf) roentgenogram.

shadowgraphy (shad/'o-graf/'e) roentgenography.

Shaffer's method (sha/'ferz) [Philip Anderson Shaffer, American biochemist, born 1881] see under *method*.

shaft (shaft) a long slender part, such as the portion of a long bone between the wider ends or extremities; see also *diaphysis* [NA]. **s. of femur**, corpus femoris. **s. of fibula**, corpus fibulae. **hair s.**, scapus pili. **s. of humerus**, corpus humeri. **s. of metacarpal bone**, corpus ossis metacarpalis. **s. of metatarsal bone**, corpus ossis metatarsalis. **s. of penis**, corpus penis. **s. of phalanx of fingers**, corpus phalangis digitorum manus. **s. of phalanx of toes**, corpus phalangis digitorum pedis. **s. of radius**, corpus radii. **s. of rib**, corpus costae. **s. of tibia**, corpus tibiae. **s. of ulna**, corpus ulnae.

shakes (shāks) a vernacular term for the cold paroxysm of intermittent fever. **hatter's s.**, mercury poisoning among fur

hat workers. **kwaski s.**, a condition seen in children who, having been severely malnourished, suffer rhythmic twitches and shaking a week or two after introduction of a better diet. The "shakes" gradually disappear over a period of a few weeks. **spelter s.**, metal fume fever seen among brass-founders. **Teflon s.**, polymer fume fever.

shamanism, shamanismus (sham/'ah-nizm; sham/'ah-niz/'mus) a state of excitement into which certain Dyaks and other people are able to throw themselves for religious purposes.

sham-feeding (sham-fēd/'ing) sham feeding; see under *feeding*.

shank (shangk) a leg, or leglike part.

shaping (shāp/'ing) a behavior therapy technique in which new behavior is produced by providing reinforcement for progressively closer approximations of the final desired behavior. Called also *successive approximation*.

Sharpey's fibers (shar/'pēz) [William Sharpey, English anatomist and physiologist, 1802-1880] see under *fiber*.

shashitsu (shah-shit/'soo) scrub typhus.

shear (shēr) an applied force that tends to cause an opposite but parallel sliding motion of the planes of an object. Also, the strain resulting from such force.

Shear's test (sherz) [Murray Jacob Shear, American chemist, born 1899] see under *tests*.

sheath (shēth) [L. *vagina*; Gr. *thēkē*] a tubular structure enclosing or surrounding some organ or part. **arachnoid s.**, the delicate membrane between the pial and dural sheaths of the optic nerve. **bulbar s.**, see *vagina bulbi*. **carotid s.**, a portion of the cervical fascia enclosing the carotid artery, the internal jugular vein, and the vagus nerve. **caudal s.**, a tubular cytoplasmic structure at the base of the nucleus in the early spermatid. **chordal s.**, notochordal s. **common s. of tendons of peroneal muscles**, vagina synovialis musculorum peroneorum communis. **common s. of testis and spermatic cord**, fascia spermatica interna. **connective tissue s. of Key and Retzius**, endoneurium, especially the delicate continuation around terminal branches of nerve fibers. **crural s.**, femoral s. **dental s.**, the layer of tissue forming the wall of a dental tubule. **dural s.**, the external investment of the optic nerve, overlying the arachnoid sheath. **enamel rod s's**, envelopes of organic tissue enclosing the enamel rods. **epithelial s. of Hertwig, epithelial root s. of Hertwig**, root s., def 1. **s. of eyeball**, vagina bulbi. **fascial s. of prostate**, the sheath, derived from the rectovesical fascia, which surrounds the prostate. **female s.**, vagina (def. 2). **femoral s.**, the fascial covering of the proximal portion of the femoral vessels, derived from the intra-abdominal fascia; the most medial portion of the sheath, separated by a septum, forms the canalis femoralis. Called also *crural s.* **fibrous s's of fingers**, vaginae fibrosae digitorum manus. **fibrous s. of optic nerve**, vagina externa nervi optici. **fibrous s. of spermatozoon**, the fibrous sheath surrounding the principal piece of the tail of a spermatozoon. **fibrous s. of tendon**, vagina fibrosa tendinis. **fibrous s's of toes**, vaginae fibrosae digitorum pedis. **s. of Henle**, connective tissue s. of Key and Retzius. **s. of Hertwig**, root s., def. 1. **s. of Key and Retzius**, connective tissue s. of Key and Retzius. **lamellar s.**, perineurium. **masculine s.**, utriculus prostaticus. **Mauthner's s.**, axolemma. **medullary s.**, myelin s. **mitochondrial s.**, the sheath of circumferentially oriented mitochondria arranged end to end, which surrounds the middle piece of a spermatozoon and is thought to control the movements of the tail. **mucous s's**, bursa synovialis and vaginal synoviales. **mucous s., intertubercular**, septum intermusculare anterius cruris. **mucous s. of tendon**, vagina synovialis tendinis. **mucous s's of tendons of fingers**, vaginae synoviales digitorum manus. **mucous s's of tendons of toes**, vaginae synoviales digitorum pedis. **myelin s.**, the sheath surrounding the axon of some (the myelinated) nerve cells, consisting of concentric layers of myelin, formed in the peripheral nervous system by the plasma membrane of Schwann cells, and in the central nervous system by oligodendrocytes. It is interrupted at intervals along the length of the axon by gaps known as nodes of Ranvier. Myelin is an electrical insulator that serves to speed the conduction of nerve impulses. **Neumann's s.**, dental s. **neurilemmal s.**, neurilemma. **notochordal s.**, an elastic sheath surrounding the notochord. **nucleated s.**, neurilemma. **s's of optic nerve**, vaginae nervi optici. **s. of optic nerve, external**, vagina externa nervi optici. **s. of optic nerve, internal**, vagina interna nervi optici. **perinephric s.**, the sheath of fascia investing the kidney. **perivascular s.**, a pia glial membrane which accompanies blood vessels into the brain. **pial s.**, the innermost of the three sheaths of the optic nerve, underlying the arachnoid sheath. **s. of plantar tendon of long peroneal muscle**, vagina tendinis musculi peronei longi plantaris. **primitive s.**, neurilemma. **prism s's**, enamel rod s's. **s. of rectus abdominis muscle**, vagina musculi recti abdominis. **root s.**, 1. an investment of epithelial cells around the unerupted tooth and inside the dental follicle which are derived by budding from the enamel organ; called also *s. of Hertwig*. 2. the epithelial portion of the hair follicle, divided into an *inner root sheath* (hair cuticle plus the layers of Huxley and

Henle) and an *outer root sheath* from which the sebaceous gland is derived. **Scarpa's s.**, fascia cremasterica. **Schwalbe's s.**, the thin envelope of an elastic fiber. **s. of Schwann**, neurilemma. **Schweigger-Seidel s.**, a spindle-shaped thickening in the walls of the second portion of the arterial branches forming the penicilli in the spleen. See *sheathed artery*, under *artery*. **spiral s.**, a heavily staining filament winding around the axial filament of the middle piece of a spermatozoon. **s. of styloid process**, vagina processus styloidei. **synovial s. of bicipital groove**, vagina synovialis intertubercularis. **synovial s. of intertubercular groove**, vagina synovialis intertubercularis. **synovial s. of tendon**, vagina synovialis tendinis. **synovial s. of tendons of foot**, vaginae synoviales digitales pedis. **tendinous s's of flexor muscles of fingers**, vaginae fibrosae digitorum manus. **tendinous s's of flexor muscles of toes**, vaginae fibrosae digitorum pedis. **tendinous s. of leg**, fascia cruris. **tendinous s. of long peroneal muscle**, plantaris, vagina tendinis musculi peronei longi plantaris. **tendon s. of anterior tibial muscle**, vagina tendinis musculi tibialis anterioris. **tendon s's of long extensor muscles of toes**, vaginae tendinum musculi extensoris digitorum pedis longi. **tendon s's of long flexor muscles of toes**, vaginae tendinum musculi flexoris digitorum pedis longi. **tendon s. of posterior tibial muscle**, vagina synovialis tendinis musculi tibialis posterioris.

sheep-pox (shēp-poks) a highly infectious and sometimes fatal eruptive disease of sheep, spread by both direct and indirect contact, and caused by a virus closely related to the vaccinia virus. A form affecting man is known as *ecthyma contagiosum*. Called also *orf*, *ovinia*, and *ovine smallpox*.

sheet (shēt) a rectangular piece of cotton, linen, etc., for a bed covering. **draw s.**, a folded sheet placed under a patient in bed so that it may be withdrawn without lifting the patient. **drip s.**, a wet sheet from which the water is wrung out and which is then wrapped around a patient standing in a tub of water. **secretory s.**, the simplest form of multicellular gland, consisting of secreting cells alone, e.g., the surface epithelium of the mammalian gastric mucosa.

shelf (shēlf) a shelflike structure, normal or abnormal, in the body. **buccal s.**, the surface of the mandible from the residual alveolar ridge or the alveolar ridge to the external oblique line in the region of the lower buccal vestibule; it is covered with cortical bone. **dental s.**, the shelflike epithelial invagination formed by the dental ridge, beneath which the dental papillae are formed. **mesocolic s.**, the transverse mesocolon and the great omentum taken together. **palatine s.**, see *lateral palatine process* and *median palatine process*, under *process*.

shell (shel) a covering or encasement, such as the calcareous, horny, or chitinous covering of an animal. **egg s.**, the thin, hard, brittle, outer covering of an egg; called also *testa ovi*.

shellac (shē-lak') a product of lac from India, produced on various plants by an insect, *Laccifer lacca* Kerr (Coccidae); sometimes used in dentistry and surgery, and in coating confections and medicinal tablets.

Shenton's line (arch) (shen'tonz) [Thomas Shenton, English radiologist] see under *line*.

Shepherd's fracture (shep'ards) [Francis John Shepherd, Canadian surgeon, 1851-1929] see under *fracture*.

Sherman unit (shur'man) [Henry Clapp Sherman, American biochemist, 1875-1955] Sherman-Munsell unit.

Sherman-Bourquin unit (shur'man boor'kwīn) [Henry C. Sherman; Ann Bourquin, American nutritionist, born 1897] see under *unit*.

Sherman-Munsell unit (shur'man-mun'sel) [Henry C. Sherman; Hazel E. Munsell, American nutritionist, born 1891] see under *unit*.

Sherrington's law (sher'ing-tonz) [Sir Charles Scott Sherrington, English physiologist, 1857-1952, noted for his work on physiology of the nervous system; co-winner, with Edward Douglas Adrian, of the Nobel prize for physiology and medicine in 1932] see under *law*.

shield (shēld) any protecting structure. **Buller's s.**, a watch glass fitted over the eye to guard it from infection. **embryonic s.**, the double-layered disk from which the embryo proper develops. **eye s.**, a covering for the eyes to protect them from light or injury. **lead s.**, in radiology, a lead barrier for protecting personnel from radiation. **nipple s.**, a cover to protect the nipple of a nursing woman. **oral s.**, a removable appliance used in orthodontic treatment, usually between the buccal mucosa and the teeth; see *vestibular screen*, under *screen*. **phallic s.**, a device for the antiseptic protection of the male genitals during surgical operations.

shift (shift) a change, as of position, status, etc. **chloride s.**, the exchange of chloride (Cl) and bicarbonate (HCO₃⁻) between the plasma and the red blood cells which takes place whenever HCO₃⁻ is generated or decomposed within the red cells. Called also *Hamburger's phenomenon*. **Doppler s.**, the magnitude of the change in frequency caused by the Doppler effect. **s. to the left**, Arneith's term for a preponderance of young neutrophils in the blood picture. **Purkinje s.**, shift of the region of maxi-

mum visual intensity in the spectrum from the yellow toward the violet as intensity of illumination diminishes. **regenerative blood s.**, the rapid outpouring of leukocytes of the juvenile and myelocyte type, occurring as the result of an acute stimulus to the bone marrow. **s. to the right**, Arneith's term for a preponderance of older neutrophils in the blood picture.

Shiga's bacillus, toxin (she'gahz) [Kiyoshi Shiga, Japanese physician, 1870-1957] see *Shigella dysenteriae* type 1, and see under *toxin*.

Shigella (shī-gel'ah) [Kiyoshi Shiga] a genus of microorganisms of tribe Salmonelleae, family Enterobacteriaceae, order Eubacteriales, made up of nonmotile, rod-shaped, gram-negative bacteria. These microorganisms, which cause dysentery and for that reason are called dysentery bacilli, are separated into the non-mannitol-fermenting and the mannitol-fermenting type; the former make up Group A, and the latter are subdivided into Groups B, C, and D, each group making up a species. See *S. boydii*, *S. dysenteriae*, *S. flexneri*, and *S. sonnei*. **S. alkaliescens**, a name given a serologically homogeneous group of microorganisms occasionally causing diarrheal disease in man; culturally and serologically distinct from other *Shigella* species, they are serologically related to coliform bacilli and are formally classified with them as *Escherichia alkaliescens*. **S. ambigua**, *S. dysenteriae* type 2. **S. arabinotar'da type A**, a dysentery bacillus identical with *S. dysenteriae* type 3. **S. arabinotar'da type B**, a dysentery bacillus identical with *S. dysenteriae* type 4. **S. boydii**, the species name given to Group C dysentery bacilli, the cause of an acute diarrheal disease in man, especially in tropical regions; culturally identical with *S. flexneri* but serologically unrelated, the species includes 15 independent numbered serotypes. **S. ceylonensis**, a dysentery-like bacillus, occasionally associated with diarrheal disease in man, and classified with the coliform bacilli as *Escherichia dispar* var. *ceylonensis*. **S. dispar**, a slow lactose-fermenting dysentery bacillus of limited or doubtful pathogenicity; serologically heterogeneous but related to some types of *S. flexneri*. Now formally classified with the coliform bacilli as *Escherichia dispar*. **S. dysenteriae**, the species name given to Group A dysentery bacilli, and separated into numbered serotypes. TYPE 1, the classic Shiga bacillus, which is set apart from other dysentery bacilli by the production of a potent exotoxin, is more common in tropical regions and causes severe dysentery. TYPE 2, the Schmitz bacillus, is a non-mannitol-fermenting organism serologically related to *Escherichia coli* type 0112. Of limited pathogenicity, but occasionally the cause of epidemic diarrheal disease in man, the organism has been found in the chimpanzee but not in other lower animals. The other numbered types include the Large-Sachs group of parashiga bacilli (see *S. parashigae*). Formerly called *Bacillus dysenteriae* and *Bacterium dysenteriae*. **S. etou'sae**, *S. boydii* type 7, Livingston, type T, type 1296/7. **S. flexneri**, a species name given to Group B dysentery bacilli, one of the commonest causes of acute diarrheal disease in man, occurring as eight related serotypes, designated by numbers 1 to 6 and letters X and Y. Called also *S. paradyenteriae* and *Flexner's bacillus*. **S. madampensis**, a dysentery-like bacillus, occasionally associated with diarrheal disease in man, and classified with the coliform bacilli as *Escherichia dispar* var. *madampensis*. **S. newcastle**, *S. flexneri* type 6, Boyd 88. **S. paradyenteriae**, *S. flexneri*. **S. parashi'gae**, a name formerly given to a group of non-mannitol-fermenting dysentery bacilli serologically differentiable from the Shiga bacillus (now *S. dysenteriae* type 1); also known as the Large-Sachs group of parashiga bacilli, they are now known as *S. dysenteriae*, types 3 to 7, inclusive. **S. schmit'zi**, *S. dysenteriae* type 2. **S. shi'gae**, *S. dysenteriae* type 1. **S. son'nei**, a species name given to Group D dysentery bacilli, one of the commonest causes of bacillary dysentery in temperate climates; slow (5-14 days) lactose fermenters, the organisms are serologically homogeneous, but two antigens, designated I and II, occur in varying proportions. Called also *Sonne-Duval bacillus* and formerly *Bacterium sonnei*. **S. wake'field**, a species name given a paracolon bacillus.

shigella (shī-gel'ah), pl. *shigel'ae*. An individual organism of the genus *Shigella*.

shigellae (shī-gel'e) plural of *shigella*.

shigellosis (shī'gel-lo'sis) the condition produced by infection with organisms of the genus *Shigella*. See individual species under *Shigella*, and *bacillary dysentery*, under *dysentery*.

shikimene (shik'i-mēn) shikimin.

shin (shin) 1. the crest or anterior edge of the tibia. 2. the anterior aspect of the leg below the knee. **bucked s's**, sore s's. **cucumber s.**, a tibia which is curved with the concavity forward. **saber s.**, a tibia with a marked anterior convexity as seen in congenital syphilis, yaws, and osteitis deformans. Called also *Fournier's sign*. **sore s's**, periostitis of the large metacarpal or metatarsal bone of the horse.

shingles (shing'g'lz) [*L. cingulus*] herpes zoster.

shiver (shiv'er) 1. a slight chill or tremor. 2. to tremble, as from a chill.

shivering (shiv'er-ing) 1. involuntary trembling or quivering of the body caused by contraction or twitching of the muscles, a

physiologic method of heat production in man and other mammals. 2. a disease of horses characterized by trembling or quivering of various muscles.

shock (shok) 1. a sudden disturbance of mental equilibrium. 2. a condition of acute peripheral circulatory failure due to derangement of circulatory control or loss of circulating fluid. It is marked by hypotension, coldness of the skin, usually tachycardia, and often anxiety. See also under *therapy*. **allergic s.**, anaphylactic s. **anaphylactic s.**, a violent attack of symptoms produced by a second injection of serum or protein and due to anaphylaxis; see *anaphylaxis*. **anaphylactoid s.**, colloidoclasia. **anesthesia s.**, a shocklike condition caused by an overdose of anesthetic. **apoplectic s.**, apoplexy (def. 1). **asthmatic s.**, status asthmaticus. **bomb s.**, a condition of dread and loss of emotional equilibrium among children in the British Isles, as a result of repeated bombings. **break s.**, the shock produced by breaking the electric current as it is passing through the body. **burn s.**, shock resulting from the loss of plasma into a burn wound. **cardiac s.**, heart s. **cardiogenic s.**, shock resulting from diminution of cardiac output in heart disease, as in myocardial infarction. **cerebral s.**, a form of shock sometimes occurring in severe head injury affecting the centers of cardiovascular control. **colloid s.**, pseudoanaphylaxis. **colloidoclastic s.**, see *colloidoclasia*. **deferred s.**, **delayed s.**, severe physical or mental disturbance, of which the symptoms occur a considerable time after the injury or mental impression is received. **diastolic s.**, the cardiac impulse which strikes the palpating hand in early diastole. **electric s.**, the effects produced by the passage of an electric current through any part of the body. When the current is intense, it may cause (a) reversible loss of consciousness or death, owing to effects on the nervous system or heart, (b) coagulation of tissue and resultant necrosis due to heat, and (c) violent tetanic muscular contractions which may lead to injury. See also *electroconvulsive therapy*, under *therapy*. **endotoxic s.**, **endotoxin s.**, septic shock due to release of endotoxins by gram-negative bacteria. **epigastric s.**, the systemic effect of a sudden blow upon the epigastrium. **erethismic s.**, a form of shock in which the patient is excited and restless. **faradic s.**, the effect produced by faradization. **gravitation s.**, peripheral circulatory collapse on assumption of the erect position. **heart s.**, a sudden collapse of the functions of the heart. **hematogenic s.**, shock due to diminished blood volume; hypovolemic shock. **hemoclastic s.**, hemoclastic crisis. **hemorrhagic s.**, hematogenic shock resulting from hemorrhage. **histamine s.**, the reaction, resembling anaphylactic shock, which follows the injection of histamine. **hypnoclastic s.**, interruption of sleep by sudden awakening. **hypoglycemic s.**, insulin s. **hypovolemic s.**, hematogenic s. **insulin s.**, a condition of circulatory insufficiency resulting from overdosage with insulin which causes too sudden reduction of blood sugar. It is marked by tremor, sweating, vertigo, diplopia, convulsions, and collapse. See also *insulin coma therapy*, under *therapy*. **irreversible s.**, a condition in which the changes produced cannot be corrected by treatment, and death is inevitable. **liver s.**, a serious collapse which sometimes follows sudden relief of common bile duct obstruction of long duration. **micro s.**, the reaction produced by a preliminary injection of a small amount of a substance, as an antiserum, so that a therapeutic dose will not cause a serious reaction; see *skeptophylaxis*. **neurogenic s.**, shock due to action of the nervous system producing vasodilatation. **oligemic s.**, hematogenic s. **osmotic s.**, the destructive effect on certain phages of rapid reduction in osmotic pressure produced by dilution of the medium in which they have been suspended. **paralytic s.**, a sudden paralytic attack. **peptone s.**, protein s. **pleural s.**, a condition sometimes following thoracentesis, and characterized by cyanosis, pallor, dilated pupils, and disturbance of pulse and respiration. **postoperative s.**, a state of shock following a surgical operation. **postpartum s.**, a condition of shock following childbirth. **protein s.**, a state of acute intoxication manifested by a chill with fever, spasm of the bronchi, acute emphysema, and vomiting and diarrhea, produced by the intravenous injection of peptone or other substance of protein nature, such as bacterial proteins, animal or vegetable proteins, organic extracts, and the like. **psychic s.**, a shocklike condition produced by strong emotion. **secondary s.**, shock appearing one or more hours after injury; delayed shock. **septic s.**, shock developing in the presence of severe infections, especially following bacteremia with gram-negative bacteria and release of endotoxins (*endotoxin s.*). **serum s.**, see *serum sickness*, under *sickness*, and see *anaphylactic s.* **shell s.**, a term in use during World War I to describe a condition of lost nervous control with numerous psychic symptoms, ranging from extreme fear to actual dementia, produced in soldiers under fire by the noise and concussion from bursting shells; it would now be classified as an adjustment reaction of adult life. **spinal s.**, the loss of spinal reflexes after injury of the spinal cord which affects the muscles innervated by the cord segments situated below the site of the lesion. **surgical s.**, shock that occurs during or after surgical operation. **testicular s.**, the effect of a sharp blow upon the testes. **thyroxin s.**, thyrotoxic symptoms produced by overdoses of thyroxin. **torpid s.**, shock in which the patient lies prostrate and immobile. **traumatic s.**,

any shock produced by trauma, whether psychic or physical. **vasogenic s.**, shock caused by marked vasodilatation.

shoe (shoo) a covering or appliance for the foot. **Charlier's s.**, a horse's shoe which allows the sole and the frog to come to the ground exactly as in the unshod foot. **Scarpa's s.**, a metal brace used in treating talipes equinus by preventing plantar extension of the foot beyond a right angle.

Shope papilloma (shōp) [Richard Edwin Shope, American pathologist, born 1902] rabbit papilloma.

shortsightedness (short-sit'ed-nes) myopia.

shot-compressor (shot'kom-pres'or) see under *compressor*.

shot-silk see under *retina*.

shotty (shot'e) like shot; resembling the lead pellets used in shotgun cartridges.

shoulder (shōl'der) the junction of the arm and trunk; also that part of the trunk which is bounded at the back by the scapula.

bull's-eye s., a horse's shoulder having on it a loose flabby disk of hyperplastic skin with a central denuded surface. **drop s.**, depression of one shoulder below the level of the other. **frozen s.**, adhesive capsulitis. **knocked-down s.**, separation or dislocation of the shoulder at the acromioclavicular joint occurring in athletes. Called also *shoulder separation*. **loose s.**, a condition seen in progressive muscular atrophy in which, when attempts to lift the patient by grasping the upper arms at their sides are made, the arms move up but the trunk remains behind. **stuffed s.**, sprain of the shoulder joint occurring in athletes.

shoulder-blade (shōl'der-blād) the scapula.

shoulder slip (shōl'der slip) inflammation and atrophy of the shoulder muscles and tendons in the horse; called also *sweeny*.

show (sho) the appearance of blood as a forerunner of labor or menstruation.

shower (show'er) a sudden emission or appearance. **uric acid s.**, temporary increase in the uric acid contents of the urine; occurring in the course of a gouty attack.

Shrady's saw (shra'dēz) [George Frederick Shrady, New York surgeon, 1837-1907] see under *saw*.

Shrapnell's membrane (shrap'nelz) [Henry Jones Shrapnell, English anatomist and Army surgeon, 19th century] pars flaccida membranae tympani.

shunt (shunt) 1. to turn to one side; to divert; to bypass. 2. a passage or anastomosis between two natural channels, especially between blood vessels. Such structures may be formed physiologically (e.g., to bypass a thrombosis), or they may be structural anomalies (see *cardiovascular s.*). 3. a surgically created anastomosis; also, the operation of forming a shunt. **arteriovenous**

Portal shunts, showing two types of portal to systemic venous shunt. (Blakemore and Vorhees, Jr.)

(A-V) s., direct passage of blood from an artery to a vein. Also a U-shaped plastic tube inserted between an artery and a vein (usually between the radial artery and cephalic vein), bypassing the capillary network; commonly done to allow repeated access to the arterial system for the purpose of hemodialysis. **cardiovascular s.**, an abnormality of blood flow between the sides of the heart or between the systemic and pulmonary circulation; see *left-to-right s.* and *right-to-left s.* **hexose monophosphate s.**, pentose phosphate pathway. **left-to-right s.**, diversion of blood from the left side of the heart to the right side or from the systemic to the pulmonary circulation through an anomalous

opening such as a septal defect or patent ductus arteriosus. **LeVeen peritoneovenous s.**, the diversion of blood flow from the jugular vein through plastic tubing which passes through the peritoneal cavity and back to the venous circulation; a valve in the tubing permits absorption of fluid to relieve intractable ascites. **pentose s.**, pentose phosphate pathway. **peritoneovenous s.**, LeVeen peritoneovenous s. **portacaval s.**, **postcaval s.**, surgical creation of an anastomosis between the portal vein and vena cava. **reversed s.**, right-to-left s. **right-to-left s.**, diversion of blood from the right side of the heart to the left side or from the pulmonary to the systemic circulation through an anomalous opening such as a septal defect or patent ductus arteriosus; called also *reversed s.* **ventriculoatrial s.**, the surgical creation of a communication between a cerebral ventricle and a cardiac atrium by means of a plastic tube, to permit drainage of cerebrospinal fluid for relief of hydrocephalus. **ventriculoperitoneal s.**, a communication between a cerebral ventricle and the peritoneum by means of plastic tubing; done for the relief of hydrocephalus.

Shwartzman's phenomenon (reaction) (shwartz'manz) [Gregory Shwartzman, Russian bacteriologist in the United States, 1896-1965] see under *phenomenon*.

SI *Système International d'Unités*, or International System of Units. See *SI unit*, under *unit*.

S.I. soluble insulin.

Si chemical symbol for *silicon*.

siagrantritis, siagonantritis (si'ag-an-tri'tis; si'ag-on-an-tri'tis) [Gr. *siagōn* jaw bone + *antritis*] (*obs.*) inflammation of the maxillary sinus.

siagonagra (si'ag-o-nag'rah) [Gr. *siagōn* jaw bone + *agra* seizure] (*obs.*) pain in the maxilla.

sial- see *sialo-*.

sialaden (si-al'ah-den) [Gr. *sial-* + Gr. *adēn* gland] a salivary gland.

sialadenectomy (si'al-ad'ē-nek'to-me) sialoadenectomy.

sialadenitis (si'al-ad'ē-ni'tis) inflammation of a salivary gland. **chronic nonspecific s.**, an inflammatory disease of the major salivary glands characterized by intermittent swelling of the glands, which may progress to the development of fibrous masses; it is caused by obstruction of the salivary ducts with subsequent pyogenic bacterial infection.

sialadenography (si'al-ad'ē-nog'rah-fe) radiography of the salivary glands and ducts.

sialadenosis (si'al-ad'ē-no'sis) noninflammatory swelling of the salivary glands.

sialadenotomy (si'al-ad'ē-not'o-me) sialoadenotomy.

sialagogic (si'ah-lah-goj'ik) promoting the flow of saliva.

sialagogue (si-al'ah-gog) [*sial-* + Gr. *agōgos* leading] an agent that promotes the flow of saliva.

sialaporia (si'al-ah-po're-ah) [*sial-* + Gr. *aporia* lack] deficiency in the amount of saliva.

sialate (si'ah-āt) any salt of a sialic acid.

sialectasia (si'al-ek-ta'se-ah) dilatation of a salivary duct.

sialemesia (si'al-em'ē-sis) [Gr. *sial-* + Gr. *emesis* vomiting] the hysteric vomiting of saliva.

sialic (si-al'ik) [Gr. *sialikos*] 1. pertaining to the saliva. 2. pertaining to sialic acid.

sialine (si'ah-lin) [L. *sialinus*] pertaining to the saliva.

sialism, sialismus (si'al-izm; si'al-iz'mus) [Gr. *sialismos*] ptyalism.

sialitis (si'ah-li'tis) inflammation of a salivary gland or duct.

sialo-, sial- (si'ah-lo, si'al) [Gr. *sialon* saliva] combining form denoting relationship to (a) saliva or to the salivary glands or (b) sialic acid.

sialoadenectomy (si'ah-lo-ad'ē-nek'to-me) [*sialo-* + Gr. *adēn* gland + *ektomē* excision] excision of a salivary gland.

sialoadenitis (si'ah-lo-ad'ē-ni'tis) sialadenitis.

sialoadenotomy (si'ah-lo-ad'ē-not'o-me) [*sialo-* + Gr. *adēn* gland + *tomē* a cutting] incision and drainage of a salivary gland.

sialoerophagia (si'ah-lo-a'er-o-fa'je-ah) [*sialo-* + Gr. *aēr* air + *phagein* to eat + *-ia*] the swallowing of saliva and air.

sialoangiectasis (si'ah-lo-an'je-ek'tah-sis) [*sialo-* + Gr. *angeion* vessel + *ektasis* distention] dilatation of the salivary ducts.

sialoangiitis (si'ah-lo-an'je-i'tis) inflammation of the salivary ducts.

sialoangiography (si'ah-lo-an'je-og'rah-fe) radiography of the ducts of the salivary glands after injection of radiopaque material.

sialoangitis (si'ah-lo-an-jī'tis) sialoangiitis.

sialoceles (si'ah-lo-sē'lē) [*sialo-* + Gr. *kēlē* tumor] a salivary cyst or tumor.

sialodochitis (si'ah-lo-do-ki'tis) [*sialo-* + Gr. *dochos* receptacle + *-itis*] inflammation of the salivary ducts.

sialodochoplasty (si'ah-lo-do-ko-plas'te) [*sialo-* + Gr. *dochos* re-

ceptacle + *plassein* to form] plastic operation on the salivary ducts.

sialoductitis (si'ah-lo-duk-ti'tis) sialoangiitis.

sialogastrone (si'ah-lo-gas'trōn) a substance in saliva reputed to inhibit gastric secretion and motility.

sialogen (si'ah-lo-jen) an agent that induces salivation.

sialogenous (si'ah-loj'ē-nus) [*sialo-* + Gr. *gennan* to produce] producing saliva.

sialogogic (si'ah-lo-goj'ik) sialogogic.

sialogogue (si-al'o-gog) sialogogue.

sialogram (si-al'o-gram) [*sialo-* + Gr. *gramma* a mark] a radiograph produced by sialography.

sialograph (si-al'o-graf) sialogram.

sialography (si'ah-log'rah-fe) [*sialo-* + Gr. *graphein* to write] radiographic demonstration of the salivary ducts by means of the injection of substances opaque to x-radiation.

sialolith (si-al'o-lith) [*sialo-* + Gr. *lithos* stone] salivary calculus, def. 1.

sialolithiasis (si'ah-lo-li-thi'ah-sis) [*sialo-* + Gr. *lithiasis* formation of a stone] the formation of salivary calculi or concretions within a salivary gland or duct.

sialolithotomy (si'ah-lo-li-thot'o-me) [*sialolith* + Gr. *tomē* a cutting] incision of a salivary gland or duct for the removal of a calculus.

sialogogy (si'ah-lo'l'o-je) [*sialo-* + *-logy*] the study of the saliva.

sialoma (si'ah-lo'mah) a salivary tumor.

sialometaplasia (si'ah-lo-met'ah-pla'ze-ah) metaplasia of the salivary glands. **necrotizing s.**, a self-healing disease of the hard and soft palates marked by one or two deeply excavating ulcers; histologically, there is necrosis of the mucous cells of the minor salivary glands with partial replacement by squamous epithelium.

sialomucin (si'ah-lo-mu'sin) a component of the airway secretions of the lungs.

sialophagia (si'ah-lo-fa'je-ah) [*sialo-* + Gr. *phagein* to eat] the excessive swallowing of saliva.

sialorrhea (si'ah-lo-re'ah) [*sialo-* + Gr. *rhoia* flow] ptyalism. **s. pancreat'ica**, the expectoration of fluid resembling saliva or pancreatic juice, sometimes seen in disease of the pancreas.

sialoschesis (si'ah-lo-s'kē-sis) [*sialo-* + Gr. *schesis* suppression] suppression of the salivary secretion.

sialosemeiology (si'ah-lo-se'mi-ol'o-je) [*sialo-* + *semeiology*] analysis of the saliva as a means of determining the physiologic status of the patient, especially in regard to metabolic processes.

sialosis (si'ah-lo'sis) [*sial-* + *-osis*] 1. the flow of saliva. 2. ptyalism.

sialostenosis (si'ah-lo-stē-no'sis) [*sialo-* + Gr. *stenos* narrow] stenosis, or narrowing, of a salivary duct.

sialosyrinx (si'ah-lo-si'rinks) [*sialo-* + Gr. *syrinx* pipe] 1. a salivary fistula. 2. a syringe for washing out the salivary ducts, or a drainage tube for the salivary ducts.

sialotic (si'ah-lot'ik) pertaining to or marked by the flow of saliva.

sib (sib) [Anglo-Saxon *sib* kin] 1. a blood relative; one of a group of persons all of whom are descendants of a common ancestor. 2. sibling.

sibbens (sib'enz) a form of treponematoses formerly prevalent in Scotland; considered to have been nonvenereal syphilis.

sibilant (sib'i-lant) [L. *sibilans* hissing] of a shrill, hissing, or whistling character.

sibilus (sib'i-lus) [L.] a whistling or sibilant rale.

sibling (sib'ling) [Anglo-Saxon *sib* kin + *linga* diminutive] any of two or more offspring of the same parents; a brother or sister. Called also *sib*.

sibship (sib'ship) 1. relationship by blood. 2. a group of persons all of whom are descendants of a common ancestor, commonly used as the basis of study to determine genetic influences. 3. a group of siblings.

Sibson's aponeurosis (fascia), furrow, groove, notch, vestibule (sib'sunz) [Francis Sibson, English physician, 1814-1876] see under *furrow, groove, and notch*, and see *membrana suprapleuralis* and *vestibule of aorta*.

Sicard's syndrome (se-karz') [Jean Athanase Sicard, Paris neurologist, 1872-1929] Collet's syndrome.

siccative (sik'ah-tiv) [L. *siccus* dry] drying; removing moisture from surrounding objects; xeransic.

sicchasia (si-ka'ze-ah) [Gr. *sikchasia*] nausea.

siccolabile (sik'o-la'bil) altered or destroyed by drying.

siccostabile (sik'o-sta'bil) not altered by drying.

siccus (sik'us) [L.] dry.

sick (sik) 1. not in good health; afflicted by disease; ill. 2. affected with nausea.

sick bay (sik'ba) hospital and dispensary quarters on a naval vessel or station.

sicklelema (sik-le'me-ah) sickle cell anemia; see under *anemia*.
sicklelemic (sik-le'mik) pertaining to or characterized by sicklelema.

sickling (sik'ling) the development of sickle cells in the blood, as in sickle cell anemia.

sickness (sik'nes) any condition or episode marked by pronounced deviation from the normal healthy state; illness. **aerial s.**, air s. **African horse s.**, an infectious pulmonary disease of horses and mules in South Africa, caused by a virus and marked by serous exudations. Called also *pestis equorum* and *equine plague*. **African sleeping s.**, African trypanosomiasis. **air s.**, sickness due to change in air pressure and to the movements experienced in an airplane, marked by nausea, salivation, and cold sweats. **altitude s.**, high-altitude s. **athletes' s.**, weakness, blurred vision, nausea, and headache, following a short period of intense physical exercise. **aviation s.**, air s. **balloon s.**, a condition similar to mountain sickness occurring during balloon ascents. **bay s.**, Haff disease. **black s.**, kala-azar. **Borna s.**, Borna disease. **bush s.**, a disease similar to enzootic marasmus, occurring in New Zealand. **caisson s.**, decompression s. **car s.**, nausea and malaise produced by the motion of trains or automobiles or other vehicles. **cave s.**, a febrile disease of the lungs occurring in persons who were engaged in excavating in an abandoned mine, due to infection with *Histoplasma capsulatum* (histoplasmosis). **compressed-air s.**, decompression s. **decompression s.**, a disorder characterized by joint pains, respiratory manifestations, skin lesions, and neurologic signs, occurring in aviators flying at high altitudes and following rapid reduction of air pressure in persons who have been breathing compressed air in caissons and diving apparatus. **falling s.**, epilepsy. **gall s.**, see *gallsickness*. **Gambian horse s.**, a fatal infection of horses throughout central Africa caused by *Trypanosoma congolense*. See also *nagana*. **Gambian sleeping s.**, Gambian trypanosomiasis. **green s.**, chlorosis. **green tobacco s.**, a transient, recurrent occupational illness of tobacco harvesters, marked by headache, dizziness, vomiting, and prostration. **high-altitude s.**, the condition resulting from difficulty in adjusting to diminished oxygen pressure at high altitudes. It may take the form of mountain sickness (q.v.), high-altitude pulmonary edema, or cerebral edema. **Jamaican vomiting s.**, a disease occurring in Jamaica, marked by severe vomiting of acute onset, usually followed by convulsions, coma, and death, due to injection of damaged or unripe fruit of akee (*Blighia sapida*). Called also *akee poisoning*. **lambling s.**, a condition of ewes almost identical with milk fever of cows. **laughing s.**, pseudobulbar paralysis. **milk s.**, 1. an acute, often fatal disease caused by the ingestion of milk, milk products, or the flesh of cattle or sheep which have a disease known as trembles. It is marked by weakness, anorexia, vomiting, constipation, and sometimes muscular tremors. Called also *lactimorbus*. 2. trembles. **morning s.**, the nausea of early pregnancy. **motion s.**, sickness caused by motion experienced in any kind of travel, such as sea sickness, train sickness, car sickness, and air sickness. **mountain s.**, a syndrome caused by exposure to altitude high enough to cause hypoxia, occurring as a result of decreased atmospheric pressure with consequent lowering of arterial oxygen content. The *acute* form (Acosta's disease) may appear a few hours after exposure to high altitude, with manifestations that include fatigue, dizziness, breathlessness, headache, nausea, vomiting, insomnia, impairment of mental capacity and judgment, and prostration. The *chronic* form (Andes disease, Monge's disease) is characterized by loss of tolerance to hypoxia in a previously acclimatized person, and by secondary polycythemia. It occurs in two types: an *emphysematous* type, in which dyspnea is the dominant symptom and bronchitis and laryngitis are common, and cyanosis is present; and in an *erythremic* type, in which the prominent symptoms include an erythremic color that turns to cyanosis on mild exertion, fatigue, headache, episodic stupor, paresthesias, anorexia, nausea, vomiting, and diminution of visual acuity. The *subacute* form is milder than the chronic form and resembles the acute form clinically, but is persistent. Both the chronic and subacute forms can be cured by descent to a lower altitude or to sea level. **protein s.**, symptoms, such as eruptions, fever, edema, and pain in the joints, following the injection of foreign proteins into the body. **radiation s.**, a condition sometimes produced by exposure to sources of ionizing radiation; it is characterized by malaise, nausea, emesis, diarrhea, leukopenia, etc. **railroad s.**, transit tetany. **Rhodesian sleeping s.**, Rhodesian trypanosomiasis. **salt s.**, a disease similar to enzootic marasmus, occurring in Florida. **sea s.**, nausea and malaise caused by the motion of a ship. **serum s.**, a hypersensitivity reaction following the administration of foreign serum and other antigens, and marked by urticarial rashes, edema, adenitis, joint pains, high fever, and prostration. The *acute* reaction is attributable to the formation of antibodies against the foreign serum or antigens, which are usually present in antigen excess at initial antibody production. Soluble antigen-antibody complexes that mediate immunologic injury are deposited in the tissues. In the *chronic* form, the injury is due to repeated administration of antigen to immune animals with continuous formation of antigen-antibody complexes over a prolonged period. Serum sickness

is a form of Type III hypersensitivity. Called also *immune-complex disease*, *serum disease*, and *serum intoxication*. See also *serum sickness syndrome*, under *syndrome*. **sleeping s.**, a disease characterized by increasing drowsiness and lethargy, caused by a protozoal infection, such as African trypanosomiasis, or by a viral infection, such as lethargic encephalitis, St. Louis encephalitis, or eastern or western encephalomyelitis. **stiff s.**, ephemeral fever of cattle. **sweating s.**, miliary fever. **talking s.**, epidemic encephalitis marked by extreme excitement, muscular twitching, and talkativeness. **three-day s.**, ephemeral fever of cattle. **veldt s.**, veldt s., heartwater. **vomiting s.**, Jamaican vomiting s. **West African sleeping s.**, African trypanosomiasis. **x-ray s.**, radiation s. **Zambezi sleeping s.**, African trypanosomiasis as it occurs today in the Zambezi-Okovango basin.

S.I.D. Society for Investigative Dermatology.

side (sid) the lateral (right or left) portion or aspect of the body or structure. **balancing s.**, the segment of a dentition or denture, on the side opposite to that toward which the mandible is moved. **working s.**, the segment of a denture or dentition on the same side as that toward which the mandible is moved.

side-bone (sid'bōn) a condition of horses marked by ossification of the lateral cartilages of the third phalanx of the foot.

side effect (sid'ef-fekt') a consequence other than the one(s) for which an agent or measure is used, as the adverse effects produced by a drug, especially on a tissue or organ system other than the one sought to be benefited by its administration.

sideration (sid'er-a'shun) [L. *siderari* to be blasted by a constellation] 1. sudden destruction of vital forces. 2. therapeutic application of electric sparks.

siderinuria (sid'er-ī-nū're-ah) [Gr. *sideros* iron + *ouron* urine + *-ia*] excretion of iron in the urine.

siderism (sid'er-izm) metallothrapy.

sidero- (sid'er-o-) [Gr. *sideros* iron] a combining form denoting relationship to iron.

Siderobacter (sid'er-o-bak'ter) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as bacilliform cells with rounded ends, singly, in pairs or short chains, or united to form colonies, with iron or manganese compounds in the membranes or on the surfaces of the cells. It includes five species, *S. bre'vis*, *S. du'plex*, *S. gra'cilis*, *S. la'tus*, and *S. linea'ris*.

sideroblast (sid'er-o-blast') a nucleated red blood cell containing granules of iron in its cytoplasm.

Siderocapsa (sid'er-o-kap'sah) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as one to many small, ellipsoidal cells embedded in a primary capsule, with iron stored on the surface. It includes six species, *S. botryo'des*, *S. corona'ta*, *S. eusphae'ra*, *S. ma'jor*, *S. monoe'ca*, and *S. treu'bii*.

Siderocapsaceae (sid'er-o-kap-sa'se-e) a family of microorganisms (order Pseudomonadales, suborder Pseudomonadineae), occurring as spherical, ellipsoidal, or bacilliform cells, frequently embedded in a thick mucilaginous capsule in which there may be deposits of iron or manganese compounds. It includes ten genera, *Ferribacterium*, *Ferrobacillus*, *Naumannella*, *Ochrobium*, *Siderobacter*, *Siderocapsa*, *Siderococcus*, *Sideromonas*, *Sideronema*, and *Siderosphaera*.

Siderococcus (sid'er-o-kok'us) a genus of microorganisms of the family Siderocapsaceae, order Pseudomonadales, suborder Pseudomonadineae, occurring as small coccoid cells without a gelatinous capsule. It includes two species, *S. commu'nis* and *S. limoni'ticus*.

siderocyte (sid'er-o-sit') an erythrocyte containing nonhemoglobin iron.

sideroderma (sid'er-o-der'mah) bronzed coloration of the skin from disorder of the metabolism of the iron from degenerated hemoglobin.

siderofibrosis (sid'er-o-fi-bro'sis) fibrosis of the spleen marked by iron-containing deposits.

siderogenous (sid'er-oj'ē-nus) [*sidero-* + Gr. *gennan* to produce] (*obs*) producing or forming iron.

Sideromonas (sid'er-o-mo'nas) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as short coccoid to rod-shaped cells embedded in a large capsule impregnated or completely encrusted with iron or manganese compounds. It includes four species, *S. conferva'rum*, *S. du'plex*, *S. ma'jor*, and *S. vulga'ris*.

Sideronema (sid'er-o-ne'mah) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as coccoid cells in short chains, embedded in a gelatinous sheath. The type species is *S. globulife'rum*.

sideropenia (sid'er-o-pe'ne-ah) [*sidero-* + Gr. *penia* poverty] iron deficiency; deficiency of iron in the body.

sideropenic (sid'er-o-pe'nik) pertaining to or characterized by deficiency of iron.

Siderophacus (sid'er-o'fah-kus) [*sidero-* + Gr. *phakos* lentil] a

genus of microorganisms of the family Caulobacteraceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as biconcave or rodlike cells on horn-shaped stalks, in which ferric hydroxide accumulates. The type species is *S. corneolus*.

siderophage (sid'er-o-faj'') a histiocyte laden with phagocytosed particles.

siderophil (sid'er-o-fil) 1. siderophilous. 2. a siderophilous tissue or structure.

siderophilin (si'der-of'i-lin) transferrin.

siderophilous (sid'er-of'i-lus) [*sidero-* + Gr. *philein* to love] having a tendency to absorb iron.

siderophone (sid'er-o-fon) [*sidero-* + Gr. *phonē* voice] an instrument for detecting, by a telephone-like arrangement, the presence of iron splinters in the eyeball.

siderophore (sid'er-o-för'') a macrophage containing hemosiderin.

sideroscope (sid'er-o-sköp) [*sidero-* + Gr. *skopein* to examine] a magnet or other appliance for determining the presence of metallic iron as a foreign body in the eye.

siderosilicosis (sid'er-o-sil'i-ko'sis) pneumoconiosis due to the inhalation of iron-ore dust containing silica.

siderosis (sid'er-o'sis) 1. pneumoconiosis due to the inhalation of iron particles. 2. excess of iron in the blood. 3. the deposit of iron in a tissue. **s. bulbi**, the deposit of an iron pigment within the eyeball. **s. conjunctivae**, a rust brown or yellowish discoloration of the conjunctiva due to the presence of an iron foreign body; the condition may also be seen in hemochromatosis. **hematogenous s.**, pigmentation with an iron compound derived from the blood. **hepatic s.**, the deposit of an abnormal quantity of iron in the liver; see also under *hemosiderosis*. **nutritional s.**, excessive iron in the blood due to a diet very high in iron and low in protein and calories. **pulmonary s.**, siderosis (def. 1). **urinary s.**, presence of hemosiderin granules in the urine. **xenogenous s.**, pigmentation with an iron oxide derived from a foreign body.

Siderosphaera (sid'er-o-sfe'rah) a genus of microorganisms of the family Siderocapsaceae, suborder Pseudomonadineae, order Pseudomonadales, occurring as small coccoid cells, in pairs and embedded in a primary capsule. The type species is *S. conglomerata*.

siderotic (sid'er-ot'ik) pertaining to or characterized by siderosis.

siderous (sid'er-us) containing iron.

SIDS sudden infant death syndrome; see under *syndrome*.

Siebold's operation (se'boltz) [Karl Kaspar von Siebold, German surgeon, 1736-1807] pubiotomy.

Siebert's sign (se'gertz) [Ferdinand Siebert, German pediatrician, born 1865] see under *sign*.

Siegle's otoscope (ze'gelz) [Emil Siegle, French aurist in Stuttgart, 1833-1900] see under *otoscope*.

siemens (se'menz) the SI unit of conductivity, measured by the quantity of electricity transferred across the unit area, per unit potential gradient per unit time. Called also *mho*. Abbreviated S.

Siemerling's nucleus (se'mer-lingz) [Ernst Siemerling, German neurologist and psychiatrist, 1857-1931] see under *nucleus*.

Sieur's test (sign) (se-erz') [Célestin Sieur, French surgeon, 1860-1955] see *coin test*, under *tests*.

sieve (siv) a device having pores or perforations of uniform size used for separating objects or particles of different sizes. **molecular s.**, a crystalline substance having uniform pores of molecular size that adsorbs smaller but not larger molecules; used in chemical separation.

Sig. abbreviation for *L. signe'tur*, let it be labeled.

sigh (si) [*L. suspirium*] an audible and prolonged inspiration, followed by an audible expiration.

sight (sit) 1. the act or faculty of vision. 2. a thing seen. **day s.**, nyctalopia (def. 1), or night blindness. **far s.**, long s., hyperopia. **near s.**, myopia. **night s.**, hemeralopia, or day blindness. **old s.**, presbyopia. **second s.**, senopia. **short s.**, myopia.

sigma (sig'mah) the eighteenth letter of the Greek alphabet σ , ς , or Σ ; used as the symbol for one thousandth of a second, standard deviation, and summation.

sigmasism (sig'mah-sizm) sigmatism.

sigmatism (sig'mah-tizm) the incorrect, difficult, or too frequent use of the *s* sound.

sigmoid (sig'moid) [*L. sigmoides*; Gr. *sigmoeidēs*] 1. shaped like the letter S or the letter C. 2. the sigmoid colon.

sigmoidectomy (sig'moi-dek'to-me) excision of the sigmoid flexure of the colon.

sigmoiditis (sig'moi-di'tis) inflammation of the sigmoid flexure.

sigmoidopexy (sig'moi'do-pek'se) [*sigmoid* + Gr. *pēxis* fixation] suspension of the sigmoid flexure, usually performed for treatment of rectal prolapse.

sigmoidoproctostomy (sig-moi'do-prok-tos'to-me) the cre-

ation of an artificial opening between the sigmoid flexure and the rectum; also, the opening so created.

sigmoidorectostomy (sig-moi'do-rek-tos'to-me) sigmoidoproctostomy.

sigmoidoscope (sig-moi'do-sköp) [*sigmoid* + Gr. *skopein* to examine] an endoscope with appropriate illumination for examining the sigmoid flexure.

sigmoidoscopy (sig'moi-dos'ko-pe) inspection of the sigmoid flexure through a sigmoidoscope.

sigmoidosigmoidostomy (sig-moi'do-sig-moi-dos'to-me) the operative formation of an anastomosis between two portions of the sigmoid; also, the opening so created.

sigmoidostomy (sig'moi-dos'to-me) [*sigmoid* + Gr. *stomoun* to provide with a mouth, or opening] the formation of an artificial opening from the surface of the body into the sigmoid flexure; also, the opening so produced.

sigmoidotomy (sig'moi-dot'o-me) operative incision into the sigmoid.

sigmoidovesical (sig-moi'do-ves'i-kal) pertaining to or communicating with the sigmoid flexure and the urinary bladder, as a sigmoidovesical fistula.

Sigmund's glands (zig'moonts) [Karl Ludwig Sigmund, Austrian physician, 1810-1883] see under *gland*.

sign (sin) [*L. signum*] an indication of the existence of something; any objective evidence of a disease, i.e., such evidence as is perceptible to the examining physician, as opposed to the subjective sensations (symptoms) of the patient. **Aaron's s.**, a sensation of pain or distress in the epigastric or precordial region on pressure over McBurney's point in appendicitis. **Abadie's s.**, 1. spasm of the levator palpebrae superioris muscle; a sign of Graves' disease. 2. insensibility of the Achilles tendon to pressure; seen in tabes dorsalis. **Abrahams' s.**, 1. a sound between dull and flat obtained on percussion over the acromion process in early tuberculosis of the apex of the lung. 2. acute pain produced in vesical lithiasis when pressure is applied midway between the umbilicus and the ninth right costal cartilage. **accessory s.**, any nonpathognomonic sign of disease. **air-cushion s.**, Klemm's s. **Allis' s.**, relaxation of the fascia between the crest of the ilium and the greater trochanter: a sign of fracture of the neck of the femur. **Amoss' s.**, in painful flexure of the spine, the patient, when rising to a sitting posture from lying in bed, does so by supporting himself with his hands placed far behind him in the bed. **Andral's s.**, see under *decubitus*. **André-Thomas s.**, if during the finger to nose test, the patient is directed to raise his arm over his head and is then suddenly ordered to let it fall to his head, the arm will rebound; seen in disease of the cerebellum. **Angelescu's s.**, inability to bend the spine while lying on the back so as to rest on the head and heels alone, seen in tuberculosis of the vertebrae. **antecedent s.**, any precursory indication of an attack of disease. **anterior tibial s.**, involuntary contraction of the tibialis anterior muscle when the thigh is forcibly flexed on the abdomen; seen in spastic paraplegia. **anticus s.**, Piotrowski's s. **Argyll Robertson pupil s.**, see under *pupil*. **Arroyo's s.**, asthenocoria. **Auschners' s.**, oculocardiac reflex. **assident s.**, accessory s. **Auenbrugger's s.**, a bulging of the epigastrium, due to extensive pericardial effusion. **Aufrecht's s.**, noisy breathing heard just above the suprasternal notch, indicative of tracheal stenosis. **Babinski's s's**, 1. loss or lessening of the Achilles tendon reflex in sciatica: this distinguishes it from hysterical sciatica. 2. Babinski's reflex. 3. in hemiplegia, the contraction of the platysma muscle in the healthy side is more vigorous than on the affected side, as seen in opening the mouth, whistling, blowing, etc. 4. the patient lies supine on the floor, with arms crossed upon his chest, and then makes an effort to rise to the sitting posture. On the paralyzed side, the thigh is flexed upon the pelvis and the heel is lifted from the ground, while on the healthy side the limb does not move. This phenomenon is repeated when the patient resumes the lying posture. It is seen in organic hemiplegia, but not in hysterical hemiplegia. 5. when the paralyzed forearm is placed in supination, it turns over to pronation: seen in organic paralysis. Called also *pronation sign*. **Babinski's toe s.**, Babinski's reflex. **Bacelli's s.**, whisper heard over the chest in pleural effusion. **Baillarger's s.**, inequality of the pupils in paralytic dementia. **Ballance's s.**, resonance of right flank when the patient lies on the left side; said to be present in splenic rupture. **Ballet's s.**, ophthalmoplegia externa, with loss of all voluntary eye movements, the pupillary movements and reflex eye movements persisting; seen in Graves' disease and hysteria. **Bamberger's s.**, 1. allochiria. 2. presence of signs of consolidation at the angle of the scapula, which disappear when the patient leans forward; a sign of pericardial effusion. **Bárány's s.**, see under *symptom*. **Bard's s.**, in organic nystagmus the oscillations of the eye increase as the patient's attention follows the finger moved alternately from one side to the other; but in congenital nystagmus the oscillations disappear in like condition. **Barré's s.**, contraction of the iris is retarded in mental deterioration. **Barré's pyramidal s.**, the patient lies face down and the legs are flexed at the knee; he is unable to hold the legs in this vertical position if there is disease of the pyramidal tracts. **Baruch's s.**, resistance of the tem-

perature in the rectum to a bath of 75° F. for fifteen minutes; a sign of typhoid fever. **Bastian-Bruns' s.**, see under *law*. **Battle's s.**, discoloration in the line of the posterior auricular artery, the ecchymosis first appearing near the tip of the mastoid process; seen in fracture of the base of the skull. **Becker's s.**, increase of pulsation in the retinal arteries in Graves' disease. **Béclard's s.**, a sign of the maturity of the fetus consisting of a center of ossification in the lower epiphysis of the femur. **Beevor's s.**, 1. a sign of functional paralysis consisting in inability of the patient to inhibit the antagonistic muscles. 2. in paralysis of the lower parts of the recti abdominis muscles, there is upward excursion of the umbilicus. **Béhier-Hardy s.**, aphonia in the early stages of pulmonary gangrene. **Beisman's s.**, a bruit over the closed eye in thyrotoxicosis. **Bekhterev's s.**, 1. in tabes dorsalis, anesthesia of the popliteal space. 2. Bekhterev's reflex. **Bell's s.**, see under *phenomenon*. **Berger's s.**, an irregularly shaped or elliptical pupil in the early stages of tabes dorsalis, paralytic dementia, and certain paralysees. **Bergman's s.**, in urologic radiography, (a) the ureter is dilated immediately below a neoplasm, rather than collapsed as below an obstructing stone and (b) the ureteral catheter tends to coil in this dilated portion of the ureter. **Bespaloff's s.**, in the early stage of measles, the tympanic membrane is red and there is nasopharyngeal catarrh. **Bethea's s.**, when the examiner, standing back of the patient, places his fingers so that the tips rest on the upper surfaces of corresponding ribs high up in the patient's axillae, unilateral impairment of chest expansion is indicated by the lessened degree of respiratory movement of the ribs on the side affected. **Bezold's s.**, an inflammatory swelling below the apex of the mastoid process; and evidence of mastoiditis. **Biederman's s.**, a dark red color (instead of the normal pink) of the anterior pillars of the throat, seen in some syphilitic patients. **Bieg's entotic s.**, (*obs.*) when sounds are heard by the patient only when spoken through an ear trumpet joined by a catheter to the eustachian tube, disease of the malleus or incus is indicated. **Biermer's s.**, the metallic resonance over hydropneumothorax varies in pitch with change of position of the patient; seen in pneumothorax. Called also *change of sound* and *Gerhardt's sign*. **Biernacki's s.**, analgesia of the ulnar nerve in paralytic dementia and tabes dorsalis. **Binda's s.**, a sudden movement of the shoulder when the head is passively and sharply turned toward the other side, an early sign of tuberculous meningitis. **Biot's s.**, see under *respiration*. **Bird's s.**, a definite zone of dullness with absence of the respiratory sounds in hydatid disease of the lung. **Bjerrum's s.**, see under *scotoma*. **Blatin's s.**, hydatid thrill. **Blumberg's s.**, pain on abrupt release of steady pressure (rebound tenderness) over the site of a suspected abdominal lesion indicates peritonitis. Repeated comparison of the pain felt on application and release has prognostic significance: a comparative increase in the release pain indicates advancing peritonitis. **Bonnet's s.**, pain on thigh adduction in sciatica. **Bordier-Fränkel s.**, an outward and upward rolling of the eye in peripheral facial paralysis. **Borsieri's s.**, when the fingernail is drawn along the skin in early stages of scarlet fever, a white line is left which quickly turns red; called also *Borsieri's line*. **Boston's s.**, in Graves' disease, when the eyeball is turned downward there is arrest of descent of the lid, spasm, and continued descent. **Bouchard's s.**, a few drops of Fehling's solution are added to the urine and the mixture is shaken; if pus from the kidney is present, fine bubbles will form which push to the surface the coagulum formed by heating. **Bouillaud's s.**, permanent retraction of the chest in the precordial region; a sign of adherent pericardium. **Boyce's s.**, a gurgling sound heard on pressure by the hand on the side of the neck, in diverticulum of the esophagus. **Bozzolo's s.**, a visible pulsation of the arteries within the nostrils; said to indicate aneurysm of the thoracic aorta. **Bragard's s.**, with the knee stiff, the lower extremity is flexed at the hip until the patient experiences pain; the foot is then dorsiflexed. Increase of pain points to disease of the nerve root. **Branham's s.**, bradycardia produced by digital closure of an artery proximal to an arteriovenous fistula. **Braunwald s.**, occurrence of a weak pulse instead of a strong one immediately after a premature ventricular contraction. **Braxton Hicks' s.**, Hicks' s. **Brickner's s.**, diminished oculoauricular associated movements seen in impairment of function of the facial nerve. **Brissaud-Marie s.**, see under *syndrome*. **Broadbent's s.**, a retraction seen on the left side of the back, near the eleventh and twelfth ribs, related to pericardial adhesion. **Broadbent's inverted s.**, pulsations synchronizing with ventricular systole on the posterior lateral wall of the chest in gross dilatation of the left atrium. **Brockenborough's s.**, occurrence of a weak pulse instead of a strong one immediately after a premature ventricular contraction. **Brodie's s.**, 1. a black spot on the glans penis: a sign of urinary extravasation into the spongiosum. 2. Brodie's pain. **Brown-Séguard's s.**, see under *syndrome*. **Brudzinski's s.**, 1. in meningitis, flexion of the neck usually results in flexion of the hip and knee. 2. in meningitis, when passive flexion of the lower limb on one side is made, a similar movement will be seen in the opposite limb; called also *contralateral sign*. **Brunati's s.**, the appearance of opacities in the cornea during the course of pneumonia or typhoid fever. **Bruns' s.**, see under *syndrome*. **Bryant's s.**, lowering of the

axillary folds in dislocation of the shoulder. **Bryson's s.**, lessened power of expansion of the thorax, sometimes noticed in Graves' disease. **Burger's s.**, Heryng's s. **Burghart's s.**, see under *symptom*. **Burton's s.**, lead line. **Cantelli's s.**, dissociation between the movements of the head and eyes: as the head is raised the eyes are lowered, and vice versa. Called also *doll's eye s.* **Capps' s.**, see under *reflex*. **Carabelli's s.**, see under *cusp*. **Cardarelli's s.**, transverse pulsation of the laryngotracheal tube in aneurysms and in dilatation of the arch of the aorta. **cardinal s's** (of inflammation), dolor, calor, rubor, tumor, and functio laesa; see *inflammation*. **cardiorespiratory s.**, a change in the normal pulse-respiration ratio from 4:1 to 2:1; seen in infantile scurvy. **Carman's s.**, meniscus s. **Carnett's s.**, the test for demonstrating parietal tenderness consists of palpation during a period in which the patient holds his anterior abdominal muscles as tense as possible. The tense abdominal muscles prevent the examiner's fingers from coming in contact with the underlying viscera and any tenderness that is elicited over them will be parietal in location. Tenderness elicited over relaxed muscles may be either parietal or intra-abdominal in origin. Tenderness present with relaxed muscles and absent with tense muscles is due to a subparietal lesion and its cause should be sought inside of the abdomen. Tenderness found both when the muscles are relaxed and when voluntarily tensed is due to an anterior parietal lesion and its cause should be sought outside the abdominal cavity. **Castellino's s.**, Cardarelli's s. **Cegka's s.**, invariability of the cardiac dullness during the different phases of respiration; a sign of adherent pericardium. **Chaddock's s.**, see under *reflex*. **Charcot's s.**, 1. the raising of the eyebrow in peripheral facial paralysis, and the lowering of the same part in facial contraction. 2. intermittent limping in arteriosclerosis of the legs and feet. **Charcot-Vigouroux s.**, Vigouroux's s. **Cheyne-Stokes s.**, see under *respiration*. **chin-retraction s.**, a sign of the third stage of anesthesia: the chin and larynx move downward during inspiration. **Chvostek's s.**, Chvostek-Weiss s., spasm of the facial muscles elicited by tapping the facial nerve in the region of the parotid gland; seen in tetany. **Claude's hyperkinesis s.**, reflex movements of paretic muscles elicited by painful stimuli. **clavicular s.**, a tumefaction at the inner third of the right clavicle; seen in congenital syphilis. Called also *Higouménakis's s.* **Cleeman's s.**, creasing of the skin just above the patella, indicative of fracture of the femur with overriding of fragments. **Cloquet's needle s.**, a clean needle is plunged into the biceps muscle; if life is not extinct, the needle oxidizes in 20-60 minutes. **Codman's s.**, in rupture of the supraspinatus tendon, the arm can be passively abducted without pain, but when support of the arm is removed and the deltoid contracts suddenly, pain occurs again. **cogwheel s.**, see under *phenomenon*. **coin s.**, see under *tests*. **Cole's s.**, deformity of the duodenal contour as seen in the roentgenogram, a sign of the presence of duodenal ulcer. **commemorative s.**, any sign of a previous disease. **Comolli's s.**, a sign of scapular fracture consisting in the appearance in the scapular region, shortly after the accident, of a triangular swelling reproducing the shape of the body of the scapula. **complementary opposition s.**, Grasset-Gaussel-Hoover s. **contralateral s.**, Brudzinski's s., def. 2. **Coopernail s.**, ecchymosis on the perineum and scrotum or labia: a sign of fracture of the pelvis. **Cope's s.**, tenderness over the appendix on stretching the psoas muscle by extending the thigh. **Corrigan's s.**, 1. a purple line at the junction of the teeth with the gum in chronic copper poisoning. 2. a peculiar expanding pulsation indicative of aneurysm of the abdominal aorta; see also *Corrigan's pulse*, under *pulse*. 3. see under *respiration*. **coughing s.**, Huntington's s. **Courvoisier's s.**, see under *law*. **Cowen's s.**, jerky constriction of the contralateral pupil when light is shown into the pupil, a sign of Graves' disease. **Crichton-Browne's s.**, tremor of the outer angles of the eyes and of the labial commissures in the earlier stages of paralytic dementia. **Cruveilhier's s.**, a swelling in the groin is palpated when the patient coughs: in saphenous varix there is felt a tremor as of a jet of water entering and filling the pouch. **Cullen's s.**, a bluish discoloration of the skin around the umbilicus sometimes associated with intraperitoneal hemorrhage, especially following rupture of the uterine tube in ectopic pregnancy. A similar discoloration is seen in acute hemorrhagic pancreatitis. **Dalrymple's s.**, abnormal wideness of the palpebral opening in Graves' disease. **D'Amato's s.**, in pleural effusion, the location of dullness is altered from the vertebral area in the sitting position to the heart region when the patient assumes a lateral position on the side opposite the effusion. **Damoiseau's s.**, Ellis' line. **Darier's s.**, urticaria and itching occurring on rubbing the lesions of urticaria pigmentosa. **Davidsohn's s.**, decrease of illumination of the pupil on transillumination with an electric light placed in the mouth; indicates tumor or fluid in the maxillary antrum. **Davis' s.**, an empty state and a yellowish or pale tint of the pulseless arteries; a sign of death. **Dawbarn's s.**, in acute subacromial bursitis, when the arm hangs by the side palpation over the bursa causes pain, but when the arm is abducted this pain disappears. **Dejerine's s.**, aggravation of symptoms of radiculitis produced by coughing, sneezing, and straining at stool. **de la Camp's s.**, relative dullness over

and at each side of the fifth and sixth vertebrae in tuberculosis of the bronchial lymph nodes. **Delbet's s.**, in aneurysm of the main artery of a limb, if the nutrition of the part distal to the aneurysm is maintained, although the pulse may have disappeared, the collateral circulation is sufficient. **Delmege's s.**, deltoid flattening; said to be an early sign of tuberculosis. **Demarquay's s.**, fixation or lowering of the larynx during phonation and deglutition; a sign of syphilis of the trachea. **Demianoff's s.**, a sign that permits the differentiation of pain originating in the sacrolumbalis muscles from lumbar pain of any other origin. The sign is obtained by placing the patient in dorsal decubitus and lifting his extended leg. In the presence of lumbago this produces a pain in the lumbar region which prevents raising the leg high enough to form an angle of 10 degrees, or even less, with the table or bed on which the patient reposes. The pain is due to the stretching of the sacrolumbalis. **de Musset's s.**, Musset's s. **de Mussy's s.**, see under *point*. **Dennie's s.**, Morgan's line. **Desault's s.**, a sign of intracapsular fracture of the femur, consisting of alteration of the arc described by rotation of the great trochanter, which normally describes the segment of a circle, but in this fracture rotates only as the apex of the femur as it rotates about its own axis. **d'Espine's s.**, in the normal person, on auscultation over the spinous processes, pectoriloquy ceases at the bifurcation of the trachea, and in infants opposite the seventh cervical vertebra. If pectoriloquy is heard lower than this, it indicates enlargement of the bronchial lymph nodes. **Dew's s.**, in diaphragmatic hydatid abscess beneath the right cupola, the area of resonance moves caudally with the patient on hands and knees. **Dixon Mann's s.**, Mann's s. **doll's eye s.**, Cantelli's s. **Dorendorf's s.**, fullness of the supraclavicular groove on one side in aneurysm of the aortic arch. **Drummond's s.**, a whiff heard at the open mouth during respiration in cases of aortic aneurysm. **D.T.P. s.** (*distal tingling on percussion*), Tinel's s. **Du Bois's s.**, shortness of the little finger in congenital syphilis. **Duchenne's s.**, the sinking in of the epigastrium on inspiration in paralysis of the diaphragm or in certain cases of hydropericardium. **Duckworth's s.**, see under *phenomenon*. **duct s.**, a red spot seen at the orifice of the parotid duct in mumps. **Dugas's s.**, see under *tests*. **Duncan-Bird s.**, Bird's s. **Dunphy's s.**, injection anterior to the insertion of the lateral rectus in Graves' disease. **Dupuytren's s.**, 1. a crackling sensation on pressure over a sarcomatous bone. 2. in congenital dislocation of the head of the femur, there is a free up-and-down movement of the head of the bone. **Duroziez's s.**, see under *murmur*. **echo s.**, 1. a percussion sound resembling an echo which is heard over a hydatid cyst. 2. the repetition of the last word or clause of a sentence, seen in certain brain diseases; echolalia. **Elliot's s.**, 1. induration of the edge of a syphilitic skin lesion. 2. a scotoma extending from the blind spot and made up of numerous points or spots. **Ellis's s.**, the peculiar curved line of dullness discoverable during resorption of a pleuritic exudate. **Ely's s.**, see under *tests*. **Enroth's s.**, abnormal fullness of the eyelids in Graves' disease. **Erb's s.**, 1. increased electric irritability of motor nerves in cases of tetany. 2. dullness in percussion over the manubrium of the sternum in acromegaly. **Erben's s.**, see under *reflex*. **Erichsen's s.**, when the iliac bones are sharply pressed toward each other pain is felt in sacroiliac disease but not in hip disease. **Erni's s.**, the cavernous tympany developed over an apical cavity that has previously been filled with fluid. Sometimes gently rapping over such a filled cavity with a hard instrument will excite coughing, which will expel the secretion, and thus the cavernous signs are developed. **Escherich's s.**, in tetany, percussion of the inner surface of the lips or tongue produces contraction of the lips, tongue, and masseter muscles. **ether s.**, a sign of death: 1 or 2 ml. of ether is injected subcutaneously. If the ether spurts back when the needle is withdrawn, death has occurred. Its absorption indicates that life still persists. **Eustace Smith's s.**, Smith's s. **Ewart's s.**, 1. undue prominence of the sternal end of the first rib in certain cases of pericardial effusion. 2. bronchial breathing and dullness on percussion at the lower angle of the left scapula in pericardial effusion. **Ewing s.**, tenderness at the upper inner angle of the orbit: a sign of obstruction of the outlet of the frontal sinus. **external malleolar s.**, Chaddock's reflex. **extinction s.**, extinction of the eruption over an area of skin about the size of the palm when normal human serum is injected intracutaneously; see *Schultz-Charlton reaction*, under *reaction*. **fabere s.**, see *Patrick's test*, under *tests*. **facial s.**, Chvostek's s. **Faget's s.**, see under *law*. **Fajersztajn's crossed sciatic s.**, in sciatica, when the leg is flexed, the hip can also be flexed, but not when the leg is held straight; flexing the sound thigh with the leg held straight causes pain on the affected side. **fan s.**, spreading apart of the toes following the stroking of the sole of the foot; it forms part of the Babinski reflex. **Federici's s.**, on auscultation of the abdomen, the cardiac sounds can be heard in cases of intestinal perforation with gas in the peritoneal cavity. **Filipovitch's s.**, the yellow discoloration of prominent parts of the palms and soles in typhoid fever. **Fischer's s.**, 1. on auscultation over the manubrium with the patient's head bent backward, there is sometimes heard, in tuberculosis of the bronchial glands, a murmur due to pressure of the glands on the innominate veins. 2.
